The following are the reasons for judgment rendered in English by

123 The interests underlying the legitimate expectations doctrine are the non-discriminatory application in public administration of the procedural norms established by past practice or published guidelines, and the protection of the individual from an abuse of power [page311] through the breach of an undertaking. These are among the traditional core concerns of public law. They are also essential elements of good public administration. In these circumstances, consultation ceases to be a matter only of political process, and hence beyond the purview of the law, but enters the domain of judicial review.

124 Accordingly, in my view the legitimate expectations doctrine is not simply a branch of the duty of fairness, in the sense that it serves the same purposes as the participatory rights conferred by the duty of fairness. Hence, there is no reason to limit its reach to the exercise of statutory powers to which the duty applies.

125 On the other hand, as with the duty of fairness, a breach will lead to the imposition of procedural duties, generally of a participatory nature, on the person or body empowered to take some administrative action, rather than requiring a particular substantive outcome to the exercise of power. Indeed, when in Baker v. Canada (Minister of Citizenship and Immigration), supra, at page 839, paragraph 26, the Supreme Court of Canada recently located the legitimate expectations doctrine within the duty of fairness it was in response to an argument that a person may have a legitimate expectation of receiving a substantive, and not merely a procedural benefit. And, in the Canada Assistance Plan case, supra, the Court's concern was to preserve the sovereignty of Parliament from the imposition of novel manner and form requirements on the enactment of legislation. However, in Old St. Boniface Residents Assn. Inc. v. Winnipeg (City), supra, where no contrast was made with substantive rights, it was said only that, as developed in the English cases, the legitimate expectations doctrine was an extension of the duty of fairness.

126 Therefore, in the absence of binding authority to the contrary, I conclude that the doctrine of [page312] legitimate expectations applies in principle to delegated legislative powers so as to create participatory rights when none would otherwise arise, provided that honouring the expectation would not breach some other legal duty, or unduly delay the enactment of regulations for which there was a demonstrably urgent need (see R. v. Lord Chancellor's Department, ex parte Law Society (Q.B.D. Crown Office List; June 22, 1993; CO/991/93)).

127 A court may set aside, or declare invalid, subordinate legislation made in breach of a legal duty to consult: R v Secretary of State for Health, ex p US Tobacco International Inc, [1992] 1 All ER 212 (Q.B.D.), at page 225. For this purpose it should not matter whether the duty arose from statute or by virtue of a promise that created a legitimate expectation of consultation. It remains to consider whether a legitimate expectation arose on the facts of this case and, if it did, whether the Regulations were enacted in breach of it.

(iii) Did a legitimate expectation arise on these facts?

128 Whether a promise by a public official or body that consultation will precede administrative action gives rise to a legitimate expectation that attracts a legal obligation to consult depends on the surrounding

Respondents

Reasons for Judgment
of the
Honourable Mr. Justice Dennis G. Hart

---

[1] This is an application for judicial review of a decision of the Respondent Board of Trustees of Foothills School Division No. 38 (the Board).

[2] Each of the Applicants is a parent of a child or children attending a school within the Foothills School Division No. 38 (the Foothills School Division), which was established pursuant to the provisions of the *School Act*, R.S.A. 2000, c.S-3. The Foothills School Division is divided into five wards bordering the south side of the City of Calgary.

The applicants alleged that the board had failed to comply with the rules of natural justice and procedural fairness because it had raised a legitimate expectation that it would consult with the applicants before any decision was reached, and the board failed to do so. The decision is very directly on point. Spencer J. held that the implementation of French immersion by the board was entirely a policy decision, and that the decision to eliminate it was a legislative act. He held, at p.258, that the decision was therefore "not ordinarily subject to the rules of procedural fairness, including the rule relating to the legitimate expectations of interested residents of the school district." However, Spencer J. went on to consider the board's own policies, and the issue of whether those policies could give rise to legitimate expectations, notwithstanding his conclusion that the board was exercising a legislative function. He noted that the board had a policy in place that required specific steps to be taken, which included consultation with interested parties. Though Spencer J. ultimately concluded that no legitimate expectation had actually arisen because the residents had been unaware of the board's policies, he was clearly of the view that a legitimate expectation could arise in other circumstances. In this regard, he held at p. 261-262:

> By incurring for itself a procedural framework that required specific steps to be taken and in failing to suspend the requirement for the purpose of this resolution, the board as a legislative body attracted to itself the rule of legitimate expectation that prevails in its administrative functions. I distinguish this case from the authorities I have referred to that say the rule does not apply to a decision made under a delegated legislative body where that body by its own procedural rules tells the public what processes it will follow in making a decision and as part of that process offers the public a specific opportunity to comment on the proposed decision. Such a view does not conflict with the tradition of parliamentary supremacy as it applies to a delegated legislative body acting within the field of its jurisdiction because it is the same legislative body that has established the procedural rule in the first place. Until such a rule is suspended, the legislative body, in this case the school board, is as subject to it as are those under its governance. I do not go so far as to say such a body may not suspend its own rules under appropriate circumstances and defeat a legitimate expectation.

[31] There are a number of other decisions that suggest that the doctrine of legitimate expectations may apply to legislative functions in certain circumstances. In Alberta, in *Lehndorff United Properties (Canada) Ltd. v. Edmonton (City)*, [1993] A.J. No. 807 (Q.B.), Fruman J. (As she then was) considered *Canada (Attorney General) v. Inuit Tapirisat of Canada*, [1980] 2 S.C.R 735 and *Reference re Canada Assistance Plan* and concluded that decisions which are purely legislative in nature are not subject to the rules of procedural fairness. However, and significantly, she went on to point out, at para. 47:

> Even in circumstances where there is no duty of procedural fairness, such a duty can arise when there has been a holding out that a specific procedure would be followed by the decision maker and there was reliance upon that position by interested parties. (*Furey v. Conception Bay Centre Roman Catholic School*

2007 ABQB 536 (CanLII)

Board (1991), 2 Admin. L.R. (2d) 263; *Sunshine Coast Parents for French v. Sunshine Coast School District No. 46* (1990), 49 B.C.L.R. (2d) 252.)

[32] In my view, this is just such a case. The Board came to a policy decision through the exercise of its legislative function, but it did so in a manner that was inconsistent with its established practices, its written policies with respect to public consultation, and despite an express promise made by its Chair at the meeting of June 1, 2005. I do not accept the distinction that the Board seeks to draw between the promise made by the Chair and a promise made by the entire Board. The Board was present when the Chair made the representation that no decision would be made until after consultation with school councils. There is no evidence that any objection was raised was any member of the Board. The Applicants were entitled to assume that the representation made by the Chair reflected the position of the Board. I appreciate that the representation made by the Chair was directed at grandfathering rather than walk distances, but the decision of the Board affected its existing practices in respect of both, and the Board's policies. Leaving aside the representation made by the Chair, the Board's policies themselves indicate that some consultation would likely occur in any event. The prerogatives of legislators must be respected by the courts, but in these circumstances there is a competing principle that public bodies should be held to their promises, in the broader interest of procedural fairness.

Nature of the Statutory Scheme

[33] Neither the *School Act*, nor the *Student Transportation Regulation* require public input or consultation prior to making a decision about transportation policy. Moreover, paragraph 4 of Board Policy B-310 provides that the Board retains the right to develop, amend and approve any necessary policy at any time. Thus, this factor, standing alone, would not suggest a high degree of procedural fairness.

Importance of the Decision to the Individuals Affected

[34] The Board contends that this factor is difficult to apply in the present case because the Decision is policy-based, broad in scope, and essentially impacts upon all of the children and parents of children attending schools in the Foothills School Division. The Board points out that this factor refers to the individuals affected by the decision, not just the applicants.

[35] While I understand the Board's submission in this regard, and agree that the impact of the Decision extends beyond the Applicants, it is clear that the Decision impacts certain individuals more directly than others. Specifically, the parents whose children obtained transportation under the grandfathering policy, and parents who will have to make arrangements to mitigate increased walking distances, or will see their young children walking further, are clearly more directly affected by the Decision than parents who will see some less tangible benefit from a redistribution of transportation resources.

[36] I agree with the Board that the interests affected do not rise to the level of those in *Baker*, where the decision involved the deportation of an individual from Canada, or those in *Kane v.*

Counsel for the Respondent, B.C. Hydro and Power Authority	C.W. Sanderson, Q.C., R.A. Skolrood & J. McLean
Counsel for the Respondent, the Attorney General of British Columbia	G.H. Copley, Q.C.
Date and Place of Hearing:	December 15-19, 2003 Vancouver, B.C.

2004 BCSC 422 (CanLII)

Canada discussed the principle of legitimate expectations in these terms:

> The principle developed in these cases is simply an extension of the rules of natural justice and procedural fairness. It affords a party affected by the decision of a public official an opportunity to make representations in circumstances in which there otherwise would be no such opportunity. The court supplies the omission where, based on the conduct of the public official, a party has been led to believe that his or her rights would not be affected without consultation.

[111] The Court more recently described the doctrine of legitimate expectations in ***Baker v. Canada (Minister of Citizenship and Immigration)***, [1999] 2 S.C.R. 817 at para. 26:

> The doctrine, as applied in Canada, is based on the principle that the "circumstances" affecting procedural fairness take into account the promises or regular practices of administrative decision-makers, and that it will generally be unfair for them to act in contravention of representations as to procedure, or to backtrack on substantive promises without according significant procedural rights.

[112] An expectation may legitimately arise in one of two ways: by an express promise made by a public authority responsible for the decision, or by a regular course of conduct that shows a well-defined practice of consultation: ***British Columbia and Yukon Hotels' Assn. v. British Columbia (Liquor Distribution Branch)***, [1997] B.C.J. No. 305 (S.C.) (QL) at para. 14; and ***Sunshine Coast Parents for French v.***

2004 BCSC 422 (CanLII)

Sunshine Coast School District No. 46 (1990), 49 B.C.L.R. (2d) 252 (S.C.) at 255.

[113] Because the doctrine of legitimate expectations is viewed as one aspect of procedural fairness, it is generally said that it does not apply to legislative action: ***Reference Re Canada Assistance Plan (B.C.)***, [1991] 2 S.C.R. 525 at para. 60; ***Sunshine Coast***, *supra* at 255–257; and ***Aasland***, *supra* at para. 52. I note, however, that in ***Sunshine Coast*** at page 260, Spencer J. held that legislative action may be subject to the doctrine of legitimate expectations if the legislative body has enacted procedural rules that give rise to such expectations.

[114] I am unable to find that the doctrine of legitimate expectations assists the petitioners. First, the statutory framework within which the OIC was issued contains no procedural requirements which might lead to an expectation of consultation.

[115] Second, the doctrine does not create substantive rights. Thus, even if it did apply, it would only give rise to a duty on the part of the Lieutenant Governor in Council to consult with the petitioners before issuing the OIC. It would

Present: Wagner C.J. and Abella, Moldaver, Karakatsanis, Gascon, Côté, Brown, Rowe and Martin JJ.

ON APPEAL FROM THE FEDERAL COURT OF APPEAL

Administrative law — Judicial review — Standard of review — Proper approach to judicial review of administrative decisions — Proper approach to reasonableness review.

Citizenship — Canadian citizens — Registrar of Citizenship cancelling certificate of Canadian citizenship issued to Canadian-born son of parents later revealed to be Russian spies — Decision of Registrar based on interpretation of statutory exception to general rule that person born in Canada is Canadian citizen — Exception stating that Canadian-born child is not citizen if either parent was

representative or employee in Canada of foreign government at time of child's birth — Whether Registrar's decision to cancel certificate of citizenship was reasonable — Citizenship Act, R.S.C. 1985, c. 29, s. 3(2)(a).

V was born in Toronto in 1994. At the time of his birth, his parents were posing as Canadians under assumed names. In reality, they were foreign nationals working on assignment for the Russian foreign intelligence service. V did not know that his parents were not who they claimed to be. He believed that he was a Canadian citizen by birth, he lived and identified as a Canadian, and he held a Canadian passport. In 2010, V's parents were arrested in the United States and charged with espionage. They pled guilty and were returned to Russia. Following their arrest, V's attempts to renew his Canadian passport proved unsuccessful. However, in 2013, he was issued a certificate of Canadian citizenship.

Then, in 2014, the Canadian Registrar of Citizenship cancelled V's certificate on the basis of her interpretation of s. 3(2)(a) of the *Citizenship Act*. This provision exempts children of "a diplomatic or consular officer or other representative or employee in Canada of a foreign government" from the general rule that individuals born in Canada acquire Canadian citizenship by birth. The Registrar concluded that because V's parents were employees or representatives of Russia at the time of V's birth, the exception to the rule of citizenship by birth in s. 3(2)(a), as she interpreted it, applied to V, who therefore was not, and had never been, entitled to citizenship. V's application for judicial review of the Registrar's decision was

2019 SCC 65 (CanLII)

dismissed by the Federal Court. The Court of Appeal allowed V's appeal and quashed the Registrar's decision because it was unreasonable. The Minister of Citizenship and Immigration appeals.

Held: The appeal should be dismissed.

Per **Wagner** C.J. and **Moldaver**, **Gascon**, **Côté**, **Brown**, **Rowe** and **Martin** JJ.: The Registrar's decision to cancel V's certificate of citizenship was unreasonable, and the Court of Appeal's decision to quash it should be upheld. It was not reasonable for the Registrar to interpret s. 3(2)(a) of the *Citizenship Act* as applying to children of individuals who have not been granted diplomatic privileges and immunities at the time of the children's birth.

More generally, this appeal and its companion cases (*Bell Canada v. Canada (Attorney General)*, 2019 SCC 66) provide an opportunity to consider and clarify the law applicable to the judicial review of administrative decisions as addressed in *Dunsmuir v. New Brunswick*, 2008 SCC 9, [2008] 1 S.C.R. 190, and subsequent cases. The submissions presented to the Court have highlighted two aspects of the current framework which need clarification. The first aspect is the analysis for determining the standard of review. The second aspect is the need for better guidance from this Court on the proper application of the reasonableness standard.

2019 SCC 65 (CanLII)

It has become clear that *Dunsmuir*'s promise of simplicity and predictability has not been fully realized. Certain aspects of the current standard of review framework are unclear and unduly complex. The former contextual analysis has proven to be unwieldly and offers limited practical guidance for courts attempting to determine the standard of review. The practical effect is that courts struggle in conducting the analysis, and debates surrounding the appropriate standard and its application continue to overshadow the review on the merits, thereby undermining access to justice. A reconsideration of the Court's approach is therefore necessary in order to bring greater coherence and predictability to this area of law. A revised framework to determine the standard of review where a court reviews the merits of an administrative decision is needed.

In setting out a revised framework, this decision departs from the Court's existing jurisprudence on standard of review in certain respects. Any reconsideration of past precedents can be justified only by compelling circumstances and requires carefully weighing the impact on legal certainty and predictability against the costs of continuing to follow a flawed approach. Although adhering to the established jurisprudence will generally promote certainty and predictability, in some instances doing so will create or perpetuate uncertainty. In such circumstances, following a prior decision would be contrary to the underlying values of clarity and certainty in the law.

2019 SCC 65 (CanLII)

The revised standard of review analysis begins with a presumption that reasonableness is the applicable standard in all cases. Where a legislature has created an administrative decision maker for the specific purpose of administering a statutory scheme, it must be presumed that the legislature also intended that decision maker to fulfill its mandate and interpret the law applicable to all issues that come before it. Where a legislature has not explicitly provided that a court is to have a more involved role in reviewing the decisions of that decision maker, it can safely be assumed that the legislature intended a minimum of judicial interference. Respect for these institutional design choices requires a reviewing court to adopt a posture of restraint. Thus, whenever a court reviews an administrative decision, it should start with the presumption that the applicable standard of review for all aspects of that decision will be reasonableness. As a result, it is no longer necessary for courts to engage in a contextual inquiry in order to identify the appropriate standard. Conclusively closing the door on the application of a contextual analysis to determine the applicable standard streamlines and simplifies the standard of review framework. As well, with the presumptive application of the reasonableness standard, the relative expertise of administrative decision makers is no longer relevant to a determination of the standard of review. It is simply folded into the new starting point. Relative expertise remains, however, a relevant consideration in conducting reasonableness review.

The presumption of reasonableness review can be rebutted in two types of situations. The first is where the legislature has indicated that it intends a different standard to apply. This will be the case where it has explicitly prescribed the

2019 SCC 65 (CanLII)

applicable standard of review. Any framework rooted in legislative intent must respect clear statutory language. The legislature may also direct that derogation from the presumption is appropriate by providing for a statutory appeal mechanism from an administrative decision to a court, thereby signalling the legislature's intent that appellate standards apply when a court reviews the decision. Where a legislature has provided a statutory appeal mechanism, it has subjected the administrative regime to appellate oversight and it expects the court to scrutinize such administrative decisions on an appellate basis. The applicable standard is therefore to be determined with reference to the nature of the question and to the jurisprudence on appellate standards of review. Where, for example, a court hears an appeal from an administrative decision, it would apply the standard of correctness to questions of law, including on statutory interpretation and the scope of a decision maker's authority. Where the scope of the statutory appeal includes questions of fact or questions of mixed fact and law, the standard is palpable and overriding error for such questions.

Giving effect to statutory appeal mechanisms in this way departs from the Court's recent jurisprudence. This shift is necessary in order to bring coherence and conceptual balance to the standard of review analysis and is justified by weighing the values of certainty and correctness. First, there has been significant and valid judicial and academic criticism of the Court's recent approach to statutory appeal rights and of the inconsistency inherent in a standard of review framework based on legislative intent that otherwise declines to give meaning to an express statutory right of appeal. Second, there is no satisfactory justification for the recent trend in the Court's

2019 SCC 65 (CanLII)

jurisprudence to give no effect to statutory rights of appeal in the standard of review analysis, absent exceptional wording. More generally, there is no convincing reason to presume that legislatures mean something entirely different when they use the word "appeal" in an administrative law statute. Accepting that the legislature intends an appellate standard of review to be applied also helps to explain why many statutes provide for both appeal and judicial review mechanisms, thereby indicating two roles for reviewing courts. Finally, because the presumption of reasonableness review is no longer premised upon notions of relative expertise and is now based on respect for the legislature's institutional design choice, departing from the presumption of reasonableness review in the context of a statutory appeal respects this legislative choice.

The second situation in which the presumption of reasonableness review will be rebutted is where the rule of law requires that the standard of correctness be applied. This will be the case for certain categories of legal questions, namely constitutional questions, general questions of law of central importance to the legal system as a whole and questions related to the jurisdictional boundaries between two or more administrative bodies. First, questions regarding the division of powers between Parliament and the provinces, the relationship between the legislature and the other branches of the state, the scope of Aboriginal and treaty rights under s. 35 of the *Constitution Act, 1982*, and other constitutional matters require a final and determinate answer from the courts. Second, the rule of law requires courts to have the final word with regard to general questions of law that are of central importance

2019 SCC 65 (CanLII)

to the legal system as a whole because they require uniform and consistent answers. Third, the rule of law requires courts to intervene where one administrative body has interpreted the scope of its authority in a manner that is incompatible with the jurisdiction of another since the rule of law cannot tolerate conflicting orders and proceedings where they result in a true operational conflict between two administrative bodies. The application of the correctness standard for such questions therefore respects the unique role of the judiciary in interpreting the Constitution and ensures that courts are able to provide the last word on questions for which the rule of law requires consistency and for which a final and determinate answer is necessary.

The general rule of reasonableness review, when coupled with these limited exceptions, offers a comprehensive approach to determining the applicable standard of review. The possibility that another category could be recognized as requiring a derogation from the presumption of reasonableness review in a future case is not definitively foreclosed. However, any new basis for correctness review would be exceptional and would need to be consistent with this framework and the overarching principles set out in this decision. Any new correctness category based on legislative intent would require a signal of legislative intent as strong and compelling as a legislated standard of review or a statutory appeal mechanism. Similarly, a new correctness category based on the rule of law would be justified only where failure to apply correctness review would undermine the rule of law and jeopardize the proper functioning of the justice system in a manner analogous to the three situations described in this decision.

2019 SCC 65 (CanLII)

For example, the Court is not persuaded that it should recognize a distinct correctness category for legal questions on which there is persistent discord within an administrative body. A lack of unanimity within an administrative tribunal is the price to pay for decision-making freedom and independence. While discord can lead to legal incoherence, a more robust form of reasonableness review is capable of guarding against such threats to the rule of law. As well, jurisdictional questions should no longer be recognized as a distinct category subject to correctness review; there are no clear markers to distinguish such questions from other questions related to interpreting an administrative decision maker's enabling statute. A proper application of the reasonableness standard will enable courts to ensure that administrative bodies have acted within the scope of their lawful authority without having to conduct a preliminary assessment on jurisdictional issues and without having to apply the correctness standard.

Going forward, a court seeking to determine what standard of review is appropriate should look to this decision first in order to determine how the general framework applies. Doing so may require the court to resolve subsidiary questions on which past precedents will often continue to provide helpful guidance and will continue to apply essentially without modification, such as cases concerning general questions of law of central importance to the legal system as a whole or those relating to jurisdictional boundaries between administrative bodies. On other issues, such as the effect of statutory appeal mechanisms, true questions of jurisdiction or the former contextual analysis, certain cases will necessarily have less precedential force.

2019 SCC 65 (CanLII)

There is also a need for better guidance from the Court on the proper application of the reasonableness standard, what that standard entails and how it should be applied in practice. Reasonableness review is meant to ensure that courts intervene in administrative matters only where it is truly necessary to do so in order to safeguard the legality, rationality and fairness of the administrative process. Its starting point lies in the principle of judicial restraint and in demonstrating respect for the distinct role of administrative decision makers. However, it is not a "rubber-stamping" process or a means of sheltering decision makers from accountability. While courts must recognize the legitimacy and authority of administrative decision makers and adopt a posture of respect, administrative decision makers must adopt a culture of justification and demonstrate that their exercise of delegated public power can be justified. In conducting reasonableness review, a court must consider the outcome of the administrative decision in light of its underlying rationale, to ensure that the decision as a whole is transparent, intelligible and justified. Judicial review is concerned with both the outcome of the decision and the reasoning process that led to that outcome. To accept otherwise would undermine, rather than demonstrate respect toward, the institutional role of the administrative decision maker.

Reasonableness review is methodologically distinct from correctness review. The court conducting a reasonableness review must focus on the decision the administrative decision maker actually made, including the justification offered for it. A court applying the reasonableness standard does not ask what decision it would

2019 SCC 65 (CanLII)

have made in place of the administrative decision maker, attempt to ascertain the range of possible conclusions, conduct a new analysis or seek to determine the correct solution to the problem. Instead, the reviewing court must consider only whether the decision made by the decision maker, including both the rationale for the decision and the outcome to which it led, was unreasonable.

In cases where reasons are required, they are the starting point for reasonableness review, as they are the primary mechanism by which decision makers show that their decisions are reasonable. Reasons are the means by which the decision maker communicates the rationale for its decision: they explain how and why a decision was made, help to show affected parties that their arguments have been considered and that the decision was made in a fair and lawful manner, and shield against arbitrariness. A principled approach to reasonableness review is therefore one which puts those reasons first. This enables a reviewing court to assess whether the decision as a whole is reasonable. Attention to the decision maker's reasons is part of how courts demonstrate respect for the decision-making process.

In many cases, formal reasons for a decision will not be given or required. Even without reasons, it is possible for the record and the context to reveal that a decision was made on the basis of an improper motive or for another impermissible reason. There will nonetheless be situations in which neither the record nor the larger context sheds light on the basis for the decision. In such cases, the reviewing court must still examine the decision in light of the relevant factual and

2019 SCC 65 (CanLII)

legal constraints on the decision maker in order to determine whether the decision is reasonable.

It is conceptually useful to consider two types of fundamental flaws that tend to render a decision unreasonable. The first is a failure of rationality internal to the reasoning process. To be reasonable, a decision must be based on an internally coherent reasoning that is both rational and logical. A failure in this respect may lead a reviewing court to conclude that a decision must be set aside. Reasonableness review is not a line-by-line treasure hunt for error. However, the reviewing court must be able to trace the decision maker's reasoning without encountering any fatal flaws in its overarching logic. Because formal reasons should be read in light of the record and with due sensitivity to the administrative regime in which they were given, a decision will be unreasonable if the reasons for it, read holistically, fail to reveal a rational chain of analysis or if they reveal that the decision was based on an irrational chain of analysis. A decision will also be unreasonable where the conclusion reached cannot follow from the analysis undertaken or if the reasons read in conjunction with the record do not make it possible to understand the decision maker's reasoning on a critical point. Similarly, the internal rationality of a decision may be called into question if the reasons exhibit clear logical fallacies.

The second type of fundamental flaw arises when a decision is in some respect untenable in light of the relevant factual and legal constraints that bear on it. Although reasonableness is a single standard that already accounts for context, and

2019 SCC 65 (CanLII)

elements of a decision's context should not modulate the standard or the degree of scrutiny by the reviewing court, what is reasonable in a given situation will always depend on the constraints imposed by the legal and factual context of the particular decision under review. These contextual constraints dictate the limits and contours of the space in which the decision maker may act and the types of solutions it may adopt. The governing statutory scheme, other relevant statutory or common law, the principles of statutory interpretation, the evidence before the decision maker and facts of which the decision maker may take notice, the submissions of the parties, the past practices and decisions of the administrative body, and the potential impact of the decision on the individual to whom it applies, are all elements that will generally be relevant in evaluating whether a given decision is reasonable. Such elements are not a checklist; they may vary in significance depending on the context and will necessarily interact with one another.

Accordingly, a reviewing court may find that a decision is unreasonable when examined against these contextual considerations. Because administrative decision makers receive their powers by statute, the governing statutory scheme is likely to be the most salient aspect of the legal context relevant to a particular decision. A proper application of the reasonableness standard is capable of allaying the concern that an administrative decision maker might interpret the scope of its own authority beyond what the legislature intended. Whether an interpretation is justified will depend on the context, including the language chosen by the legislature in describing the limits and contours of the decision maker's authority.

2019 SCC 65 (CanLII)

Both statutory and common law will also impose constraints on how and what an administrative decision maker can lawfully decide. Any precedents on the issue before the administrative decision maker or on a similar issue, as well as international law in some administrative decision making contexts, will act as a constraint on what the decision maker can reasonably decide. Whether an administrative decision maker has acted reasonably in adapting a legal or equitable doctrine involves a highly context-specific determination.

Matters of statutory interpretation are not treated uniquely and, as with other questions of law, may be evaluated on a reasonableness standard. Where this is the applicable standard, the reviewing court does not undertake a *de novo* analysis of the question or ask itself what the correct decision would have been. But an approach to reasonableness review that respects legislative intent must assume that those who interpret the law, whether courts or administrative decision makers, will do so in a manner consistent with the modern principle of statutory interpretation. Administrative decision makers are not required to engage in a formalistic statutory interpretation exercise in every case. But whatever form the interpretive exercise takes, the merits of an administrative decision maker's interpretation of a statutory provision must be consistent with the text, context and purpose of the provision.

Furthermore, the decision maker must take the evidentiary record and the general factual matrix that bears on its decision into account, and its decision must be reasonable in light of them. The reasonableness of a decision may be jeopardized

2019 SCC 65 (CanLII)

where the decision maker has fundamentally misapprehended or failed to account for the evidence before it. The reasons must also meaningfully account for the central issues and concerns raised by the parties, even though reviewing courts cannot expect administrative decision makers to respond to every argument or line of possible analysis.

While administrative decision makers are not bound by their previous decisions, they must be concerned with the general consistency of administrative decisions. Therefore, whether a particular decision is consistent with the administrative body's past decisions is also a constraint that the reviewing court should consider when determining whether an administrative decision is reasonable. Finally, individuals are entitled to greater procedural protection when the decision in question involves the potential for significant personal impact or harm. Where the impact of a decision on an individual's rights and interests is severe, the reasons provided to that individual must reflect the stakes. The principle of responsive justification means that if a decision has particularly harsh consequences for the affected individual, the decision maker must explain why its decision best reflects the legislature's intention.

The question of the appropriate remedy — specifically, whether a court that quashes an unreasonable decision should exercise its discretion to remit the matter to the decision maker for reconsideration with the benefit of the court's reasons — is multi-faceted. The choice of remedy must be guided by the rationale for

2019 SCC 65 (CanLII)

applying the reasonableness standard to begin with, including the recognition by the reviewing court that the legislature has entrusted the matter to the administrative decision maker, and not to the court, concerns related to the proper administration of the justice system, the need to ensure access to justice and the goal of expedient and cost-efficient decision making. Giving effect to these principles in the remedial context means that where a decision reviewed by applying the reasonableness standard cannot be upheld, it will most often be appropriate to remit the matter to the decision maker for reconsideration with the benefit of the court's reasons. However, there are limited scenarios in which remitting the matter would stymie the timely and effective resolution of matters in a manner that no legislature could have intended. An intention that the administrative decision maker decide the matter at first instance cannot give rise to endless judicial reviews and subsequent reconsiderations. Declining to remit a matter to the decision maker may be appropriate where it becomes evident that a particular outcome is inevitable and that remitting the case would therefore serve no useful purpose. Elements like concern for delay, fairness to the parties, urgency of providing a resolution to the dispute, the nature of the particular regulatory regime, whether the administrative decision maker had a genuine opportunity to weigh in on the issue in question, costs to the parties, and efficient use of public resources may also influence the exercise of a court's discretion to remit the matter.

In the case at bar, there is no basis for departing from the presumption of reasonableness review. The Registrar's decision has come before the courts by way of

2019 SCC 65 (CanLII)

judicial review, not by way of a statutory appeal. Given that Parliament has not prescribed the standard to be applied, there is no indication that the legislature intended a standard of review other than reasonableness. The Registrar's decision does not give rise to any constitutional questions, general questions of law of central importance to the legal system as a whole or questions regarding the jurisdictional boundaries between administrative bodies. As a result, the standard to be applied in reviewing the Registrar's decision is reasonableness.

The Registrar's decision was unreasonable. She failed to justify her interpretation of s. 3(2)(a) in light of the constraints imposed by s. 3 considered as a whole, by international treaties that inform its purpose, by the jurisprudence on the interpretation of s. 3(2)(a), and by the potential consequences of her interpretation. Each of these elements — viewed individually and cumulatively — strongly supports the conclusion that s. 3(2)(a) was not intended to apply to children of foreign government representatives or employees who have not been granted diplomatic privileges and immunities. Though V had raised many of these considerations, the Registrar failed to address those submissions in her reasons and did not do more than conduct a cursory review of the legislative history of s. 3(2)(a) and conclude that her interpretation was not explicitly precluded by its text.

First, the Registrar failed to address the immediate statutory context of s. 3(2)(a), which provides clear support for the conclusion that all of the persons contemplated by s. 3(2)(a) must have been granted diplomatic privileges and

2019 SCC 65 (CanLII)

immunities in some form for the exception to apply. Second, the Registrar disregarded compelling submissions that s. 3(2) is a narrow exception consistent with established principles of international law and with the leading international treaties that extend diplomatic privileges and immunities to employees and representatives of foreign governments. Third, it was a significant omission to ignore the relevant cases that were before the Registrar which suggest that s. 3(2)(a) was intended to apply only to those individuals whose parents have been granted diplomatic privileges and immunities. Finally, there is no evidence that the Registrar considered the potential consequences of expanding her interpretation of s. 3(2)(a) to include all individuals who have not been granted diplomatic privileges and immunities. Rules concerning citizenship require a high degree of interpretive consistency in order to shield against arbitrariness. The Registrar's interpretation cannot be limited to the children of spies — its logic would be equally applicable to other scenarios. As well, provisions such as s. 3(2)(a) must be given a narrow interpretation because they potentially take away rights which otherwise benefit from a liberal and broad interpretation. Yet there is no indication that the Registrar considered the potential harsh consequences of her interpretation, or whether, in light of those potential consequences, Parliament would have intended s. 3(2)(a) to apply in this manner. Although the Registrar knew her interpretation was novel, she failed to provide a rationale for her expanded interpretation.

It was therefore unreasonable for the Registrar to find that s. 3(2)(a) can apply to individuals whose parents have not been granted diplomatic privileges and

2019 SCC 65 (CanLII)

immunities in Canada. It is undisputed that V's parents had not been granted such privileges and immunities. No purpose would therefore be served by remitting this matter to the Registrar. Given that V was born in Canada, his status is governed only by the general rule of citizenship by birth. He is a Canadian citizen.

Per **Abella** and **Karakatsanis** JJ.: There is agreement with the majority that the appeal should be dismissed. The Registrar's decision to cancel V's citizenship certificate was unreasonable and was properly quashed by the Court of Appeal.

There is also agreement with the majority that there should be a presumption of reasonableness in judicial review. The contextual factors analysis should be eliminated from the standard of review framework, and "true questions of jurisdiction" should be abolished as a separate category of issues subject to correctness review. However, the elimination of these elements does not support the foundational changes to judicial review outlined in the majority's framework that result in expanded correctness review. Rather than confirming a meaningful presumption of deference for administrative decision-makers, the majority strips away deference from hundreds of administrative actors, based on a formalistic approach that ignores the legislature's intention to leave certain legal and policy questions to administrative decision-makers. The majority's presumption of reasonableness review rests on a totally new understanding of legislative intent and the rule of law and prohibits any consideration of well-established foundations for

2019 SCC 65 (CanLII)

deference. By dramatically expanding the circumstances in which generalist judges will be entitled to substitute their own views for those of specialized decision-makers who apply their mandates on a daily basis, the majority's framework fundamentally reorients the relationship between administrative actors and the judiciary, thus advocating a profoundly different philosophy of administrative law.

The majority's framework rests on a flawed and incomplete conceptual account of judicial review, one that unjustifiably ignores the specialized expertise of administrative decision-makers and reads out the foundations of the modern understanding of legislative intent. Instead of understanding legislative intent as being the intention to leave legal questions within their mandate to specialized decision-makers with expertise, the majority removes expertise from the equation entirely. In so doing, the majority disregards the historically accepted reason why the legislature intended to delegate authority to an administrative actor. In particular, such an approach ignores the possibility that specialization and expertise are embedded into this legislative choice. Post-*Dunsmuir*, the Court has been steadfast in confirming the central role of specialization and expertise, affirming their connection to legislative intent, and recognizing that they give administrative decision-makers the interpretative upper hand on questions of law. Specialized expertise has become the core rationale for deference. Giving proper effect to the legislature's choice to delegate authority to an administrative decision-maker requires understanding the advantages that the decision-maker may enjoy in exercising its mandate. Chief among those advantages are the institutional expertise and specialization inherent to

2019 SCC 65 (CanLII)

administering a particular mandate on a daily basis. In interpreting their enabling statutes, administrative actors may have a particularly astute appreciation for the on-the-ground consequences of particular legal interpretations, of statutory context, of the purposes that a provision or legislative scheme are meant to serve, and of specialized terminology. The advantages stemming from specialization and expertise provide a robust foundation for deference. The majority's approach accords no weight to such institutional advantages and banishes expertise from the standard of review analysis entirely. The removal of the current conceptual basis for deference opens the gates to expanded correctness review.

In the majority's framework, deference gives way whenever the rule of law demands it. This approach, however, flows from a court-centric conception of the rule of law. The rule of law means that administrative decision-makers make legal determinations within their mandate; it does not mean that only judges decide questions of law with an unrestricted license to substitute their opinions for those of administrative actors through correctness review. The majority's approach not only erodes the presumption of deference; it erodes confidence in the fact that law-making and legal interpretation are shared enterprises between courts and administrative decision-makers. Moreover, access to justice is at the heart of the legislative choice to establish a robust system of administrative law. This goal is compromised when a narrow conception of the rule of law is invoked to impose judicial hegemony over administrative decision-makers, which adds unnecessary expense and complexity. Authorizing more incursions into the administrative system by judges and permitting

2019 SCC 65 (CanLII)

de novo review of every legal decision adds to the delay and cost of obtaining a final decision.

The majority's reformulation of "legislative intent" invites courts to apply an irrebuttable presumption of correctness review whenever an administrative scheme includes a right of appeal. Elevating appeal clauses to indicators of correctness review creates a two-tier system that defers to the expertise of administrative decision-makers only where there is no appeal clause. Yet appeal rights do not represent a different institutional structure that requires a more searching form of review. The mere fact that a statute contemplates an appeal says nothing about the degree of deference required in the review process. The majority's position hinges almost entirely on a textualist argument — i.e., that the presence of the word "appeal" indicates a legislative intent that courts apply the same standards of review found in civil appellate jurisprudence. This disregards long-accepted institutional distinctions between courts and administrative decision-makers. The continued use by legislatures of the term "appeal" cannot be imbued with the intent that the majority ascribes to it. The idea that appellate standards of review must be applied to every right of appeal is entirely unsupported by the jurisprudence. For at least 25 years, the Court has not treated statutory rights of appeal as a determinative reflection of legislative intent, and such clauses have played little or no role in the standard of review analysis. Moreover, pre-*Dunsmuir*, statutory rights of appeal were still seen as only one factor and not as unequivocal indicators of correctness review. Absent exceptional

2019 SCC 65 (CanLII)

circumstances, a statutory right of appeal does not displace the presumption of reasonableness.

The majority's disregard for precedent and *stare decisis* has the potential to undermine both the integrity of the Court's decisions, and public confidence in the stability of the law. *Stare decisis* places significant limits on the Court's ability to overturn its precedents. The doctrine promotes the predictable and consistent development of legal principles, fosters reliance on judicial decisions, and contributes to the integrity of the judicial process. Respect for precedent also safeguards the Court's institutional legitimacy. The precedential value of a judgment does not expire with the tenure of the panel of judges that decided it. When the Court does choose to overrule its own precedents, it should do so carefully, with moderation, and with due regard for all the important considerations that undergird the doctrine of *stare decisis*. A nuanced balance must be struck between maintaining the stability of the common law and ensuring that the law is flexible and responsive enough to adapt to new circumstances and societal norms. *Stare decisis* plays a critical role in maintaining that balance and upholding the rule of law.

There is no principled justification for departing from the existing jurisprudence and abandoning the Court's long-standing view of how statutory appeal clauses impact the standard of review analysis. In doing so, the majority disregards the high threshold required to overturn the Court's decisions. The unprecedented wholesale rejection of an entire body of jurisprudence that is particularly unsettling.

2019 SCC 65 (CanLII)

The affected cases are numerous and include many decisions conducting deferential review even in the face of a statutory right of appeal and bedrock judgments affirming the relevance of administrative expertise to the standard of review analysis. Overruling these judgments flouts *stare decisis*, which prohibits courts from overturning past decisions that simply represent a choice with which the current bench does not agree. The majority's approach also has the potential to disturb settled interpretations of many statutes that contain a right of appeal; every existing interpretation of such statutes that has been affirmed under a reasonableness standard will be open to fresh challenge. Moreover, if the Court, in its past decisions, misconstrued the purpose of statutory appeal clauses, legislatures were free to clarify this interpretation through legislative amendment. In the absence of legislative correction, the case for overturning decisions is even less compelling.

The Court should offer additional direction on reasonableness review so that judges can provide careful and meaningful oversight of the administrative justice system while respecting its legitimacy and the perspectives of its front-line, specialized decision-makers. However, rather than clarifying the role of reasons and how to review them, the majority revives the kind of search for errors that dominated the Court's prior jurisprudence. The majority's multi-factored, open-ended list of constraints on administrative decision making will encourage reviewing courts to dissect administrative reasons in a line-by-line hunt for error. These constraints may function in practice as a wide-ranging catalogue of hypothetical errors to justify quashing an administrative decision. Structuring reasonableness review in this fashion

2019 SCC 65 (CanLII)

effectively imposes on administrative decision-makers a higher standard of justification than on trial judges. Such an approach undercuts deference. Reasonableness review should instead focus on the concept of deference to administrative decision-makers and to the legislative intention to confide in them a mandate. Curial deference is the hallmark of reasonableness review, setting it apart from the substitution of opinion permitted under correctness.

Deference imposes three requirements on courts conducting reasonableness review. First, deference is the attitude a reviewing court must adopt towards an administrative decision-maker. Deference mandates respect for the legislative choice to entrust a decision to administrative actors rather than to the courts, for the important role that administrative decision-makers play, and for their specialized expertise and the institutional setting in which they operate. Reviewing courts must pay respectful attention to the reasons offered for an administrative decision, make a genuine effort to understand why the decision was made, and give the decision a fair and generous construction. Second, deference affects how a court frames the question it must answer and the nature of its analysis. A reviewing court does not ask how it would have resolved an issue, but rather whether the answer provided by the decision-maker was unreasonable. Ultimately, whether an administrative decision is reasonable depends on the context, and a reviewing court must be attentive to all relevant circumstances, including the reasons offered to support the decision, the record, the statutory scheme and the particular issues raised, among other factors. Third, deferential review impacts how a reviewing court

2019 SCC 65 (CanLII)

evaluates challenges to a decision. The party seeking judicial review bears the onus of showing that the decision was unreasonable; the decision-maker does not have to persuade the court that its decision is reasonable.

The administrative decision itself is the focal point of the review exercise. In all cases, the question remains whether the challenging party has demonstrated that a decision is unreasonable. Where reasons are neither required nor available, reasonableness may be justified by past decisions of the administrative body or in light of the procedural context. Where reasons are provided, they serve as the natural starting point to determine whether the decision-maker acted reasonably. By beginning with the reasons, read in light of the surrounding context and the grounds raised, reviewing courts provide meaningful oversight while respecting the legitimacy of specialized administrative decision making. Reviewing courts should approach the reasons with respect for the specialized decision-makers, their significant role and the institutional context chosen by the legislator. Reviewing courts should not second-guess operational implications, practical challenges and on-the-ground knowledge and must remain alert to specialized concepts or language. Further, a reviewing court is not restricted to the four corners of the written reasons and should, if faced with a gap in the reasons, look to other materials to see if they shed light on the decision, including: the record of any formal proceedings and the materials before the decision-maker, past decisions of the administrative body, and policies or guidelines developed to guide the type of decision under review. These materials may assist a court in understanding the outcome. In these ways, reviewing courts may

2019 SCC 65 (CanLII)

legitimately supplement written reasons without supplanting the analysis. Reasons must be read together with the outcome to determine whether the result falls within a range of possible outcomes. This approach puts substance over form where the basis for a decision is evident on the record, but not clearly expressed in written reasons.

As well, a court conducting deferential review must view claims of error in context and with caution, cognizant of the need to avoid substituting its opinion for that of those empowered and better equipped to answer the questions at issue. Because judicial substitution is incompatible with deference, reviewing courts must carefully evaluate the challenges raised to ensure they go to the reasonableness of the decision rather than representing a mere difference of opinion. Courts must also consider the materiality of any alleged errors. An error that is peripheral to the reasoning process is not sufficient to justify quashing a decision. The same deferential approach must apply with equal force to statutory interpretation cases. In such cases, a court should not assess the decision by determining what, in its own view, would be a reasonable interpretation. Such an approach imperils deference. A *de novo* interpretation of a statute necessarily omits the perspective of the front-line, specialized administrative body that routinely applies the statutory scheme in question. By placing that perspective at the heart of the judicial review inquiry, courts display respect for specialization and expertise, and for the legislative choice to delegate certain questions to non-judicial bodies. Conversely, by imposing their own interpretation of a statute, courts undermine legislative intent.

2019 SCC 65 (CanLII)

In the instant case, there is agreement with the majority that the standard of review is reasonableness. The Registrar's reasons failed to respond to V's submission that the objectives of s. 3(2)(a) of the *Citizenship Act* require its terms to be read narrowly. Instead, the Registrar interpreted s. 3(2)(a) broadly, based on a purely textual assessment. This reading was only reasonable if the text is read in isolation from its objective. Nothing in the history of this provision indicates that Parliament intended to widen its scope. Furthermore, the judicial treatment of this provision also points to the need for a narrow interpretation. In addition, the text of s. 3(2)(c) can be seen as undermining the Registrar's interpretation of s. 3(2)(a), because the former denies citizenship to children born to individuals who enjoy diplomatic privileges and immunities equivalent to those granted to persons referred to in the latter. This suggests that s. 3(2)(a) covers only those employees in Canada of a foreign government who have such privileges and immunities, in contrast with V's parents. By ignoring the objectives of s. 3 as a whole, the Registrar's decision was unreasonable.

2019 SCC 65 (CanLII)

The following is the judgment delivered by

THE CHIEF JUSTICE AND MOLDAVER, GASCON, CÔTÉ, BROWN, ROWE AND MARTIN JJ. —

[1] This appeal and its companion cases (see *Bell Canada v. Canada (Attorney General)*, 2019 SCC 66), provide this Court with an opportunity to re-examine its approach to judicial review of administrative decisions.

[2] In these reasons, we will address two key aspects of the current administrative law jurisprudence which require reconsideration and clarification. First, we will chart a new course forward for determining the standard of review that applies when a court reviews the merits of an administrative decision. Second, we will provide additional guidance for reviewing courts to follow when conducting reasonableness review. The revised framework will continue to be guided by the principles underlying judicial review that this Court articulated in *Dunsmuir v. New Brunswick*, 2008 SCC 9, [2008] 1 S.C.R. 190: that judicial review functions to

maintain the rule of law while giving effect to legislative intent. We will also affirm the need to develop and strengthen a culture of justification in administrative decision making.

[3] We will then address the merits of the case at bar, which relates to an application for judicial review of a decision by the Canadian Registrar of Citizenship concerning Alexander Vavilov, who was born in Canada and whose parents were later revealed to be Russian spies. The Registrar found on the basis of an interpretation of s. 3(2)(a) of the *Citizenship Act*, R.S.C. 1985, c. C-29, that Mr. Vavilov was not a Canadian citizen and cancelled his certificate of citizenship under s. 26(3) of the *Citizenship Regulations*, SOR/93-246. In our view, the standard of review to be applied to the Registrar's decision is reasonableness, and the Registrar's decision was unreasonable. We would therefore uphold the Federal Court of Appeal's decision to quash it, and would dismiss the Minister of Citizenship and Immigration's appeal.

I. Need for Clarification and Simplification of the Law of Judicial Review

[4] Over the past decades, the law relating to judicial review of administrative decisions in Canada has been characterized by continuously evolving jurisprudence and vigorous academic debate. This area of the law concerns matters which are fundamental to our legal and constitutional order, and seeks to navigate the proper relationship between administrative decision makers, the courts and individuals in our society. In parallel with the law, the role of administrative decision

2019 SCC 65 (CanLII)

making in Canada has also evolved. Today, the administration of countless public bodies and regulatory regimes has been entrusted to statutory delegates with decision-making power. The number, diversity and importance of the matters that come before such delegates has made administrative decision making one of the principal manifestations of state power in the lives of Canadians.

[5] Given the ubiquity and practical importance of administrative decision making, it is essential that administrative decision makers, those subject to their decisions and courts tasked with reviewing those decisions have clear guidance on how judicial review is to be performed.

[6] In granting leave to appeal in the case at bar and in its companion cases, this Court's leave to appeal judgment made clear that it viewed these appeals as an opportunity to consider the law applicable to the judicial review of administrative decisions as addressed in *Dunsmuir* and subsequent cases. In light of the importance of this issue, the Court appointed two *amici curiae*, invited the parties to devote a substantial portion of their submissions to the standard of review issue, and granted leave to 27 interveners, comprising 4 attorneys general and numerous organizations representing the breadth of the Canadian administrative law landscape. We have, as a result, received a wealth of helpful submissions on this issue. Despite this Court's review of the subject in *Dunsmuir*, some aspects of the law remain challenging. In particular, the submissions presented to the Court have highlighted two aspects of the current framework which need clarification.

2019 SCC 65 (CanLII)

[7] The first aspect is the analysis for determining the standard of review. It has become clear that *Dunsmuir*'s promise of simplicity and predictability in this respect has not been fully realized. In *Dunsmuir*, a majority of the Court merged the standards of "patent unreasonableness" and "reasonableness *simpliciter*" into a single "reasonableness" standard, thus reducing the number of standards of review from three to two: paras. 34-50. It also sought to simplify the analysis for determining the applicable standard of review: paras. 51-64. Since *Dunsmuir*, the jurisprudence has evolved to recognize that reasonableness will be the applicable standard for most categories of questions on judicial review, including, presumptively, when a decision maker interprets its enabling statute: see, e.g., *Alberta (Information and Privacy Commissioner) v. Alberta Teachers' Association*, 2011 SCC 61, [2011] 3 S.C.R. 654; *Mouvement laïque québécois v. Saguenay (City)*, 2015 SCC 16, [2015] 2 S.C.R. 3, at para. 46; *Canadian National Railway Co. v. Canada (Attorney General)*, 2014 SCC 40, [2014] 2 S.C.R. 135, at para. 55; *Canadian Artists' Representation v. National Gallery of Canada*, 2014 SCC 42, [2014] 2 S.C.R. 197, at para. 13; *Smith v. Alliance Pipeline Ltd.*, 2011 SCC 7, [2011] 1 S.C.R. 160, at paras. 26 and 28; *Canada (Citizenship and Immigration) v. Khosa*, 2009 SCC 12, [2009] 1 S.C.R. 339, at para. 25; *Dunsmuir*, at para. 54. The Court has indicated that this presumption may be rebutted by showing the issue on review falls within a category of questions attracting correctness review: see *McLean v. British Columbia (Securities Commission)*, 2013 SCC 67, [2013] 3 S.C.R. 895, at para. 22. It may also be rebutted by showing that the context indicates that the legislature intended the standard of review to be correctness: *McLean*, at para. 22; *Edmonton (City) v. Edmonton East (Capilano) Shopping*

2019 SCC 65 (CanLII)

Centres Ltd., 2016 SCC 47, [2016] 2 S.C.R. 293, at para. 32; *Canada (Canadian Human Rights Commission) v. Canada (Attorney General)*, 2018 SCC 31, [2018] 2 S.C.R. 230 ("*CHRC*"), at paras. 45-46. However, uncertainty about when the contextual analysis remains appropriate and debate surrounding the scope of the correctness categories have sometimes caused confusion and made the analysis unwieldy: see, e.g., P. Daly, "Struggling Towards Coherence in Canadian Administrative Law? Recent Cases on Standard of Review and Reasonableness" (2016), 62 *McGill L.J.* 527.

[8] In addition, this analysis has in some respects departed from the theoretical foundations underpinning judicial review. While the application of the reasonableness standard is grounded, in part, in the necessity of avoiding "undue interference" in the face of the legislature's intention to leave certain questions with administrative bodies rather than with the courts (see *Dunsmuir*, at para. 27), that standard has come to be routinely applied even where the legislature has provided for a different institutional structure through a statutory appeal mechanism.

[9] The uncertainty that has followed *Dunsmuir* has been highlighted by judicial and academic criticism, litigants who have come before this Court, and organizations that represent Canadians who interact with administrative decision makers. These are not light critiques or theoretical challenges. They go to the core of the coherence of our administrative law jurisprudence and to the practical implications of this lack of coherence. This Court, too, has taken note. In *Wilson v.*

2019 SCC 65 (CanLII)

Atomic Energy of Canada Ltd., 2016 SCC 29, [2016] 1 S.C.R. 770, at para. 19, Abella J. expressed the need to "simplify the standard of review labyrinth we currently find ourselves in" and offered suggestions with a view to beginning a necessary conversation on the way forward. It is in this context that the Court decided to grant leave to hear this case and the companion cases jointly.

[10] This process has led us to conclude that a reconsideration of this Court's approach is necessary in order to bring greater coherence and predictability to this area of law. We have therefore adopted a revised framework for determining the standard of review where a court reviews the merits of an administrative decision. The analysis begins with a presumption that reasonableness is the applicable standard in all cases. Reviewing courts should derogate from this presumption only where required by a clear indication of legislative intent or by the rule of law.

[11] The second aspect is the need for better guidance from this Court on the proper application of the reasonableness standard. The Court has heard concerns that reasonableness review is sometimes perceived as advancing a two-tiered justice system in which those subject to administrative decisions are entitled only to an outcome somewhere between "good enough" and "not quite wrong". These concerns have been echoed by some members of the legal profession, civil society organizations and legal clinics. The Court has an obligation to take these perspectives seriously and to ensure that the framework it adopts accommodates all types of administrative decision making, in areas that range from immigration, prison

2019 SCC 65 (CanLII)

administration and social security entitlements to labour relations, securities regulation and energy policy.

[12] These concerns regarding the application of the reasonableness standard speak to the need for this Court to more clearly articulate what that standard entails and how it should be applied in practice. Reasonableness review is methodologically distinct from correctness review. It is informed by the need to respect the legislature's choice to delegate decision-making authority to the administrative decision maker rather than to the reviewing court. In order to fulfill *Dunsmuir*'s promise to protect "the legality, the reasonableness and the fairness of the administrative process and its outcomes", reasonableness review must entail a sensitive and respectful, but robust, evaluation of administrative decisions: para. 28.

[13] Reasonableness review is an approach meant to ensure that courts intervene in administrative matters only where it is truly necessary to do so in order to safeguard the legality, rationality and fairness of the administrative process. It finds its starting point in the principle of judicial restraint and demonstrates a respect for the distinct role of administrative decision makers. However, it is not a "rubber-stamping" process or a means of sheltering administrative decision makers from accountability. It remains a robust form of review.

[14] On the one hand, courts must recognize the legitimacy and authority of administrative decision makers within their proper spheres and adopt an appropriate posture of respect. On the other hand, administrative decision makers must adopt a

2019 SCC 65 (CanLII)

culture of justification and demonstrate that their exercise of delegated public power can be "justified to citizens in terms of rationality and fairness": the Rt. Hon. B. McLachlin, "The Roles of Administrative Tribunals and Courts in Maintaining the Rule of Law" (1998), 12 *C.J.A.L.P.* 171, at p. 174 (emphasis deleted); see also M. Cohen-Eliya and I. Porat, "Proportionality and Justification" (2014), 64 *U.T.L.J.* 458, at pp. 467-70.

2019 SCC 65 (CanLII)

[15] In conducting a reasonableness review, a court must consider the outcome of the administrative decision in light of its underlying rationale in order to ensure that the decision as a whole is transparent, intelligible and justified. What distinguishes reasonableness review from correctness review is that the court conducting a reasonableness review must focus on the decision the administrative decision maker actually made, including the justification offered for it, and not on the conclusion the court itself would have reached in the administrative decision maker's place.

II. Determining the Applicable Standard of Review

[16] In the following sections, we set out a revised framework for determining the standard of review a court should apply when the merits of an administrative decision are challenged. It starts with a presumption that reasonableness is the applicable standard whenever a court reviews administrative decisions.

[17] The presumption of reasonableness review can be rebutted in two types of situations. The first is where the legislature has indicated that it intends a different standard or set of standards to apply. This will be the case where the legislature explicitly prescribes the applicable standard of review. It will also be the case where the legislature has provided a statutory appeal mechanism from an administrative decision to a court, thereby signalling the legislature's intent that appellate standards apply when a court reviews the decision. The second situation in which the presumption of reasonableness review will be rebutted is where the rule of law requires that the standard of correctness be applied. This will be the case for certain categories of questions, namely constitutional questions, general questions of law of central importance to the legal system as a whole and questions related to the jurisdictional boundaries between two or more administrative bodies. The general rule of reasonableness review, when coupled with these limited exceptions, offers a comprehensive approach to determining the applicable standard of review. As a result, it is no longer necessary for courts to engage in a "contextual inquiry" (*CHRC*, at paras. 45-47, see also *Dunsmuir*, at paras. 62-64; *McLean*, at para. 22) in order to identify the appropriate standard.

[18] Before setting out the framework for determining the standard of review in greater detail, we wish to acknowledge that these reasons depart from the Court's existing jurisprudence on standard of review in certain respects. Any reconsideration such as this can be justified only by compelling circumstances, and we do not take this decision lightly. A decision to adjust course will always require the Court to

2019 SCC 65 (CanLII)

carefully weigh the impact on legal certainty and predictability against the costs of continuing to follow a flawed approach: see *Canada (Attorney General) v. Bedford*, 2013 SCC 72, [2013] 3 S.C.R. 1101, at para. 47; *Canada v. Craig*, 2012 SCC 43, [2012] 2 S.C.R. 489, at paras. 24-27; *Ontario (Attorney General) v. Fraser*, 2011 SCC 20, [2011] 2 S.C.R. 3, at paras. 56-57 and 129-31, 139; *R. v. Henry*, 2005 SCC 76, [2005] 3 S.C.R. 609, at paras. 43-44; *R. v. Bernard*, [1988] 2 S.C.R. 833, at pp. 849-50.

2019 SCC 65 (CanLII)

[19] On this point, we recall the observation of Gibbs J. in *Queensland v. Commonwealth* (1977), 139 C.L.R. 585 (H.C.A.), which this Court endorsed in *Craig*, at para. 26:

> No Justice is entitled to ignore the decisions and reasoning of his predecessors, and to arrive at his own judgment as though the pages of the law reports were blank, or as though the authority of a decision did not survive beyond the rising of the Court. A Justice, unlike a legislator, cannot introduce a programme of reform which sets at nought decisions formerly made and principles formerly established. It is only after the most careful and respectful consideration of the earlier decision, and after giving due weight to all the circumstances, that a Justice may give effect to his own opinions in preference to an earlier decision of the Court.

[20] Nonetheless, this Court has in the past revisited precedents that were determined to be unsound in principle, that had proven to be unworkable and unnecessarily complex to apply, or that had attracted significant and valid judicial, academic and other criticism: *Craig*, at paras. 28-30; *Henry*, at paras. 45-47; *Fraser*, at para. 135 (per Rothstein J., concurring in the result); *Bernard*, at pp. 858-59. Although adhering to the established jurisprudence will generally promote certainty

and predictability, in some instances doing so will create or perpetuate uncertainty in the law: *Minister of Indian Affairs and Northern Development v. Ranville*, [1982] 2 S.C.R. 518, at p. 528; *Bernard*, at p. 858; *R. v. B. (K.G.)*, [1993] 1 S.C.R. 740, at p. 778. In such circumstances, "following the prior decision because of *stare decisis* would be contrary to the underlying value behind that doctrine, namely, clarity and certainty in the law": *Bernard*, at p. 858. These considerations apply here.

2019 SCC 65 (CanLII)

[21] Certain aspects of the current framework are unclear and unduly complex. The practical effect of this lack of clarity is that courts sometimes struggle in conducting the standard of review analysis, and costly debates surrounding the appropriate standard and its application continue to overshadow the review on the merits in many cases, thereby undermining access to justice. The words of Binnie J. in his concurring reasons in *Dunsmuir*, at para. 133, are still apt:

> [J]udicial review is burdened with undue cost and delay. Litigants understandably hesitate to go to court to seek redress for a perceived administrative injustice if their lawyers cannot predict with confidence even what standard of review will be applied . . . . If litigants do take the plunge, they may find the court's attention focussed not on their complaints, or the government's response, but on lengthy and arcane discussions of something they are told is [the choice of standard analysis] . . . . A victory before the reviewing court may be overturned on appeal because the wrong "standard of review" was selected. A small business denied a licence or a professional person who wants to challenge disciplinary action should be able to seek judicial review without betting the store or the house on the outcome . . . .

Regrettably, we find ourselves in a similar position following *Dunsmuir*. As Karakatsanis J. observed in *Edmonton East*, at para. 35, "[t]he contextual approach

can generate uncertainty and endless litigation concerning the standard of review." While counsel and courts attempt to work through the complexities of determining the standard of review and its proper application, litigants "still find the merits waiting in the wings for their chance to be seen and reviewed": *Wilson*, at para. 25, per Abella J.

[22] As noted in *CHRC*, this Court "has for years attempted to simplify the standard of review analysis in order to 'get the parties away from arguing about the tests and back to arguing about the substantive merits of their case'": para. 27, quoting *Alberta Teachers*, at para. 36, citing *Dunsmuir*, at para. 145, per Binnie J. The principled changes set out below seek to promote the values underlying *stare decisis* and to make the law on the standard of review more certain, coherent and workable going forward.

A. *Presumption That Reasonableness Is the Applicable Standard*

[23] Where a court reviews the merits of an administrative decision (i.e., judicial review of an administrative decisions other than a review related to a breach of natural justice and/or the duty of procedural fairness), the standard of review it applies must reflect the legislature's intent with respect to the role of the reviewing court, except where giving effect to that intent is precluded by the rule of law. The starting point for the analysis is a presumption that the legislature intended the standard of review to be reasonableness.

2019 SCC 65 (CanLII)

[24] Parliament and the provincial legislatures are constitutionally empowered to create administrative bodies and to endow them with broad statutory powers: *Dunsmuir*, at para. 27. Where a legislature has created an administrative decision maker for the specific purpose of administering a statutory scheme, it must be presumed that the legislature also intended that decision maker to be able to fulfill its mandate and interpret the law as applicable to all issues that come before it. Where a legislature has not explicitly prescribed that a court is to have a role in reviewing the decisions of that decision maker, it can safely be assumed that the legislature intended the administrative decision maker to function with a minimum of judicial interference. However, because judicial review is protected by s. 96 of the *Constitution Act, 1867*, legislatures cannot shield administrative decision making from curial scrutiny entirely: *Dunsmuir*, at para. 31; *Crevier v. Attorney General of Quebec*, [1981] 2 S.C.R. 220, at pp. 236-37; *U.E.S., Local 298 v. Bibeault*, [1988] 2 S.C.R. 1048, at p. 1090. Nevertheless, respect for these institutional design choices made by the legislature requires a reviewing court to adopt a posture of restraint on review.

[25] For years, this Court's jurisprudence has moved toward a recognition that the reasonableness standard should be the starting point for a court's review of an administrative decision. Indeed, a presumption of reasonableness review is already a well-established feature of the standard of review analysis in cases in which administrative decision makers interpret their home statutes: see *Alberta Teachers*, at para. 30; *Saguenay*, at para. 46; *Edmonton East*, at para. 22. In our view, it is now

2019 SCC 65 (CanLII)

appropriate to hold that whenever a court reviews an administrative decision, it should start with the presumption that the applicable standard of review for all aspects of that decision will be reasonableness. While this presumption applies to the administrative decision maker's interpretation of its enabling statute, the presumption also applies more broadly to other aspects of its decision.

[26] Before turning to an explanation of how the presumption of reasonableness review may be rebutted, we believe it is desirable to clarify one aspect of the conceptual basis for this presumption. Since *C.U.P.E. v. N.B. Liquor Corporation*, [1979] 2 S.C.R. 227, the central rationale for applying a deferential standard of review in administrative law has been a respect for the legislature's institutional design choice to delegate certain matters to non-judicial decision makers through statute: *C.U.P.E.*, at pp. 235-36. However, this Court has subsequently identified a number of other justifications for applying the reasonableness standard, some of which have taken on influential roles in the standard of review analysis at various times.

[27] In particular, the Court has described one rationale for applying the reasonableness standard as being the relative expertise of administrative decision makers with respect to the questions before them: see, e.g., *C.U.P.E.*, at p. 236; *Pushpanathan v. Canada (Minister of Citizenship and Immigration)*, [1998] 1 S.C.R. 982, at paras. 32-35; *Pezim v. British Columbia (Superintendent of Brokers)*, [1994] 2 S.C.R. 557, at pp. 591-92; *Canada (Director of Investigation and Research) v.*

2019 SCC 65 (CanLII)

Southam Inc., [1997] 1 S.C.R. 748, at paras. 50-53; *Dunsmuir*, at para. 49, quoting D. J. Mullan, "Establishing the Standard of Review: The Struggle for Complexity?" (2004), 17 *C.J.A.L.P.* 59, at p. 93; see also *Dunsmuir*, at para. 68. However, this Court's jurisprudence has sometimes been deeply divided on the question of what expertise entails in the administrative context, how it should be assessed and how it should inform the standard of review analysis: see, e.g., *Khosa*, at paras. 23-25, per Binnie J. for the majority, compared to paras. 93-96, per Rothstein J., concurring in the result; *Edmonton East*, at para. 33, per Karakatsanis J. for the majority, compared to paras. 81-86, per Côté and Brown JJ., dissenting. In the era of what was known as the "pragmatic and functional" approach, which was first set out in *Bibeault*, a decision maker's expertise relative to that of the reviewing court was one of the key contextual factors said to indicate legislative intent with respect to the standard of review, but the decision maker was not presumed to have relative expertise. Instead, whether a decision maker had greater expertise than the reviewing court was assessed in relation to the specific question at issue and on the basis of a contextual analysis that could incorporate factors such as the qualification of an administrative body's members, their experience in a particular area and their involvement in policy making: see, e.g., *Pezim*, at pp. 591-92; *Southam*, at paras. 50-53; *Dr. Q v. College of Physicians and Surgeons of British Columbia*, 2003 SCC 19, [2003] 1 S.C.R. 226, at paras. 28-29; *Canada (Deputy Minister of National Revenue) v. Mattel Canada Inc.*, 2001 SCC 36, [2001] 2 S.C.R. 100, at paras. 28-32; *Moreau-Bérubé v. New Brunswick (Judicial Council)*, 2002 SCC 11, [2002] 1 S.C.R. 249, at para. 50.

2019 SCC 65 (CanLII)

[28] Unfortunately, this contextual analysis proved to be unwieldly and offered limited practical guidance for courts attempting to assess an administrative decision maker's relative expertise. More recently, the dominant approach in this Court has been to accept that expertise simply inheres in an administrative body by virtue of the specialized function designated for it by the legislature: *Edmonton East*, at para. 33. However, if administrative decision makers are understood to possess specialized expertise on all questions that come before them, the concept of expertise ceases to assist a reviewing court in attempting to distinguish questions for which applying the reasonableness standard is appropriate from those for which it is not.

[29] Of course, the fact that the specialized role of administrative decision makers lends itself to the development of expertise and institutional experience is not the only reason that a legislature may choose to delegate decision-making authority. Over the years, the Court has pointed to a number of other compelling rationales for the legislature to delegate the administration of a statutory scheme to a particular administrative decision maker. These rationales have included the decision maker's proximity and responsiveness to stakeholders, ability to render decisions promptly, flexibly and efficiently, and ability to provide simplified and streamlined proceedings intended to promote access to justice.

[30] While specialized expertise and these other rationales may all be reasons for a legislature to delegate decision-making authority, a reviewing court need not evaluate which of these rationales apply in the case of a particular decision maker in

2019 SCC 65 (CanLII)

order to determine the standard of review. Instead, in our view, it is the *very fact* that the legislature has chosen to delegate authority which justifies a default position of reasonableness review. The Court has in fact recognized this basis for applying the reasonableness standard to administrative decisions in the past. In *Khosa*, for example, the majority understood *Dunsmuir* to stand for the proposition that "with or without a privative clause, a measure of deference has come to be accepted as appropriate where a particular decision had been allocated to an administrative decision-maker rather than to the courts": para. 25. More recently, in *Edmonton East*, Karakatsanis J. explained that a presumption of reasonableness review "respects the principle of legislative supremacy and the choice made to delegate decision making to a tribunal, rather than the courts": para. 22. And in *CHRC*, Gascon J. explained that "the fact that the legislature has allocated authority to a decision maker other than the courts is itself an indication that the legislature intended deferential review": para. 50. In other words, respect for this institutional design choice and the democratic principle, as well as the need for courts to avoid "undue interference" with the administrative decision maker's discharge of its functions, is what justifies the presumptive application of the reasonableness standard: *Dunsmuir*, at para. 27.

[31] We wish to emphasize that because these reasons adopt a presumption of reasonableness as the starting point, expertise is no longer relevant to a determination of the standard of review as it was in the contextual analysis. However, we are not doing away with the role of expertise in administrative decision making. This

2019 SCC 65 (CanLII)

consideration is simply folded into the new starting point and, as explained below, expertise remains a relevant consideration in conducting reasonableness review.

2019 SCC 65 (CanLII)

[32] That being said, our starting position that the applicable standard of review is reasonableness is not incompatible with the rule of law. However, because this approach is grounded in respect for legislative choice, it also requires courts to give effect to clear legislative direction that a different standard was intended. Similarly, a reviewing court must be prepared to derogate from the presumption of reasonableness review where respect for the rule of law requires a singular, determinate and final answer to the question before it. Each of these situations will be discussed in turn below.

B. *Derogation From the Presumption of Reasonableness Review on the Basis of Legislative Intent*

[33] This Court has described respect for legislative intent as the "polar star" of judicial review: *C.U.P.E. v. Ontario (Minister of Labour)*, 2003 SCC 29, [2003] 1 S.C.R. 539, at para. 149. This description remains apt. The presumption of reasonableness review discussed above is intended to give effect to the legislature's choice to leave certain matters with administrative decision makers rather than the courts. It follows that this presumption will be rebutted where a legislature has indicated that a different standard should apply. The legislature can do so in two ways. First, it may explicitly prescribe through statute what standard courts should apply when reviewing decisions of a particular administrative decision maker.

Second, it may direct that derogation from the presumption of reasonableness review is appropriate by providing for a statutory appeal mechanism from an administrative decision maker to a court, thereby signalling the application of appellate standards.

2019 SCC 65 (CanLII)

(1) Legislated Standards of Review

[34] Any framework rooted in legislative intent must, to the extent possible, respect clear statutory language that prescribes the applicable standard of review. This Court has consistently affirmed that legislated standards of review should be given effect: see, e.g., *R. v. Owen*, 2003 SCC 33, [2003] 1 S.C.R. 779, at paras. 31-32; *Khosa*, at paras. 18-19; *British Columbia (Workers' Compensation Board) v. Figliola*, 2011 SCC 52, [2011] 3 S.C.R. 422, at para. 20; *Moore v. British Columbia (Education)*, 2012 SCC 61, [2012] 3 S.C.R. 360, at para. 55; *McCormick v. Fasken Martineau DuMoulin LLP*, 2014 SCC 39, [2014] 2 S.C.R. 108, at para. 16; *British Columbia (Workers' Compensation Appeal Tribunal) v. Fraser Health Authority*, 2016 SCC 25, [2016] 1 S.C.R. 587, at paras. 8 and 29; *British Columbia Human Rights Tribunal v. Schrenk*, 2017 SCC 62, [2017] 2 S.C.R. 795, at para. 28.

[35] It follows that where a legislature has indicated that courts are to apply the standard of correctness in reviewing certain questions, that standard must be applied. In British Columbia, the legislature has established the applicable standard of review for many tribunals by reference to the *Administrative Tribunals Act*, S.B.C. 2004, c. 45: see ss. 58 and 59. For example, it has provided that the standard of review applicable to decisions on questions of statutory interpretation by the B.C.

Human Rights Tribunal is to be correctness: *ibid.*, s. 59(1); *Human Rights Code*, R.S.B.C. 1996, c. 210, s. 32. We continue to be of the view that where the legislature has indicated the applicable standard of review, courts are bound to respect that designation, within the limits imposed by the rule of law.

2019 SCC 65 (CanLII)

(2) Statutory Appeal Mechanisms

[36] We have reaffirmed that, to the extent possible, the standard of review analysis requires courts to give effect to the legislature's institutional design choices to delegate authority through statute. In our view, this principled position also requires courts to give effect to the legislature's intent, signalled by the presence of a statutory appeal mechanism from an administrative decision to a court, that the court is to perform an appellate function with respect to that decision. Just as a legislature may, within constitutional limits, insulate administrative decisions from judicial interference, it may also choose to establish a regime "which does not exclude the courts but rather makes them part of the enforcement machinery": *Seneca College of Applied Arts and Technology v. Bhadauria*, [1981] 2 S.C.R. 181, at p. 195. Where a legislature has provided that parties may appeal from an administrative decision to a court, either as of right or with leave, it has subjected the administrative regime to appellate oversight and indicated that it expects the court to scrutinize such administrative decisions on an appellate basis. This expressed intention necessarily rebuts the blanket presumption of reasonableness review, which is premised on giving effect to a legislature's decision to leave certain issues with a body other than a court.

This intention should be given effect. As noted by the intervener Attorney General of Quebec in its factum, [TRANSLATION] "[t]he requirement of deference must not sterilize such an appeal mechanism to the point that it changes the nature of the decision-making process the legislature intended to put in place": para. 2.

[37] It should therefore be recognized that, where the legislature has provided for an appeal from an administrative decision to a court, a court hearing such an appeal is to apply appellate standards of review to the decision. This means that the applicable standard is to be determined with reference to the nature of the question and to this Court's jurisprudence on appellate standards of review. Where, for example, a court is hearing an appeal from an administrative decision, it would, in considering questions of law, including questions of statutory interpretation and those concerning the scope of a decision maker's authority, apply the standard of correctness in accordance with *Housen v. Nikolaisen*, 2002 SCC 33, [2002] 2 S.C.R. 235, at para. 8. Where the scope of the statutory appeal includes questions of fact, the appellate standard of review for those questions is palpable and overriding error (as it is for questions of mixed fact and law where the legal principle is not readily extricable): see *Housen*, at paras. 10, 19 and 26-37. Of course, should a legislature intend that a different standard of review apply in a statutory appeal, it is always free to make that intention known by prescribing the applicable standard through statute.

[38] We acknowledge that giving effect to statutory appeal mechanisms in this way departs from the Court's recent jurisprudence. However, after careful

2019 SCC 65 (CanLII)

consideration, we are of the view that this shift is necessary in order to bring coherence and conceptual balance to the standard of review analysis and is justified by a weighing of the values of certainty and correctness: *Craig*, at para. 27. Our conclusion is based on the following considerations.

[39] First, there has been significant judicial and academic criticism of this Court's recent approach to statutory appeal rights: see, e.g., Y.-M. Morissette, "What is a 'reasonable decision'?" (2018), 31 *C.J.A.L.P.* 225, at p. 244; the Hon. J.T. Robertson, *Administrative Deference: The Canadian Doctrine that Continues to Disappoint* (April 18, 2018) (online), at p. 8; the Hon. D. Stratas, "The Canadian Law of Judicial Review: A Plea for Doctrinal Coherence and Consistency" (2016), 42 *Queen's L.J.* 27, at p. 33; Daly, at pp. 541-42; *Québec (Procureure générale) v. Montréal (Ville)*, 2016 QCCA 2108, 17 Admin. L.R. (6th) 328, at paras. 36-46; *Bell Canada v. 7265921 Canada Ltd.*, 2018 FCA 174, 428 D.L.R. (4th) 311, at paras. 190-92, per Nadon J.A., concurring, and at 66 and 69-72, per Rennie J.A., dissenting; *Garneau Community League v. Edmonton (City)*, 2017 ABCA 374, 60 Alta. L.R. (6th) 1, at paras. 91 and 93-95, per Slatter J.A., concurring; *Nova Scotia (Attorney General) v. S&D Smith Central Supplies Limited*, 2019 NSCA 22, at paras. 250, 255-64 and 274-302 (CanLII), per Beveridge J.A., dissenting; *Atlantic Mining NS Corp. (D.D.V. Gold Limited) v. Oakley*, 2019 NSCA 14, at paras. 9-14 (CanLII). These critiques seize on the inconsistency inherent in a standard of review framework based on legislative intent that otherwise declines to give meaning to an express statutory right of appeal. This criticism observes that legislative choice is not one-

2019 SCC 65 (CanLII)

dimensional; rather, it pulls in two directions. While a legislative choice to delegate to an administrative decision maker grounds a presumption of reasonableness on the one hand, a legislative choice to enact a statutory right of appeal signals an intention to ascribe an appellate role to reviewing courts on the other hand.

[40] This Court has in the past held that the existence of significant and valid judicial, academic and other criticism of its jurisprudence may justify reconsideration of a precedent: *Craig*, at para. 29; *R. v. Robinson*, [1996] 1 S.C.R. 683, at paras. 35-41. This consideration applies in the instant case. In particular, the suggestion that the recent treatment of statutory rights of appeal represents a departure from the conceptual basis underpinning the standard of review framework is itself a compelling reason to re-examine the current approach: *Khosa*, at para. 87, per Rothstein J., concurring in the result.

[41] Second, there is no satisfactory justification for the recent trend in this Court's jurisprudence to give no effect to statutory rights of appeal in the standard of review analysis absent exceptional wording: see *Tervita Corp. v. Canada (Commissioner of Competition)*, 2015 SCC 3, [2015] 1 S.C.R. 161, at paras. 35-39. Indeed, this approach is itself a departure from earlier jurisprudence: the Hon. J. T. Robertson, "Judicial Deference to Administrative Tribunals: A Guide to 60 Years of Supreme Court Jurisprudence" (2014), 66 *S.C.L.R.* (2d) 1, at pp. 91-93. Under the former "pragmatic and functional" approach to determining the applicable standard of review, the existence of a privative clause or a statutory right of appeal

2019 SCC 65 (CanLII)

was one of four contextual factors that a court would consider in order to determine the standard that the legislature intended to apply to a particular decision. Although a statutory appeal clause was not determinative, it was understood to be a key factor indicating that the legislature intended that a less deferential standard of review be applied: see, e.g., *Pezim*, at pp. 589-92; *British Columbia Telephone Co. v. Shaw Cable Systems (B.C.) Ltd.*, [1995] 2 S.C.R. 739, at paras. 28-31; *Southam*, at paras. 30-32, 46 and 54-55; *Pushpanathan*, at paras. 30-31; *Dr. Q*, at para. 27; *Mattel*, at paras. 26-27; *Law Society of New Brunswick v. Ryan*, 2003 SCC 20, [2003] 1 S.C.R. 247, at paras. 21 and 27-29; *Barrie Public Utilities v. Canadian Cable Television Assn.*, 2003 SCC 28, [2003] 1 S.C.R. 476, at para. 11; *Monsanto Canada Inc. v. Ontario (Superintendent of Financial Services)*, 2004 SCC 54, [2004] 3 S.C.R. 152, at para. 7.

[42] The Court did indeed sometimes find that, even in a statutory appeal, a deferential standard of review was warranted for the legal findings of a decision maker that lay at the heart of the decision maker's expertise: see, e.g., *Pezim*. In other instances, however, the Court concluded that the existence of a statutory appeal mechanism and the fact that the decision maker did not have greater expertise than a court on the issue being considered indicated that correctness was the appropriate standard, including on matters involving the interpretation of the administrative decision maker's home statute: see, e.g., *Mattel*, at paras. 26-33; *Barrie Public Utilities*, at paras. 9-19; *Monsanto*, at paras. 6-16.

2019 SCC 65 (CanLII)

[43] Yet as, in *Dunsmuir*, *Alberta Teachers*, *Edmonton East* and subsequent cases, the standard of review analysis was simplified and shifted from a contextual analysis to an approach more focused on categories, statutory appeal mechanisms ceased to play a role in the analysis. Although this simplification of the standard of review analysis may have been a laudable change, it did not justify ceasing to give *any* effect to statutory appeal mechanisms. *Dunsmuir* itself provides little guidance on the rationale for this change. The majority in *Dunsmuir* was silent on the role of a statutory right of appeal in determining the standard of review, and did not refer to the prior treatment of statutory rights of appeal under the pragmatic and functional approach.

[44] More generally, there is no convincing reason to presume that legislatures mean something entirely different when they use the word "appeal" in an administrative law statute than they do in, for example, a criminal or commercial law context. Accepting that the word "appeal" refers to the same type of procedure in all these contexts also accords with the presumption of consistent expression, according to which the legislature is presumed to use language such that the same words have the same meaning both within a statute and across statutes: R. Sullivan, *Sullivan on the Construction of Statutes* (6th ed. 2014), at p. 217. Accepting that the legislature intends an appellate standard of review to be applied when it uses the word "appeal" also helps to explain why many statutes provide for *both* appeal and judicial review mechanisms in different contexts, thereby indicating two roles for reviewing courts: see, e.g., *Federal Courts Act*, R.S.C. 1985, c. F-7, ss. 27 and 28. This offers further

2019 SCC 65 (CanLII)

support for giving effect to statutory rights of appeal. Our colleagues' suggestion that our position in this regard "hinges" on what they call a "textualist argument" (at para. 246) is inaccurate.

2019 SCC 65 (CanLII)

[45] That there is no principled rationale for ignoring statutory appeal mechanisms becomes obvious when the broader context of those mechanisms is considered. The existence of a limited right of appeal, such as a right of appeal on questions of law or a right of appeal with leave of a court, does not preclude a court from considering other aspects of a decision in a judicial review proceeding. However, if the same standards of review applied regardless of whether a question was covered by the appeal provision, and regardless of whether an individual subject to an administrative decision was granted leave to appeal or applied for judicial review, the appeal provision would be completely redundant — contrary to the well-established principle that the legislature does not speak in vain: *Attorney General of Quebec v. Carrières Ste-Thérèse Ltée*, [1985] 1 S.C.R. 831, at p. 838.

[46] Finally, and most crucially, the appeals now before the Court have allowed for a comprehensive and considered examination of the standard of review analysis with the goal of remedying the conceptual and practical difficulties that have made this area of the law challenging for litigants and courts alike. To achieve this goal, the revised framework must, for at least two reasons, give effect to statutory appeal mechanisms. The first reason is conceptual. In the past, this Court has looked past an appeal clause primarily when the decision maker possessed greater relative

expertise — what it called the "specialization of duties" principle in *Pezim*, at p. 591. But, as discussed above, the presumption of reasonableness review is no longer premised upon notions of relative expertise. Instead, it is now based on respect for the legislature's institutional design choice, according to which the authority to make a decision is vested in an administrative decision maker rather than in a court. It would be inconsistent with this conceptual basis for the presumption of reasonableness review to disregard clear indications that the legislature has intentionally chosen a more involved role for the courts. Just as recognizing a presumption of reasonableness review on all questions respects a legislature's choice to leave some matters first and foremost to an administrative decision maker, departing from that blanket presumption in the context of a statutory appeal respects the legislature's choice of a more involved role for the courts in supervising administrative decision making.

[47] The second reason is that, building on developments in the case law over the past several years, this decision conclusively closes the door on the application of a contextual analysis to determine the applicable standard, and in doing so streamlines and simplifies the standard of review framework. With the elimination of the contextual approach to selecting the standard of review, the need for statutory rights of appeal to play a role becomes clearer. Eliminating the contextual approach means that statutory rights of appeal must now either play no role in administrative law or be accepted as directing a departure from the default position of reasonableness review. The latter must prevail.

2019 SCC 65 (CanLII)

[48] Our colleagues agree that the time has come to put the contextual approach espoused in *Dunsmuir* to rest and adopt a presumption of reasonableness review. We part company on the extent to which the departure from the contextual approach requires corresponding modifications to other aspects of the standard of review jurisprudence. We consider that the elimination of the contextual approach represents an incremental yet important adjustment to Canada's judicial review roots. While it is true that this Court has, in the past several years of jurisprudential development, warned that the contextual approach should be applied "sparingly" (*CHRC*, at para. 46), it is incorrect to suggest that our jurisprudence was such that the elimination of the contextual analysis was "all but complete": reasons of Abella and Karakatsanis JJ., at para. 277; see, in this regard, *CHRC*, at paras. 44-54; *Saguenay*, at para. 46; *Tervita*, at para. 35; *McLean*, at para. 22; *Edmonton East*, at para. 32; *Rogers Communications Inc. v. Society of Composers, Authors and Music Publishers of Canada*, 2012 SCC 35, [2012] 2 S.C.R. 283, at para. 15. The contextual analysis was one part of the broader standard of review framework set out in *Dunsmuir*. A departure from this aspect of the *Dunsmuir* framework requires a principled rebalancing of the framework as a whole in order to maintain the equilibrium between the roles of administrative decision makers and reviewing courts that is fundamental to administrative law.

[49] In our view, with the starting position of this presumption of reasonableness review, and in the absence of a searching contextual analysis, legislative intent can only be given effect in this framework if statutory appeal

2019 SCC 65 (CanLII)

mechanisms, as clear signals of legislative intent with respect to the applicable standard of review, are given effect through the application of appellate standards by reviewing courts. Conversely, in such a framework that is based on a presumption of reasonableness review, contextual factors that courts once looked to as signalling deferential review, such as privative clauses, serve no independent or additional function in identifying the standard of review.

[50] We wish, at this juncture, to make three points regarding how the presence of a statutory appeal mechanism should inform the choice of standard analysis. First, we note that statutory regimes that provide for parties to appeal to a court from an administrative decision may allow them to do so in all cases (that is, as of right) or only with leave of the court. While the existence of a leave requirement will affect whether a court will hear an appeal from a particular decision, it does not affect the standard to be applied if leave is given and the appeal is heard.

[51] Second, we note that not all legislative provisions that contemplate a court reviewing an administrative decision actually provide a right of appeal. Some provisions simply recognize that all administrative decisions are subject to judicial review and address procedural or other similar aspects of judicial review in a particular context. Since these provisions do not give courts an appellate function, they do not authorize the application of appellate standards. Some examples of such provisions are ss. 18 to 18.2, 18.4 and 28 of the *Federal Courts Act*, which confer jurisdiction on the Federal Court and the Federal Court of Appeal to hear and

2019 SCC 65 (CanLII)

determine applications for judicial review of decisions of federal bodies and grant remedies, and also address procedural aspects of such applications: see *Khosa*, at para. 34. Another example is the current version of s. 470 of Alberta's *Municipal Government Act*, R.S.A. 2000, c. M-26, which does not provide for an appeal to a court, but addresses procedural considerations and consequences that apply "[w]here a decision of an assessment review board is the subject of an application for judicial review": s. 470(1).

[52] Third, we would note that statutory appeal rights are often circumscribed, as their scope might be limited with reference to the types of questions on which a party may appeal (where, for example, appeals are limited to questions of law) or the types of decisions that may be appealed (where, for example, not every decision of an administrative decision maker may be appealed to a court), or to the party or parties that may bring an appeal. However, the existence of a circumscribed right of appeal in a statutory scheme does not on its own preclude applications for judicial review of decisions, or of aspects of decisions, to which the appeal mechanism does not apply, or by individuals who have no right of appeal. But any such application for judicial review is distinct from an appeal, and the presumption of reasonableness review that applies on judicial review cannot then be rebutted by reference to the statutory appeal mechanism.

C. *The Applicable Standard Is Correctness Where Required by the Rule of Law*

2019 SCC 65 (CanLII)

[53] In our view, respect for the rule of law requires courts to apply the standard of correctness for certain types of legal questions: constitutional questions, general questions of law of central importance to the legal system as a whole and questions regarding the jurisdictional boundaries between two or more administrative bodies. The application of the correctness standard for such questions respects the unique role of the judiciary in interpreting the Constitution and ensures that courts are able to provide the last word on questions for which the rule of law requires consistency and for which a final and determinate answer is necessary: *Dunsmuir*, at para. 58.

[54] When applying the correctness standard, the reviewing court may choose either to uphold the administrative decision maker's determination or to substitute its own view: *Dunsmuir*, at para. 50. While it should take the administrative decision maker's reasoning into account — and indeed, it may find that reasoning persuasive and adopt it — the reviewing court is ultimately empowered to come to its own conclusions on the question.

(1) Constitutional Questions

[55] Questions regarding the division of powers between Parliament and the provinces, the relationship between the legislature and the other branches of the state, the scope of Aboriginal and treaty rights under s. 35 of the *Constitution Act, 1982*, and other constitutional matters require a final and determinate answer from the courts. Therefore, the standard of correctness must continue to be applied in

2019 SCC 65 (CanLII)

reviewing such questions: *Dunsmuir*, para. 58; *Westcoast Energy Inc. v. Canada (National Energy Board)*, [1998] 1 S.C.R. 322.

2019 SCC 65 (CanLII)

[56] The Constitution — both written and unwritten — dictates the limits of all state action. Legislatures and administrative decision makers are bound by the Constitution and must comply with it. A legislature cannot alter the scope of its own constitutional powers through statute. Nor can it alter the constitutional limits of executive power by delegating authority to an administrative body. In other words, although a legislature may choose what powers it delegates to an administrative body, it cannot delegate powers that it does not constitutionally have. The constitutional authority to act must have determinate, defined and consistent limits, which necessitates the application of the correctness standard.

[57] Although the *amici* questioned the approach to the standard of review set out in *Doré v. Barreau du Québec*, 2012 SCC 12, [2012] 1 S.C.R. 395, a reconsideration of that approach is not germane to the issues in this appeal. However, it is important to draw a distinction between cases in which it is alleged that the effect of the administrative decision being reviewed is to unjustifiably limit rights under the *Canadian Charter of Rights and Freedoms* (as was the case in *Doré*) and those in which the issue on review is whether a provision of the decision maker's enabling statute violates the *Charter* (see, e.g., *Nova Scotia (Workers' Compensation Board) v. Martin*, 2003 SCC 54, [2003] 2 S.C.R. 504, at para. 65). Our jurisprudence holds that

an administrative decision maker's interpretation of the latter issue should be reviewed for correctness, and that jurisprudence is not displaced by these reasons.

2019 SCC 65 (CanLII)

(2) General Questions of Law of Central Importance to the Legal System as a Whole

[58] In *Dunsmuir*, a majority of the Court held that, in addition to constitutional questions, general questions of law which are "both of central importance to the legal system as a whole and outside the adjudicator's specialized area of expertise" will require the application of the correctness standard: para. 60, citing *Toronto (City) v. C.U.P.E., Local 79*, 2003 SCC 63, [2003] 3 S.C.R. 77, at para. 62, per LeBel J., concurring. We remain of the view that the rule of law requires courts to have the final word with regard to general questions of law that are "of central importance to the legal system as a whole". However, a return to first principles reveals that it is not necessary to evaluate the decision maker's specialized expertise in order to determine whether the correctness standard must be applied in cases involving such questions. As indicated above (at para. 31) of the reasons, the consideration of expertise is folded into the new starting point adopted in these reasons, namely the presumption of reasonableness review.

[59] As the majority of the Court recognized in *Dunsmuir*, the key underlying rationale for this category of questions is the reality that certain general questions of law "require uniform and consistent answers" as a result of "their impact on the administration of justice as a whole": *Dunsmuir*, para. 60. In these cases, correctness

review is necessary to resolve general questions of law that are of "fundamental importance and broad applicability", with significant legal consequences for the justice system as a whole or for other institutions of government: see *Toronto (City)*, at para. 70; *Alberta (Information and Privacy Commissioner) v. University of Calgary*, 2016 SCC 53, [2016] 2 S.C.R. 555, at para. 20; *Canadian National Railway*, at para. 60; *Chagnon v. Syndicat de la fonction publique et parapublique du Québec*, 2018 SCC 39, [2018] 2 S.C.R. 687, at para. 17; *Saguenay*, at para. 51; *Canada (Canadian Human Rights Commission) v. Canada (Attorney General)*, 2011 SCC 53, [2011] 3 S.C.R. 471 ("*Mowat*"), at para. 22; *Commission scolaire de Laval v. Syndicat de l'enseignement de la région de Laval*, 2016 SCC 8, [2016] 1 S.C.R. 29, at para. 38. For example, the question in *University of Calgary* could not be resolved by applying the reasonableness standard, because the decision would have had legal implications for a wide variety of other statutes and because the uniform protection of solicitor-client privilege — at issue in that case — is necessary for the proper functioning of the justice system: *University of Calgary*, at paras. 19-26. As this shows, the resolution of general questions of law "of central importance to the legal system as a whole" has implications beyond the decision at hand, hence the need for "uniform and consistent answers".

[60] This Court's jurisprudence continues to provide important guidance regarding what constitutes a general question of law of central importance to the legal system as a whole. For example, the following general questions of law have been held to be of central importance to the legal system as a whole: when an

2019 SCC 65 (CanLII)

administrative proceeding will be barred by the doctrines of *res judicata* and abuse of process (*Toronto (City)*, at para. 15); the scope of the state's duty of religious neutrality (*Saguenay*, at para. 49); the appropriateness of limits on solicitor-client privilege (*University of Calgary*, at para. 20); and the scope of parliamentary privilege (*Chagnon*, at para. 17). We caution, however, that this jurisprudence must be read carefully, given that expertise is no longer a consideration in identifying such questions: see, e.g., *CHRC*, at para. 43.

[61] We would stress that the mere fact that a dispute is "of wider public concern" is not sufficient for a question to fall into this category — nor is the fact that the question, when framed in a general or abstract sense, touches on an important issue: see, e.g., *Communications, Energy and Paperworkers Union of Canada, Local 30 v. Irving Pulp & Paper, Ltd.*, 2013 SCC 34, [2013] 2 S.C.R. 458, at para. 66; *McLean*, at para. 28; *Barreau du Québec v. Quebec (Attorney General)*, 2017 SCC 56, [2017] 2 S.C.R. 488, at para. 18. The case law reveals many examples of questions this Court has concluded are *not* general questions of law of central importance to the legal system as a whole. These include whether a certain tribunal can grant a particular type of compensation (*Mowat*, at para. 25); when estoppel may be applied as an arbitral remedy (*Nor-Man Regional Health Authority Inc. v. Manitoba Association of Health Care Professionals*, 2011 SCC 59, [2011] 3 S.C.R. 616, at paras. 37-38); the interpretation of a statutory provision prescribing timelines for an investigation (*Alberta Teachers*, at para. 32); the scope of a management rights clause in a collective agreement (*Irving Pulp & Paper*, at paras. 7, 15-16 and 66, per

2019 SCC 65 (CanLII)

Rothstein and Moldaver JJ., dissenting but not on this point); whether a limitation period had been triggered under securities legislation (*McLean*, at paras. 28-31); whether a party to a confidential contract could bring a complaint under a particular regulatory regime (*Canadian National Railway*, at para. 60); and the scope of an exception allowing non-advocates to represent a minister in certain proceedings (*Barreau du Québec*, at paras. 17-18). As these comments and examples indicate, this does not mean that simply because expertise no longer plays a role in the selection of the standard of review, questions of central importance are now transformed into a broad catch-all category for correctness review.

[62] In short, general questions of law of central importance to the legal system as a whole require a single determinate answer. In cases involving such questions, the rule of law requires courts to provide a greater degree of legal certainty than reasonableness review allows.

(3) Questions Regarding the Jurisdictional Boundaries Between Two or More Administrative Bodies

[63] Finally, the rule of law requires that the correctness standard be applied in order to resolve questions regarding the jurisdictional boundaries between two or more administrative bodies: *Dunsmuir*, para. 61. One such question arose in *Regina Police Assn. Inc. v. Regina (City) Board of Police Commissioners*, 2000 SCC 14, [2000] 1 S.C.R. 360, in which the issue was the jurisdiction of a labour arbitrator to consider matters of police discipline and dismissal that were otherwise subject to a

2019 SCC 65 (CanLII)

comprehensive legislative regime. Similarly, in *Quebec (Commission des droits de la personne et des droits de la jeunesse) v. Quebec (Attorney General)*, 2004 SCC 39, [2004] 2 S.C.R. 185, the Court considered a jurisdictional dispute between a labour arbitrator and the Quebec Human Rights Tribunal.

[64] Administrative decisions are rarely contested on this basis. Where they are, however, the rule of law requires courts to intervene where one administrative body has interpreted the scope of its authority in a manner that is incompatible with the jurisdiction of another. The rationale for this category of questions is simple: the rule of law cannot tolerate conflicting orders and proceedings where they result in a true operational conflict between two administrative bodies, pulling a party in two different and incompatible directions: see *British Columbia Telephone Co.*, at para. 80, per McLachlin J. (as she then was), concurring. Members of the public must know where to turn in order to resolve a dispute. As with general questions of law of central importance to the legal system as a whole, the application of the correctness standard in these cases safeguards predictability, finality and certainty in the law of administrative decision making.

D. *A Note Regarding Jurisdictional Questions*

[65] We would cease to recognize jurisdictional questions as a distinct category attracting correctness review. The majority in *Dunsmuir* held that it was "without question" (para. 50) that the correctness standard must be applied in reviewing jurisdictional questions (also referred to as true questions of jurisdiction or

2019 SCC 65 (CanLII)

vires). True questions of jurisdiction were said to arise "where the tribunal must explicitly determine whether its statutory grant of power gives it the authority to decide a particular matter": see *Dunsmuir*, at para. 59; *Quebec (Attorney General) v. Guérin*, 2017 SCC 42, [2017] 2 S.C.R. 3, at para. 32. Since *Dunsmuir*, however, majorities of this Court have questioned the necessity of this category, struggled to articulate its scope and "expressed serious reservations about whether such questions can be distinguished as a separate category of questions of law": *McLean*, at para. 25, referring to *Alberta Teachers*, at para. 34; *Edmonton East*, at para. 26; *Guérin*, at paras. 32-36; *CHRC*, at paras. 31-41.

[66] As Gascon J. noted in *CHRC*, the concept of "jurisdiction" in the administrative law context is inherently "slippery": para. 38. This is because, in theory, any challenge to an administrative decision can be characterized as "jurisdictional" in the sense that it calls into question whether the decision maker had the authority to act as it did: see *CHRC*, at para. 38; *Alberta Teachers*, at para. 34; see similarly *City of Arlington, Texas v. Federal Communications Commission*, 569 U.S. 290 (2013), at p. 299. Although this Court's jurisprudence contemplates that only a much narrower class of "truly" jurisdictional questions requires correctness review, it has observed that there are no "clear markers" to distinguish such questions from other questions related to the interpretation of an administrative decision maker's enabling statute: see *CHRC*, at para. 38. Despite differing views on whether it is possible to demarcate a class of "truly" jurisdictional questions, there is general agreement that "it is often difficult to distinguish between exercises of delegated

2019 SCC 65 (CanLII)

power that raise truly jurisdictional questions from those entailing an unremarkable application of an enabling statute": *CHRC*, at para. 111, per Brown J., concurring. This tension is perhaps clearest in cases where the legislature has delegated broad authority to an administrative decision maker that allows the latter to make regulations in pursuit of the objects of its enabling statute: see, e.g., *Green v. Law Society of Manitoba*, 2017 SCC 20, **[2017] 1 S.C.R. 360**; *West Fraser Mills Ltd. v. British Columbia (Workers' Compensation Appeal Tribunal)*, 2018 SCC 22, [2018] 1 S.C.R. 635.

[67] In *CHRC*, the majority, while noting this inherent difficulty — and the negative impact on litigants of the resulting uncertainty in the law — nonetheless left the question of whether the category of true questions of jurisdiction remains necessary to be determined in a later case. After hearing submissions on this issue and having an adequate opportunity for reflection on this point, we are now in a position to conclude that it is not necessary to maintain this category of correctness review. The arguments that support maintaining this category — in particular the concern that a delegated decision maker should not be free to determine the scope of its own authority — can be addressed adequately by applying the framework for conducting reasonableness review that we describe below. Reasonableness review is both robust and responsive to context. A proper application of the reasonableness standard will enable courts to fulfill their constitutional duty to ensure that administrative bodies have acted within the scope of their lawful authority without having to conduct a preliminary assessment regarding whether a particular interpretation raises a "truly"

2019 SCC 65 (CanLII)

or "narrowly" jurisdictional issue and without having to apply the correctness standard.

2019 SCC 65 (CanLII)

[68] Reasonableness review does not give administrative decision makers free rein in interpreting their enabling statutes, and therefore does not give them licence to enlarge their powers beyond what the legislature intended. Instead, it confirms that the governing statutory scheme will always operate as a constraint on administrative decision makers and as a limit on their authority. Even where the reasonableness standard is applied in reviewing a decision maker's interpretation of its authority, precise or narrow statutory language will necessarily limit the number of *reasonable* interpretations open to the decision maker — perhaps limiting it one. Conversely, where the legislature has afforded a decision maker broad powers in general terms — and has provided no right of appeal to a court — the legislature's intention that the decision maker have greater leeway in interpreting its enabling statute should be given effect. Without seeking to import the U.S. jurisprudence on this issue wholesale, we find that the following comments of the Supreme Court of the United States in *Arlington*, at p. 307, are apt:

> The fox-in-the-henhouse syndrome is to be avoided not by establishing an arbitrary and undefinable category of agency decision-making that is accorded no deference, but by taking seriously, and applying rigorously, in all cases, statutory limits on agencies' authority. Where [the legislature] has established a clear line, the agency cannot go beyond it; and where [the legislature] has established an ambiguous line, the agency can go no further than the ambiguity will fairly allow. But in rigorously applying the latter rule, a court need not pause to puzzle over whether the interpretive question presented is "jurisdictional" . . . .

E. *Other Circumstances Requiring a Derogation from the Presumption of Reasonableness Review*

[69] In these reasons, we have identified five situations in which a derogation from the presumption of reasonableness review is warranted either on the basis of legislative intent (i.e., legislated standards of review and statutory appeal mechanisms) or because correctness review is required by the rule of law (i.e., constitutional questions, general questions of law of central importance to the legal system as a whole, and questions regarding jurisdictional boundaries between administrative bodies). This framework is the product of careful consideration undertaken following extensive submissions and based on a thorough review of the relevant jurisprudence. We are of the view, at this time, that these reasons address all of the situations in which a reviewing court should derogate from the presumption of reasonableness review. As previously indicated, courts should no longer engage in a contextual inquiry to determine the standard of review or to rebut the presumption of reasonableness review. Letting go of this contextual approach will, we hope, "get the parties away from arguing about the tests and back to arguing about the substantive merits of their case": *Alberta Teachers*, at para. 36, quoting *Dunsmuir*, at para. 145, per Binnie J., concurring.

[70] However, we would not definitively foreclose the possibility that another category could be recognized as requiring a derogation from the presumption of reasonableness review in a future case. But our reluctance to pronounce that the list of exceptions to the application of a reasonableness standard is closed should not be

2019 SCC 65 (CanLII)

understood as inviting the routine establishment of new categories requiring correctness review. Rather, it is a recognition that it would be unrealistic to declare that we have contemplated every possible set of circumstances in which legislative intent or the rule of law will require a derogation from the presumption of reasonableness review. That being said, the recognition of any new basis for correctness review would be exceptional and would need to be consistent with the framework and the overarching principles set out in these reasons. In other words, any new category warranting a derogation from the presumption of reasonableness review on the basis of legislative intent would require a signal of legislative intent as strong and compelling as those identified in these reasons (i.e., a legislated standard of review or a statutory appeal mechanism). Similarly, the recognition of a new category of questions requiring correctness review that is based on the rule of law would be justified only where failure to apply correctness review would undermine the rule of law and jeopardize the proper functioning of the justice system in a manner analogous to the three situations described in these reasons.

[71] The *amici curiae* suggest that, in addition to the three categories of legal questions identified above, the Court should recognize an additional category of legal questions that would require correctness review on the basis of the rule of law: legal questions regarding which there is persistent discord or internal disagreement within an administrative body leading to legal incoherence. They argue that correctness review is necessary in such situations because the rule of law breaks down where legal inconsistency becomes the norm and the law's meaning comes to depend on the

2019 SCC 65 (CanLII)

identity of the decision maker. The *amici curiae* submit that, where competing reasonable legal interpretations linger over time at the administrative level — such that a statute comes to mean, simultaneously, both "yes" and "no" — the courts must step in to provide a determinative answer to the question without according deference to the administrative decision maker: factum of the *amici curiae*, at para. 91.

2019 SCC 65 (CanLII)

[72] We are not persuaded that the Court should recognize a distinct correctness category for legal questions on which there is persistent discord within an administrative body. In *Domtar Inc. v. Quebec (Commission d'appel en matière de lésions professionnelles)*, [1993] 2 S.C.R. 756, this Court held that "a lack of unanimity [within a tribunal] is the price to pay for the decision-making freedom and independence given to the members of these tribunals": p. 800; see also *Ellis-Don Ltd. v. Ontario (Labour Relations Board)*, 2001 SCC 4, [2001] 1 S.C.R. 221, at para. 28. That said, we agree that the hypothetical scenario suggested by the *amici curiae* — in which the law's meaning depends on the identity of the individual decision maker, thereby leading to legal incoherence — is antithetical to the rule of law. In our view, however, the more robust form of reasonableness review set out below, which accounts for the value of consistency and the threat of arbitrariness, is capable, in tandem with internal administrative processes to promote consistency and with legislative oversight (see *Domtar*, at p. 801), of guarding against threats to the rule of law. Moreover, the precise point at which internal discord on a point of law would be so serious, persistent and unresolvable that the resulting situation would amount to "legal incoherence" and require a court to step in is not obvious. Given these practical

difficulties, this Court's binding jurisprudence and the hypothetical nature of the problem, we decline to recognize such a category in this appeal.

2019 SCC 65 (CanLII)

III. Performing Reasonableness Review

[73] This Court's administrative law jurisprudence has historically focused on the analytical framework used to determine the applicable standard of review, while providing relatively little guidance on how to conduct reasonableness review in practice.

[74] In this section of our reasons, we endeavour to provide that guidance. The approach we set out is one that focuses on justification, offers methodological consistency and reinforces the principle "that reasoned decision-making is the lynchpin of institutional legitimacy": *amici curiae* factum, at para. 12.

[75] We pause to note that our colleagues' approach to reasonableness review is not fundamentally dissimilar to ours. Our colleagues emphasize that reviewing courts should respect administrative decision makers and their specialized expertise, should not ask how they themselves would have resolved an issue and should focus on whether the applicant has demonstrated that the decision is unreasonable: paras. 288, 289 and 291. We agree. As we have stated above, at para. 13, reasonableness review finds its starting point in judicial restraint and respects the distinct role of administrative decision makers. Moreover, as explained below, reasonableness

review considers all relevant circumstances in order to determine whether the applicant has met their onus.

A. *Procedural Fairness and Substantive Review*

[76] Before turning to a discussion of the proposed approach to reasonableness review, we pause to acknowledge that the requirements of the duty of procedural fairness in a given case — and in particular whether that duty requires a decision maker to give reasons for its decision — will impact how a court conducts reasonableness review.

[77] It is well established that, as a matter of procedural fairness, reasons are not required for all administrative decisions. The duty of procedural fairness in administrative law is "eminently variable", inherently flexible and context-specific: *Knight v. Indian Head School Division No. 19*, [1990] 1 S.C.R. 653, at p. 682; *Baker v. Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817, at paras. 22-23; *Moreau-Bérubé*, at paras. 74‑75; *Dunsmuir*, at para. 79. Where a particular administrative decision-making context gives rise to a duty of procedural fairness, the specific procedural requirements that the duty imposes are determined with reference to all of the circumstances: *Baker*, at para. 21. In *Baker*, this Court set out a non-exhaustive list of factors that inform the content of the duty of procedural fairness in a particular case, one aspect of which is whether written reasons are required. Those factors include: (1) the nature of the decision being made and the

2019 SCC 65 (CanLII)

process followed in making it; (2) the nature of the statutory scheme; (3) the importance of the decision to the individual or individuals affected; (4) the legitimate expectations of the person challenging the decision; and (5) the choices of procedure made by the administrative decision maker itself: *Baker*, at paras. 23-27; see also *Congrégation des témoins de Jéhovah de St-Jérôme-Lafontaine v. Lafontaine (Village)*, 2004 SCC 48, [2004] 2 S.C.R. 650, at para. 5. Cases in which written reasons tend to be required include those in which the decision-making process gives the parties participatory rights, an adverse decision would have a significant impact on an individual or there is a right of appeal: *Baker*, at para. 43; D. J. M. Brown and the Hon. J. M. Evans, with the assistance of D. Fairlie, *Judicial Review of Administrative Action in Canada* (loose-leaf), vol. 3, at p. 12-54.

[78] In the case at bar and in its companion cases, reasons for the administrative decisions at issue were both required and provided. Our discussion of the proper approach to reasonableness review will therefore focus on the circumstances in which reasons for an administrative decision are required and available to the reviewing court.

[79] Notwithstanding the important differences between the administrative context and the judicial context, reasons generally serve many of the same purposes in the former as in the latter: *R. v. Sheppard*, 2002 SCC 26, [2002] 1 S.C.R. 869, at paras. 15 and 22-23. Reasons explain how and why a decision was made. They help to show affected parties that their arguments have been considered and demonstrate

2019 SCC 65 (CanLII)

that the decision was made in a fair and lawful manner. Reasons shield against arbitrariness as well as the perception of arbitrariness in the exercise of public power: *Congrégation des témoins de Jéhovah de St-Jérôme-Lafontaine*, at paras. 12-13. As L'Heureux-Dubé J. noted in *Baker*, "[t]hose affected may be more likely to feel they were treated fairly and appropriately if reasons are given": para. 39, citing S.A. de Smith, J. Jowell and Lord Woolf, *Judicial Review of Administrative Action* (5th ed. 1995), at pp. 459-60. And as Jocelyn Stacey and the Hon. Alice Woolley persuasively write, "public decisions gain their democratic and legal authority through a process of public justification" which includes reasons "that justify [the] decisions [of public decision makers] in light of the constitutional, statutory and common law context in which they operate": "Can Pragmatism Function in Administrative Law?" (2016), 74 *S.C.L.R.* (2d) 211, at p. 220.

[80] The process of drafting reasons also necessarily encourages administrative decision makers to more carefully examine their own thinking and to better articulate their analysis in the process: *Baker*, at para. 39. This is what Justice Sharpe describes — albeit in the judicial context — as the "discipline of reasons": *Good Judgment*: *Making Judicial Decisions* (2018), at p. 134; see also *Sheppard*, at para. 23.

[81] Reasons facilitate meaningful judicial review by shedding light on the rationale for a decision: *Baker*, at para. 39. In *Newfoundland and Labrador Nurses' Union v. Newfoundland and Labrador (Treasury Board)*, 2011 SCC 62, [2011] 3

2019 SCC 65 (CanLII)

S.C.R. 708, the Court reaffirmed that "the purpose of reasons, when they are required, is to demonstrate 'justification, transparency and intelligibility'": para. 1, quoting *Dunsmuir*, at para. 47; see also *Suresh v. Canada (Minister of Citizenship and Immigration)*, 2002 SCC 1, [2002] 1 S.C.R. 3, at para. 126. The starting point for our analysis is therefore that where reasons are required, they are the primary mechanism by which administrative decision makers show that their decisions are reasonable — both to the affected parties and to the reviewing courts. It follows that the provision of reasons for an administrative decision may have implications for its legitimacy, including in terms both of whether it is procedurally fair and of whether it is substantively reasonable.

2019 SCC 65 (CanLII)

B. *Reasonableness Review Is Concerned With the Decision-making Process and Its Outcomes*

[82] Reasonableness review aims to give effect to the legislature's intent to leave certain decisions with an administrative body while fulfilling the constitutional role of judicial review to ensure that exercises of state power are subject to the rule of law: see *Dunsmuir*, at paras. 27-28 and 48; *Catalyst Paper Corp. v. North Cowichan (District)*, 2012 SCC 2, [2012] 1 S.C.R. 5, at para. 10; *Reference re Remuneration of Judges of the Provincial Court of Prince Edward Island*, [1997] 3 S.C.R. 3, at para. 10.

[83] It follows that the focus of reasonableness review must be on the decision actually made by the decision maker, including both the decision maker's reasoning

process and the outcome. The role of courts in these circumstances is to *review*, and they are, at least as a general rule, to refrain from deciding the issue themselves. Accordingly, a court applying the reasonableness standard does not ask what decision it would have made in place of that of the administrative decision maker, attempt to ascertain the "range" of possible conclusions that would have been open to the decision maker, conduct a *de novo* analysis or seek to determine the "correct" solution to the problem. The Federal Court of Appeal noted in *Delios v. Canada (Attorney General)*, 2015 FCA 117, 472 N.R. 171, that, "as reviewing judges, we do not make our own yardstick and then use that yardstick to measure what the administrator did": at para. 28; see also *Ryan*, at paras. 50-51. Instead, the reviewing court must consider only whether the decision made by the administrative decision maker — including both the rationale for the decision and the outcome to which it led — was unreasonable.

[84] As explained above, where the administrative decision maker has provided written reasons, those reasons are the means by which the decision maker communicates the rationale for its decision. A principled approach to reasonableness review is one which puts those reasons first. A reviewing court must begin its inquiry into the reasonableness of a decision by examining the reasons provided with "respectful attention" and seeking to understand the reasoning process followed by the decision maker to arrive at its conclusion: see *Dunsmuir*, at para. 48, quoting D. Dyzenhaus, "The Politics of Deference: Judicial Review and Democracy", in M. Taggart, ed., *The Province of Administrative Law* (1997), 279, at p. 286.

2019 SCC 65 (CanLII)

[85] Developing an understanding of the reasoning that led to the administrative decision enables a reviewing court to assess whether the decision as a whole is reasonable. As we will explain in greater detail below, a reasonable decision is one that is based on an internally coherent and rational chain of analysis and that is justified in relation to the facts and law that constrain the decision maker. The reasonableness standard requires that a reviewing court defer to such a decision.

[86] Attention to the decision maker's reasons is part of how courts demonstrate respect for the decision-making process: see *Dunsmuir*, at paras. 47-49. In *Dunsmuir*, this Court explicitly stated that the court conducting a reasonableness review is concerned with "the qualities that make a decision reasonable, referring both to the process of articulating the reasons and to outcomes": para. 47. Reasonableness, according to *Dunsmuir*, "is concerned mostly with the existence of justification, transparency and intelligibility within the decision-making process", as well as "with whether the decision falls within a range of possible, acceptable outcomes which are defensible in respect of the facts and law": *ibid.* In short, it is not enough for the outcome of a decision to be *justifiable*. Where reasons for a decision are required, the decision must also be *justified*, by way of those reasons, by the decision maker to those to whom the decision applies. While some outcomes may be so at odds with the legal and factual context that they could never be supported by intelligible and rational reasoning, an otherwise reasonable outcome also cannot stand if it was reached on an improper basis.

2019 SCC 65 (CanLII)

[87] This Court's jurisprudence since *Dunsmuir* should not be understood as having shifted the focus of reasonableness review away from a concern with the reasoning process and toward a nearly exclusive focus on the *outcome* of the administrative decision under review. Indeed, that a court conducting a reasonableness review properly considers both the outcome of the decision and the reasoning process that led to that outcome was recently reaffirmed in *Delta Air Lines Inc. v. Lukács*, 2018 SCC 2, [2018] 1 S.C.R. 6, at para. 12. In that case, although the outcome of the decision at issue may not have been unreasonable in the circumstances, the decision was set aside because the outcome had been arrived at on the basis of an unreasonable chain of analysis. This approach is consistent with the direction in *Dunsmuir* that judicial review is concerned with *both* outcome *and* process. To accept otherwise would undermine, rather than demonstrate respect toward, the institutional role of the administrative decision maker.

C. *Reasonableness Is a Single Standard That Accounts for Context*

[88] In any attempt to develop a coherent and unified approach to judicial review, the sheer variety of decisions and decision makers that such an approach must account for poses an inescapable challenge. The administrative decision makers whose decisions may be subject to judicial review include specialized tribunals exercising adjudicative functions, independent regulatory bodies, ministers, front-line decision makers, and more. Their decisions vary in complexity and importance, ranging from the routine to the life-altering. These include matters of "high policy"

2019 SCC 65 (CanLII)

on the one hand and "pure law" on the other. Such decisions will sometimes involve complex technical considerations. At other times, common sense and ordinary logic will suffice.

[89] Despite this diversity, reasonableness remains a single standard, and elements of a decision's context do not modulate the standard or the degree of scrutiny by the reviewing court. Instead, the particular context of a decision constrains what will be reasonable for an administrative decision maker to decide in a given case. This is what it means to say that "[r]easonableness is a single standard that takes its colour from the context": *Khosa*, at para. 59; *Catalyst*, at para. 18; *Halifax (Regional Municipality) v. Nova Scotia (Human Rights Commission)*, 2012 SCC 10, **[2012] 1 S.C.R. 364,** at para. 44; *Wilson*, at para. 22, per Abella J.; *Canada (Attorney General) v. Igloo Vikski Inc.*, 2016 SCC 38, [2016] 2 S.C.R. 80, at para. 57, per Côté J., dissenting but not on this point; *Law Society of British Columbia v. Trinity Western University*, 2018 SCC 32, **[2018] 2 S.C.R. 293,** at para. 53.

[90] The approach to reasonableness review that we articulate in these reasons accounts for the diversity of administrative decision making by recognizing that what is reasonable in a given situation will always depend on the constraints imposed by the legal and factual context of the particular decision under review. These contextual constraints dictate the limits and contours of the space in which the decision maker may act and the types of solutions it may adopt. The fact that the contextual constraints operating on an administrative decision maker may vary from one

2019 SCC 65 (CanLII)

decision to another does not pose a problem for the reasonableness standard, because each decision must be both justified by the administrative body and evaluated by reviewing courts in relation to its own particular context.

2019 SCC 65 (CanLII)

D. *Formal Reasons for a Decision Should Be Read in Light of the Record and With Due Sensitivity to the Administrative Setting in Which They Were Given*

[91] A reviewing court must bear in mind that the written reasons given by an administrative body must not be assessed against a standard of perfection. That the reasons given for a decision do "not include all the arguments, statutory provisions, jurisprudence or other details the reviewing judge would have preferred" is not on its own a basis to set the decision aside: *Newfoundland Nurses*, at para. 16. The review of an administrative decision can be divorced neither from the institutional context in which the decision was made nor from the history of the proceedings.

[92] Administrative decision makers cannot always be expected to deploy the same array of legal techniques that might be expected of a lawyer or judge — nor will it always be necessary or even useful for them to do so. Instead, the concepts and language employed by administrative decision makers will often be highly specific to their fields of experience and expertise, and this may impact both the form and content of their reasons. These differences are not necessarily a sign of an unreasonable decision — indeed, they may be indicative of a decision maker's strength within its particular and specialized domain. "Administrative justice" will

not always look like "judicial justice", and reviewing courts must remain acutely aware of that fact.

[93] An administrative decision maker may demonstrate through its reasons that a given decision was made by bringing that institutional expertise and experience to bear: see *Dunsmuir*, at para. 49. In conducting reasonableness review, judges should be attentive to the application by decision makers of specialized knowledge, as demonstrated by their reasons. Respectful attention to a decision maker's demonstrated expertise may reveal to a reviewing court that an outcome that might be puzzling or counterintuitive on its face nevertheless accords with the purposes and practical realities of the relevant administrative regime and represents a reasonable approach given the consequences and the operational impact of the decision. This demonstrated experience and expertise may also explain why a given issue is treated in less detail.

[94] The reviewing court must also read the decision maker's reasons in light of the history and context of the proceedings in which they were rendered. For example, the reviewing court might consider the evidence before the decision maker, the submissions of the parties, publicly available policies or guidelines that informed the decision maker's work, and past decisions of the relevant administrative body. This may explain an aspect of the decision maker's reasoning process that is not apparent from the reasons themselves, or may reveal that an apparent shortcoming in the reasons is not, in fact, a failure of justification, intelligibility or transparency.

2019 SCC 65 (CanLII)

Opposing parties may have made concessions that had obviated the need for the decision maker to adjudicate on a particular issue; the decision maker may have followed a well-established line of administrative case law that no party had challenged during the proceedings; or an individual decision maker may have adopted an interpretation set out in a public interpretive policy of the administrative body of which he or she is a member.

[95] That being said, reviewing courts must keep in mind the principle that the exercise of public power must be justified, intelligible and transparent, not in the abstract, but to the individuals subject to it. It would therefore be unacceptable for an administrative decision maker to provide an affected party formal reasons that fail to justify its decision, but nevertheless expect that its decision would be upheld on the basis of internal records that were not available to that party.

[96] Where, even if the reasons given by an administrative decision maker for a decision are read with sensitivity to the institutional setting and in light of the record, they contain a fundamental gap or reveal that the decision is based on an unreasonable chain of analysis, it is not ordinarily appropriate for the reviewing court to fashion its own reasons in order to buttress the administrative decision. Even if the outcome of the decision could be reasonable under different circumstances, it is not open to a reviewing court to disregard the flawed basis for a decision and substitute its own justification for the outcome: *Delta Air Lines*, at paras. 26-28. To allow a reviewing court to do so would be to allow an administrative decision maker to

2019 SCC 65 (CanLII)

abdicate its responsibility to justify to the affected party, in a manner that is transparent and intelligible, the basis on which it arrived at a particular conclusion. This would also amount to adopting an approach to reasonableness review focused solely on the outcome of a decision, to the exclusion of the rationale for that decision. To the extent that cases such as *Newfoundland Nurses* and *Alberta Teachers* have been taken as suggesting otherwise, such a view is mistaken.

2019 SCC 65 (CanLII)

[97] Indeed, *Newfoundland Nurses* is far from holding that a decision maker's grounds or rationale for a decision is irrelevant. It instead tells us that close attention must be paid to a decision maker's written reasons and that they must be read holistically and contextually, for the very purpose of understanding the basis on which a decision was made. We agree with the observations of Rennie J. in *Komolafe v. Canada (Minister of Citizenship and Immigration)*, 2013 FC 431, 16 Imm. L.R. (4th) 267, at para. 11:

> *Newfoundland Nurses* is not an open invitation to the Court to provide reasons that were not given, nor is it licence to guess what findings might have been made or to speculate as to what the tribunal might have been thinking. This is particularly so where the reasons are silent on a critical issue. It is ironic that *Newfoundland Nurses*, a case which at its core is about deference and standard of review, is urged as authority for the supervisory court to do the task that the decision maker did not do, to supply the reasons that might have been given and make findings of fact that were not made. This is to turn the jurisprudence on its head. *Newfoundland Nurses* allows reviewing courts to connect the dots on the page where the lines, and the direction they are headed, may be readily drawn . . . .

[98] As for *Alberta Teachers*, it concerned a very specific and exceptional circumstance in which the reviewing court had exercised its discretion to consider a question of statutory interpretation on judicial review, even though that question had not been raised before the administrative decision maker and, as a result, no reasons had been given on that issue: paras. 22-26. Furthermore, it was agreed that the ultimate decision maker — the Information and Privacy Commissioner's delegate — had applied a well-established interpretation of the statutory provision in question and that, had she been asked for reasons to justify her interpretation, she would have adopted reasons the Commissioner had given in past decisions. In other words, the reasons of the Commissioner that this Court relied on to find that the administrative decision was reasonable were not merely reasons that *could* have been offered, in an abstract sense, but reasons that *would* have been offered had the issue been raised before the decision maker. Far from suggesting in *Alberta Teachers* that reasonableness review is concerned primarily with outcome, as opposed to rationale, this Court rejected the position that a reviewing court is entitled to "reformulate a tribunal's decision in a way that casts aside an unreasonable chain of analysis in favour of the court's own rationale for the result": para. 54, quoting *Petro-Canada v. British Columbia (Workers' Compensation Board)*, 2009 BCCA 396, 276 B.C.A.C. 135, at paras. 53 and 56. In *Alberta Teachers*, this Court also reaffirmed the importance of giving proper reasons and reiterated that "deference under the reasonableness standard is best given effect when administrative decision makers provide intelligible and transparent justification for their decisions, and when courts ground their review of the decision in the reasons provided": para. 54. Where a

2019 SCC 65 (CanLII)

decision maker's rationale for an essential element of the decision is not addressed in the reasons and cannot be inferred from the record, the decision will generally fail to meet the requisite standard of justification, transparency and intelligibility.

2019 SCC 65 (CanLII)

E. *A Reasonable Decision Is One That Is Both Based on an Internally Coherent Reasoning and Justified in Light of the Legal and Factual Constraints That Bear on the Decision*

[99] A reviewing court must develop an understanding of the decision maker's reasoning process in order to determine whether the decision as a whole is reasonable. To make this determination, the reviewing court asks whether the decision bears the hallmarks of reasonableness — justification, transparency and intelligibility — and whether it is justified in relation to the relevant factual and legal constraints that bear on the decision: *Dunsmuir*, at paras. 47 and 74; *Catalyst*, at para. 13.

[100] The burden is on the party challenging the decision to show that it is unreasonable. Before a decision can be set aside on this basis, the reviewing court must be satisfied that there are sufficiently serious shortcomings in the decision such that it cannot be said to exhibit the requisite degree of justification, intelligibility and transparency. Any alleged flaws or shortcomings must be more than merely superficial or peripheral to the merits of the decision. It would be improper for a reviewing court to overturn an administrative decision simply because its reasoning exhibits a minor misstep. Instead, the court must be satisfied that any shortcomings or flaws relied on by the party challenging the decision are sufficiently central or significant to render the decision unreasonable.

[101] What makes a decision unreasonable? We find it conceptually useful here to consider two types of fundamental flaws. The first is a failure of rationality internal to the reasoning process. The second arises when a decision is in some respect untenable in light of the relevant factual and legal constraints that bear on it. There is however, no need for reviewing courts to categorize failures of reasonableness as belonging to one type or the other. Rather, we use these descriptions simply as a convenient way to discuss the types of issues that may show a decision to be unreasonable.

2019 SCC 65 (CanLII)

(1) A Reasonable Decision Is Based on an Internally Coherent Reasoning

[102] To be reasonable, a decision must be based on reasoning that is both rational and logical. It follows that a failure in this respect may lead a reviewing court to conclude that a decision must be set aside. Reasonableness review is not a "line-by-line treasure hunt for error": *Irving Pulp & Paper*, at para. 54, citing *Newfoundland Nurses*, at para. 14. However, the reviewing court must be able to trace the decision maker's reasoning without encountering any fatal flaws in its overarching logic, and it must be satisfied that "there is [a] line of analysis within the given reasons that could reasonably lead the tribunal from the evidence before it to the conclusion at which it arrived": *Ryan*, at para. 55; *Southam*, at para. 56. Reasons that "simply repeat statutory language, summarize arguments made, and then state a peremptory conclusion" will rarely assist a reviewing court in understanding the rationale underlying a decision and "are no substitute for statements of fact, analysis,

inference and judgment": R. A. Macdonald and D. Lametti, "Reasons for Decision in Administrative Law" (1990), 3 *C.J.A.L.P.* 123, at p. 139; see also *Gonzalez v. Canada (Minister of Citizenship and Immigration)*, 2014 FC 750, 27 Imm. L.R. (4th) 151, at paras. 57-59.

[103] While, as we indicated earlier (at paras. 89-96), formal reasons should be read in light of the record and with due sensitivity to the administrative regime in which they were given, a decision will be unreasonable if the reasons for it, read holistically, fail to reveal a rational chain of analysis or if they reveal that the decision was based on an irrational chain of analysis: see *Wright v. Nova Scotia (Human Rights Commission),* 2017 NSSC 11, 23 Admin. L.R. (6th) 110; *Southam*, at para. 56. A decision will also be unreasonable where the conclusion reached cannot follow from the analysis undertaken (see *Sangmo v. Canada (Citizenship and Immigration)*, 2016 FC 17, at para. 21 (CanLII)) or if the reasons read in conjunction with the record do not make it possible to understand the decision maker's reasoning on a critical point (see *Blas v. Canada (Citizenship and Immigration)*, 2014 FC 629, 26 Imm. L.R. (4th) 92, at paras. 54-66; *Reid v. Criminal Injuries Compensation Board*, 2015 ONSC 6578; *Lloyd v. Canada (Attorney General)*, 2016 FCA 115, 2016 D.T.C. 5051; *Taman v. Canada (Attorney General)*, 2017 FCA 1, [2017] 3 F.C.R. 520, at para. 47).

[104] Similarly, the internal rationality of a decision may be called into question if the reasons exhibit clear logical fallacies, such as circular reasoning, false dilemmas, unfounded generalizations or an absurd premise. This is not an invitation

2019 SCC 65 (CanLII)

to hold administrative decision makers to the formalistic constraints and standards of academic logicians. However, a reviewing court must ultimately be satisfied that the decision maker's reasoning "adds up".

2019 SCC 65 (CanLII)

(2) A Reasonable Decision Is Justified in Light of the Legal and Factual Constraints That Bear on the Decision

[105] In addition to the need for internally coherent reasoning, a decision, to be reasonable, must be justified in relation to the constellation of law and facts that are relevant to the decision: *Dunsmuir*, at para. 47; *Catalyst*, at para. 13; *Nor-Man Regional Health Authority*, at para. 6. Elements of the legal and factual contexts of a decision operate as constraints on the decision maker in the exercise of its delegated powers.

[106] It is unnecessary to catalogue all of the legal or factual considerations that could constrain an administrative decision maker in a particular case. However, in the sections that follow, we discuss a number of elements that will generally be relevant in evaluating whether a given decision is reasonable, namely the governing statutory scheme; other relevant statutory or common law; the principles of statutory interpretation; the evidence before the decision maker and facts of which the decision maker may take notice; the submissions of the parties; the past practices and decisions of the administrative body; and the potential impact of the decision on the individual to whom it applies. These elements are not a checklist for conducting reasonableness review, and they may vary in significance depending on the context.

They are offered merely to highlight some elements of the surrounding context that can cause a reviewing court to lose confidence in the outcome reached.

2019 SCC 65 (CanLII)

[107] A reviewing court may find that a decision is unreasonable when examined against these contextual considerations. These elements necessarily interact with one another: for example, a reasonable penalty for professional misconduct in a given case must be justified *both* with respect to the types of penalties prescribed by the relevant legislation and with respect to the nature of the underlying misconduct.

(a) *Governing Statutory Scheme*

[108] Because administrative decision makers receive their powers by statute, the governing statutory scheme is likely to be the most salient aspect of the legal context relevant to a particular decision. That administrative decision makers play a role, along with courts, in elaborating the precise content of the administrative schemes they administer should not be taken to mean that administrative decision makers are permitted to disregard or rewrite the law as enacted by Parliament and the provincial legislatures. Thus, for example, while an administrative body may have considerable discretion in making a particular decision, that decision must ultimately comply "with the rationale and purview of the statutory scheme under which it is adopted": *Catalyst*, at paras. 15 and 25-28; see also *Green*, at para. 44. As Rand J. noted in *Roncarelli v. Duplessis*, [1959] S.C.R. 121, at p. 140, "there is no such thing as absolute and untrammelled 'discretion'", and any exercise of discretion must accord with the purposes for which it was given: see also *Congrégation des témoins*

de Jéhovah de St-Jérôme-Lafontaine, at para. 7; *Montréal (City) v. Montreal Port Authority*, 2010 SCC 14, [2010] 1 S.C.R. 427, at paras. 32-33; *Nor-Man Regional Health Authority*, at para. 6. Likewise, a decision must comport with any more specific constraints imposed by the governing legislative scheme, such as the statutory definitions, principles or formulas that prescribe the exercise of a discretion: see *Montréal (City)*, at paras. 33 and 40-41; *Canada (Attorney General) v. Almon Equipment Limited*, 2010 FCA 193, [2011] 4 F.C.R. 203, at paras. 38-40. The statutory scheme also informs the acceptable approaches to decision making: for example, where a decision maker is given wide discretion, it would be unreasonable for it to fetter that discretion: see *Delta Air Lines*, at para. 18.

[109] As stated above, a proper application of the reasonableness standard is capable of allaying the concern that an administrative decision maker might interpret the scope of its own authority beyond what the legislature intended. As a result, there is no need to maintain a category of "truly" jurisdictional questions that are subject to correctness review. Although a decision maker's interpretation of its statutory grant of authority is generally entitled to deference, the decision maker must nonetheless properly justify that interpretation. Reasonableness review does not allow administrative decision makers to arrogate powers to themselves that they were never intended to have, and an administrative body cannot exercise authority which was not delegated to it. Contrary to our colleagues' concern (at para. 285), this does not reintroduce the concept of "jurisdictional error" into judicial review, but merely

2019 SCC 65 (CanLII)

identifies one of the obvious and necessary constraints imposed on administrative decision makers.

[110] Whether an interpretation is justified will depend on the context, including the language chosen by the legislature in describing the limits and contours of the decision maker's authority. If a legislature wishes to precisely circumscribe an administrative decision maker's power in some respect, it can do so by using precise and narrow language and delineating the power in detail, thereby tightly constraining the decision maker's ability to interpret the provision. Conversely, where the legislature chooses to use broad, open-ended or highly qualitative language — for example, "in the public interest" — it clearly contemplates that the decision maker is to have greater flexibility in interpreting the meaning of such language. Other language will fall in the middle of this spectrum. All of this is to say that certain questions relating to the scope of a decision maker's authority may support more than one interpretation, while other questions may support only one, depending upon the text by which the statutory grant of authority is made. What matters is whether, in the eyes of the reviewing court, the decision maker has properly justified its interpretation of the statute in light of the surrounding context. It will, of course, be impossible for an administrative decision maker to justify a decision that strays beyond the limits set by the statutory language it is interpreting.

(b) *Other Statutory or Common Law*

2019 SCC 65 (CanLII)

[111] It is evident that both statutory and common law will impose constraints on how and what an administrative decision maker can lawfully decide: see *Dunsmuir*, at paras. 47 and 74. For example, an administrative decision maker interpreting the scope of its regulation-making authority in order to exercise that authority cannot adopt an interpretation that is inconsistent with applicable common law principles regarding the nature of statutory powers: see *Katz Group Canada Inc. v. Ontario (Health and Long-Term Care)*, 2013 SCC 64, [2013] 3 S.C.R. 810, at paras. 45-48. Neither can a body instructed by legislation to determine what tax rate is applicable in accordance with an existing tax system ignore that system and base its determination on a "fictitious" system it has arbitrarily created: *Montréal (City)*, at para. 40. Where a relationship is governed by private law, it would be unreasonable for a decision maker to ignore that law in adjudicating parties' rights within that relationship: *Dunsmuir*, at para. 74. Similarly, where the governing statute specifies a standard that is well known in law and in the jurisprudence, a reasonable decision will generally be one that is consistent with the established understanding of that standard: see, e.g., the discussion of "reasonable grounds to suspect" in *Canada (Minister of Transport, Infrastructure and Communities) v. Farwaha*, 2014 FCA 56, [2015] 2 F.C.R. 1006, at paras. 93-98.

[112] Any precedents on the issue before the administrative decision maker or on a similar issue will act as a constraint on what the decision maker can reasonably decide. An administrative body's decision may be unreasonable on the basis that the body failed to explain or justify a departure from a binding precedent in which the

2019 SCC 65 (CanLII)

same provision had been interpreted. Where, for example, there is a relevant case in which a court considered a statutory provision, it would be unreasonable for an administrative decision maker to interpret or apply the provision without regard to that precedent. The decision maker would have to be able to explain why a different interpretation is preferable by, for example, explaining why the court's interpretation does not work in the administrative context: M. Biddulph, "Rethinking the Ramification of Reasonableness Review: *Stare Decisis* and Reasonableness Review on Questions of Law" (2018), 56 *Alta. L.R.* 119, at p. 146. There may be circumstances in which it is quite simply unreasonable for an administrative decision maker to fail to apply or interpret a statutory provision in accordance with a binding precedent. For instance, where an immigration tribunal is required to determine whether an applicant's act would constitute a criminal offence under Canadian law (see, e.g., *Immigration and Refugee Protection Act*, S.C. 2001, c. 27, ss. 35-37), it would clearly not be reasonable for the tribunal to adopt an interpretation of a criminal law provision that is inconsistent with how Canadian criminal courts have interpreted it.

[113] That being said, administrative decision makers will not necessarily be required to apply equitable and common law principles in the same manner as courts in order for their decisions to be reasonable. For example, it may be reasonable for a decision maker to adapt a common law or equitable doctrine to its administrative context: see *Nor-Man Regional Health Authority*, at paras. 5-6, 44-45, 52, 54 and 60. Conversely, a decision maker that rigidly applies a common law doctrine without

2019 SCC 65 (CanLII)

adapting it to the relevant administrative context may be acting unreasonably: see *Delta Air Lines*, at paras. 16-17 and 30. In short, whether an administrative decision maker has acted reasonably in adapting a legal or equitable doctrine involves a highly context-specific determination.

[114] We would also note that in some administrative decision making contexts, international law will operate as an important constraint on an administrative decision maker. It is well established that legislation is presumed to operate in conformity with Canada's international obligations, and the legislature is "presumed to comply with . . . the values and principles of customary and conventional international law": *R. v. Hape*, 2007 SCC 26, [2007] 2 S.C.R. 292, at para. 53; *R. v. Appulonappa*, 2015 SCC 59, [2015] 3 S.C.R. 754, at para. 40. Since *Baker*, it has also been clear that international treaties and conventions, even where they have not been implemented domestically by statute, can help to inform whether a decision was a reasonable exercise of administrative power: *Baker*, at paras. 69-71.

(c) *Principles of Statutory Interpretation*

[115] Matters of statutory interpretation are not treated uniquely and, as with other questions of law, may be evaluated on a reasonableness standard. Although the general approach to reasonableness review described above applies in such cases, we recognize that it is necessary to provide additional guidance to reviewing courts on this point. This is because reviewing courts are accustomed to resolving questions of statutory interpretation in a context in which the issue is before them at first instance

2019 SCC 65 (CanLII)

or on appeal, and where they are expected to perform their own independent analysis and come to their own conclusions.

2019 SCC 65 (CanLII)

[116] Reasonableness review functions differently. Where reasonableness is the applicable standard on a question of statutory interpretation, the reviewing court does not undertake a *de novo* analysis of the question or "ask itself what the correct decision would have been": *Ryan*, at para. 50. Instead, just as it does when applying the reasonableness standard in reviewing questions of fact, discretion or policy, the court must examine the administrative decision as a whole, including the reasons provided by the decision maker and the outcome that was reached.

[117] A court interpreting a statutory provision does so by applying the "modern principle" of statutory interpretation, that is, that the words of a statute must be read "in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament": *Rizzo & Rizzo Shoes Ltd. (Re)*, [1998] 1 S.C.R. 27, at para. 21, and *Bell ExpressVu Limited Partnership v. Rex*, 2002 SCC 42, [2002] 2 S.C.R. 559, at para. 26, both quoting E. Driedger, *Construction of Statutes* (2nd ed. 1983), at p. 87. Parliament and the provincial legislatures have also provided guidance by way of statutory rules that explicitly govern the interpretation of statutes and regulations: see, e.g., *Interpretation Act*, R.S.C. 1985, c. I-21.

[118] This Court has adopted the "modern principle" as the proper approach to statutory interpretation, because legislative intent can be understood only by reading

the language chosen by the legislature in light of the purpose of the provision and the entire relevant context: Sullivan, at pp. 7-8. Those who draft and enact statutes expect that questions about their meaning will be resolved by an analysis that has regard to the text, context and purpose, regardless of whether the entity tasked with interpreting the law is a court or an administrative decision maker. An approach to reasonableness review that respects legislative intent must therefore assume that those who interpret the law — whether courts or administrative decision makers — will do so in a manner consistent with this principle of interpretation.

[119] Administrative decision makers are not required to engage in a formalistic statutory interpretation exercise in every case. As discussed above, formal reasons for a decision will not always be necessary and may, where required, take different forms. And even where the interpretive exercise conducted by the administrative decision maker is set out in written reasons, it may look quite different from that of a court. The specialized expertise and experience of administrative decision makers may sometimes lead them to rely, in interpreting a provision, on considerations that a court would not have thought to employ but that actually enrich and elevate the interpretive exercise.

[120] But whatever form the interpretive exercise takes, the merits of an administrative decision maker's interpretation of a statutory provision must be consistent with the text, context and purpose of the provision. In this sense, the usual principles of statutory interpretation apply equally when an administrative decision

2019 SCC 65 (CanLII)

maker interprets a provision. Where, for example, the words used are "precise and unequivocal", their ordinary meaning will usually play a more significant role in the interpretive exercise: *Canada Trustco Mortgage Co. v. Canada*, 2005 SCC 54, [2005] 2 S.C.R. 601, at para. 10. Where the meaning of a statutory provision is disputed in administrative proceedings, the decision maker must demonstrate in its reasons that it was alive to these essential elements.

2019 SCC 65 (CanLII)

[121] The administrative decision maker's task is to interpret the contested provision in a manner consistent with the text, context and purpose, applying its particular insight into the statutory scheme at issue. It cannot adopt an interpretation it knows to be inferior — albeit plausible — merely because the interpretation in question appears to be available and is expedient. The decision maker's responsibility is to discern meaning and legislative intent, not to "reverse-engineer" a desired outcome.

[122] It can happen that an administrative decision maker, in interpreting a statutory provision, fails entirely to consider a pertinent aspect of its text, context or purpose. Where such an omission is a minor aspect of the interpretive context, it is not likely to undermine the decision as a whole. It is well established that decision makers are not required "to explicitly address all possible shades of meaning" of a given provision: *Construction Labour Relations v. Driver Iron Inc.*, 2012 SCC 65, [2012] 3 S.C.R. 405, at para. 3. Just like judges, administrative decision makers may find it unnecessary to dwell on each and every signal of statutory intent in their

reasons. In many cases, it may be necessary to touch upon only the most salient aspects of the text, context or purpose. If, however, it is clear that the administrative decision maker may well, had it considered a key element of a statutory provision's text, context or purpose, have arrived at a different result, its failure to consider that element would be indefensible, and unreasonable in the circumstances. Like other aspects of reasonableness review, omissions are not stand-alone grounds for judicial intervention: the key question is whether the omitted aspect of the analysis causes the reviewing court to lose confidence in the outcome reached by the decision maker.

[123] There may be other cases in which the administrative decision maker has not explicitly considered the meaning of a relevant provision in its reasons, but the reviewing court is able to discern the interpretation adopted by the decision maker from the record and determine whether that interpretation is reasonable.

[124] Finally, even though the task of a court conducting a reasonableness review is *not* to perform a *de novo* analysis or to determine the "correct" interpretation of a disputed provision, it may sometimes become clear in the course of reviewing a decision that the interplay of text, context and purpose leaves room for a single reasonable interpretation of the statutory provision, or aspect of the statutory provision, that is at issue: *Dunsmuir*, at paras. 72-76. One case in which this conclusion was reached was *Nova Tube Inc./Nova Steel Inc. v. Conares Metal Supply Ltd.*, 2019 FCA 52., in which Laskin J.A., after analyzing the reasoning of the administrative decision maker (at paras. 26-61 (CanLII)), held that the decision

2019 SCC 65 (CanLII)

maker's interpretation had been unreasonable, and, furthermore, that the factors he had considered in his analysis weighed so overwhelmingly in favour of the opposite interpretation that that was the only reasonable interpretation of the provision: para. 61. As discussed below, it would serve no useful purpose in such a case to remit the interpretative question to the original decision maker. Even so, a court should generally pause before definitively pronouncing upon the interpretation of a provision entrusted to an administrative decision maker.

2019 SCC 65 (CanLII)

(d) *Evidence Before the Decision Maker*

[125] It is trite law that the decision maker may assess and evaluate the evidence before it and that, absent exceptional circumstances, a reviewing court will not interfere with its factual findings. The reviewing court must refrain from "reweighing and reassessing the evidence considered by the decision maker": *CHRC*, at para. 55; see also *Khosa*, at para. 64; *Dr. Q*, at paras. 41-42. Indeed, many of the same reasons that support an appellate court's deferring to a lower court's factual findings, including the need for judicial efficiency, the importance of preserving certainty and public confidence, and the relatively advantageous position of the first instance decision maker, apply equally in the context of judicial review: see *Housen*, at paras. 15-18; *Dr. Q*, at para. 38; *Dunsmuir*, at para. 53.

[126] That being said, a reasonable decision is one that is justified in light of the facts: *Dunsmuir*, para. 47. The decision maker must take the evidentiary record and the general factual matrix that bears on its decision into account, and its decision must

be reasonable in light of them: see *Southam*, at para. 56. The reasonableness of a decision may be jeopardized where the decision maker has fundamentally misapprehended or failed to account for the evidence before it. In *Baker*, for example, the decision maker had relied on irrelevant stereotypes and failed to consider relevant evidence, which led to a conclusion that there was a reasonable apprehension of bias: para. 48. Moreover, the decision maker's approach would *also* have supported a finding that the decision was unreasonable on the basis that the decision maker showed that his conclusions were not based on the evidence that was actually before him: para. 48.

(e) *Submissions of the Parties*

[127] The principles of justification and transparency require that an administrative decision maker's reasons meaningfully account for the central issues and concerns raised by the parties. The principle that the individual or individuals affected by a decision should have the opportunity to present their case fully and fairly underlies the duty of procedural fairness and is rooted in the right to be heard: *Baker*, at para. 28. The concept of responsive reasons is inherently bound up with this principle, because reasons are the primary mechanism by which decision makers demonstrate that they have actually *listened* to the parties.

[128] Reviewing courts cannot expect administrative decision makers to "respond to every argument or line of possible analysis" (*Newfoundland Nurses*, at para. 25), or to "make an explicit finding on each constituent element, however

2019 SCC 65 (CanLII)

subordinate, leading to its final conclusion" (para 16). To impose such expectations would have a paralyzing effect on the proper functioning of administrative bodies and would needlessly compromise important values such as efficiency and access to justice. However, a decision maker's failure to meaningfully grapple with key issues or central arguments raised by the parties may call into question whether the decision maker was actually alert and sensitive to the matter before it. In addition to assuring parties that their concerns have been heard, the process of drafting reasons with care and attention can alert the decision maker to inadvertent gaps and other flaws in its reasoning: *Baker*, at para. 39.

(f) *Past Practices and Past Decisions*

[129] Administrative decision makers are not bound by their previous decisions in the same sense that courts are bound by *stare decisis*. As this Court noted in *Domtar*, "a lack of unanimity is the price to pay for the decision-making freedom and independence" given to administrative decision makers, and the mere fact that some conflict exists among an administrative body's decisions does not threaten the rule of law: p. 800. Nevertheless, administrative decision makers and reviewing courts alike must be concerned with the general consistency of administrative decisions. Those affected by administrative decisions are entitled to expect that like cases will generally be treated alike and that outcomes will not depend merely on the identity of the individual decision maker — expectations that do not evaporate simply because the parties are not before a judge.

2019 SCC 65 (CanLII)

[130] Fortunately, administrative bodies generally have a range of resources at their disposal to address these types of concerns. Access to past reasons and summaries of past reasons enables multiple individual decision makers within a single organization (such as administrative tribunal members) to learn from each other's work, and contributes to a harmonized decision-making culture. Institutions also routinely rely on standards, policy directives and internal legal opinions to encourage greater uniformity and guide the work of frontline decision makers. This Court has also held that plenary meetings of a tribunal's members can be an effective tool to "foster coherence" and "avoid . . . conflicting results": *IWA v. Consolidated-Bathurst Packaging Ltd.*, [1990] 1 S.C.R. 282, at pp. 324-28. Where disagreement arises within an administrative body about how to appropriately resolve a given issue, that institution may also develop strategies to address that divergence internally and on its own initiative. Of course, consistency can also be encouraged through less formal methods, such as the development of training materials, checklists and templates for the purpose of streamlining and strengthening institutional best practices, provided that these methods do not operate to fetter decision making.

[131] Whether a particular decision is consistent with the administrative body's past decisions is also a constraint that the reviewing court should consider when determining whether an administrative decision is reasonable. Where a decision maker *does* depart from longstanding practices or established internal authority, it bears the justificatory burden of explaining that departure in its reasons. If the decision maker does not satisfy this burden, the decision will be unreasonable. In this

2019 SCC 65 (CanLII)

sense, the legitimate expectations of the parties help to determine both whether reasons are required and what those reasons must explain: *Baker*, at para. 26. We repeat that this does not mean administrative decision makers are bound by internal precedent in the same manner as courts. Rather, it means that a decision that departs from longstanding practices or established internal decisions will be reasonable if that departure is justified, thereby reducing the risk of arbitrariness, which would undermine public confidence in administrative decision makers and in the justice system as a whole.

[132] As discussed above, it has been argued that correctness review would be required where there is "persistent discord" on questions on law in an administrative body's decisions. While we are not of the view that such a correctness category is required, we would note that reviewing courts have a role to play in managing the risk of persistently discordant or contradictory legal interpretations within an administrative body's decisions. When evidence of internal disagreement on legal issues has been put before a reviewing court, the court may find it appropriate to telegraph the existence of an issue in its reasons and encourage the use of internal administrative structures to resolve the disagreement. And if internal disagreement continues, it may become increasingly difficult for the administrative body to justify decisions that serve only to preserve the discord.

(g) *Impact of the Decision on the Affected Individual*

2019 SCC 65 (CanLII)

[133] It is well established that individuals are entitled to greater procedural protection when the decision in question involves the potential for significant personal impact or harm: *Baker*, at para. 25. However, this principle also has implications for how a court conducts reasonableness review. Central to the necessity of adequate justification is the perspective of the individual or party over whom authority is being exercised. Where the impact of a decision on an individual's rights and interests is severe, the reasons provided to that individual must reflect the stakes. The principle of responsive justification means that if a decision has particularly harsh consequences for the affected individual, the decision maker must explain why its decision best reflects the legislature's intention. This includes decisions with consequences that threaten an individual's life, liberty, dignity or livelihood.

[134] Moreover, concerns regarding arbitrariness will generally be more acute in cases where the consequences of the decision for the affected party are particularly severe or harsh, and a failure to grapple with such consequences may well be unreasonable. For example, this Court has held that the Immigration Appeal Division should, when exercising its equitable jurisdiction to stay a removal order under the *Immigration and Refugee Protection Act*, consider the potential foreign hardship a deported person would face: *Chieu v. Canada (Minister of Citizenship and Immigration)*, 2002 SCC 3, [2002] 1 S.C.R. 84.

[135] Many administrative decision makers are entrusted with an extraordinary degree of power over the lives of ordinary people, including the most vulnerable

2019 SCC 65 (CanLII)

among us. The corollary to that power is a heightened responsibility on the part of administrative decision makers to ensure that their reasons demonstrate that they have considered the consequences of a decision and that those consequences are justified in light of the facts and law.

2019 SCC 65 (CanLII)

F. *Review in the Absence of Reasons*

[136] Where the duty of procedural fairness or the legislative scheme mandates that reasons be given to the affected party but none have been given, this failure will generally require the decision to be set aside and the matter remitted to the decision maker: see, e.g., *Congrégation des témoins de Jéhovah de St-Jérôme-Lafontaine*, at para. 35. Also, where reasons are provided but they fail to provide a transparent and intelligible justification as explained above, the decision will be unreasonable. In many cases, however, neither the duty of procedural fairness nor the statutory scheme will require that formal reasons be given at all: *Baker*, at para. 43.

[137] Admittedly, applying an approach to judicial review that prioritizes the decision maker's justification for its decisions can be challenging in cases in which formal reasons have not been provided. This will often occur where the decision-making process does not easily lend itself to producing a single set of reasons, for example, where a municipality passes a bylaw or a law society renders a decision by holding a vote: see, e.g., *Catalyst*; *Green*; *Trinity Western University*. However, even in such circumstances, the reasoning process that underlies the decision will not usually be opaque. It is important to recall that a reviewing court must look to the

record as a whole to understand the decision, and that in doing so, the court will often uncover a clear rationale for the decision: *Baker*, at para. 44. For example, as McLachlin C.J. noted in *Catalyst*, "[t]he reasons for a municipal bylaw are traditionally deduced from the debate, deliberations, and the statements of policy that give rise to the bylaw": para. 29. In that case, not only were "the reasons [in the sense of rationale] for the bylaw . . . clear to everyone", they had also been laid out in a five-year plan: para. 33. Conversely, even without reasons, it is possible for the record and the context to reveal that a decision was made on the basis of an improper motive or for another impermissible reason, as, for example, in *Roncarelli*.

[138] There will nonetheless be situations in which no reasons have been provided and neither the record nor the larger context sheds light on the basis for the decision. In such a case, the reviewing court must still examine the decision in light of the relevant constraints on the decision maker in order to determine whether the decision is reasonable. But it is perhaps inevitable that without reasons, the analysis will then focus on the outcome rather than on the decision maker's reasoning process. This does not mean that reasonableness review is less robust in such circumstances, only that it takes a different shape.

G. *A Note on Remedial Discretion*

[139] Where a court reviews an administrative decision, the question of the appropriate remedy is multi-faceted. It engages considerations that include the reviewing court's common law or statutory jurisdiction and the great diversity of

2019 SCC 65 (CanLII)

elements that may influence a court's decision to exercise its discretion in respect of available remedies. While we do not aim to comprehensively address here the issue of remedies on judicial review, we do wish to briefly address the question of whether a court that quashes an unreasonable decision should exercise its discretion to remit the matter to the decision maker for reconsideration with the benefit of the court's reasons.

[140] Where the reasonableness standard is applied in conducting a judicial review, the choice of remedy must be guided by the rationale for applying that standard to begin with, including the recognition by the reviewing court that the legislature has entrusted the matter to the administrative decision maker, and not to the court, to decide: see *Delta Air Lines*, at para. 31. However, the question of remedy must also be guided by concerns related to the proper administration of the justice system, the need to ensure access to justice and "the goal of expedient and cost-efficient decision making, which often motivates the creation of specialized administrative tribunals in the first place": *Alberta Teachers*, at para. 55.

[141] Giving effect to these principles in the remedial context means that where a decision reviewed by applying the reasonableness standard cannot be upheld, it will most often be appropriate to remit the matter to the decision maker to have it reconsider the decision, this time with the benefit of the court's reasons. In reconsidering its decision, the decision maker may arrive at the same, or a different, outcome: see *Delta Air Lines*, at paras. 30-31.

2019 SCC 65 (CanLII)

[142] However, while courts should, as a general rule, respect the legislature's intention to entrust the matter to the administrative decision maker, there are limited scenarios in which remitting the matter would stymie the timely and effective resolution of matters in a manner that no legislature could have intended: *D'Errico v. Canada (Attorney General)*, 2014 FCA 95, at paras. 18-19 (CanLII). An intention that the administrative decision maker decide the matter at first instance cannot give rise to an endless merry-go-round of judicial reviews and subsequent reconsiderations. Declining to remit a matter to the decision maker may be appropriate where it becomes evident to the court, in the course of its review, that a particular outcome is inevitable and that remitting the case would therefore serve no useful purpose: see *Mobil Oil Canada Ltd. v. Canada-Newfoundland Offshore Petroleum Board*, [1994] 1 S.C.R. 202, at pp. 228-30; *Renaud v. Quebec (Commission des affaires sociales)*, [1999] 3 S.C.R. 855; *Groia v. Law Society of Upper Canada*, 2018 SCC 27, [2018] 1 S.C.R. 772, at para. 161; *Sharif v. Canada (Attorney General)*, 2018 FCA 205, 50 C.R. (7th) 1, at paras. 53-54; *Maple Lodge Farms Ltd. v. Canadian Food Inspection Agency*, 2017 FCA 45, 411 D.L.R. (4th) 175, at paras. 51-56 and 84; *Gehl v. Canada (Attorney General)*, 2017 ONCA 319, at paras. 54 and 88 (CanLII). Elements like concern for delay, fairness to the parties, urgency of providing a resolution to the dispute, the nature of the particular regulatory regime, whether the administrative decision maker had a genuine opportunity to weigh in on the issue in question, costs to the parties, and the efficient use of public resources may also influence the exercise of a court's discretion to remit a matter, just as they may influence the exercise of its discretion to quash a decision that is flawed: see *MiningWatch Canada v. Canada*

2019 SCC 65 (CanLII)

(Fisheries and Oceans), 2010 SCC 2, [2010] 1 S.C.R. 6, at paras. 45-51; *Alberta Teachers*, at para. 55.

2019 SCC 65 (CanLII)

IV. Role of Prior Jurisprudence

[143] Given that this appeal and its companion cases involve a recalibration of the governing approach to the choice of standard of review analysis and a clarification of the proper application of the reasonableness standard, it will be necessary to briefly address how the existing administrative law jurisprudence should be treated going forward. These reasons set out a holistic revision of the framework for determining the applicable standard of review. A court seeking to determine what standard is appropriate in a case before it should look to these reasons first in order to determine how this general framework applies to that case. Doing so may require the court to resolve subsidiary questions on which past precedents will often continue to provide helpful guidance. Indeed, much of the Court's jurisprudence, such as cases concerning general questions of law of central importance to the legal system as a whole or those relating to jurisdictional boundaries between two or more administrative bodies, will continue to apply essentially without modification. On other issues, certain cases —including those on the effect of statutory appeal mechanisms, "true" questions of jurisdiction or the former contextual analysis — will necessarily have less precedential force. As for cases that dictated how to conduct reasonableness review, they will often continue to provide insight, but should be used carefully to ensure that their application is aligned in principle with these reasons.

[144] This approach strives for future doctrinal stability under the new framework while clarifying the continued relevance of the existing jurisprudence. Where a reviewing court is not certain how these reasons relate to the case before it, it may find it prudent to request submissions from the parties on both the appropriate standard and the application of that standard.

[145] Before turning to Mr. Vavilov's case, we pause to note that our colleagues mischaracterize the framework developed in these reasons as being an "encomium" for correctness, and a turn away from the Court's deferential approach to the point of being a "eulogy" for deference (at paras. 199 and 201). With respect, this is a gross exaggeration. Assertions that these reasons adopt a formalistic, court-centric view of administrative law (at paras. 229 and 240), enable an unconstrained expansion of correctness review (at para. 253) or function as a sort of checklist for "line-by-line" reasonableness review (at para. 284), are counter to the clear wording we use and do not take into consideration the delicate balance that we have accounted for in setting out this framework.

V. Mr. Vavilov's Application for Judicial Review

[146] The case at bar involves an application for judicial review of a decision made by the Canadian Registrar of Citizenship on August 15, 2014. The Registrar's decision concerned Mr. Vavilov, who was born in Canada and whose parents were later revealed to be undercover Russian spies. The Registrar determined that Mr. Vavilov was not a Canadian citizen on the basis of an interpretation of s. 3(2)(a) of

2019 SCC 65 (CanLII)

the *Citizenship Act* and cancelled his certificate of citizenship under s. 26(3) of the *Citizenship Regulations*. We conclude that the standard of review applicable to the Registrar's decision is reasonableness, and that the Registrar's decision was unreasonable. We would uphold the decision of the Federal Court of Appeal to quash the Registrar's decision and would not remit the matter to the Registrar for redetermination.

2019 SCC 65 (CanLII)

A. *Facts*

[147] Mr. Vavilov was born in Toronto as Alexander Foley on June 3, 1994. At the time of his birth, his parents were posing as Canadians under the assumed names of Tracey Lee Ann Foley and Donald Howard Heathfield. In reality, they were Elena Vavilova and Andrey Bezrukov, two foreign nationals working on a long-term assignment for the Russian foreign intelligence service, the SVR. Their false Canadian identities had been assumed prior to the birth of Mr. Vavilov and of his older brother, Timothy, for purposes of a "deep cover" espionage network under the direction of the SVR. The United States Department of Justice refers to it as the "illegals" program.

[148] Ms. Vavilova and Mr. Bezrukov were deployed to Canada to establish false personal histories as Western citizens. They worked, ran a business, pursued higher education and, as noted, had two children here. After their second son was born, the family moved to France, and later to the United States. In the United States, Mr. Bezrukov obtained a Masters of Public Administration at Harvard University and

worked as a consultant, all while working to collect information on a variety of sensitive national security issues for the SVR. The nature of the undercover work of Ms. Vavilova and Mr. Bezrukov meant that there was no point at which either of them had any publicly acknowledged affiliation with the Russian state, held any official diplomatic or consular status, or had been granted any diplomatic privilege or immunity.

2019 SCC 65 (CanLII)

[149] Until he was about 16 years old, Mr. Vavilov did not know that his parents were not who they claimed to be. He believed that he was a Canadian citizen by birth, lived and identified as a Canadian, held a Canadian passport, learned both official languages and was proud of his heritage. His parents' true identities became known to him on June 27, 2010, when they were arrested in the United States and charged (along with several other individuals) with conspiracy to act as unregistered agents of a foreign government. On July 8, 2010, they pled guilty, admitted their status as Russian citizens acting on behalf of the Russian state, and were returned to Russia in a "spy swap" the following day. Mr. Vavilov has described the revelation as a traumatic event characterized by disbelief and a crisis of identity.

[150] Just prior to his parents' deportation, Mr. Vavilov left the United States with his brother on a trip that had been planned before their parents' arrest, going first to Paris, and then to Russia on a tourist visa. In October 2010, Mr. Vavilov unsuccessfully attempted to renew his Canadian passport through the Canadian Embassy in Moscow. Although he submitted to DNA testing and changed his

surname from Foley to Vavilov at the behest of passport authorities, his second attempt to obtain a Canadian passport in December 2011 was also unsuccessful. He was then informed that despite his Canadian birth certificate, he would also need to obtain and provide a certificate of Canadian citizenship before he would be issued a passport. Mr. Vavilov applied for that certificate in October 2012, and it was issued to him on January 15, 2013. At that point, he made another passport application through the Canadian Embassy in Buenos Aires, Argentina, and, after a delay, applied for mandamus, a process that was settled out of court in June 2013. The Minister of Citizenship and Immigration undertook to issue a new travel document to Mr. Vavilov by July 19, 2013.

[151] However, Mr. Vavilov never received a passport. Instead, he received a "procedural fairness letter" from the Canadian Registrar of Citizenship dated July 18, 2013 in which the Registrar stated that Mr. Vavilov had not been entitled to a certificate of citizenship, that his certificate of citizenship had been issued in error and that, pursuant to s. 3(2)(a) of the *Citizenship Act*, he was not a citizen of Canada. Mr. Vavilov was invited to make submissions in response, and he did so. On August 15, 2014, the Registrar formally cancelled Mr. Vavilov's Canadian citizenship certificate pursuant to s. 26(3) of the *Citizenship Regulations*.

B. *Procedural History*

(1) Registrar's Decision

2019 SCC 65 (CanLII)

[152] In a brief letter sent to Mr. Vavilov on August 15, 2014, the Registrar informed him that she was cancelling his certificate of citizenship pursuant to s. 26(3) of the *Citizenship Regulations* on the basis that he was not entitled to it. The Registrar summarized her position as follows:

a) Although Mr. Vavilov was born in Toronto, neither of his parents was a citizen of Canada, and neither of them had been lawfully admitted to Canada for permanent residence at the time of his birth.

b) In 2010, Mr. Vavilov's parents were convicted of "conspiracy to act in the United States as a foreign agent of a foreign government", and recognized as unofficial agents working as "illegals" for the SVR.

c) As a result, the Registrar believed that, at the time of Mr. Vavilov's birth, his parents were "employees or representatives of a foreign government".

d) Accordingly, pursuant to s. 3(2)(a) of the *Citizenship Act*, Mr. Vavilov had never been a Canadian citizen and had not been entitled to receive the certificate of Canadian citizenship that had been issued to him in 2013. Section 3(2)(a) provides that s. 3(1)(a) of the *Citizenship Act* (which grants citizenship by birth to persons born in Canada after February 14, 1977) does not apply to an individual if, at the time of the individual's birth, neither of their parents was a citizen or lawfully admitted to Canada for permanent

2019 SCC 65 (CanLII)

residence and either parent was "a diplomatic or consular officer or other representative or employee in Canada of a foreign government."

[153] For these reasons, the Registrar cancelled the certificate and indicated that Mr. Vavilov would no longer be recognized as a Canadian citizen. The Registrar's letter did not offer any analysis or interpretation of s. 3(2)(a) of the *Citizenship Act*. However, it appears that in coming to her decision, the Registrar relied on a 12-page report prepared by a junior analyst, which included an interpretation of this key statutory provision.

[154] In that report, the analyst provided a timeline of the procedural history of Mr. Vavilov's file, a summary of the investigation into and charges against his parents in the United States, and background information on the SVR's "illegals" program. The analyst also discussed several provisions of the *Citizenship Act*, including s. 3(2)(a), and it is this aspect of her report that is most relevant to Mr. Vavilov's application for judicial review. The analyst's ultimate conclusion was that the certificate of citizenship issued to Mr. Vavilov in January 2013 was issued in error, as his parents had been "working as employees or representatives of a foreign government (the Russian Federation) during the time they resided in Canada, including at the time of Mr. Vavilov's birth", and that "[a]s such, Mr. Vavilov was not entitled to receive a citizenship certificate pursuant to paragraph 3(2)(a) of the *Citizenship Act*": A.R., Vol. I, at p. 3. The report was dated June 24, 2014.

2019 SCC 65 (CanLII)

[155] In discussing the relevant legislation, the analyst cited s. 3(1)(a) of the *Citizenship Act*, which establishes the general rule that persons born in Canada after February 14, 1977 are Canadian citizens. The analyst also referred to an exception to that general rule set out in s. 3(2) of the *Citizenship Act*, which reads as follows:

> (2) Paragraph (1)(a) does not apply to a person if, at the time of his birth, neither of his parents was a citizen or lawfully admitted to Canada for permanent residence and either of his parents was
>
> (a) a diplomatic or consular officer or other representative or employee in Canada of a foreign government;
>
> (b) an employee in the service of a person referred to in paragraph (a); or
>
> (c) an officer or employee in Canada of a specialized agency of the United Nations or an officer or employee in Canada of any other international organization to whom there are granted, by or under any Act of Parliament, diplomatic privileges and immunities certified by the Minister of Foreign Affairs to be equivalent to those granted to a person or persons referred to in paragraph (a).

[156] The analyst noted that s. 3(2)(a) refers both to diplomatic and consular officers and to *other* representatives or employees of a foreign government. She acknowledged that the term "diplomatic or consular officer" is defined in s. 35(1) of the *Interpretation Act* and that the definition lists a large number of posts within a foreign mission or consulate. However, the analyst observed that no statutory definition exists for the phrase "other representative or employee in Canada of a foreign government."

2019 SCC 65 (CanLII)

[157] The analyst compared the wording of s. 3(2)(a) with that of a similar provision in predecessor legislation. That provision, s. 5(3)(b) of the *Canadian Citizenship Act,* R.S.C. 1970, c. C-19, excluded from citizenship children whose "responsible parent" at the time of birth was:

> (i) a foreign diplomatic or consular officer or a representative of a foreign
> government accredited to Her Majesty,
> (ii) an employee of a foreign government attached to or in the service of a foreign diplomatic mission or consulate in Canada, or
> (iii) an employee in the service of a person referred to in subparagraph (i).

[158] The analyst reasoned that because s. 3(2)(a) "makes reference to 'representatives or employees of a foreign government,' but does not link the representatives or employees to 'attached to or in the service of a foreign diplomatic mission or consulate in Canada' (as did the earlier version of the provision), it is reasonable to maintain that this provision intends to encompass individuals not included in the definition of 'diplomatic and consular staff'": A.R., vol. I, at p. 7.

[159] Although the analyst acknowledged that "Ms. Vavilova and Mr. Bezrukov, were employed in Canada by a foreign government without the benefits or protections (i.e.: immunity) that accompany diplomatic, consular, or official status positions", she concluded that they were nonetheless "unofficial employees or representatives" of Russia at the time of Mr. Vavilov's birth: A.R., vol. I, at p. 13. The exception in s. 3(2)(a) of the *Citizenship Act*, as she interpreted it, therefore applied to Mr. Vavilov. As a result, the analyst recommended that the Canadian

2019 SCC 65 (CanLII)

Registrar of Citizenship "recall" Mr. Vavilov's certificate on the basis that he was not, and had never been, entitled to citizenship.

2019 SCC 65 (CanLII)

(2) Federal Court (Bell J.), 2015 FC 960, [2016] 2 F.C.R. 39

[160] Mr. Vavilov sought and was granted leave to bring an application for judicial review of the Registrar's decision in the Federal Court pursuant to s. 22.1 of the *Citizenship Act*. His application was dismissed.

[161] The Federal Court rejected Mr. Vavilov's argument that the Registrar had breached her duty of procedural fairness by failing to disclose the documentation that had prompted the procedural fairness letter. In the Federal Court's view, the Registrar had provided Mr. Vavilov sufficient information to allow him to meaningfully respond, and had thereby satisfied the requirements of procedural fairness in the circumstances.

[162] The Federal Court also rejected Mr. Vavilov's challenge to the Registrar's interpretation of s. 3(2)(a) of the *Citizenship Act*. Applying the correctness standard, the Federal Court agreed with the Registrar that undercover foreign operatives living in Canada fall within the meaning of the phrase "diplomatic or consular officer or other representative or employee in Canada of a foreign government" in s. 3(2)(a). In the Federal Court's view, to interpret s. 3(2)(a) in any other way would render the phrase "other representative or employee in Canada of a foreign government" meaningless and would lead to the "absurd result" that "children

of a foreign diplomat, registered at an embassy, who conducts spy operations, cannot claim Canadian citizenship by birth in Canada but children of those who enter unlawfully for the very same purpose, become Canadian citizens by birth": para. 25.

2019 SCC 65 (CanLII)

[163] Finally, the Federal Court was satisfied, given the evidence, that the Registrar's conclusion that Mr. Vavilov's parents had at the time of his birth been in Canada as part of an undercover operation for the Russian government was reasonable.

(3) Federal Court of Appeal (Stratas J.A. with Webb J.A. Concurring; Gleason J.A. Dissenting), 2017 FCA 132, [2018] 3 F.C.R. 75

[164] A majority of the Federal Court of Appeal allowed Mr. Vavilov's appeal from the Federal Court's judgment and quashed the Registrar's decision.

[165] The Court of Appeal unanimously rejected Mr. Vavilov's argument that he had been denied procedural fairness by the Registrar. In the Court of Appeal's view, the Registrar had provided Mr. Vavilov sufficient information in the procedural fairness letter to enable him to know the case to meet. Even if Mr. Vavilov had been entitled to more information at the time of that letter, the court indicated that his procedural fairness challenge would nevertheless have failed because he had subsequently obtained that additional information through his own efforts and was able to make meaningful submissions.

[166] The Court of Appeal was also unanimously of the view that the appropriate standard of review for the Registrar's interpretation and application of s. 3(2)(a) of the *Citizenship Act* was reasonableness. It split, however, on the application of that standard to the Registrar's decision.

[167] The majority of the Court of Appeal concluded that the analyst's interpretation of s. 3(2)(a), which the Registrar had adopted, was unreasonable and that the Registrar's decision should be quashed. The analysis relied on by the Registrar on the statutory interpretation issue was confined to a consideration of the text of s. 3(2)(a) and an abbreviated review of its legislative history, which totally disregarded its purpose or context. In the majority's view, such a "cursory and incomplete approach to statutory interpretation" in a case such as this was indefensible: para. 44. Moreover, when the provision's purpose and its context were taken into account, the only reasonable conclusion was that the phrase "employee in Canada of a foreign government" in s. 3(2)(a) was meant to apply only to individuals who have been granted diplomatic privileges and immunities under international law. Because it was common ground that neither of Mr. Vavilov's parents had been granted such privileges or immunities, s. 3(2)(a) did not apply to him. The cancellation of his citizenship certificate on the basis of s. 3(2)(a) therefore could not stand, and Mr. Vavilov was entitled to Canadian citizenship under the *Citizenship Act*.

2019 SCC 65 (CanLII)

[168] The dissenting judge disagreed, finding that the Registrar's interpretation of s. 3(2)(a) was reasonable. According to the dissenting judge, the text of that provision admits of at least two rational interpretations: one that includes all employees of a foreign government and one that is restricted to those who have been granted diplomatic privileges and immunities. In the dissenting judge's view, the former interpretation is not foreclosed by the context or the purpose of the provision. It was thus open to the Registrar to conclude that Mr. Vavilov's parents fell within the scope of s. 3(2)(a). The dissenting judge would have upheld the Registrar's decision.

C. *Analysis*

(1) Standard of Review

[169] Applying the standard of review analysis set out above leads to the conclusion that the standard to be applied in reviewing the merits of the Registrar's decision is reasonableness.

[170] When a court reviews the merits of an administrative decision, reasonableness is presumed to be the applicable standard of review, and there is no basis for departing from that presumption in this case. The Registrar's decision has come before the courts by way of judicial review, not by way of a statutory appeal. On this point, we note that ss. 22.1 through 22.4 of the *Citizenship Act* lay down rules that govern applications for judicial review of decisions made under that Act, one of which, in s. 22.1(1), is that such an application may be made only with leave of the

2019 SCC 65 (CanLII)

Federal Court. However, none of these provisions allow for a party to bring an appeal from a decision under the *Citizenship Act*. Given this fact, and given that Parliament has not prescribed the standard to be applied on judicial review of the decision at issue, there is no indication that the legislature intended a standard of review other than reasonableness to apply. The Registrar's decision does not give rise to any constitutional questions, general questions of law of central importance to the legal system as a whole or questions regarding the jurisdictional boundaries between two or more administrative bodies. As a result, the standard to be applied in reviewing the decision is reasonableness.

2019 SCC 65 (CanLII)

(2) Review for Reasonableness

[171] The principal issue before this Court is whether it was reasonable for the Registrar to find that Mr. Vavilov's parents had been "other representative[s] or employee[s] in Canada of a foreign government" within the meaning of s. 3(2)(a) of the *Citizenship Act*.

[172] In our view, it was not. The Registrar failed to justify her interpretation of s. 3(2)(a) of the *Citizenship Act* in light of the constraints imposed by the text of s. 3 of the *Citizenship Act* considered as a whole, by other legislation and international treaties that inform the purpose of s. 3, by the jurisprudence on the interpretation of s. 3(2)(a), and by the potential consequences of her interpretation. Each of these elements — viewed individually and cumulatively — strongly supports the conclusion that s. 3(2)(a) was not intended to apply to children of foreign government

representatives or employees who have not been granted diplomatic privileges and immunities. Though Mr. Vavilov raised many of these considerations in his submissions in response to the procedural fairness letter (A.R., vol. IV, at pp. 448-52), the Registrar failed to address those submissions in her reasons and did not, to justify her interpretation of s. 3(2)(a), do more than conduct a cursory review of the legislative history and conclude that her interpretation was not explicitly precluded by the text of s. 3(2)(a).

2019 SCC 65 (CanLII)

[173] Our review of the Registrar's decision leads us to conclude that it was unreasonable for her to find that the phrase "diplomatic or consular officer or other representative or employee in Canada of a foreign government" applies to individuals who have not been granted diplomatic privileges and immunities in Canada. It is undisputed that Mr. Vavilov's parents had not been granted such privileges and immunities. No purpose would therefore be served by remitting this matter to the Registrar.

(a) *Section 3(2) of the Citizenship Act*

[174] The analyst justified her conclusion that Mr. Vavilov is not a citizen of Canada by reasoning that his parents were "other representative[s] or employee[s] in Canada of a foreign government" within the meaning of s. 3(2)(a) of the *Citizenship Act.* Section 3(2)(a) provides that children of "a diplomatic or consular officer or other representative or employee in Canada of a foreign government" are exempt from the general rule in s. 3(1)(a) that individuals born in Canada after February 14,

1977 acquire Canadian citizenship by birth. The analyst observed that although the term "diplomatic or consular officer" is defined in the *Interpretation Act* and does not apply to individuals like Mr. Vavilov's parents, the phrase "other representative or employee in Canada of a foreign government" is not so defined, and may apply to them.

2019 SCC 65 (CanLII)

[175] The analyst's attempt to give the words "other representative or employee in Canada of a foreign government" a meaning distinct from that of "diplomatic or consular officer" is sensible. It is generally consistent with the principle of statutory interpretation that Parliament intends each word in a statute to have meaning: Sullivan, at p. 211. We accept that if the phrase "other representative or employee in Canada of a foreign government" were considered in isolation, it could apply to a spy working in the service of a foreign government in Canada. However, the analyst failed to address the immediate statutory context of s. 3(2)(a), including the closely related text in s. 3(2)(c):

> (2) Paragraph (1)(a) does not apply to a person if, at the time of his birth, neither of his parents was a citizen or lawfully admitted to Canada for permanent residence and either of his parents was
>
> (a) a diplomatic or consular officer or other representative or employee in Canada of a foreign government;
>
> (b) an employee in the service of a person referred to in paragraph (a); or
>
> (c) an officer or employee in Canada of a specialized agency of the United Nations or an officer or employee in Canada of any other international organization to whom there are granted, by or under any Act of Parliament, diplomatic privileges and immunities

> certified by the Minister of Foreign Affairs to be equivalent to those granted to a person or persons referred to in paragraph (a).

[176] As the majority of the Court of Appeal noted (at paras. 61-62), the wording of s. 3(2)(c) provides clear support for the conclusion that *all* of the persons contemplated by s. 3(2)(a) — including those who are "employee[s] in Canada of a foreign government" — must have been granted diplomatic privileges and immunities in some form. If, as the Registrar concluded, s. 3(2)(a) includes persons who do not benefit from these privileges or immunities, it is difficult to understand how effect could be given to the explicit equivalency requirement articulated in s. 3(2)(c). However, the analyst did not account for this tension in the immediate statutory context of s. 3(2)(a).

(b) *The Foreign Missions and International Organizations Act and the Treaties It Implements*

[177] Before the Registrar, Mr. Vavilov argued that s. 3(2) of the *Citizenship Act* must be read in conjunction with both the *Foreign Missions and International Organizations Act*, S.C. 1991, c. 41 ("*FMIOA*"), and the *Vienna Convention on Diplomatic Relations*, Can. T.S. 1966 No. 29 ("*VCDR*"). The *VCDR* and the *Vienna Convention on Consular Relations*, Can. T.S. 1974 No. 25, are the two leading treaties that extend diplomatic and/or consular privileges and immunities to employees and representatives of foreign governments in diplomatic missions and consular posts. Parliament has implemented the relevant provisions of both conventions by means of s. 3(1) of the *FMIOA*.

2019 SCC 65 (CanLII)

[178] To begin, we note that Canada affords citizenship in accordance both with the principle of *jus soli*, the acquisition of citizenship through birth regardless of the parents' nationality, and with that of *jus sanguinis*, the acquisition of citizenship by descent, that is through a parent: *Citizenship Act*, s. 3(1)(a) and (b); see I. Brownlie, *Principles of Public International Law* (5th ed. 1998), at pp. 391-93. These two principles operate as a backdrop to s. 3 of the *Citizenship Act* as a whole. It is undisputed that s. 3(2)(a) operates as an exception to these general rules. However, Mr. Vavilov took a narrower view of that exception than did the Registrar. In his submissions to the Registrar, he argued that Parliament intended s. 3(2) of the *Citizenship Act* to simply mirror the *FMIOA* and the *VCDR*, as well as Article II of the *Optional Protocol to the Vienna Convention on Diplomatic Relations, concerning Acquisition of Nationality*, 500 U.N.T.S. 223, which provides that "[m]embers of the mission not being nationals of the receiving State, and members of their families forming part of their household, shall not, solely by the operation of the law of the receiving State, acquire the nationality of that State". Mr. Vavilov made the following submission to the Registrar:

> The purpose in excluding diplomats and their families, including newborn children, from acquiring citizenship in the receiving state relates to the immunities which extend to this group of people. Diplomats and their family members are immune from criminal prosecution and civil liability in the receiving state. As such, they cannot acquire citizenship in the receiving state and also benefit from these immunities. A citizen has duties and responsibilities to its country. Immunity is inconsistent with this principle and so does not apply to citizens. See Article 37 of the *Convention*.
>
> Section 3(2) legislates into Canadian domestic law the above principles and should be narrowly interpreted with these purposes in

2019 SCC 65 (CanLII)

> mind. The term "employee in Canada of a foreign government" must be interpreted to mean an employee of a diplomatic mission, or connected to it, who benefits from the immunities of the *Convention*. Any other interpretation would lead to absurd results. There is no purpose served in excluding any child born of a person not having a connection to a diplomatic mission in Canada while sojourning here from the principle of *Jus soli*.
>
> (A.R., vol. IV, at pp. 449-50)

2019 SCC 65 (CanLII)

[179] In *Al-Ghamdi v. Canada (Minister of Foreign Affairs & International Trade)*, 2007 FC 559, 64 Imm. L. R. (3d) 67, a case which was referred to in the analyst's report and which we will discuss in greater detail below, the Federal Court, at para. 53, quoted a passage by Professor Brownlie on this point:

> Of particular interest are the special rules relating to the jus soli, appearing as exceptions to that principle, the effect of the exceptions being to remove the cases where its application is clearly unjustifiable. A rule which has very considerable authority stipulated that children born to persons having diplomatic immunity shall not be nationals by birth of the state to which the diplomatic agent concerned is accredited. Thirteen governments stated the exception in the preliminaries of the Hague Codification Conference. In a comment on the relevant article of the Harvard draft on diplomatic privileges and immunities it is stated: 'This article is believed to be declaratory of an established rule of international law'. The rule receives ample support from legislation of states and expert opinion. The Convention on Certain Questions relating to the Conflict of Nationality Laws of 1930 provides in Article 12: 'Rules of law which confer nationality by reasons of birth on the territory of a State shall not apply automatically to children born to persons enjoying diplomatic immunities in the country where the birth occurs.'
>
> In 1961 the United Nations Conference on Diplomatic Intercourse and Immunities adopted an Optional Protocol concerning Acquisition of Nationality, which provided in Article II: 'Members of the mission not being nationals of the receiving State, and members of their families forming part of their household, shall not, solely by the operation of the law of the receiving State, acquire the nationality of that State'.

> Some states extend the rule to the children of consuls, and there is some support for this from expert opinion. [Emphasis deleted.]
>
> (Brownlie, at pp. 392-93).

[180] Mr. Vavilov included relevant excerpts from the parliamentary debate that had preceded the enactment of the *Citizenship Act* in support of his argument that the very purpose of s. 3(2) of the *Citizenship Act* was to align Canada's citizenship rules with these principles of international law. These excerpts describe s. 3(2) as "conform[ing] to international custom" and as having been drafted with the intention of "exclud[ing] children born in Canada to diplomats from becoming Canadian citizens": Hon. J. Hugh Faulkner, Secretary of State of Canada, House of Commons, *Minutes of Proceedings and Evidence of the Standing Committee on Broadcasting, Films and Assistance to the Arts, respecting Bill C-20*, *An Act respecting citizenship*, No. 34, 1st Sess., 30th Parl., February 24, 1976, at 34:23. The record of that debate also reveals that Parliament took care to avoid the danger that because of how some provisions were written, "a number of other people would be affected such as those working for large foreign corporations": *ibid*. Although the analyst discussed the textual difference between s. 3(2) and a similar provision in the former *Canadian Citizenship Act*, she did not grapple with these other elements of the legislative history, despite the fact that they cast considerable doubt on her conclusions, indicating that s. 3(2) was not intended to affect the status of individuals whose parents have not been granted diplomatic privileges and immunities.

2019 SCC 65 (CanLII)

[181] In attempting to distinguish the meaning of the phrase "other representative or employee in Canada of a foreign government" from that of the term "diplomatic or consular officer", the analyst also appeared to overlook the possibility that some individuals who fall into the former category might be granted privileges or immunities despite not being considered "diplomatic or consular officer[s]" under the *Interpretation Act*. Yet, as the majority of the Federal Court of Appeal pointed out, such individuals do in fact exist: paras. 53-55, citing *FMIOA*, at ss. 3 and 4 and Sched. II, Articles 1, 41, 43, 49, and 53. In light of Mr. Vavilov's submissions regarding the purpose of s. 3(2), the failure to consider this possibility is a noticeable omission.

[182] It is well established that domestic legislation is presumed to comply with Canada's international obligations, and that it must be interpreted in a manner that reflects the principles of customary and conventional international law: *Appulonappa*, at para. 40; see also *Pushpanathan*, at para. 51; *Baker*, at para. 70; *GreCon Dimter inc. v. J.R. Normand inc.*, 2005 SCC 46, [2005] 2 S.C.R. 401, at para. 39; *Hape*, at paras. 53- 54; *B010 v. Canada (Citizenship and Immigration)*, 2015 SCC 58, [2015] 3 S.C.R. 704, at para. 48; *India v. Badesha*, 2017 SCC 44, [2017] 2 S.C.R. 127, at para. 38; *Office of the Children's Lawyer v. Balev*, 2018 SCC 16, [2018] 1 S.C.R. 398, at paras. 31-32. Yet the analyst did not refer to the relevant international law, did not inquire into Parliament's purpose in enacting s. 3(2) and did not respond to Mr. Vavilov's submissions on this issue. Nor did she advance any alternate explanation for why Parliament would craft such a provision in the first place. In the face of

2019 SCC 65 (CanLII)

compelling submissions that the underlying rationale of s. 3(2) was to implement a narrow exception to a general rule in a manner that was consistent with established principles of international law, the analyst and the Registrar chose a different interpretation without offering any reasoned explanation for doing so.

2019 SCC 65 (CanLII)

(c) *Jurisprudence Interpreting Section 3(2) of the Citizenship Act*

[183] Although the analyst cited three Federal Court decisions on s. 3(2)(a) of the *Citizenship Act* in a footnote, she dismissed them as being irrelevant on the basis that they related only to "individuals whose parents maintained diplomatic status in Canada at the time of their birth". But this distinction, while true, does not explain why the *reasoning* employed in those decisions, which directly concerned the scope, the meaning and the legislative purpose of s. 3(2)(a), was inapplicable in Mr. Vavilov's case. Had the analyst considered just the three cases cited in her report — *Al-Ghamdi*; *Lee v. Canada (Minister of Citizenship and Immigration)*, 2008 FC 614, [2009] 1 F.C.R. 204; and *Hitti v. Canada (Minister of Citizenship and Immigration)*, 2007 FC 294, 310 F.T.R. 169 — it would have been evident to her that she needed to grapple with and justify her interpretation in light of the persuasive and comprehensive legal reasoning that supports the position that s. 3(2)(a) was intended to apply only to those individuals whose parents have been granted diplomatic privileges and immunities.

[184] In *Al-Ghamdi*, the Federal Court considered the constitutionality of paras. (a) and (c) of s. 3(2) of the *Citizenship Act* in reviewing a decision in which

Passport Canada had refused to issue a passport to a child of a Saudi Arabian diplomat. In its reasons, the court came to a number of conclusions regarding the purpose and scope of s. 3(2), including, at para. 5, that:

> The only individuals covered in paragraphs 3(2)(a) and (c) of the *Citizenship Act* are children of individuals with diplomatic status. These are individuals who enter Canada under special circumstances and without undergoing any of the normal procedures. Most importantly, while in Canada, they are granted all of the immunities and privileges of diplomats . . . .

[185] The court went on to extensively document the link between the exception to the rule of citizenship by birth set out in s. 3(2) of the *Citizenship Act* and the rules of international law, the *FMIOA* and the *VCDR*: *Al-Ghamdi*, at paras. 52 et. seq. It noted that there is an established rule of international law that children born to parents who enjoy diplomatic immunities are not entitled to automatic citizenship by birth, and that their status in this respect is an exception to the principle of *jus soli*: *Al-Ghamdi*, at para. 53, quoting Brownlie, at pp. 391-93. In finding that the exceptions under s. 3(2) to citizenship on the basis of *jus soli* do not infringe the rights of children of diplomats under s. 15 of the *Charter*, the court emphasized that *all* children to whom s. 3(2) applies are entitled to an "extraordinary array of privileges under the *Foreign Missions and International Organizations Act*": *Al-Ghamdi*, at para. 62. Citing the *VCDR*, it added that "[i]t is precisely because of the vast array of privileges accorded to diplomats and their families, which are by their very nature inconsistent with the obligations of citizenship, that a person who enjoys diplomatic status cannot acquire citizenship": para. 63. In its analysis under s. 1 of the

2019 SCC 65 (CanLII)

Charter, the court found that the choice to deny citizenship to individuals provided for in s. 3(2) is "tightly connected" to a pressing government objective of ensuring "that no citizen is immune from the obligations of citizenship", such as the obligations to pay taxes and comply with the criminal law: *Al-Ghamdi*, at paras. 74-75. In the case at bar, the analyst failed entirely to engage with the arguments endorsed by the Federal Court in *Al-Ghamdi* despite the court's key finding that s. 3(2)(a) applies only to "children born of foreign diplomats or an equivalent", a conclusion upon which the very constitutionality of the provision turned: *Al-Ghamdi*, at paras. 3, 9, 27, 28, 56 and 59.

[186] In *Lee*, another case cited by the analyst, the Federal Court confirmed the finding in *Al-Ghamdi* that "[t]he only individuals covered in paragraphs 3(2)(a) and (c) of the *Citizenship Act* are children of individuals with diplomatic status": *Lee*, at para. 77. The court found in *Lee* that the "functional duties of the applicant's father" were not relevant to whether or not the applicant was excluded from citizenship pursuant to s. 3(2)(a) of the *Citizenship Act*: para. 58. Rather, what mattered was only that at the time of the applicant's birth, his father had been a registered consular official and had held a diplomatic passport and the title of Vice-Consul: paras. 44, 58, 61 and 63.

[187] *Hitti*, the third case cited in the analyst's report, concerned a decision to confiscate two citizenship certificates on the basis that, under s. 3(2) of the *Citizenship Act*, their holders had never been entitled to them. In that case, the

2019 SCC 65 (CanLII)

applicants' father, a Lebanese citizen, had been employed as an information officer of the League of Arab States in Ottawa. Although the League did not have diplomatic standing at that time, Canada had agreed as a matter of courtesy to extend diplomatic status to officials of the League's information centre, treating them as "attachés" of their home countries' embassies: *Hitti*, at paras. 6 and 9; see also *Interpretation Act*, s. 35(1). Mr. Hitti argued he did not, in practice, fulfill diplomatic tasks or act as a representative of Lebanon, but there was nonetheless a record of his being an accredited diplomat, enjoying the benefits of that status and being covered by the *VCDR* when his children were born: paras. 5 and 8. The Federal Court rejected a submission that Mr. Hitti would have had to perform duties in the service of Lebanon in order for his children to fall within the meaning of s. 3(2)(a), and concluded that "what Mr. Hitti did when he was in the country is not relevant": para. 32.

[188] What can be seen from both *Lee* and *Hitti* is that what matters, for the purposes of s. 3(2)(a), is not whether an individual carries out activities in the service of a foreign state while in Canada, but whether, at the relevant time, the individual has been granted diplomatic privileges and immunities. Thus, in addition to the Federal Court's decision in *Al-Ghamdi*, the analyst was faced with two cases in which the application of s. 3(2) had turned on the existence of diplomatic status rather than on the "functional duties" or activities of the child's parents. In these circumstances, it was a significant omission for her to ignore the Federal Court's reasoning when determining whether the espionage activities of Ms. Vavilova and Mr. Bezrukov were sufficient to ground the application of s. 3(2)(a).

2019 SCC 65 (CanLII)

(d) *Possible Consequences of the Registrar's Interpretation*

[189] When asked why the children of individuals referred to in s. 3(2)(a) would be excluded from acquiring citizenship by birth, another analyst involved in Mr. Vavilov's file (who had also been involved in Mr. Vavilov's brother's file) responded as follows:

> Well, usually the way we use section 3(2)(a) is for – you're right, for diplomats and that they don't -- because they are not -- they are not obliged . . . to the law of Canada and everything, so that's why their children do not obtain citizenship if they were born in Canada while the person was in Canada under that status. But then there is also this other part of the Act that says other representatives or employees of a foreign government in Canada, that may open the door for other person than diplomats and that's how we interpreted in this specific case 3(2)(a) but there is no jurisprudence on that.
>
> (R.R. transcript, at pp. 87-88)

[190] In other words, the officials responsible for these files were aware that s. 3(2)(a) was informed by the principle that individuals subject to the exception are "not obliged . . . to the law of Canada". They were also aware that the interpretation they had adopted in the case of the Vavilov brothers was a novel one. Although the Registrar knew this, she failed to provide a rationale for this expanded interpretation.

[191] Additionally, there is no evidence that the Registrar considered the potential consequences of expanding her interpretation of s. 3(2)(a) to include individuals who have not been granted diplomatic privileges and immunities. Citizenship has been described as "the right to have rights": U.S. Supreme Court

2019 SCC 65 (CanLII)

Chief Justice Earl Warren, as quoted in A. Brouwer, *Statelessness in Canadian Context: A Discussion Paper* (July 2003) (online), at p. 2. The importance of citizenship was recognized in *Benner v. Canada (Secretary of State)*, [1997] 1 S.C.R. 358, in which Iacobucci J., writing for this Court, stated: "I cannot imagine an interest more fundamental to full membership in Canadian society than Canadian citizenship": para. 68. This was reiterated in *Canada (Minister of Citizenship and Immigration) v. Tobiass*, [1997] 3 S.C.R. 391, in which this Court unanimously held that "[f]or some, such as those who might become stateless if deprived of their citizenship, it may be valued as highly as liberty": para. 108.

[192] It perhaps goes without saying that rules concerning citizenship require a high degree of interpretive consistency in order to shield against a perception of arbitrariness and to ensure conformity with Canada's international obligations. We can therefore only assume that the Registrar intended that this new interpretation of s. 3(2)(a) would apply to any other individual whose parent is employed by or represents a foreign government at the time of the individual's birth in Canada but has not been granted diplomatic privileges and immunities. The Registrar's interpretation would not, after all, limit the application of s. 3(2)(a) to the children of spies — its logic would be equally applicable to a number of other scenarios, including that of a child of a non-citizen worker employed by an embassy as a gardener or cook, or of a child of a business traveller who represents a foreign government-owned corporation. Mr. Vavilov had raised the fact that provisions such as s. 3(2)(a) must be given a narrow interpretation because they deny or potentially take away rights — that of

2019 SCC 65 (CanLII)

citizenship under s. 3(1) in this case — which otherwise benefit from a liberal and broad interpretation: *Brossard (Town) v. Québec (Commission des droits de la personne)*, [1988] 2 S.C.R. 279, at p. 307. Yet there is no indication that the Registrar considered the potential harsh consequences of her interpretation for such a large class of individuals, which included Mr. Vavilov, or the question whether, in light of those possible consequences, Parliament would have intended s. 3(2)(a) to apply in this manner.

[193] Moreover, we would note that despite following a different legal process, the Registrar's decision in this case had the same effect as a revocation of citizenship — a process which has been described by scholars as "a kind of 'political death'" — depriving Mr. Vavilov of his right to vote and the right to enter and remain in Canada: see A. Macklin, "Citizenship Revocation, the Privilege to Have Rights and the Production of the Alien" (2014), 40 *Queen's L.J.* 1, at pp. 7-8. While we question whether the Registrar was empowered to unilaterally alter Canada's position with respect to Mr. Vavilov's citizenship and recognize that the relationship between the cancellation of a citizenship certificate under s. 26 of the *Citizenship Regulations* and the revocation of an individual's citizenship (as set out in s. 10 of the *Citizenship Act*) is not clear, we leave this issue for another day because it was neither raised nor argued by the parties.

D. *Conclusion*

2019 SCC 65 (CanLII)

[194] Multiple legal and factual constraints may bear on a given administrative decision, and these constraints may interact with one another. In some cases, a failure to justify the decision against any one relevant constraint may be sufficient to cause the reviewing court to lose confidence in the reasonableness of the decision. Section 3 of the *Citizenship Act* considered as a whole, other legislation and international treaties that inform the purpose of s. 3, the jurisprudence cited in the analyst's report, and the potential consequences of the Registrar's decision point overwhelmingly to the conclusion that Parliament did not intend s. 3(2)(a) to apply to children of individuals who have not been granted diplomatic privileges and immunities. The Registrar's failure to justify her decision with respect to these constraints renders her interpretation unreasonable, and we would therefore uphold the Federal Court of Appeal's decision to quash the Registrar's decision.

[195] As noted above, we would exercise our discretion not to remit the matter to the Registrar for redetermination. Crucial to our decision is the fact that Mr. Vavilov explicitly raised all of these issues before the Registrar and that the Registrar had an opportunity to consider them but failed to do so. She offered no justification for the interpretation she adopted except for a superficial reading of the provision in question and a comment on part of its legislative history. On the other hand, there is overwhelming support — including in the parliamentary debate, established principles of international law, an established line of jurisprudence and the text of the provision itself — for the conclusion that Parliament did not intend s. 3(2)(a) of the *Citizenship Act* to apply to children of individuals who have not been granted

2019 SCC 65 (CanLII)

diplomatic privileges and immunities. That being said, we would stress that it is not our intention to offer a definitive interpretation of s. 3(2)(a) in all respects, nor to foreclose the possibility that multiple reasonable interpretations of other aspects might be available to administrative decision makers. In short, we do not suggest that there is necessarily "one reasonable interpretation" of the provision as a whole. But we agree with the majority of the Court of Appeal that it was *not* reasonable for the Registrar to interpret s. 3(2)(a) as applying to children of individuals who have not been granted diplomatic privileges and immunities at the time of the children's birth.

[196] Given that it is undisputed that Ms. Vavilova and Mr. Bezrukov, as undercover spies, were granted no such privileges, it would serve no purpose to remit the matter in this case to the Registrar. Given that Mr. Vavilov is a person who was born in Canada after February 14, 1977, his status is governed only by the general rule set out in s. 3(1)(a) of the *Citizenship Act*. He is a Canadian citizen.

E. *Disposition*

[197] The appeal is dismissed with costs throughout to Mr. Vavilov.

The following are the reasons delivered by

ABELLA AND KARAKATSANIS JJ. —

2019 SCC 65 (CanLII)

[198] Forty years ago, in *C.U.P.E., Local 963 v. New Brunswick Liquor Corporation*, [1979] 2 S.C.R. 227, this Court embarked on a course to recognize the unique and valuable role of administrative decision-makers within the Canadian legal order. Breaking away from the court-centric theories of years past, the Court encouraged judges to show deference when specialized administrative decision-makers provided reasonable answers to legal questions within their mandates. Building on this more mature understanding of administrative law, subsequent decisions of this Court sought to operationalize deference and explain its relationship to core democratic principles. These appeals offered a platform to clarify and refine our administrative law jurisprudence, while remaining faithful to the deferential path it has travelled for four decades.

[199] Regrettably, the majority shows our precedents no such fidelity. Presented with an opportunity to steady the ship, the majority instead dramatically reverses course — away from this generation's deferential approach and back towards a prior generation's more intrusive one. Rather than confirming a meaningful presumption of deference for administrative decision-makers, as our common law has increasingly done for decades, the majority's reasons strip away deference from hundreds of administrative actors subject to statutory rights of appeal; rather than following the consistent path of this Court's jurisprudence in understanding legislative intent as being the intention to leave legal questions within their mandate to specialized decision-makers with expertise, the majority removes expertise from the equation entirely and reformulates legislative intent as an overriding intention to

2019 SCC 65 (CanLII)

provide — or not provide — appeal routes; and rather than clarifying the role of reasons and how to review them, the majority revives the kind of search for errors that dominated the pre-*C.U.P.E.* era. In other words, instead of *reforming* this generation's evolutionary approach to administrative law, the majority *reverses* it, taking it back to the formalistic judge-centred approach this Court has spent decades dismantling.

2019 SCC 65 (CanLII)

[200] We support the majority's decision to eliminate the vexing contextual factors analysis from the standard of review framework and to abolish the shibboleth category of "true questions of jurisdiction". These improvements, accompanied by a meaningful presumption of deference for administrative decision-makers, would have simplified our judicial review framework and addressed many of the criticisms levied against our jurisprudence since *Dunsmuir v. New Brunswick*, [2008] 1 S.C.R. 190.

[201] But the majority goes much further and fundamentally reorients the decades-old relationship between administrative actors and the judiciary, by dramatically expanding the circumstances in which generalist judges will be entitled to substitute their own views for those of specialized decision-makers who apply their mandates on a daily basis. In so doing, the majority advocates a profoundly different philosophy of administrative law than the one which has guided our Court's jurisprudence for the last four decades. The majority's reasons are an encomium for correctness and a eulogy for deference.

[202] The modern Canadian state "could not function without the many and varied administrative tribunals that people the legal landscape" (The Rt. Hon. Beverley McLachlin, *Administrative Tribunals and the Courts: An Evolutionary Relationship*, May 27, 2013 (online)). Parliament and the provincial legislatures have entrusted a broad array of complex social and economic challenges to administrative actors, including regulation of labour relations, welfare programs, food and drug safety, agriculture, property assessments, liquor service and production, infrastructure, the financial markets, foreign investment, professional discipline, insurance, broadcasting, transportation and environmental protection, among many others. Without these administrative decision-makers, "government would be paralyzed, and so would the courts" (Guy Régimbald, *Canadian Administrative Law* (2nd ed. 2015), at p. 3).

[203] In exercising their mandates, administrative decision-makers often resolve claims and disputes within their areas of specialization (Gus Van Harten et al., *Administrative Law: Cases, Text, and Materials* (7th ed. 2015), at p. 13). These claims and disputes vary greatly in scope and subject-matter. Corporate merger requests, professional discipline complaints by dissatisfied clients, requests for property reassessments and applications for welfare benefits, among many other matters, all fall within the purview of the administrative justice system.

[204] The administrative decision-makers tasked to resolve these issues come from many different walks of life (Van Harten et al., at p. 15). Some have legal

2019 SCC 65 (CanLII)

backgrounds, some do not. The diverse pool of decision-makers in the administrative system responds to the diversity of issues that it must resolve. To address this broad range of issues, administrative dispute-resolution processes are generally "[d]esigned to be less cumbersome, less expensive, less formal and less delayed" than their judicial counterparts — but "no less effectiv[e] or credibl[e]" (*Rasanen v. Rosemount Instruments Ltd.* (1994), 17 O.R. (3d) 267 (C.A.), at p. 279). In the field of labour relations, for example, Parliament explicitly rejected a court-based system to resolve workplace disputes in favour of a Labour Board, staffed with representatives from management and labour alongside an independent member (Bora Laskin, "Collective Bargaining in Ontario: A New Legislative Approach" (1943), 21 *Can. Bar Rev.* 684; John A. Willes, *The Ontario Labour Court: 1943-1944* (1979); Katherine Munro, "A 'Unique Experiment': The Ontario Labour Court, 1943-1944" (2014), 74 *Labour/Le Travail* 199). Other administrative processes — license renewals, zoning permit issuances and tax reassessments, for example — bear even less resemblance to the traditional judicial model.

[205] Courts, through judicial review, monitor the boundaries of administrative decision making. Questions about the standards of judicial review have been an enduring feature of Canadian administrative law. The debate, in recent times, has revolved around "reasonableness" and "correctness", and determining when each standard applies. On the one hand, "reasonableness" review expects courts to defer to decisions by specialized decision-makers that "are defensible in respect of the facts and law"; on the other, "correctness" review allows courts to substitute their own

2019 SCC 65 (CanLII)

opinions for those of the initial decision-maker (*Dunsmuir*, at paras. 47-50). This standard of review debate has profound implications for the extent to which reviewing courts may substitute their views for those of administrative decision-makers. At its core, it is a debate over two distinct philosophies of administrative law.

[206] The story of modern Canadian administrative law is the story of a shift away from the court-centric philosophy which denied administrative bodies the authority to interpret or shape the law. This approach found forceful expression in the work of Albert Venn Dicey. For Dicey, the rule of law meant the rule of courts. Dicey developed his philosophy at the end of the 19th century to encourage the House of Lords to restrain the government from implementing ameliorative social and welfare reforms administered by new regulatory agencies. Famously, Dicey asserted that administrative law was anathema to the English legal system (Albert Venn Dicey, *Introduction to the Study of the Law of the Constitution* (10th ed. 1959), at pp. 334-35). Because, in his view, only the judiciary had the authority to interpret law, there was no reason for a court to defer to legal interpretations proffered by administrative bodies, since their decisions did not constitute "law" (Kevin M. Stack, "Overcoming Dicey in Administrative Law" (2018), 68 *U.T.L.J.* 293, at p. 294).

[207] The canonical example of Dicey's approach at work is the House of Lords' decision in *Anisminic Ltd. v. Foreign Compensation Commission*, [1969] 2 A.C. 147, the judicial progenitor of "jurisdictional error". *Anisminic* entrenched non-deferential judicial review by endorsing a lengthy checklist of "jurisdictional errors"

2019 SCC 65 (CanLII)

capable of undermining administrative decisions. Lord Reid noted that there were two scenarios in which an administrative decision-maker would lose jurisdiction. The first was narrow and asked whether the legislature had empowered the administrative decision-maker to "enter on the inquiry in question" (p. 171). The second was wider:

> [T]here are many cases where, although the tribunal had jurisdiction to enter on the inquiry, it has done or failed to do something in the course of the inquiry which is of such a nature that its decision is a nullity. It may have given its decision in bad faith. It may have made a decision which it had no power to make. It may have failed in the course of the inquiry to comply with the requirements of natural justice. *It may in perfect good faith have misconstrued the provisions giving it power to act so that it failed to deal with the question remitted to it and decided some question which was not remitted to it. It may have refused to take into account something which it was required to take into account. Or it may have based its decision on some matter which, under the provisions setting it up, it had no right to take into account. I do not intend this list to be exhaustive.* [Emphasis added; p. 171.]

[208] The broad "jurisdictional error" approach in *Anisminic* initially found favour with this Court in cases like *Metropolitan Life Insurance Company v. International Union of Operating Engineers, Local 796*, [1970] S.C.R. 425, and *Bell v. Ontario Human Rights Commission*, [1971] S.C.R. 756. These cases "took the position that a definition of jurisdictional error should include any question pertaining to the interpretation of a statute made by an administrative tribunal", and in each case, "th[e] Court substituted what was, in its opinion, the correct interpretation of the enabling provision of the tribunal's statute for that of the tribunal" (*Canada (Attorney General) v. Public Service Alliance of Canada*, [1991] 1 S.C.R. 614, at p. 650, per Cory J., dissenting, but not on this point). In *Metropolitan Life*, for example, this

2019 SCC 65 (CanLII)

Court quashed a labour board's decision to certify a union, concluding that the Board had "ask[ed] itself the wrong question" and "decided a question which was not remitted to it" (p. 435). In *Bell*, this Court held that a human rights commission had strayed beyond its jurisdiction by deciding to investigate a complaint of racial discrimination filed against a landlord. The Court held that the Commission had incorrectly interpreted the term "self-contained dwelling uni[t]" found in s. 3 of the *Ontario Human Rights Code*, *1961-62*, S.O. 1961-62, c. 93, and by so doing, had lost jurisdiction to inquire into the complaint of discrimination (pp. 767 and 775).

[209] As these cases illustrate, the *Anisminic* approach proved easy to manipulate, allowing courts to characterize any question as "jurisdictional" and thereby give themselves latitude to substitute their own view of the appropriate answer without regard for the original decision-maker's decision or reasoning. The *Anisminic* era and the "jurisdictional error" approach were and continue to be subject to significant judicial and academic criticism (*Public Service Alliance*, at p. 650; *National Corn Growers Assn. v. Canada (Import Tribunal)*, [1990] 2 S.C.R. 1324, at p. 1335, per Wilson J., concurring; Beverley McLachlin, P.C., "'Administrative Law is Not for Sissies': Finding a Path Through the Thicket" (2016), 29 *C.J.A.L.P.* 127, at pp. 129-30; Jocelyn Stacey and Alice Woolley, "Can Pragmatism Function in Administrative Law?" (2016), 74 *S.C.L.R.* (2d) 211, at pp. 215-16; R.A. MacDonald, "Absence of Jurisdiction: A Perspective" (1983), 43 *R. du B.* 307).

2019 SCC 65 (CanLII)

[210] In 1979, the Court signaled a turn to a more deferential approach to judicial review with its watershed decision in *C.U.P.E.* There, the Court challenged the "jurisdictional error" model and planted the seeds of a home-grown approach to administrative law in Canada. In a frequently-cited passage, Dickson J., writing for a unanimous Court, cautioned that courts "should not be alert to brand as jurisdictional, and therefore subject to broader curial review, that which may be doubtfully so" (p. 233; cited in nearly 20 decisions of this Court, including *Dunsmuir*, at para. 35; *Canada (Citizenship and Immigration) v. Khosa*, [2009] 1 S.C.R. 339, at para. 45; *Alberta (Information and Privacy Commissioner) v. Alberta Teachers' Association*, [2011] 3 S.C.R. 654, at para. 33; *Canada (Canadian Human Rights Commission) v. Canada (Attorney General)*, [2018] 2 S.C.R. 230, at para. 31). The Court instead endorsed an approach that respected the legislature's decision to assign legal policy issues in some areas to specialized, non-judicial decision-makers. The Court recognized that legislative language could "bristl[e] with ambiguities" and that the interpretive choices made by administrative tribunals deserved respect from courts, particularly when, as in *C.U.P.E.*, the decision was protected by a privative clause (pp. 230 and 234-36).

[211] By championing "curial deference" to administrative bodies, *C.U.P.E.* embraced "a more sophisticated understanding of the role of administrative tribunals in the modern Canadian state" (*National Corn Growers*, at p. 1336, per Wilson J., concurring; *Domtar Inc. v. Quebec (Commission d'appel en matière de lésions professionnelles)*, [1993] 2 S.C.R. 756, at p. 800). As one scholar has observed:

2019 SCC 65 (CanLII)

> . . . legislatures and courts in . . . Canada have come to settle on the idea that the functional capacities of administrative agencies – their expertise, investment in understanding the practical circumstances at issue, openness to participation, and level of responsiveness to political change – justify not only their law-making powers but also judicial deference to their interpretations and decisions. *Law-making and legal interpretation are shared enterprises in the administrative state*. [Emphasis added.]
>
> (Stack, at p. 310)

[212] In explaining why courts must sometimes defer to administrative actors, *C.U.P.E.* embraced two related foundational justifications for Canada's approach to administrative law — one based on the legislature's express choice to have an administrative body decide the issues arising from its mandate; and one animated by the recognition that an administrative justice system could offer institutional advantages in relation to proximity, efficiency, and specialized expertise (David Dyzenhaus, "The Politics of Deference: Judicial Review and Democracy" in Michael Taggart, ed., *The Province of Administrative Law* (1997), 279 at p. 304).

[213] A new institutional relationship between the courts and administrative actors was thus being forged, based on "an understanding of the role of expertise in the modern administrative state" which "acknowledge[d] that judges are not always in the best position to interpret the law" (The Hon. Frank Iacobucci, "Articulating a Rational Standard of Review Doctrine: A Tribute to John Willis" (2002), 27 *Queen's L.J.* 859, at p. 866).

[214] In subsequent decades, the Court attempted to reconcile the deference urged by *C.U.P.E.* with the lingering concept of "jurisdictional error". In *U.E.S.,*

2019 SCC 65 (CanLII)

Local 298 v. Bibeault, [1988] 2 S.C.R. 1048, the Court introduced the "pragmatic and functional" approach for deciding when a matter was within the jurisdiction of an administrative body. Instead of describing jurisdiction as a preliminary or collateral matter, the *Bibeault* test directed reviewing courts to consider the wording of the enactment conferring jurisdiction on the administrative body, the purpose of the statute creating the tribunal, the reason for the tribunal's existence, the area of expertise of its members, and the nature of the question the tribunal had to decide — all to determine whether the legislator "intend[ed] the question to be within the jurisdiction conferred on the tribunal" (p. 1087; see also p. 1088). If so, the tribunal's decision could only be set aside if it was "patently unreasonable" (p. 1086).

[215] Although still rooted in a formalistic search for jurisdictional errors, the pragmatic and functional approach recognized that legislatures had assigned courts and administrative decision-makers distinct roles, and that the specialization and expertise of administrative decision-makers deserved deference. In her concurring reasons in *National Corn Growers*, Wilson J. noted that part of the process of moving away from Dicey's framework and towards a more sophisticated understanding of the role of administrative tribunals:

> . . . has involved a growing recognition on the part of courts that they may simply not be as well equipped as administrative tribunals or agencies to deal with issues which Parliament has chosen to regulate through bodies exercising delegated power, e.g., labour relations, telecommunications, financial markets and international economic relations. Careful management of these sectors often requires the use of experts who have accumulated years of experience and a specialized understanding of the activities they supervise. [p. 1336]

2019 SCC 65 (CanLII)

[216] By the mid-1990s, the Court had accepted that specialization and the legislative intent to leave issues to administrative decision-makers were inextricable and essential factors in the standard of review analysis. It stressed that "the expertise of the tribunal is of the utmost importance in determining the intention of the legislator with respect to the degree of deference to be shown to a tribunal's decision . . . [e]ven where the tribunal's enabling statute provides explicitly for appellate review" (*United Brotherhood of Carpenters and Joiners of America, Local 579 v. Bradco Construction Ltd.*, [1993] 2 S.C.R. 316, at p. 335). Of the factors relevant to setting the standard of review, expertise was held to be "the most important" (*Canada (Director of Investigation and Research) v. Southam Inc.*, [1997] 1 S.C.R. 748, at para. 50).

[217] Consistent with these judgments, this Court invoked the specialized expertise of a securities commission to explain why its decisions were entitled to deference on judicial review even when there was a statutory right of appeal. Writing for a unanimous Court, Iacobucci J. explained that "the concept of the specialization of duties requires that deference be shown to decisions of specialized tribunals on matters which fall squarely within the tribunal's expertise" (*Pezim v. British Columbia (Superintendent of Brokers)*, [1994] 2 S.C.R. 557, at p. 591; see also *Bell Canada v. Canada (Canadian Radio-Television and Telecommunications Commission)*, [1989] 1 S.C.R. 1722, at pp. 1745-46). Critically, the Court's willingness to show deference demonstrated that specialization outweighed a statutory appeal as the most significant indicator of legislative intent.

2019 SCC 65 (CanLII)

[218] In *Pushpanathan v. Canada (Minister of Citizenship and Immigration)*, [1998] 1 S.C.R. 982, the Court reformulated the pragmatic and functional approach, engaging four slightly different factors from those in *Bibeault*, namely: (1) whether there was a privative clause, or conversely, a right of appeal; (2) the expertise of the decision-maker on the matter in question relative to the reviewing court; (3) the purpose of the statute as a whole, and of the provision in particular; and (4) the nature of the problem, i.e., whether it was a question of law, fact, or mixed law and fact (paras. 29-37). Instead of using these factors to answer whether a question was jurisdictional, *Pushpanathan* deployed them to discern how much deference the legislature intended an administrative decision to receive on judicial review. *Pushpanathan* confirmed three standards of review: patent unreasonableness, reasonableness *simpliciter*, and correctness (para. 27; see also *Southam*, at paras. 55-56).

[219] Significantly, *Pushpanathan* did not disturb the finding reaffirmed in *Southam* that specialized expertise was the most important factor in determining whether a deferential standard applied. Specialized expertise thus remained integral to the calibration of legislative intent, even in the face of statutory rights of appeal (see *Law Society of New Brunswick v. Ryan*, [2003] 1 S.C.R. 247, at paras. 21 and 29-34; *Cartaway Resources Corp. (Re)*, [2004] 1 S.C.R. 672, at para. 45; *Council of Canadians with Disabilities v. VIA Rail Canada Inc.*, [2007] 1 S.C.R. 650, at paras. 88-92 and 100).

2019 SCC 65 (CanLII)

[220] Next came *Dunsmuir*, which sought to simplify the pragmatic and functional analysis while maintaining respect for the specialized expertise of administrative decision-makers. The Court merged the three standards of review into two: reasonableness and correctness. *Dunsmuir* also wove together the deferential threads running through the Court's administrative law jurisprudence, setting out a presumption of deferential review for certain categories of questions, including those where the decision-maker had expertise or was interpreting its "home" statute (paras. 53-54, per Bastarache and LeBel JJ., and para. 124, per Binnie J., concurring). Certain categories of issues remained subject to correctness review, including constitutional questions regarding the division of powers, true questions of jurisdiction, questions of law that were both of central importance to the legal system as a whole and outside the adjudicator's specialized area of expertise, and questions about jurisdictional lines between tribunals (paras. 58-61). Where the standard of review had not been satisfactorily determined in the jurisprudence, four contextual factors — the presence or absence of a privative clause, the purpose of the tribunal, the nature of the question at issue and the expertise of the tribunal — remained relevant to the standard of review analysis (para. 64).

[221] Notably, *Dunsmuir* did not mention statutory rights of appeal as one of the contextual factors, and left undisturbed their marginal role in the standard of review analysis. Instead, the Court explicitly affirmed the links between deference, the specialized expertise of administrative decision-makers and legislative intent. Justices LeBel and Bastarache held that "deference requires respect for the legislative

2019 SCC 65 (CanLII)

choices to leave some matters in the hands of administrative decision makers, for the processes and determinations that draw on particular expertise and experiences, and for the different roles of the courts and administrative bodies within the Canadian constitutional system" (para. 49). They noted that "in many instances, those working day to day in the implementation of frequently complex administrative schemes have or will develop a considerable degree of expertise or field sensitivity to the imperatives and nuances of the legislative regime" (para. 49, citing David J. Mullan, "Establishing the Standard of Review: The Struggle for Complexity?" (2004), 17 *C.J.A.L.P.* 59, at p. 93).

[222] Post-*Dunsmuir*, this Court continued to stress that specialized expertise is the basis for making administrative decision-makers, rather than the courts, the appropriate forum to decide issues falling within their mandates (see *Khosa*, at para. 25; *R. v. Conway*, [2010] 1 S.C.R. 765, at para. 53; *McLean v. British Columbia (Securities Commission)*, [2013] 3 S.C.R. 895, at paras. 30-33). Drawing on the concept of specialized expertise, the Court's post-*Dunsmuir* cases expressly confirmed a presumption of reasonableness review for an administrative decision-maker's interpretation of its home or closely-related statutes (see *Alberta Teachers' Association*, at paras. 39-41). As Gascon J. explained in *Mouvement laïque québécois v. Saguenay (City)*, [2015] 2 S.C.R. 3, at para. 46:

> Deference is in order where the Tribunal acts within its specialized area of expertise . . . (*Saskatchewan (Human Rights Commission) v. Whatcott*, 2013 SCC 11, [2013] 1 S.C.R. 467, at paras. 166-68; *Mowat*, at para. 24). In *Alberta (Information and Privacy*

2019 SCC 65 (CanLII)

> *Commissioner) v. Alberta Teachers' Association*, 2011 SCC 61, [2011] 3 S.C.R. 654, at paras. 30, 34 and 39, the Court noted that, on judicial review of a decision of a specialized administrative tribunal interpreting and applying its enabling statute, it should be presumed that the standard of review is reasonableness (*Canadian National Railway Co. v. Canada (Attorney General)*, 2014 SCC 40, [2014] 2 S.C.R. 135, at para. 55; *Canadian Artists' Representation v. National Gallery of Canada*, 2014 SCC 42, [2014] 2 S.C.R. 197 ("*NGC*"), at para. 13; *Khosa*, at para. 25; *Smith v. Alliance Pipeline Ltd.*, 2011 SCC 7, [2011] 1 S.C.R. 160, at paras. 26 and 28; *Dunsmuir*, at para. 54).

2019 SCC 65 (CanLII)

[223] And in *Edmonton (City) v. Edmonton East (Capilano) Shopping Centres Ltd.*, [2016] 2 S.C.R. 293, the majority recognized:

> The presumption of reasonableness is grounded in the legislature's choice to give a specialized tribunal responsibility for administering the statutory provisions, and the expertise of the tribunal in so doing. Expertise arises from the specialization of functions of administrative tribunals like the Board which have a habitual familiarity with the legislative scheme they administer . . . . [E]xpertise is something that inheres in a tribunal itself as an institution: ". . . at an institutional level, adjudicators . . . can be presumed to hold relative expertise in the interpretation of the legislation that gives them their mandate, as well as related legislation that they might often encounter in the course of their functions". [Citation omitted; para. 33.]

[224] The presumption of deference, therefore, operationalized the Court's longstanding jurisprudential acceptance of the "specialized expertise" principle in a workable manner, continuing the deferential path Dickson J. first laid out in *C.U.P.E.*

[225] As for statutory rights of appeal, they continued to be seen as either an irrelevant factor in the standard of review analysis or one that yielded to specialized expertise. So firmly entrenched was this principle that in cases like *Bell Canada v.*

Bell Aliant Regional Communications, [2009] 2 S.C.R. 764, *Smith v. Alliance Pipeline Ltd.*, [2011] 1 S.C.R. 160, *ATCO Gas and Pipelines Ltd. v. Alberta (Utilities Commission)*, [2015] 3 S.C.R. 219, and *Canada (Attorney General) v. Igloo Vikski Inc.*, [2016] 2 S.C.R. 80, the Court applied the reasonableness standard without even *referring* to the presence of an appeal clause. When appeal clauses *were* discussed, the Court consistently confirmed that they did not oust the application of judicial review principles.

[226] In *Khosa*, Binnie J. explicitly endorsed *Pezim* and rejected "the idea that in the absence of express statutory language . . . a reviewing court is 'to apply a correctness standard as it does in the regular appellate context'" (para. 26). This reasoning was followed in *Canada (Canadian Human Rights Commission) v. Canada (Attorney General)*, [2011] 3 S.C.R. 471 ("*Mowat*"), where the Court confirmed that "care should be taken not to conflate" judicial and appellate review (para. 30; see also para. 31). In *McLean*, decided two years after *Mowat*, the majority cited *Pezim* and other cases for the proposition that "general administrative law principles still apply" on a statutory appeal (see para. 21, fn. 2). Similarly, in *Mouvement laïque*, Gascon J. affirmed that

> [w]here a court reviews a decision of a specialized administrative tribunal, the standard of review must be determined on the basis of administrative law principles. This is true regardless of whether the review is conducted in the context of an application for judicial review or of a statutory appeal . . . . [para. 38]

2019 SCC 65 (CanLII)

[227] In *Edmonton East*, the Court considered — and again rejected — the argument that statutory appeals should form a new category of correctness review. As the majority noted, "recognizing issues arising on statutory appeals as a new category to which the correctness standard applies — as the Court of Appeal did in this case — would go against strong jurisprudence from this Court" (para. 28). Even the dissenting judges in *Edmonton East*, although of the view that the wording of the relevant statutory appeal clause and legislative scheme pointed to the correctness standard, nonetheless unequivocally stated that "a statutory right of appeal is not a new 'category' of correctness review" (para. 70).

[228] By the time these appeals were heard, contextual factors had practically disappeared from the standard of review analysis, replaced by a presumption of deference subject only to the correctness exceptions set out in *Dunsmuir* — which explicitly did *not* include statutory rights of appeal. In other words, the Court was well on its way to realizing *Dunsmuir*'s promise of a simplified analysis. Justice Gascon recognized as much last year in *Canadian Human Rights Commission*:

> *This contextual approach should be applied sparingly*. As held by the majority of this Court in *Alberta Teachers*, it is inappropriate to "retreat to the application of a full standard of review analysis where it can be determined summarily" . . . . After all, the "contextual approach can generate uncertainty and endless litigation concerning the standard of review" (*Capilano* [*Edmonton East*], at para. 35). The presumption of reasonableness review and the identified categories will generally be sufficient to determine the applicable standard. In the exceptional cases where such a contextual analysis may be justified to rebut the presumption, it need not be a long and detailed one (*Capilano* [*Edmonton East*], at para. 34). Where it has been done or referred to in the past, the analysis has been limited to determinative factors that showed a

2019 SCC 65 (CanLII)

> clear legislative intent justifying the rebuttal of the presumption (see, e.g., *Rogers*, at para. 15; *Tervita*, at paras. 35-36; see also, *Saguenay*, at paras. 50-51). [Emphasis added; para. 46.]

2019 SCC 65 (CanLII)

[229] In sum, for four decades, our standard of review jurisprudence has been clear and unwavering about the foundational role of specialized expertise and the limited role of statutory rights of appeal. Where confusion persists, it concerns the relevance of the contextual factors in *Dunsmuir*, the meaning of "true questions of jurisdiction" and how best to conduct reasonableness review. That was the backdrop against which these appeals were heard and argued. But rather than ushering in a simplified next act, these appeals have been used to rewrite the whole script, reassigning to the courts the starring role Dicey ordained a century ago.

The Majority's Reasons

[230] The majority's framework rests on a flawed and incomplete conceptual account of judicial review, one that unjustifiably ignores the specialized expertise of administrative decision-makers. Although the majority uses language endorsing a "presumption of reasonableness review", this presumption now rests on a totally new understanding of legislative intent and the rule of law. By prohibiting any consideration of well-established foundations for deference, such as "expertise . . . institutional experience . . . proximity and responsiveness to stakeholders . . . prompt[ness], flexib[ility], and efficien[cy]; and . . . access to justice", the majority reads out the foundations of the modern understanding of legislative intent in administrative law.

[231] In particular, such an approach ignores the possibility that specialization and other advantages are embedded into the legislative choice to delegate particular subject matters to administrative decision-makers. Giving proper effect to the legislature's choice to "delegate authority" to an administrative decision-maker requires understanding the *advantages* that the decision-maker may enjoy in exercising its mandate (*Dunsmuir*, at para. 49). As Iacobucci J. observed in *Southam*:

> Presumably if Parliament entrusts a certain matter to a tribunal and not (initially at least) to the courts, *it is because the tribunal enjoys some advantage that judges do not*. For that reason alone, review of the decision of a tribunal should often be on a standard more deferential than correctness. [Emphasis added; para. 55.]

[232] Chief among those advantages are the institutional expertise and specialization inherent to administering a particular mandate on a daily basis. Those appointed to administrative tribunals are often chosen precisely because their backgrounds and experience align with their mandate (Van Harten et al., at p. 15; Régimbald, at p. 463). Some administrative schemes explicitly require a degree of expertise from new members as a condition of appointment (*Edmonton East*, at para. 33; *Dr. Q v. College of Physicians and Surgeons of British Columbia*, [2003] 1 S.C.R. 226, at para. 29; Régimbald, at p. 462). As institutions, administrative bodies also benefit from specialization as they develop "habitual familiarity with the legislative scheme they administer" (*Edmonton East*, at para. 33) and "grappl[e] with issues on a repeated basis" (*Parry Sound (District) Social Services Administration Board v. O.P.S.E.U., Local 324*, [2003] 2 S.C.R. 157, at para. 53). Specialization and

2019 SCC 65 (CanLII)

expertise are further enhanced by continuing education and through meetings of the membership of an administrative body to discuss policies and best practices (Finn Makela, "Acquired Expertise of Administrative Tribunals and the Standard of Judicial Review: The Case of Grievance Arbitrators and Human Rights Law" (2013), 17 *C.L.E.L.J.* 345, at p. 349). In addition, the blended membership of some tribunals fosters special institutional competence in resolving "polycentric" disputes (*Pushpanathan*, at para. 36; *Dr. Q* at paras. 29-30; *Pezim*, at pp. 591-92 and 596).

[233] All this equips administrative decision-makers to tackle questions of law arising from their mandates. In interpreting their enabling statutes, for example, administrative actors may have a particularly astute appreciation for the on-the-ground consequences of particular legal interpretations; of statutory context; of the purposes that a provision or legislative scheme are meant to serve; and of specialized terminology used in their administrative setting. Coupled with this Court's acknowledgment that legislative provisions often admit of multiple reasonable interpretations, the advantages stemming from specialization and expertise provide a robust foundation for deference to administrative decision-makers on legal questions within their mandate (*C.U.P.E.*, at p. 236; *McLean*, at para. 37). As Professor H.W. Arthurs said:

> There is no reason to believe that a judge who reads a particular regulatory statute once in his life, perhaps in worst-case circumstances, can read it with greater fidelity to legislative purpose than an administrator who is sworn to uphold that purpose, who strives to do so daily, and is well-aware of the effect upon the purpose of the various alternate interpretations. There is no reason to believe that a legally-

2019 SCC 65 (CanLII)

> trained judge is better qualified to determine the existence or sufficiency or appropriateness of evidence on a given point than a trained economist or engineer, an arbitrator selected by the parties, or simply an experienced tribunal member who decides such cases day in and day out. There is no reason to believe that a judge whose entire professional life has been spent dealing with disputes one by one should possess an aptitude for issues which arise often because an administrative system dealing with cases in volume has been designed to strike an appropriate balance between efficiency and effective rights of participation.
>
> ("Protection against Judicial Review" (1983), 43 *R. du B.* 277, at p. 289)

2019 SCC 65 (CanLII)

[234] Judges of this Court have endorsed both this passage and the broader proposition that specialization and expertise justify the deference owed to administrative decision-makers (*National Corn Growers*, at p. 1343, per Wilson J., concurring). As early as *C.U.P.E.*, Dickson J. fused expertise and legislative intent by explaining that an administrative body's specialized expertise can be essential to achieving the purposes of a statutory scheme:

> The Act calls for a delicate balance between the need to maintain public services, and the need to maintain collective bargaining. Considerable sensitivity and unique expertise on the part of Board members is all the more required if the twin purposes of the legislation are to be met. [p. 236]

[235] Over time, specialized expertise would become the core rationale for deferring to administrative decision-makers (*Bradco Construction*, at p. 335; *Southam*, at para. 50; Audrey Macklin, "Standard of Review: Back to the Future?", in Colleen M. Flood and Lorne Sossin, eds., *Administrative Law in Context* (3rd ed. 2018), 381 at pp. 397-98). Post-*Dunsmuir*, the Court has been steadfast in confirming the central role of specialization and expertise, affirming their connection to

legislative intent, and recognizing that they give administrative decision-makers the "interpretative upper hand" on questions of law (*McLean*, at para. 40; see also *Conway*, at para. 53; *Mowat*, at para. 30; *Newfoundland and Labrador Nurses' Union v. Newfoundland and Labrador (Treasury Board)*, [2011] 3 S.C.R. 708, at para. 13; *Doré v. Barreau du Québec*, [2012] 1 S.C.R. 395, at para. 35; *Mouvement laïque*, at para. 46; *Khosa*, at para. 25; *Edmonton East*, at para. 33).

[236] Although the majority's approach extolls respect for the legislature's "institutional design choices", it accords no weight to the institutional advantages of specialization and expertise that administrative decision-makers possess in resolving questions of law. In so doing, the majority disregards the historically accepted reason *why* the legislature intended to delegate authority to an administrative actor.

[237] Nor are we persuaded by the majority's claim that "if administrative decision makers are understood to possess specialized expertise on all questions that come before them, the concept of expertise ceases to assist a reviewing court in attempting to distinguish questions for which applying the reasonableness standard is appropriate from those for which it is not". Here, the majority sets up a false choice: expertise must either be assessed on a case-by-case basis or play no role at all in a theory of judicial review.

[238] We disagree. While not every decision-maker necessarily has expertise on every issue raised in an administrative proceeding, reviewing courts do not engage in an individualized, case-by-case assessment of specialization and expertise. The

2019 SCC 65 (CanLII)

theory of deference is based not only on the legislative choice to delegate decisions, but also on institutional expertise and on "the reality that . . . those working day to day in the implementation of frequently complex administrative schemes have or will develop a considerable degree of expertise or field sensitivity to the imperatives and nuances of the legislative regime" (*Khosa*, at para. 25; see also *Nor-Man Regional Health Authority Inc. v. Manitoba Association of Health Care Professionals*, [2011] 3 S.C.R. 616, at para. 53; *Edmonton East*, at para. 33).

[239] The exclusion of expertise, specialization and other institutional advantages from the majority's standard of review framework is not merely a theoretical concern. The removal of the current "conceptual basis" for deference opens the gates to expanded correctness review. The majority's "presumption" of deference will yield all too easily to justifications for a correctness-oriented framework.

[240] In the majority's framework, deference gives way whenever the "rule of law" demands it. The majority's approach to the rule of law, however, flows from a court-centric conception of the rule of law rooted in Dicey's 19th century philosophy.

[241] The rule of law is not the rule of courts. A pluralist conception of the rule of law recognizes that courts are not the exclusive guardians of law, and that others in the justice arena have shared responsibility for its development, including administrative decision-makers. *Dunsmuir* embraced this more inclusive view of the rule of law by acknowledging that the "court-centric conception of the rule of law"

2019 SCC 65 (CanLII)

had to be "reined in by acknowledging that the courts do not have a monopoly on deciding all questions of law" (para. 30). As discussed in *Dunsmuir*, the rule of law is understood as meaning that administrative decision-makers make legal determinations within their mandate, and not that only judges decide questions of law with an unrestricted license to substitute their opinions for those of administrative actors through correctness review (see McLachlin, *Administrative Tribunals and the Courts: An Evolutionary Relationship*; The Hon. Thomas A. Cromwell, "What I Think I've Learned About Administrative Law" (2017), 30 *C.J.A.L.P.* 307, at p. 308; *Wilson v. Atomic Energy of Canada Ltd.*, [2016] 1 S.C.R. 770, at para. 31, per Abella J.).

[242] Moreover, central to any definition of the rule of law is access to a fair and efficient dispute resolution process, capable of dispensing timely justice (*Hryniak v. Mauldin*, [2014] 1 S.C.R. 87, at para. 1). This is an important objective for all litigants, from the sophisticated consumers of administrative justice, to, most significantly, the particularly vulnerable ones (Angus Grant and Lorne Sossin, "Fairness in Context: Achieving Fairness Through Access to Administrative Justice", in Colleen M. Flood and Lorne Sossin, eds., *Administrative Law in Context* (3rd ed. 2018), 341, at p. 342). For this reason, access to justice is at the heart of the legislative choice to establish a robust system of administrative law (Grant and Sossin, at pp. 342 and 369-70; Van Harten, et al., at p. 17; Régimbald, at pp. 2-3; McLachlin, *Administrative Tribunals and the Courts: An Evolutionary Relationship*). As Morissette J.A. has observed:

2019 SCC 65 (CanLII)

> . . . the aims of administrative law . . . generally gravitate towards promoting access to justice. The means contemplated are costless or inexpensive, simple and expeditious procedures, expertise of the decision-makers, coherence of reasons, consistency of results and finality of decisions.
>
> (Yves-Marie Morissette, "What is a 'reasonable decision'?" (2018), 31 *C.J.A.L.P.* 225, at p. 236)

2019 SCC 65 (CanLII)

[243] These goals are compromised when a narrow conception of the "rule of law" is invoked to impose judicial hegemony over administrative decision-makers. Doing so perverts the purpose of establishing a parallel system of administrative justice, and adds unnecessary expense and complexity for the public.

[244] The majority even calls for a reformulation of the "questions of central importance" category from *Dunsmuir* and permits courts to substitute their opinions for administrative decision-makers on "questions of central importance to the legal system as a whole", even if those questions fall squarely within the mandate and expertise of the administrative decision-maker. As noted in *Canadian Human Rights Commission*, correctness review was permitted only for questions "of central importance to the legal system *and* outside the specialized expertise of the adjudicator" (para. 28 (emphasis in original)). Broadening this category from its original characterization unduly expands the issues available for judicial substitution. Issues of discrimination, labour rights, and economic regulation of the securities markets (among many others) theoretically raise questions of vital importance for Canada and its legal system. But by ignoring administrative decision-makers' expertise on these matters, this category will inevitably provide more "room . . . for

both mistakes and manipulation" (Andrew Green, "Can There Be Too Much Context in Administrative Law? Setting the Standard of Review in Canadian Administrative Law" (2014), 47 *U.B.C. L. Rev.* 443, at p. 483). We would leave *Dunsmuir*'s description of this category undisturbed.[1]

[245] We also disagree with the majority's reformulation of "legislative intent" to include, for the first time, an invitation for courts to apply correctness review to legal questions whenever an administrative scheme includes a right of appeal. We do not see how appeal rights represent a "different institutional structure" that requires a more searching form of review. The mere fact that a statute contemplates a reviewing role for a court says nothing about the *degree of deference* required in the review process. Rights of appeal reflect different choices by different legislatures to permit review for different reasons, on issues of fact, law, mixed fact and law, and discretion, among others. Providing parties with a right of appeal can serve several purposes entirely unrelated to the standard of review, including outlining: where the appeal will take place (sometimes, at a different reviewing court than in the routes provided for judicial review); who is eligible to take part; when materials must be filed; how materials must be presented; the reviewing court's powers on appeal; any leave requirements; and the grounds on which the parties may appeal (among other things). By providing this type of structure and guidance, statutory appeal provisions may allow legislatures to promote efficiency and access to justice, in a way that exclusive reliance on the judicial review procedure would not have.

[1] Other than one of the two *amici*, no one asked us to modify this category.

2019 SCC 65 (CanLII)

[246] In reality, the majority's position on statutory appeal rights, although couched in language about "giv[ing] effect to the legislature's institutional design choices", hinges almost entirely on a textualist argument: the presence of the word "appeal" indicates a legislative intent that courts apply the same standards of review found in civil appellate jurisprudence.

[247] The majority's reliance on the "presumption of consistent expression" in relation to the single word "appeal" is misplaced and disregards long-accepted institutional distinctions between how courts and administrative decision-makers function. The language in each setting is different; the mandates are different; the policy bases are different. The idea that *Housen v. Nikolaisen*, [2002] 2 S.C.R. 235, must be inflexibly applied to every right of "appeal" within a statute — with no regard for the broader purposes of the statutory scheme or the practical implications of greater judicial involvement within it — is entirely unsupported by our jurisprudence.

[248] In addition, the majority's claim that legislatures "d[o] not speak in vain" is irreconcilable with its treatment of privative clauses, which play no role in its standard of review framework. If, as the majority claims, Parliament's decision to provide appeal routes must influence the standard of review analysis, there is no

2019 SCC 65 (CanLII)

principled reason why Parliament's decision via privative clauses to *prohibit* appeals should not be given comparable effect.[2]

[249] In any event, legislatures in this country have known for at least 25 years since *Pezim* that this Court has not treated statutory rights of appeal as a determinative reflection of legislative intent regarding the standard of review (*Pezim*, at p. 590). Against this reality, the continued use by legislatures of the term "appeal" cannot be imbued with the intent that the majority retroactively ascribes to it; doing so is inconsistent with the principle that legislatures are presumed to enact legislation in compliance with existing common law rules (Ruth Sullivan, *Statutory Interpretation* (3rd ed. 2016), at p. 315).

[250] Those legislatures, moreover, understood from our jurisprudence that this Court was committed to respecting *standards* of review that were statutorily prescribed, as British Columbia alone has done.[3] We agree with the Attorney General of Canada's position in the companion appeals of *Bell Canada v. Canada (Attorney General)*, 2019 SCC 66, that, absent exceptional circumstances, the existence of a

[2] The "constitutional concerns" cited by the majority are no answer to this dilemma — nothing in *Crevier v. Attorney General of Quebec*, [1981] 2 S.C.R. 220, prevents privative clauses from influencing the *standard* of review, as they did for years under the pragmatic and functional approach and in *C.U.P.E.* (David Dyzenhaus, "Dignity in Administrative Law: Judicial Deference in a Culture of Justification" (2012), 17 *Rev. Const. Stud.* 87, at p. 103; David Mullan, "Unresolved Issues on Standard of Review in Canadian Judicial Review of Administrative Action – The Top Fifteen!" (2013), 42 *Adv. Q.* 1, at p. 21).

[3] See *Administrative Tribunals Act*, S.B.C. 2004, c. 45. Quebec's recent attempt to introduce such legislation is another example of a legislature which understood that it was free to set standards of review, and that the mere articulation of a right of appeal did not dictate what those standards would be: see Bill 32, *An Act mainly to promote the efficiency of penal justice and to establish the terms governing the intervention of the Court of Québec with respect to applications for appeal*, 1st Sess., 42nd Leg., 2019.

2019 SCC 65 (CanLII)

statutory right of appeal does not displace the presumption that the standard of reasonableness applies.[4] The majority, however, has inexplicably chosen the template proposed by the *amici*,[5] recommending a sweeping overhaul of our approach to legislative intent and to the determination of the standard of review.

[251] The result reached by the majority means that hundreds of administrative decision-makers subject to different kinds of statutory rights of appeal — some in highly specialized fields, such as broadcasting, securities regulation and international trade — will now be subject to an irrebuttable presumption of correctness review. This has the potential to cause a stampede of litigation. Reviewing courts will have license to freely revisit legal questions on matters squarely within the expertise of administrative decision-makers, even if they are of no broader consequence outside of their administrative regimes. Even if specialized decision-makers provide reasonable interpretations of highly technical statutes with which they work daily, even if they provide internally consistent interpretations responsive to the parties' submissions and consistent with the text, context and purpose of the governing scheme, the administrative body's past practices and decisions, the common law, prior judicial rulings and international law, those interpretations can still be set aside by a reviewing court that simply takes a different view of the relevant statute. This risks undermining the integrity of administrative proceedings whenever there is a statutory right of appeal, rendering them little more than rehearsals for a judicial appeal — the

[4] The notion that legislative intent finds determinative expression in statutory rights of appeal found no support in the submissions of four of the five attorneys general who appeared before us.

[5] Even the *amici* did not go so far as to say that *all* appeal clauses were indicative of a legislative intent for courts to substitute their views on questions of law.

2019 SCC 65 (CanLII)

inverse of the legislative intent to establish a specialized regime and entrust certain legal and policy questions to non-judicial actors.

[252] Ironically, the majority's approach will be a roadblock to its promise of simplicity. Elevating appeal clauses to indicators of correctness review creates a two-tier system of administrative law: one tier that defers to the expertise of administrative decision-makers where there is no appeal clause; and another tier where such clauses permit judges to substitute their own views of the legal issues at the core of those decision-makers' mandates. Within the second tier, the application of appellate law principles will inevitably create confusion by encouraging segmentation in judicial review (*Mouvement laïque*, at para. 173, per Abella J., concurring in part; see also Paul Daly, "Struggling Towards Coherence in Canadian Administrative Law? Recent Cases on Standard of Review and Reasonableness" (2016), 62 *McGill L.J.* 527, at pp. 542-43; The Hon. Joseph T. Robertson, "Identifying the Review Standard: Administrative Deference in a Nutshell" (2017), 68 *U.N.B.L.J.* 145, at p. 162). Courts will be left with the task of identifying palpable and overriding errors for factual questions, extricating legal issues from questions of mixed fact and law, reviewing questions of law *de novo*, and potentially having to apply judicial review and appellate standards interchangeably if an applicant challenges in one proceeding multiple aspects of an administrative decision, some falling within an appeal clause and others not. It is an invitation to complexity and a barrier to access to justice.

2019 SCC 65 (CanLII)

[253] The majority's reasons "roll back the *Dunsmuir* clock to an era where some courts asserted a level of skill and knowledge in administrative matters which further experience showed they did not possess" (*Khosa*, at para. 26). The reasons elevate statutory rights of appeal to a determinative factor based on a formalistic approach that ignores the legislature's intention to leave certain legal and policy questions to specialized administrative decision-makers. This unravelling of Canada's carefully developed, deferential approach to administrative law returns us to the "black letter law" approach found in *Anisminic* and cases like *Metropolitan Life* whereby specialized decision-makers were subject to the pre-eminent determinations of a judge. Rather than building on *Dunsmuir*, which recognized that specialization is fundamentally intertwined with the legislative choice to delegate particular subject matters to administrative decision-makers, the majority's reasons banish expertise from the standard of review analysis entirely, opening the door to a host of new correctness categories which remain open to further expansion. The majority's approach not only erodes the presumption of deference; it erodes confidence in the existence — and desirability — of the "shared enterprises in the administrative state" of "[l]aw-making and legal interpretation" between courts and administrative decision-makers (Stack, at p. 310).

[254] But the aspect of the majority's decision with the greatest potential to undermine both the integrity of this Court's decisions, and public confidence in the stability of the law, is its disregard for precedent and *stare decisis*.

2019 SCC 65 (CanLII)

[255] *Stare decisis* places significant limits on this Court's ability to overturn its precedents. Justice Rothstein described some of these limits in *Canada v. Craig*, [2012] 2 S.C.R. 489, the case about horizontal *stare decisis* on which the majority relies:

> The question of whether this Court should overrule one of its own prior decisions was addressed recently in *Ontario (Attorney General) v. Fraser*, 2011 SCC 20, [2011] 2 S.C.R. 3. At paragraph 56, Chief Justice McLachlin and LeBel J., in joint majority reasons, noted that overturning a precedent of this Court is a step not to be lightly undertaken. *This is especially so when the precedent represents the considered views of firm majorities* (para. 57).
>
> Nonetheless, this Court has overruled its own decisions on a number of occasions. (See *R. v. Chaulk*, [1990] 3 S.C.R. 1303, at p. 1353, *per* Lamer C.J., for the majority; *R. v. B. (K.G.)*, [1993] 1 S.C.R. 740; *R. v. Robinson*, [1996] 1 S.C.R. 683.) *However, the Court must be satisfied based on compelling reasons that the precedent was wrongly decided and should be overruled . . . .*
>
> Courts must proceed with caution when deciding to overrule a prior decision. In *Queensland v. Commonwealth* (1977), 139 C.L.R. 585 (H.C.A.), at p. 599, Justice Gibbs articulated the required approach succinctly:
>
> > No Justice is entitled to ignore the decisions and reasoning of his predecessors, and to arrive at his own judgment as though the pages of the law reports were blank, or as though the authority of a decision did not survive beyond the rising of the Court. A Justice, unlike a legislator, cannot introduce a programme of reform which sets at nought decisions formerly made and principles formerly established. It is only after the most careful and respectful consideration of the earlier decision, and after giving due weight to all the circumstances, that a Justice may give effect to his own opinions in preference to an earlier decision of the Court. [Emphasis added; paras. 24-26.]

2019 SCC 65 (CanLII)

[256] Apex courts in several jurisdictions outside Canada have similarly stressed the need for caution and compelling justification before departing from precedent. The United States Supreme Court refrains from overruling its past decisions absent a "special justification", which must be over and above the belief that a prior case was wrongly decided (*Kimble v. Marvel Entertainment, LLC.*, 135 S. Ct. 2401 (2015), at p. 2409; see also *Halliburton Co. v. Erica P. John Fund, Inc.*, 573 U.S. 258 (2014), at p. 266; *Kisor v. Wilkie*, 139 S. Ct. 2400 (2019), at pp. 2418 and 2422; Bryan A. Garner et al., *The Law of Judicial Precedent* (2016), at pp. 35-36).

[257] Similarly, the House of Lords "require[d] much more than doubts as to the correctness of [a past decision] to justify departing from it" (*Fitzleet Estates Ltd. v. Cherry* (1977), 51 T.C. 708, at p. 718), an approach that the United Kingdom Supreme Court continues to endorse (*R. v. Taylor*, [2016] UKSC 5, [2016] 4 All E.R. 617, at para. 19; *Willers v. Joyce (No. 2)*, [2016] UKSC 44, [2017] 2 All E.R. 383, at para. 7; *Knauer v. Ministry of Justice*, [2016] UKSC 9, [2016] 4 All E.R. 897, at paras. 22-23).

[258] New Zealand's Supreme Court views "caution, often considerable caution" as the "touchstone" of its approach to horizontal *stare decisis*, and has emphasized that it will not depart from precedent "merely because, if the matter were being decided afresh, the Court might take a different view" (*Couch v. Attorney-General (No. 2)*, [2010] NZSC 27, [2010] 3 N.Z.L.R. 149, at paras. 105, per Tipping J., and 209, per McGrath J.).

2019 SCC 65 (CanLII)

[259] Restraint and respect for precedent also guide the High Court of Australia and South Africa's Constitutional Court when applying *stare decisis* (*Lee v. New South Wales Crime Commission*, [2013] HCA 39, 302 A.L.R. 363, at paras. 62-66 and 70; *Camps Bay Ratepayers' and Residents' Association v. Harrison*, [2010] ZACC 19, 2011 (4) S.A. 42, at pp. 55-56; *Buffalo City Metropolitan Municipality v. Asla Construction Ltd.*, [2019] ZACC 15, 2019 (4) S.A. 331, at para. 65).

[260] The virtues of horizontal *stare decisis* are widely recognized. The doctrine "promotes the evenhanded, predictable, and consistent development of legal principles, fosters reliance on judicial decisions, and contributes to the actual and perceived integrity of the judicial process" (*Kimble*, at p. 2409, citing *Payne v. Tennessee*, 501 U.S. 808 (1991), at p. 827). This Court has stressed the importance of *stare decisis* for "[c]ertainty in the law" (*Canada (Attorney General) v. Bedford*, [2013] 3 S.C.R. 1101, at para. 38; *R. v. Bernard*, [1988] 2 S.C.R. 833, at p. 849; *Minister of Indian Affairs and Northern Development v. Ranville*, [1982] 2 S.C.R. 518, at p. 527). Other courts have described *stare decisis* as a "foundation stone of the rule of law" (*Michigan v. Bay Mills Indian Community*, 572 U.S. 782 (2014), at p. 798; *Kimble*, at p. 2409; *Kisor*, at p. 2422; see also *Camps Bay*, at pp. 55-56; Jeremy Waldron, "Stare Decisis and the Rule of Law: A Layered Approach" (2012), 111 *Mich. L. Rev.* 1, at p. 28; Lewis F. Powell, Jr., "Stare Decisis and Judicial Restraint" (1990), 47 *Wash. & Lee L. Rev.* 281, at p. 288).

2019 SCC 65 (CanLII)

[261] Respect for precedent also safeguards this Court's institutional legitimacy. The precedential value of a judgment of this Court does not "expire with the tenure of the particular panel of judges that decided it" (*Plourde v. Wal-Mart Canada Corp.*, [2009] 3 S.C.R. 465, at para. 13). American cases have stressed similar themes:

> There is . . . a point beyond which frequent overruling would overtax the country's belief in the Court's good faith. Despite the variety of reasons that may inform and justify a decision to overrule, we cannot forget that such a decision is usually perceived (and perceived correctly) as, at the least, a statement that a prior decision was wrong. There is a limit to the amount of error that can plausibly be imputed to prior Courts. If that limit should be exceeded, disturbance of prior rulings would be taken as evidence that justifiable reexamination of principle had given way to drives for particular results in the short term. The legitimacy of the Court would fade with the frequency of its vacillation.
>
> (*Planned Parenthood of Southeastern Pennsylvania v. Casey, Governor of Pennsylvania*, 505 U.S. 833 (1992), at p. 866; see also *Florida Department of Health and Rehabilitative Services v. Florida Nursing Home Association*, 450 U.S. 147 (1981), at p. 153, per Stevens J., concurring.)

[262] Several scholars have made this point as well (see e.g., Michael J. Gerhardt, *The Power of Precedent* (2008), at p. 18; Garner et al., at p. 391). Aharon Barak has warned that

> overruling precedent damages the public's conception of the judicial role, and undermines the respect in which the public holds the courts and its faith in them. Precedent should not resemble a ticket valid only for the day of purchase.
>
> ("Overruling Precedent" (1986), 21 *Is.L.R.* 269, at p. 275)

2019 SCC 65 (CanLII)

[263] The majority's reasons, in our view, disregard the high threshold required to overturn one of this Court's decisions. The justification for the majority abandoning this Court's long-standing view of how statutory appeal clauses impact the standard of review analysis is that this Court's approach was "unsound in principle" and criticized by judges and academics. The majority also suggests that the Court's decisions set up an "unworkable and unnecessarily complex" system of judicial review. Abandoning them, the majority argues, would promote the values underlying *stare decisis*, namely "clarity and certainty in the law". In doing so, the majority discards several of this Court's bedrock administrative law principles.

[264] The majority leaves unaddressed the most significant rejection of this Court's jurisprudence in its reasons — its decision to change the entire "conceptual basis" for judicial review by excluding specialization, expertise and other institutional advantages from the analysis. The lack of any justification for this foundational shift — repeatedly invoked by the majority to sanitize further overturning of precedent — undercuts the majority's stated respect for *stare decisis* principles.

[265] The majority explains its decision to overrule the Court's prior decisions about appeal clauses by asserting that these precedents had "no satisfactory justification". It does not point, however, to any arguments different from those heard and rejected by other panels of this Court over the decades whose decisions are being discarded. Instead, the majority substitutes its own preferred approach to interpreting statutory rights of appeal — an approach rejected by several prior panels of this Court

2019 SCC 65 (CanLII)

in a line of decisions stretching back three decades. The rejection of such an approach was explicitly reaffirmed *no fewer than four times in the past ten years* (*Khosa*, at para. 26; *Mowat*, at paras. 30-31; *Mouvement laïque*, at para. 38; *Edmonton East*, at paras. 27-31; see also *McLean*, at para. 21).

2019 SCC 65 (CanLII)

[266] Overruling these judgments flouts *stare decisis* principles, which prohibit courts from overturning past decisions which "simply represen[t] a preferred choice with which the current Bench does not agree" (*Couch*, at para. 105; see also *Knauer*, at para. 22; *Casey*, at p. 864). "[T]he entire idea of *stare decisis* is that judges do not get to reverse a decision just because they never liked it in the first instance" (*Knick v. Township of Scott, Pennsylvania*, 139 S. Ct. 2162 (2019), at p. 2190, per Kagan J., dissenting). As the United States Supreme Court noted in *Kimble*:

> . . . an argument that we got something wrong—even a good argument to that effect—cannot by itself justify scrapping settled precedent. Or otherwise said, it is not alone sufficient that we would decide a case differently now than we did then. To reverse course, we require as well what we have termed a "special justification"—over and above the belief "that the precedent was wrongly decided." [Citation omitted; p. 2409.]

[267] But it is the unprecedented wholesale rejection of an entire body of jurisprudence that is particularly unsettling. The affected cases are too numerous to list in full here. It includes many decisions conducting deferential review even in the face of a statutory right of appeal (*Pezim*; *Southam*; *Committee for Equal Treatment of Asbestos Minority Shareholders v. Ontario (Securities Commission)*, [2001] 2 S.C.R. 132; *Dr. Q*; *Ryan*; *Cartaway*; *VIA Rail*; *Association des courtiers et agents*

immobiliers du Québec v. Proprio Direct inc., [2008] 2 S.C.R. 195; *Nolan v. Kerry (Canada) Inc.*, [2009] 2 S.C.R. 678; *McLean*; *Bell Canada (2009)*; *ATCO Gas*; *Mouvement laïque*; *Igloo Vikski*; *Edmonton East*) and bedrock judgments affirming the relevance of administrative expertise to the standard of review analysis and to "home statute" deference (*C.U.P.E.*; *National Corn Growers*; *Domtar Inc.*; *Bradco Construction*; *Southam*; *Pushpanathan*; *Alberta Teachers' Association*; *Canadian Human Rights Commission*, among many others).

[268] Most of those decisions were decided unanimously or by strong majorities. At no point, however, does the majority acknowledge this Court's strong reluctance to overturn precedents that "represen[t] the considered views of firm majorities" (*Craig*, at para. 24; *Ontario (Attorney General) v. Fraser*, [2011] 2 S.C.R. 3, at para. 57; see also *Nishi v. Rascal Trucking Ltd.*, [2013] 2 S.C.R. 438, at paras. 23-24), or to overrule decisions of a "recent vintage" (*Fraser*, at para. 57; see also *Nishi*, at para. 23). The decisions the majority *does* rely on, by contrast, involved overturning usually only one precedent and almost always an older one: *Craig* overruled a 34-year-old precedent; *R. v. Henry*, [2005] 3 S.C.R. 609, overruled a 19-year-old precedent (and another 15-year-old precedent, in part); and the dissenting judges in *Bernard* would have overruled a 10-year-old precedent.

[269] The majority's decision to overturn precedent also has the potential to disturb settled interpretations of many statutes that contain a right of appeal. Under the majority's approach, every existing interpretation of such statutes by an

2019 SCC 65 (CanLII)

administrative body that has been affirmed under a reasonableness standard of review will be open to fresh challenge. In *McLean*, for example, this Court acknowledged that a limitations period in British Columbia's *Securities Act*[6] had two reasonable interpretations, but deferred to the one the Commission preferred based on deferential review. We see no reason why an individual in the same situation as Ms. McLean could not now revisit our Court's decision through the statutory right of appeal in the *Securities Act*, and insist that a new reviewing court offer *its* definitive view of the relevant limitations period now that appeal clauses are interpreted to permit judicial substitution rather than deference.

[270] The majority does not address the chaos that such legal uncertainty will generate for those who rely on settled interpretations of administrative statutes to structure their affairs, despite the fact that protecting these reliance interests is a well-recognized and especially powerful reason for respecting precedent (Garner et al., at pp. 404-11; Neil Duxbury, *The Nature and Authority of Precedent* (2008), at pp. 118-19; *Kimble*, at pp. 2410-11). By changing the entire status quo, the majority's approach will undermine legal certainty — "the foundational principle upon which the common law relies" (*Bedford*, at para. 38; see also Cromwell, at p. 315).

[271] Moreover, if this Court had for over 30 years significantly misconstrued the purpose of statutory appeal routes by failing to recognize what *this* majority has ultimately discerned — that in enacting such routes, legislatures were unequivocally

[6] R.S.B.C. 1996, c. 418, s. 159

2019 SCC 65 (CanLII)

directing courts to review *de novo* every question of law that an administrative body addresses, regardless of that body's expertise — legislatures across Canada were free to clarify this interpretation and endorse the majority's favoured approach through legislative amendment. Given the possibility — and continued absence — of legislative correction, the case for overturning our past decisions is even less compelling (*Binus v. The Queen*, [1967] S.C.R. 594, at p. 601; see also *Kimble*, at p. 2409; *Kisor*, at pp. 2422-23; *Bilski v. Kappos*, *Under Secretary of Commerce for Intellectual Property and Director, Patent and Trademark Office*, 561 U.S. 593 (2010), at pp. 601-2).

[272] Each of these rationales for adhering to precedent — consistent affirmation, reliance interests and the possibility of legislative correction — was recently endorsed by the United States Supreme Court in *Kisor*. There, the Court invoked *stare decisis* to uphold two administrative law precedents which urged deference to administrative agencies when they interpreted ambiguous provisions in their regulations (*Bowles, Price Administrator v. Seminole Rock & Sand Co.*, 325 U.S. 410 (1945); *Auer v. Robbins*, 519 U.S. 452 (1997)). Writing for the majority on the issue of *stare decisis*, Justice Kagan explained at length why the doctrine barred the Court from overturning *Auer* or *Seminole Rock*. To begin, Justice Kagan reiterated the importance of *stare decisis* and the need for special justification to overcome its demands. She then explained that *stare decisis* carried even greater force than usual when applied to two decisions that had been affirmed by a "long line of precedents" going back 75 years or more and cited by lower courts thousands of times (p. 2422).

2019 SCC 65 (CanLII)

She noted that overturning the challenged precedents would cast doubt on many settled statutory interpretations and invite relitigation of cases (p. 2422). Finally, Justice Kagan reasoned that Congress remained free to overturn the cases if the Court had misconstrued legislative intent:

> . . . even if we are wrong about *Auer*, "Congress remains free to alter what we have done." In a constitutional case, only we can correct our error. But that is not so here. Our deference decisions are "balls tossed into Congress's court, for acceptance or not as that branch elects." And so far, at least, Congress has chosen acceptance. It could amend the APA or any specific statute to require the sort of *de novo* review of regulatory interpretations that Kisor favors. Instead, for approaching a century, it has let our deference regime work side-by-side with both the APA and the many statutes delegating rulemaking power to agencies. It has done so even after we made clear that our deference decisions reflect a presumption about congressional intent. And it has done so even after Members of this Court began to raise questions about the doctrine. Given that history — and Congress's continuing ability to take up Kisor's arguments — we would need a particularly "special justification" to now reverse *Auer*. [Citations omitted; pp. 2422-23]

[273] In the face of these compelling reasons for adhering to precedent, many of which have found resonance in this Court's jurisprudence, the majority's reliance on "judicial and academic criticism" falls far short of overcoming the demands of *stare decisis*. It is hard to see why the *obiter* views of the handful of Canadian judges referred to by the majority should be determinative or even persuasive. The majority omits the views of any academics or judges who *have* voiced support for a strong presumption of deference without identifying our approach to statutory rights of appeal as cause for concern (Dyzenhaus, "Dignity in Administrative Law: Judicial Deference in a Culture of Justification", at p. 109; Green, at pp. 489-90; Matthew

2019 SCC 65 (CanLII)

Lewans, *Administrative Law and Judicial Deference* (2016); Jonathan M. Coady, "The Time Has Come: Standard of Review in Canadian Administrative Law" (2017), 68 *U.N.B.L.J.* 87; The Hon. John M. Evans, "Standards of Review in Administrative Law" (2013), 26 *C.J.A.L.P.* 67, at p. 79; The Hon. John M. Evans, "Triumph of Reasonableness: But How Much Does It Really Matter?" (2014), 27 *C.J.A.L.P.* 101; Jerry V. DeMarco, "Seeking Simplicity in Canada's Complex World of Judicial Review" (2019), 32 *C.J.A.L.P.* 67).

[274] A selective assortment of criticism is not evidence of generalized criticism or unworkability. This Court frequently tackles contentious, high-profile cases that engender strong and persisting divisions of opinion. The public looks to us to definitively resolve those cases, regardless of the composition of the Court. As Hayne J. noted in *Lee*:

> To regard the judgments of this Court as open to reconsideration whenever a new argument is found more attractive than the principle expressed in a standing decision is to overlook the function which a final court of appeal must perform in defining the law. In difficult areas of the law, differences of legal opinion are inevitable; before a final court of appeal, the choice between competing legal solutions oftentimes turns on the emphasis or weight given by each of the judges to one factor against a countervailing factor ... *In such cases, the decision itself determines which solution is, for the purposes of the current law, correct*. It is not to the point to argue in the next case that, leaving the particular decision out of account, another solution is better supported by legal theory. *Such an approach would diminish the authority and finality of the judgments of this Court.* As the function of defining the law is vested in the Court rather than in the justices who compose it, a decision of the Court will be followed in subsequent cases by the Court, however composed, subject to the exceptional power which resides in the Court to permit reconsideration.

2019 SCC 65 (CanLII)

> Accordingly, as one commentator has put the point: "the previous decision is to be treated as the primary premise from which other arguments follow, and not just as one potential premise among an aggregate of competing premises". [Emphasis in original; footnote omitted.]
>
> (paras. 65-66, citing *Baker v. Campbell*, [1983] HCA 39, 153 C.L.R. 52, at pp. 102-3)

2019 SCC 65 (CanLII)

[275] This Court, in fact, has been clear that "criticism of a judgment is not sufficient to justify overruling it" (*Fraser*, at para. 86). Differences of legal and public opinion are a natural by-product of contentious cases like *R. v. Jordan*, [2016] 1 S.C.R. 631, or even *Housen*, which, as this Court acknowledged, was initially applied by appeal courts with "varying degrees of enthusiasm" (*H.L. v. Canada (Attorney General)*, [2005] 1 S.C.R. 401, at para. 76; see also Paul M. Perell, "The Standard of Appellate Review and The Ironies of Housen v. Nikolaisen" (2004), 28 *Adv. Q.* 40, at p. 53; Mike Madden, "Conquering the Common Law Hydra: A Probably Correct and Reasonable Overview of Current Standards of Appellate and Judicial Review" (2010), 36 *Adv. Q.* 269, at pp. 278-79 and 293; Paul J. Pape and John J. Adair, "Unreasonable review: The losing party and the palpable and overriding error standard" (2008), 27 *Adv. J.* 6, at p. 8; Geoff R. Hall, "Two Unsettled Questions in the Law of Contractual Interpretation: A Call to the Supreme Court of Canada" (2011), 50 *Can. Bus. L.J.* 434, at p. 436).

[276] To justify circumventing this Court's jurisprudence, the majority claims that the precedents being overturned *themselves* departed from the approach to statutory rights of appeal under the pragmatic and functional test. That, with respect,

is wrong. Ever since *Bell Canada (1989)* and in several subsequent decisions outlined earlier in these reasons, statutory rights of appeal have played little or no role in the standard of review analysis. Moreover, in pre-*Dunsmuir* cases, statutory rights of appeal were still seen as only one factor among others — and *not* as unequivocal indicators of correctness review (see, for example, *Canada (Deputy Minister of National Revenue) v. Mattel Canada Inc.*, [2001] 2 S.C.R. 100, at paras. 27-33; *Chieu v. Canada (Minister of Citizenship and Immigration)*, [2002] 1 S.C.R. 84, at paras. 23-24; *Harvard College v. Canada (Commissioner of Patents)*, [2002] 4 S.C.R. 45, at paras. 149-51). Our pre- and post-*Dunsmuir* cases on statutory rights of appeal shared in common an unwavering commitment to determining the standard of review in administrative proceedings using administrative law principles, even when appeal rights were involved.

[277] For the majority, the elimination of the contextual factors appears to have justified the reconstruction of the whole judicial review framework. Yet the elimination of the contextual analysis was all but complete in our post-*Dunsmuir* jurisprudence, and does not support the foundational changes to judicial review in the majority's decision. Neither that development, nor the majority's assertion that our precedents have proven "unclear and unduly complex", justifies the conclusion that *all* of our administrative law precedents — even those unconnected to the practical difficulties in applying *Dunsmuir* — are suddenly fair game.

2019 SCC 65 (CanLII)

[278] This Court is overturning a long line of well-established and recently-affirmed precedents in a whole area of law, including several unanimous or strong majority judgments. There is no principled justification for such a dramatic departure from this Court's existing jurisprudence.

2019 SCC 65 (CanLII)

Going Forward

[279] In our view, a more modest approach to modifying our past decisions, one that goes no further than necessary to clarify the law and its application, is justified. "[W]hen a court does choose to overrule its own precedents, it should do so carefully, with moderation, and with due regard for all the important considerations that undergird the doctrine" (Garner et al., at pp. 41-42). Such an approach to changing precedent preserves the integrity of the judicial process and, at a more conceptual level, of the law itself as a social construct. Michael J. Gerhardt summarized this approach eloquently:

> Judicial modesty is . . . . a disposition to respect precedents (as embodying the opinions of others), to learn from their and others' experiences, and to decide cases incrementally to minimize conflicts with either earlier opinions of the Court or other constitutional actors. [p. 7]

[280] Judicial modesty promotes the responsible development of the common law. Lord Tom Bingham described that process in his seminal work, *The Rule of Law* (2010):

> . . . it is one thing to move the law a little further along a line on which it is already moving, or to adapt it to accord with modern views and practices; it is quite another to seek to recast the law in a radically innovative or adventurous way, because that is to make it uncertain and unpredictable, features which are the antithesis of the rule of law. [pp. 45-46]
>
> (See also Robert J. Sharpe, *Good Judgment: Making Judicial Decisions* (2018), at p. 93; Beverley McLachlin, "The Role of the Supreme Court of Canada in Shaping the Common Law", in Paul Daly, ed., *Apex Courts and the Common Law* (2019), 25, at p. 35; *R. v. Salituro*, [1991] 3 S.C.R. 654, at p. 670; *Friedmann Equity Developments Inc. v. Final Note Ltd.*, [2000] 1 S.C.R. 842, at para. 42; *R. v. Kang-Brown*, [2008] 1 S.C.R. 456, at paras. 14-16, per Lebel J., and 73-74, per Binnie J., concurring.)

[281] Lord Bingham's comments highlight that a nuanced balance must be struck between maintaining the stability of the common law and ensuring that the law is flexible and responsive enough to adapt to new circumstances and shifts in societal norms. *Stare decisis* plays a critical role in maintaining that balance and upholding the rule of law. When *stare decisis* is respected, precedent acts as a stabilizing force: providing certainty as to what the law is, consistency that allows those subject to the law to order their affairs accordingly, and continuity that protects reliance on those legal consequences. *Stare decisis* is at the heart of the iterative development of the common law, fostering progressive, incremental and responsible change.

[282] So what do we suggest? We support a standard of review framework with a meaningful rule of deference, based on *both* the legislative choice to delegate decision-making authority to an administrative actor *and* on the specialized expertise that these decision-makers possess and develop in applying their mandates. Outside of the three remaining correctness categories from *Dunsmuir* — and absent clear and

2019 SCC 65 (CanLII)

explicit legislative direction on the *standard* of review — administrative decisions should be reviewed for reasonableness. Like the majority, we support eliminating the category of "true questions of jurisdiction" and foreclosing the use of the contextual factors identified in *Dunsmuir*. These developments introduce incremental changes to our judicial review framework, while respecting its underlying principles and placing the ball in the legislatures' court to modify the standards of review if they wish.

[283] To the extent that concerns were expressed about the quality of administrative decision making by some interveners who represented particularly vulnerable groups, we agree that they must be taken seriously. But the solution does not lie in authorizing more incursions into the administrative system by generalist judges who lack the expertise necessary to implement these sensitive mandates. Any perceived shortcomings in administrative decision making are not solved by permitting *de novo* review of every legal decision by a court and, as a result, adding to the delay and cost of obtaining a final decision. The solution lies instead in ensuring the proper qualifications and training of administrative decision-makers. Like courts, administrative actors are fully capable of, and responsible for, improving the quality of their own decision-making processes, thereby strengthening access to justice in the administrative justice system.

2019 SCC 65 (CanLII)

[284] We also acknowledge that this Court should offer additional direction on conducting reasonableness review.[7] We fear, however, that the majority's multi-factored, open-ended list of "constraints" on administrative decision making will encourage reviewing courts to dissect administrative reasons in a "line-by-line treasure hunt for error" (*Communications, Energy and Paperworkers Union of Canada, Local 30 v. Irving Pulp & Paper, Ltd.*, [2013] 2 S.C.R. 458, at para. 54). These "constraints" may function in practice as a wide-ranging catalogue of hypothetical errors to justify quashing an administrative decision — a checklist with unsettling similarities to the series of "jurisdictional errors" spelled out in *Anisminic* itself.

[285] Structuring reasonableness review in this fashion effectively imposes on administrative decision-makers a higher standard of justification than that applied to trial judges. Such an approach undercuts deference and revives a long-abandoned posture of suspicion towards administrative decision making. We are also concerned by the majority's warning that administrative decision-makers cannot "arrogate powers to themselves that they were never intended to have", an unhelpful truism that risks reintroducing the tortured concept of "jurisdictional error" by another name.

[286] We would advocate a continued approach to reasonableness review which focuses on the concept of *deference* and what it requires of reviewing courts. Curial deference, after all, is *the* hallmark of reasonableness review, setting it apart

[7] Consistent with requests from some commentators and some of the interveners at these hearings, including the Canadian Bar Association and the Council of Canadian Administrative Tribunals (see also Mullan, at pp. 76-78).

2019 SCC 65 (CanLII)

from the substitution of opinion permitted under the correctness standard. The choice of a particular standard of review — whether described as "correctness", "reasonableness" or in other terms — is fundamentally about "whether or not a reviewing court should defer"[8] to an administrative decision (see *Dunsmuir*, at para. 141, per Binnie J., concurring; Régimbald, at pp. 539-40). If courts, therefore, are to properly conduct "reasonableness" review, they must properly understand what deference means.

[287] In our view, deference imposes three requirements on courts conducting reasonableness review. It informs the attitude a reviewing court must adopt towards an administrative decision-maker; it affects how a court frames the question it must answer on judicial review; and it affects how a reviewing court evaluates challenges to an administrative decision.

[288] First and foremost, deference is an "attitude of the court" conducting reasonableness review (*Dunsmuir*, at para. 48). Deference mandates respect for the legislative choice to entrust a decision to administrative actors rather than to the courts, and for the important role that administrative decision-makers play in upholding and applying the rule of law (*Toronto (City) v. C.U.P.E., Local 79*, [2003] 3 S.C.R. 77, at para. 131, per LeBel J., concurring). Deference also requires respect for administrative decision-makers, their specialized expertise and the institutional setting in which they operate (*Dunsmuir*, at paras. 48-49). Reviewing courts must pay

[8] Factum of the intervener the Canadian Association of Refugee Lawyers, at para. 5; factum of the intervener the Council of Canadian Administrative Tribunals, at paras. 24-26.

2019 SCC 65 (CanLII)

"respectful attention" to the reasons offered for an administrative decision, make a genuine effort to understand why the decision was made, and give the decision a fair and generous construction in light of the entire record (*Newfoundland Nurses*, at paras. 11-14 and 17).

2019 SCC 65 (CanLII)

[289] Second, deference affects how a court frames the question it must answer when conducting judicial review. A reviewing court does not ask how it would have resolved an issue, but rather, whether the answer provided by the administrative decision-maker has been shown to be unreasonable (*Khosa*, at paras. 59 and 61-62; *Dunsmuir*, at para. 47). Framing the inquiry in this way ensures that the administrative decision under review is the focus of the analysis.

[290] This Court has often endorsed this approach to conducting reasonableness review. In *Ryan*, for example, Iacobucci J. explained:

> . . . When deciding whether an administrative action was unreasonable, a court should not at any point ask itself what the correct decision would have been . . . . The standard of reasonableness does not imply that a decision-maker is merely afforded a "margin of error" around what the court believes is the correct result.
>
> . . . Unlike a review for correctness, there will often be no single right answer to the questions that are under review against the standard of reasonableness . . . . Even if there could be, notionally, a single best answer, it is not the court's role to seek this out when deciding if the decision was unreasonable. [paras. 50-51]
>
> (See also *Volvo Canada Ltd. v. U.A.W., Local 720*, [1980] 1 S.C.R. 178, at p. 214; *Toronto (City)*, at paras. 94-95, per LeBel J., concurring; *VIA Rail*, at para. 101; *Mason v. Minister of Citizenship and Immigration*, 2019 FC 1251, at para. 22 (CanLII), per Grammond J.; Régimbald, at p. 539; Sharpe, at pp. 204 and 208; Paul Daly, "The Signal and the Noise in

Administrative Law" (2017), 68 *U.N.B.L.J.* 68, at p. 85; Evans, "Triumph of Reasonableness: But How Much Does It Really Matter?", at p. 107.)

2019 SCC 65 (CanLII)

[291] Third, deferential review impacts how a reviewing court evaluates challenges to an administrative decision. Deference requires the applicant seeking judicial review to bear the onus of showing that the decision was unreasonable (*Williams Lake Indian Band v. Canada (Aboriginal Affairs and Northern Development)*, [2018] 1 S.C.R. 83, at para. 108; *Mission Institution v. Khela*, [2014] 1 S.C.R. 502, at para. 64; *May v. Ferndale Institution*, [2005] 3 S.C.R. 809, at para. 71; *Ryan*, at para. 48; *Southam*, at para. 61; *Northern Telecom Ltd. v. Communications Workers of Canada*, [1980] 1 S.C.R. 115, at p. 130). Focusing on whether the applicant has demonstrated that the decision is unreasonable reinforces the central role that administrative decisions play in a properly deferential review process, and confirms that the decision-maker does not have to persuade the court that its decision is reasonable.

[292] Assessing whether a decision is reasonable also requires a qualitative assessment. Reasonableness is a concept that pervades the law but is difficult to define with precision (*Dunsmuir*, at para. 46). It requires, by its very nature, a fact-specific inquiry that involves a certain understanding of common experience. Reasonableness cannot be reduced to a formula or a checklist of factors, many of which will not be relevant to a particular decision. Ultimately, whether an administrative decision is reasonable will depend on the context (*Catalyst Paper Corp. v. North Cowichan (District)*, [2012] 1 S.C.R. 5, at para. 18). Administrative

law covers an infinite variety of decisions and decision-making contexts, as LeBel J. colourfully explained in *Blencoe v. British Columbia (Human Rights Commission)*, [2000] 2 S.C.R. 307, at para. 158 (dissenting in part, but not on this point):

> . . . not all administrative bodies are the same. Indeed, this is an understatement. At first glance, labour boards, police commissions, and milk control boards may seem to have about as much in common as assembly lines, cops, and cows! Administrative bodies do, of course, have some common features, but the diversity of their powers, mandate and structure is such that to apply particular standards from one context to another might well be entirely inappropriate . . . .

[293] Deference, in our view, requires approaching each administrative decision on its own terms and in its own context. But we emphasize that the inherently contextual nature of reasonableness review does not mean that the degree of scrutiny applied by a reviewing court varies (*Alberta Teachers' Association*, at para. 47; *Wilson*, at para. 18). It merely means that when assessing a challenge to an administrative decision, a reviewing court must be attentive to all relevant circumstances, including the reasons offered to support the decision, the record, the statutory scheme and the particular issues raised by the applicant, among other factors (see, for example, *Suresh v. Canada (Minister of Citizenship and Immigration)*, [2002] 1 S.C.R. 3, at para. 40; *Newfoundland Nurses*, at para. 18; Van Harten et al., at p. 794). Without this context, it is impossible to determine what constitutes a sufficiently compelling justification to quash a decision under reasonableness review. Context may make a challenge to an administrative decision more or less persuasive

2019 SCC 65 (CanLII)

— but it does not alter the deferential posture of the reviewing court (*Suresh*, at para. 40).

[294] Deference, however, does not require reviewing courts to shirk their obligation to review the decision. So long as they maintain a respectful attitude, frame the judicial review inquiry properly and demand compelling justification for quashing a decision, reviewing courts are entitled to meaningfully probe an administrative decision. A thorough evaluation by a reviewing court is not "disguised correctness review", as some have used the phrase. Deference, after all, stems from respect, not inattention to detail.

[295] Bearing this in mind, we offer the following suggestions for conducting reasonableness review. We begin with situations where reasons are required.[9]

[296] The administrative decision is the focal point of the review exercise. Where reasons are provided, they serve as the natural starting point to determine whether the decision-maker acted reasonably (*Williams Lake*, at para. 36). By beginning with the reasons offered for the decision, read in light of the surrounding context and the grounds raised to challenge the decision, reviewing courts provide meaningful oversight while respecting the legitimacy of specialized administrative decision making.

[9] Under the duty of procedural fairness outlined in *Baker v. Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817, at para. 43.

2019 SCC 65 (CanLII)

[297] Reviewing courts should approach the reasons with respect for the specialized decision-makers, the significant role they have been assigned and the institutional context chosen by the legislator. Reasons should be approached generously, on their own terms. Reviewing courts should be hesitant to second-guess operational implications, practical challenges and on-the-ground knowledge used to justify an administrative decision. Reviewing courts must also remain alert to specialized concepts or language used in an administrative decision that may be unfamiliar to a generalist judge (*Newfoundland Nurses*, at para. 13; *Igloo Vikski*, at paras. 17 and 30). When confronted with unfamiliar language or modes of reasoning, judges should acknowledge that such differences are an inevitable, intentional and invaluable by-product of the legislative choice to assign a matter to the administrative system. They may lend considerable force to an administrative decision and, by the same token, render an applicant's challenge to that decision less compelling. Reviewing courts scrutinizing an administrative body's decision under the reasonableness framework should therefore keep in mind that the administrative body holds the "interpretative upper hand" (*McLean*, at para. 40).

[298] Throughout the review process, a court conducting deferential review must view claims of administrative error in context and with caution, cognizant of the need to avoid substituting its opinion for that of those empowered and better equipped to answer the questions at issue. Because judicial substitution is incompatible with deference, reviewing courts must carefully evaluate the challenges raised by an applicant to ensure they go to the *reasonableness* of the administrative decision.

2019 SCC 65 (CanLII)

[299] Unsurprisingly, applicants rarely present challenges to an administrative decision as explicit invitations for courts to substitute their opinions for those of administrative actors. Courts, therefore, must carefully probe challenges to administrative decisions to assess whether they amount, in substance, to a mere difference of opinion with how the administrative decision-maker weighed or prioritized the various factors relevant to the decision-making process. Allegations of error may, on deeper examination, simply reflect a legitimate difference in approach by an administrative decision-maker. By rooting out and rejecting such challenges, courts respect the valuable and distinct perspective that administrative bodies bring to answering legal questions, flowing from the considerable expertise and field sensitivity they develop by administering their mandate and working within the intricacies of their statutory context on a daily basis. The understanding and insights of administrative actors enhance the decision-making process and may be more conducive to reaching a result "that promotes effective public policy and administration . . . than the limited knowledge, detachment, and modes of reasoning typically associated with courts of law" (*National Corn Growers*, at pp. 1336-37 (emphasis deleted), per Wilson J., concurring, citing J. M. Evans et al., *Administrative Law: Cases, Text, and Materials* (3rd ed. 1989), at p. 414).

[300] When resolving challenges to an administrative decision, courts must also consider the *materiality* of any alleged errors in the decision-maker's reasoning. Under reasonableness review, an error is not necessarily sufficient to justify quashing a decision. Inevitably, the weight of an error will depend on the extent to which it

2019 SCC 65 (CanLII)

affects the decision. An error that is peripheral to the administrative decision-maker's reasoning process, or overcome by more compelling points advanced in support of the result, does not provide fertile ground for judicial review. Ultimately, the role of the reviewing court is to examine the decision as a whole to determine whether it is reasonable (*Dunsmuir*, at para. 47; *Khosa*, at para. 59). Considering the materiality of any impugned errors is a natural part of this exercise, and of reading administrative reasons "together with the outcome" (*Newfoundland Nurses*, at para. 14).

[301] Review of the decision as a whole is especially vital when an applicant alleges that an administrative decision contains material omissions. Significantly, and as this Court has frequently emphasized, administrative decision-makers are not required to consider and comment upon every issue raised by the parties in their reasons (*Construction Labour Relations v. Driver Iron Inc.*, [2012] 3 S.C.R. 405, at para. 3; *Newfoundland Nurses*, at para. 16, citing *Service Employees' International Union, Local No. 333 v. Nipawin District Staff Nurses Association*, [1975] 1 S.C.R. 382, at p. 391). Further, a reviewing court is not restricted to the four corners of the written reasons delivered by the decision-maker and should, if faced with a gap in the reasons, look to the record to see if it sheds light on the decision (*Williams Lake*, at para. 37; *Delta Air Lines Inc. v. Lukács*, [2018] 1 S.C.R. 6, at para. 23; *Newfoundland Nurses*, at para. 15; *Alberta Teachers' Association*, at paras. 53 and 56).

[302] The use of the record and other context to supplement a decision-maker's reasons has been the subject of some academic discussion (see, for example, Mullan,

2019 SCC 65 (CanLII)

at pp. 69-74). We support a flexible approach to supplementing reasons, which is consistent with the flexible approach used to determine whether administrative reasons must be provided to begin with and sensitive to the "day-to-day realities of administrative agencies" (*Baker*, at para. 44), which may not be conducive to the production of "archival" reasons associated with court judgments (para. 40, citing Roderick A. Macdonald and David Lametti, "Reasons for Decision in Administrative Law" (1990), 3 *C.J.A.L.P.* 123).

[303] Some materials that may help bridge gaps in a reviewing court's understanding of an administrative decision include: the record of any formal proceedings as well as the materials before the decision-maker, past decisions of the administrative body, and policies or guidelines developed to guide the type of decision under review (see Matthew Lewans, "Renovating Judicial Review" (2017), 68 *U.N.B.L.J.* 109, at pp. 137-38). Reviewing these materials may assist a court in understanding, "by inference", why an administrative decision-maker reached a particular outcome (*Baker*, at para. 44; see also *Williams Lake*, at para. 37; *Mills v. Ontario (Workplace Safety and Insurance Appeals Tribunal (Ont.)*, 2008 ONCA 436, 237 O.A.C. 71, at paras. 38-39). It may reveal further confirmatory context for a line of reasoning employed by the decision-maker — by showing, for example, that the decision-maker's understanding of the purpose of its statutory mandate finds support in the provision's legislative history (*Celgene Corp. v. Canada (Attorney General)*, [2011] 1 S.C.R. 3, at paras. 25-29). Reviewing the record can also yield responses to the specific challenges raised by an applicant on judicial review, responses that are

2019 SCC 65 (CanLII)

"consistent with the process of reasoning" applied by the administrative decision-maker (*Igloo Vikski*, at para. 45). In these ways, reviewing courts may legitimately supplement written reasons without "supplant[ing] the analysis of the administrative body" (*Lukács*, at para. 24).

[304] The "adequacy" of reasons, in other words, is not "a stand-alone basis for quashing a decision" (*Newfoundland Nurses*, at para. 14). As this Court has repeatedly confirmed, reasons must instead "be read together with the outcome and serve the purpose of showing whether the result falls within a range of possible outcomes" (*Newfoundland Nurses*, at para. 14; *Halifax (Regional Municipality) v. Canada (Public Works and Government Services)*, [2012] 2 S.C.R. 108, at para. 44; *Agraira v. Canada (Public Safety and Emergency Preparedness)*, [2013] 2 S.C.R. 559, at para. 52; *Williams Lake*, at para. 141, per Rowe J., dissenting, but not on this point). This approach puts substance over form in situations where the basis for a decision by a specialized administrative actor is evident on the record, but not clearly expressed in written reasons. Quashing decisions in such circumstances defeats the purpose of deference and thwarts access to justice by wasting administrative and judicial resources.

[305] In our view, therefore, if an applicant claims that an administrative decision-maker failed to address a relevant factor in reaching a decision, the reviewing court must consider the submissions and record before the decision-maker, and the materiality of any such omission to the decision rendered. An administrative

2019 SCC 65 (CanLII)

decision-maker's failure, for example, to refer to a particular statutory provision or the full factual record before it does not automatically entitle a reviewing court to conduct a *de novo* assessment of the decision under review. The inquiry must remain focussed on whether the applicant has satisfied the burden of showing that the omission renders the decision reached unreasonable.

[306] We acknowledge that respecting the line between reasonableness and correctness review has posed a particular challenge for judges when reviewing interpretation by administrative decision-makers of their statutory mandates. Judges routinely interpret statutes and have developed a template for how to scrutinize words in that context. But the same deferential approach we have outlined above must apply with equal force to statutory interpretation cases. When reviewing an administrative decision involving statutory interpretation, a court should not assess the decision by determining what, in its own view, would be a reasonable interpretation. Such an approach "imperils deference" (Paul Daly, "Unreasonable Interpretations of Law" (2014), 66 *S.C.L.R.* (2d) 233, at p. 250).

[307] We agree with Justice Evans that "once [a] court embarks on its own interpretation of the statute to determine the reasonableness of the tribunal's decision, there seems often to be little room for deference" (Evans, "Triumph of Reasonableness: But How Much Does It Really Matter?", at p. 109; see also *Mason*, at para. 34; Dyzenhaus, "Dignity in Administrative Law: Judicial Deference in a Culture of Justification", at p. 108; Daly, "Unreasonable Interpretations of Law", at

2019 SCC 65 (CanLII)

pp. 254-55). We add that a *de novo* interpretation of a statute, conducted as a prelude to "deferential" review, necessarily omits a vital piece of the interpretive puzzle: the perspective of the front-line, specialized administrative body that routinely applies the statutory scheme in question (Dyzenhaus, "The Politics of Deference: Judicial Review and Democracy", at p. 304; Paul Daly, "Deference on Questions of Law" (2011), 74 *Mod. L. Rev.* 694). By placing that perspective at the heart of the judicial review inquiry, courts display respect for administrative specialization and expertise, and for the legislative choice to delegate certain questions to non-judicial bodies.

2019 SCC 65 (CanLII)

[308] Conversely, by imposing their own interpretation of a statutory provision, courts *undermine* legislative intent to confide a mandate to the decision-maker. Applying a statute will almost always require some interpretation, making the interpretive mandate of administrative decision-makers inherent to their legislative mandate. The decision-maker who applies the statute has primary responsibility for interpreting the provisions in order to carry out their mandate effectively.

[309] Administrative decision-makers performing statutory interpretation should therefore be permitted to be guided by their expertise and knowledge of the practical realities of their administrative regime. In many cases, the "ordinary meaning" of a word or term makes no sense in a specialized context. And in some settings, law and policy are so inextricably at play that they give the words of a statute a meaning unique to a particular specialized context (*National Corn Growers*, at p. 1336, per Wilson J., concurring; *Domtar Inc.*, at p. 800). Further, not only are

statutory provisions sometimes capable of bearing more than one reasonable interpretation, they are sometimes drafted in general terms or with "purposeful ambiguity" in order to permit adaptation to future, unknown circumstances (see Felix Frankfurter, "Some Reflections on the Reading of Statutes" (1947), 47 *Colum. L. Rev.* 527, at p. 528). These considerations make it all the more compelling that reviewing courts avoid imposing judicial norms on administrative decision-makers or maintaining a dogmatic insistence on formalism. Where a decision-maker can explain its decision adequately, that decision should be upheld (Daly, "Unreasonable Interpretations of Law", at pp. 233-34, 250 and 254-55).

[310] Justice Brown's reasons in *Igloo Vikski* provide a useful illustration of a properly deferential approach to statutory interpretation. That case involved an interpretation of the *Customs Tariff*, S.C. 1997, c. 36, as it applies to hockey goaltender gloves. The Canada Border Services Agency had classified the gloves as "[g]loves, mittens [or] mitts". Igloo Vikski argued they should have been classified as sporting equipment. The Canadian International Trade Tribunal ("CITT") confirmed the initial classification. The Federal Court of Appeal reversed the decision.

[311] Acknowledging that the "specific expertise" of the CITT gave it the upper hand over a reviewing court with respect to certain questions of law, Justice Brown determined that the standard of review was reasonableness. Writing for seven other members of the Court, he carefully reviewed the reasons of the CITT and how it had engaged with Igloo Vikski's arguments before turning to the errors alleged by

2019 SCC 65 (CanLII)

Igloo Vikski and the Federal Court of Appeal. Conceding that the CITT reasons lacked "perfect clarity", Justice Brown nevertheless concluded that the Tribunal's interpretation was reasonable. While he agreed with Igloo Vikski that an alternate interpretation to that given by the CITT was available, the inclusive language of the applicable statute was broad enough to accommodate the CITT's reasonable interpretation. By beginning with the reasons offered for the interpretation and turning to the challenges mounted against it in light of the surrounding context, *Igloo Vikski* provides an excellent example of respectful and properly deferential judicial review.

[312] We conclude our discussion of reasonableness review by addressing cases where reasons are neither required nor available for judicial review. In these circumstances, a reviewing court should remain focussed on whether the decision has been shown to be unreasonable. The reasonableness of the decision may be justified by past decisions of the administrative body (see *Edmonton East*, at paras. 38 and 44-46; *Alberta Teachers' Association*, at paras. 56-64). In other circumstances, reviewing courts may have to assess the reasonableness of the outcome in light of the procedural context surrounding the decision (see *Law Society of British Columbia v. Trinity Western University*, [2018] 2 S.C.R. 293, at paras. 51-56; *Edmonton East*, at paras. 48-60; *Catalyst Paper Corp.*, at paras. 32-36). In all cases, the question remains whether the challenging party has demonstrated that a decision is unreasonable.

2019 SCC 65 (CanLII)

[313] In sum, reasonableness review is based on deference to administrative decision-makers and to the legislative intention to confide in them a mandate. Deference must inform the attitude of a reviewing court and the nature of its analysis: the court does not ask how it would have resolved the issue before the administrative decision-maker but instead evaluates whether the decision-maker acted reasonably. The reviewing court starts with the reasons offered for the administrative decision, read in light of the surrounding context and based on the grounds advanced to challenge the reasonableness of the decision. The reviewing court must remain focussed on the reasonableness of the decision viewed as a whole, in light of the record, and with attention to the materiality of any alleged errors to the decision-maker's reasoning process. By properly conducting reasonableness review, judges provide careful and meaningful oversight of the administrative justice system while respecting its legitimacy and the perspectives of its front-line, specialized decision-makers.

2019 SCC 65 (CanLII)

Application to Mr. Vavilov

[314] Alexander Vavilov challenges the Registrar of Citizenship's decision to cancel his citizenship certificate. The Registrar concluded that Mr. Vavilov was not a Canadian citizen, and therefore not entitled to a certificate of Canadian citizenship because, although he was born in Canada, his parents were "other representative[s] or employee[s] in Canada of a foreign government" within the meaning of s. 3(2)(a) of the *Citizenship Act*, R.S.C. 1985, c. C-29.

[315] The first issue is the applicable standard of review. We agree with the majority that reasonableness applies.

[316] The second issue is whether the Registrar was reasonable in concluding that the exception to Canadian citizenship in s. 3(2)(a) applies not only to parents who enjoy diplomatic privileges and immunities, but also to intelligence agents of a foreign government. The onus is therefore on Mr. Vavilov to satisfy the reviewing court that the decision was unreasonable. In our view, he has met that onus.

[317] Mr. Vavilov was born in Canada in 1994. His Russian parents, Elena Vavilova and Andrey Bezrukov, entered Canada at some point prior to his birth, assumed the identities of two deceased Canadians and fraudulently obtained Canadian passports. After leaving Canada to live in France, Mr. Vavilov and his family moved to the United States. While in the United States, Mr. Vavilov's parents became American citizens under their assumed Canadian identities. Mr. Vavilov and his older brother also obtained American citizenship.

[318] In June 2010, agents of the United States Federal Bureau of Investigation arrested Mr. Vavilov's parents and charged them with conspiracy to act as unregistered agents of a foreign government and to commit money laundering. Mr. Vavilov's parents pleaded guilty to the conspiracy charges in July 2010 and were returned to Russia in a spy swap. Around the same time, Mr. Vavilov and his brother travelled to Russia. The American government subsequently revoked Mr. Vavilov's

2019 SCC 65 (CanLII)

passport and citizenship. In December 2010, he was issued a Russian passport and birth certificate.

[319] From 2010 to 2013, Mr. Vavilov repeatedly sought a Canadian passport. In December 2011, he obtained an amended Ontario birth certificate, showing his parents' true names and places of birth. Using this birth certificate, Mr. Vavilov applied for and received a certificate of Canadian citizenship in January 2013. Relying on these certificates, Mr. Vavilov applied for an extension of his Canadian passport in early 2013. On July 18, 2013, the Registrar wrote to Mr. Vavilov, informing him that there was reason to believe the citizenship certificate had been erroneously issued and asking him for additional information.

[320] On April 22, 2014, Mr. Vavilov provided extensive written submissions to the Registrar. He argued that the narrow exception set out in s. 3(2) of the Act does not apply to him. Because he was born in Canada, he is entitled to Canadian citizenship. Mr. Vavilov also argued that the Registrar had failed to respect the requirements of procedural fairness.

[321] The Registrar wrote to Mr. Vavilov on August 15, 2014, cancelling his certificate of Canadian citizenship. In her view, because Mr. Vavilov met the two statutory restrictions in s. 3(2) of the Act, he was not a Canadian citizen. First, when Mr. Vavilov was born in Canada, neither of his parents were Canadian citizens or lawfully admitted to Canada for permanent residence. Second, as unofficial agents working for Russia's Foreign Intelligence Service, Mr. Vavilov's parents were "other

2019 SCC 65 (CanLII)

representative[s] or employee[s] in Canada of a foreign government" within the meaning of s. 3(2)(a).

[322] The Federal Court ([2016] 2 F.C.R. 39) dismissed Mr. Vavilov's application for judicial review. It found that the Registrar had satisfied the requirements of procedural fairness and, applying a correctness standard, determined that the Registrar's interpretation of s. 3(2)(a) was correct. The Federal Court then reviewed the application of s. 3(2)(a) on a reasonableness standard and concluded that the Registrar had reasonably determined that Mr. Vavilov's parents were working in Canada as undercover agents of the Russian government at the time of his birth.

[323] The Federal Court of Appeal ([2018] 3 F.C.R. 75) allowed the appeal and quashed the Registrar's decision to cancel Mr. Vavilov's citizenship certificate. Writing for the majority, Stratas J.A. agreed that the requirements of procedural fairness were met but held that the Registrar's interpretation of s. 3(2)(a) was unreasonable. In his view, only those who enjoy diplomatic privileges and immunities fall within the exception to citizenship found in s. 3(2)(a). Justice Stratas reached this conclusion after considering the context and purpose of the provision, its legislative history and international law principles related to citizenship and diplomatic privileges and immunities.

[324] As a general rule, administrative decisions are to be judicially reviewed for reasonableness. None of the correctness exceptions apply to the Registrar's

2019 SCC 65 (CanLII)

interpretation of the Act in this case. As such, the standard of review is reasonableness.

2019 SCC 65 (CanLII)

[325] The following provisions of the *Citizenship Act* are relevant to this appeal:

> **Persons who are citizens**
>
> **3 (1)** Subject to this Act, a person is a citizen if
>
> > **(a)** the person was born in Canada after February 14, 1977;
> >
> > . . .
>
> **Not applicable to children of foreign diplomats, etc.**
>
> **(2)** Paragraph (1)(a) does not apply to a person if, at the time of his birth, neither of his parents was a citizen or lawfully admitted to Canada for permanent residence and either of his parents was
>
> > **(a)** a diplomatic or consular officer or other representative or employee in Canada of a foreign government;
> >
> > **(b)** an employee in the service of a person referred to in paragraph (a); or
> >
> > **(c)** an officer or employee in Canada of a specialized agency of the United Nations or an officer or employee in Canada of any other international organization to whom there are granted, by or under any Act of Parliament, diplomatic privileges and immunities certified by the Minister of Foreign Affairs to be equivalent to those granted to a person or persons referred to in paragraph (a).

The general rule embodied in s. 3(1)(a) of the Act is that persons born in Canada are Canadian citizens. Section 3(2) sets out an exception to this rule. As such, if s. 3(2) applies to Mr. Vavilov, he was never a Canadian citizen.

[326] The specific issue in this case is whether the Registrar's interpretation of the statutory exception to citizenship was reasonable. Reasonableness review entails deference to the decision-maker, and we begin our analysis by examining the reasons offered by the Registrar in light of the context and the grounds argued.

[327] In this case, the Registrar's letter to Mr. Vavilov summarized the key points underlying her decision. In concluding that Mr. Vavilov was not entitled to Canadian citizenship, the Registrar adopted the recommendations of an analyst employed by Citizenship and Immigration Canada. As such, the analyst's report properly forms part of the reasons supporting the Registrar's decision.

[328] The analyst's report sought to answer the question of whether Mr. Vavilov was erroneously issued a certificate of Canadian citizenship. The report identifies the key question in this case as being whether either of Mr. Vavilov's parents was a "representative" or "employee" of a foreign government within the meaning of s. 3(2)(a). Much of the report relates to matters not disputed in this appeal, including the legal status of Mr. Vavilov's parents in Canada and their employment as Russian intelligence agents.

[329] The analyst began her analysis with the text of s. 3(2)(a). In concluding that the provision operates to deny Mr. Vavilov Canadian citizenship, she set out two textual arguments. First, she compared the current version of s. 3(2)(a) to an earlier iteration of the exception found in s. 5(3) of the *Canadian Citizenship Act*, R.S.C. 1970, c. C-19:

2019 SCC 65 (CanLII)

Not applicable to children of foreign diplomats, etc.

(3) Subsection (1) does not apply to a person if, at the time of that person's birth, his responsible parent

(*a*) is an alien who has not been lawfully admitted to Canada for permanent residence; and

(*b*) is

(i) a foreign diplomatic or consular officer or a representative of a foreign government accredited to Her Majesty,

(ii) an employee of a foreign government attached to or in the service of a foreign diplomatic mission or consulate in Canada, or

(iii) an employee in the service of a person referred to in subparagraph (i).

[330] The analyst stated that the removal of references to official accreditation or a diplomatic mission indicate that the previous exception was narrower than s. 3(2)(a). She then pointed out that the definition of "diplomatic or consular officer" in s. 35(1) of the *Interpretation Act*, R.S.C. 1985, c. I-21, clearly associates these individuals with diplomatic positions. Because the current version of s. 3(2)(a) does not link "other representative or employee in Canada of a foreign government" to a diplomatic mission, the analyst determined "it is reasonable to maintain that this provision intends to encompass individuals not included in the definition of 'diplomatic and consular staff.'" Finally, the analyst stated that the phrase "other representative or employee in Canada of a foreign government" has not been previously interpreted by a court.

2019 SCC 65 (CanLII)

[331] Beyond the analyst's report, there is little in the record to supplement the Registrar's reasons. There is no evidence about whether the Registrar has previously applied this provision to individuals like Mr. Vavilov, whose parents did not enjoy diplomatic privileges and immunities. Neither does there appear to be any internal policy, guideline or legal opinion to guide the Registrar in making these types of decisions.

[332] In challenging the Registrar's decision, Mr. Vavilov bears the onus of demonstrating why it is not reasonable. Before this Court, Mr. Vavilov submitted that the analyst focussed solely on the text of the exception to citizenship. In his view, had the broader objectives of s. 3(2)(a) been considered, the analyst would have concluded that "other representative" or "employee" only applies to individuals who benefit from diplomatic privileges and immunities.

[333] In his submissions before the Registrar, Mr. Vavilov offered three reasons why the text of s. 3(2) must be read against the backdrop of Canadian and international law relating to the roles and functions of diplomats.

[334] First, Mr. Vavilov explained that s. 3(2)(a) should be read in conjunction with the *Foreign Missions and International Organizations Act*, S.C. 1991, c. 41 ("*FMIOA"*). This statute incorporates into Canadian law aspects of the *Vienna Convention on Diplomatic Relations*, Can. T.S. 1966 No. 29, Sched. I to the *FMIOA*, and the *Vienna Convention on Consular Relations*, Can. T.S. 1974 No. 25, Sched. II to the *FMIOA*, which deal with diplomatic privileges and immunities. He submitted

2019 SCC 65 (CanLII)

that s. 3(2) denies citizenship to children of diplomats because diplomatic privileges and immunities, including immunity from criminal prosecution and civil liability, are inconsistent with the duties and responsibilities of a citizen. Because Mr. Vavilov's parents did not enjoy such privileges and immunities, there would be no purpose in excluding their children born in Canada from becoming Canadian citizens.

2019 SCC 65 (CanLII)

[335] Second, Mr. Vavilov provided the Registrar with Hansard committee meeting minutes such as the comments of the Honourable J. Hugh Faulkner, Secretary of State, when introducing the amendments to s. 3(2), who explained that the provision had been redrafted to narrow the exception to citizenship.

[336] Third, Mr. Vavilov cited case law, arguing that: (i) the exception to citizenship should be narrowly construed because it takes away substantive rights (*Brossard (Town) v. Quebec Commission des droits de la personne*, [1988] 2 S.C.R. 279, at p. 307); (ii) s. 3(2)(a) must be interpreted functionally and purposively (*Medovarski v. Canada (Minister of Citizenship and Immigration)*, [2005] 2 S.C.R. 539, at para. 8); and (iii) because Mr. Vavilov's parents were not immune from criminal or civil proceedings, they fall outside the scope of s. 3(2) (*Greco v. Holy See (State of the Vatican City)*, [1999] O.J. No. 2467 (QL) (S.C.J.); *R. v. Bonadie* (1996), 109 C.C.C. (3d) 356 (Ont. C.J.); *Al-Ghamdi v. Canada (Minister of Foreign Affairs & International Trade)* (2007), 64 Imm. L.R. (3d) 67 (F.C.)).

[337] The Federal Court's decision in *Al-Ghamdi*, a case which challenged the constitutionality of s. 3(2)(a), was particularly relevant. In that case, Shore J. wrote

that s. 3(2)(a) only applies to the "children of individuals with diplomatic status" (paras. 5 and 65). Justice Shore also stated that "[i]t is precisely because of the vast array of privileges accorded to diplomats and their families, which are by their very nature inconsistent with the obligations of citizenship, that a person who enjoys diplomatic status cannot acquire citizenship" (para. 63).

2019 SCC 65 (CanLII)

[338] The Registrar's reasons failed to respond to Mr. Vavilov's extensive and compelling submissions about the objectives of s. 3(2)(a). It appears that the analyst misunderstood Mr. Vavilov's arguments on this point. In discussing the scope of s. 3(2), she wrote, "[c]ounsel argues that CIC [Citizenship and Immigration Canada] cannot invoke subsection 3(2) because CIC has not requested or obtained verification with the Foreign Affairs Protocol to prove that [Mr. Vavilov's parents] held diplomatic or consular status with the Russian Federation while they resided in Canada." It thus appears that the analyst did not recognize that Mr. Vavilov's argument was more fundamental in nature — namely, that the objectives of s. 3(2) require the terms "other representative" and "employee" to be read narrowly. During discovery, in fact, the analyst acknowledged that her research did not reveal a policy purpose behind s. 3(2)(a) or why the phrase "other representative or employee" was included in the Act. It also appears that the analyst did not understand the potential relevance of the *Al-Ghamdi* decision, since her report stated that "[t]he jurisprudence that does exist only relates to individuals whose parents maintained diplomatic status in Canada at the time of their birth."

[339] The Registrar, in the end, interpreted s. 3(2)(a) broadly, based on the analyst's purely textual assessment of the provision, including a comparison with the text of the previous version. This reading of "other representative or employee" was only reasonable if the text is read in isolation from its objective. Nothing in the history of this provision indicates that Parliament intended to widen its scope. Rather, as Mr. Vavilov points out, the modifications made to s. 3(2) in 1976 appear to mirror those embodied in the *Vienna Convention on Diplomatic Relations* and the *Vienna Convention on Consular Relations*, which were incorporated into Canadian law in 1977. The judicial treatment of this provision, in particular the statements in *Al-Ghamdi* about the narrow scope of s. 3(2)(a) and the inconsistency between diplomatic privileges and immunities and citizenship, also points to the need for a narrow interpretation of the exception to citizenship.

[340] In addition, as noted by the majority of the Federal Court of Appeal, the text of s. 3(2)(c) can be seen as undermining the Registrar's interpretation. That provision denies citizenship to children born to individuals who enjoy "diplomatic privileges and immunities certified by the Minister of Foreign Affairs to be equivalent to those granted to a person or persons referred to in paragraph (a)". As Stratas J.A. noted, this language suggests that s. 3(2)(a) covers *only* those "employee[s] in Canada of a foreign government" who have diplomatic privileges and immunities.

[341] By ignoring the objectives of the provision, the Registrar rendered an unreasonable decision. In particular, the arguments supporting a reading of s. 3(2)

2019 SCC 65 (CanLII)

that is restricted to those who have diplomatic privileges and immunities, likely would have changed the outcome in this case.

[342] Mr. Vavilov has satisfied us that the Registrar's decision is unreasonable. As a result, the Court of Appeal properly quashed the Registrar's decision to cancel Mr. Vavilov's citizenship certificate, and he is thus entitled to a certificate of Canadian citizenship.

[343] We would therefore dismiss the appeal with costs to Mr. Vavilov throughout.

Appeal dismissed with costs throughout.

the operation of the program, but also legislative power to create rules and standards and judicial or quasi-judicial power to resolve disputes. The exercise of these powers is supervised by the courts through appeal and judicial review. In some jurisdictions, it is also reviewed by a parliamentary committee.[19]

The emergence of a significant body of program legislation in the nineteenth and twentieth centuries led to the development of the branch of law known as administrative law. Acting pursuant to this law, the superior court of each jurisdiction reviews the work of the executive branch to ensure that it has been carried out in accordance with the rule of law.[20] Judicial review is based primarily on the principles of legality, reasonableness, and fairness.[21] The principle of legality, also known as the *vires* doctrine, ensures that every exercise of power is authorized by law; any attempt by the executive to exceed its powers by making an unauthorized decision, order, or regulation may be declared *ultra vires*, or invalid, and without legal effect. The principles of fairness ensure that individuals are given fair treatment, including notice and a chance to be heard, when their interests are affected by the exercise of executive power.

In interpreting program legislation, the focus is normally not on the common law but on the goals sought by the legislature and on the design of the implementing scheme. The meaning of each provision is best understood in light of its contribution to the goals and its function in the scheme.

6) Guidelines and Other Forms of Quasi-Legislation

In addition to the legislative instruments described above, administrative bodies also produce a wide range of non-legislative instruments that set out norms, procedures, and directives designed to facilitate the orderly exercise of governmental functions. These instruments are referred to as quasi-legislation in that they offer guidance in dealing with a legislative scheme, but they are not legally binding. Quasi-legislation is often written for government employees, to tell them how to carry out their jobs. Some quasi-legislation sets out guidelines which government officials are to consult in making discretionary decisions, such as whether to issue a licence or grant an exemption. Other quasi-legislation explains how government officials interpret the legislation they administer. The tax interpretation bulletins produced by the Canada

19 For example, the Standing Joint Committee for the Scrutiny of Regulations, established under the *Statutory Instruments Act*, RSC 1985, c S-22, s 19.

20 The rule of law is explained in Chapter 2.

Select Language and Voice :

Revenue Agency are probably the best-known example of this type. They set out the position the government has taken in interpreting various provisions of the *Income Tax Act*. They are relied on not only by Canada Revenue Agency staff in administering the Act but also by taxpayers in arranging their affairs and preparing tax returns.

While some quasi-legislation is explicitly authorized by statute, much is produced under the implied administrative powers of government. What distinguishes all quasi-legislation from legislation is the fact that quasi-legislation is not legally binding. A prison guard who fails to comply with a directive may be disciplined by the employer, but he or she has not broken the law. An applicant for a benefit who meets the criteria set out in a guideline may nonetheless be denied the benefit, provided the denial is within the statutory discretion conferred on the decision maker. It is the Act, not the non-statutory guideline, that declares the law.

It is sometimes difficult to determine whether a given instrument is legislative or quasi-legislative. The title given to the instrument is not conclusive. For example, instruments entitled "Guidelines" are sometimes found to have statutory force when they are made under a statutory authority and rely on the conventions of legislative drafting.[22]

B. LEGISLATIVE STYLE

Although the content of legislation is infinitely variable, its form and style are fixed to a large extent by the conventions of legislative drafting. These conventions vary in some respects from one jurisdiction to another, but the broad principles are the same throughout Canada. Conventions govern the style in which legislation is drafted, the form and structure of legislative provisions, the arrangement of provisions within an Act, the use of headings, notes, and finders' aids such as marginal notes, and the use of particular words. For example, to confer a power in legislation, the word "may" is normally used; to express the idea of obligation, "shall" or "must" is used.

One of the reasons legislation is considered dull and difficult reading is the style in which it is written. By convention, drafters use a utilitarian prose that shuns metaphor, irony, wit, embellishment, colloquialism, and rhetorical device of any sort. Another hallmark of legislative style is consistency and uniformity: once an idea is expressed in

22 See, for example, *Friends of the Oldman River Society v Canada (Minister of Transport)*, [1992] 1 SCR 3.

1/7/2021 Read - Statutory Interpretation 3/e: Ruth Sullivan - desLibris

provision that is enacted but has not commenced. It remains in this limbo until either it or the paramount law is repealed.

5) Invalidity

Legislation continues to form part of the law until expiry or repeal unless it is declared to be invalid by a court. The legal effect of a judicial declaration of invalidity is to erase the legislation from the law, as if it had never been made, unless the judgment provides otherwise. However, to remove it from the physical or electronic statute book, a formal amendment is generally required.

6) Re-enactment

Legislation is re-enacted when it is repealed and immediately enacted again without undergoing any substantive change. In some re-enactments the wording of the new legislation is identical to the old while in others the wording is changed. But so long as the *substance* of the rule is not changed, the legislation is re-enacted rather than amended.

The chief significance of re-enactment is that it does not change the coming into force date of the re-enacted law. Ordinarily a repealed provision stops operating when the repealing legislation comes into force. And ordinarily a newly enacted provision first begins to operate when it comes into force. But in a re-enactment, because the repealed provision and the newly enacted one express the same rule, there is no interruption in temporal operation. The coming into force date of the re-enacted provision is considered to be the coming into force date of the old provision. This rule is called the "continuous operation of rules." It is codified in section 44(f) of the federal *Interpretation Act*:

> Where an enactment, in this section called the "former enactment", is repealed and another enactment, in this section called the "new enactment", is substituted therefore,
>
> . . .
>
> (f) except to the extent that the provisions of the new enactment are not in substance the same as those of the former enactment, the new enactment shall not be held to operate as new law, but shall be construed and have effect as a consolidation and as declaratory of the law as contained in the former enactment.[38]

---

38 Most provincial and territorial Interpretation Acts lack a comparable provision. Those jurisdictions rely on the common law rule.

Select Language and Voice :

Legislation is re-enacted for a number of reasons: to consolidate or revise existing law, to declare the true meaning of existing law, or as part of the amending process. In a consolidation, legislation is updated, re-arranged, and re-enacted to make it available in a more convenient format.[39] In a revision, legislation is not only updated and re-arranged, but the style is adjusted and drafting errors are corrected.[40] In a declaration, legislation that has been a source of doubt or controversy is clarified by re-enacting the legislation in a new and clearer form or by enacting an additional provision that clarifies the doubtful one. As explained by Wagner J, speaking for the majority of the Supreme Court of Canada in *Régie des rentes du Québec v Canada Bread Company Ltd*,

> It is settled law in Canada that it is within the prerogative of the legislature to enter the domain of the courts and offer a binding interpretation of its own law by enacting declaratory legislation . . . . As this Court acknowledged in *Western Minerals Ltd. v. Gaumont*, . . . such forays are usually made where the legislature wishes to correct judicial interpretations that it perceives to be erroneous.
>
> In enacting declaratory legislation, the legislature assumes the role of a court and dictates the interpretation of its own law . . . .[41]

Finally, although the primary purpose of amendment is to change the law, many amendments include a partial re-enactment of existing law. Partial re-enactment occurs when existing provisions are repealed and replaced by new ones that incorporate a desired change while retaining elements of the previous law. To the extent the new provision does not substantially differ from the repealed one, the legislation is re-enacted. Suppose, for example, that on 1 February 1950 the following provision was added by way of amendment to the *Criminal Code* and that it came into force immediately upon enactment:

> 250. Every one who fraudulently undertakes, for a consideration, to tell fortunes by reading palms or cards, by gazing into crystals or by any means whatsoever, is guilty of an offence punishable on summary conviction.

Suppose that on 1 February 1954 this provision was repealed and replaced by the following, which also came into force upon enactment:

> 250. Every one who fraudulently
> (a) undertakes, for a consideration, to tell fortunes by any means, or

---

39 The process of consolidation is described in more detail later in this chapter.
40 The process of statute revision is described in more detail later in this chapter.
41 2013 SCC 46 at paras 26–27.

1/7/2021 Read - Statutory Interpretation 3/e: Ruth Sullivan - desLibris

(b) pretends to use any kind of sorcery, enchantment, or conjuration,

is guilty of an offence punishable on summary conviction.

Because the rule prohibiting the fraudulent use of sorcery embodied in paragraph (b) adds something substantially new, it operates as new law; its coming-into-force day is 1 February 1954. However, the rule prohibiting fraudulent fortune-telling is not new. It has only been reformulated in a less verbose style. Because the rule has been re-enacted rather than amended, its operation is not interrupted; its coming-into-force day remains 1 February 1950.

7) Amendment

Amending legislation adds new provisions to the statute book or substitutes new provisions for existing ones. Insofar as the new provisions make substantive changes to the law, they operate as amendments rather than re-enactments. Amendments operate and come into force on the day the amending legislation comes into force.

Suppose, for example, that the following provision, from a *Human Rights Code*, was first enacted on 1 February 1984 and came into force on 1 June 1984:

5.(1) Every person has a right to equal treatment with respect to employment, without discrimination on grounds of race, colour, ethnic origin, creed, age, family status, or handicap.

Suppose that on 1 February 1995 the following amending Act received royal assent:

An Act to amend the *Human Rights Code*

Her Majesty, by and with the advice and consent of the Senate and the House of Commons of Canada, enacts as follows:

1. Subsection 5(1) of the *Human Rights Code* is replaced by the following:

5.(1) Every person has a right to equal treatment with respect to employment, without discrimination on grounds of race, colour, ethnic origin, creed, age, *gender, sexual orientation*, family status, or handicap.

2. This Act comes into force on 1 December 1996.

Upon coming into force on 1 December 1996, this amending Act would operate (1) by re-enacting the whole of subsection 5(1) of the 1984 code without change and (2) by adding two new provisions to the subsection. The new provisions prohibit discrimination in employment

on grounds of gender and on grounds of sexual orientation. The coming-into-force date of the re-enacted provisions would remain 1 June 1984 while the coming-into-force date of the new provisions would be 1 December 1996.

When enabling legislation is amended, it is necessary to consider the impact of the amendment on existing regulations. Most Interpretation Acts contain a provision like the following:

> 44. Where an enactment, in this section called the "former enactment," is repealed and another enactment, in this section called the "new enactment", is substituted therefor,
>
> (a) all regulations made under the repealed enactment remain in force and are deemed to have been made under the new enactment, in so far as they are not inconsistent with the new enactment, until they are repealed or others made in their stead.[42]

It is not always clear whether existing regulations are consistent with the new enactment. Ideally, while preparing to amend the parent Act, the department responsible for administering the Act will review the relevant regulations and revoke or amend those that are inconsistent.

8) Codes and Codification

The term "codification" is used in common law in Canada in two distinct ways. First, it refers to the process of enacting common law rules in legislation, thus giving them the force and status of statute law. A codification of this sort does not change the law, but merely "codifies" it—that is, gives it a fixed statutory form. This type of codification is similar to re-enactment. The codified provision does not operate as new law.

The term "codification" also refers to the preparation of a statute or "code" that is meant to set out the entire body of rules on a subject in a coherent, systematic way. Codification in this sense affords an opportunity to bring together all existing statutory and common law rules, to reconcile inconsistencies, to fill gaps, and to make appropriate reforms. The finished product is meant to be a complete and definitive statement of the law on the subject, dispensing with the need to refer to previous law. Federal and provincial Labour Codes are examples of legislation that were enacted as codes in this sense.

It is possible for a statute to be a code for some purposes and not for others. The *Criminal Code*, for example, sets out an exhaustive list of criminal law offences precluding further resort to common law crimes;

42 *Interpretation Act*, above note 32, s 44(a). The application of this rule is illustrated by *9175-7468 Québec inc c Montréal (Ville de)*, 2015 QCCA 811 at para 9ff.

> accountability through meaningful consequences and effective rehabilitation and reintegration, and *that reserves its most serious intervention for the most serious crimes and reduces the over-reliance on incarceration for non-violent young persons.*[17]

Courts may also look to the preamble of one statute to help interpret another related statute.[18] Finally, they may look to the preamble to an international instrument for help in interpreting the legislation enacted to give domestic effect to that instrument.[19]

C. PURPOSE STATEMENTS

Purpose statements can take different forms, from a short introductory phrase to elaborate, multi-paragraphed provisions.[20] Like preambles, purpose statements reveal the purpose of legislation and draw attention to the principles and policies that should inform the exercise of discretion conferred by the Act. However, unlike preambles, purpose statements are set out in the body of the statute as a numbered provision (or part of a numbered provision), and they unquestionably form an integral part of the legislation in which they appear. They are to be relied on in every interpretive exercise.

The most obvious use of purpose statements is to set out the primary purpose, or the several purposes, of an enactment. Their use is illustrated by the Supreme Court of Canada in *LeBlanc v LeBlanc*.[21] The issue in the case was whether New Brunswick's *Marital Property Act* conferred discretion on the courts to deny a spouse an equal share in the couple's marital property upon marriage breakdown. In holding that it did, the

18 See *Bell ExpressVu Limited Partnership v Rex*, 2002 SCC 42 at paras 45–46 where the court relied on s 3 of the *Broadcasting Act* setting out the governing principles of Canadian broadcasting policy to interpret the *Radiocommunication Act*.

19 See *Febles v Canada (Citizenship and Immigration)*, 2014 SCC 68 at paras 93–94, and *Canada (Attorney General) v Ward*, [1993] 2 SCR 689 at para 63.

20 Because purpose statements appear as sentences or parts of sentences within sections or subsections, they are not really components. They are appropriately classified as interpretive provisions. However, it is customary in statutory interpretation texts to examine them in conjunction with preambles, which perform a similar function.

Select Language and Voice :

Supreme Court of Canada relied on the purpose statement set out in section 2 of the Act. Justice La Forest wrote:

> Section 2 is an interpretative provision in the nature of a preamble announcing the general framework and philosophy of the legislation. It reads:
>
> > "2. Child care, household management and financial provision are joint responsibilities of spouses and are recognized to be of equal importance in assessing the contributions of the respective spouses to the acquisition, management, maintenance, operation or improvement of marital property; and *subject to the equitable considerations recognized elsewhere in the Act the contribution of each spouse to the fulfilment of these responsibilities entitles each spouse to an equal share of the marital property* and imposes on each spouse, in relation to the other, the burden of an equal share of the marital debts." [Emphasis added.]
>
> . . .
>
> In common with similar provisions in other jurisdictions, s. 2 establishes the general principle that each spouse is entitled to an equal share of marital property . . . . The principle must be respected. In applying that principle, the courts are not permitted to engage in measurements of the relative contribution of spouses to a marriage. Nevertheless . . . the principle is expressly made subject to the equitable considerations recognized elsewhere in the Act.[22]

The purpose statement made it clear that the Act was animated by more than one guiding principle, that the ideal of partnership and pooling between spouses might in appropriate circumstances be tempered by concerns of fairness and of avoiding unjust enrichment.

As provisions of the legislation itself, purpose statements generally have more interpretive weight than preambles,[23] but they are unlikely to prevail over a contrary substantive provision.[24] In addition, the Supreme Court of Canada in *Reference re Broadcasting Regulatory Policy* has cast doubt on the support they may provide for generally worded regula-

tion-making powers.[25] Their weight depends on a number of considerations, including how specific the purposes are, their relation to one another, what legislative direction has been given as to their use, and what other indicators of purpose there are.

As purpose statements become more commonplace in legislation, they figure ever more prominently in interpretation.

D. HEADINGS

The majority of Canadian Interpretation Acts state that headings are not part of the enactment in which they appear, the implication being that they should not be taken into account (at least not in the absence of ambiguity). Other Interpretation Acts say nothing of headings. In practice, courts often ignore the Interpretation Acts and rely on caselaw to decide what use should be made of headings. In the older cases, courts emphasize the external nature of headings and refuse to rely on them unless the language of the legislation is ambiguous. In more recent cases, there is a tendency to treat headings as an integral part of the context, to be relied on like any other contextual feature. This is the approach taken by the Supreme Court of Canada toward the headings that appear in the *Charter*. In *Law Society of Upper Canada v Skapinker*, Estey J wrote:

> The *Charter*, from its first introduction into the constitutional process, included many headings including the heading now in question . . . . It is clear that these headings were systematically and deliberately included as an integral part of the *Charter* for whatever purpose. At the very minimum, the Court must take them into consideration when engaged in the process of discerning the meaning and application of the provisions of the *Charter*.[26]

This approach to headings has been adopted in interpreting ordinary legislation as well.

---

25 2012 SCC 68 at para 22, stating:

> Policy statements, such as the declaration of Canadian broadcasting policy found in s. 3(1) of the *Broadcasting Act*, are not jurisdiction-conferring provisions. They describe the objectives of Parliament in enacting the legislation and, thus, they circumscribe the discretion granted to a subordinate legislative body (Sullivan, at pp. 387–88 and 390–91). As such, declarations of policy cannot serve to extend the powers of the subordinate body to spheres not granted by Parliament in jurisdiction-conferring provisions.

CHAPTER 18

PRESUMED COMPLIANCE WITH CONSTITUTIONAL LAW, COMMON LAW, AND INTERNATIONAL LAW

A. PRESUMED COMPLIANCE WITH CONSTITUTIONAL LAW, INCLUDING *CHARTER* NORMS

It is presumed that the legislature does not intend to violate the constitutional limits on its jurisdiction. These include limits on the matters a legislature may deal with under the *Constitution Act, 1867* as well as limits on interference with *Charter*-protected rights. When faced with a choice, courts prefer interpretations that are consistent with these limits and avoid interpretations that would render legislation invalid. As Cartwright J wrote in *McKay v Canada*, "if words in a statute are fairly susceptible of two constructions of which one will result in the statute being *intra vires* [valid] and the other will have the contrary result the former is to be adopted."[1]

In *McKay*, the Supreme Court of Canada was concerned with a municipal bylaw, authorized by provincial legislation, which prohibited the display of signs on residential property. The issue was whether the bylaw could be relied on to prevent the display of signs advertising candidates for federal office. Since property is a provincial matter under section 92 of the *Constitution Act, 1867*, it was valid for the province to exercise regulatory authority over land use or, as was done here, to delegate this authority to municipalities. Thus, most applications of the bylaw would

1 [1965] SCR 798 at 804 [*McKay*].

Select Language and Voice :

have been valid. However, the regulation of federal elections is a matter within the exclusive jurisdiction of Parliament. Any attempt by a province to interfere with the display of federal election signs would therefore exceed its authority. In these circumstances the court faced a dilemma. Given the ordinary meaning of its language, the bylaw must apply to all signs, including federal election signs, but if that interpretation were adopted, the bylaw would be invalid. By presuming that the legislature did not intend to violate the limits on its jurisdiction, the dilemma was solved: the scope of "signs" was read down or narrowed to exclude application to federal election signs. In this way the bylaw was given maximum effect within jurisdictional limits.

As the *McKay* case illustrates, the presumption in favour of valid interpretations is easy to apply in the context of challenges to validity based on the division of powers under the *Constitution Act, 1867*. It has also been invoked in the context of challenges to validity based on the *Charter*. In *R v Ahmad*,[2] for example, the Supreme Court of Canada was concerned with a challenge to the non-disclosure scheme established by sections 38 to 38.16 of the *Canada Evidence Act*. Under that scheme, in the context of proceedings, including criminal proceedings, the Attorney General of Canada was authorized to prevent the disclosure of information that could pose a threat to international relations, national defence, or national security. Under section 38.03, he or she could withhold disclosure even in the face of a disclosure order from a Federal Court judge. This put the accused and trial judge at the mercy of the Attorney General's discretion. However, under section 38.14, the trial judge was given a discretion to make any order that he or she considered appropriate to protect the accused's right to a fair trial, including ordering a stay of proceedings. The court began its analysis of the scheme with reference to the modern principle followed by the presumption of compliance:

> This Court has repeated on numerous occasions that "the words of an Act are to be read in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament . . . . Moreover, "Parliament is presumed to have intended to enact legislation in conformity with the *Charter*" . . . .[3]
>
> We therefore begin from the proposition that, in the absence of clear and unambiguous statutory language to the contrary, the

2 2011 SCC 6 [*Ahmad*].

1/8/2021 Read - Statutory Interpretation 3/e: Ruth Sullivan - desLibris

> legislation must be understood not to contemplate that trial judges would determine the impact of non-disclosure on trial fairness in a manner that would result in granting unwarranted stays or declining to grant appropriate remedies. Parliament must have been aware of these potential injustices and cannot have intended either result.[4]

The court then turned to specific aspects of the scheme and in particular to the role of the Federal Court judge in the scheme. It wrote:

> Section 38.04(5)(*b*) contemplates that the Federal Court judge may proceed without a hearing simply on the representations of the Attorney General of Canada . . . . It is only "if" the designated judge decides to proceed to a hearing that he or she will "determine who should be given notice of the hearing" (s. 38.04(5)(*c*)(i)).
>
> In the context of criminal proceedings, it is our view that unless the designated judge decides without a hearing that the information in question should be disclosed to the criminal court, there must be a hearing on the disclosure issues, and that s. 38.04(5) should be read as requiring notice to the criminal court that a s. 38 proceeding has been commenced in Federal Court. Although s. 38.04(5)(*c*)(i) may at first blush appear to grant Federal Court judges a wide discretion in determining who "should" be given notice, this Court has held in the past that "[e]nabling words are always compulsory where they are words [used] to effectuate a legal right" . . . . Given that the criminal trial judge will require notice to effectively discharge the duty to protect the accused's legal rights under the *Charter*, it will always be the case (subject of course to the other provisions of that Act) that he or she "should" be given notice. The word "may" in s. 38.07 will similarly be understood to require that notice of the Federal Court judge's final order be given to the trial judge.[5]

The court here adopts an interpretation that is not self-evident on the face of the legislation, but shows how the legislation may be interpreted and applied in a way that avoids the violation of an accused's *Charter* rights.

In addition to the presumption of compliance with the *Charter*, there is also a presumption of compliance with *Charter* values. Presumed compliance with the *Charter* attributes to the legislature an intention to enact valid legislation because the legislature is presumed to be benevolent and competent and because the alternative would be self-defeating. Presumed compliance with *Charter* values is grounded in the fundamental nature

---

1/8/2021 Read - Statutory Interpretation 3/e: Ruth Sullivan - desLibris

Select Language and Voice :

of *Charter* values in the legal system. The point is well made by Weiler and Sharpe JJA in *Lalonde v Ontario (Commission de restructuration des services de santé)*:

> Fundamental constitutional values have normative legal force . . . . Before the advent of the *Charter* and the constitutional entrenchment of rights and freedoms, there can be no doubt that those same rights were fundamental constitutional values. Although they had not been crystallized in the form of entrenched and directly enforceable rights, they were regularly used by the courts to interpret legislation . . . .[6]

Given the importance of these values, it is plausible to assume that the legislature has them in mind when drafting its legislation.

While the courts acknowledge the importance of *Charter* values, they are concerned that the presumption of compliance with those values not be used as a way to undermine the application of section 1. Allowance must be made for the possibility that the legislature intended to curtail *Charter* rights, believing this curtailment to be justified in a free and democratic society. In such a case it would be inappropriate to invoke the presumption of compliance with *Charter* values to avoid a violation of rights. The government must be given the opportunity to justify such a violation with a section 1 defence. The leading case on this point is *Bell ExpressVu Limited Partnership v Rex*, where Iacobucci J wrote:

> [I]t must be stressed that, to the extent this Court has recognized a "*Charter* values" interpretive principle, such principle can only receive application in circumstances of genuine ambiguity, i.e., where a statutory provision is subject to differing, but equally plausible, interpretations.[7]
>
> . . .
>
> . . . if courts were to interpret all statutes such that they conformed to the *Charter*, this would wrongly upset the dialogic balance [between courts and legislatures]. Every time the principle were applied, it would pre-empt judicial review on *Charter* grounds, where resort to the internal checks and balances of s. 1 may be had. In this fashion, the legislatures would be largely shorn of their constitutional power to enact reasonable limits on *Charter* rights and freedoms, which would in turn be inflated to near absolute status.[8]

1/7/2021 Read - Statutory Interpretation 3/e: Ruth Sullivan - desLibris

interpretation is adopted and "institution" is read as not including municipalities, the internal coherence is restored.[19]

Even though Official Languages Acts are quasi-constitutional legislation and therefore attract a broad, goal-promoting interpretation, the presumption of coherence in these circumstances justified the majority preference for the more restrictive interpretation.

4) Conflict Resolution

a) Legislative Rule

In the complete statute book of a jurisdiction, whether federal, provincial, or municipal, there is inevitably a significant potential for conflict between provisions. Part of the job of legislative drafters is to search out such conflicts and seek instruction on how to deal with them — by repeal perhaps, or by designating one of the provisions to be paramount. The latter is conventionally rendered by introducing the paramount provision with words like "notwithstanding (or despite) section xx" or introducing the subordinate provision with words like "subject to section yy." Sometimes general notwithstanding clauses are included that make certain provisions or an entire Act paramount over anything else that might conflict with it.[20]

When two provisions are in conflict, even if the legislature does not provide an express solution, it may be apparent from the scheme and purpose of the legislation that one provision was intended to have priority over the other. However, in the absence of an express or implicit legislative solution, the conflict must be dealt with under common law paramountcy rules. These are essentially ranking rules. They assign a relative status to the provisions in conflict, with the higher-ranked or paramount provision prevailing over the lower-ranked or subordinate one. The paramount provision is applied in accordance with its terms while the subordinate provision is rendered inoperative to the extent it is in conflict with the paramount law. When legislation is rendered inoperative, it remains a valid part of the law, but cannot be applied.[21] It remains in this suspended state until the conflict disappears, usually through repeal or amendment of one or both of the conflicting laws. There are five paramountcy rules.

---

19 *Ibid* at para 19.

20 It may not be wise to rely on a general clause of this sort. Sometimes the provisions in conflict are *both* covered by a general notwithstanding clause, in which case the problem of paramountcy must be resolved through interpretation.

21 It has the same status as a provision that has been enacted but not yet come into force.

COURT OF QUEEN'S BENCH OF MANITOBA

BETWEEN:	**APPEARANCES:**
MANITOBA METIS FEDERATION INC. Applicant,	Murray N. Trachtenberg for the Applicant
- and -	
THE GOVERNMENT OF MANITOBA, and KELVIN GOERTZEN, MINISTER OF HEALTH, SENIORS AND ACTIVE LIVING FOR THE GOVERNMENT OF MANITOBA, Respondents.	Sean Boyd for the Respondents Judgment delivered: July 30, 2018

JOYAL, C.J.Q.B.

I. INTRODUCTION

[1] This case involves a unique motion for production. It arises in the broader context of an application for judicial review.

[2] The production being sought is for certain advisory notes and internal emails which were prepared by the Respondents, the Government of Manitoba and the Minister of Health, Seniors and Active Living for the Government of Manitoba. Unless otherwise specified hereinafter, the Respondent Government

> administer income assistance programs at rates and standards "comparable" to those offered by the provinces. The only significant point of contention between the parties is the extent to which the National Manual (2012) imposes rates and eligibility requirements that are "comparable" to those offered in the referenced Provinces. In other words, the correct interpretation of the word "comparable" is at issue.
>
> [emphasis added]

[64] Following the above analysis, the Court in ***Simon*** concluded (at para. 39):

> This Court concludes that it has the appropriate authority to review the Minister's Decision to interpret the meaning of the words "adopt", "comparable" and "consistent with", in the MOU, as meaning to mirror provincial rates. Contrary to the Respondent's argument it is not the Minister's spending authority which is being reviewed but his interpretation of the criteria applicable to spending under that authority and whether that interpretation will result in the attainment of the objectives set by the MOU with respect to the Income Assistance Program.
>
> [emphasis added]

[65] While acknowledging the distinctions and nuances upon which the decision was rendered in ***Simon***, it should be noted that the present case does not involve a memorandum of understanding or any other criteria to be interpreted by or applied to the Minister's conduct. To repeat (and as I explain at paras. 70 to 87) the other reference points invoked by the MMF have either no application or are aspirational in nature and they do not create controlling criteria against which the Respondent Minister's conduct or decision should be reviewed. Even in the context of what I acknowledge is the clear and expressed intention on the part of Manitoba government policy to approach the Métis people and community with respect and accountability, it is my view that the MMF, in questioning what may very well be an insufficiently explained and for them, a

2018 MBQB 131 (CanLII)

disappointing decision, are nonetheless questioning the spending decisions of government.

[66] One further distinction and nuance was addressed and negated by the Respondents in their argument against judicial review of the funding decision in question. In that connection, the Respondents addressed the case of ***Attawapiskat First Nation v. Canada***, 2012 FC 948 (CanLII), a decision of the Federal Court relied upon by the MMF. In relying upon ***Attawapiskat***, the MMF contends that different considerations arise in determining whether a decision is subject to judicial review when dealing with Indigenous parties. The MMF argues that the factors the Court should consider in determining whether the decision is subject to judicial review include:

a. Whether the decision includes a public law issue other than a private commercial interest or contract;
b. A nation-to-nation relationship;
c. The duty to consult and accommodate when the decision impacts on an Aboriginal or treaty right;
d. Honour of the Crown;
e. Section 35 and the purpose of reconciliation.

See ***Attawapiskat*** at paras. 55-61.

[67] As I earlier noted, I review some of the above factors at paras. 70 to 87, infra, when I address the additional arguments invoked by the MMF to support its position that the decision is justiciable and subject to judicial review. At this

2018 MBQB 131 (CanLII)

TAB 41

Alberta Land Stewardship Act, SA 2009, c A-26.8

ALBERTA LAND STEWARDSHIP ACT

Chapter A-26.8

HER MAJESTY, by and with the advice and consent of the Legislative Assembly of Alberta, enacts as follows:

…

Definitions

2(1) In this Act,

(e) "decision-maker" means a person who, under an enactment or regulatory instrument, has authority to grant a statutory consent, and includes a decision-making body;

…

Part 1
Regional Plans

Division 1
Making, Amending and Reviewing Regional Plans

How regional plans are made and amended

4(1) Subject to section 5, the Lieutenant Governor in Council may make or amend regional plans for planning regions.

(2) The Lieutenant Governor in Council may make regulations

(a) classifying amendments to regional plans;

(b) prescribing the process, procedure or criteria, if any, for all or any class of amendments to regional plans;

(c) respecting the notice or consultation, or both, required for amendments to regional plans or for a class of amendment;

(d) respecting the conditions or criteria to be met in applying for an amendment to a regional plan, who may apply for an amendment to a regional plan and to whom the application must be made, and the procedure for verifying that any conditions or criteria have been met;

(e) respecting the role and function of the secretariat, government departments and other persons in reviewing, preparing or developing amendments to regional plans for consideration by the Lieutenant Governor in Council;

(f) appointing or designating a person or entity to perform any function with respect to a proposed amendment to a regional plan and, if required, appointing a person as a commissioner under the *Public Inquiries Act* for the purposes described in the regulation.

(3) A regulation under subsection (2) may be made with respect to all or one or more regional plans.

(4) If a regulation is made under subsection (2) about how a regional plan is to be amended, an amendment to the regional plan may be made by the Lieutenant Governor in Council only in accordance with the regulation.

Consultation required

5 Before a regional plan is made or amended, the Stewardship Minister must

(a) ensure that appropriate public consultation with respect to the proposed regional plan or amendment has been carried out, and present a report of the findings of such consultation to the Executive Council, and

(b) lay before the Legislative Assembly the proposed regional plan or amendment.

Division 2
Contents of Regional Plans

Elements of a regional plan

8(1) A regional plan must

(a) describe a vision for the planning region, and

(b) state one or more objectives for the planning region.

(2) A regional plan may

(a) include policies designed to achieve or maintain the objectives for the planning region;

(b) set or provide for one or more thresholds for the purpose of achieving or maintaining an objective for the planning region;

(c) name, describe or specify indicators to determine or to assist in determining whether an objective or policy in the regional plan has been, is being or will be achieved or maintained and whether policies in the regional plan are working;

(d) describe or specify the monitoring required of thresholds, indicators and policies, who will do the monitoring and when, and to whom the monitoring will be reported;

(e) describe or specify the times and means by which, and by whom, an assessment or analysis will be conducted to determine if the objectives or policies for the planning region have been, are being or will be achieved or maintained;

(f) describe or specify the actions or measures or the nature of the actions or measures to be taken to achieve or maintain the objectives and policies in the regional plan, and by whom they are to be taken or co-ordinated, if

(i) an adverse trend or an adverse effect occurs;

(ii) an objective or policy is or might be in jeopardy or a threshold is or might be exceeded or jeopardized;

(iii) an objective or policy has not been achieved or maintained, is not being achieved or maintained, or might not be achieved or maintained;

(g) describe and convey to a person named in the regional plan authority to achieve or maintain an objective or policy, which may include delegating authority under any enactment or regulatory instrument to the person named;

(h) make different provision for

(i) different parts of a planning region, or for different objectives, policies, activities or effects in a planning region;

(ii) different classes of effect arising from an activity in a planning region;

(i) manage an activity, effect, cause of an effect or person outside a planning region until a regional plan comes into force with respect to the matter or person;

(j) specify that it applies for a stated or described period of time;

(k) provide for an exclusion from, exception to or exemption from its legal effect;

(l) specify whether, in whole or in part, it is specific or general in its application;

(m) delegate and authorize subdelegation of any authority under the regional plan, except authority

(i) to make a regional plan or amend a regional plan, or to make or adopt rules under a regional plan, or

(ii) to approve, adopt or incorporate a subregional plan or issue-specific plan as part of a regional plan, or to adopt or incorporate a plan, agreement or arrangement as part of a regional plan, or to amend any of them.

Subregional plans, issue-specific plans and other arrangements

10(1) A regional plan may

(a) authorize the preparation of a subregional plan or an issue-specific plan and specify or describe how it is to be approved as part of the regional plan;

(b) make or authorize a Designated Minister to make, or authorize a Designated Minister to adopt by incorporation or reference, rules, a code of practice, guidelines, best practices or any other instrument on matters described in the regional plan for the purpose of advancing or implementing an objective or policy in the regional plan;

(c) approve, as part of the regional plan, a plan made under the *Public Lands Act*, whether the plan is made before or after this Act comes into force, with or without modifications, as a subregional plan or an issue-specific plan of the regional plan;

(d) adopt or incorporate, as part of the regional plan, a plan made under an enactment, or an agreement or arrangement, whether made before or after this Act comes into force, with or without modification to the plan, agreement or arrangement, as a subregional plan or an issue-specific plan of the regional plan.

(2) A subregional plan or an issue-specific plan approved by or in accordance with a regional plan, or a plan, agreement or arrangement adopted by or incorporated in a regional plan,

(a) may contain anything that a regional plan may contain;

(b) becomes effective in accordance with section 13(5).

(3) When a subregional plan or an issue-specific plan comes into effect, and when a Designated Minister makes or adopts rules, a code of practice, guidelines, best practices or any other instrument authorized by a regional plan, the subregional plan, issue-specific plan or rules, code of practice, guidelines, best practices or other instrument, as the case may be, becomes part of the regional plan that authorized it or them.

Part 2
Nature and Effect of Regional Plans and Compliance Declarations

Division 1
Nature and Effect of Regional Plans

Legal nature of regional plans

13 (1) A regional plan is an expression of the public policy of the Government and therefore the Lieutenant Governor in Council has exclusive and final jurisdiction over its contents.

(2) Regional plans are legislative instruments and, for the purposes of any other enactment, are considered to be regulations.

(2.1) Notwithstanding subsection (2), a regional plan may provide rules of application and interpretation, including specifying which parts of the regional plan are enforceable as law and which parts of the regional plan are statements of public policy or a direction of the Government that is not intended to have binding legal effect.

(3) The meaning of a regional plan is to be ascertained from its text, in light of the objectives of the regional plan, and in the context in which the provision to be interpreted or applied appears.

(4) A regional plan and every amendment to a regional plan must

(a) be published in Part I of The Alberta Gazette, and

(b) be made publicly available by the secretariat in accordance with section 59(c).

(5) A regional plan and every amendment to a regional plan comes into effect when it is published in Part I of The Alberta Gazette or on any later date specified in the regional plan or amendment.

Division 1
Compliance Declarations

Decision-making bodies

21 (2) Every decision-making body affected by the regional plan must, within the time set in or under, or in accordance with, the regional plan,

(a) make any necessary changes or implement new initiatives to comply with the regional plan, and

(b) file a statutory declaration with the secretariat that the review required by this section is complete and that the decision-making body is in compliance with the regional plan.

Part 3
Conservation and Stewardship Tools

Division 1
Research and Development

Delegation to Stewardship Minister

26 The Lieutenant Governor in Council may delegate any or all of its powers, duties or functions under sections 23 to 25 to the Stewardship Minister subject to any terms and conditions that the Lieutenant Governor in Council imposes.

Part 4
Regional Planning Process and its Administration

Division 2

Regional Advisory Councils

Establishment and appointment

52(1) The Lieutenant Governor in Council may establish a regional advisory council for a planning region.

(2) The Lieutenant Governor in Council may

(a) appoint members of a regional advisory council, including individuals who are members of aboriginal peoples;

(b) provide for the payment of expenses and remuneration for some or all members of a regional advisory council;

(c) provide or authorize the provision of information, data and other materials to assist regional advisory councils in their work.

(3) The Lieutenant Governor in Council may establish a date on which the mandate of a regional advisory council terminates unless the mandate and terms of office of one or more members is extended.

(4) The Lieutenant Governor in Council may delegate to the Stewardship Minister any of the functions of the Lieutenant Governor in Council under this section.

Terms of reference

53(1) For each regional advisory council, the Lieutenant Governor in Council may establish terms of reference, which may include

(a) roles and responsibilities of members of the regional advisory council;

(b) designation of a chair and vice-chair and their responsibilities or delegating that responsibility to the regional advisory council;

(c) rules governing the calling and conduct of meetings;

(d) a means or method for resolving disputes;

(e) a code of ethics for members of the regional advisory council;

(f) a description of the nature or kind of advice to be given by the regional advisory council and to whom it is to be given.

(2) The Lieutenant Governor in Council may delegate to the Stewardship Minister any of the functions of the Lieutenant Governor in Council under this section, including authority to delegate to a regional advisory council any of the functions described in subsection (1)(b) and (c).

Division 3
Land Use Secretariat

Complaint review

62(1) A person may make a written complaint to the secretariat that a regional plan is not being complied with.

(2) The secretariat may investigate a complaint if the stewardship commissioner is satisfied that

(a) the complaint has or may have sufficient merit to warrant an investigation,

(b) the matter complained of is not the subject or part of the subject of an application, process, decision or appeal governed by an enactment or regulatory instrument, or that there is not an adequate remedy under the law or existing administrative practices, and

(c) no other person should investigate the matter complained of.

(3) If the secretariat decides a complaint should not be investigated by the secretariat, the stewardship commissioner must notify the complainant accordingly.

(4) Subject to subsection (2), the secretariat may conduct or authorize a person to conduct any investigation or inquiry as is considered necessary or appropriate in the circumstances and provide a report to the stewardship commissioner.

(5) A government department or local government body must co-operate with an investigation or inquiry conducted by the secretariat or a person authorized by the secretariat.

(6) If the secretariat is satisfied that there is clearly non-compliance with a regional plan, the stewardship commissioner may refer the matter, with or without a report or recommendations, to either or both of the following who have jurisdiction or authority with respect to the matter:

(a) a Minister or government department, or

(b) a local government body.

(7) The stewardship commissioner may delegate the secretariat's authority to conduct an investigation or inquiry under this section to one or more other persons, with or without conditions, but may not delegate authority to decide whether an investigation or inquiry should be conducted.

(2019 ABQB 205, Docket: 1803-08530)

2020 ABCA 402 (CanLII)

[99] Stripping a statutory interpretation problem of its historical context makes the task more complicated than it need be and dramatically increases the risk that a decision at odds with the purpose that accounted for its enactment will be the result.[54]

[100] *London and India Docks Co. v. Thames Steam Tug and Lighterage Co.*[55] illustrates this conundrum.[56]

[101] At issue was the obligation of lighters – small barges that moved cargo on the river Thames – to pay dock fees to the owners of the dock. Because of unforeseen developments the ship lying at the docks the lighters had contracted to service was unable to accept the cargo the lighters had for it after the lighters had entered the docks to discharge this cargo. Had the lighters discharged any cargo the dock company would not have charged a dock fee. But because the lighters discharged no cargo the dock company claimed it was entitled to dock fees.

Rex,* 2002 SCC 42, ¶ 27; [2002] 2 S.C.R. 559, 580 ("The preferred approach recognizes the important role that context must inevitably play when a court ... construes the ... words of a statute"); *Chieu v. Minister of Citizenship and Immigration*, 2002 SCC 3, ¶ 34; [2002] 1 S.C.R. 84, 104 ("s. 70(1)(b) must be read in its entire context. This inquiry involves examining the history of the provision at issue; its place in the overall scheme of the Act, the object of the Act itself, and Parliament's intent both in enacting the Act as a whole, and in enacting the particular provision at issue"); *Project Blue Sky Inc. v. Australian Broadcasting Authority*, [1998] HCA 28, ¶ 69; 194 C.L.R. 355, 381 per McHugh, Gummow, Kirby & Hayne, JJ. ("the process of construction must always begin by examining the context of the provision that is being construed") & A. Scalia & B. Garner, Reading Law: The Interpretation of Legal Texts 167 (2012) ("context is a primary determinant of meaning").

[55] [1909] A.C. 15 (H.L.).

[56] See also *Mitchell v. Cohen*, 333 U.S. 411, 421-22 (1948) ("In the light of the very clear purpose which Congress had in mind in adopting the Veterans' Preference Act, we are constrained to define the term 'ex-servicemen', for the purposes of this particular statute, as relating only to those who performed military service on full-time active duty with military pay and allowances, thereby dislocating the fabric of their normal economic and social life. It thus becomes obvious that respondents' service with the Volunteer Port Security Force of the Coast Guard Reserve cannot qualify them as 'ex-servicemen' entitled to veterans' preference [to United States government jobs] under this enactment. They continued their normal civilian employment with the War Department and the Navy Department during the war, employment which suffered as little as possible from their military service; they served on active duty for only relatively short periods each week and could be disenrolled at their own request … . They were therefore able to retain the essential elements of their civilian life. As to them, there was no problem of reemployment or rehabilitation caused by their military service. They are not among the 'ex-servicemen' whom Congress desired to assist by means of the Veterans' Preference Act") & 1 W. Blackstone, Commentaries on the Laws of England 61 (4th ed. 1770) ("the most universal and effective way of discovering the true meaning of a law, when the words are dubious, is by considering the reason and spirit of it; or the cause which moved the legislator to enact it. … An instance of this is given in the case put by Cicero … . There was a law, that those who in a storm forsook the ship should forfeit all property therein; and the ship and lading should belong entirely to those who staid in it. In a dangerous tempest all the mariners forsook the ship, except only one sick passenger, who by reason of his disease was unable to get out and escape. By chance the ship came safe to port. The sick man kept possession and claimed the benefit of the law. Now here all the learned agree, that the sick man is not within the reason of the law; for the reason of making it was to give encouragement to such as should venture their lives to save the vessel: but this is a merit, which he could never pretend to, who neither staid in the ship upon that account, nor contributed anything to … [its] preservation").

ON APPEAL FROM THE COURT OF APPEAL FOR ONTARIO

Employment law — Bankruptcy — Termination pay and severance available when employment terminated by the employer — Whether bankruptcy can be said to be termination by the employer — Employment Standards Act, R.S.O. 1980, c. 137, ss. 7(5), 40(1), (7), 40a — Employment Standards Amendment Act, 1981, S.O. 1981, c. 22, s. 2(3) — Bankruptcy Act, R.S.C., 1985, c. B-3, s. 121(1) — Interpretation Act, R.S.O. 1990, c. I.11, ss. 10, 17.

A bankrupt firm's employees lost their jobs when a receiving order was made with respect to the firm's property. All wages, salaries, commissions and vacation pay were paid to the date of the receiving order. The province's Ministry of Labour audited the firm's records to determine if any outstanding termination or severance pay was owing to former employees under the *Employment Standards Act* ("*ESA*") and delivered a proof of claim to the Trustee. The Trustee disallowed the claims on the ground that the bankruptcy of an employer does not constitute dismissal from employment and accordingly creates no entitlement to sever-

EN APPEL DE LA COUR D'APPEL DE L'ONTARIO

Employeur et employé — Faillite — Indemnités de licenciement et de cessation d'emploi payables en cas de licenciement par l'employeur — Faillite peut-elle être assimilée au licenciement par l'employeur? — Loi sur les normes d'emploi, L.R.O. 1980, ch. 137, art. 7(5), 40(1), (7), 40a — Employment Standards Amendment Act, 1981, L.O. 1981, ch. 22, art. 2(3) — Loi sur la faillite, L.R.C. (1985), ch. B-3, art. 121(1) — Loi d'interprétation, L.R.O. 1990, ch. I.11, art. 10, 17.

Les employés d'une entreprise en faillite ont perdu leur emploi lorsqu'une ordonnance de séquestre a été rendue à l'égard des biens de l'entreprise. Tous les salaires, les traitements, toutes les commissions et les paies de vacances ont été versés jusqu'à la date de l'ordonnance de séquestre. Le ministère du Travail de la province a vérifié les dossiers de l'entreprise pour déterminer si des indemnités de licenciement ou de cessation d'emploi devaient encore être versées aux anciens employés en application de la *Loi sur les normes d'emploi* (la «*LNE*») et il a remis une preuve de réclamation au syndic. Ce dernier a rejeté les réclamations pour le

ance, termination or vacation pay under the *ESA*. The Ministry successfully appealed to the Ontario Court (General Division) but the Ontario Court of Appeal overturned that court's ruling and restored the Trustee's decision. The Ministry sought leave to appeal from the Court of Appeal judgment but discontinued its application. Following the discontinuance of the appeal, the Trustee paid a dividend to Rizzo's creditors, thereby leaving significantly less funds in the estate. Subsequently, the appellants, five former employees of Rizzo, moved to set aside the discontinuance, add themselves as parties to the proceedings, and requested and were granted an order granting them leave to appeal. At issue here is whether the termination of employment caused by the bankruptcy of an employer give rise to a claim provable in bankruptcy for termination pay and severance pay in accordance with the provisions of the *ESA*.

Held: The appeal should be allowed.

At the heart of this conflict is an issue of statutory interpretation. Although the plain language of ss. 40 and 40*a* of the *ESA* suggests that termination pay and severance pay are payable only when the employer terminates the employment, statutory interpretation cannot be founded on the wording of the legislation alone. The words of an Act are to be read in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament. Moreover, s. 10 of Ontario's *Interpretation Act* provides that every Act "shall be deemed to be remedial" and directs that every Act shall "receive such fair, large and liberal construction and interpretation as will best ensure the attainment of the object of the Act according to its true intent, meaning and spirit".

The objects of the *ESA* and of the termination and severance pay provisions themselves are broadly premised upon the need to protect employees. Finding ss. 40 and 40*a* to be inapplicable in bankruptcy situations is incompatible with both the object of the *ESA* and the termination and severance pay provisions. The legislature does not intend to produce absurd consequences and such a consequence would result if employees dismissed before the bankruptcy were to be entitled to these benefits while those dismissed after a bankruptcy would not be so entitled. A distinction would be made between employees merely on the basis of the timing of their dismissal and such a result would arbi-

motif que la faillite d'un employeur ne constituant pas un congédiement, aucun droit à une indemnité de cessation d'emploi, à une indemnité de licenciement ni à une paie de vacances ne prenait naissance sous le régime de la *LNE*. En appel, le ministère a eu gain de cause devant la Cour de l'Ontario (Division générale) mais la Cour d'appel de l'Ontario a infirmé ce jugement et a rétabli la décision du syndic. Le ministère a demandé l'autorisation d'interjeter appel de l'arrêt de la Cour d'appel mais il s'est désisté. Après l'abandon de l'appel, le syndic a versé un dividende aux créanciers de Rizzo, réduisant de façon considérable l'actif. Par la suite, les appelants, cinq anciens employés de Rizzo, ont demandé et obtenu l'annulation du désistement, l'obtention de la qualité de parties à l'instance et une ordonnance leur accordant l'autorisation d'interjeter appel. En l'espèce, il s'agit de savoir si la cessation d'emploi résultant de la faillite de l'employeur donne naissance à une réclamation prouvable en matière de faillite en vue d'obtenir une indemnité de licenciement et une indemnité de cessation d'emploi conformément aux dispositions de la *LNE*.

Arrêt: Le pourvoi est accueilli.

Une question d'interprétation législative est au centre du présent litige. Bien que le libellé clair des art. 40 et 40*a* de la *LNE* donne à penser que les indemnités de licenciement et de cessation d'emploi doivent être versées seulement lorsque l'employeur licencie l'employé, l'interprétation législative ne peut pas être fondée sur le seul libellé du texte de loi. Il faut lire les termes d'une loi dans leur contexte global en suivant le sens ordinaire et grammatical qui s'harmonise avec l'esprit de la loi, l'objet de la loi et l'intention du législateur. Au surplus, l'art. 10 de la *Loi d'interprétation* ontarienne dispose que les lois «sont réputées apporter une solution de droit» et qu'elles doivent «s'interpréter de la manière la plus équitable et la plus large qui soit pour garantir la réalisation de leur objet selon leurs sens, intention et esprit véritables».

L'objet de la *LNE* et des dispositions relatives à l'indemnité de licenciement et à l'indemnité de cessation d'emploi elles-mêmes repose de manière générale sur la nécessité de protéger les employés. Conclure que les art. 40 et 40*a* sont inapplicables en cas de faillite est incompatible tant avec l'objet de la *LNE* qu'avec les dispositions relatives aux indemnités de licenciement et de cessation d'emploi. Le législateur ne peut avoir voulu des conséquences absurdes mais c'est le résultat auquel on arriverait si les employés congédiés avant la faillite avaient droit à ces avantages mais pas les employés congédiés après la faillite. Une distinction serait établie entre les employés sur la seule base de la date de leur

1998 CanLII 837 (SCC)

trarily deprive some of a means to cope with economic dislocation.

The use of legislative history as a tool for determining the intention of the legislature is an entirely appropriate exercise. Section 2(3) of the *Employment Standards Amendment Act, 1981* exempted from severance pay obligations employers who became bankrupt and lost control of their assets between the coming into force of the amendment and its receipt of royal assent. Section 2(3) necessarily implies that the severance pay obligation does in fact extend to bankrupt employers. If this were not the case, no readily apparent purpose would be served by this transitional provision. Further, since the *ESA* is benefits-conferring legislation, it ought to be interpreted in a broad and generous manner. Any doubt arising from difficulties of language should be resolved in favour of the claimant.

When the express words of ss. 40 and 40*a* are examined in their entire context, the words "terminated by an employer" must be interpreted to include termination resulting from the bankruptcy of the employer. The impetus behind the termination of employment has no bearing upon the ability of the dismissed employee to cope with the sudden economic dislocation caused by unemployment. As all dismissed employees are equally in need of the protections provided by the *ESA*, any distinction between employees whose termination resulted from the bankruptcy of their employer and those who have been terminated for some other reason would be arbitrary and inequitable. Such an interpretation would defeat the true meaning, intent and spirit of the *ESA*. Termination as a result of an employer's bankruptcy therefore does give rise to an unsecured claim provable in bankruptcy pursuant to s. 121 of the *Bankruptcy Act* for termination and severance pay in accordance with ss. 40 and 40*a* of the *ESA*. It was not necessary to address the applicability of s. 7(5) of the *ESA*.

congédiement et un tel résultat les priverait arbitrairement de certains des moyens dont ils disposent pour faire face à un bouleversement économique.

Le recours à l'historique législatif pour déterminer l'intention du législateur est tout à fait approprié. En vertu du par. 2(3) de l'*Employment Standards Amendment Act, 1981*, étaient exemptés de l'obligation de verser des indemnités de cessation d'emploi, les employeurs qui avaient fait faillite et avaient perdu la maîtrise de leurs biens entre le moment où les modifications sont entrées en vigueur et celui où elles ont reçu la sanction royale. Le paragraphe 2(3) implique nécessairement que les employeurs en faillite sont assujettis à l'obligation de verser une indemnité de cessation d'emploi. Si tel n'était pas le cas, cette disposition transitoire semblerait ne poursuivre aucune fin. En outre, comme la *LNE* est une loi conférant des avantages, elle doit être interprétée de façon libérale et généreuse. Tout doute découlant de l'ambiguïté des textes doit se résoudre en faveur du demandeur.

Lorsque les mots exprès employés aux art. 40 et 40*a* sont examinés dans leur contexte global, les termes «l'employeur licencie» doivent être interprétés de manière à inclure la cessation d'emploi résultant de la faillite de l'employeur. Les raisons qui motivent la cessation d'emploi n'ont aucun rapport avec la capacité de l'employé congédié de faire face au bouleversement économique soudain causé par le chômage. Comme tous les employés congédiés ont également besoin des protections prévues par la *LNE*, toute distinction établie entre les employés qui perdent leur emploi en raison de la faillite de leur employeur et ceux qui sont licenciés pour quelque autre raison serait arbitraire et inéquitable. Une telle interprétation irait à l'encontre des sens, intention et esprit véritables de la *LNE*. La cessation d'emploi résultant de la faillite de l'employeur donne effectivement naissance à une réclamation non garantie prouvable en matière de faillite au sens de l'art. 121 de la *LF* en vue d'obtenir une indemnité de licenciement et une indemnité de cessation d'emploi en conformité avec les art. 40 et 40*a* de la *LNE*. Il était inutile d'examiner la question de l'applicabilité du par. 7(5) de la *LNE*.

APPEAL from a judgment of the Ontario Court of Appeal (1995), 22 O.R. (3d) 385, 80 O.A.C. 201, 30 C.B.R. (3d) 1, 9 C.C.E.L. (2d) 264, 95 C.L.L.C. ¶210-020, [1995] O.J. No. 586 (QL), reversing a judgment of the Ontario Court (General Division) (1991), 6 O.R. (3d) 441, 11 C.B.R. (3d) 246, 92 C.L.L.C. ¶14,013, ruling that the Ministry of Labour could prove claims on behalf of employees of the bankrupt. Appeal allowed.

Steven M. Barrett and *Kathleen Martin*, for the appellants.

Raymond M. Slattery, for the respondent.

David Vickers, for the Ministry of Labour for the Province of Ontario, Employment Standards Branch.

The judgment of the Court was delivered by

IACOBUCCI J. — This is an appeal by the former employees of a now bankrupt employer from an order disallowing their claims for termination pay (including vacation pay thereon) and severance pay. The case turns on an issue of statutory interpretation. Specifically, the appeal decides whether, under the relevant legislation in effect at the time of the bankruptcy, employees are entitled to claim termination and severance payments where their employment has been terminated by reason of their employer's bankruptcy.

1. Facts

Prior to its bankruptcy, Rizzo & Rizzo Shoes Limited ("Rizzo") owned and operated a chain of retail shoe stores across Canada. Approximately 65 percent of those stores were located in Ontario. On April 13, 1989, a petition in bankruptcy was filed against the chain. The following day, a receiving

POURVOI contre un arrêt de la Cour d'appel de l'Ontario (1995), 22 O.R. (3d) 385, 80 O.A.C. 201, 30 C.B.R. (3d) 1, 9 C.C.E.L. (2d) 264, 95 C.L.L.C. ¶210-020, [1995] O.J. nº 586 (QL), qui a infirmé un jugement de la Cour de l'Ontario (Division générale) (1991), 6 O.R. (3d) 441, 11 C.B.R. (3d) 246, 92 C.L.L.C. ¶14,013, statuant que le ministère du Travail pouvait prouver des réclamations au nom des employés de l'entreprise en faillite. Pourvoi accueilli.

Steven M. Barrett et *Kathleen Martin*, pour les appelants.

Raymond M. Slattery, pour l'intimée.

David Vickers, pour le ministère du Travail de la province d'Ontario, Direction des normes d'emploi.

Version française du jugement de la Cour rendu par

LE JUGE IACOBUCCI — Il s'agit d'un pourvoi interjeté par les anciens employés d'un employeur maintenant en faillite contre une ordonnance qui a rejeté les réclamations qu'ils ont présentées en vue d'obtenir une indemnité de licenciement (y compris la paie de vacances) et une indemnité de cessation d'emploi. Le litige porte sur une question d'interprétation législative. Tout particulièrement, le pourvoi tranche la question de savoir si, en vertu des dispositions législatives pertinentes en vigueur à l'époque de la faillite, les employés ont le droit de réclamer une indemnité de licenciement et une indemnité de cessation d'emploi lorsque la cessation d'emploi résulte de la faillite de leur employeur. 1

1. Les faits

Avant sa faillite, la société Rizzo & Rizzo Shoes Limited («Rizzo») possédait et exploitait au Canada une chaîne de magasins de vente au détail de chaussures. Environ 65 pour 100 de ces magasins étaient situés en Ontario. Le 13 avril 1989, une pétition en faillite a été présentée contre la 2

1998 CanLII 837 (SCC)

the words, "Where . . . fifty or more employees have their employment terminated by an employer. . . ." Therefore, the question on which this appeal turns is whether, when bankruptcy occurs, the employment can be said to be terminated "by an employer".

19 The Court of Appeal answered this question in the negative, holding that, where an employer is petitioned into bankruptcy by a creditor, the employment of its employees is not terminated "by an employer", but rather by operation of law. Thus, the Court of Appeal reasoned that, in the circumstances of the present case, the *ESA* termination pay and severance pay provisions were not applicable and no obligations arose. In answer, the appellants submit that the phrase "terminated by an employer" is best interpreted as reflecting a distinction between involuntary and voluntary termination of employment. It is their position that this language was intended to relieve employers of their obligation to pay termination and severance pay when employees leave their jobs voluntarily. However, the appellants maintain that where an employee's employment is involuntarily terminated by reason of their employer's bankruptcy, this constitutes termination "by an employer" for the purpose of triggering entitlement to termination and severance pay under the *ESA*.

20 At the heart of this conflict is an issue of statutory interpretation. Consistent with the findings of the Court of Appeal, the plain meaning of the words of the provisions here in question appears to restrict the obligation to pay termination and severance pay to those employers who have actively terminated the employment of their employees. At first blush, bankruptcy does not fit comfortably into this interpretation. However, with respect, I believe this analysis is incomplete.

21 Although much has been written about the interpretation of legislation (see, e.g., Ruth Sullivan, *Statutory Interpretation* (1997); Ruth Sullivan, *Driedger on the Construction of Statutes* (3rd ed. 1994) (hereinafter "*Construction of Statutes*"); Pierre-André Côté, *The Interpretation of Legisla-*

licencier un employé . . .» Le paragraphe 40*a*(1a) contient également les mots: «si [. . .] l'employeur licencie cinquante employés ou plus . . .» Par conséquent, la question dans le présent pourvoi est de savoir si l'on peut dire que l'employeur qui fait faillite a licencié ses employés.

La Cour d'appel a répondu à cette question par la négative, statuant que, lorsqu'un créancier présente une pétition en faillite contre un employeur, les employés ne sont pas licenciés par l'employeur mais par l'effet de la loi. La Cour d'appel a donc estimé que, dans les circonstances de l'espèce, les dispositions relatives aux indemnités de licenciement et de cessation d'emploi de la *LNE* n'étaient pas applicables et qu'aucune obligation n'avait pris naissance. Les appelants répliquent que les mots «l'employeur licencie» doivent être interprétés comme établissant une distinction entre la cessation d'emploi volontaire et la cessation d'emploi forcée. Ils soutiennent que ce libellé visait à dégager l'employeur de son obligation de verser des indemnités de licenciement et de cessation d'emploi lorsque l'employé quittait son emploi volontairement. Cependant, les appelants prétendent que la cessation d'emploi forcée résultant de la faillite de l'employeur est assimilable au licenciement effectué par l'employeur pour l'exercice du droit à une indemnité de licenciement et à une indemnité de cessation d'emploi prévu par la *LNE*.

Une question d'interprétation législative est au centre du présent litige. Selon les conclusions de la Cour d'appel, le sens ordinaire des mots utilisés dans les dispositions en cause paraît limiter l'obligation de verser une indemnité de licenciement et une indemnité de cessation d'emploi aux employeurs qui ont effectivement licencié leurs employés. À première vue, la faillite ne semble pas cadrer très bien avec cette interprétation. Toutefois, en toute déférence, je crois que cette analyse est incomplète.

Bien que l'interprétation législative ait fait couler beaucoup d'encre (voir par ex. Ruth Sullivan, *Statutory Interpretation* (1997); Ruth Sullivan, *Driedger on the Construction of Statutes* (3e éd. 1994) (ci-après «*Construction of Statutes*»); Pierre-André Côté, *Interprétation des lois* (2e éd.

1998 CanLII 837 (SCC)

1998 CanLII 837 (SCC)

tion in Canada (2nd ed. 1991)), Elmer Driedger in *Construction of Statutes* (2nd ed. 1983) best encapsulates the approach upon which I prefer to rely. He recognizes that statutory interpretation cannot be founded on the wording of the legislation alone. At p. 87 he states:

> Today there is only one principle or approach, namely, the words of an Act are to be read in their entire context and in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament.

Recent cases which have cited the above passage with approval include: *R. v. Hydro-Québec*, [1997] 1 S.C.R. 213; *Royal Bank of Canada v. Sparrow Electric Corp.*, [1997] 1 S.C.R. 411; *Verdun v. Toronto-Dominion Bank*, [1996] 3 S.C.R. 550; *Friesen v. Canada*, [1995] 3 S.C.R. 103.

1990)), Elmer Driedger dans son ouvrage intitulé *Construction of Statutes* (2e éd. 1983) résume le mieux la méthode que je privilégie. Il reconnaît que l'interprétation législative ne peut pas être fondée sur le seul libellé du texte de loi. À la p. 87, il dit:

> [TRADUCTION] Aujourd'hui il n'y a qu'un seul principe ou solution: il faut lire les termes d'une loi dans leur contexte global en suivant le sens ordinaire et grammatical qui s'harmonise avec l'esprit de la loi, l'objet de la loi et l'intention du législateur.

Parmi les arrêts récents qui ont cité le passage ci-dessus en l'approuvant, mentionnons: *R. c. Hydro-Québec*, [1997] 1 R.C.S. 213; *Banque Royale du Canada c. Sparrow Electric Corp.*, [1997] 1 R.C.S. 411; *Verdun c. Banque Toronto-Dominion*, [1996] 3 R.C.S. 550; *Friesen c. Canada*, [1995] 3 R.C.S. 103.

I also rely upon s. 10 of the *Interpretation Act*, R.S.O. 1980, c. 219, which provides that every Act "shall be deemed to be remedial" and directs that every Act shall "receive such fair, large and liberal construction and interpretation as will best ensure the attainment of the object of the Act according to its true intent, meaning and spirit".

22 Je m'appuie également sur l'art. 10 de la *Loi d'interprétation*, L.R.O. 1980, ch. 219, qui prévoit que les lois «sont réputées apporter une solution de droit» et doivent «s'interpréter de la manière la plus équitable et la plus large qui soit pour garantir la réalisation de leur objet selon leurs sens, intention et esprit véritables».

Although the Court of Appeal looked to the plain meaning of the specific provisions in question in the present case, with respect, I believe that the court did not pay sufficient attention to the scheme of the *ESA*, its object or the intention of the legislature; nor was the context of the words in issue appropriately recognized. I now turn to a discussion of these issues.

23 Bien que la Cour d'appel ait examiné le sens ordinaire des dispositions en question dans le présent pourvoi, en toute déférence, je crois que la cour n'a pas accordé suffisamment d'attention à l'économie de la *LNE*, à son objet ni à l'intention du législateur; le contexte des mots en cause n'a pas non plus été pris en compte adéquatement. Je passe maintenant à l'analyse de ces questions.

In *Machtinger v. HOJ Industries Ltd.*, [1992] 1 S.C.R. 986, at p. 1002, the majority of this Court recognized the importance that our society accords to employment and the fundamental role that it has assumed in the life of the individual. The manner in which employment can be terminated was said to be equally important (see also *Wallace v. United Grain Growers Ltd.*, [1997] 3 S.C.R. 701). It was in this context that the majority in *Machtinger* described, at p. 1003, the object of the *ESA* as being the protection of "... the interests of employees by requiring employers to comply with

24 Dans l'arrêt *Machtinger c. HOJ Industries Ltd.*, [1992] 1 R.C.S. 986, à la p. 1002, notre Cour, à la majorité, a reconnu l'importance que notre société accorde à l'emploi et le rôle fondamental qu'il joue dans la vie de chaque individu. La manière de mettre fin à un emploi a été considérée comme étant tout aussi importante (voir également *Wallace c. United Grain Growers Ltd.*, [1997] 3 R.C.S. 701). C'est dans ce contexte que les juges majoritaires dans l'arrêt *Machtinger* ont défini, à la p. 1003, l'objet de la *LNE* comme étant la protection «. . . [d]es intérêts des employés en exigeant que

Interpretation Act, RSA 2000, c I-8

INTERPRETATION ACT
Chapter I-8

HER MAJESTY, by and with the advice and consent of the Legislative Assembly of Alberta, enacts as follows:

…

Powers in name of office

21 (2) Words in an enactment directing or empowering a person to do something, or otherwise applying to the person by the person's name of office, include

(a) a person acting for that person or appointed to act in the office, and

(b) that person's deputy or a person appointed as that person's acting deputy.

General definitions

28 (1) In an enactment,

(r) "Government" or "Government of Alberta" means Her Majesty in right of Alberta;

Citation includes amendments

31 In an enactment a citation of or reference to another enactment of the Province, of another province or territory or of Canada is a citation of or reference to the other enactment as amended, whether amended before or after the commencement of the enactment in which the citation or reference occurs.

Application of other enactments

33 If an enactment provides that another enactment of Alberta, Canada or another province or territory applies, it applies with the necessary changes and so far as it is applicable.

Repeal and replacement

36(1) If an enactment is repealed and a new enactment is substituted for it,

(a) every person acting under the repealed enactment shall continue to act as if appointed or elected under the new enactment until the person is reappointed or another is appointed or elected in the person's place;

(b) every proceeding commenced under the repealed enactment shall be continued under and in conformity with the new enactment so far as may be consistent with the new enactment;

(c) the procedure established by the new enactment shall be followed as far as it can be adapted

(i) in the recovery or enforcement of penalties and forfeitures incurred under the repealed enactment,

(ii) in the enforcement of rights existing or accruing under the repealed enactment, and

(iii) in a proceeding in relation to matters that have happened before the repeal;

(d) if any penalty, forfeiture or punishment is reduced or mitigated by the new enactment, the penalty, forfeiture or punishment, if imposed or adjudged after the repeal, shall be reduced or mitigated accordingly;

(e) all regulations made under the repealed enactment remain in force and are deemed to have been made under the new enactment, insofar as they are not inconsistent with the new enactment;

(f) any reference in an unrepealed enactment to the repealed enactment shall, with respect to a subsequent transaction, matter or thing, be construed as a reference to the provisions of the new enactment relating to the same subject-matter as the repealed enactment, but if there are no provisions in the new enactment relating to the same subject-matter, the repealed enactment shall be construed as being unrepealed insofar as is necessary to maintain or give effect to the unrepealed enactment.

(2) If a statute or regulation of any province or territory or of Canada is repealed in whole or in part and other provisions are substituted for it, a reference in an enactment of Alberta to the repealed statute or regulation shall, with respect to a subsequent transaction, matter or thing, be construed to be a reference to the substituted provisions relating to the same subject-matter as the repealed statute or regulation.

EN APPEL DE LA COUR D'APPEL DU MANITOBA

Droit municipal — Municipalités — Demandes de règlements de zonage — Partialité ou crainte de partialité — Un conseiller municipal a appuyé en privé une demande de modification de zonage et a subséquemment voté en faveur de la demande sans révéler sa participation antérieure — La conduite du conseiller soulève-t-elle une crainte raisonnable de partialité?

Droit municipal — Urbanisme — Plan officiel — Effet — Aménagement résidentiel et parc prévus dans les plans de la ville et du district — Nouveau zonage permettant l'aménagement de condominiums — L'aménagement proposé contrevient-il aux plans? — City of Winnipeg Act, S.M. 1971, ch. 105, art. 599, 609.

Droit municipal — Zonage — Modification — Procédure — L'auteur d'une demande de modification de zonage négocie avec la municipalité l'acquisition de biens-fonds municipaux et de rues destinées à être fermées — Vente au requérant approuvée par la municipalité avant l'adoption du nouveau zonage — Régularité du nouveau zonage — City of Winnipeg Act, S.M. 1971, ch. 105, art. 609(1).

Droit municipal — Règlements de zonage — Validité — Demande de modification de zonage présentée par l'acquéreur prévu de biens-fonds municipaux sans autorisation de la ville — Le règlement portant modification de zonage est-il invalide pour cause de non-respect de la loi et de la procédure? — City of Winnipeg Act, S.M. 1971, ch. 105, art. 609(1).

* Juge en chef à la date de l'audition.

** Juge en chef à la date du jugement.

1990 CanLII 31 (SCC)

Winnipeg approved a proposed land development in Old St. Boniface, and adopted the recommendations of the Finance Committee, the Community Committee, the Planning and Community Services Committee and, ultimately, City Council that the land in question be rezoned to permit the erection of two condominium towers, that certain streets be closed and that the streets, together with other city-owned land, be sold to the developer. Prior to public hearings before the Community Committee on the application for rezoning submitted by the intended purchaser of the lands, a municipal councillor had been personally involved in the planning of the proposed development and had appeared as advocate in support of the application at in camera private meetings of the Finance Committee. An election intervened during the period between public meetings in which the councillor took part, and he was re-elected. At the public meetings, he did not disclose his earlier involvement with the application.

Before the re-zoning by-law was passed, the appellant attacked the process by way of originating motion filed in the Court of Queen's Bench. The motions judge quashed the Committee's decision, prohibited the passing of the rezoning by-law, and adjourned the appellant's application to quash the street-closing by-law. The City was further prohibited from implementing or acting upon the street-closing by-law until further ordered by the court. The respondents' appeal to the Court of Appeal for Manitoba was allowed and the appellant's cross-appeal concerning the street-closing by-law was dismissed.

The issues raised in this appeal are: (1) whether the municipal councillor was disqualified by reason of bias from participating in the proceedings of the Community Committee; (2) whether the application for rezoning, which was made by someone other than the owner of the subject land, complied with s. 609(1) of the *City of Winnipeg Act*; (3) whether the zoning by-law failed to comply with the Greater Winnipeg development plan ("Plan Winnipeg"); and (4) whether the Community Committee acted in bad faith or in violation of a reasonable expectation of consultation.

Held (La Forest, L'Heureux-Dubé and Cory JJ. dissenting): The appeal should be dismissed.

Per Dickson C.J. and Wilson, Sopinka, Gonthier and McLachlin JJ.: *Wiswell v. Metropolitan Corporation of Greater Winnipeg* was distinguished. A flexible approach based on the context is now taken with respect to the test to be applied for disqualifying bias. Here, it

Winnipeg a approuvé un projet d'aménagement immobilier dans le Vieux St-Boniface et a adopté les recommandations du comité des finances, du comité municipal, du comité de l'urbanisme et des services communautaires et, finalement, du conseil municipal que les biens-fonds en question fassent l'objet d'un nouveau zonage de façon à permettre la construction de deux tours de condominiums, que certaines rues soient fermées et que les rues ainsi que d'autres biens-fonds appartenant à la ville soient vendus au promoteur. Avant que des audiences publiques soient tenues devant le comité municipal relativement à la demande de modification de zonage présentée par l'acquéreur prévu des biens-fonds, un conseiller municipal avait participé personnellement à la planification du projet d'aménagement et avait appuyé la demande dans des réunions à huis clos et privées du comité des finances. Durant la période comprise entre les réunions publiques, il y a eu une élection à laquelle le conseiller a participé et où il a été réélu. Lors des réunions publiques, il n'a pas révélé sa participation antérieure relativement à la demande.

Avant l'adoption du nouveau règlement de zonage, l'appelante a attaqué cette façon de procéder par voie d'avis de requête introductive d'instance déposé auprès de la Cour du Banc de la Reine. Le juge des requêtes a annulé la décision du comité, interdit l'adoption du règlement portant modification de zonage et ajourné l'audition de la demande de l'appelante visant l'annulation du règlement portant fermeture de rues. De plus, il a interdit à la ville d'appliquer ou d'utiliser le règlement de fermeture de rues jusqu'à nouvel ordre de la cour. La Cour d'appel du Manitoba a accueilli l'appel des intimés et rejeté l'appel incident de l'appelante relativement au règlement portant fermeture de rues.

Les questions soulevées dans ce pourvoi sont de savoir (1) si le conseiller municipal était, pour cause de partialité, inhabile à participer aux procédures du comité municipal, (2) si la demande de modification de zonage, présentée par une autre personne que le propriétaire du bien-fonds visé, est conforme au par. 609(1) de la *City of Winnipeg Act*, (3) si le règlement de zonage est conforme au plan directeur de la ville de Winnipeg (le «plan de la ville de Winnipeg»), et (4) si le comité municipal a agi de mauvaise foi ou sans respecter une expectative raisonnable de consultation.

Arrêt (les juges La Forest, L'Heureux-Dubé et Cory sont dissidents): Le pourvoi est rejeté.

Le juge en chef Dickson et les juges Wilson, Sopinka, Gonthier et McLachlin: Une distinction est faite d'avec l'arrêt *Wiswell v. Metropolitan Corporation of Greater Winnipeg*. Il convient d'adopter une approche souple fondée sur le contexte en ce qui concerne le critère à

1990 CanLII 31 (SCC)

would not be appropriate to apply the test of a reasonable apprehension of pre-judgment with full vigour simply because of the councillor's appearance as advocate for the development proposal before the Finance Committee. The Legislature could not have intended that the rule requiring a tribunal to be free of an appearance of bias apply to members of Council with the same force as in the case of other tribunals whose character and functions more closely resemble those of a court. Some degree of prejudgment is inherent in the role of a municipal councillor. Nor, however, could the Legislature have intended that there be a hearing before a body which has already made an irreversible decision.

The applicable test is that objectors or supporters be heard by members of Council who are capable of persuasion. This test is consistent with the functions of a municipal councillor and enables him or her to carry out the political and legislative duties entrusted to the councillor. The party alleging disqualifying prejudgment must establish that any representations at variance with the adopted view would be futile. Statements by individual members of Council, while they may give rise to an appearance of bias, will not satisfy the test unless the court concludes that they are the expression of a final opinion on the matter.

On the other hand, there is nothing inherent in the councillors' hybrid functions that would make it mandatory or desirable to excuse them from the requirement that they refrain from dealing with matters in respect of which they have either a personal or other interest. Where such an interest is found, both at common law and by statute, a member of Council is disqualified if the interest is so related to the exercise of public duty that a reasonably well-informed person would conclude that it might influence the exercise of that duty. The motions judge erred in applying the reasonable apprehension of bias test once he had found that the councillor whose impartiality was in question had no personal interest in the development, either pecuniary or by reason of a relationship with the developer.

Per Lamer C.J.: The reasons of La Forest J. in *Save Richmond Farmland Society v. Richmond (Township)* were agreed with. Applying his test to the facts of this case, the appeal should be dismissed.

On the issue of conformity with Plan Winnipeg, the reasons of Sopinka J. were agreed with.

appliquer pour conclure à l'inhabilité pour cause de partialité. Il ne serait pas approprié en l'espèce d'appliquer le critère d'une crainte raisonnable de préjugé dans toute sa rigueur simplement parce que le conseiller a défendu le projet d'aménagement devant le comité des finances. Le législateur ne peut pas avoir voulu que la règle qui exige qu'un tribunal soit exempt de toute apparence de partialité s'applique aux membres d'un conseil municipal avec la même rigueur qu'à d'autres tribunaux administratifs dont le caractère et les fonctions ressemblent davantage à ceux d'une cour de justice. Un certain degré de préjugé est inhérent au rôle de conseiller municipal. Le législateur ne pouvait cependant pas non plus avoir voulu d'une audience devant un organisme qui a déjà pris une décision irrévocable.

Le critère applicable est que les tenants de l'un ou l'autre point de vue doivent être entendus par des membres du conseil qu'il est possible de convaincre. Ce critère est compatible avec les fonctions d'un conseiller municipal et lui permet de remplir ses fonctions politiques et législatives. La partie qui allègue l'existence d'un préjugé qui rend inhabile doit établir qu'il ne servirait à rien de présenter des arguments contredisant le point de vue adopté. Bien qu'elles puissent créer une apparence de partialité, les déclarations de conseillers individuels ne satisfont au critère que si la cour conclut qu'elles sont l'expression d'une opinion finale sur la question.

Par contre, il n'y a rien d'inhérent aux fonctions hybrides des conseillers qui rendrait obligatoire ou souhaitable de les soustraire à l'obligation de ne pas intervenir dans des affaires dans lesquelles ils ont un intérêt personnel ou autre. Quant on conclut à l'existence d'un tel intérêt, tant en vertu de la common law que de la loi, un conseiller devient inhabile si l'intérêt est à ce point lié à l'exercice d'une fonction publique qu'une personne raisonnablement bien informée conclurait que cet intérêt risquerait d'influer sur l'exercice de la fonction en question. Le juge des requêtes a commis une erreur en appliquant le critère de la crainte raisonnable de partialité après qu'il eut conclu que le conseiller dont l'impartialité était mise en doute n'avait aucun intérêt personnel dans le projet d'aménagement, que ce soit sur le plan pécuniaire ou sur celui de ses rapports avec le promoteur.

Le juge en chef Lamer: Le juge en chef souscrit aux motifs du juge La Forest dans l'affaire *Save Richmond Farmland Society c. Richmond (Canton)*. En appliquant son critère aux faits de l'espèce, on conclut au rejet du pourvoi.

Quand à la question du respect du plan de la ville de Winnipeg, le juge en chef Lamer souscrit aux motifs du juge Sopinka.

1990 CanLII 31 (SCC)

Per La Forest, L'Heureux-Dubé and Cory JJ. (dissenting): The City was precluded from adopting the zoning by-law in question without first amending Plan Winnipeg. The zoning power of Council is constrained by the community plan, the amendment of which involves consultation with community committees and requires the entire council, rather than simply the executive policy committee, to deliberate on the plan by-law. In adopting a by-law which does not conform to the plan, Council oversteps its statutory authority.

The proposed condominium represented a derogation from Plan Winnipeg. If the City wished to permit development that conflicted with the policy of the Plan, it was first required to seek amendment to the Plan. The procedures for amendment provide for public participation at all stages of policy development and it was not open to Council to circumvent the public process by the simple passage of a zoning by-law.

Judicial review is not inappropriate in this case. The designated commissioner, who determines whether a by-law conforms to the Plan, is not independent of Council but, rather, is appointed by and may be dismissed by Council. Furthermore, there is no privative clause. It is therefore open to the courts to overturn a decision which is legally incorrect. The land in question was clearly designated as parkland on the Plan policy map and the condominium development could not be said to conform to the Plan.

Les juges La Forest, L'Heureux-Dubé et Cory (dissidents): La ville ne pouvait pas adopter le règlement de zonage en cause sans d'abord modifier le plan de la ville de Winnipeg. Le pouvoir de zonage du conseil est limité par le plan d'urbanisme dont la modification nécessite la consultation de comités municipaux et exige que le conseil au complet, et non simplement le comité exécutif, délibère sur le règlement relatif au plan. En adoptant un règlement non conforme au plan, le conseil outrepasse le pouvoir que lui confère la Loi.

Le projet de condominiums constitue une dérogation au plan de la ville de Winnipeg. Si la ville désirait autoriser un aménagement qui ne respectait pas la politique du plan, elle devait d'abord demander la modification du plan lui-même. Les procédures de modification prévoient la participation du public à toutes les étapes de la conception d'une politique et il n'était pas loisible au conseil de se soustraire au processus public par la simple adoption d'un règlement de zonage.

Le contrôle judiciaire n'est pas inopportun en l'espèce. Le commissaire désigné, qui détermine si un règlement est conforme au plan, n'est pas indépendant du conseil; au contraire, il est nommé et peut être démis de ses fonctions par le conseil. En outre, il n'y a aucune clause privative. Les tribunaux peuvent donc infirmer une décision qui est mauvaise du point de vue légal. Le bien-fonds en cause était clairement désigné comme parc sur la carte établie conformémement à la politique du plan et on ne pouvait dire que l'aménagement de condominiums était conforme au plan.

R. (2d) 252, 39 M.P.L.R. 271, quashing the decision of the respondent, the St. Boniface-St. Vital Community Committee, and granting *certiorari* and prohibition. Appeal dismissed, La Forest, L'Heureux-Dubé and Cory JJ. dissenting.

Arne Peltz and *M. B. Nepon*, for the appellant.

C. Gillespie and *D. McCaffrey*, *Q.C.*, for the respondents.

The judgment of Dickson C.J. and Wilson, Sopinka, Gonthier and McLachlin JJ. was delivered by

SOPINKA J.—This appeal was heard together with *Save Richmond Farmland Society v. Richmond (Township)*, [1990] 3 S.C.R. 1213, and reasons for judgment are being released concurrently. They both raise the question of the application of the rules of natural justice or fairness to municipal councillors when they are called upon to make a decision after hearing representations from interested parties. In particular, these appeals raise the issue of the application to municipal councillors of the rule which requires a member of a tribunal to recuse himself or herself when there exists a reasonable apprehension of bias or prejudgment.

In this appeal the appellant, in addition to the issue of bias, raises the following issues: Did the City have jurisdiction to proceed with the rezoning in the absence of express written authority from all freehold owners of the proposed site? Is the zoning by-law void for non-conformity with Plan Winnipeg? Did breach of an alleged undertaking to involve the Residents Association in a redevelopment plan constitute bad faith or create a right of consultation?

Facts

The appellant is a Residents Association for the area known as Old St. Boniface. It has existed since 1977. It was incorporated in 1979 pursuant to the Neighbourhood Improvement Program, which was a federal, provincial and municipal

Version française du jugement du juge en chef Dickson et des juges Wilson, Sopinka, Gonthier et McLachlin rendu par

LE JUGE SOPINKA—Le présent pourvoi et le pourvoi *Save Richmond Farmland Society c. Richmond (Canton)*, [1990] 3 R.C.S. 1213, ont été entendus ensemble et les motifs de jugement sont rendus simultanément. Ils soulèvent l'un et l'autre la question de l'application des règles de justice naturelle ou de l'équité aux conseillers municipaux appelés à prendre une décision après avoir entendu les observations des parties intéressées. Se pose en particulier dans ces pourvois la question de l'application aux conseillers municipaux de la règle imposant à un membre d'un tribunal administratif l'obligation de se récuser lorsqu'il existe une crainte raisonnable de partialité ou de préjugé.

Outre la partialité, l'appelante soulève en l'espèce les questions suivantes: la ville avait-elle compétence pour procéder à la modification du zonage sans en avoir reçu par écrit l'autorisation expresse de tous les propriétaires fonciers du site proposé? Le règlement de zonage est-il entaché de nullité pour cause de non-conformité avec le plan de la ville de Winnipeg? L'engagement qui aurait été pris de faire participer l'association des résidents à la conception d'un plan de réaménagement conférait-il à celle-ci le droit d'être consultée et la violation de cet engagement constituait-elle de la mauvaise foi?

Les faits

L'appelante est une association des résidents du secteur connu sous le nom de Vieux St-Boniface. Elle existe depuis 1977. En 1979, elle a été constituée en personne morale dans le cadre du programme d'amélioration de quartier qui était une

1990 CanLII 31 (SCC)

Plan Winnipeg was adopted as a by-law of the City in April 1986. The Plan is the instrument by which overall planning for the entire territory of the city is instituted. It is a general, long-term policy document which serves as a framework in which specific policies and zoning by-laws are formulated. It may be viewed as the very foundation of all planning. Indeed, master plans like Plan Winnipeg are characterized by Rogers in *Canadian Law of Planning and Zoning* (1990), at pp. 68-69, as "quasi-constitutional documents":

> In some respects a community plan operates as kind of a constitutional document controlling the future development of the municipality. As a constitution, it embodies limitations on the local authority in both its legislative and administrative spheres and is less subject to change than ordinary laws.

Although the author was speaking in general terms, his insights are applicable to Plan Winnipeg. By section 599 of the Act, the zoning power of council is constrained by the plan, although the extent of the constraint may not be entirely clear. In addition, the procedure for amendment to the plan, found in ss. 574-78 of the Act, is more onerous than the process for the amendment of a zoning by-law, in that it involves consultation with community committees, requires the entire council, rather than simply the executive policy committee, to deliberate on the plan by-law, and contains more stringent public notice provisions. Moreover, council is required to obtain the written approval of the minister before it can finally pass the plan by-law.

There is a temptation to view the plan as a document too policy oriented to command any legal status. Such an approach, however, misapprehends the true nature of the plan. Although the policies are articulated in relatively general terms, this does not detract from the legal force of the plan. The specific legal effect of the plan, pursuant to s. 599 of the Act, is to set the parameters of the zoning power of council. If council adopts a by-law which does not conform with the plan, it has overstepped its statutory authority; see *Christie v.*

Le plan de la ville de Winnipeg a été adopté à titre de règlement municipal en avril 1986. Ce plan constitue l'instrument qui établit la planification générale de l'ensemble du territoire de la ville. Il s'agit d'un document énonçant une politique générale à long terme, en fonction duquel des politiques précises et des règlements de zonage sont formulés. Il peut être considéré comme le fondement même de toute planification. En fait, les plans directeurs comme le plan de la ville de Winnipeg sont qualifiés par Rogers dans *Canadian Law of Planning and Zoning* (1990), aux pp. 68 et 69, de [TRADUCTION] «documents quasi constitutionnels»:

> [TRADUCTION] À certains égards, un plan directeur fonctionne comme un genre de document constitutionnel qui contrôle l'aménagement futur de la municipalité. À titre de constitution, il comprend des restrictions imposées au pouvoir local dans ses champs de compétence législative et administrative et est moins susceptible de subir des modifications que les lois ordinaires.

Bien que l'auteur se soit exprimé en termes généraux, ses opinions s'appliquent au plan de la ville de Winnipeg. Aux termes de l'art. 599 de la Loi, le pouvoir de zonage du conseil est limité par le plan, bien que l'étendue de la limite ne soit pas tout à fait claire. De plus, la procédure de modification du plan, qui se trouve aux art. 574 à 578 de la Loi, est plus lourde que la procédure de modification d'un règlement de zonage parce qu'elle comporte une consultation avec les comités municipaux, exige que le conseil au complet, et non simplement le comité exécutif, délibère sur le règlement relatif au plan, et contient des dispositions plus strictes en matière d'avis public. En outre, le conseil est tenu d'obtenir l'autorisation écrite du ministre avant l'adoption finale du règlement relatif au plan.

On est tenté de considérer le plan comme un document qui est trop axé sur des politiques générales pour avoir un statut juridique. Toutefois, une telle position repose sur une mauvaise compréhension de la véritable nature du plan. Bien que les politiques soient formulées en des termes relativement généraux, cela ne diminue pas le caractère juridique du plan. L'effet juridique précis du plan, selon l'art. 599 de la Loi, est d'établir les paramètres du pouvoir de zonage du conseil. Si le conseil adopte un règlement non conforme au plan, il

ON APPEAL FROM THE COURT OF APPEAL FOR BRITISH COLUMBIA

Constitutional law — Federal-provincial agreements — Canada Assistance Plan — Federal government contributing 50 per cent of costs of provincial assistance and welfare services pursuant to Canada Assistance Plan and Agreement with province — Federal government introducing new legislation reducing its fiscal obligation under Canada Assistance Plan and Agreement — Whether federal government has authority to reduce its obligation unilaterally — Whether doctrine of legitimate expectations applies — Whether Canada Assistance Plan imposes requirements as to "manner and form" of subsequent legislation — Whether new legislation ultra vires — Canada Assistance Plan, R.S.C., 1985, c. C-1.

Constitutional law — Reference — Questions — Whether questions referred to Court of Appeal raised justiciable issues.

In 1990, the federal government, in order to reduce the federal budget deficit, decided to cut expenditures and limit the growth of payments made to financially stronger provinces under the *Canada Assistance Plan* (the "Plan"). This change was embodied in Bill C-69, now the *Government Expenditures Restraint Act*. Under the Plan, the federal government concluded agreements with the provinces to share the cost of their expenditures on social assistance and welfare. Section 5 of the Plan authorizes contributions amounting to half of the provinces' eligible expenditures. These agreements continue to be in force so long as the relevant provincial law remains in operation (s. 8(1)). They may be amended or terminated by mutual consent, or terminated on one

EN APPEL DE LA COUR D'APPEL DE LA COLOMBIE-BRITANNIQUE

Droit constitutionnel — Accords fédéraux-provinciaux — Régime d'assistance publique du Canada — Moitié du coût des services provinciaux d'assistance publique et de protection sociale payée par le gouvernement fédéral conformément au Régime d'assistance publique du Canada et à un accord conclu avec la province — Dépôt par le gouvernement fédéral d'un projet de loi prévoyant l'allégement de l'obligation financière lui incombant aux termes du Régime d'assistance publique du Canada et de l'accord — Le gouvernement fédéral a-t-il compétence pour alléger unilatéralement son obligation? — La théorie de l'expectative légitime s'applique-t-elle? — Le Régime d'assistance publique du Canada impose-t-il des exigences quant au «mode» et à la «forme» d'une loi subséquente? — La nouvelle mesure législative est-elle inconstitutionnelle? — Régime d'assistance publique du Canada, L.R.C. (1985), ch. C-1.

Droit constitutionnel — Renvoi — Questions — Les questions soumises à la Cour d'appel soulèvent-elles des points relevant de la compétence des tribunaux?

Afin de réduire son déficit budgétaire, le gouvernement fédéral a décidé, en 1990, de couper les dépenses et de limiter l'augmentation des paiements effectués, en vertu du *Régime d'assistance publique du Canada* (le «Régime»), aux provinces les plus fortes financièrement. Cette modification était contenue dans le projet de loi C-69, devenu maintenant la *Loi sur la compression des dépenses publiques*. En vertu du Régime, le gouvernement fédéral a conclu avec les provinces des accords prévoyant le partage des frais engagés par ces dernières au titre de l'assistance publique et de la protection sociale. L'article 5 du Régime autorise le versement de contributions égales à la moitié des dépenses admissibles des provinces. Ces accords resteront en vigueur

1991 CanLII 74 (SCC)

year's notice from either party (s. 8(2)). The Plan also provides for regulations, but regulations affecting the substance of agreements are ineffective unless passed with the consent of any province affected (s. 9(2)).

The Lieutenant Governor in Council of British Columbia, in accordance with s. 1 of the *Constitutional Question Act* of that province, referred to the British Columbia Court of Appeal two constitutional questions to determine: (1) whether the Government of Canada has any authority to limit its obligation under the Plan and its Agreement with British Columbia; and (2) whether the terms of the Agreement, the subsequent conduct of the Government of Canada pursuant to the Agreement and the provisions of the Plan give rise to a legitimate expectation that the Government of Canada would introduce no bill into Parliament to limit its obligation under the Agreement or the Plan without the consent of British Columbia. The Court of Appeal answered the first question in the negative and the second question in the affirmative.

Held: The appeal should be allowed. The first constitutional question is answered in the affirmative. The second constitutional question is answered in the negative.

Justiciability

The reference questions raise matters that are justiciable and should be answered. Both questions have a sufficient legal component to warrant the intervention of the judiciary branch. The first question requires the interpretation of a statute of Canada and an agreement. The second raises the question of the applicability of the legal doctrine of legitimate expectations to the process involved in the enactment of a money bill. A decision on these questions will have the practical effect of settling the legal issues in contention and will assist in resolving the controversy. There is no other forum in which these legal questions could be determined in an authoritative manner.

Question 1

In presenting Bill C-69 to Parliament, the Government of Canada acted in accordance with the Agreement. While the language of the Plan is, in general, duplicated in the Agreement, the contribution formula

tant que sera appliquée la législation provinciale pertinente (par. 8(1)). Ils peuvent être modifiés ou résiliés par consentement mutuel, ou résiliés à la suite d'un préavis d'un an donné par l'une ou l'autre partie (par. 8(2)). Le Régime prévoit aussi l'adoption de règlements d'application. Les règlements portant sur le fond d'un accord ne s'appliquent toutefois que s'ils sont pris avec l'assentiment de toute province concernée (par. 9(2)).

Le lieutenant-gouverneur en conseil de la Colombie-Britannique, en conformité avec l'art. 1 de la *Constitutional Question Act* de cette province, a soumis à la Cour d'appel de la Colombie-Britannique deux questions constitutionnelles: (1) celle de savoir si le gouvernement du Canada a compétence pour limiter son obligation découlant du Régime et de l'accord intervenu entre lui et la Colombie-Britannique, et (2) celle de savoir si les conditions de l'accord, la conduite subséquente du gouvernement du Canada dans l'exécution de cet accord et les dispositions du Régime permettent de s'attendre légitimement à ce que le gouvernement du Canada ne dépose devant le Parlement aucun projet de loi tendant à limiter, sans le consentement de la Colombie-Britannique, l'obligation que lui impose l'accord ou le Régime. La Cour d'appel a répondu par la négative à la première question et par l'affirmative à la seconde.

Arrêt: Le pourvoi est accueilli. La première question constitutionnelle reçoit une réponse affirmative. La seconde question constitutionnelle reçoit une réponse négative.

L'assujettissement à la compétence des tribunaux

Les questions faisant l'objet du renvoi soulèvent des points qui relèvent de la compétence des tribunaux et méritent une réponse. Les deux questions posées présentent un aspect suffisamment juridique pour justifier l'intervention des tribunaux. La première question nécessite l'interprétation d'une loi du Canada et d'un accord. La seconde concerne l'applicabilité de la théorie juridique de l'expectative légitime au processus d'adoption d'un projet de loi de finances. La décision rendue sur ces questions aura l'effet pratique de trancher les questions de droit en litige et contribuera à résoudre la controverse. Il n'existe pas d'autre tribune devant laquelle ces questions de droit pourraient être réglées de manière péremptoire.

La première question

En déposant le projet de loi C-69 devant le Parlement, le gouvernement du Canada a agi en conformité avec l'accord. Bien que l'accord reprenne généralement les termes du Régime, la formule de calcul des contribu-

1991 CanLII 74 (SCC)

which authorizes payments to the provinces, appears only in s. 5 of the Plan. Being part of the Plan, the formula is subject to amendment by virtue of the principle of parliamentary sovereignty reflected in s. 42(1) of the federal *Interpretation Act*, which states that "Every Act shall be construed as to reserve to Parliament the power of repealing or amending it. . .". Under s. 54 of the *Constitution Act, 1867*, a money bill, including an amendment to a money bill like the Plan, can only be introduced on the initiative of the government. In these circumstances, the natural meaning to be given to the Agreement is that Canada's obligation is to pay the contributions which are authorized from time to time and not the contributions that were authorized when the Agreement was signed. The insertion of the formula for payment in the Plan only was a very strong indication that the parties did not intend that the formula should remain forever frozen. To assert that the federal government could prevent Parliament from exercising its powers to legislate amendments to the Plan would be to negate the sovereignty of Parliament. As well, Parliament did not intend to fetter its sovereign legislative power in restricting, in s. 9(2) of the Plan, the federal government's regulatory powers. Finally, the Agreement could be amended otherwise than in accordance with s. 8 of the Plan. The Agreement, which is subject to the amending formula in s. 8, obliges Canada to pay the amounts which Parliament has authorized Canada to pay pursuant to s. 5 of the Plan. Hence, the payment obligations under the Agreement are subject to change when s. 5 is changed. That provision contains its own process of amendment by virtue of the principle of parliamentary sovereignty.

Question 2

The federal government did not act illegally in invoking the power of Parliament to amend the Plan without obtaining the consent of British Columbia. The doctrine of legitimate expectations does not create substantive rights — in this case, a substantive right to veto proposed federal legislation. The doctrine is part of the rules of procedural fairness which can govern administrative bodies. Where it is applicable, it can only create a right to make representations or to be consulted. Moreover, the doctrine does not apply to the legislative process. The government, which is an integral part of this process, is thus not constrained by the doctrine from introducing a bill to Parliament. A restraint on the executive in the introduction of legislation would place a fetter on the sovereignty of Parliament itself. This is particularly true when the restraint relates to the introduction

tions, qui autorise les paiements aux provinces, figure seulement à l'art. 5 du Régime. Comme elle fait partie du Régime, la formule est susceptible de modification en application du principe de la souveraineté du Parlement reflété au par. 42(1) de la *Loi d'interprétation* fédérale, qui prévoit: «Il est entendu que le Parlement peut toujours abroger ou modifier toute loi . . .» Suivant l'art. 54 de la *Loi constitutionnelle de 1867*, c'est seulement à l'initiative du gouvernement que peut être déposé un projet de loi de finances ou un projet de loi modificative d'une loi de finances comme le Régime. Dans ces circonstances, le sens naturel à donner à l'accord est que le Canada est obligé de payer les contributions qui sont autorisées à l'occasion et non celles autorisées lors de la signature de l'accord. L'inclusion de la formule de paiement dans le Régime seulement constitue une très forte indication que les parties n'ont pas voulu que la formule demeure à tout jamais figée. Affirmer que le gouvernement fédéral pourrait empêcher le Parlement d'exercer ses pouvoirs de légiférer pour modifier le Régime reviendrait à nier la souveraineté du Parlement. De même, le Parlement n'a pas voulu limiter son pouvoir législatif souverain en imposant, au par. 9(2) du Régime, une restriction aux pouvoirs de réglementation du gouvernement fédéral. Enfin, l'accord pouvait être modifié autrement qu'en conformité avec l'art. 8 du Régime. L'accord, qui est assujetti à la formule de modification prévue à l'art. 8 oblige le Canada à verser les montants que le Parlement a autorisé le Canada à payer en vertu de l'art. 5 du Régime. Les obligations prévues par l'accord en matière de paiement peuvent donc être changées par une modification de l'art. 5. Cette disposition renferme son propre processus de modification en vertu du principe de la souveraineté du Parlement.

La seconde question

Le gouvernement fédéral n'a pas agi illégalement en invoquant le pouvoir du Parlement afin de modifier le Régime sans obtenir le consentement de la Colombie-Britannique. La théorie de l'expectative légitime n'est pas génératrice de droits fondamentaux, en l'occurrence, celui d'opposer un veto à un projet de loi fédérale. Cette théorie fait partie des règles de l'équité procédurale auxquelles peuvent être soumis les organismes administratifs. Dans les cas où elle s'applique, elle ne peut faire naître que le droit de présenter des observations ou d'être consulté. La théorie ne s'applique pas non plus au processus législatif. Elle ne vient donc pas empêcher le gouvernement, qui fait partie intégrante de ce processus, de déposer un projet de loi au Parlement. Toute restriction imposée au pouvoir de l'exécutif de déposer des projets de loi constituerait une limitation de la souverai-

1991 CanLII 74 (SCC)

of a money bill. It is also fundamental to our system of government that a government is not bound by the undertakings of its predecessor. The doctrine would derogate from this essential feature of democracy.

The Plan does not purport to control the "manner and form" of subsequent legislation. Where a statute is of a constitutional nature and governs legislation generally, rather than dealing with a specific statute, it can impose requirements as to manner and form. But where, as in this case, a statute has no constitutional nature, it will be very unlikely to evidence an intention of the legislative body to bind itself in the future. Sections 8(2) and 9(2) of the Plan, read together, do not reveal, by necessary implication, a requirement that subsequent legislation cannot alter the Plan unless the consent of the affected province or provinces is obtained. They address only amendments to the Agreement and to the regulations under the Plan, and say nothing about amendments to the Plan. Moreover, any "manner and form" requirement in an ordinary statute must overcome the clear words of s. 42(1) of the *Interpretation Act*. This provision requires that federal statutes ordinarily be interpreted to accord with the doctrine of parliamentary sovereignty. This doctrine prevents a legislative body from binding itself as to the substance of its future legislation.

Section 2 of the *Government Expenditures Restraint Act* is *intra vires* Parliament. First, Parliament was not disabled from unilaterally changing the law so as to change the Agreement once it had been authorized by Parliament and executed by the parties. The Agreement was between British Columbia and the federal government. It did not bind Parliament. The applicable constitutional principle is the sovereignty of Parliament. Second, the new legislation does not amount to regulation of an area outside federal jurisdiction. Bill C-69 was not an indirect, colourable attempt to regulate in provincial areas of jurisdiction. It is simply an austerity measure. Further, the simple withholding of federal money, which had previously been granted to fund a matter within provincial jurisdiction, does not amount to the regulation of that matter. The new legislation simply limits the growth of federal contributions. While the *Government Expenditures Restraint Act* impacts upon a constitutional interest outside the jurisdiction of Parliament, such impact is not enough to find that a statute encroaches

neté du Parlement lui-même. Cela est particulièrement vrai dans le cas d'une restriction relative au dépôt d'un projet de loi de finances. Il est également essentiel à notre système de gouvernement qu'un gouvernement ne soit pas lié par les engagements de son prédécesseur. La théorie de l'expectative légitime dérogerait à ce trait essentiel de la démocratie.

Le Régime ne vise pas à déterminer le «mode et la forme» de toute législation subséquente. Une loi qui est de nature constitutionnelle et qui régit la législation en général plutôt que de porter sur une loi précise peut imposer des exigences quant au mode et à la forme. Toutefois, lorsqu'une loi ne présente aucun caractère constitutionnel, comme c'est le cas en l'espèce, il est fort peu probable qu'elle traduise une intention de la part du corps législatif de se lier pour l'avenir. Quand on rapproche les par. 8(2) et 9(2) du Régime, il ne s'en dégage pas, par voie d'interprétation nécessaire, une exigence qu'aucune modification ne soit apportée au Régime au moyen d'une loi subséquente, si ce n'est avec l'assentiment de la province ou des provinces touchées. Ces paragraphes ne concernent que la modification de l'accord et des règlements pris en vertu du Régime et sont muets relativement à la modification du Régime. De plus, toute exigence de «mode» et de «forme» posée dans une loi ordinaire doit surmonter le texte clair du par. 42(1) de la *Loi d'interprétation*. Cette disposition exige que les lois fédérales soient ordinairement interprétées de manière à s'accorder avec la théorie de la souveraineté du Parlement, laquelle vient empêcher un corps législatif de se lier les mains en ce qui concerne la teneur de sa législation future.

L'article 2 de la *Loi sur la compression des dépenses publiques* n'excède pas la compétence du Parlement. Premièrement, le Parlement ne devenait pas inhabile à modifier unilatéralement la loi de manière à changer l'accord, du moment que celui-ci avait été autorisé par le Parlement et signé par les parties. L'accord est intervenu entre la Colombie-Britannique et le gouvernement fédéral. Il ne lie pas le Parlement. Le principe constitutionnel applicable est celui de la souveraineté du Parlement. Deuxièmement, la nouvelle loi ne revient pas à réglementer un domaine qui n'est pas de compétence fédérale. Le projet de loi C-69 ne constitue pas une tentative déguisée et indirecte de réglementer des domaines de compétence provinciale. Il s'agit simplement d'une mesure d'austérité. En outre, le simple refus de verser des fonds fédéraux jusque-là accordés pour financer une matière relevant de la compétence provinciale ne revient pas à réglementer cette matière. La nouvelle loi se borne à limiter l'accroissement des contributions fédérales. Bien que la *Loi sur la compression des dépenses*

1991 CanLII 74 (SCC)

upon the jurisdiction of the other level of government. The Court should not, under the "overriding principle of federalism", supervise the federal government's exercise of its spending power in order to protect the autonomy of the provinces. Supervision of the spending power is not a separate head of judicial review. If a statute is neither *ultra vires* nor contrary to the *Canadian Charter of Rights and Freedoms*, the courts have no jurisdiction to supervise the exercise of legislative power.

publiques ait des répercussions sur un droit constitutionnel qui échappe à la compétence du Parlement, ces répercussions ne sont pas suffisantes pour conclure qu'une loi empiète sur la compétence de l'autre palier de gouvernement. La Cour ne doit pas, en vertu du «principe essentiel du fédéralisme», surveiller l'exercice par le gouvernement fédéral de son pouvoir de dépenser, afin de protéger l'autonomie des provinces. La surveillance du pouvoir de dépenser ne constitue pas un sujet distinct de contrôle judiciaire. Si une loi n'est ni inconstitutionnelle ni contraire à la *Charte canadienne des droits et libertés*, les tribunaux n'ont nullement compétence pour surveiller l'exercice du pouvoir législatif.

The judgment of the Court was delivered by

SOPINKA J.—This is an appeal by the Attorney General of Canada from a decision of the British Columbia Court of Appeal, answering two questions which were referred to it under the *Constitutional Question Act*, R.S.B.C. 1979, c. 63. The issues raised by the questions include whether and in what circumstances a court should answer questions referred to it that have a political connotation, the interpretation and binding effect of federal-provincial agreements, and whether the doctrine of legitimate expectations applies to prevent the Cabinet from introducing a money bill.

The Attorneys General for Ontario, Manitoba and Alberta intervened in the Court of Appeal, as did the Native Council of Canada and the United Native Nations of British Columbia. In addition, the Attorney General for Saskatchewan intervened in this Court.

1. The Background

The *Canada Assistance Plan* (the "*Plan*") was enacted by S.C. 1966-67, c. 45; it is now R.S.C., 1985, c. C-1. By its s. 4, it authorizes the Government of Canada to enter into agreements with the provincial governments to pay them contributions toward their expenditures on social assistance and welfare. Section 5 of the *Plan* authorizes payments to the provinces pursuant to such agreements, and broadly speaking it authorizes contributions amounting to half of the provinces' eligible expenditures. The *Plan* (s. 6(2)) specifies certain prerequisites for

Version française du jugement de la Cour rendu par

LE JUGE SOPINKA — Le présent pourvoi est formé par le procureur général du Canada contre un arrêt de la Cour d'appel de la Colombie-Britannique qui a répondu à deux questions qui lui avaient été soumises en vertu de la *Constitutional Question Act*, R.S.B.C. 1979, ch. 63. Il s'agit notamment de déterminer, par suite de ces questions, si et dans quelles circonstances une cour doit répondre à des questions qui lui ont été soumises et qui présentent un aspect politique, comment il convient d'interpréter des accords fédéraux-provinciaux et quelle est leur force exécutoire, et si la théorie de l'expectative légitime s'applique de manière à empêcher le cabinet de déposer un projet de loi de finances.

Les procureurs généraux de l'Ontario, du Manitoba et de l'Alberta sont intervenus en Cour d'appel, comme l'ont fait également le Conseil national des autochtones du Canada et les United Native Nations of British Columbia. De plus, le procureur général de la Saskatchewan est intervenu en notre Cour.

1. Historique

Le *Régime d'assistance publique du Canada* (le «*Régime*») a été adopté à S.C. 1966-67, ch. 45; il constitue maintenant le chapitre C-1 des L.R.C. (1985). Son article 4 habilite le gouvernement du Canada à conclure avec les gouvernements provinciaux des accords prévoyant le paiement de contributions aux frais encourus par ces derniers au titre de l'assistance publique et de la protection sociale. L'article 5 du *Régime* permet d'effectuer des paiements aux provinces en exécution de ces accords et, d'une manière générale, autorise le versement de contribu-

1991 CanLII 74 (SCC)

(i) *Constitutional Convention*

The Attorney General for Ontario argued, in the words of his factum, that "with respect to federal-provincial cost-sharing agreements a constitutional convention exists that neither Parliament nor the legislatures will use their legislative authority unilaterally to alter their obligations." Presumably the last two words mean "the obligations of the governments which are responsible to them". These submissions were adopted by the Attorneys General for Alberta and Saskatchewan. Additionally, the Attorney General for Alberta argued that there is a convention that the federal government will not introduce legislation to alter unilaterally Canada's obligations under the *Plan*.

The question, as I have interpreted it, does not ask about conventions. The existence of a convention can only relate to the question as an aspect of legitimate expectations. I have concluded that that doctrine does not apply to the legislative process and therefore does not apply here. The existence of a convention, therefore, is irrelevant and need not be considered further in answering this question.

(ii) *Manner and Form*

Again, this is not properly raised by either question. This argument was presented by the Native Council of Canada and the United Native Nations of British Columbia. I refer to them together hereinafter as N.C.C.

This submission differs from all of those heretofore discussed in that it is an argument that the addition of s. 5.1 to the *Plan* by s. 2 of the *Government Expenditures Restraint Act* is *ultra vires* Parliament. The argument is based on the idea that even a sovereign body can restrict itself in respect of the "manner and form" of subsequent legislation. N.C.C. cited *Attorney-General for New South Wales v. Trethowan*, [1932] A.C. 526, in which the Privy Council found that the legislature of New South Wales had so

(i) *La convention constitutionnelle*

Le procureur général de l'Ontario fait valoir, dans son mémoire, qu' [TRADUCTION] «en ce qui concerne les ententes fédérales-provinciales de partage des coûts, il existe une convention constitutionnelle qui veut que ni le Parlement ni les assemblées législatives ne se serviront unilatéralement de leur pouvoir législatif pour changer leurs obligations». Les deux derniers mots signifient vraisemblablement «les obligations du gouvernement qui est comptable au corps législatif en question». Ces arguments ont été adoptés par les procureurs généraux de l'Alberta et de la Saskatchewan. En outre, le procureur général de l'Alberta a soutenu qu'il existe une convention selon laquelle le gouvernement fédéral ne légiférera pas pour modifier unilatéralement les obligations imposées au Canada par le *Régime*.

La question, telle que je l'interprète, ne concerne pas les conventions. Ce n'est qu'en tant qu'aspect de l'expectative légitime que l'existence d'une convention peut se rapporter à la question. J'ai conclu que la théorie de l'expectative légitime ne s'applique pas au processus législatif et qu'elle n'est donc pas applicable en l'espèce. L'existence d'une convention n'a donc aucune pertinence et il n'est pas nécessaire d'en tenir compte davantage pour répondre à cette question.

(ii) *Le mode et la forme*

Encore une fois, il s'agit d'un point qui n'est pas légitimement soulevé par l'une ou l'autre question. L'argument à ce sujet a été présenté par le Conseil national des autochtones du Canada et par les United Native Nations of British Columbia, que je désignerai ci-après par le sigle C.N.A.C.

Cet argument diffère de tous ceux traités jusqu'ici en ce sens qu'on allègue que l'adjonction de l'art. 5.1 au *Régime* opérée par l'art. 2 de la *Loi sur la compression des dépenses publiques* excède la compétence du Parlement. L'argument repose sur l'idée que même un corps législatif souverain peut s'imposer des restrictions quant au «mode» et à la «forme» de toute loi subséquente. Le C.N.A.C. a cité à cet égard l'affaire *Attorney-General for New South Wales v. Trethowan*, [1932] A.C. 526, dans laquelle le Conseil

1991 CanLII 74 (SCC)

restrained itself. Also, it referred to *R. v. Mercure*, [1988] 1 S.C.R. 234, in which it was held that the legislature of Saskatchewan was bound to enact statutes in both English and French.

N.C.C. said that when one reads ss. 8(2) and 9(2) of the *Plan* together, there is revealed, by necessary implication, a requirement that subsequent legislation cannot alter the *Plan* unless the consent of the affected province or provinces is obtained. By these sections Parliament prevented the federal government from unilaterally terminating its obligations under the *Plan* or an agreement; hence, by implication, Parliament imposed upon itself a requirement that provincial consent be obtained before the legislation could be amended. Further, N.C.C. submitted that if the *Plan* does not reveal an intention that Parliament has bound itself to obtain provincial consent before amending the *Plan*, then at least an intention is revealed that the government is bound to do so before introducing amending legislation.

I reject this argument. Neither intention is revealed in the *Plan*. Any "manner and form" requirement in an ordinary statute must overcome the clear words of s. 42(1) of the *Interpretation Act*, which I set out again for ease of reference:

> **42.** (1) Every Act shall be so construed as to reserve to Parliament the power of repealing or amending it, and of revoking, restricting or modifying any power, privilege or advantage thereby vested in or granted to any person.

This provision requires that federal statutes ordinarily be interpreted to accord with the doctrine of parliamentary sovereignty.

In order for this argument to succeed, it would first have to be shown that Parliament intended, in the face of s. 42(1), to bind itself or to restrict the legislative powers of those of its members who are also members of the executive. The sections of the *Plan* which are supposed to reveal this intention are ss. 8(2) and 9(2). They say absolutely nothing about

privé a conclu que la législature de la Nouvelle-Galles du Sud s'était mise sous le coup d'une telle restriction. Le C.N.A.C. s'est référé en outre à l'arrêt *R. c. Mercure*, [1988] 1 R.C.S. 234, où il a été statué que l'assemblée législative de la Saskatchewan était tenue d'adopter ses lois en français et en anglais.

Selon le C.N.A.C., quand on rapproche les par. 8(2) et 9(2) du *Régime*, il s'en dégage, par voie d'interprétation nécessaire, une exigence qu'aucune modification ne soit apportée au *Régime* au moyen d'une loi subséquente, si ce n'est avec l'assentiment de la province ou des provinces touchées. Au moyen de ces paragraphes, le Parlement empêche le gouvernement fédéral de mettre fin unilatéralement à ses obligations découlant du *Régime* ou d'un accord. Le Parlement s'est donc implicitement imposé l'exigence d'obtenir l'assentiment de la province pour pouvoir modifier la mesure législative. De plus, le C.N.A.C. a fait valoir que, si le *Régime* ne manifeste aucune intention de la part du Parlement de s'imposer l'obligation d'obtenir l'assentiment de la province avant de modifier le *Régime*, il traduit à tout le moins l'intention d'obliger le gouvernement à le faire avant de déposer un projet de loi modificative.

Je rejette cet argument. Le *Régime* n'exprime ni l'une ni l'autre intention. Toute exigence de «mode» et de «forme» posée dans une loi ordinaire doit surmonter le texte clair du par. 42(1) de la *Loi d'interprétation*, que, par souci de commodité, je reproduis de nouveau:

> **42.** (1) Il est entendu que le Parlement peut toujours abroger ou modifier toute loi et annuler ou modifier tous pouvoirs, droits ou avantages attribués par cette loi.

Cette disposition exige que les lois fédérales soient ordinairement interprétées de manière à s'accorder avec la théorie de la souveraineté du Parlement.

Pour que cet argument soit retenu, il faudrait d'abord démontrer que, nonobstant le par. 42(1), le Parlement a eu l'intention de se lier les mains ou de restreindre les pouvoirs législatifs des députés qui composent également l'exécutif. Cette intention est censée se dégager des par. 8(2) et 9(2) du *Régime*. Or, ceux-ci ne disent absolument rien concernant la

1991 CanLII 74 (SCC)

the amendment of the *Plan*, and so reveal no parliamentary intention of the sort argued for by N.C.C.

It is no coincidence that when this Court has found "manner and form" restrictions, the instrument creating the restrictions has not been an ordinary statute. Regard may be had for *R. v. Drybones*, [1970] S.C.R. 282, in which a provision of the *Indian Act* was held to be inoperative pursuant to the *Canadian Bill of Rights*, S.C. 1960, c. 44 (reprinted in R.S.C., 1985, App. III). The latter statute was described as "a quasi-constitutional instrument" by Laskin J. (as he then was) in *Hogan v. The Queen*, [1975] 2 S.C.R. 574, at p. 597. Similarly, in *R. v. Mercure*, *supra*, s. 110 of *The North-West Territories Act*, R.S.C. 1886, c. 50, as re-enacted by S.C. 1891, c. 22, s. 18, was held to impose "manner and form" limitations on the legislature of Saskatchewan. But s. 110 was explicitly directed at the legislature, and the Court observed that the section was continued in force by the constituent statute of the province. Both the *Canadian Bill of Rights* and s. 110 of *The North-West Territories Act* have a constitutional nature. It may be that where a statute is of a constitutional nature and governs legislation generally, rather than dealing with a specific statute, it can impose requirements as to manner and form. But where a statute has no constitutional nature, it will be very unlikely to evidence an intention of the legislative body to bind itself in the future.

That is the case here. The sections of the *Plan* relied upon address amendments to the Agreement and amendments to the regulations under the *Plan*. They say nothing about amendments to the *Plan*. The *Plan* has no constitutional nature. It does not purport to impose any "manner and form" requirement.

There is a further problem with this argument. It is clear that parliamentary sovereignty prevents a legislative body from binding itself as to the substance of its future legislation. The claim that is made in a "manner and form" argument is that the body has

modification du *Régime* et, par conséquent, ils ne révèlent chez le législateur fédéral aucune intention du genre évoqué par le C.N.A.C.

Ce n'est pas une coïncidence que, dans les cas où notre Cour a conclu à l'existence de restrictions quant au «mode» et à la «forme», ce n'était pas par une loi ordinaire que les restrictions étaient édictées. Mentionnons, à cet égard, l'arrêt *R. c. Drybones*, [1970] R.C.S. 282, dans lequel une disposition de la *Loi sur les Indiens* a été jugée inopérante en application de la *Déclaration canadienne des droits*, S.C. 1960, ch. 44 (réimprimée à L.R.C. (1985), app. III). Cette dernière loi a été qualifiée de «document quasi constitutionnel» par le juge Laskin (plus tard Juge en chef) dans l'arrêt *Hogan c. La Reine*, [1975] 2 R.C.S. 574, à la p. 597. De même, dans l'arrêt *R. c. Mercure*, précité, il a été jugé que l'art. 110 de l'*Acte des territoires du Nord-Ouest*, S.R.C. 1886, ch. 50, adopté de nouveau à S.C. 1891, ch. 22, art. 18, imposait à l'assemblée législative de la Saskatchewan des restrictions en matière de «mode» et de «forme». Mais l'article 110 visait expressément l'assemblée législative et la Cour a observé qu'il continuait à s'appliquer aux termes de la loi constitutive de la province. La *Déclaration canadienne des droits* et l'art. 110 de l'*Acte des territoires du Nord-Ouest* sont tous deux de nature constitutionnelle. Il se peut qu'une loi qui est de nature constitutionnelle et qui régit la législation en général plutôt que de porter sur une loi précise puisse imposer des exigences quant au mode et à la forme. Toutefois, lorsqu'une loi ne présente aucun caractère constitutionnel, il est fort peu probable qu'elle traduise une intention de la part du corps législatif de se lier pour l'avenir.

Tel est le cas en l'espèce. Les articles du *Régime* qu'on a invoqués concernent la modification de l'accord et des règlements pris en vertu du *Régime*. Ils sont muets relativement à la modification du *Régime*. Celui-ci n'a aucun caractère constitutionnel. Il n'a pas pour objet d'imposer une exigence quant au «mode» et à la «forme».

Cet argument présente une autre difficulté. Il est évident en effet que la souveraineté du Parlement vient empêcher un corps législatif de se lier les mains en ce qui concerne la teneur de sa législation future. Or, l'argument relatif au «mode» et à la «forme» veut

1991 CanLII 74 (SCC)

restrained itself, not in respect of substance, but in respect of the procedure which must be followed to enact future legislation of some sort, or the form which such legislation must take. In *West Lakes Ltd. v. South Australia*, *supra*, a "manner and form" argument was rejected. King C.J. said (at pp. 397-98):

> Even if I could construe the statute according to the plaintiff's argument, I could not regard the provision as prescribing the manner or form of future legislation. A provision requiring the consent to legislation of a certain kind, of an entity not forming part of the legislative structure . . . does not, to my mind, prescribe a manner or form of lawmaking, but rather amounts to a renunciation *pro tanto* of the lawmaking power.

Those words are fully applicable here.

(iii) *Jurisdiction*

The Attorney General of Manitoba argued that Parliament lacked legislative jurisdiction to make the proposed change to the *Plan*. Again, this is not raised by the questions, but I will consider these submissions briefly.

Like the N.C.C., the Attorney General of Manitoba argued that s. 2 of the *Government Expenditures Restraint Act* is *ultra vires* Parliament. The argument begins with the observation that the federal spending power is wider than the field of federal legislative competence. So, as with the *Plan*, Parliament can authorize the disbursement of federal funds to the provinces for use in areas within provincial jurisdiction. Manitoba said that once Parliament authorized the federal government to enter into an agreement with British Columbia and such an agreement was executed, Parliament became disabled from unilaterally changing the law so as to change the Agreement. There are two reasons for this.

précisément que le corps législatif en question se soit imposé des restrictions, non pas à l'égard de la teneur, mais quant à la procédure à suivre dans l'adoption d'une loi future quelconque ou bien quant à la forme que doit revêtir pareille loi. Dans l'arrêt *West Lakes Ltd. v. South Australia*, précité, un argument relatif au «mode» et à la «forme» a été rejeté. Le juge en chef King a dit (aux pp. 397 et 398):

> [TRADUCTION] Même s'il m'était possible d'interpréter la loi conformément à l'argument de la demanderesse, je ne pourrais considérer la disposition en cause comme prescrivant le mode ou la forme d'une mesure législative future. Une disposition exigeant qu'une entité qui ne fait pas partie de l'appareil législatif donne son consentement à un certain type de législation [. . .] ne prescrit pas, à mon sens, un mode ou une forme d'adoption de lois, mais équivaut plutôt à une renonciation dans cette mesure au pouvoir législatif.

Ces propos s'appliquent pleinement en l'espèce.

(iii) *La compétence*

Le procureur général du Manitoba a soutenu que le Parlement n'avait pas la compétence législative voulue pour apporter au *Régime* la modification projetée. Bien qu'il s'agisse encore une fois d'un point qui n'est pas soulevé par les questions, je me propose tout de même d'examiner brièvement les arguments avancés à ce propos.

Comme le C.N.A.C., le procureur général du Manitoba a fait valoir que l'art. 2 de la *Loi sur la compression des dépenses publiques* excède la compétence du Parlement. L'argument commence par l'observation que le pouvoir de dépenser du fédéral est plus large que le champ de la compétence législative fédérale. Ainsi, comme il l'a fait dans le cas du *Régime*, le Parlement peut autoriser le paiement de fonds fédéraux aux provinces pour qu'elles s'en servent dans des domaines de compétence provinciale. D'après le Manitoba, du moment que le Parlement autorisait le gouvernement fédéral à conclure un accord avec la Colombie-Britannique et dès que cet accord était signé, le Parlement devenait inhabile à modifier unilatéralement la loi de manière à changer l'accord. Il y a deux raisons à cela.

[385] The conservation purposes listed in section 29(1) of *ALSA* must be examined purposively, with a consideration of the legislative intent behind the statute. As the Supreme Court of Canada recently explained in *R v ADH*, 2013 SCC 28 at para 25:

> Presumptions of legislative intent are not self-applying rules. They are instead principles of interpretation. They do not, on their own, prescribe the outcome of interpretation, but rather set out broad principles that ought to inform it. As Professor Sullivan has observed, presumptions of legislative intent, such as this one, serve as a way in which the courts recognize and incorporate important values into the legal context in which legislation is drafted and should be interpreted. These values both inform judicial understanding of legislation and play an important role in assessing competing interpretations: R. Sullivan, *Sullivan and Driedger on the Construction of Statutes* (4th ed. 2002), at p. 365.

[386] The language found in section 29(1) is directional and encompassing, not prescriptive of instances limited in number. It speaks of broad principles not narrow lists.

[387] The Defendants have not advanced any authority for the general proposition that the NCC was required to introduce expert scientific evidence in order to establish the fencing provision's satisfaction of the conservation purposes set out in *ALSA*.

[388] I disagree with what amounts to a presumption of invalidity. I disagree that *a priori* a conservation easement is unenforceable unless the grantee demonstrates with scientific evidence that the conservation easement, or the specific term of it to be enforced, *accomplishes* at least one of the statutory purposes for the legislators creating conservation easements, now set out in *ALSA*. Section 29 permits conservation easements to exist where the grantor had at least one of the stated purposes for the conservation easement. Proof of accomplishing one of those purposes, or proof of the probability of accomplishing one of those purposes, or proof of potentially or even possibly accomplishing one of those purposes is not required. The prerequisite is that the grantor had one of those purposes in mind. There will be many ways to prove such intent, most notably by inference from the wording of the conservation easement. On the face of a conservation easement it will usually be apparent whether the grantor's purposes fell within at least one of the statutory purposes.

[389] Put another way, convincing proof that adherence to a particular term of a conservation easement is actually undermining one or all of the statutory purposes would not prove the grantor did not intend the conservation easement to accomplish one of the statutory purposes.

[390] In this case, the wording of both the Initial ACA CE and, following its amendments, the CE, satisfied me that its grantor, originally the NCC, intended "(a) the protection, conservation and enhancement of the environment" where "environment" includes "living organisms". The NCC's testimony confirmed this intention.

[391] The Waterton Parties asserted the NCC failed to lead evidence demonstrating the validity of the CE's terms. I disagree. The NCC's evidence on this was not in the form of scientific evidence that the Bison Parties maintained was necessary, but Simpson addressed the NCC's

s. 23 — Criteria for determining legislative nature — Extension of time period for compliance with s. 23 — Period of temporary validity extended — Retroactivity — Manitoba Act, 1870, S.C. 1870, c. 3, s. 23.

Following the judgment of this Court in *Reference re Manitoba Language Rights*, [1985] 1 S.C.R. 721, a dispute arose among the parties concerned as to which instruments had to be translated, re-enacted, printed and published, pursuant to s. 23 of the *Manitoba Act, 1870*, in order to comply with the judgment. To solve the dispute, this Court agreed to hear new questions put forward by the parties to determine whether certain types of orders in council and documents incorporated by reference in the "Acts of the Legislature" fell within the scope of s. 23.

Held: Section 23 of the *Manitoba Act, 1870* applies to orders in council which are of a legislative nature and, under certain conditions, to documents incorporated by reference in the legislation.

(1) *Orders in Council*

The requirements of s. 23 of the *Manitoba Act, 1870* apply to orders in council which are determined to be of "a legislative nature". To make this determination, the form, content and effect of the instrument in question must be considered. The criteria indicative of a legislative nature do not operate cumulatively. An instrument may be determined to be legislative in form, though not in content, and under the criteria it would nonetheless be determined to be of a legislative nature. With respect to form, sufficient connection between the legislature and the instrument is indicative of a legislative nature. This connection is established where the instrument is, pursuant to legislation, enacted by the government, or made subject to the approval of the government. With respect to content and effect, the following are indicative of a legislative nature: the instrument embodies a rule of conduct; the instrument has the force of law; and the instrument applies to an undetermined number of persons.

Orders in council as a category do not fall within the phrase "Records and Journals" of the House in s. 23 of the *Manitoba Act, 1870*. The scope of that phrase must be limited to those documents which are actually tabled in the Legislative Assembly.

verbaux et journaux» de la Chambre dans l'art. 23? — Critères permettant de déterminer la nature législative — Prorogation du délai pour se conformer à l'art. 23 — Prorogation de la période de validité temporaire — Rétroactivité — Loi de 1870 sur le Manitoba, S.C. 1870, ch. 3, art. 23.

Par suite de l'arrêt de notre Cour *Renvoi relatif aux droits linguistiques au Manitoba*, [1985] 1 R.C.S. 721, un litige est survenu entre les parties quant à savoir quels textes devaient être traduits, adoptés de nouveau, imprimés et publiés, aux termes de l'art. 23 de la *Loi de 1870 sur le Manitoba*, pour se conformer à l'arrêt. Pour régler le litige, notre Cour a accepté d'entendre de nouvelles questions présentées par les parties pour déterminer si certains types de décrets et de documents incorporés par renvoi dans les «lois de la législature» relèvent de l'art. 23.

Arrêt: L'article 23 de la *Loi de 1870 sur le Manitoba* s'applique aux décrets qui sont de nature législative et, sous réserve de certaines conditions, aux documents incorporés par renvoi dans les «lois de la législature».

(1) *Décrets*

Les exigences de l'art. 23 de la *Loi de 1870 sur le Manitoba* s'appliquent aux décrets qui sont déterminés comme étant de «nature législative». Pour faire cette détermination, il convient d'examiner la forme, le contenu et l'effet du texte en question. Les critères indicatifs d'une nature législative ne s'appliquent pas de façon cumulative. On pourrait déterminer qu'un texte est de caractère législatif du point de vue de la forme mais pas du point de vue du contenu et déterminer néanmoins en vertu des critères que ce texte est de nature législative. En ce qui a trait à la forme, un lien suffisant entre l'Assemblée législative et le texte indique qu'il est de nature législative. Ce lien est établi lorsque le texte est adopté, en vertu de la loi, par le gouvernement, ou assujetti à l'approbation du gouvernement. En ce qui a trait au contenu et à l'effet, les éléments suivants indiquent la nature législative: le texte comprend une règle de conduite; le texte a force de loi; et le texte s'applique à un nombre indéterminé de personnes.

Les décrets en tant que catégorie ne s'inscrivent pas dans le cadre de l'expression «archives, procès-verbaux et journaux» de la Chambre dans l'art. 23 de la *Loi de 1870 sur le Manitoba*. La portée de cette expression doit être limitée aux documents qui sont réellement déposés à l'Assemblée législative.

1992 CanLII 115 (SCC)

(2) *Documents Incorporated by Reference in Legislation*

The requirements of s. 23 also apply to documents incorporated by reference in Acts of the Manitoba Legislature if the following conditions are met: (a) the primary instrument in which the document is incorporated is "a legislative instrument"; (b) the incorporation is a true incorporation in that the document is an integral part of the primary instrument as if reproduced therein; and (c) the document was generated by the Government of Manitoba. Where a document is created by the legislature or the executive or where the document requires ministerial or legislative approval to give it life, the connection between the government and the document is sufficiently strong to conclude that the document is generated by the government itself. Even where the document is generated by an outside source — for example, another government or a non-governmental body — it will still attract s. 23 obligations unless it can be shown that there was a *bona fide* purpose behind its incorporation without translation.

(3) *Extension of Time Period for Compliance*

The period of temporary validity of Acts of the Manitoba Legislature which would currently be in force were it not for their constitutional defect will be extended for a period of time to be determined by agreement between the parties. The period of temporary validity is hereby extended for three months from the date this judgment is handed down. The parties must reach an agreement with respect to the further extension of the time period within those three months,* or apply to this Court for a determination of the issue.

(4) *Retroactivity*

Instruments enacted unilingually by the Government of Manitoba between the handing down of *Reference re Manitoba Language Rights* and the handing down of this judgment, now deemed to fall within the scope of s. 23, will be rendered valid retroactively provided that compliance with s. 23 is achieved within the time period outlined above. The period of temporary validity will not, however, apply to any unilingual Acts of the Legislature enacted after the date of this judgment.

Cases Cited

Referred to: *Reference re Manitoba Language Rights*, [1985] 1 S.C.R. 721; *Attorney General of Que-*

(2) *Les documents incorporés par renvoi dans la loi*

Les exigences de l'art. 23 s'appliquent également aux documents incorporés par renvoi dans les lois de l'Assemblée législative du Manitoba si les conditions suivantes sont respectées: a) le texte primaire auquel le document est incorporé est «un texte législatif»; b) l'incorporation est une incorporation véritable, c'est-à-dire que le document fait partie intégrante du texte primaire comme s'il y était reproduit; et c) le document a été produit par le gouvernement du Manitoba. Lorsqu'un document est créé par l'Assemblée législative ou par l'exécutif ou lorsque le document exige une approbation ministérielle ou législative pour entrer en vigueur, le rapport entre le gouvernement et le document est suffisamment solide pour conclure que le document est produit par le gouvernement lui-même. Même lorsque le document émane d'une source extérieure, par exemple un autre gouvernement ou un organisme non gouvernemental, il sera encore assujetti aux exigences de l'art. 23 à moins qu'on ne puisse démontrer que son incorporation sans traduction est fondée sur un motif légitime.

(3) *Prorogation du délai pour se conformer à l'arrêt*

La période de validité temporaire des lois de l'Assemblée législative du Manitoba qui seraient actuellement en vigueur n'était-ce le vice dont elles sont entachées sur le plan constitutionnel est prorogée d'une période qui sera déterminée par accord entre les parties. La période de validité temporaire est par les présentes prorogée de trois mois à partir de la date du présent arrêt. Les parties doivent, avant l'expiration de ce délai de trois mois, parvenir à un accord sur la durée de la prorogation supplémentaire du délai* ou demander à notre Cour de rendre une décision à ce sujet.

(4) *Rétroactivité*

Les textes unilingues adoptés par le gouvernement du Manitoba entre le prononcé du *Renvoi relatif aux droits linguistiques au Manitoba* et le prononcé du présent arrêt, qui sont maintenant réputés assujettis à l'art. 23, deviendront valides rétroactivement pourvu qu'ils respectent les exigences de l'art. 23 dans le délai prévu précédemment. Toutefois, la période de validité temporaire ne s'appliquera pas aux lois unilingues de l'Assemblée législative adoptée après la date du présent arrêt.

1992 CanLII 115 (SCC)

The following is the judgment delivered by

THE COURT—

I. The Facts

On June 13, 1985, this Court issued a judgment in *Reference re Manitoba Language Rights*, [1985] 1 S.C.R. 721, which determined that the requirements of s. 133 of the *Constitution Act, 1867* and of s. 23 of the *Manitoba Act, 1870*, S.C. 1870, c. 3, with respect to the use of both the English and French languages in the Records and Journals and in the Acts of Parliament and of the Legislatures of Manitoba and Quebec are mandatory. Consequently it was held that all statutes and regulations of the province of Manitoba that were not printed and published in both English and French were invalid, but they were deemed to have temporary force and effect for the minimum period of time necessary for their translation, re-enactment, printing and publication.

The parties and interveners arrived at a consent agreement with respect to this minimum period which was given effect by this Court on November 4, 1985, [1985] 2 S.C.R. 347. The Order issued dictated that the period would continue to December 31, 1988, for "the Continuing Consolidation of the Statutes of Manitoba" and "the Regulations of Manitoba" and to December 31, 1990 for "all other laws of Manitoba" (p. 349).

The Government of Manitoba then devised a set of criteria for discerning which instruments had to be translated, re-enacted, printed and published in order to comply with this Court's judgment. Essentially, this involved a determination of whether the various instruments were considered to be "of a legislative nature".

This course of action has given rise to a dispute between the parties, the Attorney General of Manitoba and the Société franco-manitobaine ("SFM"), with respect to which types of orders in council are subject to the judgment. It is the position of the Attorney General that only those orders in council

Le jugement suivant a été rendu par

LA COUR—

I. Les faits

Le 13 juin 1985, notre Cour a rendu jugement sur le *Renvoi relatif aux droits linguistiques au Manitoba*, [1985] 1 R.C.S. 721, dans lequel elle a décidé que les exigences de l'art. 133 de la *Loi constitutionnelle de 1867* et de l'art. 23 de la *Loi de 1870 sur le Manitoba*, S.C. 1870, ch. 3, relativement à l'usage du français et de l'anglais dans les archives, procès-verbaux et journaux ainsi que dans les lois du Parlement et des législatures du Manitoba et du Québec sont impératives. Par conséquent, notre Cour a conclu que toutes les lois et tous les règlements de la province du Manitoba qui n'étaient pas imprimés et publiés en anglais et en français étaient invalides mais qu'ils étaient réputés temporairement valides et opérants pendant le délai minimum requis pour les traduire, les adopter de nouveau, les imprimer et les publier.

Les parties et les intervenants se sont entendus sur ce délai minimum auquel notre Cour a donné effet le 4 novembre 1985, [1985] 2 R.C.S. 347. Aux termes de l'ordonnance de la Cour, la période devait continuer jusqu'au 31 décembre 1988 en ce qui concerne «la Consolidation permanente des lois du Manitoba» et «les règlements du Manitoba» et jusqu'au 31 décembre 1990 en ce qui concerne «toutes les autres lois du Manitoba» (p. 349).

Le gouvernement du Manitoba a élaboré alors un ensemble de critères pour déterminer quels textes devaient être traduits, adoptés de nouveau, imprimés et publiés de manière à se conformer à l'arrêt de notre Cour. Essentiellement, il s'agissait de déterminer si les divers textes étaient «de nature législative».

Cette manière de procéder a donné lieu à un litige entre les parties, le procureur général du Manitoba et la Société franco-manitobaine («SFM»), relativement au genre de décrets visés par l'arrêt. Le procureur général est d'avis que seuls les décrets «de nature législative» sont visés

1992 CanLII 115 (SCC)

Documents Incorporated by Reference

The second aspect of this case which must be addressed relates to documents incorporated by reference in "Acts of the Legislature". The question posed is which of these documents must be translated in accordance with the terms of this Court's earlier judgment in *Reference re Manitoba Language Rights*, *supra*. Again the Attorney General of Manitoba seeks to limit the documents which are required to be translated while the SFM essentially argues that all such documents are required to be translated.

The Threshold Questions

At the outset of this inquiry two threshold questions must be answered. First, is the primary instrument in which the document is incorporated an "Act of the Legislature"? Second, what is meant by "incorporation"? It is relatively easy to answer the first question. The first portion of this judgment relating to orders in council was directed toward determining what comprises an "Act of the Legislature". If the primary instrument in which the document is incorporated is not, on the application of the above criteria, "of a legislative nature" and is not itself subject to s. 23, obviously neither is the incorporated document.

The second question requires elaboration. Some documents are simply mentioned in legislative instruments; they need not be consulted before the operation of the instrument in question can be understood. Others are "incorporated by reference" in the sense that they are an integral part of the primary instrument as if reproduced therein. It is this latter type of incorporation that can be termed "true incorporation" and that potentially attracts translation obligations under s. 23. A clear example of a true incorporation can be found in *Attorney-General of Quebec v. Collier* (1985), 23 D.L.R. (4th) 339, [1985] C.A. 559 (upheld by this Court, [1990] 2 S.C.R. 260). There it was held that unilingual session papers effectively formed the substance of two bills which had been passed in both official languages (at p. 346 D.L.R.):

Les documents incorporés par renvoi

Le deuxième point à traiter en l'espèce concerne les documents incorporés par renvoi dans les «lois de la législature». La question est de savoir lesquels, parmi ces documents, doivent être traduits conformément aux termes de l'arrêt antérieur de notre Cour dans le *Renvoi relatif aux droits linguistiques au Manitoba*, précité. Là encore, le procureur général du Manitoba cherche à limiter les documents qui doivent être traduits alors que la SFM soutient essentiellement que tous ces documents doivent être traduits.

Les questions préliminaires

Au début du présent examen, il faut répondre à deux questions préliminaires. Premièrement, le texte primaire, celui auquel le document est incorporé, est-il une «loi de la législature»? Deuxièmement, que signifie «incorporation»? Il est relativement facile de répondre à la première question. La première partie du présent arrêt, qui se rapporte aux décrets, visait à déterminer ce qui constituait une «loi de la législature». Si le texte primaire auquel le document est incorporé n'est pas, en application des critères mentionnés précédemment, «de nature législative» et n'est pas lui-même assujetti à l'art. 23, il est évident que le document incorporé ne le sera pas non plus.

La deuxième question exige des précisions. Certains documents sont simplement mentionnés dans des textes législatifs; il n'est pas nécessaire de les consulter pour comprendre le texte lui-même. D'autres sont «incorporés par renvoi» en ce sens qu'ils font partie intégrante du texte primaire comme s'ils y étaient reproduits. C'est ce dernier type d'incorporation qui peut être qualifié d'«incorporation véritable» et qui est susceptible d'entraîner des obligations en matière de traduction aux termes de l'art. 23. Un exemple clair d'incorporation véritable se trouve dans l'arrêt *Procureur général du Québec c. Collier*, [1985] C.A. 559 (confirmé par notre Cour, [1990] 1 R.C.S. 260). Cet arrêt a conclu que des documents sessionnels unilingues formaient en fait la substance de deux projets de loi qui avaient été adoptés dans les deux langues officielles (à la p. 562):

2016 BCPC 406 (CanLII)

IN THE PROVINCIAL COURT OF BRITISH COLUMBIA

(Small Claims)

BETWEEN:

JACK YI YO TSAI

CLAIMANT

AND:

ATLAS ANCHOR SYSTEMS (B.C.) LTD.

DEFENDANT

REASONS FOR JUDGMENT
OF THE
HONOURABLE JUDGE R. HARRIS

Appearing in person:	Jack Tsai
Counsel for the Defendant:	Edward L. Montague
Place of Hearing:	Vancouver, B.C.
Date of Hearing:	September 20, 21, 2016
Date of Judgment:	December 5, 2016

[25] According to Mr. D'Sa, once the claimant received his professional designation, the responsibilities of health and safety, costing, and inventory were passed to others and the claimant assumed the role of signing off on drawings and projects. Mr. D'Sa testified that the claimant was not a direct supervisor and he did not have people reporting to him.

Does the incorporation of the ESA notice provisions render the termination clause unenforceable?

[26] The claimant asserts the termination clause is not enforceable because of the reference to the *ESA*. He argues the *ESA* does not apply to engineers and therefore the defendant cannot rely on the termination clause for the calculation of what is reasonable pay in lieu of notice.

[27] The defendant responds by arguing absent unconscionability, an employment contract can, by reference, incorporate provisions of the *ESA* even if the profession involved is one that is exempted from the *ESA.*

[28] In *U.B.C.* v. *The Association of Administrative and Professional Staff on Behalf of Bill Wong,* 2016 BCCA 491, it was argued that an accountant was by profession exempted from the *ESA* and therefore the incorporation of the *ESA* notice into his collective agreement resulted in the provisions not being enforceable and therefore he was entitled to the common law period of pay in lieu of notice.

[29] In dealing with the matter the Court, agreed with the reviewing chambers judge who stated at paragraphs 34-35:

2016 BCPC 406 (CanLII)

> [34] I agree with the conclusion of the chambers judge that a plain reading of Article 9.3.1 is that the provisions of the ***ESA*** providing for notice or pay in lieu of notice are incorporated into the contract in issue. The effect is that the language of the ***ESA*** concerning notice or pay in lieu of notice is part of the contract. It is as if the draftsman included the words either in the text of or as a schedule to the contract.
>
> [35] The chambers judge described the result as "... binding the parties to such statutory provisions". Insofar as these words are merely descriptive of the text included by reference in Article 9.3.1, they are accurate, but the incorporation by reference in this case does not involve an acceptance of any part of the substantive content of the ***ESA***.

2016 BCPC 406 (CanLII)

[30] In *Brown* v. *Utopia Spas and Salons Ltd.,* 2014 BCSC 1400, the court commented specifically on the incorporation of *ESA* provisions into an employment contract and stated at paragraphs 17 - 18:

> [17] Absent unconscionability, an employer can make contracts with employees that "referentially" incorporate the minimum notice periods in the *ESA.* Such contractual notice provisions are enough to displace the presumption that the contract is terminable without cause only on reasonable notice. *Machtinger* at 1004-1005. See also: *University of British Columbia v. Wong,* 2006 BCCA 491 [*UBC*].
>
> [18] The principle of legislative interpretation which holds that material incorporated by reference into a statute or regulation becomes integral to the instrument that incorporates it applies also to contracts and other instruments: *UBC* at para. 29, citing *R. v. Sims*, 2000 BCCA 437 at para. 20; *UBC* at para. 30 citing *R. v. St. Lawrence Cement Inc.* (2002), 60 O.R. (3d) 712, 162 O.A.C. 363; *UBC* at para. 31.

[31] The above authorities are binding on this Court. As such, I conclude, the contract properly incorporated provisions from the *ESA* and that the parties agreed to be bound by these terms. Accordingly, and there being no evidence of unconscionability, I find the termination provision enforceable.

[2002] O.J. No. 3030
Docket No. C36943

2002 CanLII 45010 (ON CA)

Court of Appeal for Ontario,
Charron, Borins and Feldman JJ.A.
August 2, 2002

Evidence -- Judicial notice -- Emission Standards Guide incorporated by reference in regulation -- Regulation published in Ontario Gazette -- Regulation did not include text of Guide -- Effect of incorporation by reference was that text of Guide became part of text of regulation -- Section 5(4) of Regulations Act requiring that judicial notice be taken of regulations which have been published in Ontario Gazette -- Justice of the Peace required to take judicial notice of Guide -- Justice erring in acquitting defendant of operating vehicle that contravened emission [page713] standards on basis that Crown had not proved Guide -- Regulations Act, R.S.O. 1990, c. R.21, s. 5(4) -- Ontario Regulation 361/98.

The defendant was charged with operating a heavy diesel-fuelled motor vehicle that contravened emission standards contrary to s. 12(5) of O. Reg. 361/98 made under the Environmental Protection Act, R.S.O. 1990, c. E.19. The relevant emission standards are contained in a document entitled Drive Clean Guide (the "Guide") published by the Ministry of the Environment. The Guide is adopted and incorporated by reference in the regulation by s. 12(2) of the Regulation, and the regulation was published in the Ontario Gazette as required by s. 5(1) of the Regulations Act, although the regulation did not include the text of the Guide. At the

defendant's trial before a justice of the peace, the evidence established that its motor vehicle exceeded the emission standards in the Guide, but the justice of the peace acquitted the defendant on the basis that the Crown had not proved the Guide. The acquittal was upheld by the Ontario Court of Justice. The Crown appealed.

Held, the appeal should be allowed.

Section 5(4) of the Regulations Act provides that judicial notice is to be taken of regulations that have been published in the Ontario Gazette. The Guide was part of the regulation as it was incorporated by reference in the regulation. The effect of incorporation by reference is that the material incorporated is considered to be part of the text of the legislation. Because the text of the Guide was effectively written into s. 12(2) of the regulation by the doctrine of incorporation by reference, and because the regulation had been published in the Ontario Gazette, the Crown was not required to prove the Guide, and the justice of the peace was required to take judicial notice of it.

APPEAL from a judgment dismissing an appeal from an acquittal on a charge of operating a vehicle that contravened emission standards. [page714]

Isabelle O'Connor and Laura Nemchin, for appellant.
Neal J. Smitheman and Karyn Wasserstein, for respondent.

The judgment of the court was delivered by

[1] BORINS J.A.: -- The respondent, St. Lawrence Cement Inc., was acquitted of the offence of operating a heavy diesel-fuelled motor vehicle that contravened emission standards contrary to s. 12(5) of Ontario Regulation 361/98 made under the Environmental Protection Act, R.S.O. 1990, c. E.19 ("EPA"). The relevant emission standards are contained in a document entitled Drive Clean Guide (the "Guide") published by the Ministry of the Environment. The Guide is adopted and incorporated by reference in the regulation by s. 12(2) of the regulation. Subsections 12(4) and (5) mandate compliance with the emission standards set out in the Guide.

[2] At the respondent's trial before a justice of the peace, although the evidence established that its motor vehicle

2002 CanLII 45010 (ON CA)

(c) There was no statutory authority to adopt the Guide by reference in the regulation as required by Ainsley Financial Corp. v. Ontario Securities Commission (1994), 21 O.R. (3d) 104, 121 D.L.R. (4th) 79 (C.A.).

Analysis

[13] Although leave to appeal was granted on several grounds, as noted in para. 3, in my view the appeal turns on the issue of judicial notice.

[14] As Ontario Regulation 361/98 had been published in The Ontario Gazette as required by s. 5(1) of the Regulations Act, [page718] pursuant to s. 5(4) of the Act the justice of the peace was required to take judicial notice of the regulation. Since s. 12(4) of the regulation adopted the Guide, or incorporated it by reference, as permitted by s. 177(4) of the EPA, s. 12(4) includes the contents of the Guide just as if the text of the Guide had been written into the regulation. Not only the legislative device of incorporation by reference, but also the language of ss. 5(4)(a) and (b) of the Regulations Act, produce this result. There was, therefore, no requirement that the text of the Guide be published in The Ontario Gazette to make it subject to judicial notice. Nor was the Crown required to authenticate, or prove, the Guide through the testimony of the person, or persons, who prepared the Guide.

[15] The doctrine of judicial notice is the vehicle by which statutes and subordinate legislation are proved. At common law, judicial notice has always been taken of a public Act of Parliament or a provincial legislature. No evidence has ever been required concerning its passage through Parliament or a legislature, nor of its contents. The common law rule has been codified and is found in s. 7(1) of the Interpretation Act. A similar provision in respect to regulations published in The Ontario Gazette is in s. 5(4)(b) of the Regulations Act. There is no need to prove that a regulation has been published to rely on s. 5(4). Publication is presumed, subject to proof to the contrary. Indeed, it can be said that statutes and regulations are the everyday companions of judges and counsel

2002 CanLII 45010 (ON CA)

of common law proof by witnesses to authenticate legislation.

[17] As the justice of the peace was required to take judicial notice of the regulation, it is necessary to determine whether the Guide was part of the regulation and, as such, should have been judicially noticed. As I have indicated, although the respondent agrees that the Guide was properly adopted, and thereby incorporated by reference, in s. 12(2) of the regulation, it maintains that because its text was not published in The Ontario Gazette at the time of the regulation's publication, it had to be independently proved. I do not agree.

[18] A helpful discussion of the legislative device of incorporation by reference is to be found in F. Bennion, Statutory Interpretation, 3rd ed. (London: Butterworths, 1997) at pp. 585-91. It enables the legislative draftsman to include provisions of earlier statutes or other documents into statutes or regulations without actually reproducing the language of the statute or document. As Bennion points out, incorporation by reference is a common device of legislators in accordance with the maxim verba relata hoc maxime operantur per referentiam rit it eis inesse videntur (words to which reference is made in an instrument have the same operation as if they were inserted in the instrument referring to them). The effect of incorporation by reference is that the material incorporated is considered to be part of the text of the legislation.

[19] In a case not unlike this appeal, the British Columbia Court of Appeal held that incorporation by reference was complete without publication of the text of the incorporated documents in the Canada Gazette: R. v. Sims (2000), 148 C.C.C. (3d) 308. The court held that it was unnecessary to publish a regulatory standard incorporated by reference together with the regulation before a prosecution based on contravention of the standard could be pursued. It further held at p. 318 C.C.C. that incorporation by reference does not require that the text of the incorporated [page720] document be reproduced in the incorporating statute or regulation. See, also, Re Denison Mines Ltd. and Ontario Securities Commission (1981), 32 O.R. (2d) 469, 122 D.L.R. (3d) 98 (Div. Ct.).

2002 CanLII 45010 (ON CA)

[20] I would adopt and apply the following statement of the law of Rowles J.A. in Sims at p. 315 C.C.C.:

> When material is incorporated by reference into a statute or regulation it becomes an integral part of the incorporating instrument as if reproduced therein. In that regard, see Mainwaring v. Mainwaring, [1942] 2 D.L.R. 377 (B.C.C.A.), in which McDonald, C.J.B.C., referred to the effect of referential legislation in relation to the incorporating statute, at p. 380:
>
> > . . . Legislation by reference . . . has been consistently construed not to be ambulatory in its effect, but to incorporate the extrinsic law as at the date of the Act that is being construed, and to be unaffected by subsequent change of the law incorporated: [citations omitted.] The effect of such legislation is as though the extrinsic law referred to was written right into the Act.

(Emphasis in original)

[21] It follows, therefore, that because the text of the Guide was effectively written into s. 12(2) of the regulation by the doctrine of incorporation by reference, and because the regulation had been published in The Ontario Gazette, the Crown was not required to prove the Guide. The justice of the peace was required to take judicial notice of it. [See Note 1 at end of document] As s. 5(4)(a) of the Regulations Act provides, the publication of the regulation is proof of its text, which includes the text of the Guide. As the respondent, by the provisions of s. 5(4)(b) of the regulation is deemed to have notice of its contents, it is deemed to have notice of the contents of the Guide. Therefore, had the justice of the peace taken judicial notice of the Guide, as the evidence established that the respondent's motor vehicle exceeded the emission standards in the Guide, the justice of the peace would have been bound to register a conviction.

[22] In her factum, counsel for the Crown listed 26 statutes in which incorporation by reference has been used, as in the

highways located on Federal property within the province, *e.g.* the Defence Establishment of Camp Borden, "otherwise than in accordance with the laws of the province and the municipality".

[19] Material other than statutes may also be incorporated by reference. Examples of such material are international conventions or rules, industrial standards of construction or safety, statistical information from Statistics Canada (***Calder v. Canada (M.E.I.)***, [1980] 1 F.C. 842 (F.C.A.) at 852), and generally accepted accounting principles recommended in the Handbook of the Canadian Institute of Chartered Accountants (***Re Denison Mines Ltd. and Ontario Securities Commission***, (1981), 122 D.L.R. (3d) 98 (Ont. G.D.)).

[20] When material is incorporated by reference into a statute or regulation it becomes an integral part of the incorporating instrument as if reproduced therein. In that regard, see ***Mainwaring v. Mainwaring***, [1942] 2 D.L.R. 377 (B.C.C.A.) in which McDonald C.J.B.C. referred to the effect of referential legislation in relation to the incorporating statute, at 380:

> …Legislation by reference … has been consistently construed not to be ambulatory in its effect, but to incorporate the extrinsic law as at the date of the Act that is being construed, and to be unaffected by subsequent change of the law incorporated: [citations omitted] The effect of such legislation

2000 BCCA 437 (CanLII)

> is as though the extrinsic law referred to was written right into the Act….
>
> [Emphasis added.]

[21] In ***Reference Re Manitoba Language Rights***, [1992] 1 S.C.R. 212 at 228-231, the Supreme Court of Canada referred to the practice of incorporation by reference of standards set by a non-governmental body and held such incorporated standards valid in Manitoba without being translated. In respect of the question of whether there is a *bona fide* reason for incorporation without translation, the Court said at 229-230:

> There are a number of legitimate reasons why a legislature would choose to incorporate outside documents….
>
> Another situation where incorporation without translation is likely to be *bona fide* is one which involves the incorporation of standards set by a non-governmental standard setting body, for example, safety standards developed by a national or international body. Here it is usually legitimate for the legislature to rely on the technical expertise of such bodies. Specific examples provided to this Court in evidence included the incorporation in the Manitoba *Highway Traffic Act* of "Standards respecting motorcycle helmets" developed by the British Standards Institute and the incorporation in the *Steam and Pressure Plants Regulation* of "American National Standards Institute Safety Requirements for the Storage and Handling of Anhydrous Ammonia".

[22] While the respondents do not attack the validity of the regulation incorporating the relevant CSA standard, they nevertheless maintain that under s. 11(2) of the ***Statutory***

2020 ABQB 347 (CanLII)

I. Introduction

[1] This is a claim for the alleged breach of a Purchase and Sale Agreement (the "**PSA**"). The PSA is a detailed 100 page document that was negotiated over several months.

[2] The due diligence concerning the subject transaction commenced in October 2011. The PSA was signed on March 4, 2012 (the "**March 2012 Signing Date**" or "**March 2012 Signing**").

[3] The Plaintiffs were the purchasers under the PSA (collectively, "**NOV**"). The Defendants were the vendors under the PSA (collectively, "**Enerflow**"). The subject transaction closed on May 11, 2012 (the "**May 2012 Closing Date**" or "**May 2012 Closing**").

[4] NOV has made two primary claims under the PSA. The first claim has an accounting focus. The second claim has a quality management focus.

[5] NOV is also alleging claims for the breach of a "material adverse effect" clause (the "**MAE Representation**") and of fiduciary duty, along with claims for resource losses and warranty.

[6] The first primary claim involves a dispute concerning revenue recognition (collectively, the "**GAAP Claim**"). The GAAP Claim concerns allegations that the financial "books and records" of Enerflow were deficient, such that they breached representations and warranties made to NOV under the PSA.

[7] The second primary claim involves a dispute concerning various quality management system assertions (collectively, the "**QMS Claim**"). This claim concerns allegations that the "quality management system" ("**QMS**") of Enerflow was deficient (the "**Enerflow QMS**"), such that it breached representations and warranties made to NOV under the PSA.

II. Background

A. Business History – The Enerflow Principals

[8] Enerflow was established in 2003. The principals behind Enerflow were Mr. Williamson and Mr. Lindholm (collectively, the "**Enerflow Principals**").

[9] During the years between high school and the formation of the Enerflow business (the "**Enerflow Business**"), the Enerflow Principals gained practical experience with different employers. However, prior to establishing Enerflow neither Mr. Williamson nor Mr. Lindholm had formed or run their own business.

(A) Section 8.10 – The "Permits" and "Applicable Laws" Representation

[497] Section 8.10 of the PSA is a representation and warranty aimed at confirming: (i) that Enerflow was operating legally; (ii) that Enerflow had any necessary approvals and licenses required to carry on business; and (iii) that Enerflow was operating in compliance with the law. It also was a representation and warranty that no event had occurred that would reasonably be expected to constitute a violation of a law, and that no authority had issued a notice of a potential violation or failure to comply with the law.

[498] NOV alleges Enerflow breached section 8.10 of the PSA on two footings. First, NOV contends Enerflow breached the representation that the Enerflow Business had been conducted, and was being conducted, in accordance with the API Permits. Second, NOV argues Enerflow breached the representation that "the API Permits were in good standing".

(1) First Argument – Applicable Law Issue

[499] Concerning the first argument advanced by NOV, I take a different view of section 8.10 of the PSA. The provision is directed at ratifying that Enerflow was operating within the "Applicable Laws", and that it is not in breach of any provision of "Applicable Law". In that context, the purpose of section 8.10 of the PSA is to provide NOV with comfort that Enerflow had the necessary approvals and licenses required to carry on its operations, and was conducting in compliance with the "law".

[500] The definition of "Applicable Law" is constrained to matters that have the "effect of law". To address the substantive argument advanced by NOV, it is necessary to consider the definition of "law", and then to consider that term in the context of the phrase "the effect of law".

[501] Before I consider the definition of "law", I first address the relationship between API and Enerflow. That relationship was established by a contract. Enerflow had no obligation to engage with API. It elected to do so because it wanted to accommodate a customer of its Rig Business.

[502] API and Enerflow were both entitled to agree to whatever terms and conditions suited them, and they did so. The underlying agreement between API and Enerflow created a contractual framework between the parties.

[503] A contractual framework does not constitute a "law", although is does establish legal relationships that can be enforced. A "law" is a rule that is established by a lawmaking arm of a body politic.

[504] API is not a body politic. On cross-examination, Mr. Durante agreed with this when he confirmed API was a private entity; and not a government body. As such, API cannot make laws. The most API can do is establish a rule that it can include in, and enforce under, the terms of a contract. A rule established by API is a private direction, which is not a "law" in the classical sense.

[505] In making this determination, I acknowledge there are circumstances were a body politic elevates a direction or policy to the status of a law or regulation. An example of this is the Transport Canada Certificates of Registration, which are listed on line 6 of Schedule 3.1(h) to the Final Enerflow Disclosure Letter. The related *Transportation of Dangerous Goods Regulation*

2020 ABQB 347 (CanLII)

incorporates by reference various Canadian Standards Association standards, thereby giving them the force of law[6].

[506] In contrast, there is no evidence the API Permits were ever elevated to the status of a law. To the contrary, Mr. Logan testified the API Permits were of a voluntary nature. The testimony of Mr. Logan on this point is consistent with the evidence of Mr. Durante. In particular, the Durante February 2017 Expert Report stated the API program requirements and obligations, "...are enforced through a legal agreement between API and the Licensee." Again, a contract between parties establishes legal relationships, but such relationships are not "laws".

[507] Further, my determination that the API Permit is voluntary is supported by another statement made in the Durante February 2017 Expert Report. That statement is that "[t]he API Monogram program is a voluntary licensing program designed to facilitate the consistent manufacturing of product that conforms to API standards." Again, that statement is consistent with my finding above that the API Permits do not equate to a "law". It therefore follows that the API Permits cannot have the "effect of law".

[508] Given the evidence and analysis, I find that policies, directives and rules which API included in its agreements with Enerflow do not have the "effect of law" for purposes of section 8.10 of the PSA. In making this finding, I draw a distinction between: (i) legislation that is enacted by a body politic, which has "the effect the law"; and (ii) a contractual provision negotiated between two parties, which establishes legal rights and obligations. As a result, the API standards do not constitute an "Applicable Law" as that phrase is defined in section 1.1 of the PSA.

[509] Consequently, I find NOV has not established that Enerflow has not met the "Applicable Law" standard in section 8.10 of the PSA.

(2) Second Argument – Good Standing Issue

[510] Concerning the second argument advanced by NOV, I again take a different view of section 8.10 of the PSA. As I read the provision, the term "Permit" in the context of the "good standing" issue must be construed by reference to the phrase "*necessary* to carry on the Purchased Business" (emphasis added).

[511] In my view, the "ordinary and grammatical meaning" of the phrase "necessary to carry on the Purchased Business" directs that the only Permits necessary to operate a business are those the law requires. That is consistent with a reading of section 8.10 as whole, which is aimed at making sure the Purchased Business complies with the law. This interpretation is supported by the fact the API and Enerflow relationship is based on a contract, which is a voluntary affiliation.

[512] In making the above findings, I am cognizant of the NOV argument that the contract with ElementCo required the API 4F Monogram on a rig unit that was being constructed for that client. I disagree with the NOV argument on this point for two reasons.

[513] First, while that may have been a contractual requirement between Enerflow and ElementCo, that single requirement was not "necessary to carry on the Purchased Business". To the extent the obligation existed, it was only a requirement to carry out that one contract.

2006 BCCA 491 (CanLII)

para. 34; Herbert Broom, *A Selection of Legal Maxims,* 10th Edition (London: Sweet & Maxwell, 1939) at 485).

[29] He combines this concept with principles concerning incorporation by reference and refers to ***R. v. Sims*** (2000), 140 B.C.A.C. 311, 2000 BCCA 437 at para. 20:

> When material is incorporated by reference into a statute or regulation it becomes an integral part of the incorporating instrument as if reproduced therein.

[30] The appellant also relies on the decision of the Ontario Court of Appeal in ***R. v. St. Lawrence Cement Inc.*** (2002), 60 O.R. (3d) 712, 162 O.A.C. 363. The Court's comments at para. 18 of this case are particularly apt for the consideration of the contract in issue in the instant case:

> [Incorporation by reference] enables the legislative draftsman to include provisions of earlier statutes or other documents into statutes or regulations without actually reproducing the language of the statute or document . . . words to which reference is made in an instrument have the same operation as if they were inserted in the instrument referring to them . . .The effect of incorporation by reference is that the material incorporated is considered to be part of the text of the legislation.

[31] Although these comments deal with legislation, they are equally applicable to contracts and other instruments.

[32] The Supreme Court of Canada addressed the concept in the employment law context in ***Machtinger v. HOJ Industries Ltd.***, [1992] 1 S.C.R. 986 at 1004 -1005, 91 D.L.R. (4th) 491, as follows:

[Indexed as: R. v. Blackbird]

64 O.R. (3d) 385
[2003] O.J. No. 1102

Ontario Court of Justice
Hornblower J.
March 31, 2003

Environmental law -- Offences -- Applicants engaging in activities on reserve lands which resulted in charges being laid under Migratory Birds Convention Act -- Band council had passed valid by-law under authority of s. 81 of Indian Act relating to preservation, protection and management of fish and game on Reserve lands -- Band council also establishing mechanism to enforce by-law -- By-law constituting comprehensive regulatory scheme for protection, preservation and management of game -- Act and by-law not co-existing so that Act was applicable to extent that it was not inconsistent with by-law -- By-law ousting operation of Act on reserve lands -- Charges under Act quashed -- Indian Act, R.S.C. 1985, c. I-5, s. 81 -- Migratory Birds Convention Act, 1994, S.C. 1994, c. 22 -- Walpole Island First Nation By-law No. 5.

The applicants were charged with offences under the Migratory Birds Convention Act, 1994 as a result of certain activities which they engaged in as outfitters and guides for hunting excursions carried out on reserve lands. The lands in question were subject to the Indian Act. In 1955, acting under the authority of s. 81 of that Act, the Band council had passed By-law No. 5, providing for the preservation, protection and management of fish and game on the reserve. The by-law was properly enacted and was in full force and effect when the offences were allegedly committed by the applicants. The Band

2003 CanLII 72340 (ON SC)

council also established a mechanism to enforce the by-law. The applicants brought an application to quash the charges on the grounds that the Migratory Birds Convention Act did not apply to the reserve lands because of the enactment of the by-law.

Held, the application should be granted.

Section 81 of the Indian Act empowers a Band council to make by-laws for "[t]he preservation, protection and the management of fur bearing animals, fish and other game on the Reserve". By-law No. 5 was a comprehensive regulatory scheme which demonstrated a sufficient intent to cover the field exclusively and oust the jurisdiction of the Migratory Birds Convention Act. The two schemes did not co-exist, so that the Act was applicable to the extent that it did not conflict with the by-law. Accordingly, the by-law was not a mere defence to charges under the Act.

R. v. Baker, [1983] 4 C.N.L.R. 73 (B.C. Co. Ct.); R. v. Francis, [1988] 1 S.C.R. 1025, 85 N.B.R. (2d) 243, 51 D.L.R. (4th) 418, 85 N.R. 3, 217 A.P.R. 243, 41 C.C.C. (3d) 217, 5 M.V.R. (2d) 268; R. v. 2003 CanLII 72340 (ON SC)

APPLICATION to quash charges under the Migratory Birds Convention Act, 1994, S.C. 1994, c. 22.

J. McNair, for respondents.
D.F. Dawson and J.C. Peters, for applicant.

HORNBLOWER J.: --

This application seeks to have charges laid against the applicants under the Migratory Birds Convention Act, 1994, S.C. 1994, c. 22 and its regulations quashed. It is the applicant's position that if the actions which give rise to these charges are contrary to any law, it can only be the Walpole Island First Nation By-law No. 5. By virtue of the enactment of that law, the Migratory Birds Convention Act, which would otherwise apply, does not apply on the Walpole Island First Nations lands. The respondent, on the other hand, argues that the Migratory Birds Convention Act is a law of general application, which applies to Indian reserve lands, notwithstanding the regulatory powers of the Band Council.

The essential facts are not in dispute. As a result of an investigation carried out by officers of the Canadian Wild Life Service, the applicants were charged with violations under the Migratory Birds Convention Act. The applicants were all engaged as outfitters or guides for hunting excursions carried out on the reserve. It is alleged that the conduct of the applicants was contrary to the Act and its regulations and thus constitutes offences under the Migratory Birds Convention Act. The conduct in question includes unlawful possession of Canada geese, aiding others to kill migratory birds in excess of daily bag limits, depositing bait for migratory birds, possessing untagged carcasses of migratory birds belonging to or killed by other persons, failing to mak[e] reasonable efforts to retrieve crippled or injured migratory birds, aiding others to hunt before or after the time permitted by the [page387] regulations under the Migratory Birds Convention Act, hunting with shotguns

2003 CanLII 72340 (ON SC)

date when the offences are alleged to have occurred.

It is the applicant's position that By-law No. 5 is a comprehensive code for the protection, preservation and management of ducks and other game. The by-law adopts certain other regulatory provisions as part of the by-law, by reference to those provisions. It is as if those regulations have been specifically set out word for word in the by-law. As it relates to ducks, it is the regulation for the Province of Ontario made under the authority of the Migratory Birds Convention Act that have been adopted and apply. For game other than ducks, the regulations made under the Ontario Game Act have been adopted and apply.

It should be noted that in 1955, there was not an Act known as the Ontario Game Act. The legislation that existed at that time was known as the Game and Fisheries Act. I am satisfied however that it was the Game and Fisheries Act that was adopted by reference in By-law No. 5, notwithstanding the improper reference to the name of the Statute.

The adoption by reference of those provisions of the Ontario Game Act (The Game and Fisheries Act) for game, and the regulations under the Migratory Birds Convention Act for ducks, was static as opposed to ambulatory. In other words, it was the legislation as it stood at the time it was adopted that was incorporated into the by-law. Subsequent revisions or amendments to either the Migratory Birds Convention Act or the Ontario Game Act (the Game and Fisheries Act) or any regulations passed under either of them, were not adopted into the by-law. The only way [page389] for the by-law to change was by an amendment to the by-law either by the Minister, or the Band Council.

It is the respondent's position that the by-law is not a comprehensive scheme. The following reasons are put forward for this proposition: the by-law only partly adopts the Migratory Birds Convention Act; and while for other game the Game and Fisheries Act is adopted, neither Act nor its regulations establishes open season, bag limits or possession limits for migratory birds. Not only does this create a gap in the scheme,

On appeal from the judgment of Justice Douglas M. Belch of the Superior Court of Justice, sitting with a jury, dated November 25, 2015, with reasons reported at 2015 ONSC 6799 and at 2015 ONSC 7373, and the costs judgment by the same judge dated December 23, 2015, with reasons reported at 2015 ONSC 7373.

2017 ONCA 717 (CanLII)

MacFarland J.A.:

[1] These appeals arise from the judgment of Justice Douglas M. Belch of the Superior Court of Justice, dated November 25, 2015, sitting with a jury, and, if leave be granted, from the accompanying costs judgment dated December 23, 2015. They were heard together with the appeal in *El-Khodr v. Lackie*, 2017 ONCA 716 because these cases raise common issues regarding the regime in Part VI of the *Insurance Act*, R.S.O. 1990, c. I.8 for the treatment of statutory accident benefits ("SABs") in the calculation of damages arising from motor vehicle accidents. They also raise a common issue regarding the applicable rate of prejudgment interest under the *Courts of Justice Act*, R.S.O. 1990, c. C.43. The reasons for judgment in this appeal are being released concurrently with the reasons for judgment in *El-Khodr*.

[2] In the *Cobb* appeals, because separate appeals were instituted by the parties, I propose to refer to them as "the plaintiffs" and "the defendant" in order to avoid any confusion that might arise from referring to each party according to

(b) Section 59 of the Legislation Act, 2006

[117] Section 59 deals with the question of whether the reference to a regulation in a statute is meant to be interpreted in a static fashion, meaning that it is interpreted as it exists at a particular time:

> **59** (1) A reference in an Act or regulation to a provision of another Act or regulation is a reference to the provision,
>
> (a) as amended, re-enacted or remade; or
>
> (b) as changed under Part V (Change Powers).
>
> (2) Subsection (1) applies whether the provision is amended, re-enacted, remade or changed under Part V before or after the commencement of the provision containing the reference.
>
> (3) If the provision referred to is repealed or revoked, without being replaced,
>
> (a) the repealed or revoked provision continues to have effect, but only to the extent that is necessary to give effect to the Act or regulation that contains the reference; and
>
> (b) the reference is to the provision as it read immediately before the repeal or revocation.

[118] Thus, absent persuasive evidence of a legislative intention to apply the version of a regulation in force at a specific date, s. 59 ensures application of the current version of a regulation to which a statutory provision refers. This kind of incorporation of other legislation by reference is a "rolling" or "ambulatory" reference, as opposed to a "static" or "fixed" reference, which incorporates a piece of legislation as it existed at a particular time, with that incorporation

2017 ONCA 717 (CanLII)

persisting even after amendment or repeal of the referenced legislation: John Mark Keyes, *Executive Legislation*, 2nd ed. (Markham: LexisNexis Canada Inc., 2010), at pp. 455-456.

[119] Given the direction in s. 59, the interpretation of the regulation at issue must start from the premise that the regulation that is intended to apply to any given case is the regulation that is in force from time to time and not the version of the regulation that was in force at the date of the accident. This premise supports a conclusion that the amount specified in the 2015 amendment to s. 5.1 of the *Court Proceedings* Regulation is the statutory deductible that applies in this case.

(c) The legislature authorized retrospective application of the regulation

[120] On my reading, the language of the relevant provisions of the *Insurance Act* and of the 2015 amendment to the *Court Proceedings* Regulation corresponds with the application of the rolling incorporation rule because these provisions indicate that the 2015 amendment was intended to apply to accidents that occurred both before and after the date of its promulgation. One must interpret s. 267.5(7)3(i) in the broader context of related provisions in the *Insurance Act* that prescribe how the statutory scheme for deduction from non-pecuniary damage awards in automobile accident cases operates.

2017 ONCA 717 (CanLII)

MAINWARING v. MAINWARING

B.C.
C.A.
1942.

British Columbia Court of Appeal, McDonald C.J.B.C., Sloan and O'Halloran JJ.A. March 3, 1942.

1942 CanLII 248 (BC CA)

F. S. Cunliffe, for appellant.

A. M. Whiteside, K.C., for respondent.

McDONALD C.J.B.C.:—This is an action by a wife who sets up desertion, and sues for alimony under O. 70a, r. 1 of the *Supreme Court Rules*. This Rule reads as follows:

"1. Alimony may be recovered in an action brought and prosecuted in the ordinary manner:—

"(*a*) By any wife who would be entitled to alimony by the law of England or of this Province; or

"(*b*) By any wife who would be entitled by the law of England or of this Province to a divorce, and to alimony as incident thereto; or

"(*c*) By any wife whose husband lives separate from her without any sufficient cause, and under circumstances which would entitle her, by the law of England, to a decree for restitution of conjugal rights; and alimony, when decreed or adjudged, shall continue until the further order of the Court."

The provisions of this Rule are copied from an Ontario statute, except that the opening words of the statute were: "The High Court shall have jurisdiction to grant alimony to any wife . . . ." and the statute makes no reference to the law "of this Province", but only to the law of England. This statute was passed when Ontario had neither divorce laws nor divorce Courts. Why it was thought desirable to reproduce it in this Province, where the English *Matrimonial Causes Act* of 1857 [c. 85] has been in force since 1858, is not easy to see. The Order first appears in the Rules of 1890, and I feel no doubt that originally it was *ultra vires,* as an attempt to legislate by

B.C.
C.A.
1942.
MAIN-WARING. v. MAIN-WARING
McDonald C.J.B.C.

Order in Council on substantive rights under the guise of regulating procedure. However, I shall assume (without deciding) that the order is now law, being either validated by statute that confirmed the *Supreme Court Rules* of 1890, or at any rate, put beyond our power to question by this Court's decision in *Rousseau* v. *Rousseau,* [1920] 3 W.W.R. 384. However, assuming O. 70a, r. 1 to be valid, I find it no small task to discover its meaning. Though it has been copied by several provincial Legislatures, it would be hard to find a more embarrassing piece of legislation. It strikingly demonstrates how unwise it is to copy what another Province has evolved, without enquiring into the reasons for it. Actually, however, though the language in all the legislation is nearly the same, our Province has gone farther than the others in an important respect that I shall examine later.

I first point out some of the anomalies which that Rule 1 creates. The intention obviously is that a wife shall issue a writ and obtain alimony by invoking the common law jurisdiction instead of the matrimonial jurisdiction of the Supreme Court. How this is to be worked consistently with principle, is hard to see. Alimony cannot very well be awarded in lump sums; it calls for periodic payments. But judgments for payment *in futuro* are unknown to common law jurisdiction; and if a judgment is once given for specified sums, how is a common law Court to vary it when the husband's means change? Somewhat similar difficulty was felt in *Dorey* v. *Dorey* (1912), 9 D.L.R. 150, 46 N.S.R. 469, under the same legislation in Nova Scotia, and in *Severn* v. *Severn* (1852), 3 Gr. 431, in Ontario.

In Ontario, however, the anomalies were never as serious. There from the creation of the Court of Chancery in 1837, statute (7 Wm. 4, c. 2, s. 3) gave it all alimony jurisdiction "possessed by any Ecclesiastical or other Court in England". The ecclesiastical Courts did not decree alimony for desertion but enforced restitution of conjugal rights in other ways. The English *Matrimonial Causes Act* of 1857 for the first time enabled an English Court to award alimony for desertion. Presumably as a result, the Legislature of Upper Canada in the same year enacted that the Chancery might give alimony in those cases now included in our R. 1(*c*). The Consolidated Statutes of Upper Canada 1859, c. 12, s. 29 "*An Act respecting the Court of Chancery*", expanded the previous sections so that they read the same as our R. 1, with the variations already noted. These provisions were carried on in the various revisions down to recent times.

The obvious difference however, between the Ontario legisla-

1942 CanLII 248 (BC CA)

tion and our own O. 70a, r. 1 is that the former gave the power to award alimony with all the powers of the ecclesiastical Courts, so that it could readily assimilate its machinery to that in matrimonial causes without incongruity. In our own Province, the inference from the passing of Order 70a *at all* is that the Court is to proceed apart from its divorce and matrimonial jurisdiction, but at the same time is given no apt machinery for the purpose. In the North West Territories the same difficulty was felt, as shown in *Harris* v. *Harris* (1896), 3 Terr. L.R. 416, and *Holmes* v. *Holmes,* [1923] 1 D.L.R. 294, 16 S.L.R. 390. There, however, the anomaly was less, because the Court did not also have a divorce jurisdiction existing side by side with this new alimony jurisdiction. As it was, the Courts hacked their way through the difficulties rather than solved them.

I assume therefore that we must likewise manufacture machinery to make O. 70a workable, though it is not only embarrassing and anomalous, but entirely unnecessary in this Province, even if the *Deserted Wives' Maintenance Act,* R.S.B.C. 1936, c. 73, did not offer a third alternative remedy.

The ineptitude of O. 70a, r. 1 becomes the more obvious when we pass from making it workable to finding what field it covers. In all the Provinces where statutes similar to r. 1(*a*) are in force, their meaning has caused difficulty. A common law action for alimony is unknown in England, and it can only be obtained by petition in a matrimonial cause, a deserted wife's remedy at common law being to pledge her husband's credit as agent of necessity. But in order to give sub-clause (*a*) some effect the Courts have decided that it applies where the wife has grounds upon which in England she could file a petition and obtain alimony.

One obvious objection to this construction is that it renders sub-clauses (*b*) and (*c*) meaningless and superfluous, and there is really no getting over the objection; it simply has to be ignored. In Ontario, indeed, where sub-clause (*c*) came from, there was some sort of reason for it, since it was first inserted in 1857, as seen above, to include a remedy newly created in England that year, and hence not included in a previous general reference to English jurisdiction. But that reason is entirely lacking in this Province, where apparently sub-clause (*c*) is meaningless tautology, adding nothing to sub-clause (*a*).

That, however, is not all. Our Legislature, as I think unfortunately, has added to the difficulties, which the Courts of other Provinces found formidable enough, by adding an alternative in sub-clause (*a*) not found in other legislation. Thus, here,

1942 CanLII 248 (BC CA)

MAIN-WARING. v. MAIN-WARING.
McDonald C.J.B.C.

any wife is to be able to sue "who would be entitled to alimony by the law of England *or of this Province.*" The reference to the law of this Province must be to the *Matrimonial Causes Act* 1857, which is copied into our own statutes. I do not see what other meaning can be assigned to the words. Other Provinces which passed similar legislation had no provincial divorce law to refer to, and had perforce to go to the law of England. Without observing this radical difference, we copied the other Provinces. But what is the result? Where other Provinces have something like certainty, we have an alternative, and the most startling consequences are inherent in that alternative. Before examining them, I must touch on an ancillary point. There has been some argument as to whether "the law of England" means that law as at the date when O.70a became effective, or whatever may be the law of England from time to time. Diverse opinions on this point were expressed in *O'Leary* v. *O'Leary*, [1923] 1 D.L.R. 949, 19 A.L.R. 224; but I cannot feel that there is real doubt. Legislation by reference in this same way has often been the subject of decision, and it has been consistently construed not to be ambulatory in its effect, but to incorporate the extrinsic law as at the date of the Act that is being construed, and to be unaffected by subsequent change of the law incorporated: see *e.g.*, *Reg.* v. *Merionethshire*, 6 Q.B. 343, 115 E.R. 132; *Reg.* v. *Smith* (1873), L.R. 8 Q.B. 146; *Clarke* v. *Bradlaugh* (1881), 8 Q.B.D. 63 at p. 69; *Kilgour* v. *London Street R. Co.* (1914), 19 D.L.R. 827 at pp. 828-9, 30 O.L.R. 603 at p. 606. The effect of such legislation is as though the extrinsic law referred to was written right into the Act; *Re Wood's Estate, Ex p. Her Majesty's Com'rs of Wks & Bldgs* (1886), 31 Ch. D. 607 at p. 615. Order 70a thus refers to the law of England as at the date when O.70a became law. Here I may refer to *Cumpson* v. *Cumpson*, [1934], 1 D.L.R. 461, O.R. 60, *per* Riddell J.A. For our purposes, though the exact date does not seem to be material, I think this should be taken as 1893, the date as of which the Rules of 1890 were confirmed by the *Supreme Court Amendment Act* 1896 (B.C.), c. 14, s. 21.

Order 70a, r. 1 therefore allows a wife to sue for alimony who could petition for it either in England or in this Province, according to the law of 1893. Since the law here is that of the Act of 1857, but that law was considerably changed in England by the Imperial Act of 1884 [c. 68] and rules passed thereunder, some very anomalous situations could obviously arise. A wife whom we would refuse alimony under our divorce jurisdiction, could ignore our divorce law and claim under English law, and presumably she could do this even after her petition had been

1942 CanLII 248 (BC CA)

dismissed. On the other hand, if she had been deserted less than two years, so that an action must be based on her right to restitution of conjugal rights, then, according to sub-clause (*c*) of this rule of ours, she could only invoke the law of England, and a more favourable law prevailing under our divorce jurisdiction would avail her nothing.

It was argued for the appellant that the wife could only succeed by showing her right to restitution of conjugal rights. If that were so, there would be little difficulty in this case. Under the English Act of 1884 and rules passed thereunder, a formal request for resumption of cohabitation was made a condition precedent to claiming restitution. No such request was made here. Moreover, it is a further condition of granting restitution, certainly under the English law of 1893, and I think even under the Act of 1857, that the petitioner must satisfy the Court of her sincere desire to resume cohabitation. It would be grotesque to suggest that the evidence here showed any such desire; the respondent's letters state emphatically, again and again, that she does not want to live with her husband, and also express violent hatred for him.

If, then, her claim for alimony was based on her right to restitution of conjugal rights, it would be easily met. However, the decisions indicate that she need not base her claim so; the desertion has lasted more than two years, and if it was without cause she would be entitled to a judicial separation with alimony, which would be sufficient to bring her under R. 1(*a*), without any need to invoke (*c*).

This brings before us squarely the question whether the evidence shows the husband's desertion to have been without cause. I have read the evidence through carefully more than once, and each perusal has satisfied me that he had ample cause for leaving the respondent. Throughout, her evidence strikes me as that of an untrustworthy witness, evasive and prevaricating. The husband's evidence seems to me infinitely more truthful; moreover, any corroboration that is to be found is in his favour.

Descending to particulars, I refer to the wife's evidence found at p. 27 of the appeal book, stating that her husband had kicked her in the stomach while she was pregnant, probably causing her later miscarriage. The statement that she did not know whether he did it accidentally or not, the fact that this alleged assault was never made the basis for a charge of cruelty, but simply dragged in casually, make the evidence incredible to me: I think it must be looked on as "propaganda" evidence. However, its only bearing is on her credibility. Considerably

1942 CanLII 248 (BC CA)

MAIN-WARING v. MAIN-WARING.
McDonald C.J.B.C.

more importance attaches to her evidence on her husband's relations with other women, as I think it clear that this touches the main source of the matrimonial troubles. Even taking the wife's evidence alone, I would find it quite unconvincing. According to her, the husband for years was consistently running around with other women, or another woman; he had brought a woman up from Vancouver to Calgary to play about with, a suggestion that I think is not meant to stop short of a charge of adultery. All this is supposed to have gone on, while, by her own evidence, her husband was in poor health, and most of the time on relief. There is not the slightest attempt to identify any woman, in spite of the fact that the wife all the time was watching and following the husband; and the only evidence that is even reasonably concrete is that she saw the woman twice at a distance of about half a block. Against all this we have not only the husband's complete denials; we have the significant and uncontradicted evidence of his brother that the wife eventually admitted to him that her ideas of other women were "most likely hallucinations". I think that very well describes them.

The defence set up is one of cruelty, consisting of persistent nagging, quarrelling and false charges of infidelity carried to the husband's friends and employers, which reached such a pitch that it endangered the husband's health. I think this defence was substantially made out.

According to the husband's uncontradicted evidence the wife made an accusation to his employer in Calgary that the husband was running around with the telephone operator at the office. The employer investigated and satisfied himself the charge was baseless, later intervening to convince the wife. According to the appellant, when he left Calgary for Vancouver it was because she had made his life unbearable in Calgary. Almost as soon as they reached Vancouver she accused him of having brought his "lady friend" to the Coast, her basis being "the expression on his face".

She later went to his employers in Vancouver and made enquiries as to whether he was meeting another woman at the plant. She insisted on escorting him to and from work for the purpose of preventing meetings with his supposed paramours. Her jealousy of him seems to have become such an obsession that his fidelity, or want of same, became the continual topic, "all day and every day".

None of this evidence of what the husband was subjected to is contradicted; the wife's attitude seems to be simply that her jealousy was justified. This is made clear by her counsel's line of cross-examination when the husband was on the witness

1942 CanLII 248 (BC CA)

stand. Strong efforts were made to make him admit that he had got some girl into trouble in Vancouver and brought her to Calgary. So that there can be no doubt that her accusations against her husband were not mere accusations of philandering, but of adultery. Judging by the line her counsel takes, after eight years of separation, and from the coarse, indecent and violent vituperation contained in her letters, the types of accusation and abuse that the husband must have had to endure are not hard to imagine. Not many men could have stood it, and I have not the least difficulty in believing that it could break down the appellant's health.

The agreement (ex. 3) by which the husband agreed without consideration, to turn over to his wife all his wages for the next 12 years, seems to me rather significant. I cannot imagine any man signing such an agreement except under strong pressure as indeed both parties agree that he was; and it furnishes strong evidence of who was the dominant personality. The husband's evidence that his health was broken by his wife's persecution does not rest on his own evidence; it is corroborated, at least as to the result, by his brother, and even by the wife herself. In Appeal Book, pp. 39, 40 she gave her account of her husband's disappearance. She was asked about his physical condition at the time and said: "He was very jittery. He looked to me as though he was pretty ill; sometimes I was scared he would have a nervous breakdown."

The questions leading up to that answer carried the implication that the husband's condition was due to the constant quarrelling, and there was nothing said by her to rebut the implication. I infer that the wife herself would have admitted that, but said he brought the quarrels on himself by his conduct. I do not think that he did.

The learned trial Judge [[1941] 4 D.L.R. 324] seems to have disregarded the evidence on the husband's health because it was not given by a doctor. With respect, I do not think that was a good reason. Nothing, unfortunately, is commoner than for people to be seriously ill and to die without medical attention, and I think it would be impossible to hold that lay evidence on such matters would not be admissible. If the husband had been shown to have had a doctor whom he failed to call as witness, it would have been a matter for comment, though here I think adverse comment would have been completely met by the wife's own evidence. Here it is not shown that he ever had a doctor, but that does not say that he was not seriously ill; I think the evidence establishes that he was, and sufficiently establishes that it was due to persistent persecution from his

C.A.

1942.

MAIN-WARING v. MAIN-WARING.

O'Halloran J.A.

wife. I think things reached the stage where it was impossible for him to live with her.

There is some authority for saying that a spouse may resist a legal separation on grounds that would not enable him to obtain one himself. This apparent anomaly is explained by Lord Herschell in *Mackenzie* v. *Mackenzie,* [1895] A.C. 384 at pp. 389 and 390, though he is there referring to restitution of conjugal rights and not to judicial separation.

Here, however, the question does not really arise, because I think the husband has shown legal cruelty by the wife, within the definition of *Russell* v. *Russell,* [1897] A.C. 395, misconduct sufficient to endanger his health.

It is unusual for us to reverse a trial Judge's findings in a case of this kind; but I think we must do so here. It follows that I would allow the appeal and reverse the judgment entered below.

SLOAN J.A.:—I agree with the Chief Justice.

O'HALLORAN J.A.:—The amendment of the *Court Rules of Practice Act* [R.S.B.C. 1936, c. 249] at the last session of the Provincial Legislature has supplied the statutory authority to support O. 70a and has made it retroactive as well.

With due respect to the learned Judge who made the order now complained of, I take the same view of the evidence as my Lord the Chief Justice. The respondent's behaviour to her husband was so persistently and intentionally unreasonable that his health was undermined, he lost one good position after another, and it became impossible for him to live with her any longer.

I agree in allowing the appeal.

Appeal allowed.

p. 582.

dge (1881-82), 8 Q.B.D. 119.

But, as we have seen,[55] the courts will correct what may be called a draftsman's error. Thus, in *The Queen* v. *Wilcock*[56] a statute repealed a statute that was described by its title and having been passed in the thirteenth year of Geo. 3; there was no Act so entitled in the statutes of 13 Geo. 3, but there was one in 17 Geo. 3. Lord Denmon C.J. said:

> "A mistake has been committed by the Legislature; but, having regard to the subject matter, and looking to the mere contents of the Act itself, we cannot doubt that the intention was to repeal the 17 Geo. 3, and that the incorrect year must be rejected."

A mistake of fact or of law in a recital, however, is not conclusive, and a court is at liberty to consider the fact or the law to be different from the statement in the recital.[57]

LEGISLATION BY REFERENCE

Where the provisions of one statute are incorporated in another by reference and the earlier statute is afterwards repealed, the provisions so incorporated continue in force so far as they form part of the second enactment.[58]

Where a single section of one Act is incorporated in another "it must be read in the sense which it bore in the original Act in order to ascertain what the section meant, though those other sections are not incorporated in the new Act".[59] But an exception or proviso not incorporated cannot be referred to.[60]

v.
ALBERT.

Ewing J.A.

1943 CanLII 243 (AB CA)

J. A. Harry Millican, for appellant.
I. F. Fitch, K.C., for respondent.
The judgment of the Court was delivered by

EWING J.A.:—This is an action by the plaintiff appellant who was tenant of a room in a house in Calgary, against her landlord, the respondent herein, for damages for unlawful ejection.

For some years prior to January 18, 1941, the appellant occupied the said room as a monthly tenant and when the house was purchased by the respondent in January 1940 she continued as tenant on the same basis.

On November 6, 1940, the respondent served notice on the appellant to give up possession of the premises at the end of December 1940. Some question arose as to whether the receipt given by the respondent for the December rent did not extend the appellant's term to include January 1, 1941, but in the view I have taken of another issue in the case it is not necessary to consider that question. The respondent then demanded $13.50 as rent for the month of November and $15 for the month of December, both of which amounts the appellant paid without demur. After receipt of the notice to quit the appellant tried to get other premises but was unable to do so. She remained on until January 18, 1941. On the evening of that day she went out on an errand, locking her door as she went out. While she was away the respondent effected an entry into the room and removed all the appellant's furniture into the hall, took off the door of the room, took down the stove, disconnected the lights, thereby rendering the room uninhabitable. The appellant had great difficulty in getting a room for the

night but finally secured a room in a hotel for the night. The next day she was taken to the hospital.

The learned trial Judge denounced the respondent's conduct in scathing terms but thought reluctantly that he was unable as a matter of law, to afford the appellant any relief. The action was therefore dismissed but without costs.

One of the claims set up by the appellant is that she was dispossessed contrary to the then existing regulations governing rentals and housing accommodation. The first order promulgated, which is material to this case, is Order No. 7 [74 Can. Gaz., p. 1186] which became effective on October 1, 1940. This order dealt with maximum rentals. Section 1(*a*) of the order defined "Housing accommodation" as follows:

"1. For the purposes of this Order,

"(*a*) 'Housing accommodation' means any furnished or unfurnished house, apartment, flat, room, or dwelling, designed or used for residential purposes, together with all appurtenances thereto and such heating, lighting, water, garage and other services, equipment or facilities as are supplied by the landlord."

Order No. 7 provided certain machinery for fixing maximum rentals and further provided that until further notice, the order should apply only to the municipalities named in the order. Neither Calgary nor any other municipality in Alberta was named in the order at the time it was made, but on December 7, 1940 the order was, by Order No. 21, [74 Can. Gaz., p. 2066] made applicable to the City of Calgary.

On November 23, 1940 Order No. 15 became effective. This order which is to be found at pp. 1859 and 1860 of Vol. 74 of the Canada Gazette deals with the eviction of tenants. The provisions of Order No. 15 material to the issues in this action are as follows:

"For the purposes of this order:

"1 (*b*) 'Housing accommodation,' 'Landlord,' 'Lease,' 'Rent,' 'Rental,' and 'Rental Administrator' shall have the respective meanings set forth in Order No. 7 of the Board, dated the 24th day of September 1940.

"5. In respect of any aforesaid housing accommodation, any notice to vacate given by any landlord and not followed by actual vacation prior to the effective date of this order, shall have no effect unless the landlord satisfies the said Court as to the existence of one or more of the circumstances set forth in Section 3 hereof.

"6. All leases shall be deemed to have been amended in so far as is necessary to give effect to the provisions of this order.

1943 CanLII 243 (AB CA)

Alta.

A.D.

1943.

WILSON v. ALBERT.

Ewing J.A.

"7. Any agreement by a tenant to waive his rights under this order shall be null and void.

"8. This order shall be effective on and after the 23rd day of November 1940."

Order No. 15 from which the above excerpts are quoted is without any territorial limitation and is therefore on its face effective throughout Canada. But it is argued that the expression "aforesaid housing accommodation" as used in s. 5 of Order No. 15 above quoted, must by reason of s. 1(*a*) be limited to the "housing accommodation" mentioned in Order No. 7; and as Order No. 7 was not in force in the City of Calgary at the time that Order No. 15 was made, the latter Order can have no application to the City of Calgary.

The argument seems to me to be untenable. Section 1(*a*) of Order No. 7 merely defines the meaning of the term "housing accommodation" as used in that order. The other provisions of Order No. 7 respecting housing accommodation do not form part of the definition.

Mayor of Portsmouth v. *Smith* (1885), 10 App. Cas. 364, was a case in which a local improvement Act incorporated s. 53 of the *Towns Improvement Clauses Act*. Lord Blackburn, dealing with this aspect of the case, in the House of Lords said (p. 371): "Where a single section of an Act of Parliament is introduced into another Act I think it must be read in the sense which it bore in the original Act from which it is taken, and that consequently it is perfectly legitimate to refer to all the rest of that Act in order to ascertain what the section meant, though those other sections are not incorporated in the new Act. I do not mean that if there was in the original Act a section not incorporated, which came by way of a proviso or exception on that which is incorporated, that should be referred to."

It will be noted that Lord Blackburn points out that if there were in the original Act sections which came by way of proviso or exception to that which is incorporated but which provisos or exceptions are not incorporated into the new Act, then such provisos or exceptions cannot be referred to. Much less, it seems to me can sections in the original Act which are not incorporated into the new Act and which have no bearing on the meaning of the section which is incorporated, be referred to.

Section 1(*b*) of Order No. 15 merely imports into that Order the definition of "housing accommodation" contained in s. 1(*a*) of Order No. 7. Section 1(*b*) does not incorporate anything else from Order No. 7. It does not, for example, incorporate s. 8 of Order No. 7 which limits territorially the operation of

1943 CanLII 243 (AB CA)

Order No. 7. It seems to me that Order No. 15 is in exactly the same position as it would have been if instead of incorporating by reference s. 1(*a*) of Order No. 7, it had simply repeated the definition contained in that section. In this view the incorporation of s. 1(*a*) of Order No. 7 does not alter or affect the general application of Order No. 15 to all Canada.

In *Clarke* v. *Bradlaugh* (1881), 8 Q.B.D. 63 at p. 69, Brett L.J. said: "There is a rule of construction that, where a statute is incorporated by reference into a second statute, the repeal of the first statute by a third does not affect the second."

This rule seems quite logical. If a new statute incorporates a section from a former statute then that section becomes a part of the new statute and is not affected by the repeal or alteration of the former statute. A similar logic would, I think, apply to the case at bar. Let it be assumed that as far as Calgary was concerned Order No. 7 had no existence prior to November 23, 1940. On the latter date Order No. 15, which had no territorial limitation and was therefore on its face applicable to all Canada came into force. It cannot, I think, reasonably or logically be said that Order No. 15 did not apply to Calgary because it incorporated a definition from Order No. 7 which latter order did not then apply to Calgary and which definition had no reference to the territorial applicability of Order No. 7.

If Order No. 15 was in effect in all Canada on and after November 23, 1940, then it seems clear that under the terms of s. 5 of that Order the respondent's notice to quit had no effect. The notice was not followed by actual vacation prior to November 23, 1940, when Order No. 15 became effective. As already pointed out the appellant remained in possession until January 18, 1941. The evidence establishes that respondent did not make any attempt at any time to satisfy the Court as to the existence of one or more of the circumstances set out in s. 3 of Order No. 15.

But even if it could be said that Order No. 15 did not become effective in the City of Calgary on November 23, 1940, it has been pointed out above that Order No. 7 was made applicable to Calgary on December 7, 1940. It follows in my view of the case that Order No. 15 was effective in Calgary on December 7, 1940. If the effective date of Order No. 15, as far as Calgary is concerned, is December 7, 1940, then s. 5 of Order No. 15 is equally effective to nullify the respondent's notice to quit because the notice to quit, given on November 6, 1940, was not

1943 CanLII 243 (AB CA)

Alta.

WILSON
v.
ALBERT.

Ewing J.A.

followed by actual vacation prior to the effective date of the Order, *viz.*, December 7, 1940.

In either view the respondent's notice to vacate was of no effect. It follows that the appellant was wrongfully dispossessed by the respondent. I would fix the damages at $625. There will be judgment for this amount.

The appeal will therefore be allowed with costs here and in the Court below. Such costs will be taxed in Column 2 and shall include examinations for discovery, Rule 27 not to apply. There will be no set-off for costs.

Appeal allowed.

CHARTIER J.A.

The Issue

1 The issue on this appeal is whether a youth court judge, when conducting an annual review pursuant to s. 94 of the *Youth Criminal Justice Act* (*YCJA*), has the authority to convert the remaining secure custody portion of a young person's sentence into an open custody order.

2008 MBCA 11 (CanLII)

review conducted by youth court judges (as it was done previously under the *YOA*).

How does repealing a statute affect another statute that incorporates it by reference?

26 As a final point, a concern was raised at the hearing of this matter with respect to the following question: How does repealing a statute affect another statute that incorporates the repealed statute by reference? Section 199 of the *YCJA* repealed the *YOA* at the same time as the *YCJA* came into force on April 1, 2003. The Order in Council, which is dated April 23, 2003, references, *inter alia*, ss. 24.1 and 28 of the repealed *YOA*. The concern raised is that at the same time the *YCJA* incorporated provisions of the *YOA* by reference, it repealed the *YOA*.

27 There is no question that Parliament can legislate by reference, as it did in s. 88 of the *YCJA*. That is not the concern. The concern is whether it was permissible for Parliament to incorporate by reference s. 28 of the *YOA* into the *YCJA* (by way of s. 88) given that the *YCJA* repealed the *YOA* at the same time it referenced s. 28 of the *YOA*. Put another way, the issue is what effect, if any, the repeal of the *YOA*, from which the provisions were incorporated, has on the *YCJA*.

28 Generally speaking, when legislation is repealed, it ceases to be law. As described by Professor Ruth Sullivan, *Sullivan and Driedger on the Construction of Statutes*, 4th ed. (Markham: Butterworths Canada Ltd., 2002) (at p. 527):

> Repeal is the key terminal event in the operation of legislation. When a repeal takes effect, the repealed legislation ceases to be law

2008 MBCA 11 (CanLII)

> and ceases to be binding or to produce legal effects. … It also means that everything dependent on the repealed legislation for its existence or efficacy ceases to exist or to produce effects. …

29 This rule can be displaced by statute and, indeed, several survival clauses were built into the federal *Interpretation Act*. One of these clauses, s. 44(*h*) of the *Interpretation Act*, provides some assistance in addressing the issue at hand. It reads as follows:

> **44.** Where an enactment, in this section called the "former enactment", is repealed and another enactment, in this section called the "new enactment", is substituted therefor,
>
> . . . . .
>
> (*h*) any reference in an unrepealed enactment to the former enactment shall, with respect to a subsequent transaction, matter or thing, be read and construed as a reference to the provisions of the new enactment relating to the same subject-matter as the former enactment, but where there are no provisions in the new enactment relating to the same subject-matter, the former enactment shall be read as unrepealed in so far as is necessary to maintain or give effect to the unrepealed enactment.
>
> [emphasis added]

30 With respect to the consequences of repealing provisions incorporated by reference and its impact on the operation of the referential legislation, Pierre-André Côté, *The Interpretation of Legislation in Canada*, 3rd ed. (Toronto: Carswell, 2000) noted (at p. 77):

> The federal *Interpretation Act* (s. 44(h)) provides a special rule in the case of the substitution of one legislative text by another. If a new text brings about the deletion of a provision referred to by another text, the provision remains in force "so far as is necessary to maintain or give effect to the unrepealed enactment." …

2008 MBCA 11 (CanLII)

31 The evolution of the law in this area has been described by Horace Emerson Read, "Is Referential Legislation Worth While?" (1940), 18 Can. Bar Rev. 415, as follows (at pp. 423, 424-25):

> … The earlier decisions in both England and the United States hold without qualification that the repeal of the incorporated law leaves the referring one in force, unless it also is repealed expressly or by necessary implication, and that the reference does not carry with it changes afterwards made in the former. …
>
> . . . . .
>
> But, despite their initial declarations of firm loyalty to a rule coined of logic and dedicated to certainty, it was not long before the "American" courts, while in the throes of construction, resorted to the "Intention of the Legislature", that Alladin's lamp which has so often enabled Anglo-American courts to conjure much from little or nothing. The result was a distinction between two types of reference: Where one statute adopts the whole or a part of another *statute* by a particular or descriptive reference to the statute or provisions adopted, such adoption takes the statute as it exists at the time of adoption and does not include subsequent additions, modifications, or repeals of the statute so taken unless it does so expressly or by necessary implication. But where the reference is, not to any particular statute or part of a statute, but to *the law generally* which governs a specified subject, the reference will be regarded as including, not only the law on that subject in force at the date of the referential act, but also that law as it exists from time to time thereafter.
>
> [emphasis in original]

32 As the reference in s. 88 of the *YCJA* is to ss. 24.1 and 28 of the *YOA*, it falls within the first category of referential legislation and appears to be valid. This conclusion is supported by the case law. For instance, in *Mainwaring v. Mainwaring*, [1942] 2 D.L.R. 377 (B.C.C.A.), McDonald C.J.B.C. stated (at p. 380):

2008 MBCA 11 (CanLII)

> … Legislation by reference … has been consistently construed not to be ambulatory in its effect, but to incorporate the extrinsic law as at the date of the Act that is being construed, and to be unaffected by subsequent change of the law incorporated: …

33 Another Canadian case on this point is *Wilson v. Albert*, [1943] 2 W.W.R. 151 (Alta. S.C. App. Div.) which involved an action by a tenant against her landlord for damages for unlawful ejection. Issues regarding referential legislation were raised. Ewing J.A. reasoned as follows (at p. 155):

> In *Clarke v. Bradlaugh* (1881) 8 Q.B.D. 63, 51 L.J.Q.B. 1, Brett, L.J. said:
>
> > There is a rule of construction that where a Statute is incorporated by reference in a second Statute the repeal of the first Statute by a third does not affect the second.
>
> This rule seems quite logical. If a new statute incorporates a section from a former statute then that section becomes a part of the new statute and is not affected by the repeal or alteration of the former statute. …

34 A similar result was reached in *Hilborn v. Killam*, [1981] 4 W.W.R. 619 (B.C.S.C.). In that case, the court's family law rules incorporated by reference the *Family Relations Act, 1972*. That *Act* was subsequently repealed and replaced by the *Family Relations Act, 1978*. Gould J. stated (at pp. 625-26):

> … The rule is an example of incorporation by reference. It has so incorporated Pt. IV of the 1972 Family Relations Act. The repeal of that Act cannot invalidate or modify the rule, including the parts of the 1972 Act so incorporated. …
>
> . . . . .

2008 MBCA 11 (CanLII)

> Therefore the repeal of the 1972 Family Relations Act does not have any effect upon Pt. IV thereof as incorporated by reference into judge-made R. 36(4).

35 This Canadian law stems from older English authorities. For instance, in *The Queen v. Smith et al.* (1873), 42 L.J.M.C. (N.S.) 46 (Q.B.), the court was facing a situation somewhat similar to the case at bar. In that case, the *Wine and Beerhouse Act, 1869*, 32 & 33 Vict. c. 27, incorporated certain appeal provisions from the earlier *Alehouse Act, 1828*, 9 Geo. 4. c. 61. However, a new *Licensing Act, 1872*, 35 & 36 Vict. c. 94, repealed the *Alehouse Act*. The question before the court was whether, despite this repeal, the appeal provisions were still available under the *Wine and Beerhouse Act*. The case is not on all fours with the case at bar, as there the referentially incorporated provisions were repealed by a third act, and not the act into which they were incorporated by reference. In any event, Cockburn C.J. found (at p. 48):

> … The authorities which have been referred to establish that where an earlier part of an Act is incorporated in a subsequent Act so as to form part of it, it is the same as if it were in the ordinary sense part of it, and the repeal of the first Act will not take away the part incorporated in the second. …

36 Another similar case may be found in the old Australian jurisprudence. In *Osborne v. The Commonwealth* (1911), 12 C.L.R. 321 (H.C.A.), a new *Land Tax Act* was passed. It simply provided that the *Land Tax Assessment Act* be read as one with the *Land Tax Act*. The issue in that case arose from the fact that the *Land Tax Assessment Act* was passed a day later than the *Land Tax Act*; i.e., it was not in force when the *Land Tax Act* was originally passed. It was argued that the *Land Tax Act* was therefore void, as it endeavoured to referentially incorporate an Act that did not exist

2008 MBCA 11 (CanLII)

as of the day it was enacted. Griffith C.J. dismissed this argument summarily (at p. 334):

> The first point, that the attempt to incorporate an Act which was not in existence is meaningless and ineffectual, was not very seriously pressed, and indeed could not be. In construing any Act the duty of the Court is to ascertain what the legislature meant. Now what did they mean when they spoke of the *Land Tax Assessment Act* 1910? As a matter of common sense they meant to refer to an Act of that name which was then in process of enactment. As soon as it became law the Act, although before ineffective, became effective. …

37 By analogy, the reference in the *YCJA* to the *YOA* should be given effect, "as a matter of common sense," even though or, perhaps, especially because the *YCJA* also repealed the *YOA*.

38 Two statutory interpretation principles should be borne in mind in this case. The first principle relates to simultaneously enacted provisions (here, s. 88 (which referentially incorporated s. 28 of the *YOA*) and s. 199 (which repealed the *YOA*)). As an illustration of this principle, Professor Sullivan, *ibid.* at 277, cites *Ottawa (City) v. Hunter* (1900), 31 S.C.R. 7. Therein, Taschereau J. wrote (at p. 11):

> The rule that a prior enactment is superseded by a later one incompatible with it cannot be applied here. These two paragraphs became law at one and the same moment. They no doubt cannot but be read one after the other, but Parliament's will as to both was expressed by simultaneous enactments … .

39 In the same way, it cannot be argued that s. 199 should be seen as superseding s. 88 of the *YCJA* just because it comes later, sequentially, in the legislation. Both provisions came into force at the exact same moment.

Newfoundland Supreme Court
Court of Appeal

Citation: Bow Valley Husky (Bermuda) Ltd. et al. v. Saint John Shipbuilding Ltd. et al. (No. 3)
Date: 1992-05-06
Docket: 1991 No. 180

1992 CanLII 7090 (NL CA)

Between:
Bow Valley Husky (Bermuda) Ltd., Husky Oil Operations Ltd. and Bow Valley Industries Ltd. (Appellants)
and
Raychem Canada Limited, Raychem Corporation and Saint John Shipbuilding Limited (Respondents)

Gushue, Mahoney, O'Neill, Marshall and Steele, JJ.A.

Counsel:
Michael Harrington, Q.C., and Cecily Strickland, for the appellants;
Wylie Spicer, for the respondents Raychem Limited and Raychem Corporation;
Edward Roberts, Q.C., and Glen Noel, for the respondent Saint John Shipbuilding Limited.

[1] Marshall, J.A.: The immediate question raised by this appeal is whether the Supreme Court of Newfoundland can be called upon to adjudicate a negligence claim for damages caused by a fire aboard an offshore drilling rig whilst it was drilling for oil on the Grand Banks of Newfoundland outside the territorial waters. Resolution of this question will necessarily entail inquiry into this court's admiralty jurisdiction.

Circumstances And Nature Of The Claim

[2] The rig is the "Bow Drill 3" which was constructed at Saint John, New Brunswick, and Halifax, Nova Scotia, by Saint John Shipbuilding Limited for its owner, Bow Valley Husky (Bermuda) Limited. Certain electrical components manufactured by Raychem Corporation of California, U.S.A., were utilized in the construction, being incorporated into the rig's pipeline

[106] The court's admiralty jurisdiction extends, as a reading of s. 22(1) shows, over all cases where relief or a remedy is sought under "Canadian maritime law". That law was explicitly defined in one part of s. 2 as including the law administered by the Exchequer Court on its admiralty side by virtue of the repealed *Admiralty Act.* That jurisdiction, together with all preexisting Canadian maritime law prior to enactment of the *Federal Court Act* was continued in existence by s. 42.

[107] In addressing the combined effect of these provisions, Thurlow, A.C.J., said in *Canada v. Canadian Vickers Ltd.* (1978), 77 D.L.R.(3d) 241 (F.C.) [revd. 28 N.R. 486 (F.C.A.)], at p. 250:

> "(T)he effect of these provisions is to continue in effect as law of Canada the body of admiralty law that had become part of the law of Canada by the *Admiralty Act* 1891 and had been administered thereafter by the Exchequer Court of Canada both under that *Act* and the *Admiralty Act* 1934 ..."

[108] Therefore, the jurisdictional powers set out in the *Admiralty Act,* 1934 are incorporated by reference into the *Federal Court Act* and continue to apply notwithstanding repeal of the former statute. This is important in the context of the present case, as the 1934 *Act* granted jurisdiction to hear and determine "(a)ny claim for damage received by a ship, whether received within the body of a country or on the high seas" (the *Admiralty Act,* 1934, s. 18(2), incorporating s. 22(l)(a)(iii) of the *Supreme Court of Judicature (Consolidation) Act,* 1925 (U.K.), 15-16 Geo 5, c. 49). Inasmuch as this is broad enough to include tortious damage, whether through collision or otherwise, the consequential confirmation in this court of this specific jurisdictional grant appears to afford an answer to the contention of Raychem's counsel that maritime torts committed on the high seas are outside the purview of this court's jurisdictional powers.

[109] In the event that the foregoing interpretation should not be deemed to answer completely the contention of Raychem's counsel, then the conclusion to be drawn from the second part of the definition of "Canadian maritime law" in s. 2 must surely suffice. This includes in "Canadian Maritime Law" such law as "would have been" administered by the Exchequer Court if it "had had, on its admiralty side, unlimited jurisdiction in relation to maritime

Application for Leave to Appeal the Decision of the
Subdivision and Development Board of the City of Calgary
Dated April 17th, 2007

Reasons for Decision of the
Honourable Mr. Justice Clifton O'Brien

2007 ABCA 421 (CanLII)

Introduction

[1] The applicant, 587901 Alberta Ltd., carrying on business as Centre Street North Liquor Store (Centre Street Liquor), makes application for leave to appeal a decision of the Subdivision and Development Appeal Board of the City of Calgary (SDAB), granting a development permit to the respondent, The Olympia Liquor Store (Centre North) Ltd. (Olympia Liquor).

Background Facts

[2] Centre Street Liquor is the owner of the property at 1716 Centre Street North in Calgary where it operates a liquor store.

[3] Olympia Liquor applied to the City of Calgary Approving Authority (the Authority) for a development permit to change the use of 1915 Centre Street North (the site) to a liquor store. The site is located approximately 184 metres from Centre Street Liquor. The Authority denied the application on March 10, 2007.

[4] Olympia Liquor filed an appeal to the SDAB, which was heard on April 17, 2007. The site was posted and advertised on the SDAB website from March 30, 2007. Notice of the hearing was included in Public Notices published in the *Calgary Herald* prior to the hearing. Persons residing within a 200 feet or 60 metre radius of the site were sent written notice of the appeal. However, no written notice of the appeal was given to Centre Street Liquor and no one appeared on its behalf to oppose the appeal when it was heard by the SDAB.

[5] The SDAB allowed Olympia's appeal, and granted a development permit subject to a number of permanent conditions.

Governing bylaws and legislation

[6] The land use designation of the site is Direct Control, pursuant to Bylaw 6Z2000 passed on January 17, 2000. Schedule "B" of that bylaw set out Development Guidelines as follows:

> 2. Development Guidelines
> (a) Commercial and Mixed Commercial and Residential Development
> For commercial and mixed commercial and residential development, the General Rules for Commercial Districts contained in Section 33 of Bylaw 2P80 and the Permitted and Discretionary Use Rules of C-2(12) General Commercial District shall apply
> . . .

Bylaw 2P80 is the City of Calgary Land Use Bylaw.

2007 ABCA 421 (CanLII)

[7] A liquor store is within the discretionary uses for the site as a C-2(12) General Commercial district. The General Criteria for Liquor Stores (General Criteria) in use in at the time, in 2000, for assessing an application for a development permit for liquor stores stated, in part:

> 1. Location in Relation to Existing Liquor Stores
>
> Where a proposed liquor store is within 300 metres radial distance of an existing liquor store, any cumulative impacts of the facilities on existing development within the area must be considered in evaluating the application.

[8] Section 33(7)(d) of Bylaw 2P80 was amended by Bylaw No. 13P 2003 on November 3, 2003, as follows:

> 1. The City of Calgary Land Use Bylaw Number 2P80 is hereby amended.
> 2.Section 33(7) is amended by deleting Section 33(7)(d) and substituting the following therefor:
>
> (d) Liquor Stores
>
> (i)Separation Distance Between Liquor Stores
>
> (A) No liquor store shall be located closer than 300 metres to any other liquor store.
>
> (B) The 300 metre separation distance shall be measured from the closest point of a liquor store to the closest point of another liquor store.
>
> . . .

[9] The pertinent provisions of the *Municipal Government Act*, RSA 2000, c. M-26, (the MGA) are as follows:

> 686.(3) The subdivision and development appeal board must give at least 5 days' notice in writing of the hearing
>
> (a) to the appellant,
>
> (b) to the development authority whose order, decision or development permit is the subject of the appeal, and
>
> (c) to those owners required to be notified under the land use bylaw and any other person that the subdivision and

> development appeal board considers to be affected by the appeal and should be notified.

. . .

687(3) In determining an appeal, the subdivision and development appeal board

> (a) must comply with the land use policies and statutory plan and, subject to clause (d), the land use bylaw in effect;
>
> (b) must have regard to but is not bound by the subdivision and development regulations;
>
> (c) may confirm, revoke or vary the order, decision or development permit or any condition attached to any of them or make or substitute an order, decision or permit of its own;
>
> (d) may make an order or decision or issue or confirm the issue of a development permit even though the proposed development does not comply with the land use bylaw if, in its opinion,
>
> > (i) the proposed development would not
> >
> > > (A) unduly interfere with the amenities of the neighbourhood, or
> > >
> > > (B) materially interfere with or affect the use, enjoyment or value of neighbouring parcels of land,
> >
> > and
> >
> > (ii) the proposed development conforms with the use prescribed for that land or building in the land use bylaw.

Decision of the Authority

[10] The decision of the Authority referenced both the General Criteria and that the current rule under the Land Use Bylaw prohibited liquor stores from locating closer than 300 metres from another liquor store. The decision also noted that there was an inadequate number of parking stalls on the site for a liquor store use. The Authority refused the application seemingly on the basis that it met neither the General Criteria nor the current rule.

2007 ABCA 421 (CanLII)

2007 ABCA 421 (CanLII)

Decision of the SDAB

[11] The SDAB considered that the 2003 amendment to the Land Use Bylaw did not apply, and evaluated the application based solely on the General Criteria. The Board found that there would be negligible cumulative impact, even though the two liquor stores were within 300 metres of each other, due to the offsetting locations (different sides of the street) and the high volume of activity on Centre Street North.

Proposed Issues

[12] Centre Street Liquor seeks leave to appeal the SDAB's decision on the following questions of alleged law and jurisdiction:

> (a) Did the Board err by failing to consider that the Applicant is a person that would be affected by the matter under consideration which is entitled to receive notice of the appeal and by failing to give notice to the Applicant of the appeal;
>
> (b) Did the Board err by failing to consider or properly consider and take into account the restrictions imposed by section 33(7)(d) of the City of Calgary's Land Use Bylaw 2P80, and whether those restrictions apply to the property located at 1915 Centre Street N.W. that was the subject of the appeal (the "Subject Land"); and
>
> (c) Did the Board err by improperly applying the General Criteria for Liquor Stores, a policy of the City of Calgary, by failing to consider that by granting the application to develop a liquor store on the Subject Land, the Applicant would by reason of the restrictions imposed by section 33(7)(d) of the City of Calgary Land Use Bylaw be adversely affected.

Test for leave

[13] Section 688(3) of the MGA provides that leave to appeal a decision of the SDAB may be granted if the judge is of the opinion that the appeal involves a question of law or jurisdiction of sufficient importance to merit a further appeal and has a reasonable chance of success.

Analysis

(i) Notice of hearing

[14] Section 686(3) of the MGA requires that notice in writing of the hearing be given to persons that the SDAB considers to be affected by the appeal. This ground of appeal relates to procedural fairness, a breach of which goes to jurisdictional error: *Parkdale-Cromdale Community League Assocation v. Edmonton (City*), 2006 ABCA 78 at para. 7.

[15] Centre Street Liquor was not provided with notice in writing as were persons residing within a 200 feet or 60 metre radius, which persons were deemed by the SDAB to be the affected persons. In this instance, both the General Criteria for consideration of development permit applications for

liquor stores, and the current land use bylaw requires consideration of liquor stores within a radius of 300 metres. There is nothing in the record before me that indicates that the SDAB gave consideration to whether Centre Street North was an affected person entitled to notice in writing and, if so, whether that requirement was met by the posting and advertising carried out by the SDAB.

[16] Centre Street Liquor submits that the SDAB is required, as a prerequisite to exercising its jurisdiction, to give notice of the appeal to any person it considers to be affected by the appeal. Centre Street Liquor further submits that because it was not notified, it was thereby denied the opportunity to present additional evidence of the cumulative impact of another liquor store being located in such proximity. In my view, it is reasonably arguable that Centre Street Liquor is an affected party so that a failure to consider, and consequent failure to give notice, is an error of law or jurisdiction: *Murray v. Edmonton* (City), [1977] A.J. No. 339 (Alta.S.C. A.D.).

(ii) Applicability of the 2003 amendment to the Land Use Bylaw

[17] The amendment to the Land Use Bylaw in 2003 provides, in mandatory terms, that no liquor store shall be located closer than 300 metres to any other liquor store. The City of Calgary and Olympia Liquor submit that this amendment is not applicable to the site. They argue that a direct control bylaw has the effect of incorporating the existing provisions of the then Current Land use Bylaw, but it does not incorporate any amendments made to the Land Use Bylaw after the date of passing of the Direct Control Bylaw.

[18] The interpretation of a bylaw is a question of law. Centre Street Liquor points to section 31 of the *Interpretation Act*, R.S.A. 2000, c. I-8, which provided that reference to another enactment is to the enactment as amended, whether it is amended before or after. There is support for the proposition that the *Interpretation Act* applies to a municipal bylaw: *Barke v. Calgary (City)*, [1993] A.J. No. 107 (Q.B., Hunt J. as she then was). Côté in *The Interpretation of Legislation in Canada*, 3rd ed. (Toronto: Carswell, 2000) at pp. 75-81, sets out a number of factors to determine whether references to other enactments are ambulatory in nature, or static.

[19] In my view, it is reasonably arguable that the reference in the Direct Control Bylaw to the Land Use Bylaw is to the Land Use Bylaw as amended from time to time, except where the amendment states to the contrary.

(iii) Improper application of General Criteria for Liquor Stores

[20] My understanding of Centre Street Liquor's submission with respect to this proposed ground of appeal is that it is something of a "fall back" argument. That is, if the General Criteria are applicable rather than the 2003 amendment, then the SDAB did not properly apply the criteria.

[21] However, the SDAB, in its Reasons, specifically addressed the General Criteria and made a specific finding that there was negligible cumulative impact of the two liquor stores being located

2007 ABCA 421 (CanLII)

within 300 metres of each other. This is a finding of fact or mixed fact and law, such that appellate interference is not warranted.

2007 ABCA 421 (CanLII)

Conclusion

[22] I am satisfied that the first two proposed grounds of appeal meet the statutory test for leave, and grant leave to appeal to Centre Street Liquor on these grounds. I refuse to grant leave with respect to the third proposed ground.

PREFACE

This planning document was prepared by government agencies and public consultants in recognition of the need for improved management of Alberta's lands and resources. It applies only to public lands within the Ghost River Planning Area, not to private or federal lands.

The plan presents the Government of Alberta's resource management policy for public lands and resources within the area. It is intended to be a guide for resource managers, industry and the public with responsibility or interests in the area, rather than a regulatory mechanism. Resource potentials and opportunities for development are identified with a view to assisting in the economic progress of Alberta. The plan is sufficiently flexible so that all future proposals for land use and development may be considered. No legitimate proposals will be categorically rejected. Energy resource decisions are subject to the application of legal and approved regulatory processes under the jurisdiction of the Minister of Energy. This plan may influence regulatory decisions, but will not result in the categorical approval or rejection of energy proposals. The provincial government is committed to serving Albertans; should a proposal not be in keeping with the provisions of the plan, staff will work with the proponent to explore alternative means for accommodating the proposal in a more appropriate location, either in this planning area or on other public lands. The rejection of any proposal will be done only in writing by the minister or his designate.

A detailed outline for implementation will be provided for this sub-regional plan in order to identify the necessary implementation actions and roles. This implementation outline will also provide for the continuing review of the plan so that it may accommodate changing needs and situations. Wherever possible, the private sector will be provided the opportunity to be actively involved in the operational delivery of the plan.

Implementation is subject to the normal budgetary approval process. In establishing overall priorities, opportunities in other planning areas and areas currently outside the planning process will be considered.

While the plan identifies resource potentials and opportunities, the realization of these may require the dedication of major amounts of public funds. The plan will be used on the understanding that any actions required for implementation will only be undertaken as budgetary approvals are given in the normal way. The private sector will be given the first opportunity to provide any development required.

This plan has no legal status and is subject to revisions or review at the discretion of the Minister of Forestry, Lands and Wildlife.

1. INTRODUCTION

1.1 The Planning Area

The Ghost River Planning Area (Figure 1) is located 50 km northwest of Calgary. The area encompasses approximately 2900 km^2 (1120 sq. mi.) and includes most of the Ghost River drainage basin and Burnt Timber and Fallentimber creeks, which are part of the Red Deer River drainage basin.

The boundaries of the planning area are as follows:

NORTH - northern divide of the Burnt Timber/Fallentimber Watershed Basin, and the boundary between Townships 30 and 31, Range 5 (W5M).

SOUTH - Bow Corridor and the northern boundary of the Forest Reserve south of the Stoney Indian Reserve.

EAST - boundary between Ranges 4 and 5, W5M, north of the Stoney Indian Reserve and the I.D. 8 boundary south of the Stoney Indian Reserve.

WEST - Banff National Park.

The planning area contains the settlements of Benchlands, Big Prairie, Waiparous Creek and Water Valley.

The eastern and southeastern portions of the area are used mainly for ranching. Grazing and timber production occur on much of the public land. The entire planning area is also used extensively for a variety of outdoor recreation activities, mainly by people from Cochrane and Calgary. Stoney Indian Reserves 142, 143 and 144 are located along the southern boundary of the Ghost River Planning Area and reserve 142 B is located entirely within the southeastern portion of the area.

Access to the planning area is provided by Highway 1, Highway 1A, Secondary Road 940 (Forestry Trunk Road) and other secondary roads.

1.2 Policy and Planning Context

A Policy for Resource Management of the Eastern Slopes Revised 1984 (Alberta 1984) states that integrated resource planning, conducted under a comprehensive interagency approach, is the key to effective management of Alberta's resources in the Eastern Slopes. The policy also explains that integrated resource plans implement its regional land use zoning priorities and guidelines. The Eastern Slopes Policy articulates further that integrated resource plans will allocate land uses for specific portions of a planning area, and identifies the need for possible changes in policy zone boundaries.

Integrated resource plans have been completed or are under preparation for selected areas of the Eastern Slopes Policy region. In March 1978, the Alberta Energy and Natural Resources/Recreation and Parks Interdepartmental Assistant Deputy Ministers Committee identified the Ghost River area (Figure 1) as a priority for the development of an integrated resource plan. The Ghost River Sub-Regional Integrated Resource Plan will serve to effectively mitigate conflicts between resource use objectives by determining resource priorities and allocating land uses for specific portions of the Ghost River Planning Area.

The Ghost River planning team consists of representatives from the Alberta Forest Service, Public Lands and Fish and Wildlife divisions of the Department of Forestry, Lands and Wildlife, and the Mineral Resources Division of the Department of Energy.

Consultative team members were identified and given the opportunity to present agency concerns and opinions at key stages of the planning process. They include agencies within the Alberta government, federal government and local authorities:

- Alberta government: Alberta Environment, Alberta Recreation and Parks, Alberta Transportation and Utilities, Alberta Culture and Multiculturalism, Alberta Tourism and Alberta Agriculture;

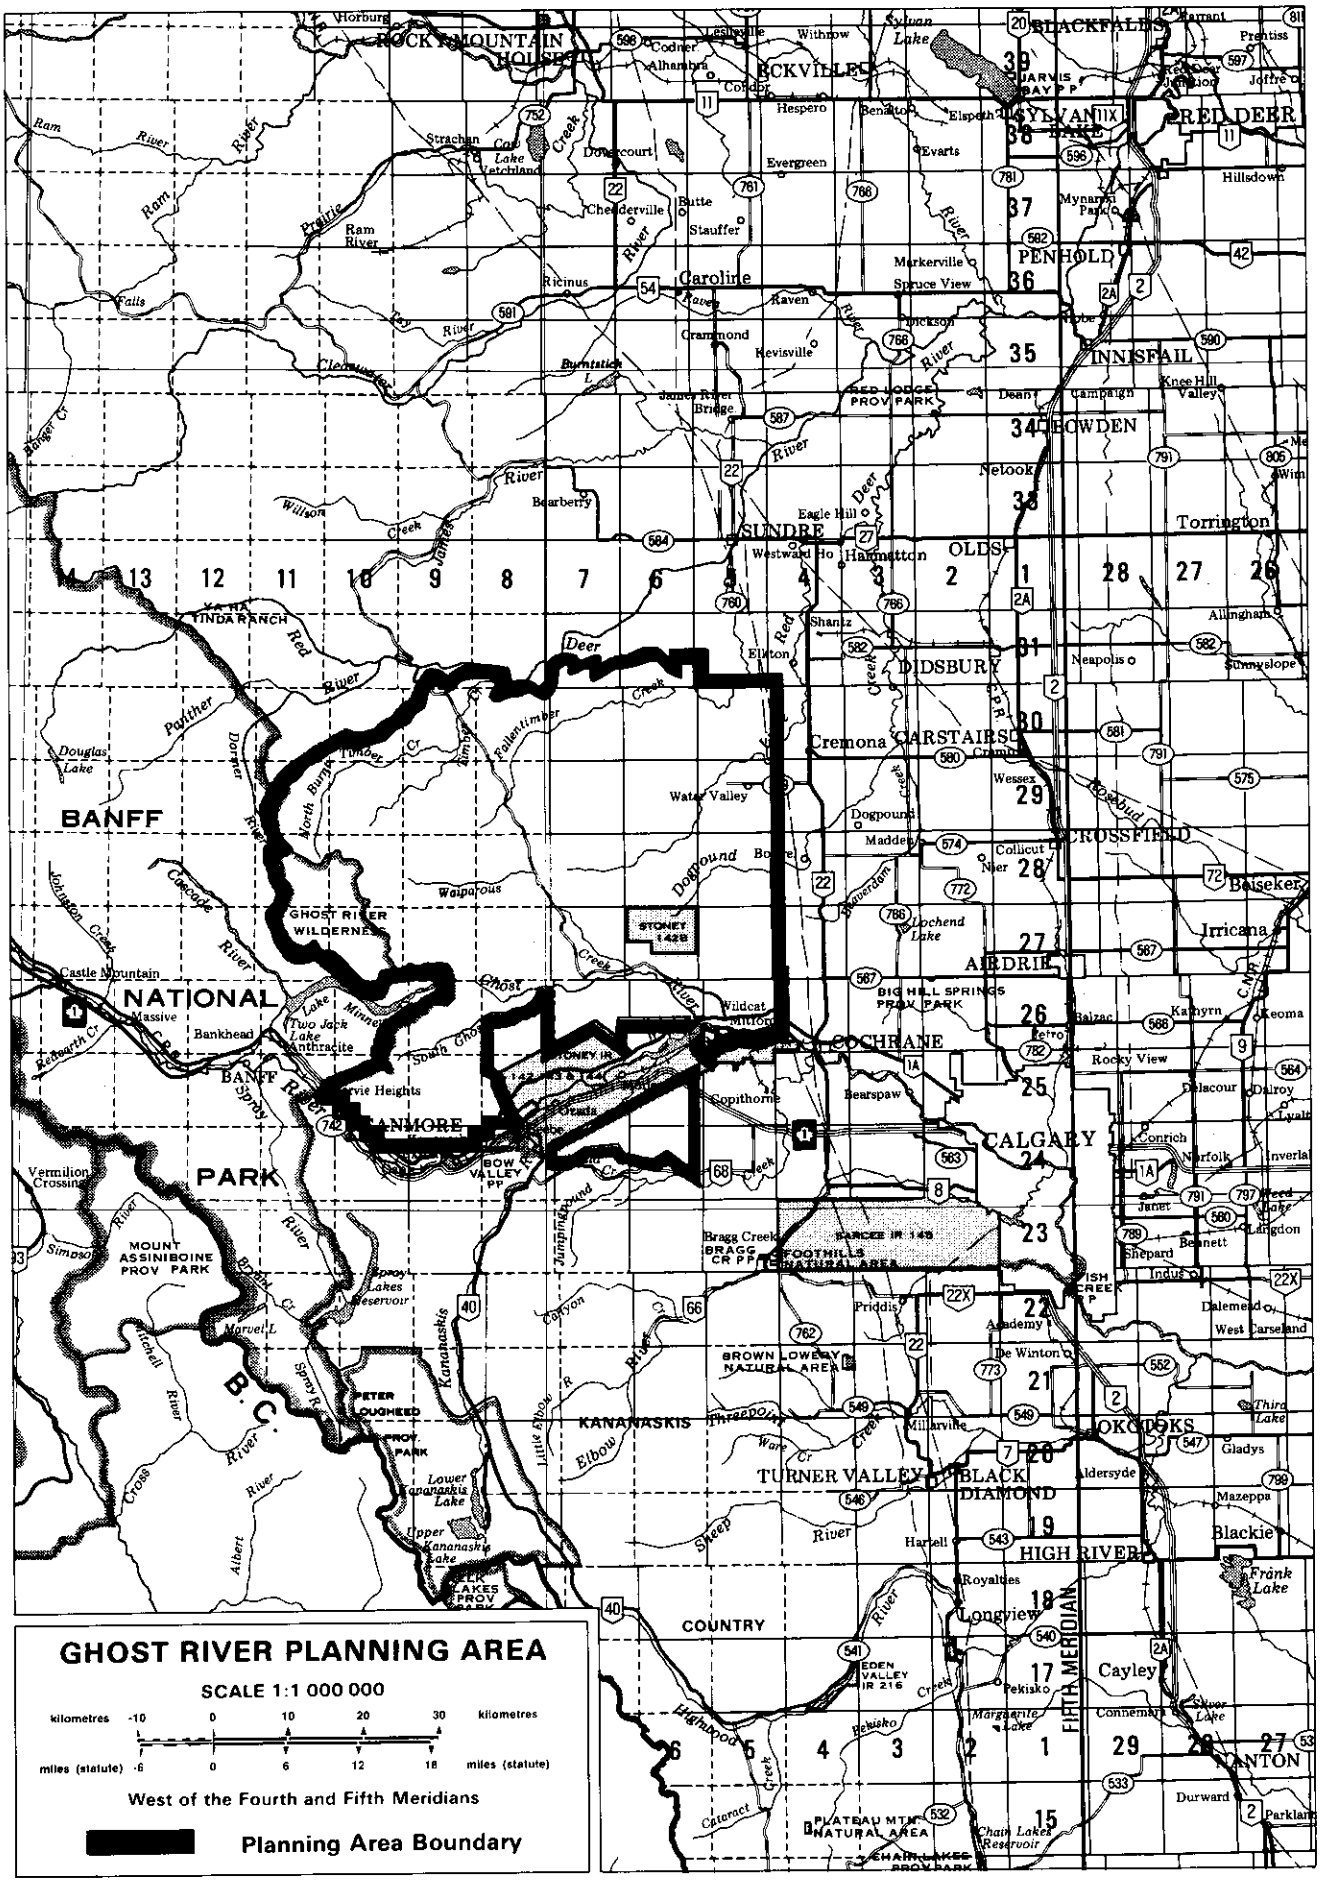

Fig. 1 **REGIONAL LOCATION**

- federal government: Canadian Parks Service; and

- local authorities and MLAs: MLA Banff/Cochrane, MLA Olds/Didsbury, M.D. 8, I.D. 8, M.D. 44, County 17, Red Deer Regional Planning Commission and Calgary Regional Planning Commission.

Throughout development of the plan, public interest groups and associations, industries and individuals have been invited to participate in the planning process. Participation involved submitting letters, briefs and information, reviewing plan documents and attending public meetings.

The final plan will apply only to land and resources vested in the Crown, in both the Green and White Areas. Patent land and private development on public land within the boundaries of the Calgary and Red Deer Regional Planning Commissions remain under the planning control of local municipalities and the planning commissions. In connection with these lands, the integrated resource plan reflects the philosophies of land management of the local authorities. The Alberta government will continue to make every effort to strengthen the existing co-ordination and co-operation with local planning authorities.

A Policy for Resource Management of the Eastern Slopes Revised 1984 (Alberta 1984) provides guidelines and objectives for integrated resource management and planning for the entire Eastern Slopes region including the Ghost River Planning Area. The Eastern Slopes Policy relies on regional land use zoning to designate large areas of land for varying degrees of protection, resource management and development. Table 1 lists the general intent for each of the following eight land use zones:

1) Prime Protection;

2) Critical Wildlife;

3) Special Use;

4) General Recreation;

5) Multiple Use;

6) Agriculture;

7) Industrial; and

8) Facility.

The overriding principle for all the zones is to protect the valuable water resources of the Eastern Slopes and to provide for public land and resource utilization in a manner consistent with principles of conservation and environmental protection. The zoning does not apply to privately owned lands in the planning area. Table 2 defines a range of compatible activities to enact the intent of the eight land use zones. The compatible activities table and regional zoning provide interim direction until sub-regional integrated resource plans are completed.

The Ghost River Sub-Regional Integrated Resource Plan supersedes the zoning configuration in the Eastern Slopes Policy. As a result, the zones have been refined and the regional zoning found in the Eastern Slopes Policy no longer applies in the planning area. Figure 2 shows the revised zoning. It also shows Resource Management Areas (RMAs) which are geographic units that have common resource management intents.

For a discussion of legislation and other associated direction directly related to this plan, refer to APPENDIX A (p. 70).

Table 1

INTENTS OF THE EASTERN SLOPES POLICY ZONES

#	ZONE	INTENT OF THE ZONE
1	Prime Protection	To preserve environmentally sensitive terrain and valuable ecological and aesthetic resources.
2	Critical Wildlife	To protect ranges or terrestrial and aquatic habitat that are crucial to the maintenance of specific fish and wildlife populations.
3	Special Use	To recognize historical resources, lands set aside for scientific research and any lands which are required to meet unique management requirements or legislative status, which can not be accommodated within any of the other zones.
4	General Recreation	To retain a variety of natural environments within which a wide range of outdoor recreational opportunities may be provided.
5	Multiple Use	To provide for the management and development of the full range of available resources, while meeting the objectives for watershed management and environmental protection in the long term.
6*	Agriculture	To recognize those lands within the Eastern Slopes which are presently utilized or are considered suitable for cultivation and/or improved grazing.
7	Industrial	To recognize existing or approved industrial operations such as coal mines, gas processing plants, cement plants and large forest product mills.
8*	Facility	To recognize existing or potential settlement and commercial development areas.

* Not applied in the Ghost River Sub-Regional Integrated Resource Plan.

Mineral exploration & development					▒	▒	▒	
Serviced camping				▒	▒			▒
Commercial development								▒
Industrial development					▒		▒	
Residential subdivisions						▒		▒
Cultivation						▒		

▒ Compatible Use — Uses that are considered to be compatible with the intent of a land use zone under normal guidelines and land use regulations.

Permitted Use — Uses that may be compatible with the intent of a land use zone under certain circumstances and under special conditions and controls where necessary.

Not Permitted Use — Uses that are not compatible with the intent or capabilities of a land use zone.

These activities are only representative of the range of activities that occur in the Eastern Slopes. For these and any other activities, the possibility of whether they should or should not take place in a particular area must always be measured against the fundamental management intentions for that zone. Since economic opportunities are not all known in advance, site-specific developments may be considered in any zone.

2. BROAD RESOURCE MANAGEMENT OBJECTIVES AND GUIDELINES

This chapter consists of a statement of intent for resource management within the planning area plus a set of broad resource objectives and guidelines that apply to the entire planning area. A resource summary is also provided for each sector.

The primary intent for resource management within the Ghost River Planning Area is as follows:

> To allow for the development and use of the full range of available resources while minimizing adverse environmental impacts on watershed and renewable resources.

The Ghost River plan was developed within the scope of the broad resource objectives identified at the plan policy stage of the planning process by participating agencies. These broad objectives provide future standards which participating agencies will strive to attain. They reflect government priorities for the Ghost River sub-region within the context of the Eastern Slopes region, and are expressed as they relate to a particular resource. Following the broad objectives for each resource are the common resource management guidelines.

2.1 Watershed

The Ghost River Planning Area includes a portion of the headwaters of the Bow and Red Deer rivers that eventually flow into the South Saskatchewan River. The water supplied by the Bow and Red Deer rivers is used downstream for irrigation, hydro-electric generation, and industrial and municipal purposes in south and south-central Alberta. The major drainages in the planning area include Fallentimber and Burnt Timber creeks and the Little Red Deer River of the Red Deer River drainage basin, and Waiparous Creek and the Ghost and Bow rivers of the Bow River drainage basin. These drainages are locally important for their fisheries, wildlife and recreation values.

The lower elevations (900 to 1200 m or 3000 to 3900 ft. asl) of the eastern portion of the planning area are mainly composed of Aspen Parkland with mixed lodgepole/aspen forests in northern areas. Intermediate elevations are dominated by the Montane Ecoregion to the south and the Subalpine Ecoregion through the remainder of the area. Lodgepole pine, Douglas fir and grasslands dominate the Montane Ecoregion. Engelmann spruce occurs at the higher elevations of the mountains in the western portion of the planning area dominated by Subalpine forests, and the Alpine Ecoregion occurs above tree line (approximately 2100 m or 7000 ft. asl). The Alpine Ecoregion is mainly composed of rock, alpine meadows, sedges, shrubs and herbs.

The topography of the planning area is mountainous to the west, giving way to foothills east of the McConnell Thrust Fault and changing to gently rolling topography in the eastern portions. The majority of the surficial deposits in the planning area consist of glacial deposits with areas in the northwest unglaciated. Terrain sensitivity varies throughout the planning area. Stream channels are well armoured with rock material in the western portions of the planning area. Also in these portions, soils are less developed and slopes are steeper with the result that disturbances become more difficult to reclaim. Although soils are more developed in the east, disturbance can cause erosion on some slopes. Precipitation throughout the planning area is high, generally increasing in the west at higher elevations. Fifty to 60 per cent of the annual precipitation occurs as snow. In addition, streamflow peaks in spring as the result of snowmelt.

Current uses of public land in the planning area do not seriously affect water quality or quantity in the Bow or Red Deer drainage systems. However, local impacts (e.g., industrial, agricultural and recreational) have influenced and continue to influence stream conditions in the planning area.

Objectives

1. To maintain an optimum water yield of streams in the planning area to satisfy both increasing downstream and on-site demands.

2. To prevent vegetation changes that could cause extreme fluctuations in streamflow,

resulting in erosion of channel materials, high sediment loads, property damage or water supply problems.

3. To maintain, and where possible improve, the water quality of streams and lakes.

4. To prevent or minimize soil erosion associated with land use activities.

5. To proceed with proposed reclamation projects on vacant public land where unacceptable environmental conditions exist.

6. To ensure that reclamation guidelines and standards are adhered to on surface and subsurface dispositions and on land disturbances from natural and man-made causes.

Guidelines

1. Alberta Environment and the Alberta Forest Service will monitor water yield and quality in the planning area to ensure the maintenance of a high-quality water resource.

2. The Ghost River Planning Area will be included in a watershed management plan prepared for the Bow/Crow Forest by the Alberta Forest Service.

3. Land or resource uses that may alter water quality, quantity and flow regime of surface water and groundwater should be brought to the attention of Alberta Forestry, Lands and Wildlife, and Alberta Environment so that adverse impacts on the water resource can be assessed and co-operatively minimized as required.

4. Fluctuations in water yield and streamflow will be minimized by adhering to operating ground rules for timber harvesting and existing forest protection policies.

5. The frequency of stream crossings will be minimized to lessen point sources of sedimentation.

6. Soil erosion associated with land use activities will be addressed through ground rules established for individual developments and the internal referral systems of the provincial government.

7. Reclamation projects will be initiated and completed based on provincial reclamation policies, approval of an access management plan and availability of funds where the responsibility rests with the provincial government.

8. Reclamation of land use disturbances will proceed progressively to reduce erosion and sedimentation. Reclamation will be included as a condition of surface disposition approvals and completed according to provincial standards.

2.2 Wildlife

The planning area has the capability to support a wide variety of wildlife species including a number of big game species, upland game bird species and furbearers generally sought for consumptive use. The capability of the area to support big game species depends greatly on the availability of certain factors, such as protective cover near available food sources. Mule deer are currently the most extensively distributed big game species in the area. Significant numbers of moose, bighorn sheep and grizzly bear also inhabit the area. Moose use shrublands located on the floodplains of major creeks and bighorn sheep populations are present in the mountainous areas. The capability of the area to support grizzly bear populations depends on the availability of undisturbed feeding areas and territories. Other big game species present include elk, white-tailed deer, black bear, cougar, wolf and mountain goat.

The area has the capability to support productive populations of furbearing animals such as red squirrel, marten, lynx, coyote and beaver. The areas which have the best capabilities for many of these species change with forest succession and the availability of prey and riparian habitat.

The area also has the capability to support upland bird species such as ruffed grouse and spruce grouse. The areas which have the best capabilities for supporting these species change with forest succession and are largely dependent on forest management.

Present use of these wildlife species is both non-consumptive (e.g., viewing) and consumptive

(e.g., hunting and trapping). Commercial use varies from the sale of fur to outfitting service for hunters. There are eight traplines in the area. The average annual revenue from 1974-79 was $4360/trapline. The overall demand for consumptive and non-consumptive uses probably exceeds the available resource within the area.

The overall demand for wildlife resources present in the planning area is high as indicated in Status of Fish and Wildlife Resource in Alberta (Alberta 1984). Current uses of wildlife resources include recreational use such as hunting and viewing, and commercial use such as trapping and hunter and trail ride outfitting.

Specific demands for, and use of, each wildlife resource in the planning area are not fully known. The demand for most hunted species is probably well above the current supply as indicated by hunter questionnaire surveys. Estimates made in 1985 show that hunting demand (in relation to hunting opportunities permitted) is 4-fold for female elk, 12-fold for female moose and 3-fold for female mule deer in wildlife management unit F314, and 3-fold for non-trophy sheep in S412. The number of recreational user-days for hunting elk, moose, bighorn sheep, mule deer and white-tailed deer was estimated to be 24 247 in 1985 for wildlife management units S414, S412, F316 and a portion of F314. Although it is known that recreational hunting also occurs in this area for upland game birds, black bear and cougar, there are currently no estimates of user days available for these species.

The potential for increased use of wildlife species depends on many factors including manipulation of populations and availability of habitat. The potential for maintaining and improving populations is high in the planning area.

Objectives

1. To maintain or increase numbers, distribution, productivity and diversity of wildlife populations, particularly ungulates, furbearers, furbearing carnivores, game birds and endangered, threatened, rare or extirpated species.
2. To maintain or increase distribution, diversity and quality of wildlife habitat required to support wildlife populations at optimal densities.
3. To increase opportunities for sport hunting and other recreational uses of wildlife.
4. To maintain existing levels of commercial trapping.
5. To ensure that wildlife populations remain healthy and in balance with their range.
6. To maintain migratory routes, wintering and calving areas crucial to the survival of specific wildlife populations.

Guidelines

1. Primary management of wildlife densities will continue through commercial trapping, recreational hunting and treaty Indian hunting. Recreational hunting and trapping regulations will be adjusted as necessary to manage wildlife populations. Recreational hunting and trapping may be further restricted temporarily as a means to increase populations.
2. Habitat development and improvement programs will be planned and conducted where needed to maintain or increase wildlife populations. These programs will consider timber, recreation and range values and commitments. Programs will be implemented through range and timber management plans where suitable, and through the Buck for Wildlife Program. They will involve such activities as vegetation manipulation including prescribed burning and/or mechanical treatment where appropriate.
3. Field surveys will be conducted on seismic and industrial access roads to determine where uncontrolled public vehicle use is having significant adverse effects on wildlife populations.
4. The proposed access management plan will be reviewed to ensure that access for hunting will be maintained where compatible with other resource activities and protection of the wildlife resource.

5. Land use activity and resource development applications will be reviewed to identify potential impacts on wildlife. Conditions will be placed on applications and activities to avoid displacement or loss of wildlife or habitat. Conditions may include changes in location and timing of activity and development.

6. Recreational development and range management plans will be reviewed for compatibility with wildlife management objectives. Means to minimize impacts on wildlife resources and improve hunting opportunities will also be identified.

7. Forest management and timber harvesting plans will be reviewed for opportunities to maximize forest diversity for increasing wildlife species, and to ensure habitat requirements for selected species are met.

8. Forage production and use by cattle and wildlife will be monitored to determine if adequate forage is available on rangelands to meet wildlife objectives.

2.3 Fisheries

Lakes which can support fish populations are limited in the area and are discussed by RMA. About half the 19 creeks or river systems in the Ghost River Planning Area are considered to have good capabilities for supporting sportfish. The most common fish species present are brook trout, bull trout, brown trout and mountain whitefish.

Fishing is a major pastime for campers and day users in the area, especially on easily accessible streams. There is no commercial fishing. The number of user-days of fishing is not known, but approximately 46 per cent of the visitors to the area fish during their visit. It is believed that most visitors originate from the Calgary area.

Objectives

1. To maintain and/or increase naturally reproducing fish populations and establish new populations in suitable locations.

2. To maintain optimum instream flows for fish.

3. To maintain and/or increase the quality and quantity of aquatic habitat conducive to maintaining high water quality and supporting fish populations at optimum densities.

4. To protect spawning, overwintering and rearing areas, and migratory routes crucial to the survival of specific fish populations.

5. To increase and diversify recreational fishing opportunities.

6. To provide a success rate of 0.3 fish per angler hour on naturally reproducing populations and high altitude lakes, and 0.5 fish per angler hour on productive stocked lakes.

7. To provide appropriate access to the fisheries resource.

8. To inform and educate the public in the conservation and management of the fisheries resource.

Guidelines

1. Land use applications and resource development plans will be reviewed to identify potential impacts on fisheries. Appropriate conditions will be placed on them to avoid destruction or loss of habitat. Conditions may include changes in location, timing of activity, or development and construction methods. Rehabilitation measures may be required, particularly for key fisheries habitat such as crucial spawning, rearing or overwintering areas.

2. Angling regulations will undergo regular review in relation to angler use, harvest levels and fish population conditions to ensure the long-term survival of naturally reproducing resident sportfish populations, particularly bull and cutthroat trout. Innovative angling regulations may be required to maintain naturally reproducing populations.

3. Motorized and non-motorized trail developments will be reviewed and monitored to ensure that such trails do not damage fish habitat and that adequate stream crossings are installed.

4. Angling opportunities will be provided by enhancing the diversity of fish species available, the angling methods and angling locations. This will include development of new fisheries through lake development and stocking programs.

5. Development of fisheries enhancement or improvement programs will be implemented through the Buck for Wildlife Program and in co-operation with other agencies.

2.4 Recreation

The planning area is noted for its diversity of recreational uses resulting from its proximity to the City of Calgary and the ability of the land to sustain a variety of recreational pursuits. Most of the recreational use originates from the City of Calgary, the Town of Cochrane and smaller communities within and east of the planning area and is concentrated on weekends. A lesser degree of transient recreational use, associated with tourism along the Forestry Trunk Road (SR 940), also occurs. The potential exists to increase recreation use in the area.

Typical recreational pursuits in the planning area include camping, hunting, fishing, off-highway vehicle use, snowmobiling, trail riding, hiking, mountain climbing, ice climbing and scenic drives primarily on developed roads. There are seven forest recreation areas located on a north-south axis provided by the Forestry Trunk Road (SR 940). They provide facilities for three group camps, 328 camping units, 88 picnic sites and staging areas for an estimated 1197 km (960 mi.) of developed off-highway vehicle (OHV), motorcycle and snowmobile trails.

There are currently four Class I commercial trail riding areas in the southern portion of the planning area with trails and campsites located in the more remote, mountainous areas. (See Commercial Trail Riding Policy, APPENDIX A.) Hiking trails are located in the Blackrock Mountain area, along the Ghost River into the Ghost River Wilderness Area, and from the Canmore area through the Exshaw Creek Valley.

Random camping is widespread throughout the planning area and formal camping facilities tend to be heavily overused on long weekends during the summer. Random camping occurs in the planning area as an alternative to the formalized recreational opportunities offered within Kananaskis Country, Alberta Forest Service recreation areas and provincial recreation areas. At present, this recreational pursuit has not created any acute problems within the Ghost River Planning Area with respect to site condition or quality.

Objectives

1. To maintain existing recreational facilities at current provincial standards as required.

2. To provide a wide range of resource-based recreational opportunities.

3. To promote a greater public awareness of existing recreational facilities and opportunities.

4. To create an understanding of environmental concerns associated with recreational use within an integrated management approach.

Guidelines

1. The maintenance and upgrading of existing recreational facilities will continue within the scope of recreational operations and maintenance plans.

2. Public recreational opportunities will be provided according to long-range recreational development plans employing an integrated approach.

3. Development of recreational opportunities by the private sector on public land will be encouraged where the intent of the recreational use is compatible with environmental conditions, demand and other ongoing or anticipated land uses.

4. Visitor services, including user awareness and education, information services and promotional efforts, will be considered as components of the forest recreation approach in the planning area.

5. Management of random camping activity will be determined on the basis of ongoing site observation. Should site impacts resulting from this activity exceed acceptable levels, site hardening, closure and

rehabilitation or relocation of the activity to other identified sites will be considered.

2.5 Access

Most of the planning area is accessible by public and industrial roads and a variety of seismic, hiking, equestrian and other trails. The upper elevations of the western portions have the least access, consisting mainly of hiking, equestrian and off-highway vehicle trails. Access to the central portions is mainly by the Forestry Trunk Road (SR 940) (portions of which are being upgraded) and a variety of seismic, recreational and other trails. The TransAlta Utilities road into Devil's Gap provides access along the Ghost River. In the east-central portion of the study area the Harold Creek road, which is currently being upgraded, provides access along with a large number of seismic trails. Access to the remainder of the eastern portion is by local public roads and seismic trails. The portion of the planning area south of Indian Reserves 142, 143 and 144 is reached by Highway 1 and Secondary Road 968 along with seismic and other trails.

Off-highway vehicle use is a legitimate activity and highly valued by many users of the area. Recreational off-highway vehicle use has had some localized impacts in the Ghost River Planning Area. Indiscriminate use has the potential to cause additional impact on terrain, vegetation, wildlife and water quality.

Objectives

1. To provide a range of opportunities for summer and winter recreational off-highway vehicle use.

2. To minimize conflicts between recreational off-highway vehicle users and other users.

3. To minimize environmental impacts through the management of recreational off-highway vehicle use.

Guidelines

1. An access management plan will be prepared for the entire planning area to determine an access network suitable for summer and winter recreational off-highway vehicle use. In the development and approval of the access management plan, public education and regulatory strategies under the Forests Act will be considered as implementation mechanisms as required. The access management plan will be developed on a co-operative basis and will be subject to involvement and review by interested government resource management agencies, local authorities, the general public and public interest groups. More specific guidelines are given, as necessary, on a RMA basis.

2. Snowmobile use will be considered and permitted on selected routes in Zone 1 when approved through the access management plan. Snowmobile use will be permitted only under certain circumstances in Critical Wildlife (Zone 2) areas providing critical ungulate winter range.

2.6 Tourism

The planning area is within a two-hour drive of a resident population of over 600 000 people. In 1982, the Calgary/Canmore area received over 1 million non-resident visitors. A preliminary profile of these visitors indicates that they visit primarily in the summer from the United States, British Columbia, Saskatchewan and Ontario, and they travel by private vehicle. Almost half these visitors stayed with friends or relatives, while just over 40 per cent stayed in motels/hotels. Only 7 per cent used campgrounds. Vacationing was the main trip purpose for over half these travellers with sightseeing (69 per cent), visiting friends and relatives (57 per cent), and resting and relaxing (45 per cent) as their primary activities. Only 12 per cent indicated they took part in backpacking and hiking.

The Forestry Trunk Road is the major scenic route through the planning area. Many non-resident visitors are interested in the beautiful scenery of the foothills as seen from this road. This passive form of outdoor activity is referred to as "auto touring".

It is anticipated that an increasing number of visitors, both resident and non-resident, will be interested in auto touring on the Forestry Trunk Road in order to experience the splendour of Alberta's foothills. There is no increase in

backcountry use anticipated as a result of an increase in auto touring.

There have been no formal surveys completed on Albertan recreational activity patterns within this area, but from public input and field staff observation, several user types can be described. Residents who frequent the area for recreational purposes include backcountry hikers and backpackers, fishermen, hunters, off-highway vehicle enthusiasts and horseback riders. They are primarily weekend-oriented visitors within a day's drive of their place of residence and enjoy the random use that presently exists. Considering the varied demand on this area for recreation, and the wide range of visitors to the area, it will become increasingly important to allow for some basic service development (e.g., gas station and corner grocery.) It is also important to recognize that certain commercial tourism facilities (such as backcountry lodges) may be economically viable in the planning area.

Objectives

1. To facilitate tourism use of the planning area by resident and non-resident visitors through consideration of a variety of compatible service developments.

2. To provide opportunity for the development of private sector commercial tourism and recreational facilities and activities.

Guidelines

1. A variety of tourism and recreational opportunities such as commercial trail riding and staging areas, backcountry lodges and youth hostels, outfitting/guiding operations for hiking and hunting, summer and winter recreational off-highway vehicle use, cross-country skiing and touring activities will be accommodated where appropriate in the planning area. The development of support services to facilitate travel in, and use of, the area will also be accommodated where appropriate through consultation with M. D. 8, I.D. 8 and other responsible government agencies.

2. Planning assistance will be provided to existing and potential operators of commercial tourism facilities and services in the planning area. Marketing and demand information and promotion advice will be supplied, where possible.

3. Private sector individuals or companies interested in commercial tourism facility development will be expected to show economic feasibility and assess environmental impacts prior to project approval.

2.7 Timber

The timber resource is presently managed under two forest management units (FMUs), B8 and B02. As of May 1, 1986, the B3, B4 and B5 FMUs were amalgamated to form the B8 FMU with an estimated coniferous annual allowable cut of 141 000 m^3 (32 853 mFbm) based on a 15+/11 cm utilization standard. This has resulted in a more balanced age-class distribution incorporating the younger age classes from the former B3 FMU, and will promote a regulated forest situation over the long term. A portion of the former B2 FMU in this planning area has been incorporated in the B7 FMU which, for the most part, is located in the Kananaskis Country Planning Area. As a result, the B7 FMU has not been included in annual allowable cut calculations for the Ghost River Planning Area.

An estimated coniferous annual allowable cut of 17 500 m^3 (4078 mFbm) will be available from the Water Valley, Dogpound, Fallentimber and South Ghost miscellaneous timber use (MTU) areas for local residents and small commercial operators. Firewood cutting areas in the planning area will continue to be available for commercial and non-commercial use.

It is anticipated that commercial demand for forest products will be satisfied through commercial timber permits and three timber quota allocations. Timber quota allocations include an estimated 85 244 m^3 (19 862 mFbm) at a 15+/11 cm utilization standard, and 10 837 m^3 (2525 mFbm) employing a modified 19 cm utilization standard on an annual basis. Existing and/or additional resource allocations will remain within the limits of sustained yield forest management.

The B8 forest management unit is capable of supporting an estimated annual allowable cut of 6200 m^3 (1445 mFbm) for deciduous timber

at a 15+/11 cm utilization standard. Should demand for deciduous forest products become apparent in the future, commercial and local uses of this resource will been encouraged.

Dwarf mistletoe, found in the B8 forest management unit, is a parasitic plant that attacks lodgepole pine and, occasionally, white spruce. The parasite tends to reduce the life functions of its host, resulting eventually in mortality, either directly or through the introduction of secondary pathogens to weakened forest stands.

Intensive and extensive surveys of dwarf mistletoe commenced in November 1984 to develop a method by which occurrences could be systematically surveyed throughout the Bow/Crow Forest and to provide relevant information for forest management purposes. Surveys completed in March 1986 indicate a significant occurrence of the parasite within the planning area. Estimates from aerial reconnaissance suggest that of the 121 656 ha (300 608 ac.) of pine and mixed pine forest types on public land; 16 196 ha (40 020 ac.) have been confirmed as infected and 1526 ha (3771 ac.) have been identified as infected. An estimated 781 ha (1930 ac.) of pine forest types on privately owned lands are also infected.

Forest management throughout the Ghost River Planning Area includes the provision and maintenance of a sustained yield land base capable of satisfying both commercial and local demands for forest products. Forest management techniques intended to promote a healthy and stable forest environment, in conjunction with other demands on the forest land base, are also employed.

As the Ghost River Planning Area provides opportunities for a wide range of land uses, fire protection measures are important to ensure the safety of the public who recreate or make their livelihoods in the area, and to protect natural resources. The planning area is, for the most part, located within the forest protection area and has experienced a high frequency of both man-made and lightning-induced fire starts since 1980.

Forest protection measures, with respect to wildfires, involve a number of components including fire prevention, detection, pre-suppression and suppression. Fire prevention involves public education and direct contact with the public in an effort to prevent or minimize the risk of wildfires before they occur. Detection efforts include five lookouts located in the Keystone Hills, Mockingbird Hill, Burnt Timber (near North Burnt Timber Creek), Blue Hill (north of the Red Deer River) and Barrier Lake (formerly located on Pigeon Mountain in Kananaskis Country). Lightning detectors located throughout the Eastern Slopes provide accurate detection information as does aerial detection involving regular patrols. The public, both local residents and visitors, also play an important role in fire detection.

Pre-suppression and suppression efforts include the mobilization and deployment of initial attack crews generally located at the Ghost Ranger Headquarters and the Red Deer Guardian Station. In addition, a "helitack" crew is periodically located at the station. Airtanker bases are located at Calgary and Rocky Mountain House. The deployment of crews and equipment is dependent upon forest conditions and fire danger ratings. The public, including ranchers, local residents and industry fire suppression crews, have participated in forest fire situations.

Objectives

1. To manage the forest resource and sustained yield land base to satisfy commercial and local requirements for forest products.

2. To examine and promote the expansion of forest product allocation levels, where feasible, allowing a balanced age-class distribution and a regulated forest situation over the long term.

3. To protect the forest from damage, including destruction by fire, insects, disease or other causes, and maintain healthy and stable forest conditions.

4. To protect the forest from wildfires and maintain public safety, prevent property damage and protect the natural resources in the planning area.

5. To encourage forest research in insect and disease management problems, site productivity and reforestation on steep slopes.

6. To manage forest vegetation in a manner that will not cause detrimental changes to streamflow characteristics.

Guidelines

1. The forest land base includes all lands within the Bow/Crow Forest where forest management for sustained yield production or other purposes may be undertaken. The sustained yield land base generally consists of lands designated as zones under the Eastern Slopes Policy where logging is a compatible or permitted land use activity.

2. The sustained yield land base will be managed to provide for an estimated commercial demand level of 85 244 m^3 (19 862 mFbm) at 15+/11 cm utilization standard and 10 837 m^3 (2525 mFbm) employing a modified 19 cm utilization standard on an annual basis for coniferous timber. Existing or additional coniferous timber quota allocations will remain within the limits of sustained yield forest management.

3. An estimated deciduous annual allowable cut of 6200 m^3 (1445 mFbm) will be available for local or commercial use at the 15+/11 cm utilization standard, as demand warrants.

4. Miscellaneous timber use areas will be formally established and continue to be a source of wood products for local residents and small commercial operators. A volume estimate is given within the Little Red Deer RMA. Refer to the Little Red Deer and Water Valley RMAs for specific guidelines.

5. Timber harvesting will be conducted using landscape logging techniques applied in the Bow/Crow Forest, the Forest Landscape Management Guidelines for Alberta (Alberta 1986) and principles contained in the Timber Harvest Cutblock Design Manual (Alberta 1977).

6. Continued and increased productivity of the forest land base will be ensured through intensive forest management techniques, reclamation of surface disturbances and reforestation of harvested stands according to the established reforestation policy.

7. Sanitation treatments and/or salvage operations will occur where required throughout the forest land base following analysis and consideration of potential environmental impacts and referral to resource management agencies.

8. Forest fuel modification treatments by mechanical means or the use of prescribed burns will be considered for forest management purposes throughout the planning area to reduce the risk of wildfire, maintain public safety and increase forest productivity.

9. Timber management plans will integrate harvesting and reforestation with other land use activities such as recreational developments, range management and wildlife habitat management.

10. Reforestation efforts will consider the use of a diversity of tree species in the vicinity of recreation facilities and high use areas under general recreation reservations.

11. The impacts of logging operations on watersheds will be minimized by ensuring adherence to operational ground rules, pre- and post-operational watershed assessments, and procedures in the internal referral systems of the provincial government.

12. The dwarf mistletoe survey program has been concluded in this portion of the Bow/Crow Forest. Assessments of the impacts on the forest resource will be undertaken, with subsequent control treatments expanded and implemented to control the spread of this disease where possible.

13. Forest management activities will be directed at the maintenance or improvement of water yields. The use of tested procedures to predict water yield changes resulting from vegetation changes will guide resource management programming.

14. Resource and land development proposals or projects will include fire protection assessments as part of the internal referral systems of the provincial government through the Forest Protection

Branch. Assessments will address public safety aspects and risk management associated with the size and location of developments within the forest protection area. Consultative services concerning forest protection measures will be available to M.D. 8 and I.D. 8 adjacent to the forest protection area.

15. Fire protection measures will continue to be undertaken throughout the planning area as a component of the fire management program developed for the Bow/Crow Forest. The use of fire prescribed for land or resource management purposes will be strictly controlled and monitored according to fire management policy.

2.8 Range

Domestic grazing has been an integral component of the land use pattern in the planning area since the turn of the century. Rangelands within the forest reserve portion were heavily grazed in the early 1900s to help reduce the wildfire hazard resulting from fuel build-up. As a result of this practice, rangelands were overgrazed and a subsequent deterioration of range conditions occurred. In the 1950s, as the knowledge of range management improved, reductions in range use were employed to return the range to a condition capable of sustaining long-term use. The loss of productive rangelands to brush encroachment and an estimated 200 escaped or abandoned horses within the Ghost River Planning Area have continued to contribute to the reduction of forage available for domestic livestock and wildlife.

There are currently 10 grazing allotments in the Rocky Mountain Forest Reserve portion of the Ghost River Planning Area. The carrying capacity on the grazing allotments is estimated at 7857 animal unit months (AUMs) provided by 19 367 ha (47 855 ac.) of primary and secondary range.

There are 18 complete, and portions of six, grazing leases in the Green Area outside the Rocky Mountain Forest Reserve. Covering approximately 23 660 ha (58 463 ac.), they support an estimated 12 722 AUMs. In addition, there are 10 grazing permits covering approximately 4381 ha (10 825 ac.) supporting an estimated 2274 AUMs.

Grazing leases or permits have been issued for the majority of public land in the White Area portion of the planning area (10 553 ha or 26 076 ac.). In total, 6648 AUMs are provided on 37 grazing leases and seven grazing permits. Grazing leases and permits are grazed in conjunction with adjacent private land. Brush encroachment and increased canopy cover have reduced the forage available for domestic livestock. Rotational logging has helped to offset the decrease of available forage in the short term.

Objectives

1. To provide rangelands within the planning area that will support at least 29 501 AUMs in accordance with the commitment to maintain 1977 grazing levels for domestic livestock.

2. To maintain the rangelands in good condition for use by domestic livestock and wildlife.

3. To reduce the annual loss of rangelands from vegetation succession and conflicting resource uses.

4. To encourage more intensive management of domestic livestock within range allotments, leases and permits to achieve uniform forage use and good range conditions.

Guidelines

1. Range objectives are to be achieved using primary rangelands and range management techniques and improvements prescribed in range management and range development plans. The use of secondary rangelands will be promoted where feasible to supplement existing use on primary rangelands.

2. Range management plans for grazing dispositions will be completed and/or updated every five to 10 years, or more often as needed. Range management plans will contain provisions for range improvement projects and other range management practices required to maintain

the range resources. Range management plans are subject to watershed and wildlife assessments.

3. Range improvement programs will be considered to maintain long-term forage productivity. All improvements will preserve the intent of the zone in which they are conducted.

4. A detailed assessment of range improvement requirements will be undertaken to determine the degree of range improvement on allotments, permits and leases required to achieve range management objectives. Range improvements will be accomplished considering wildlife habitat enhancement as a complementary benefit.

5. Range improvements will generally be conducted on suitable areas of brush or aspen vegetation with minimal disturbance to coniferous growing stock. Improvement efforts will be concentrated on areas where vegetation succession has reduced grazing capacities. Treatments may include mechanical removal of vegetation species and the use of prescribed burns for range management purposes.

6. Opportunities for stocking increases based on sound range management practices will be considered on an operational basis during the development of range management plans.

2.9 Minerals

The most important mineral resource of the planning area is natural gas found in 11 gas fields located along the foothills and Front Ranges of the Rocky Mountains. The 1985 total production of natural gas was 1.25 billion m^3, while gas reserves were about 29 billion m^3. This is just over one-and-one half per cent of Alberta's production and reserves of natural gas. There is no production of petroleum here although the Lochend oil field now extends into the area and has potential for discovery of oil.

Coal-bearing strata of the Upper Cretaceous Edmonton Formation occur in the planning area and there is potential for coal resource development. Limited coal exploration has resulted in the identification of two small deposits at Silver Creek and Grand Valley. Several very small mines operated in the first part of this century at these two locations. There is coal potential in a large part of the area.

The area has substantial volumes of limestone and sandstone. At present there is one quarry mining Rundle stone in the Harvie Heights area and one quarry mining sandstone in the Yamnuska area. There are several limestone quarries on the periphery of the planning area, in the Bow Corridor.

Objectives

1. To encourage industry to define the extent of, develop or produce minerals where reserves have been proven or where productive formations exist.

2. To encourage the exploration for mineral resources in previously unexplored areas and formations.

Guidelines

1. All proposals for coal exploration and development will be processed in accordance with A Coal Development Policy for Alberta (1976). Mining and siting of processing facilities will be considered on a site-specific basis in response to Preliminary Disclosures.

2. Renewable resource values are high in Critical Wildlife and General Recreation Zones, and any mineral exploration or development must mitigate any potential resource conflicts.

3. Mineral activity will be governed by Eastern Slopes zoning through normal referral processes.

4. In most cases, mineral activity will be allowed in Zone 2 if the following criteria are met:

   - avoidance, if possible, of key habitat areas by the project;

- where avoidance is not possible, development should be designed to minimize disturbance of wildlife habitat and provide mitigative measures to maintain habitat capability throughout the project; and

- reclamation plans should have wildlife habitat as a high priority and retain the pre-disturbance wildlife capability of the project area whenever possible.

2.10 Historical Resources

The Ghost River area has not been subjected to intensive investigation of its prehistoric past, but over 100 archaeological sites have been identified. It is likely that the area was used for at least the last 12 000 years, but its use was likely less intensive than in surrounding areas associated with major watercourses. The most intensive use would have been along the Ghost, Dogpound, Waiparous and Fallentimber drainage systems.

Sites representing the material remains of hunters who frequented the region in the past 12 000 years have been identified in, or adjacent to, the planning area. The area is considered to have a high potential for the discovery of additional sites particularly along terraces above streams and rivers, along lakeshores or the margins of wetlands, and in areas where bedrock or cobbles of material suitable for the manufacture of stone tools have been exposed.

The Ghost River area first became readily accessible in the 1880s with completion of the railway to Cochrane. This opened markets for ranchers who had moved into the area in the 1870s. Logging was one of the first commercial activities, occurring along the Burnt Timber, Fallentimber, Ghost and Waiparous basins. Access to the area was mainly by foot or horseback until 1953, when the Forestry Trunk Road was completed and oil and gas exploration intensified through the 1950s, 1960s and 1970s. The waters of the North Ghost River were diverted into Lake Minnewanka in 1942.

The area is within the disturbed belts comprising the Rocky Mountain Front Ranges. The foothills belt (Little Red Deer River and Water Valley RMAs) is underlain by Upper Cretaceous clastic units. Formations include the Blackstone, Cardium, and Wapiabi formations of the Alberta Group and Brazeau Formation. The fossils present in these units include such organisms as foraminifera, pelecypods, gastropods, cephalopods and rare fish bones. Dinosaur bones have been recovered from equivalent units in the Nordegg area of Alberta. At the present time most of this foothills region is covered by thick conifer forests. The outcrops of bedrock, usually occurring along streams, are areas of maximum impact. At times construction of roads in the area has exposed these units and they have provided some fossil material. In the subsurface there should be units of the Blairmore Group (Lower Cretaceous), Kootenay Formation (Upper Jurassic - Lower Cretaceous) and Fernie Formation (Jurassic). These units are exposed both north and south of the Ghost River area and may be close to the surface within the area. All three units are fossiliferous in other areas of the foothills belt, and the Kootenay has been extensively mined for fossils in the Bow River Valley.

Once within the Rocky Mountain Front Ranges (Ghost Wilderness, Upper Ghost, Fallentimber and Waiparous RMAs), the sequence of units changes drastically. The sequence is entirely Palaeozoic with units of Cambrian, Devonian and Carboniferous ages mapped in the area. Invertebrate fossils are common in a large number of the formations and there are probably a number of undescribed potential palaeontological sites in the region. The Cambrian units include the Eldon, Pika and Arctomys formations, and the Lynx Group. Trilobites and brachiopods have been recovered from these units in the vicinity.

The Devonian units include Yahatinda (oldest plants in western Canada and fish bones), Cairn, Southesk, Alexo and Palliser formations.

These contain corals, stromatoporids, brachiopods, crinoids, bryozoa, etc. The Carboniferous units encountered include the Exshaw and Banff formations and Rundle Group which have cephalopods, brachiopods, corals, crinoids, bryozoa, pelecypods and gastropods. Thus, all these units are to some extent fossiliferous. The Front Ranges have excellent exposures not only along streams but

also along the exposed eastern faces of the mountains.

Objective

1. To protect historical resources (historic, prehistoric and palaeontological) from potential or actual impact related to future resource development and to manage these resources for future generations.

Guidelines

1. Resource uses in the planning area involving land surface disturbance may require Historical Resources Impact Assessments before development, as outlined under Section 33(2) of the Historical Resources Act.

2. The Archaeological Survey of Alberta, Resource Management Section, will participate in the land use referral process to review proposed development projects within those areas considered to have high historical resource potential.

2.11 Ecological Resources

Ecological resources are unique or representative features or systems that have been identified in the planning area. One Wilderness Area, two Natural Areas and one significant ecological area are located in the planning area. The Ghost River Wilderness Area is located in the headwaters of the Ghost River. Ole Buck Mountain Natural Area (Section 5, pt. Section 7-25-6 W5) is located in the Westover Lake area south of Indian Reserves 142, 143 and 144, and Wildcat Island Natural Area (SW 15-26-3 W5, the island only) is located in the Bow River near Beaupre Creek. One ecologically significant area is located near Winchell Lake south of Water Valley (Winchell Creek, NW 2-29-5 W5).

Objectives

1. To preserve selected unique or representative ecosystems or features.

2. To provide for the recreational, scientific and educational uses of ecological resources.

Guidelines

1. Existing land use reservations will be maintained to protect ecologically significant areas until further protection, such as natural area or ecological reserve designations, is approved and established.

2. For any areas approved as Ecological Reserves or Natural Areas, a management plan will be prepared with interdepartmental and public participation. The plan will outline purpose, boundaries and permitted uses in keeping with guidelines in the Ghost River Sub-Regional Integrated Resource Plan.

3. RESOURCE MANAGEMENT AREA INTENTS, OBJECTIVES AND GUIDELINES

The general resource management objectives and guidelines described in the previous chapter do not apply evenly across the planning area. To facilitate the planning exercise, the planning area was divided into six resource management areas (RMAs). These RMAs are geographic areas that have common landscapes, resources, demands, current use and potential for resource management. The six RMAs identified in the Ghost River Planning Area (Figure 2, p. 7) are as follows:

A) Ghost Wilderness;
B) Upper Ghost;
C) Fallentimber;
D) Waiparous;
E) Little Red Deer; and
F) Water Valley.

Each RMA is examined individually to provide a detailed framework for decision-making. The specific management intent is unique to each RMA while the specific resource objectives and resource management guidelines may be repeated in two or more RMAs. The specific resource objectives and resource management guidelines are presented by resource sector. As well, the Eastern Slopes zoning configuration is identified.

It is recognized that conflicts between specific resource management objectives may exist within each RMA, so resource management guidelines are provided for each RMA to aid in the integration of objectives and minimize conflict. Whenever a particular resource is not mentioned in the specific resource objectives and guidelines, the broad resource objectives and guidelines described in Chapter 2 apply.

3.1 Ghost Wilderness Resource Management Area

This RMA corresponds to the Ghost River Wilderness Area (Figure 3) which is established under the Wilderness Areas, Ecological Reserves and Natural Areas Act. Management of the wilderness area is the responsibility of Alberta Recreation and Parks. The area is composed entirely of Alpine and Subalpine ecoregions. The Alpine portion is dominated by exposed limestone bedrock while small pockets of dwarf shrubs, graminoids and stunted alpine fir are found on eroded sandstones and shales. Slopes are steep and colluvium with Engelmann spruce and lodgepole pine forests dominate the Subalpine ecoregion.

Significant mountain goat and bighorn sheep populations currently use ranges within the Ghost River Wilderness Area in conjunction with ranges in the Upper Ghost RMA and Banff National Park. Little information is available on other wildlife species such as ptarmigan, grizzly bear and wolverine or on the fisheries resources. This area contains the upper portion of the Ghost River drainage system. There are no known mineral deposits in this RMA.

Recreational activities such as climbing and hiking occur in this RMA to a very limited extent. Because of limited development, presence of wildlife, natural beauty and low recreational uses, this RMA is recognized for its wildland values and ability to provide a quality wildland recreational experience.

The management intent of the Ghost Wilderness RMA is to protect and manage this area of Alberta for the purposes of preserving its natural beauty, and safeguarding it from impairment and industrial development. (See the preamble to the Wilderness Areas, Ecological Reserves and Natural Areas Act, 1984.)

Objectives and Guidelines

Specific resource objectives and guidelines are not required for the Ghost Wilderness RMA as all programs must adhere to conditions set out in the Wilderness Areas, Ecological Reserves and Natural Areas Act. Resource management in this RMA will be subject to management plans where required and prepared and implemented by Alberta Recreation and Parks in accordance with the act and regulations thereunder.

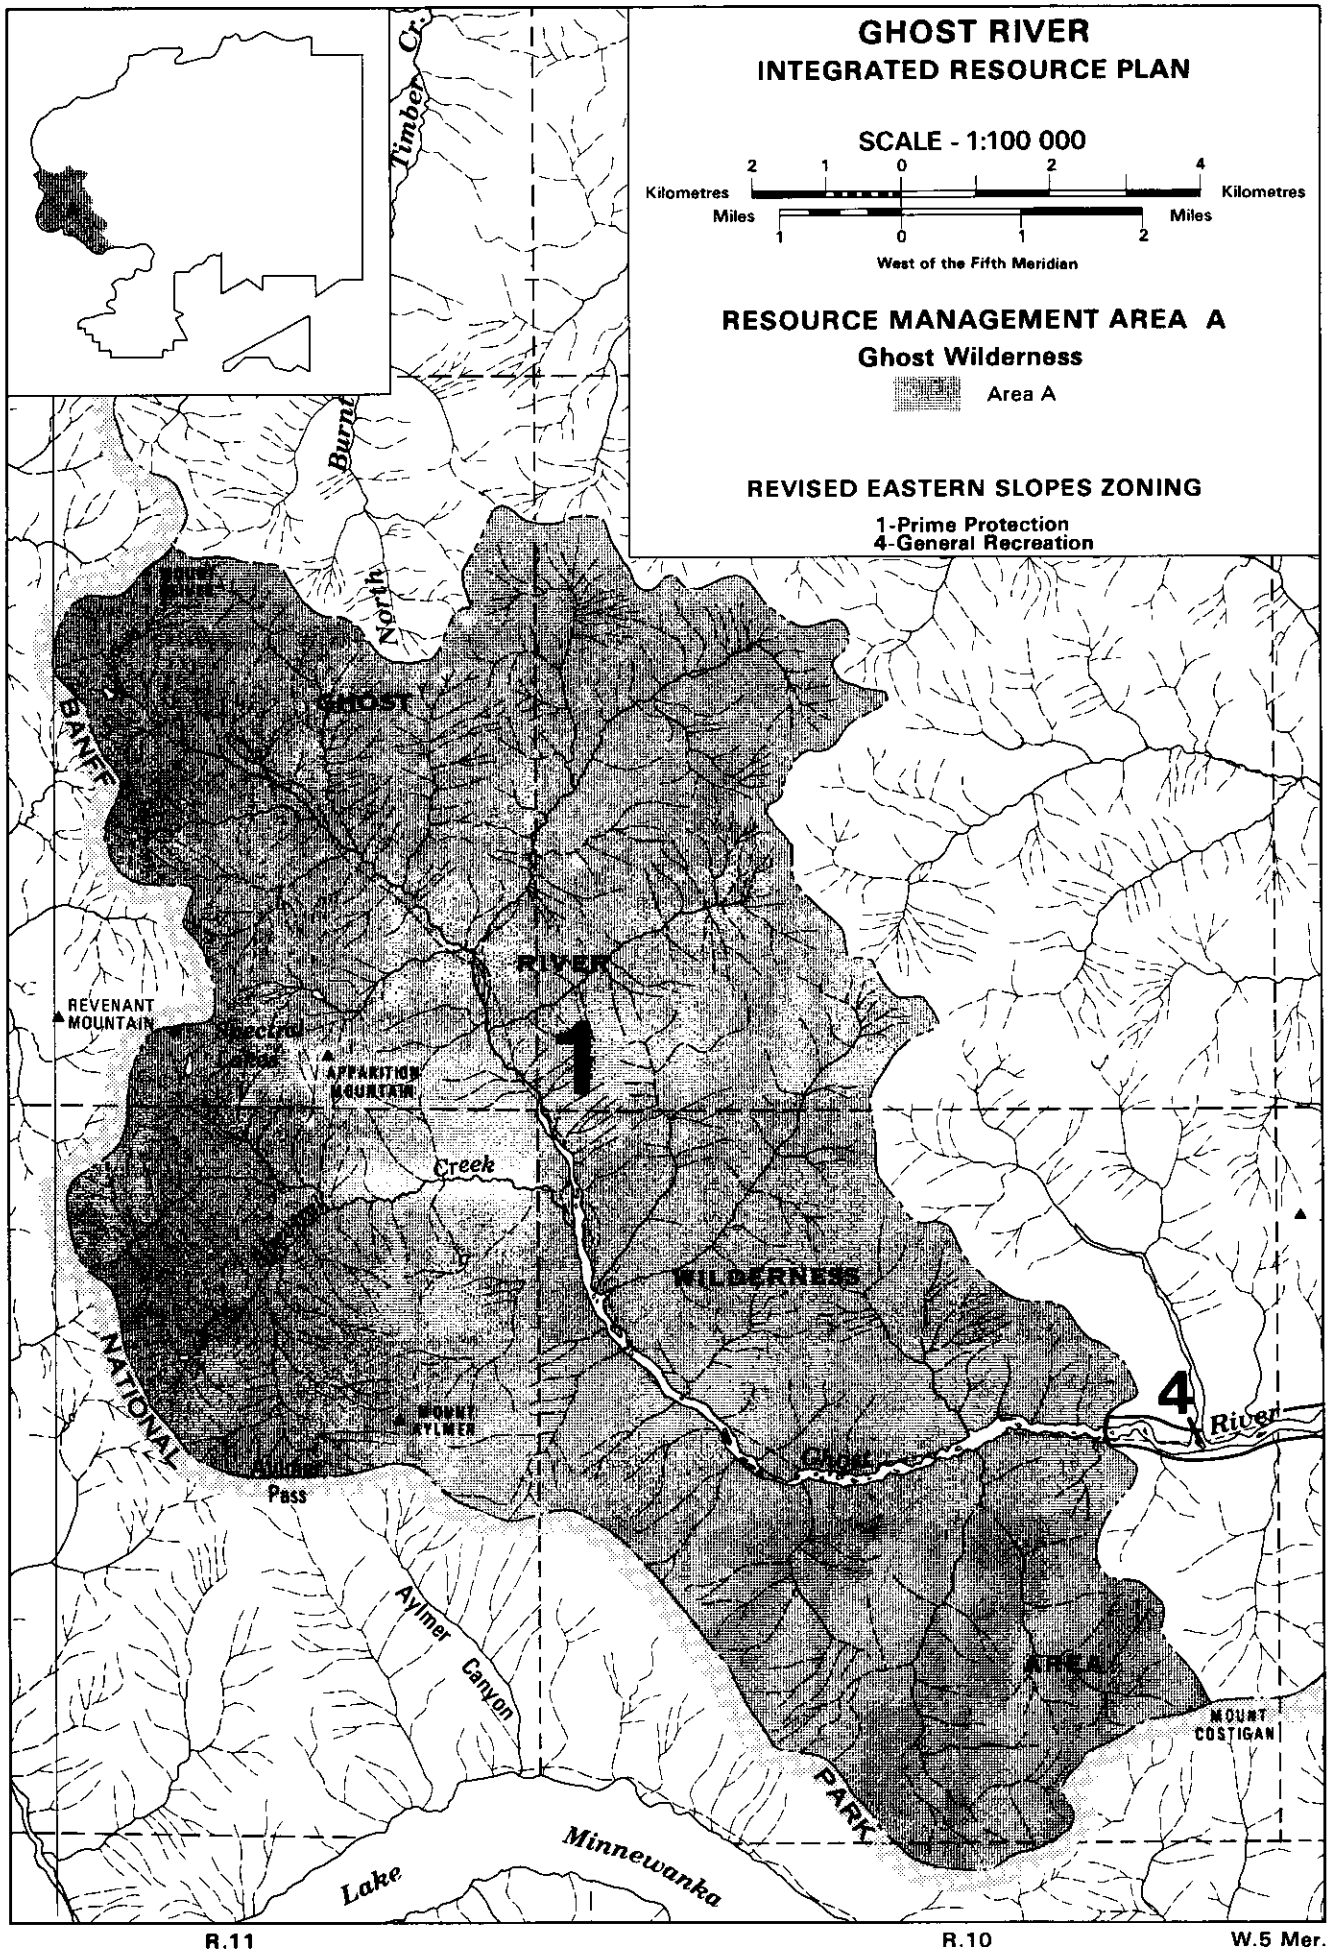

Fig. 3 Ghost Wilderness Resource Management Area

Ghost Wilderness RMA

In keeping with the intent of the Wilderness Areas, Ecological Reserves and Natural Areas Act, no mineral or other resource extraction is permitted in this RMA. Hunting, trapping and fishing are also not permitted. Access is only allowed by foot. Use of the area is strictly controlled.

3.2 Upper Ghost RMA

The Upper Ghost RMA consists of the Front Ranges of the planning area outside the Ghost River RMA (Figure 4). It contains Alpine and Subalpine ecoregions along with portions of the Montane Ecoregion. The Montane Ecoregion in this RMA is dominated by extreme to very steep slopes. South-facing slopes are mainly grassland with scattered aspen, lodgepole pine or Douglas fir. North-facing slopes commonly have mixedwood forests of a variety of age classes.

The management intent of the Upper Ghost RMA is to protect the watershed; environmentally sensitive terrain; rare, fragile or representative landscapes; and critical wildlife ranges.

Watershed

This RMA contains the headwaters of the major drainages in the planning area. Parent materials consist of weathered bedrock, colluvium on slopes and coarse material in river valleys. Stream channels are well protected from disturbances. Steep slopes, poorly developed soil and a harsh climate can make disturbances difficult to reclaim. Land use activity, including seismic exploration, has not been as prevalent in the area compared to more eastern portions of the study area.

Objective

1. The broad watershed management objectives apply.

Guideline

1. There are nine reclamation projects proposed for the RMA. They involve the reclamation of an estimated 20.3 km of seismic lines in the North Burnt Timber, Burnt Timber, Fallentimber and Blackrock Mountain areas, and 11.3 km of access trails in the Upper Waiparous and Ghost River/Johnson Lakes areas will also be evaluated.

Upper Ghost RMA

Wildlife

Significant bighorn sheep and mountain goat populations are distributed throughout the alpine areas. The major winter ranges for bighorn sheep include Burnt Timber, Blackrock, Orient Point, End Mountain, Mount Laurie and Mount Charles Stewart areas. Grizzly bear, moose, mule deer and elk populations are present.

Objectives

1. To maintain the existing bighorn sheep population at about 200 animals, and moose population densities at 0.9 and mule deer at 0.8 animals per km^2.

2. To increase the goat population to a minimum of 100 animals.

3. To provide hunting opportunities for goat when numbers reach a sufficient level.

4. To identify and maintain territories or ranges for grizzly bear, goat, elk and wolverine populations.

5. To maintain sheep range with emphasis on protecting and enhancing key habitats.

6. To maintain current annual harvest levels of 12 male elk, three trophy sheep and one grizzly bear on a sustained basis.

7. To increase hunting opportunities, particularly for trophy elk, grizzly bear and goats.

Guidelines

1. Goat populations will be permitted to naturally re-establish themselves through protective measures.

2. Grizzly bears will be transplanted to this area from other areas.

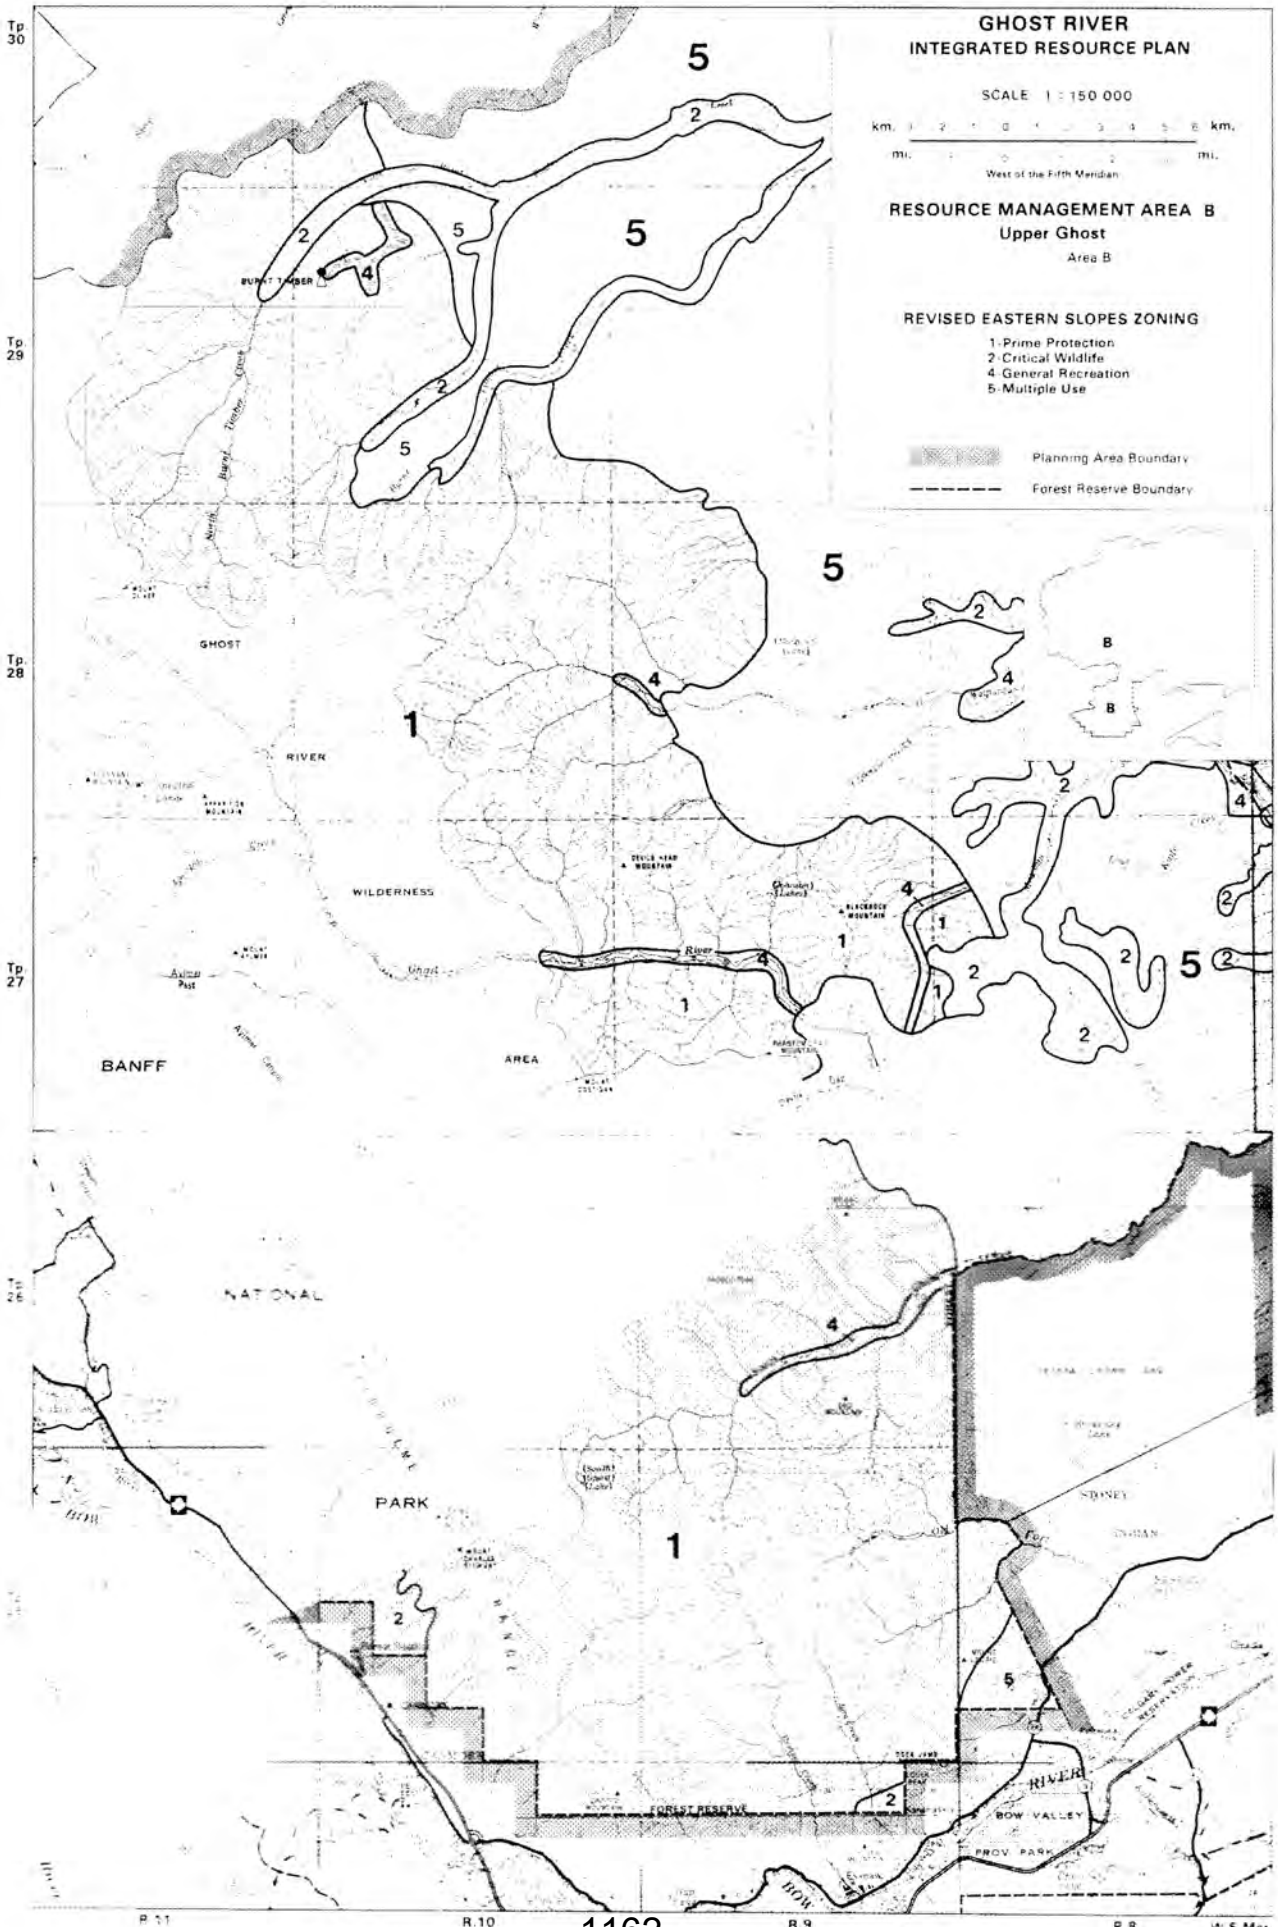

Fig 4 Upper Ghost Resource Management Area

3. Present and proposed non-motorized access and recreational activities will be reviewed to determine whether they avoid areas significant to sheep, goat and grizzly bear populations. Means to mitigate impacts will be applied where appropriate.

4. Forest management plans in Zone 1 and Zone 2 will be reviewed to ensure impacts on wildlife and wildlife habitat resources are minimized.

Fisheries

The Upper Ghost RMA contains the headwaters of the South Ghost and North Ghost rivers and Waiparous, Burnt Timber and North Burnt Timber creeks. These streams support sparse gamefish populations of bull trout, cutthroat trout, brook trout and mountain whitefish. The major limiting factors are high velocity, steep gradient, cold water temperatures and unproductive habitats.

Stenton (South Ghost) Lake, located at the headwaters of the South Ghost River, has been stocked with cutthroat trout. North Johnson Lake has overwintering capabilities for maintaining fish populations. Because of its connection with a Waiparous Creek tributary, this lake is naturally stocked with brook, cutthroat and bull trout. The level of present use of these lakes for fishing is unknown, but there is potential here to accommodate some of the high demand for mountain lake sport fishing.

Objectives

1. To maintain 50 gamefish per km in the North Burnt Timber and Waiparous creeks and South Ghost River.

2. To maintain 100 gamefish per km in Burnt Timber Creek and North Ghost River.

3. To protect spawning, rearing and overwintering areas for bull trout in the headwaters of the North Burnt Timber and Burnt Timber creeks, and other streams identified during surveys.

Upper Ghost RMA

4. To protect areas particularly crucial for bull trout as identified through surveys in the Waiparous Creek and Ghost River drainage.

5. To maintain migratory corridors for bull trout along North Burnt Timber, Burnt Timber and streams identified during surveys.

Guidelines

1. Additional surveys will be conducted by 1990 to identify crucial spawning and rearing areas and to measure fish populations. Populations will be monitored every 10 years to determine changes in populations and habitat conditions.

2. High altitude lake fisheries will be surveyed and developed where feasible by 1995 to broaden the wilderness backcountry experience that is unique to the high country.

3. Naturally reproducing gamefish populations will be expanded into various creeks where feasible, through regulations, habitat development and introduction programs, to increase sport fishing recreational opportunities.

4. Cutthroat trout will be introduced into the North Burnt Timber and Burnt Timber creeks and golden trout or arctic grayling into suitable lakes.

5. Recreational fishing opportunities will be increased by enhancing the primary production of lakes or streams where appropriate.

6. The amount of recreation provided by the various fisheries will be documented by 1995 and monitored every 10 years. The quantity of gamefish harvested will be measured every 10 years to ensure that continued optimum levels of use and harvests are provided.

7. Lakes and beaver ponds will be surveyed by 1990 to determine stocking potential.

8. Alpine and subalpine lakes will be managed according to the Alberta High

Upper Ghost RMA

Mountain Lakes Fisheries Management Program. This requires co-operation with the Alberta Forest Service to manage access to and use around these lakes.

9. Careful regulation of angling in high altitude lakes will be required to maintain the fragile ecosystem and the backcountry experience.

10. An information program to inform the public of the sensitive nature of this RMA and its very limited ability to produce gamefish and support recreation will be provided.

11. A feasibility study on introducing golden trout and arctic grayling to provide angling variety will be conducted.

Access

Access in this RMA is much less prevalent than in more eastern portions of the planning area. Seismic activity has occurred on a limited scale and recreational activity, including the use of snowmobiles and off-highway vehicles, has been noted in the upper Waiparous Creek, Blackrock Mountain and Devil's Gap/Johnson Lakes area up to the Ghost River Wilderness Area. Current access is mainly by foot or horseback. Motorized recreational use has been known to occur to a limited degree within the Ghost River Wilderness Area where such use is prohibited.

Objectives

1. To allow motorcycles, 4x4s, all terrain cycles and snow machines access to selected routes and trails.

Guidelines

1. The majority of this form of recreational activity will be directed to the Fallentimber and Waiparous Creek RMAs where facilities already exist. This may be achieved through the use of signs/posters, brochures, visitor information and management messages at trailheads, and the co-operation of the public through contact with clubs, organizations and school groups.

2. Recreational off-highway vehicle access will be restricted to trails in the Zone 4 corridors.

3. Seasonal use and types of vehicles permitted on the Zone 4 corridor trails will be addressed in the access management plan. Motorized recreational vehicle access on the Burnt Timber Lookout trail will be restricted during bighorn lambing season specifically, but timing of use will also be addressed on all other trails.

4. Motorized recreational vehicle access in the Ghost valley bottom near Ghost Wilderness Area will be addressed through the access management plan.

5. Public education or regulatory strategies under the Forests Act will be considered as implementation mechanisms where required, in the development and approval of the access management plan.

Recreation

There are no forest recreational areas, facilities or formal trails within this RMA. Portions of the Blackrock and the proposed Burnt Timber commercial trail riding areas are located in this RMA. Random camping occurs in the Mount Yamnuska area, Devil's Gap area and along the Ghost River. Climbing and hiking also occur in the Mount Yamnuska, Devil's Gap and Phantom Crag areas. Off-highway vehicle use occurs to a limited degree in this RMA. Because of limited resource development, presence of wildlife and natural beauty, this RMA is recognized for its ability to provide a quality wildland recreational experience.

Objectives

1. To maintain existing dispersed, non-motorized recreational opportunities in the RMA.

2. To provide limited trail facilities for existing hiking trails in the central portion of the RMA.

3. To provide motorized recreational opportunities through selected routes and trails.

Guidelines

1. Non-motorized recreational pursuits such as hiking, horseback riding, hunting, fishing and limited motorized recreation vehicle use are compatible with the management intent of this RMA.

2. Recreational off-highway vehicle access will be restricted to existing Zone 4 corridor trails. Serviced camping will not be permitted in the Zone 4 corridors.

3. Hiking and backpacking trails now used in the Blackrock Mountain and Devil's Gap areas will be considered for formalized trailhead development and trail signs according to recreational operations and maintenance plans.

4. The use of trails for commercial trail riding purposes, including overnight camping, will be permitted in the RMA under the provisions of the Commercial Trail Riding Policy.

Timber

The forest contains a variety of age-classes ranging from immature, mature and overmature in the Burnt Timber and North Burnt Timber creeks area to immature and regenerating stands in the south. Overmature stand conditions are also found in the upper South Ghost and Ghost River areas and the upper Johnson and Waiparous Creek areas.

The emphasis for forest management in this RMA will be on the maintenance of forest conditions amenable to watershed protection and wildlife habitat. With the presence of overmature age-classes, and a resulting trend towards senescent and decadent stand conditions, forest management will also include the maintenance of healthy and stable forest conditions.

Objective

1. To maintain healthy and stable forest conditions recognizing watershed, wildlife and recreational values.

Upper Ghost RMA

Guidelines

1. Watershed protection and wildlife habitat will be important features of forest management planning in the RMA.

2. Sanitation or salvage treatments, if required and feasible, will be concentrated in areas containing forest stands demonstrating senescent and/or decadent conditions or damaged stands in an effort to stabilize forest conditions and minimize the risk or occurrence of wildfire or disease.

Minerals

Natural gas reserves, associated with that part of the Panther River Field which extends into the northern tip of the RMA, are estimated at 300 million m^3. Three natural gas wells associated with this field are located in the Ghost River Planning Area, one of which is in the Upper Ghost RMA. All three wells are capped and there is currently no hydrocarbon production from the RMA. Petroleum and natural gas infrastructure consists of access to the one wellsite. Gas of the Panther River Field contains a high percentage of hydrogen sulphide. Approximately five per cent of the RMA is under petroleum and natural gas disposition, all in the Panther River Field. There is step-out natural gas potential in the area around the field because it was discovered prior to July 21, 1977.

Quarriable mineral resources exist in the extensively exposed Paleozoic strata and this, in combination with the proximity of the Trans-Canada Highway and the Canadian Pacific Railway main line, makes these quarriable mineral resources very important provincially. Three quarriable mineral leases exist along the southern edge of the RMA - two of which have quarries developed on them.

One quarry located near Harvie Heights has been a small operation, providing about 1000 tonnes per year of Rundle stone. The other quarry at Mount Yamnuska is owned by Canada Cement Lafarge and has been producing about 14 000 tonnes per year of sandstone. Both quarries have been granted surface access for the purpose of quarrying. A quarriable

mineral lease also extends into the planning area east of Jura Creek.

Objectives

1. To allow the assessment and development of petroleum and natural gas reserves within the productive geological structures of the Panther River gas field.

2. To allow the existing quarries to continue their operations.

Guideline

1. Except for step-out activities, exploration and development of petroleum and natural gas will not be permitted in the Prime Protection and General Recreation corridor portions of the RMA.

2. Exploration and development of coal in this RMA will not be permitted.

3. Development or expansion of quarries in the Prime Protection portion of the RMA will not be permitted, but activity will be permitted on existing quarriable mineral leases under appropriate conditions in the Zone 2 and Zone 5 portions of the RMA. Additional leases in Zone 2 and Zone 5 may be considered.

Historical Resources

The Upper Ghost RMA has not been the subject of any systematic inventory of historical resources. However, considerable potential exists for the occurrence of prehistoric archaeological sites. Areas exhibiting such potential are those suitable for encampments and other activities associated with exploitation of the high elevation plant and game resources which characterize the area. These include flat terraces (especially south-facing) above streams and rivers, shores or small lakes, alpine meadows and exposures of bedrock suitable for stone tool manufacture. These sites represent the remains of native hunters who have frequented the area for over 12 000 years.

Objective

1. The broad objective applies.

Guidelines

1. The Archaeological Survey of Alberta, Resource Management Section, will participate in the land use referral process to review any proposed developments in the following portions of the RMA considered to be of high historical resource potential.

   - Land adjacent to the headwaters of South Ghost, North Ghost/ Waiparous, Burnt Timber, North Burnt Timber and their tributaries; Johnson Lakes; the unnamed lake at the head of Johnson Creek; South Ghost River and its tributaries; Old Fort Creek and its tributaries; Jura Creek; Exshaw Creek; headwaters of various tributaries to the Bow River; and land adjacent to South Ghost Lake.

   - Any major project outside the above areas involving large areas of land surface disturbance (i.e., coal mines, major roadways, etc.).

3.3 Fallentimber RMA

This RMA is mainly covered by the Subalpine Ecoregion with only a very small area of Boreal Foothills Ecoregion in the northeast portion (Figure 5). The area is made up mainly of foothills running northwest/southeast. The area has a pronounced crest-swale pattern with local relief of about 400 m (1300 ft.). Moraine covers most of the lower slopes and valleys. The subalpine forests are dominated by lodgepole pine and Engelmann/white spruce. The Boreal Foothills Ecoregion to the northeast is mainly composed of a mixture of lodgepole pine, white spruce and aspen.

The management intent of the Fallentimber RMA is to allow the use of the full range of available resources within a multiple use context.

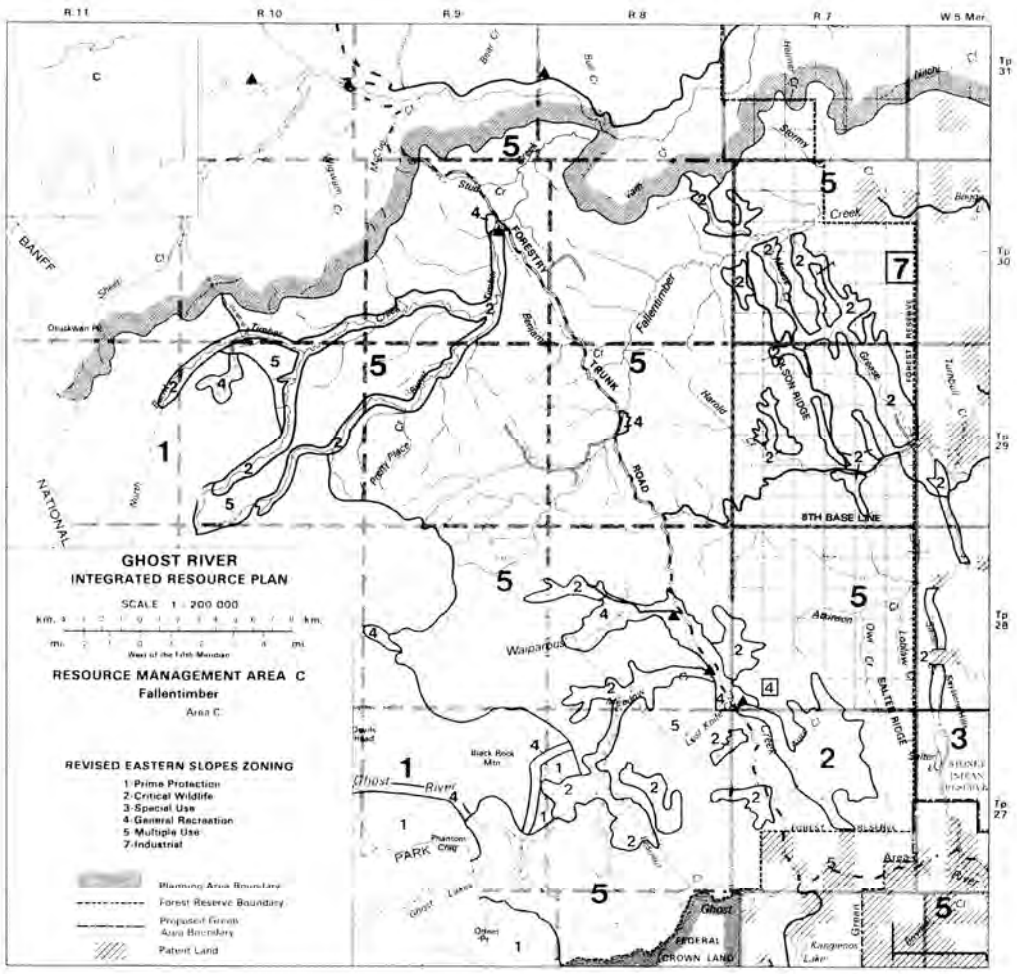

Fig.5 Fallentimber Resource Management Area

Fallentimber RMA

Watershed

The susceptibility of the area to erosion depends largely on steepness of slopes. The North Burnt Timber, Benjamin Creek and Harold Creek areas are particularly susceptible to erosion.

Objective

1. The broad watershed management objectives apply.

Guideline

1. There are 14 reclamation projects proposed in this RMA. They include reclamation of an estimated 32.1 km of seismic lines in the North Burnt Timber, Burnt Timber and the Burnt Timber/Benjamin Creek/Hunter Valley Road areas. There are also 12.3 km of access trails in the North Burnt Timber, Burnt Timber and Hunter Valley Road areas. Portions of the North Burnt Timber and Burnt Timber project overlap into the Upper Ghost RMA.

Wildlife

Winter concentrations of moose occur mainly in the area between Heifer Lake and Harold Creek. Winter concentrations of mule deer are widely distributed, but they are most likely to be found where small snow-free grassy areas are present on south and west-facing slopes especially along Fallentimber Creek. Grizzly bear are most abundant within the Upper Burnt Timber watershed.

The principal source of income from trapline operations comes from coyote, beaver, red squirrel, lynx and marten. Highly productive areas of marten occur in the upper headwaters of Fallentimber Creek and along the Little Red Deer River. Highly productive areas for beaver occur mostly along the Little Red Deer watershed.

Objectives

1. To increase mule deer population densities on suitable habitats from 0.4/km^2 to 4/km^2, and moose populations from 0.4/km^2 to 1.4/km^2.
2. To identify suitable ranges for elk and re-establish elk populations in these areas where feasible.
3. To identify ranges and re-establish fisher populations on currently vacant ranges.
4. To identify and maintain territories for grizzly bear, wolf and wolverine populations.
5. To maintain habitat for spruce grouse and enhance habitat for ruffed grouse.
6. To enhance habitat for mule deer, moose and elk.
7. To maintain adequate forage and thermal cover on current winter ranges for mule deer and moose.
8. To maintain migration corridors for ungulates along watercourses.
9. To maintain habitat for marten and red squirrel populations, and to maintain riparian habitats, particularly for beaver and mink.
10. To maintain the current harvest of at least one grizzly bear and two cougars per year on a sustained basis.
11. To maintain long-term minimal average harvest of 30 beaver, one lynx, 10 marten, 40 red squirrels and five coyotes on an annual sustained basis.

Guidelines

1. Timber management plans will be reviewed for opportunities to increase winter forage for wildlife, particularly on south-facing and southwest-facing slopes.
2. Range development plans will be reviewed to ensure browse and thermal/hiding cover is maintained, and to ensure forage is provided for wildlife.
3. Forage units (AUMs) for wildlife will be assessed to determine whether additional

forage is required and appropriate funding will be allocated as needed.

4. An assessment of mature and old-growth forest cover will be conducted to identify requirements to maintain certain wildlife populations such as red squirrel and marten populations.

5. Trapline damage or loss from industrial activity may be compensated through the Alberta Trappers Compensation Program where appropriate.

Fisheries

The Burnt Timber, Fallentimber and Little Red Deer drainage systems contain major sport fisheries. The North Burnt Timber and Burnt Timber creeks support populations of bull trout and mountain whitefish. Cutthroat trout have been introduced into this drainage over the past few years.

Present use for sport fishing is high where access is good, especially adjacent to Burnt Timber campground. The demand is generally greater than the present capability for consumptive use. Pinto Creek has been completely closed to fishing to protect important spawning areas for bull trout.

The Fallentimber system supports mountain whitefish, brown trout, brook trout and bull trout populations. To support the high demand for sport fishing, beaver ponds of this system were stocked with 23 850 brown trout and 13 740 eastern brook trout between 1957 and 1979.

The Little Red Deer system within this RMA supports brook trout, bull trout and brown trout. Where streams are readily accessible, they are heavily used for sport fishing.

Objectives

1. To maintain 200 gamefish (bull trout and mountain whitefish) per km in North Burnt Timber and Burnt Timber creeks.

2. To establish 300 cutthroat per km in North Burnt Timber and Burnt Timber creeks by 1990.

Fallentimber RMA

3. To maintain 780 mountain whitefish, 50 brown trout, 150 brook trout and 50 bull trout per km in the lower portions of Fallentimber Creek.

4. To maintain 200 brook trout per km in Benjamin Creek.

5. To maintain 100 gamefish per km in the Little Red Deer River and tributaries.

6. To protect spawning, rearing and overwintering areas in Pinto Creek (100 bull trout adults per km).

7. To protect other areas in Burnt Timber and North Burnt Timber creeks to be identified by 1995 that are important to cutthroat trout.

8. To protect spawning, rearing and overwintering areas for all gamefish in the Fallentimber and Grease creeks, and for brook trout in Benjamin Creek.

9. To maintain 10 000 brown trout in the Harold Creek beaver dams.

10. To identify and maintain migratory corridors for bull trout, cutthroat trout and mountain whitefish in North Burnt Timber Creek.

11. To identify and maintain migratory corridors for mountain whitefish, bull trout, brook trout and brown trout in Fallentimber Creek.

Guidelines

1. Surveys will be conducted by 1995 to identify crucial spawning and overwintering areas and to measure fish populations. Populations and habitat will be monitored every 10 years to determine if changes have occurred.

2. The amount of recreation provided by the various fisheries will be documented by 1995 and monitored every 10 years. The quantity of gamefish harvested will be measured every 10 years to ensure that continued optimum levels of use and harvests are provided.

3. Cutthroat trout will be allowed to expand their distribution and numbers to increase sport fishing recreation through regulations and habitat retention on various creeks in the North Burnt Timber and Burnt Timber drainage.

4. Recreational fishing opportunities will be broadened by introducing new species where appropriate (e.g., rainbow trout into all developed land-locked ponds).

5. Primitive access trails will be maintained or provided to stream and river fisheries and any lakes developed for sport fishing through development of an access management plan.

6. Recreational fishing opportunities will be increased by enhancing the primary production of lakes or streams where appropriate.

7. An information program will be provided to inform the public of sport fishing opportunities and also the limitations for supporting intensive recreation.

8. Fieldwork will be conducted every five years and appropriate public information will be provided to deliver an effective beaver dam stocking program.
9. The feasibility of introducing golden trout and arctic grayling to provide angling variety will be evaluated.

10. Lakes in the eastern portion of this RMA will be surveyed and enhanced where feasible to provide additional sport fishing opportunities and to reduce pressure on naturally reproducing populations.

Recreation

There are two formal Alberta Forest Service recreation areas located in this RMA, the Fallentimber and Burnt Timber. They provide facilities for 90 camping units and 58 picnic sites. There are an estimated 108 km of developed recreational trails in this RMA, including approximately 8 km for snowmobile only, 29 km for motorcycle only and 71 km for motorized, summer and winter use. The Fallentimber Forest Recreation Area provides staging areas for 96 km of trails. The remaining 12 km of trails in this RMA are accessible from staging areas provided from forest recreation areas in the Waiparous Creek RMA. The trails established in this RMA and the Waiparous Creek RMA are linked, providing a number of circuits for recreational off-highway vehicle use. The use of recreational off-highway vehicles also occurs throughout the RMA as the result of access created by resource development. The Forestry Trunk Road is important as a transportation route for recreationists.

At present, there is one commercial trail riding permittee operating in the Burnt Timber area of the RMA. Random camping is considered heavy and is generally concentrated in the Hunter Valley Road/ North Burnt Timber and Burnt Timber creeks area, Hunter Valley Road/ Fallentimber Creek area, Stud Creek east of the Forestry Trunk Road (SR 940), Stud Creek Road/Doc Mills Road area and the Benjamin Creek area.

Objective

1. To formalize commercial trail riding areas in the RMA and provide additional commercial trail riding opportunities.

2. To monitor recreational activities and provide additional facilities as demand requires.

Guidelines

1. Two Class II commercial trail riding areas will be recommended for the Burnt Timber area.

2. The long-range recreational development plan will identify areas for camping, picnicking and staging areas for recreation in this RMA. An area under reservation along the Harold Creek Road (N1/2 11-29-7 W5M), previously identified as having potential for a new forest recreation area, will be cancelled.

Access

The major access routes are the Forestry Trunk Road, the roads along Harold Creek and Olson

Ridge and roads in the Fallentimber/Burnt Timber areas. The entire RMA is covered by seismic trails, particularly the northeast portions. Access by recreational off-highway vehicles is concentrated in the Harold Creek area and west of the Forestry Trunk Road, but occurs throughout the RMA mainly as a result of resource development.

Objective

1. The broad access management objective applies.

Guidelines

1. In the Owl Creek/Salter Ridge area, recreational off-highway vehicle use will be limited to selected routes and trails. In the development and approval of the access management, public education and regulatory strategies under the Forests Act will be considered as implementation mechanisms where required to manage motorized recreational access in this portion of, or throughout, the RMA.

2. Recreational off-highway vehicle use will be monitored throughout the RMA to determine whether further mitigative measures are required.

Tourism

There are currently no existing tourism facility developments in this RMA. Non-resident visitor use will probably remain focused along the Forestry Trunk Road. Visitors from the surrounding region actively participating in outdoor activities, including OHV use, should also be encouraged to continue use of this area.

Objectives

1. To recognize that the Forestry Trunk Road corridor is the most realistic area for potential recreation and tourism development opportunities.

2. To maintain opportunities for snowmobiling and encourage additional associated developments.

Fallentimber RMA

Guideline

1. The opportunity for private sector development of commercial tourism facilities and services along the Forestry Trunk Road will be considered where appropriate on public land.

Timber

The timber resources in the Fallentimber RMA are predominantly in the mature and overmature age-classes. Of the commercial species, pine is more prevalent than spruce. Spruce occurs for the most part along the valley bottoms throughout the RMA.

The RMA contains timber quota spheres of interest held by Sunpine Forest Products Ltd. and Spray Lake Sawmills Ltd. Potential sources of timber available to the forest products companies include the reserve stands of cancelled timber licenses. The Fallentimber RMA is expected to accommodate an estimated 44 per cent of the anticipated commercial demand for forest products, within the planning area, over the next 20- to 30-year period (given commercial planning horizons of 20 years and timber management plan revisions at 10-year intervals).

Dwarf mistletoe occurs in the western and east-central portions of the RMA. Affected areas include North Burnt Timber, Burnt Timber, Nuisance, Fallentimber, Benjamin, Harold and Grease creeks and the Little Red Deer River.

The emphasis for forest management in this resource management area will include the provision and maintenance of a sustained yield land base capable of satisfying commercial demands for forest products.

Objectives

1. The broad timber management objectives apply.

Guidelines

1. Timber harvesting operations will be generally located in the Burnt Timber/North Burnt Timber Creek area,

Grease/Turnbull Creek area (30-5 W5), Fallentimber Creek area (30-8 W5) and south of the Little Red Deer River in the vicinity of Atkinson Creek.

Range

There are six range allotments within this RMA: Burnt Timber, Lower Fallentimber, Upper Fallentimber, Grease Creek, Harold Creek and Little Red Deer. The recommended carrying capacity in the RMA is estimated at 4431 animal unit months. For the most part, range use has decreased as the result of brush and aspen encroachment. Most of the allotments are now being managed under guidelines established through range management plans developed in the late 1950s and early 1960s. Generally, allotments have sites that are suitable for range improvement including brushlands dominated by bog birch and occasional bog birch/willow brushland sites. Most sites are flat with good access.

Objectives

1. To provide a rangeland that is capable of supporting an estimated 4431 animal unit months for domestic livestock.

2. To monitor and manage range resources with respect to escaped or abandoned horses.

Guidelines

1. An estimated 300 ha (741 ac.) has been identified as having potential for range improvement. A detailed assessment of range improvement requirements will be undertaken to more accurately determine the extent of range improvement projects required over the long term. Mechanical clearing and prescribed burns will be considered for brush encroachment control.

2. The western portion of the upper Fallentimber range allotment overlaps into the Upper Ghost RMA. The allotment boundary will be adjusted to comply with the intent of the RMA and the Eastern Slopes Policy (revised 1984).

Fallentimber RMA

3. The impact of escaped or abandoned horses along roads and on rangelands will be determined.

Minerals

Two natural gas fields (the Benjamin and Hunter Valley) and parts of two other fields (the Burnt Timber and Panther River) occur in this RMA. Production of natural gas from the seven producing wells was 225 million m^3 in 1984, while reserves were approximately 5.5 billion m^3. There are seven capped gas wells including two associated with the Panther River Field. Although natural gas production is limited by present markets, industry has dispositions covering 85 per cent of the RMA and exploration activity is continuing. This reflects the strong potential of the Mississippian Rundle Formation as well as the industry's interest in the less extensively explored Devonian and Cretaceous strata.

One gas plant with associated pipeline is located here and serves four gas fields in the planning area and beyond. About 400 tonnes per year of sulphur are produced at this plant. Substantial reserves of sulphur in the form of hydrogen sulphide gas are found in this RMA in the Burnt Timber and Panther River gas fields.

Objectives

1. To provide opportunities for the continued exploration and development of petroleum and natural gas within the Benjamin, Burnt Timber, Hunter Valley and Panther River gas fields as well as in other parts of the RMA.

2. To provide opportunities for exploration and development of coal resources within the RMA.

Guidelines

1. The broad mineral guidelines apply.

Historical Resources

The limited archaeological studies undertaken to date have demonstrated that the Fallentimber RMA contains considerable numbers of pre-

historic archaeological sites and has high potential for additional occurrences. These sites represent camps and processing stations associated with the exploitation of game herds which were seasonally present in the area. Areas of potential consist of flat terraces above streams and rivers, lakeshores, the margins of wetland areas, and where bedrock, river gravels or materials suitable for stone tool manufacture are exposed. Prehistoric natives responsible for these sites frequented the area for more than 12 000 years.

Objectives

1. The broad historical resource objective applies.

Guidelines

1. The Archaeological Survey of Alberta, Resource Management Section, will participate in the land use referral process to review any proposed developments in the following areas of the RMA considered to be of high historical resource potential.

    - Land adjacent to North Burnt Timber Creek and its tributaries, Burnt Timber Creek and its tributaries, Nuisance Creek and its tributaries, Fallentimber Creek and its tributaries, Stormy Creek, Benjamin Creek, Mouse Creek, Grease Creek, Harold Creek and its tributaries, the Little Red Deer River and its tributaries, Atkinson Creek, Owl Creek, Loblaw Creek, Pinto Creek, and Heifer Lake.

    - Any major projects outside the above areas involving large areas of land surface disturbance (i.e., coal mines, major roadways, etc.).

3.4 Waiparous RMA

The Waiparous RMA (Figure 6) consists of the Subalpine and Montane ecoregions. Subalpine forests (lodgepole pine and Engelmann-white spruce) cover the northern one-third of the RMA. The area has a pronounced crest-swale pattern with local relief of 400 m (1300 ft.). The Montane Ecoregion covers the southern two-thirds of the area. The foothills of this RMA have been eroded by the Ghost River, forming extensive south-facing slopes. Slopes are moderate to very strong with grassland-forest on the south-facing slopes and forests on north-facing slopes. Douglas fir, aspen, lodgepole pine and white spruce are the dominant tree species in the Montane ecoregion.

The management intent for the Waiparous RMA is to allow the use of the full range of available resources within a multiple use context, with an emphasis on wildlife and intensive recreation in the area of Waiparous Creek.

Watershed

This RMA contains a large portion of the Waiparous drainage basin including Meadow, Lost Knife and Aura creeks. It also includes a part of the Ghost drainage including Lesueur Creek. Within these systems, Meadow Creek has been rated as being particularly sensitive to erosion. The Ghost River and Lesueur Creek flow through coarse alluvial outwash which is resistant to disturbance. The Ghost River is partially diverted into Lake Minnewanka.

Objective

1. The broad watershed management objectives apply.

Guidelines

1. Reclamation projects proposed for the upper Waiparous Creek area southwest of Margaret Lake will be evaluated and undertaken subject to reclamation policies and funding according to availability and provincial priorities. The projects involve reclamation of an estimated 3.0 km of seismic line, and 2.6 km of access. These overlap into the Upper Ghost RMA.

2. Licensed diversions from the Ghost River to Lake Minnewanka for hydro-electric generation purposes will be maintained.

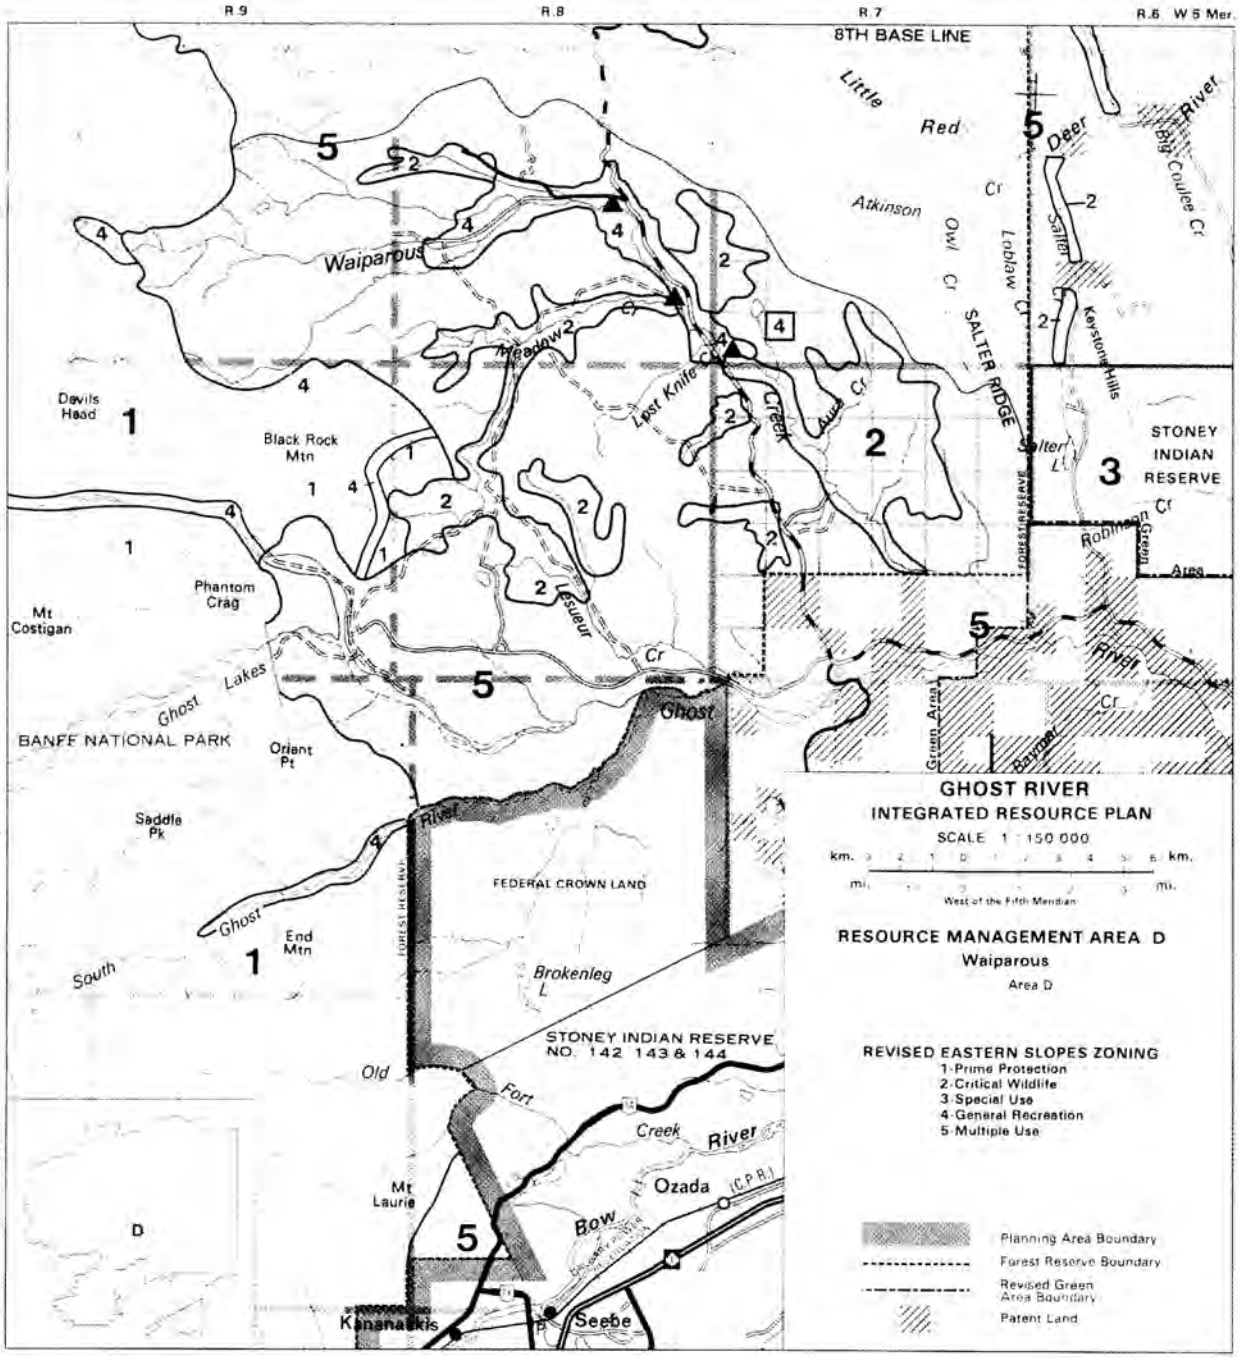

Fig. 6 Waiparous Resource Management Area

Waiparous RMA

Wildlife

Winter concentrations of moose are found mainly in shrubland areas near Meadow Creek, Cow Lake and Aura Lake. Winter concentrations of mule deer are less known but generally are found on south and west-facing grassy slopes along the Waiparous watershed. Traditional winter ranges for elk and mule deer are believed to have existed in the same habitat along the Ghost River and Lesueur Creek.

The principal source of income for trapline operations is from coyote, beaver, red squirrel, lynx and marten.

Objectives

1. To increase mule deer population densities on suitable habitats from 0.8/km^2 to 4/km^2, and moose population densities from 0.8/km^2 to 1.4/km^2.

2. To identify historical ranges for elk and re-establish elk populations on these areas where feasible.

3. To identify ranges and re-establish fisher populations on currently vacant ranges.

4. To enhance habitat for mule deer, moose and elk populations.

5. To ensure adequate forage and thermal cover is maintained on winter ranges for mule deer and moose, and maintain migration corridors for ungulates along watercourses.

6. To identify and maintain territories for grizzly bear, wolf and wolverine populations.

7. To maintain habitat for marten and red squirrel populations.

8. To maintain riparian habitats particularly for beaver and mink.

9. To maintain habitat for spruce grouse and enhance habitat for ruffed grouse.

10. To maintain long-term minimal average harvest levels of one marten, 300 red squirrels, eight coyotes, 11 beaver and one lynx on an annual sustained basis.

Guidelines

1. Timber harvest plans will be reviewed for opportunities to increase winter forage for wildlife, particularly on south or southwest-facing slopes, and to maximize forest diversity.

2. Range development plans will be reviewed to ensure browse and thermal/hiding cover is maintained, and to ensure forage is provided for wildlife.

3. Forage units (AUMs) for wildlife will be assessed to determine whether additional forage is required and appropriate funding will be allocated as required.

4. An assessment of mature and old-growth forest cover will be conducted to identify requirements for maintaining habitat for certain wildlife species such as red squirrel and marten populations.

5. Trapline damage or loss from industrial activity may be compensated for through the Alberta Trapping Compensation Program where appropriate.

Fisheries

The Ghost River and Waiparous, Meadow and Johnson creeks and Margaret Lake form the major sport fisheries in this RMA. Waiparous Creek drainage system supports cutthroat trout, brook trout, bull trout and mountain whitefish. Where access is good, present use for sport fishing is high, especially adjacent to Waiparous Creek campground. The demand is generally greater than the present capability for consumptive use. The South Ghost drainage system supports brook trout, bull trout and mountain whitefish.

Margaret Lake has good capabilities for supporting fish populations and has been stocked annually with brook and rainbow trout since 1963. The lake was stocked with 5000 brook trout in 1982. Cow (Whispering Pines)

Lake is incapable of overwintering fish but has potential to be a productive put-and-take fishery.

Objectives

1. To maintain 200 gamefish (bull trout, brook trout and mountain whitefish) per km in Ghost River.

2. To maintain 50-130 gamefish (bull trout, cutthroat trout, brook trout, brown trout and mountain whitefish) per km in Waiparous Creek.

3. To maintain 125-350 gamefish (cutthroat trout, brook trout, bull trout and mountain whitefish) per km in Meadow Creek.

4. To maintain 80-175 gamefish (cutthroat trout, brook trout, bull trout and mountain whitefish) per km in Johnson Creek.

5. To maintain brook trout in beaver dams along Lesueur Creek.

6. To maintain high water quality and protect habitat areas which are crucial for specific gamefish populations particularly spawning, rearing and overwintering areas for gamefish in Ghost River, Waiparous Creek, Meadow Creek, Johnson Creek and others identified through surveys.

7. To maintain stocking programs for Margaret Lake (5000 brook trout) and other lakes or beaver dams identified through surveys as having stocking potential.

Guidelines

1. Naturally reproducing gamefish populations will be expanded into various creeks where possible through regulations, habitat development and introduction, in order to increase sport fishing recreational opportunities.

2. Flow diversion will be monitored and reviewed to determine means to minimize impacts on gamefish populations along the Ghost River.

Waiparous RMA

3. Recreational fishing opportunities will be broadened by introducing new species where appropriate (e.g., arctic grayling).

4. Recreational fishing opportunities will be increased by enhancing the primary production of lakes and streams where appropriate. Potential for the development of lakes to increase fishing opportunities will be reviewed annually.

5. The Alberta Fish and Wildlife Division will participate in the development of a management plan to maintain or provide primitive access to the streams with bull trout and cutthroat trout, and improve access and facilities at Margaret Lake.

6. An information program will be provided to inform the public of sport fishing opportunities and also limitations for supporting intensive recreation.

7. Alpine and subalpine lakes will be managed according to the Alberta High Mountain Lakes Fisheries Management Program. This program requires co-operation with the Alberta Forest Service to manage access to, and use around, these lakes.

8. Lakes will be surveyed and enhanced where feasible to increase sport fishing opportunities and reduce pressure on naturally reproducing populations.

9. Careful regulation of angling activities at high altitude lakes will be required to maintain the fragile ecosystem and the backcountry experience.

10. Fieldwork will be conducted and appropriate public information provided every five years to deliver an effective beaver dam stocking program.

11. Additional surveys will be conducted to identify crucial spawning and rearing areas, and to measure gamefish populations. Populations and habitat will be monitored every 10 years to determine if changes have occurred.

12. The amount of recreation provided by the various fisheries will be documented by 1995 and monitored every 10 years. The quantity of fish harvested will be measured every 10 years to ensure that continued optimum levels of use and harvests are provided.

Recreation

There are five formal recreation sites located in this RMA including the South Ghost, Waiparous Creek, Ghost Airstrip and North Ghost forest recreation areas and the Waiparous Valley Viewpoint. The forest recreation areas provide facilities for three group camps, 238 camping units, 30 picnic sites and staging areas for an estimated 89 km of developed trails (including approximately 2 km for snowmobiles only), and 87 km for motorized summer and winter use. The Waiparous Valley Viewpoint provides 10 picnic sites with a view of the valley to the west. All forest recreation areas have been upgraded to provincial standards. The Forestry Trunk Road provides the major access route for outdoor recreation.

There are four Class I commercial trail riding areas located in the RMA including the Ghost River, Blackrock, Lesueur Creek and Meadow Creek management areas. Random camping is considered heavy and is generally concentrated along the Ghost River/Lesueur Creek area, Johnson and Waiparous Creeks and along the TransAlta Utilities road west of Lesueur Creek.

Objective

1. To provide opportunities for formalized recreational use in accordance with current provincial standards.

Guidelines

1. Two water access points along Waiparous Creek and a group camp facility north of the existing Ghost Airstrip group camp will be considered for recreational development in accordance with long- range recreational development plans.

Waiparous RMA

2. No changes to the present system of commercial trail riding management areas are anticipated at this time.

Access

The major access routes in the Waiparous RMA are the Forestry Trunk Road, Mockingbird Lookout Tower Road and the TransAlta Utilities Road. The use of recreational off-highway vehicles occurs throughout the RMA as a result of access constructed for resource development. Use is particularly high along the Waiparous, Meadow and Lesueur creeks and along the Ghost River. Motorized recreational use occurs in the vicinity of the Banff National Park boundary and has been known to occur, on occasion, within the park boundary where this is prohibited.

Objective

1. The broad access management objective applies.

Guideline

1. Existing trails and roads will be examined to determine and provide an access network suitable for recreational off-highway vehicle use through the development of an access management plan. In the development and approval of the access management plan, public education and regulatory strategies under the Forests Act will be considered as implementation mechanisms where required to manage recreational motorized access in this RMA.

2. Motorized recreational vehicle access in the Devil's Gap area near Banff National Park will be addressed through the access management plan.

Tourism

The Forestry Trunk Road traverses the RMA and is important for scenic touring opportunities. Currently there are no existing tourism facility developments in this RMA. Part of the Ghost District Snowmobile Area lies in the RMA and staging areas have been developed as a minimal service to visitors. There are five formal recreation sites and

combined with the snowmobile area, the RMA receives a consistent level of visitor use. Additional services are needed to better accommodate existing and anticipated numbers of visitors. The lack of a dumping station at the Ghost Ranger District Information Centre and public access to recreational sites along the Ghost River and Waiparous Creek are immediate problems that must be examined.

Objectives

1. To recognize the Forestry Trunk Road as the focus along which intensive recreational development and tourism opportunities are most appropriate.

2. To provide opportunities for the private and public sectors to develop facilities which cater to the needs of the travelling public and users in the area.

3. To ensure recreational access to the Ghost River and Waiparous Creek is maintained or developed in appropriate locations.

Guidelines

1. The opportunity for private sector development of tourism and recreational facilities will be accommodated on public land where appropriate.

2. A dumping station should be constructed at the Ghost Ranger District Information Centre on the Forestry Trunk Road.

Range

There are four range allotments within this RMA: Ghost River, Aura Cache, Lesueur Creek and Devil's Head. The total recommended carrying capacity is estimated at 3426 animal unit months. For the most part, range use has decreased as the result of brush and aspen encroachment.

Objectives

1. To provide a rangeland that is capable of supporting an estimated 3426 animal unit months.

Waiparous RMA

2. To monitor and manage range resources with respect to escaped or abandoned horses.

Guidelines

1. An estimated 500 ha (1236 ac.) have been identified as having potential for range improvement. A detailed assessment of range improvement requirements will be undertaken to more accurately determine the extent of range improvement projects required over the long term.

2. Portions of Ghost River and Devil's Head range allotments overlap into the Upper Ghost RMA. The allotment boundaries will be adjusted to comply with the intent of that RMA and the Eastern Slopes Policy (revised 1984).

3. The allocation and management of forage used by domestic livestock, escaped or abandoned horses and wildlife will be reviewed in the Ghost River and Aura Cache grazing allotment.

4. The impact of escaped or abandoned horses along roads and on rangelands will be determined.

Minerals

Almost half the Salter natural gas field, with approximate reserves of one billion m^3, falls within the RMA. There is no hydrocarbon production at present. Approximately 40 per cent of the RMA is under petroleum and natural gas disposition and is undergoing exploration.

Objective

1. To provide opportunities for the continued exploration and development of petroleum and natural gas, particularly that resource associated with the Salter gas field.

Guideline

1. The broad minerals guidelines apply.

Waiparous RMA

Timber

The timber resources in the Waiparous Creek RMA are predominantly in the immature age-class as the result of fire in the early 1900s. Stands in the mature to overmature age-classes are found in the Waiparous/Meadow Creek, Waiparous/Cow Lake/Aura Creek and the Ghost River/Waiparous Creek areas. Of the commercial species pine is more prevalent than spruce and forms the majority of stands found in the younger age-classes. Spruce occurs, for the most part, along valley bottoms throughout the RMA.

The RMA contains portions of the timber quota held by Spray Lake Sawmills Ltd. The Waiparous Creek RMA is expected to accommodate an estimated 28 per cent of the anticipated commercial demand for forest products within the planning area over the next 25-year period, (given commercial planning horizons of 20 years and timber management plan revisions at 10-year intervals). Timber harvesting operations are anticipated in the early 1990s.

Dwarf mistletoe occurs in the northwestern and north-central portions of the RMA. Affected areas include the Margaret Lake, Waiparous/Meadow Creek and the Lost Knife/Waiparous Creek areas.

The emphasis for forest management in this resource management area will include the provision and maintenance of a sustained yield land base capable of satisfying commercial demands for forest products.

Objective

1. The broad timber management objectives apply.

Guideline

1. Timber harvesting operations are anticipated in the early 1990s and will generally be located north of Meadow Creek, in the Waiparous Creek drainage, in the Cow Lake/Aura Creek area and east of the Ghost Ranger Headquarters.

Historical Resources

Very limited historical resource inventory studies have taken place in the Waiparous RMA. Nevertheless, several sites have been identified and the potential for additional finds is considerable. Areas of potential are those suitable for encampments and other activities associated with exploitation of the seasonally present game herds in the area. These areas include flat terraces above rivers and streams (especially the Ghost River), lake-shores, margins of wetlands and exposures of bedrock or cobbles of materials suitable for stone tool manufacture. These sites represent the material remains of prehistoric hunting groups known to have frequented the area for over 12 000 years.

Objective

1. The broad historical resource objective applies.

Guidelines

1. The Archaeological Survey of Alberta, Resource Management Section, will participate in the land use referral process to review any proposed developments in the following areas of the RMA considered to be of high historical resource potential.

   - Land adjacent to Waiparous Creek and its tributaries, Meadow Creek and its tributaries, Lost Knife Creek, Aura Creek and land adjacent to its headwaters lake, Lesueur Creek and its tributaries, Ghost River and its tributaries, South Ghost River and its tributaries, and the unnamed lakes and their tributaries east of Mount Laurie.

   - Any major project outside the above areas involving large areas of land surface disturbance (i.e., coal mines, major roadways, etc.).

3.5 Little Red Deer RMA

The Little Red Deer RMA (Figure 7) consists mainly of the Boreal Lower Foothills and Montane ecoregions. The Boreal Foothills covers most of the RMA and includes gently rolling to very steep foothills. It is forested with mixtures of lodgepole pine, aspen and white spruce. The Montane ecoregion covers about 30 per cent of the RMA and consists of grassland-forest on steep south-facing slopes and forests on north-facing slopes.

The management intent for the Little Red Deer RMA is to allow for use of the full range of available resources within a multiple use context, with an emphasis on timber production and domestic livestock grazing in association with private land uses.

Watershed

This RMA contains portions of Turnbull Creek, Silver Creek, Grease Creek, Little Red Deer and Ghost River drainages. Turnbull Creek, Silver Creek and the Little Red Deer River all flow through fine textured material with the result that banks only have fair stability. Slopes are steeper in the southern portions of the RMA but erosion is a lesser problem because of the rocky nature of the terrain and stream channels.

Objective and Guideline

1. The broad objectives and guidelines apply.

Wildlife

Big game populations include mule deer, white-tailed deer and moose. There is little information on the distribution of these populations.

Principal sources of income from trapline operations are beaver, coyote, red squirrel, mink and marten. Areas near Stormy Creek, Boggy Lake, Turnbull Creek and Little Red Deer River are highly productive for marten and red squirrel. Riparian areas along Little Red Deer River and its tributaries, Fallentimber, Stormy and Silver creeks are highly productive for mink and beaver.

Little Red Deer RMA

Objectives

1. To enhance moose population densities from 0.3/km^2 to 1.4/km^2 on suitable habitat, and to maintain mule deer population densities of 0.9/km^2 and white-tailed deer population densities of 0.3/km^2 on suitable habitat.

2. To maintain adequate forest cover for sustaining moose and deer, and to maintain migration corridors for ungulates along watercourses.

3. To maintain habitat for sustaining marten, red squirrel, lynx and coyote populations, and to maintain riparian habitats particularly for mink and beaver.

4. To maintain hunting opportunities for deer, moose, elk, black bear, wolf and ruffed grouse.

5. To maintain the current average annual harvest of 1.4 cougar per year on a sustained basis.

6. To maintain long term minimal annual harvest of 40 beaver, five marten, 150 red squirrels and 12 coyote on a sustained basis.

Guidelines

1. Co-operation will be sought from grazing lessees and landowners to provide access to hunters under the Use Respect Program. Ranchers may be compensated for shot livestock through the Shot Livestock Program.

2. Co-operation will be sought from grazing lessees and landowners to carry out conservation programs for retaining or enhancing habitat for wildlife.

3. Problem wildlife situations will be resolved through animal removal or control where appropriate through the Nuisance Wildlife and Beaver Flood Control programs.

4. Ranchers may be compensated for wildlife depredation through the Livestock Predation Indemnity Program.

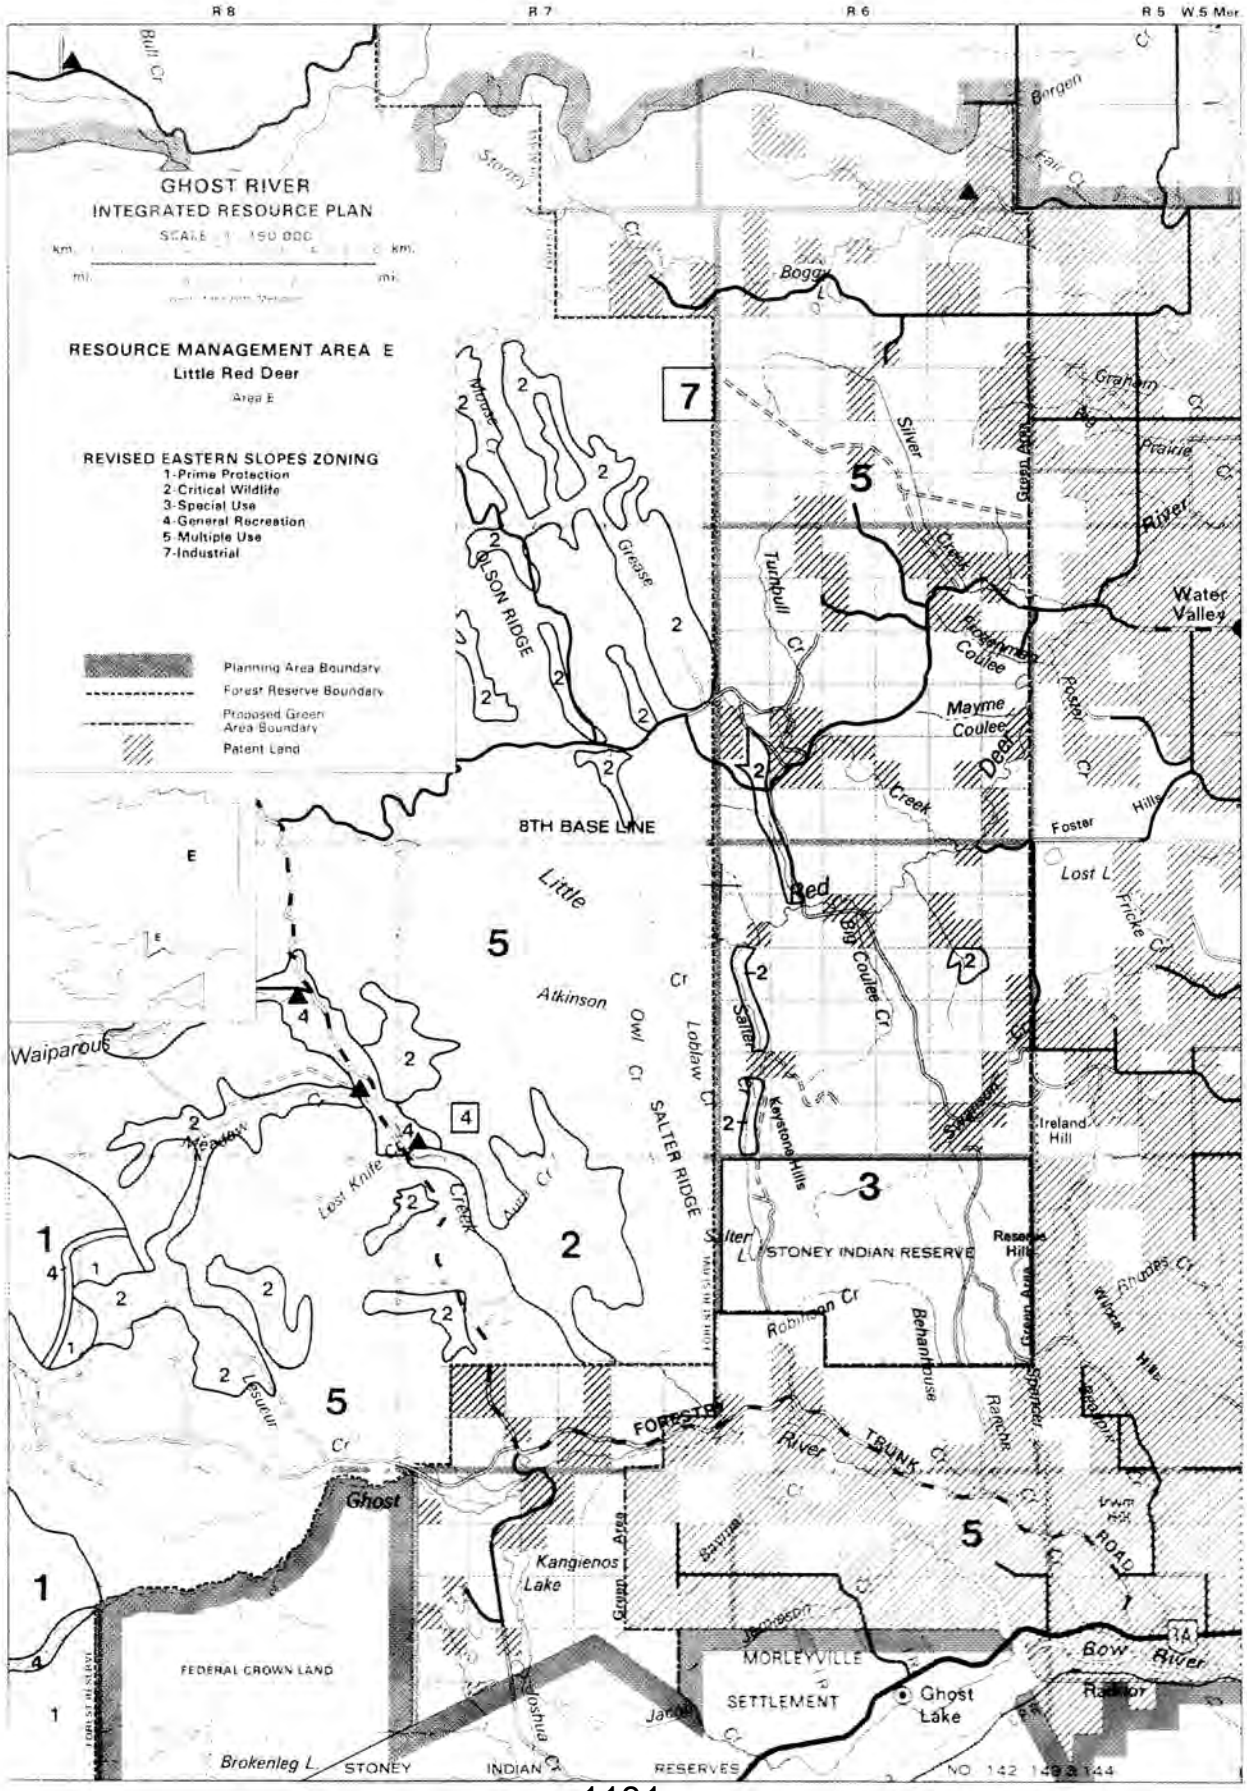

Fig 7 Little Red Deer Resource Management Area

5. Timber harvest plans will be reviewed for opportunities to increase winter forage for wildlife, particularly on south or southwest-facing slopes.

6. Range development plans will be reviewed to ensure that browse and thermal/hiding cover is maintained, and forage is provided for wildlife.

7. Forage units (AUMs) for wildlife will be assessed to determine whether additional forage is required and appropriate funding will be allocated as required.

8. An assessment of public land will be undertaken to identify lands with valuable wildlife resources. Measures will be recommended for reducing wildlife habitat loss to support this resource.

9. Trapline damage or loss due to industrial activity will be compensated for through the Alberta Trappers Compensation Program where appropriate.

Fisheries

The Little Red Deer RMA contains the following major sport fisheries: portions of the Ghost, Little Red Deer and Fallentimber plus important tributaries such as Grease and Turnbull creeks. Boggy and Kangienos lakes have low capabilities to support fish populations.

The Waiparous drainage system supports cutthroat trout, brook trout, bull trout, brown trout and mountain whitefish. The Fallentimber drainage system in this RMA supports bull trout, mountain whitefish, brook trout and brown trout. The Little Red Deer drainage system supports brown trout, bull trout, mountain whitefish and northern pike. Important spawning areas for brown trout have been identified in Turnbull Creek. Beaver ponds associated with Silver Creek were stocked with 2000 brook trout and 105 000 brown trout between 1955 and 1979.

Objectives

1. To maintain 900 gamefish per km in the Fallentimber Creek.

Little Red Deer RMA

2. To maintain 100 gamefish per km in the Little Red Deer River.

3. To maintain high water quality to protect spawning, rearing and overwintering areas of gamefish populations in Fallentimber Creek, Little Red Deer River, Grease Creek, Ghost River and others identified through surveys.

4. To identify lakes or beaver dams with stocking potential to provide continued or additional sport fishing recreation.

5. To maintain Silver Creek beaver dams for stocking programs.

6. To identify and maintain migratory corridors for gamefish along the Fallentimber Creek and Little Red Deer and Ghost rivers.

7. To minimize impacts of agricultural activities adjacent to streams on the fisheries resource.

8. To create additional put-and-take fisheries to reduce pressure on naturally reproducing populations.

Guidelines

1. Through co-operation with other agencies and the public, means for reducing erosion and other impacts on fisheries resources will be implemented.

2. Field work will be conducted every five years and appropriate public information will be provided to deliver an effective beaver dam stocking program.

3. Public information programs will be provided to inform the public of specific management programs or problems.

4. Naturally reproducing gamefish populations will be expanded into various creeks, where possible, through regulations and habitat development and introduction programs to increase sport fishing opportunities.

5. Lakes will be surveyed and enhanced, where feasible, to increase sport fishing

Little Red Deer RMA

opportunities and reduce pressures on naturally reproducing populations.

6. Additional surveys will be conducted by 1995 to identify crucial spawning and rearing areas and measure fish populations. Populations and habitat will be monitored every 10 years to determine if changes have occurred.

7. The amount of recreation provided by the various fisheries will be documented by 1995 and monitored every 10 years. The quantity of fish harvested will be measured to ensure that continued optimum levels of use and harvests are provided.

8. The Alberta Fish and Wildlife Division will participate in the development of an access management plan to maintain or provide primitive access trails to the stream and river fisheries, and to improve appropriate access to sport fisheries near recreational facilities. Access facilities will be developed under the public access program where appropriate.

Recreation

Alberta Recreation and Parks operates the Fallentimber provincial recreation area (SW 1-31-6 W5) with facilities for approximately 20 camping units. There are no forest recreation areas or formal trails within the Little Red Deer RMA. This RMA is, for the most part, under disposition for grazing lease or permit, or is patent land. Although scattered sections or quarter sections of vacant public land may be found, public sector recreational development is not anticipated at the present time.

In the southern portion of the RMA, in the vicinity of the Forestry Trunk Road (SR 940), a limited degree of commercial recreation occurs such as trail riding and hay and sleigh rides. The northern portion of the RMA (north of the Indian Reserve 142B) is used for commercial trail riding operations to varying degrees. There are currently four operators using the Green Area, with one operating under permit. The remaining three operators use the Green Area primarily for day trips, with their bases of operation on patent lands in this RMA or in the Water Valley RMA. Other tourism-related operations are located in the southern portion of this RMA.

Random camping is concentrated both north and south of the Ghost River in the southern portion of the RMA east of the Rocky Mountain Forest Reserve.

Objective

1. To provide the opportunity for the development of commercial trail riding opportunities within this RMA.

Guideline

1. Commercial trail riding opportunities will be encouraged, recognizing the commercial trail riding policy and ongoing land uses present. Permits may be issued to operators wishing to conduct commercial ventures in unclassified commercial trail riding management areas.

Access

The major access roads are the Forestry Trunk Road, Richards Road west of Kangienos Lake, the Keystone Lookout Road and the Harold Creek/Shell/Boggy Creek roads in the northeast portion of the RMA. The use of recreational off-highway vehicles occurs throughout the RMA as the result of access created by resource development.

Objective

1. The broad access management objective applies.

Guideline

1. Recreational off-highway vehicle use will be monitored throughout the RMA to determine whether future mitigative actions are required. In the interim, a "use respect" philosophy will be encouraged with regard to other land uses and an access management plan will be developed for this RMA.

Tourism

Limited information is available on the existing visitor use patterns in this RMA. It is likely that

Little Red Deer RMA

there is very little use because of the restricted access associated with the many grazing dispositions on public land.

Good access is only available into the southern section where it is traversed by the Forestry Trunk Road. There is limited access for recreational sites to the Ghost River from the Forestry Trunk Road. This area of the Ghost River receives seasonal use as a boat put-in area and should be upgraded to accommodate existing and potential public use.

Objective

1. To maintain public access to the Ghost River for recreational purposes.

Guideline

1. Alberta Tourism will provide input into the Ghost River access management plan developed by Alberta Forest Service.

Timber

The timber resources in the Little Red Deer RMA are predominantly in the mature age-class. Of the commercial species, pine is more prevalent than spruce which occurs mainly along the valley bottoms throughout the RMA.
The RMA contains portions of the timber quota held by Spray Lake Sawmills Ltd. Potential sources of timber available to forest products companies include the reserve stands of cancelled timber licenses. The Little Red Deer RMA is expected to accommodate an estimated 28 per cent of the anticipated demand for forest products within the planning area over the next 20 to 25 years (given commercial planning horizons of 20 years and timber management plan revisions at 10-year intervals). This includes both commercial and local requirements.

Local demand for forest products will be satisfied through the provision and maintenance of miscellaneous timber use (MTU) areas including Water Valley (Mayme Coulee area), Dogpound (west and south of Lost Lake), Fallentimber (north and east of Boggy Lake) and South Ghost (balance of the RMA south and west of the Stoney Indian Reserve 142B).

The MTU areas will provide an estimated 17 500 m^3 (4078 mFbm) on an annual basis for use by local residents and small commercial operators. A Christmas tree cutting area has been established in the Boggy Lake area and is expected to supply local residents and residents of Calgary and vicinity for the next 10 to 15 years.

Dwarf mistletoe has been detected in the central portions of the RMA. Affected areas include Turnbull Creek, Grease Creek, Foster Hills and Swanson Creek.

The emphasis for forest management in this resource management area will include the provision and maintenance of a sustained yield land base capable of satisfying commercial and local demands for forest products.

Objective

1. The broad timber management objectives apply.

Guidelines

1. Timber harvesting operations will generally be located in the north-central portion of the RMA and the Salter Creek/Keystone Hills areas.

2. An estimated 17 500 m^3 (4078 mFbm) on an annual basis will be available for use by local residents and small commercial operators from the Water Valley, Dogpound, Fallentimber and South Ghost MTU areas. A portion of the South Ghost MTU area is located in the Water Valley RMA.

3. A Christmas tree cutting site will be maintained in the Boggy Lake area to supply local residents and residents in the vicinity of the planning area. The site is expected to satisfy demand for 10 to 15 years.

Range

There are 18 complete grazing leases and portions of six others covering approximately 23 660 ha (58 463 ac.) that support an estimated 12 722 animal unit months of grazing. In addition

there are 10 grazing permits covering approximately 4381 ha (10 825 ac.) supporting an estimated 2274 animal unit months of grazing. Although rangelands are generally stable and in fair to good condition, range improvements will be required on a number of dispositions to maintain the forage base over the long term.

Objective

1. To provide a forage land base that is capable of supporting an estimated 12 722 animal unit months for grazing leases and 2274 animal unit months for grazing permits.

Guideline

1. The broad range management guidelines apply.

Minerals

Portions of five designated petroleum and natural gas fields occur here: the Jumpingpound West, Morley, Salter, Wildcat Hills and Winchell Coulee. Production of natural gas in 1984 was 350 million m^3 and reserves (based on only six productive wells) were estimated at 8.8 billion m^3. Most of the area is under petroleum and natural gas disposition. In addition, minerals beneath 15 per cent of the land are held in freehold.

Objectives

1. To provide opportunities for industry to explore new areas for petroleum and natural gas and to continue development of those portions of the Jumpingpound West, Morley, Salter, Wildcat Hills and Winchell Coulee gas fields within the RMA.

2. To provide opportunities for exploration and development of coal resources within the RMA.

Guideline

1. The broad minerals guidelines apply.

Little Red Deer RMA

Historical Resources

Few historical resources inventory studies have taken place in the Little Red Deer RMA. Studies conducted have, however, identified a considerable number of sites located along the Little Red Deer River, Harold and Silver creeks. These and other data serve to indicate that the area has high potential for additional occurrences. Areas of potential are those suitable for campsites and other activities associated with exploitation of seasonally abundant game herds, especially bison in prehistoric times. These include flat terraces above streams and rivers, lakeshores, margins of wetland areas and exposures of bedrock and cobbles of materials suitable for stone tool manufacture. The sites represent the material remains of prehistoric hunters who frequented the region for over 12 000 years.

Objective

1. The broad historical resource objective applies.

Guidelines

1. The Archaeological Survey of Alberta, Resource Management Section, will participate in the land use referral process to review any proposed developments in the following areas of the RMA considered to be of high historical resource potential.

   - Land adjacent to Stormy Creek and the unnamed lake associated with this creek, Fallentimber Creek and its tributaries and associated lakes, lands surrounding Boggy Lake and the unnamed lake to the southwest, lands adjacent to Waterstreet Lake, Graham Creek and its tributaries, Big Prairie Creek and its tributaries, Silver Creek and its tributaries, Frozenman Coulee, Mayme Coulee, the Little Red Deer River and its tributaries, Grease Creek and its tributaries, Turnbull Creek, Harold Creek, Lower Atkinson Creek, Salter Creek and its tributaries, Big Coulee Creek and Swanson Creek.

- To the south of the Stoney Indian Reserve, lands adjacent to Robinson Creek and its tributaries, Ghost River and its tributaries, lands adjacent to Kangienos Lake and adjacent unnamed lakes and their tributaries, Baymoor Creek and its tributaries, Jamieson Creek and its tributaries, and Ranche Creek and its tributaries.

- Any major projects outside the above areas involving large areas or land surface disturbance (i.e., coal mines, major roadways, etc.).

3.6 Water Valley RMA

The Water Valley RMA (Figure 8) consists of the Boreal Foothills, Aspen Parkland and Montane ecoregions. Boreal Foothills forests of lodgepole pine, aspen and white spruce cover most the RMA. The Montane ecoregion covers about 20 per cent of the foothills portion. Steep south-facing slopes generally consist of grassland forest, with forests on the north-facing slopes. Portions of the Aspen Parkland ecoregion cover about 20 per cent of the RMA. Rough fescue dominates the grasslands with aspen and shrubs found on moist or north-facing sites. Black Chernozems are characteristic of the Aspen Parkland.

The management intent for the Water Valley RMA is to allow the use of the full range of available resources within a multiple use context, with an emphasis on domestic grazing and timber production in association with private land uses.

Watershed

Soils are finer textured and topography is more gently rolling than found throughout much of the planning area. The RMA is generally not sensitive to disturbances except on steeper slopes. Grand Valley Creek has been identified as having low channel stability.

Objectives

1. To ensure areas disturbed by land use activities are reclaimed in a satisfactory manner.

2. To maintain power generation capabilities on the Bow River.

Guideline

1. Areas disturbed by land use activities will be reclaimed within one year of initial disturbance and on a progressive basis where disturbance is long term.

Wildlife

Big game populations include moose, mule deer and white-tailed deer. Little is known about the distribution of mule deer and white-tailed deer. Moose populations are generally associated with the forested areas adjacent to the Ghost drainage in the north and the Little Jumpingpound drainage south of the Bow River corridor.

Little is known about the furbearer populations because most of the area is privately owned. Beaver and coyote populations are believed to be the major furbearers.

Objectives

1. To maintain mule deer and white-tailed deer population densities at 1.7/km^2 and 0.5/km^2 respectively, and enhance moose population densities from 0.3/km^2 to 1.4/km^2 on suitable habitat.

2. To minimize depredation problems associated with wildlife populations in fringe agricultural areas.

3. To maintain migration corridors for ungulates along watercourses.

4. To maintain riparian habitats and forest cover for wildlife populations.

Guidelines

1. Co-operation will be sought from grazing lessees and landowners to carry out conservation programs for retaining or enhancing habitat for wildlife.

2. Co-operation will be sought from grazing lessees and landowners to provide access to hunters through the Use Respect Program.

Ranchers may be compensated for shot livestock through the Shot Livestock Program as required.

3. Problem wildlife situations will be resolved through animal removal or control, where appropriate, through the Nuisance Wildlife and Beaver Flood Control program.

4. Ranchers may be compensated for wildlife depredation through the Livestock Predator and Indemnity Program as required.

5. Range development plans will be reviewed to ensure browse and thermal/hiding cover is maintained, and forage is provided for wildlife.

6. Forage units (AUMs) for wildlife will be assessed to determine whether additional forage is required and appropriate funding will be allocated as required.

7. An assessment of public land will be undertaken to identify lands with valuable wildlife resources and recommend measures to retain wildlife habitat within forest management areas and on rangelands.

8. Damage to crops and haystacks resulting from maintenance and enhancement of wildlife populations will be prevented through measures taken under the Fencing Assistance and Managing Problem Wildlife programs, and compensated for through the Crop Damage Compensation Program where appropriate.

Fisheries

Major sport fisheries are present in the Little Red Deer River, its tributaries and Dogpound Creek. The Little Red Deer River supports bull trout, mountain whitefish, brook trout, brown trout and northern pike. Between 1959 and 1967, 92 400 brown trout were stocked in the Dogpound system. The fisheries have declined in quality, however, mainly because of industrial and agricultural land uses affecting bank stability. Access to the public is also limited because of private ownership of land adjoining the creek. Spencer and Beaupre creeks have low capabilities to support fish populations. No information on fish populations is available for

Water Valley RMA

Grand Valley Creek, nor does there appear to be a demand for consumptive use. Winchell Lake is the only lake recently stocked. It was stocked with 6600 rainbow trout in 1982. Scott, Westover and Frederick lakes have low capability to support fish populations. The Ghost River supports cutthroat trout, brook trout, bull trout, brown trout and mountain whitefish.

Objectives

1. To maintain 100 gamefish per km in the Little Red Deer River.

2. To identify lakes and beaver ponds with stocking potential to provide new or additional sport fishing opportunities.

3. To maintain and stock the Winchell Lakes.

4. To identify and maintain migratory corridors for gamefish along the Little Red Deer and Ghost drainage systems.

5. To maintain or provide appropriate public access to sport fisheries.

6. To minimize impacts on the fisheries resource of agricultural activities adjacent to streams.

Guidelines

1. Basic facilities and access will be developed through the Alberta Fish and Wildlife public access program where there are no other means of implementation.

2. Through the co-operation of other agencies and the public, means for reducing bank erosion and other impacts on fisheries resources will be implemented.

Recreation

There are five recreational leases in the RMA. Although one site (SW 2-29-5 W5) has been identified as being suitable for cottage subdivision development, no development has been approved by the Municipal District of Rockyview.

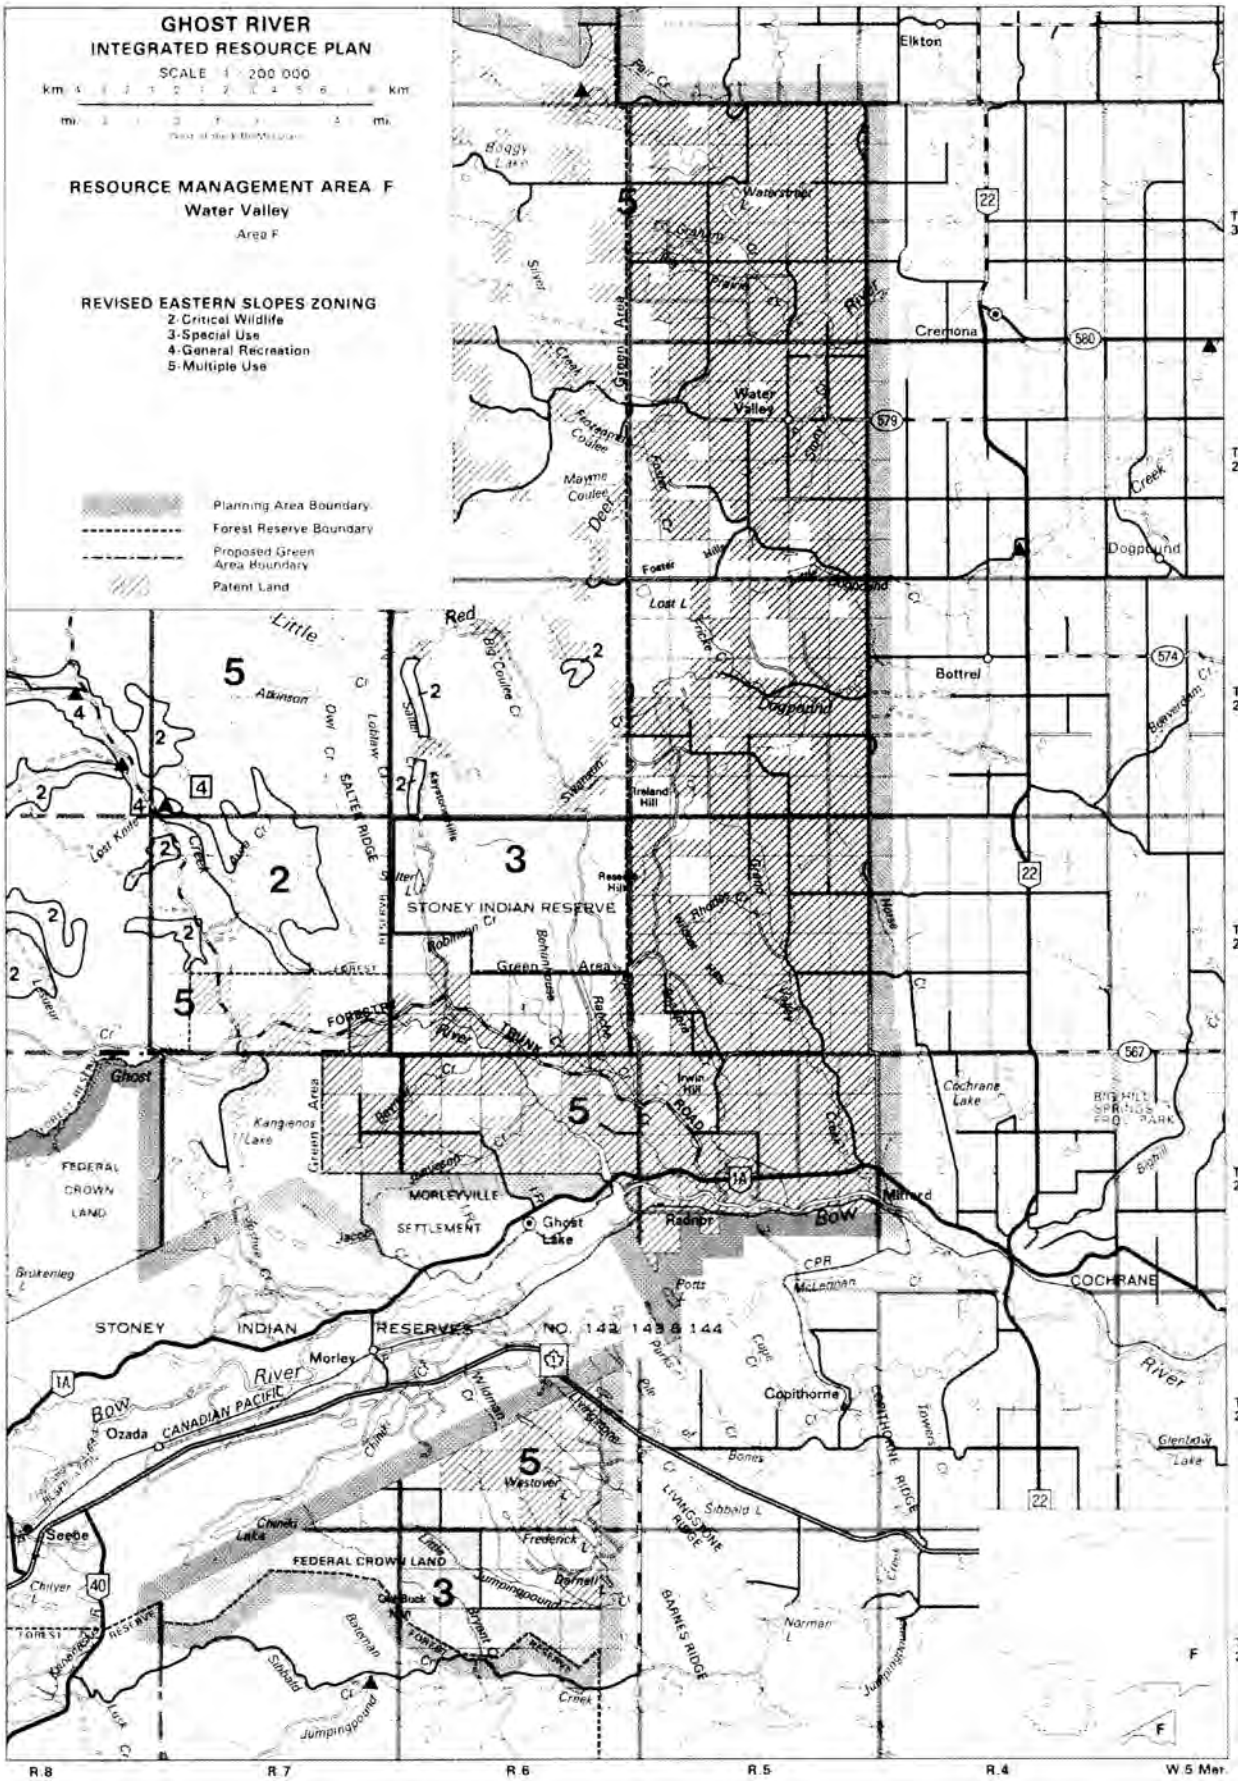

Fig. 8 Water Valley Resource Management Area

Water Valley RMA

Objectives

1. To support extensive recreational use.

2. To support intensive recreational use where it conforms with local municipal zoning.

3. To reduce conflicts between recreational and agricultural resource users.

4. To identify areas suitable for recreational cottage subdivision.

Guidelines

1. Intensive recreational use applications will be assessed for suitability as received.

2. Grazing lessees and permittees will be encouraged to allow extensive recreational use.

Access

Highways 1 and 1A and secondary roads 940, 968 and 579 provide the main access to the RMA along with a large number of improved and unimproved roads. The area also contains a large number of trails and seismic lines. Public access to grazing dispositions on public land for hunting, off-highway vehicle use and other recreation has led to conflicts between ranchers and recreationists. The departure of off-highway vehicles from established trails and road allowances has created range and terrain damage. The Use Respect Program continues to be an effective measure to elicit co-operation among users of public land. Further measures may, however, be required in high use areas.

Objective

1. The broad access management objective applies.

Guidelines

1. Posting of lands under disposition with "Use Respect" signs will be encouraged to reduce conflict between the extensive recreational users and the grazing lessee or permittee.

2. Grazing lessees and permittees will be requested to restrict off-highway vehicle use to existing trails.

3. An access management plan (selected routes) may be developed for selected lands in conjunction with grazing lessees, permittees and other agencies. These plans will be co-ordinated with the access management plan for the remainder of the planning area.

Tourism

The community of Water Valley provides limited tourism service facilities (i.e., gasoline station, grocery store). The larger communities, immediately west of the planning area, mainly service visitors to the area. There may be opportunity to expand Water Valley's role as a service centre. The Forestry Trunk Road (Secondary Road 940), Highway 1A and secondary roads 968 and 569 provide access to the RMA.

Objectives

1. To provide opportunities for the private sector to develop facilities which cater to the needs of the travelling public and users of the area.

2. To recognize the Forestry Trunk Road and Highway 1A as the prime focus along which intensive recreational development and tourism opportunities will occur.

Guideline

1. The opportunity for private sector development of tourism and recreational facilities will be accommodated on public land where appropriate.

Timber

Forest management in the Water Valley RMA has generally included the provision of forest products for local residents through the issuance of local or commercial timber permits. This is combined with the recognition of priority areas for range improvement. Reforestation on areas identified for range improvement may not be undertaken.

The timber resources on public land in the Water Valley RMA are generally in the overmature age-class and are managed as part of the BO2 forest management unit. Three sawmill sites (pt. SW6, pt NW5 and pt NE 6-29-5 W5) are located in the RMA. Of the commercial species, pine is more prevalent than spruce which is found in valley bottoms and on generally wetter sites. Dwarf mistletoe occurs in the central portion of the RMA. The affected areas include the Dogpound/Foster Hills and Swanson Hills areas.

All public land in the BO2 forest management unit portion of the planning area has been identified as having the potential for multiple use management, providing rangelands for domestic livestock, wildlife habitat and sustained yield forest production. An estimated 64 per cent of the area is forested and 29.5 per cent has potential for timber production.

The emphasis for forest management in most of this resource management area will include the provision of forest products for local residents. This will occur through the issuance of local and commercial timber permits that recognize priority areas for agricultural development. The resource management area will be managed on an integrated basis, providing domestic rangelands, wildlife habitat and forest products for local residents on a sustained yield basis.

Objective

1. To manage forested public lands on a sustained yield basis considering local requirements for forest products and agricultural development.

Guidelines

1. A more detailed assessment of lands capable of forest and forage production will be prepared with the co-operation of Alberta Forestry, Lands and Wildlife and the grazing disposition holders within the area. Forested public lands will be managed on a sustained yield basis to provide forest products for local residents, forage for domestic livestock and habitat for wildlife.

2. A portion of the South Ghost MTU area is located in this RMA. It will be managed as a contiguous unit of that portion of the MTU located in the Little Red Deer RMA.

Water Valley RMA

Range

The RMA covers approximately 62 600 ha (154 700 ac.) of which about 11 330 ha (28 000 ac.) are public land. The majority of the public land is leased for grazing on which 6648 AUMs are provided. The grazing dispositions are divided into 37 grazing leases and seven grazing permits.

Objective

1. To maintain and, where possible, increase the number of animal unit months of grazing from the present 6648 AUMs.

Guidelines

1. The suitability of the land for range improvement will be assessed when applications for range improvement are submitted.

2. Assistance for range improvement will be provided under the Range Improvement Regulations existing at the time the application is submitted.

3. Range condition will be evaluated a maximum of every three years and also at renewal, to ensure that stocking rates are accurate and that the grazing lessees are following the stocking rate.

4. Grazing lessees will be requested to restrict off-highway vehicles to existing trails.

5. Public land will be assessed to identify lands capable of sustained yield forest production, tame forage production and wildlife habitat. These lands will be reserved from sale. This will allow continued rangeland use and sustained yield forest management to occur. An integrated approach to land and resource management will be employed. Approximately 40 per cent of the suitable area on each grazing lease will be designated for long-term tame forage production, while 60 per cent of the suitable area of each grazing lease will be designated for sustained yield forest management. The

designated acreage calculated from the percentage split will be based on those portions of the grazing lease which are suitable for sustaining either resource.

Minerals

Parts of the Winchell Coulee, Bottrel, Jumpingpound and Wildcat Hills natural gas fields are found here. Natural gas production in 1984 was 180 million m^3 from 12 wells and reserves were approximately 4.2 billion m^3. One gas plant (which produces gas and small amounts of sulphur from the Wildcat Hills field) and major oil and gas pipelines are located here.

Historical coal production amounting to about 30 000 tonnes was generated from several mines located mainly along the Bow River and at Silver Creek. This indicates that the coal-bearing strata are not restricted to two locations. Coal leases and freehold mineral rights underlie about half the RMA.

Four surface material leases are located in this RMA, three in the Winchell Lake area and one in the Waiparous Creek area.

Objectives

1. To provide opportunities for industry to develop the natural gas reserves of the four existing gas fields and to explore other areas of hydrocarbon potential.

2. To provide opportunities for the exploration and development of coal resources within the RMA.

3. To provide opportunities for development of surface materials where appropriate.

Guideline

1. To provide opportunities for development of surface materials where appropriate.

Guideline

1. The broad minerals guidelines apply.

Water Valley RMA

Historical Resources

Very limited historical resource inventories have been undertaken in the Water Valley RMA. However, several sites have been recorded along the Little Red Deer River and in other locations. These and other data indicate that the area has high potential for additional occurrences. Areas of potential include those suitable for camps and other activities associated with exploitation of seasonally present big game herds, especially bison in prehistoric times. These include flat terraces above rivers and streams, lakeshores, margins of wetlands, glacial outwash channels and exposures of bedrock or cobbles of material suitable for stone tool manufacture. These sites represent the material remains of prehistoric hunters who frequented the area for over 12 000 years.

Objective

1. The broad historical resource management objectives apply.

Guideline

1. The Archaeological Survey of Alberta, Resource Management Section, will participate in the land use referral process to review any proposed developments in the following areas of the RMA considered to be of high historical resource potential.

   - Lands adjacent to Fallentimber Creek, its tributaries and associated unnamed lakes, Big Prairie Creek and its tributaries, the Little Red Deer River and its tributaries, Silver Creek, Stoney Creek and its tributaries, Winchell Coulee and Winchell Lake, Lost Lake, Dogpound Creek and its tributaries, Fricke Creek, Swanson Creek and its tributaries and associated lakes, Grand Valley Creek and its tributaries, Rhodes Creek, Kerfoot Creek, Beaupre Creek and its tributaries, Spencer Creek, Horse Creek and an associated unnamed lake (NW 35-27-5 W5).

   - Any major project outside the above areas involving large areas of land surface disturbance (i.e., coal mines, major roadways, etc.).

Water Valley RMA

Ecological Resources

Ole Buck Mountain Natural Area (Section 5, pt. Section 7-25-6 W5) is located in the Westover Lake area south of Indian Reserves 142, 143 and 144 and Wildcat Island Natural Area (SW 15-26-3 W5, the island only) is located in the Bow River near Beaupre 753
Creek. One ecologically significant area is located near Winchell Lake south of Water Valley (Winchell Creek, NW 2-29-5 W5).

Objective

1. To protect unique or important ecological resources.

Guidelines

1. The natural resources of the Ole Buck Mountain Natural Area will be managed according to the Wilderness Areas, Ecological Reserves and Natural Areas Act.

2. Appropriate land use reservations or notations will be maintained or applied within potential Natural Areas to protect ecological resources.

4. IMPLICATIONS

Implications are major components of the plan which should be considered by decision-makers responsible for approving the plan, and by others who will use the plan or who are interested in its major effects. Implications can be negative or positive. This chapter also outlines private and public resource management and development opportunities.

4.1 General Implications

The Ghost River Sub-Regional Integrated Resource Plan provides a framework for resource management agencies, industry and the public to pursue opportunities for resource use in the planning area. In this manner, legitimate opportunities identified by the private or public sector will be accommodated where suitable.

The plan addresses a broad spectrum of natural resource management concerns. The refined Eastern Slopes zoning contributes to the geographic location of resource management objectives. The plan also contains positive future-oriented resource management objectives for each resource sector. These objectives provide targets toward which resource management agencies will work. The attainment of objectives will provide a net increase in social and economic benefits to users of the area. Eastern Slopes zoning, along with the general and specific objectives and guidelines in the plan, address watershed protection as a priority throughout the planning area.

The plan addresses the issue of recreational off-highway vehicle use and identifies the need for an access management plan to provide further direction for this activity. The conflict between off-highway vehicle users and other resource users will be addressed in the access management plan. Opportunities for additional off-highway vehicle trails will also be addressed.

Domestic grazing will be maintained at 1977 levels and there are opportunities for range improvements over the long term.

A forest land base is identified for sustained yield management purposes to satisfy present and/or future commercial and local demands for forest production and management to maintain healthy and stable forest conditions throughout the planning area. Forest protection services will also be maintained in the planning area. Proposed reclamation projects will be undertaken in the Upper Ghost, Fallentimber and Waiparous RMAs to protect watershed values subject to reclamation policies and funding according to availability, provincial priorities and an approved access management plan. Opportunities to increase coniferous timber use through quota allocation and an opportunity to use an estimated deciduous annual allowable cut of 6200 m^3 (1445 mFbm) are also identified.

This integrated resource plan provides an opportunity for the Archaeological Survey of Alberta, Resource Management Section, to participate in the referral system to review proposed developments involving land surface disturbances.

A range of recreational and tourism opportunities are accommodated in the plan which identifies potential areas for such activities by RMA. These opportunities include commercial trail riding, backcountry lodges and youth hostels, outfitting and guiding for hunting and hiking, snowmobiling, cross-country skiing and auto touring.

The plan provides an avenue for the inclusion of public and private sector tourism interests in an overall framework of public land management. This enables the Alberta government to better assist the tourism industry by focusing their efforts on identified areas of potential opportunity while minimizing possible conflict.

This plan provides the means to ensure that high fish and wildlife resource values are recognized during the development and management of resources. Co-operative planning of timber management and harvesting to incorporate wildlife requirements will help to increase overall benefits while minimizing any negative impacts on wildlife populations. Input into the management of rangelands will help minimize negative impacts on wildlife populations caused by conversion of aspen and shrublands to grassland and by concentrating cattle on primary

rangeland. Increases in forage availability may be restricted by adherence to 1977 grazing levels and by limitations placed on converting coniferous vegetation to range. Forage availability may also be reduced if escaped or abandoned horse populations are not controlled. Input into access management will help ensure that reasonable access is provided to use wildlife resources in an acceptable manner. Input into other resource developments and activities will help protect fish and wildlife resources while providing for use of the area.

The increased economic opportunities to Albertans and non-residents from the proposed increases in fish and wildlife resources cannot be easily quantified. However, projected increases in fish and wildlife resources can promote economic opportunities for guides, outfitters, sporting goods businesses, guest ranches and communities that can provide accommodations, food and/or gas. Increased economic benefits to taxidermists and local butchers can be realized if more game is available for hunting. There also can be direct economic benefits to trappers and the fur industry if desirable furbearing populations can be increased to meet demands. Increases in wildlife will take into consideration 1977 domestic grazing levels; however, increases in domestic grazing above these levels could have a negative impact on wild ungulate populations, depending on the species in the area.

The economic implications of the plan for mineral exploration and development can be discussed in terms of general and specific influences. It is difficult, however, to quantify impacts. Mineral activity within the Ghost River area primarily involves the production of natural gas from existing wells. Currently there are no indications that significant expansion or intensification of activity will take place. While the plan does propose certain restrictions on mineral exploration and development, the overall impact would likely be limited. If a development application (subsequent to exploration on existing agreements) was rejected, applications pursuant to the Mineral Rights Compensation Regulations would be accepted. It is highly unlikely that the plan's implementation would have any effect on the pattern of employment generated by the minerals industry within the region. No new jobs would be directly created, and indirect employment would reflect the industry as a whole rather than any specific local influence.

4.2 Ghost Wilderness RMA

There are no zoning changes or changes in resource management direction in the area. Resource management will continue to adhere to the Wilderness Areas, Ecological Reserves and Natural Areas Act with the result that land and resource management are not anticipated to change in this RMA.

Fishing and hunting opportunities are not provided in this RMA. Fish populations and habitat will therefore not be inventoried. Wildlife populations will continue to be monitored, however.

The wilderness area status of the RMA precludes any tourism facility development. However, the wildland nature and scenery may be enjoyed through hiking. Motorized recreation and horse travel are not permitted in the RMA.

4.3 Upper Ghost RMA

This RMA is almost entirely Zone 1, Prime Protection. There is an area of Zone 5 east of Mt. Laurie and small areas of Zone 2 near Jura Creek and northeast of Harvie Heights. There are also Zone 4, General Recreation, corridors in the North Burnt Timber area along Waiparous Creek, the Ghost and South Ghost valleys and the Blackrock Mountain area. The major zoning changes occur in the most southern portions where land, originally Zone 2 in the Eastern Slopes Policy, has been changed to Zone 1 with the result that there is an overall increase in the area of Zone 1 in the RMA and planning area. Smaller Zone 1 changes have been undertaken in the Blackrock Mountain and Ghost River areas near Devil's Gap.

Opportunities for continued operation and development of the Kamenka, Canada Cement Lafarge and Genstar quarriable mineral leases are preserved by retaining these areas in Zone 2 and Zone 5. Additional leases may be considered in these zones. Surface access will be granted to develop the existing quarriable mineral leases. The expansion of Zone 1 in the RMA will result in the sterilization of some other quarriable resources. Petroleum and natural gas opportunities are also affected.

Zoning changes along the southern edge of the Upper Ghost RMA and on both sides of the border with Fallentimber and Waiparous RMAs will result in some areas of Prime Protection being expanded or reduced, depending on the area. Where Prime Protection has been reduced, there is added opportunity for access to explore for hydrocarbons, but in areas of expanded Prime Protection, access which is possible now may be refused. Areas of Prime Protection on top of petroleum and natural gas dispositions occur near the Panther River gas field. Dispositions here have approximately 2.5 sections of expanded Prime Protection in four separate areas, and approximately 0.5 sections removed from Prime Protection. All the zoning changes on top of petroleum and natural gas dispositions are areas of potential step-out activity. Further south in Townships 27 and 28, prime protection zoning has been expanded eastward into prospective natural gas areas which are not leased and which do not have step-out potential (as there are no producing wells nearby).

The plan provides for extensive non-motorized recreational opportunities throughout the RMA. Motorized recreational vehicle opportunities are provided in the Zone 4 corridors. Provisions for sanitation/salvage will allow for healthy and stable forest conditions with respect to long-term forest management. The completion of nine reclamation projects involving 31.6 km of seismic lines and trails will be subject to reclamation policies, an approved access management plan, funding availability and provincial priorities. Protection of watershed, wildlife and fisheries resources will be afforded following project completion.

The small expansion of Zone 1 has eliminated two recreational opportunities often associated with tourism (off-highway vehicle use and serviced camping) in the Upper Ghost RMA. Apart from outfitting, guiding and trail riding, private sector tourism opportunities are severely limited. This is particularly important considering the proximity of Canmore to the southwest part of the zone as it will limit Canmore's potential to expand its regional tourism opportunities.

Co-operative planning of access management will help ensure that wildlife populations can increase through increased security of highly sensitive ranges from disturbance. Initiation of projects to increase forage availability and forest diversity to enhance certain wildlife populations could provide additional benefits to the timber industry.

4.4 Fallentimber RMA

This area was zoned entirely as Zone 5, Multiple Use, with one section of Zone 7, Industrial, by the Eastern Slopes Policy. Numerous changes from Zone 5 to Zone 2 have been made by the Ghost River Sub-Regional Integrated Resource Plan. Zone 2, Critical Wildlife, now occurs along the North Burnt Timber, Burnt Timber and Fallentimber creeks and in the Olson Ridge-Harold Creek Area.

The recognition of tourism development opportunities along the Forestry Trunk Road may stimulate the private sector to develop the needed facilities on this potential auto touring route.

Fourteen reclamation projects involving 45 km of seismic lines and trails are proposed subject to reclamation policies, an approved access management plan, funding availability and provincial priorities. Some of these projects continue from those in the Upper Ghost RMA. Protection of watershed, wildlife and fisheries resources will be afforded upon completion.

Opportunities for commercial trail riding are identified. There is an opportunity for two Class II trail riding areas to be established. Management intent, objectives and guidelines allow for a full range of recreational activities.

Timber resource development and domestic grazing are accommodated through RMA objectives, guidelines and zoning. Both activities are compatible with the intent of this RMA.

A major implication of the change in zoning is the increased recognition of habitats crucial to fish and wildlife populations in this RMA. Plans for access management may be insufficient to protect fish and wildlife populations. Uncontrolled access in the Harold Creek area will continue to hamper efforts to minimize disturbance to deer and moose populations which use this crucial winter range. Until access can be controlled in areas required to maintain or enhance wildlife populations, hunting opportunities may have to be reduced.

Co-operative planning for reclamation projects will help restore lost productivity of wildlife habitat particularly if combined with appropriate access management measures. Reclamation projects proposed for this RMA will also help reduce sediment loads to streams and rivers, thereby enhancing fish habitat and productivity. This is especially so if they are combined with appropriate access management measures.

4.5 Waiparous RMA

The majority of this area was Zone 5 under the Eastern Slopes Policy, and most of the RMA remains Zone 5, Multiple Use. The plan increases Zone 2 in the Lesueur, Meadow, Waiparous and Aura Creek areas. In addition, areas of Zone 8, Facility, in the Waiparous Creek/Forestry Trunk Road area are changed to Zone 4, General Recreation.

The change in zoning in the Waiparous Creek/Forestry Trunk Road area from Zone 8 to Zone 4 may limit any tourism facility development in this area, but opportunities for private sector development of tourism and recreational facilities are identified in other portions of the RMA.

A full range of recreational opportunities is addressed in this RMA. Two water access points along Waiparous Creek and a group camp will be considered for development according to long-range recreational development plans.

Reclamation projects involving about 6 km of seismic lines and trails are proposed subject to reclamation policies, an approved access management plan, funding availability and provincial priorities. Projects are continuations of those in the Upper Ghost RMA. Protection of watershed, wildlife and fisheries will be afforded following the completion of these projects.

Timber resource development and domestic grazing are accommodated through objectives, guidelines and zoning. Both activities are compatible with the intent of the RMA.

The overall implication of the increase of Zone 2, Critical Wildlife, is the increased recognition of crucial habitats to wildlife populations in this RMA. Co-operative planning of access management and reclamation projects, and controlled development of tourist and recreation facilities will help ensure increased protection of fish and wildlife habitats, reduction in disturbance to wildlife populations and adequate provision for public access to view wildlife, hunt and/or fish.

4.6 Little Red Deer RMA

Most of this area was Zone 5 under the Eastern Slopes Policy, and most of the area remains Zone 5. Changes from Zone 5 to Zone 2 occur in the Salter Creek area north of the Stoney Indian Reserve. Land originally Zone 2 along the Ghost River and Waiparous Creek is changed to Zone 5. A section of land north of Stoney Indian Reserve 142B (originally Zone 3) is changed to Zone 5.

Motorized recreational vehicle access will be managed through the development of an access management plan to alleviate existing and potential problems, including conflicts with other resource uses.

Commercial and local demand for forest products will be accommodated through quota and MTU areas in this RMA.

Co-operative planning with government agencies, industry, lessees and landowners regarding land use development and activities will help ensure that conflicts with fish and wildlife resource management and use are resolved and maximum public benefits obtained.

The increase in Zone 5 will allow for a wider spectrum of recreational and tourism opportunities previously limited by Zone 2, such as facility development, serviced camping and off-highway vehicle use. Commercial trail riding opportunities will be encouraged.

4.7 Water Valley RMA

This RMA is zoned entirely as Zone 5, Multiple Use. This zoning emphasizes multiple resource use rather than single resource use. No lands were considered to have a priority for agricultural use (i.e., Zone 6). The White Area/Green Area boundary change (Figure 9) will add about 34 sections to the White Area of which nine sections are public land. This is equal to about 20 per cent of the public land base in the RMA. Five grazing leases covering 2312 ha (5713 ac.) and providing 1809 AUMs

and one farm development lease will be transferred to the White Area (NW 17-27-6 W5).

The South Ghost MTU will be managed as a contiguous unit with that portion of the MTU area located in the Little Red Deer RMA.

Maintaining the area as Zone 5 will allow for some development of tourist facilities and services in and around the resource management area. As a result, private sector opportunities will be given serious consideration by the regulatory agencies. One specific site (SW 2-29-5 W5) has been identified as having potential for cottage subdivision by private developers, but the County of Mountain View opposes subdivision of land in this area.

The identification of lands capable of sustained yield forest production, tame forage and wildlife production, combined with resource management plans and a no-sale reservation, will result in improved management of timber, range and wildlife resources over the long term. Increased livestock production and income to grazing lessees will occur through range improvement.

5. PLAN MANAGEMENT

General administrative procedures and mechanisms required for plan implementation, monitoring and amendment are outlined in this section. Detailed program and project implications resulting from this plan will be contained in an implementation document which will complement the plan.

5.1 General Administration

The Ghost River Sub-Regional Integrated Resource Plan will be implemented within the terms of appropriate legislation, regular programs and activities of the government, operational plans, specific developed projects, referral processes and administrative bodies. The revised zoning provides a means of processing applications for new public land dispositions within the planning area. Existing systems for referral and interdepartmental review will apply to the plan. Resources will continue to be administered by the departments responsible, in line with the approved zoning, resource management guidelines and any operational plans.

Government management agencies participating in the Ghost River Sub-Regional Integrated Resource Plan will have several responsibilities to ensure the effective delivery of this plan. It will be their responsibility to deal with conflicts or concerns with respect to implementation or interpretation of any of the plan's provisions. These responsibilities are outlined by subject area below.

Referral Systems: Participating government management agencies will ensure that existing referral systems of the Alberta government are adequate to encompass all affected or concerned agencies.

Plan Monitoring: The Ghost River Sub-Regional Integrated Resource Plan will be reviewed annually by the Eastern Slopes Regional Resource Management Committee to:

- assess the relevancy of the stated resource objectives in light of changing conditions;
- assess the resource management guidelines and referral procedures;
- assess agency operational plans to ensure their consistency with the Ghost River resource management area intents, objectives and guidelines; and
- recommend amendments to the Ghost River Sub-Regional Integrated Resource Plan and future actions required to maintain or promote government resource management activities in the planning area.

An annual report will be prepared by the Eastern Slopes Regional Resource Management Committee and will highlight the previous year's activity in the planning area. It will also indicate what accomplishments are anticipated in the planning area during the next year. The report may be deferred if there is a lack of activity or progress on government resource management objectives within the planning area.

A major plan review by the Eastern Slopes Region Regional Resource Management Committee will occur when the plan becomes outdated due to significant changes and new priorities including:

- a comprehensive assessment of all aspects of the plan, including but not limited to broad resource management objectives, land-use zoning, and resource management area boundaries and intents;
- a public review on the same basis as the public is involved in the development of new integrated resource plans; and
- a statement recommending amendments to the plan and future actions required to maintain or promote government resource management activities in the planning area.

5.2 Amendment Procedures

Changes to the planning area boundary, broad planning area resource management objectives, land-use zoning, and the resource management area boundaries and intents that would result in

significant changes to the allowed resource uses or to priorities will require major amendment to the Ghost River Sub-Regional Integrated Resource Plan. An amendment to the plan may be required as a result of an annual review, government requests or a request from an individual, group or organization outside the government. Proposed amendments to the Ghost River Sub-Regional Integrated Resource Plan from outside the government should be made by formal application to the Assistant Deputy Minister of the Public Lands Division, Alberta Forestry, Lands and Wildlife*.

Opportunities for public review of proposed amendments to the Ghost River Sub-Regional Integrated Resource Plan will be provided before changes are approved by the government. A decision on requests to amend an integrated resource plan will be endorsed by the Minister of Forestry, Lands and Wildlife or his designate. Amendments which entail a major policy decision or a change to the basic intent of the plan may be forwarded by the Minister to Cabinet Committee for approval.

---

*Guidelines for preparing requests for amendments to integrated resource plans are available upon request.

APPENDIX A

LEGISLATION AND ASSOCIATED DIRECTION

Numerous government directives must be considered while developing an integrated resource plan. The most significant directions to the Ghost River plan are discussed below.

A.1 A Policy for Resource Management of the Eastern Slopes Revised 1984

A Policy for Resource Management of the Eastern Slopes Revised 1984 (often cited as The Eastern Slope Policy) provides guidelines and objectives for integrated resource management and planning for the entire Eastern Slopes region including the Ghost River Planning Area. The Eastern Slopes Policy relies on regional land use zoning to designate large areas of land for varying degrees of protection, resource management and development. Table 1 lists the general intent for each of the following eight land use zones: 1) Prime Protection; 2) Critical Wildlife; 3) Special Use; 4) General Recreation; 5) Multiple Use; 6) Agriculture; 7) Industrial; and 8) Facility. The overriding principle for all the zones under A Policy for Resource Management of the Eastern Slopes Revised 1984 is to protect the valuable water resources of the Eastern Slopes and provide for public land and resource use in a manner consistent with the principles of conservation and environmental protection. The zoning does not apply to privately owned lands in the planning area. Table 2 defines a range of compatible activities to enact the intent of the eight land use zones. The compatible activities matrix and regional zoning found in the Eastern Slopes Policy provide interim direction until sub-regional integrated resource plans are completed.

The Ghost River Sub-Regional Integrated Resource Plan supersedes the zoning configuration set down in the Eastern Slopes Policy. As a result, the zones have been refined and the regional zoning found in the Eastern Slopes Policy no longer apply in the planning area. Figure 2 shows the revised zoning.

A.2 A Coal Development Policy for Alberta

A Coal Development Policy for Alberta, released in 1976, guides the exploration and development of coal resources throughout the province. Under the Coal Policy, exploration and development of coal deposits are permitted only under strict control to ensure environmental protection and satisfactory reclamation of any disturbed land. It classifies the province into four categories of suitability for different levels of exploration and development. The western portion of the planning area is Category 1 where no exploration or development is permitted. The north-central area is Category 2, where "limited exploration is desirable and may be permitted under strict control". Commercial development by surface mining "will not normally be considered at the present time" because "the preferred land or resource use remains to be determined". The eastern portion of the planning area is mostly Category 4 where "exploration may be permitted under strict control" and where commercial development "may be considered subject to proper assurances respecting protection of the environment and reclamation of disturbed land".

A.3 Fish and Wildlife Policy for Alberta

The Fish and Wildlife Policy for Alberta was approved by Cabinet and released in October 1982. This policy provides general direction regarding outdoor recreation, wildlife resources, fisheries resources and regulatory aspects of fish and wildlife use. The Fish and Wildlife Policy calls for preparation of comprehensive 10-year fish and wildlife resource plans. Meeting the objectives stated in this plan will achieve a portion of the overall fish and wildlife projected demand targets identified in the Status of the Fish and Wildlife Resource in Alberta (1984).

A.4 Commercial Trail Riding Policy

As an outcome of the Commercial Trail Riding Policy, "Commercial Trail Riding Regulations" were established for the Green Area in 1979 under the Public Lands Act. In part, these regulations establish three classes of trail ride management areas: single operator (class I), multiple operator (class II) and multiple operator day-use (class III).

A.5 Wilderness Areas, Ecological Reserves and Natural Areas Act

The Wilderness Areas, Ecological Reserves and Natural Areas Act (1984) consolidated the policy context for these three separate programs under one act. The Ghost River Wilderness Area, designated under the previous Wilderness Areas Act (1971), has been retained under the new legislation.

Ecological reserves are to be designated to protect representative landscapes of the province. The act provides the public with the opportunity to submit recommendations regarding wilderness areas and ecological reserves.

Natural areas, which are scattered throughout the province, were previously established under the Public Lands Act or were simply under reservation. These areas have a broader set of acceptable uses than ecological reserves or wilderness areas, including recreation, education and conservation.

APPENDIX B

GLOSSARY

Access Management Plan	A plan to manage recreational off-highway vehicle access in the entire planning area outside of the Ghost River Wilderness Area will be co-ordinated by the Bow Crow Forest, Alberta Forest Service, with participation from concerned government agencies, local authorities and the public. The plan will consist of a network of selected routes and trails suitable for recreational off-highway vehicle use. The access management plan will maintain a range of recreational OHV trails and address such items as types of vehicles, seasonal use of routes and trails, and limits to motorized recreational access in the area.
Animal Unit Month (AUM)	Measure of forage or feed required to maintain one (AUM) animal unit (a mature cow of 455 kg [1000 lbs]/ or equivalent) for 30 days (Resource Conservation Glossary, Soil Conservation Society of America, 1976).
Annual Allowable Cut (AAC)	Total volume of timber that may be harvested yearly under sustained yield management.
Auto Touring Route	Existing roads in the planning area which are either major travel corridors or travel through cultural or aesthetic features of sufficient significance to warrant greater visitor awareness, education and enjoyment. The development of suitable visitor information (e.g., interpretive brochures, road signage) and non-serviced road facilities such as pull-off areas and viewpoints are appropriate on these roadways.
Archaeological Resource	"...a work of man that (i) is primarily of value for its prehistoric, historic, cultural or scientific significance, and (ii) is or was buried or partially buried in land in Alberta or submerged beneath the surface of any watercourse or permanent body of water in Alberta". (Historic Resources Act, Revised Statute of Alberta [henceforth abbreviated RSA] 1978, H-8).
Commercial Development	All activities and infrastructure associated with the development of facilities for the use of the general public, including fixed-roof recreation accommodation, such as hunting, fishing, skiing and backcountry lodges; hotels, motels, apartments, townhouses and cottages; and commercial recreational activities involving facilities such as ski hills and golf courses, whether owned and/or operated by the private or public sector.
Commercial Timber Permit	Authorization for the permittee to harvest timber and which identifies lands on which timber may be harvested, the period of time within which the timber may be harvested, the actual timber to be harvested and the terms and conditions on which the permit is issued (Forest Act, RSA 1980, c. F-16).
Consumptive Use	Those uses of resources that reduce the supply such as hunting, logging and mining (Wildland Planning Glossary, USDA Forest Service).

	Conversely, non-consumptive use does not reduce the supply (e.g., wildlife viewing.)
Country Vacation Farm or Vacation Ranch	A working farm or ranch which provides overnight accommodation for a minimum of four guests and offers organized participation in, and/or observation of, actual farm/ranch activities as part of the vacation experience.
Crown Land	Land titled to her Majesty the Queen in the right of the Province of Alberta.
Domestic Grazing	All activities associated with the production and use of forage for domestic livestock.
Extirpated Species	Wildlife species no longer found in their historical ranges but are not extinct.
Eastern Slopes Zones	The Eastern Slopes Policy document, first issued in 1977, identified three policy areas and eight corresponding regional land use zones: **A. Protection** - 1) Prime Protection, 2) Critical Wildlife and 3) Special Use; **B. Resource Management** - 4) General Recreation, 5) Multiple Use and 6) Agriculture; **C. Development** - 7) Industrial and 8) Facility. The primary objectives of regional zoning are: a) to provide resource management intents for broad units of land; b) to recognize opportunities and allocate resources at a broader regional scale; c) to provide background and direction for more detailed integrated resource planning; and d) as a consequence of the latter, to resolve land use conflicts (A Policy for Resource Management of the Eastern Slopes Revised 1984, Alberta 1984).
Fixed Roof Accommodation	Permanent accommodation other than campgrounds (e.g., hotels, motels, backcountry lodges or rental cabins).
Flow Regime	Distribution of streamflow over time (usually one year).
Forest Land Base	Land considered to be capable of contributing to the social and economic welfare of the province if it is predominantly maintained under forest management. Includes provisions for production of wood and wood products on a sustained yield basis, wildlife, grazing, recreation, and protection and production of water supplies.
Forest Management Unit (FMU)	An area of forest land designated by the minister for the purposes of administration (Forest Act, RSA 1980, c. F-16). The annual allowable cut of timber is determined with respect to forest management unit boundaries.
Forest Reserve	Approximately two-thirds of the Ghost River Planning Area is within the Rocky Mountain Forest Reserve. It includes lands in the Province of Alberta set aside by the Forest Reserves Act (1964) primarily to maintain good watershed conditions and obtain high water yields. This is done through the management of vegetative cover as an insurance against soil erosion and to minimize the danger of flash floods. Other

benefits of the forest reserve are timber production, grazing, recreational use and use of fish and wildlife (Alberta's Forests, Alberta 1971).

Grazing Allotment

Synonymous with range allotment. A rangeland area based on natural or watershed boundaries designated for use by a prescribed number of cattle, managed by permittee(s) and directed by a range management plan prepared by the Alberta Forest Service (Range Management Section, Forest Land Use Branch).

Grazing Lease

Crown grazing-land disposition issued on an area of land which is suitable for supporting livestock. Leases are legislated under the Public Lands Act (RSA 1980, P-30) and are issued for public lands in the Green Area and White Area, outside the Rocky Mountain Forest Reserve, usually for a term of five or 10 years. The lease allows the lessee exclusive use of the land for grazing (Range Management Section, Forest Land Use Branch, Alberta Forest Service).

Grazing Permit

Official written permission to graze a specific number, kind and class of livestock for a specific period on a defined range allotment (Wildland Planning Glossary, USDA, Forest Service, 1976).

Green Area:
Permits are issued on an annual basis by the forest superintendent for the Green Area, pending the preference quota for each permittee and the available animal unit months (AUM) in each allotment. Grazing permits are legislated pursuant to the Forest Reserves Act (RSA 1980, F-15) (Range Management Section, Forest Land Use Branch, Alberta Forest Service).

White Area:
Grazing permits are issued on an annual basis, frequently on lands under reservation for another purpose or on lands for which it is not considered in the public interest to grant long-term dispositions. Grazing permits are legislated through Alberta Regulation 64/70 found under the Public Lands Act (RSA 1980, P-30).

Green Area

The Green Area, established in 1948 by Alberta Order-in-Council 213/48, consists of the non-settled forest lands and covers 53 per cent of the total area of the Province of Alberta. Public lands in the Green Area are managed primarily for forest production, watershed protection, fish and wildlife management, recreation and other multiple uses. Permanent settlement, except on legally subdivided lands, as well as agricultural uses other than grazing, have been excluded (Alberta Public Lands, Alberta, 1981a).

Historical Resource

Any work of nature or of man that is primarily of value for its palaeontological, archaeological, prehistoric, historic, cultural, natural, scientific or aesthetic interest (Historical Resource Act, RSA 1979, H-8).

Historical Resource Impact Assessment

Projects normally conducted when development programs are anticipated to cause ground surface disturbance within the Province of Alberta. The purposes of such projects are to locate all historical resource sites to be affected by the development, evaluate the worth

	of such sites relative to Alberta historical resources as a whole, determine the nature of the impact of the development on individual sites and propose conservation procedures for those sites to be affected by the development. (Archaeological Survey of Alberta).
Historic Site	"...any site which includes or is comprised of an historical resource of an immovable nature or which cannot be disassociated from its context without destroying some or all of its value as an historical resource and includes a prehistoric, historic or natural site or structure." (Historic Resources Act, RSA 1979, H-8).
Integrated Resource Management (IRM)	Co-ordinated, interagency approach to comprehensive planning and shared decision-making in the overall management of diverse natural resources and their use. A basic principle of IRM is consultation before action; concerned agencies consult and discuss implications of possible courses of action so mutually acceptable solutions can be determined. Integrated resource management is a comprehensive, co-ordinated approach to planning and administering Alberta's resources as efficiently as possible, with the goal of producing the greatest benefits for present and future Albertans (Resource Planning Branch; Alberta Forestry, Lands and Wildlife).
Miscellaneous Timber Unit Area	Land set aside within a forest management unit to provide timber for local use. The area represents a portion of the annual allowable cut for the total forest management unit. Timber is allocated for local use through Local Timber or Commercial Timber permits.
Multiple Use	The use of land for more than one purpose (e.g., watershed management, timber production, domestic livestock grazing, wildlife production and recreational and industrial uses). A combination of uses may not necessarily yield the highest economic return or the greatest unit output considering the optimal use of available resources (adapted from Resource Conservation Glossary, 3rd Edition. Soil Conservation Society of America, 1976).
Off-Highway Vehicle	Motorized vehicle used for cross-country travel on land, water or snow, including four-wheel-drive vehicles, motorcycles, track vehicles and snow vehicles, but not motorboats (Off-Highway Vehicle Act, RSA 1980, c. 0-4). In the context of this plan, off-highway vehicles do not include helicopters.
Operational Plans	Provincial government resource management agencies prepare long- and short-range plans for the management of resources under their jurisdiction. These specific resource management plans generally deal exclusively with the resource(s) for which a management responsibility has been delegated. Wildlife management plans, timber management plans, range management plans and recreational management plans are examples.
Palaeontological Resource	"...a work of nature consisting of or containing evidence of extinct multicellular beings and includes those works or classes of works of nature designated by the regulations as palaeontological resources." (Historic Resources Act, RSA 1979, H-8).

Point Source Of Sedimentation	Term used to denote where sedimentation occurs as a result of land use which is in direct contact with the stream (e.g., road crossings). Conversely, a non-point source of sedimentation is used to denote sedimentation arising from a land use within the watershed but not adjacent to the stream (e.g., timber harvest cutblocks may change the quantity and timing of run-off which may lead to higher flows and erosion of stream banks downstream).
Preliminary Disclosure	Means by which both the private and public sectors may make major development proposals, on a confidential basis, to government. Through preliminary review, the government may indicate whether it has objections "in principle" to a proposal's form, timing, location or any other essential feature. No objection in principle of a major development proposal (resulting from preliminary disclosure) constitutes approval for the filing of necessary applications and documents as required under controlling legislation (A Policy for Resource Management of the Eastern Slopes Revised 1984 [Alberta, 1984]).
Primary Range	An area which animals prefer to use and over which they will graze when management is limited (Wildland Planning Glossary, USDA, Forest Service). The primary range will be overused before the secondary range is used when animals are allowed to shift for themselves (A Glossary of Terms Used in Range Management, Society for Range Management, 1974).
Productive Geological Structure	Types of geological situations which contain economically viable amounts of naturally occurring minerals such as petroleum and natural gas (e.g., traps), coal (e.g., seam formations) and metals (e.g., igneous intrusives).
Program	Plan of procedure; a schedule or system under which action may be taken toward a desired goal.
Project	Specific plan or design intended to meet desired program goals. A work item definable in terms of plans and specifications.
Public Land	Land which is under the administration of the Minister of Forestry, Lands and Wildlife. Title to the beds and shores of all rivers, streams, water- courses, lakes and other bodies of water is declared to be vested in the Crown in right of Alberta and under the administration of the Minister of Forestry, Lands and Wildlife (Public Lands Act, RSA 1980, P-30) unless the title specifies otherwise.
Rangeland	Land on which the (climax or natural potential) plant community is dominated by grasses, grass-like plants, forbs or shrubs suitable for grazing or browsing and present in sufficient quantity to justify grazing or browsing use. Land on which the native vegetation (climax or natural potential) is predominantly grasses, grass-like plants, forbs or shrubs suitable for grazing or browsing use. This includes lands revegetated naturally or artificially to provide a forage cover that is managed like native vegetation. Rangelands include natural grasslands, savannahs, shrublands, most deserts, tundra, alpine, communities, coastal marshes

	and wet meadows (A Glossary of Terms Used in Range Management, Society for Range Management, 1974).
Recreation	Extensive Recreation: The recreational use of trails, natural lakes, rivers, streams and generally undeveloped or minimally developed areas. The term includes such activities as off-highway vehicle use, random camping, hiking, backpacking, hunting, fishing, snowmobiling, horseback riding and cross-country skiing. Intensive Recreation: High-density recreational use such as developed staging areas and camp and picnic grounds, and other sites or areas requiring continuous recreational management and services to maintain recreational opportunities.
Referral Systems	The Alberta government has established formal mechanisms for the internal review of land-use applications originating from within itself and the private sector. Government management agencies concerned or affected by the provisions of an application participate in its review. Each management agency subsequent to the review files its recommendation for the approval or rejection of the application. These positions are co-ordinated by a lead agency (i.e., "one window" approach) which, in turn, provides the proponent with a comprehensive decision.
Regional Resource Management Committee (RRMC)	A group of regional directors representing each of the involved divisions of Alberta Forestry, Lands and Wildlife and other agency representatives on an occasional and "as needed" basis. The RRMC reviews planning documents and has the primary responsibility for the implementation stage of the planning process.
Reserve Block	Area of timber exempted from harvest. The coniferous reserve block is usually harvested after the initial cut area has been reforested with coniferous regeneration to a height of 1.8 m (6 ft.) to 2.4 m (8 ft.). It is expected that coniferous regeneration will reach a height of 2.0 m (7 ft.) within 20 years.
Residential Subdivisions	All activities and infrastructure associated with permanent housing subdivisions for residents.
Resource	Any part of the natural environment which society perceives as having value.
Resource Integration Committee (RIC)	An approvals body responsible for supervising and monitoring the integrated resource planning program.
Resource Management Area	A geographical unit which has a common resource management intent (e.g., wildlife habitat protection, multiple use, extensive and intensive recreation).
Resource Management Guidelines	Measures which prescribe or define: a) conditions, requirements or standards which may be imposed upon those activities which have a direct or indirect effect on resources or resource uses; b) information collection activities and responsibilities;

c) decision-making activities and responsibilities; and
d) procedures for making decisions about activities.

Resource Management Implication

A statement in an integrated resource plan that attempts to outline:
a) benefits to accrue to the public as a result of the policy decisions made through the plan's resource management objectives, guidelines and zoning;
b) resource management costs incurred (generally in qualitative terms) to implement the proposed resource management actions; and
c) potential trade-offs between mutually exclusive resource uses.

Resource Management Objective

A frame of reference that provides a degree of measure in reaching designated goals. Specifically, resource management objectives:
a) document desired conditions that spell out ends rather than means;
b) are cast as infinitives rather than in the imperative mood or future tense;
c) are presented in a general to specific fashion which demonstrates continuity in detail; and
d) are quantifiable and can be achieved with existing technology or knowledge.

Restricted

Any activity which will not be permitted until stricter than normal conditions are defined through an integrated decision-making process such as integrated resource planning and referrals.

Route

Usually a mapped but unsigned primitive travel way for motorized or non-motorized use which has a low standard of maintenance. Summer routes may not have an evident tread.

Salvage Cutting

A cutting to remove dead, downed and injured trees before the timber becomes unmerchantable.

Sanitation Cutting

A cutting made to remove dead, diseased, infested, damaged or susceptible trees to reduce or prevent the spread of insects or pathogens.

Secondary Range

An area which is unused or lightly used by livestock under minimal management and will ordinarily not be fully used until the primary range has been overused (Wildland Planning Glossary, USDA, Forest Service, 1976).

Staging Area

A site developed to provide access to trails.

Step-Out Well

A proposed well that, in the judgment of the Mineral Resources Division, Alberta Department of Energy (based on geophysical, geological or engineering technical data), has a reasonable chance of penetrating the same hydrocarbon-bearing structure discovered by a well drilled prior to July 1977 (Mineral Resources Division, Alberta Energy).

Surface Disturbance

Because historical resources generally exist on the surface or are shallowly buried in the upper components of the soil horizon, surface disturbance can include any mechanical activity that affects the distribution of near-surface or buried sediments. In the case of open prairie, even extensive vehicular activity over the surface is considered

	disturbance. In the case of forested conditions, any activity that displaces soil horizons immediately below forest litter or deeper is considered surface disturbance. In the case of a significant known historical resource containing stratified or layered occupations, compaction of sediments as a result of heavy vehicular activity is considered disturbance (Archaeological Survey of Alberta).
Sustained Yield	The yield that a forest can produce continuously at a given intensity of management without impairment of the productivity of the land. Sustained yield timber management therefore implies continuous production of timber so planned that at the earliest practical time there is a balance between timber growth and cutting (Wildland Planning Glossary, USDA, Forest Service, 1976).
Timber Quota	Coniferous Timber Quota: A percentage of the volume of the annual allowable cut, as it relates to coniferous timber, that a quota holder may harvest. Deciduous Timber Quota: The volume or area of deciduous timber that a quota holder may harvest. (Forests Act, RSA 1980, c. F-16).
Trail	A signed, mapped travel way for motorized or non-motorized use that has an evident tread (in summer) and is developed and maintained to a prescribed standard.
Tourism	The action and activities of people taking trips to places outside their home communities for any purpose except daily commuting to and from work.
Tourism Attractions	A physical feature of interest or significance which can either be natural or man-made. There may or may not be facilities constructed in conjunction with it to increase the enjoyment of visitors. The attraction can be of international, national, provincial, regional or local significance, depending upon the degree of market appeal.
Tourism Facility	A man-made development whose purpose is to offer or enhance a particular service or recreational activity to the tourist.
Water Quality	Quantity of solid and dissolving material carried out by a stream (Resource Conservation Glossary, Soil Conservation Society of America, 1976).
White Area	The White Area is the region of the province settled initially and includes nearly 40 per cent of the total area of Alberta. Available public lands in this region, suitable for settlement and agriculture and not required for conservation, watershed, forestry, recreational uses or wildlife habitat, for example, may be applied for pursuant to the Public Lands Act (RSA 1980, P-30).
Wildland Recreation	In relative terms, extensive recreation occurring on lands that are on the less used and less altered side of a continuum from totally developed to completely untouched lands. The term is not exact in that the land may be under a low level of management for several land uses and is therefore not truly wild.

Wildlife Depredation	Use of lands and/or land products by wildlife for their survival which is determined by human land occupants to be in direct competition with a proposed or existing use. Examples include wildlife use of agricultural crops, hay stacks and domestic livestock ranges.
Wildlife Management Unit	An area of Alberta designated in the Wildlife Act (RSA, 1980) for the purpose of administration.

Government Bills and Orders
Second Reading

Bill 10
Alberta Land Stewardship Amendment Act, 2011

The Deputy Speaker: The hon. Minister of Sustainable Resource Development.

Mr. Knight: Well, thank you, Mr. Speaker. I rise to move second reading of Bill 10, the Alberta Land Stewardship Amendment Act, 2011.

Mr. Speaker, there is in the province of Alberta, I believe, a pressing need for land-use planning. In the period of time of 2001 to 2006 the province of Alberta gained a population that was almost four times the size of the population of the city of Red Deer. We have, indeed, got a population growth that also includes a growing economy and a fast-paced economy; industrial, residential, and community pressure on the land base in the province of Alberta; and concerns around the quality of our airshed and the quantity and quality of water resources. All of these things need to be taken into consideration with regional plans.

We need to remember, you know, the issues that we had. Some of the members of the House, in certain ridings in the province, would remember the issues that we had around providing adequate housing and services for the people that had come to the province to work and the issue around infrastructure that was felt to be lacking with respect to that pressure. People were very worried at that point in time about the impact of development on air, land, and water in the province and the impact also on critical habitat for wildlife, on habitat for recreational areas, and the like. So, Mr. Speaker, we needed to manage multiple pressures on the landscape.

Out of that was born the land-use framework and nearly three years of consultation with Albertans with respect to land-use planning. There were always questions when we did the planning that we had initiated in the land-use framework – where is the plan? what is going to be the outcome of the land-use framework? what is this government's commitment to co-ordinated regional planning? – and the differences across the province, southern Alberta being completely different from areas in the oil sands or the forestry-intensive northwest parts of the province, and each region's unique needs and the challenges that each region had. We wanted to make sure that we considered the combined impact of all of the activities that were occurring on the land base, considered the needs for conservation, the needs for more balanced development over the long term.

From these questions that Albertans were posing to us came the Alberta Land Stewardship Act. We created the Land Stewardship Act to support regional planning, Mr. Speaker. It gives the authority to establish seven planning regions in the province based on watersheds. It will define, and has defined, what a regional plan may address.

Some examples, Mr. Speaker, would be the environmental impact and the identification of lands for conservation. We have established a role for regional advisory councils to take a look at each of the regions and provide government with their advice and a vision for a plan for each of the regions. The act would help us to establish that we can look at conservation tools that might do things like help reduce agricultural fragmentation. There are opportunities there for making sure that the eco stewardship of the land and the opportunity for eco goods and services, the benefits of that, could perhaps be enjoyed by the agricultural community.

We have respected local decision-making and people's property rights in the legislation. I can't express strongly enough, Mr. Speaker, that when we're looking at these amendments, we cannot cancel or take away, remove, or rescind somebody's land title or their freehold mineral rights or a number of other issues that, you know, had been discussed in our opportunities to be around the province talking to individuals and groups of people relative to what happens when you put a regional plan in place.

Mr. Speaker, we've also in this particular amendment made sure that we provided for compensation if private land that is identified for conservation is indeed put into things like a conservation directive. We've defined that there are statutory consents that, indeed, may require us to look at compensation. We have also defined that statutory consents do not include things like land title. Also, it's very clear that the existing provisions for compensation and appeal remain for any individual that is directly or adversely affected by what might happen in a regional plan.

I think that there have been some, probably deliberate, interpretations of the original act that were never intended. I believe that in certain circumstances as I've gone around and talked to Albertans, they in some cases were fearful, in most cases anxious. In some cases, most certainly, landowners were angry.

The Premier asked me to review the original act and to be sure that I could clarify for Albertans what the intent of this act is, and where there was necessity for change, we should look at the requirement for change and put the changes in place that would give Albertans a feeling of some comfort with respect to what the plans were intended to do. Also, Mr. Speaker, a thing that happened at that point in time was that there is now an indication that none of these regional plans will actually be enforced or approved until this review is completed and until we've had the opportunity to come here to the Legislature, look at the outcomes of Bill 10, the

Alberta Land Stewardship Amendment Act, 2011, and be sure that we've had a good, open, and frank debate and discussion about this situation, again, on the floor of the Legislature.

Mr. Speaker, the changes, I think, most certainly clearly define the scope of regional plans and the focus on land and land-related activities. We do have as an intent here to be sure that we look at the pressure on the land base and to be sure that we have an opportunity for species, human settlement, natural resources, and the environment to all be considered as we move forward and design the plans that we have thoughts on for Albertans in the future.

I've got to comment a bit on property rights and compensation. We have a respect for property rights clearly stated in the front end of the legislation now, and we have also indicated that the right to all existing compensation and appeals to any other compensation issues are clearly stated. Land titles, of course, Mr. Speaker, as I've said, were never included in the definition of statutory consent, and we've clarified that. The amendment act very clearly excludes land titles from any definitions that we have, and it also excludes freehold mineral rights and a range of other personal matters. A regional plan cannot cancel a land title, and it cannot affect freehold mineral rights.

The issue of compensation, of course, you know, has been hotly debated by groups and individuals across the province, and we have clarified that nothing in this act takes away any existing right to compensation. With compensation and compensable taking of property interest under the act or under a plan, there is an opportunity for compensation, an opportunity for appeal, and an opportunity to get to the courts if you're not satisfied with what you may see at the appeal process and with the Land Compensation Board. You can apply to the Crown if you're not satisfied. If your rights are affected and you're entitled to compensation, you're certainly allowed to appeal and to go before the board, and if you're not satisfied with that, Mr. Speaker, you can indeed go to the courts with respect to your compensation.

4:20

The consultation that we've gone through, Mr. Speaker, commits the government and the province of Alberta to openness, transparency, and fairness. There was, I think, an original concern that there might be an ability for a regional plan to be established without consultation, but clearly in the amendment consultation is required. We're committed to regional plans and the advice that we get from consultation, and as we've done already, we've laid out a way for this consultation to occur through the lower Athabasca and South Saskatchewan. We've received from the lower Athabasca a vision and advice to government, and of course we continue to move forward. The consultation on the lower Athabasca regional plan will take place over the next number of months, and we would continue with the amendment indicating that consultation is required. We'd continue with that framework that we have laid out. Before a plan or an amendment is made, it's clear now in the amendments that consultation is most certainly required. So there's a legal requirement for consultation.

The act would also now be amended to address unintended direct and adverse impact. Anyone that is directly and adversely affected can ask for a review. That, of course, is a new piece that is in the amendments that we're putting forward. The persons could apply to the minister for a review of a plan.

Mr. Speaker, another thing that I think would give a lot of comfort, particularly to titleholders, landowners who may have issues, is that you can actually request at any point along the progression of a regional plan that a variance be granted to you with respect to a plan. You know, you might not realize when the plan is initially incorporated that something could affect you, so you have a bit of breathing space there to look and see how the plan is going to work. If there was some suggestion that something that was happening in a plan might affect you, you can actually apply for a variance. There's a process set out for listening with respect to variances and hearing the variances, and under most circumstances I think we would be able to grant variances and avoid any unreasonable hardship that individual might be facing with respect to regional plans.

Mr. Speaker, our opportunity here to work with local governments again is very clearly defined. We want to be sure that we co-ordinate the decisions and not override decisions that are made by regional governments and municipalities. We put an amendment here that would ensure that prior to the incorporation of a regional plan municipal development that's under way, municipal bylaws that operate relative to their land use, et cetera, would be maintained, and if there is development that is under way, that would be allowed to be completed. So there's no intention to take away the opportunity for municipal governments to do what they need to do and continue to do what they have always done with respect to regional planning in their own municipalities.

The amendments that we've made will help us, I think, to sit down and work with municipal governments across the province to be sure that there's no intention here that we would make laws in the province of Alberta that, you know, would override or change the intent of municipal bylaws. We've actually removed part of the original act, taken away a piece that actually indicated that that, in fact, could have happened.

In conclusion, Mr. Speaker, I think there is a democratic tradition here of elected representatives determining policy for Albertans, and one of the policy areas that we do determine is the area around land use. I think it's very important that as we move forward, we have cumulative-effect management that takes into consideration the pressures on the air, water, land use, the environment, and social aspects of the province of Alberta and that we continue as elected representatives to determine that policy and make good policy that works for all Albertans.

The amended act, Mr. Speaker, most certainly creates some new checks and balances for cabinet, and it starts with the requirement to consult. It moves into an era, I think, where we'll be placing draft plans before the Legislative Assembly before they can be approved by the cabinet. New processes for review, new avenues for appeal, and I think that the result is a much more transparent regional planning process. I think that the regional plans respond to the needs and the interests of all Albertans.

As we debate, I hope we keep in mind that land-use planning is a requirement, I think, for ongoing proper development of the province of Alberta. I hope that we can also recognize that the amendments that we have put forward recognize and protect the rights and compensation of individuals and, most certainly, protect the opportunity for local decision with respect to development.

With that, Mr. Speaker, I thank you.

The Deputy Speaker: The hon. Member for Edmonton-Centre.

Ms Blakeman: Thank you very much. Well, this has been a long time in coming. I'm glad to get the opportunity to get up and get some observations on the record in the second reading portion of Bill 10, the Alberta Land Stewardship Amendment Act, 2011. This is a singularly important bill because it has significance in so many different arenas. There's no question that it has considerable significance and opportunity for political parties to further a particular cause. I know that one of the opposition parties, my colleagues to the . . .

somebody else doesn't want you to have it? Is there notification for other people?

If you've got a land-use plan and someone applies for a variance on it, that's going to have consequences down the line. Who manages and foresees those consequences? Who is the decision-maker about whether that variance is going to be granted and allowing anybody else to have their say on that, or is this just cut off at a certain point? You can apply for your variance. Nobody else has anything to say about it, and either they grant it or they don't. So that's the second question that I have.

4:40

Section 14, which is amending section 19 of the act, was the one where the burden was put on the landowner to apply for compensation within a specific period of time. By going back and forth, I was able to answer my own question there, which is: how did they get notification that this was going to happen? There is another section that actually deals with the notification. They don't just have to be constantly monitoring the *Alberta Gazette*, which, I'm sure, we all do every day. No, we don't, obviously. There was an official notification section to landowners that something would happen with the regional plan or would happen with their property so that they would know and be able to deal with that. So I answered one of my own questions there.

An Hon. Member: That's efficient.

Ms Blakeman: Yeah, I know.

I'm also curious that there was no change to section 20. I'm pretty sure that section 20 was one of the ones that was being talked about as a Henry VIII clause, in which the minister or the cabinet is able to change legislation without coming back to the House. At the time the government defended these clauses very strongly, and I argued against them, and I still am. You know, as much as this place has been diminished, it's a bit of an echo chamber today, so I suppose that's proving my point. There's a lot of legislation now that can be dealt with by the minister away from this Chamber, and we never know about it unless we're reading the *Alberta Gazette*.

I don't see that there was a change in section 20 from the main bill, and I also question what was going on in section 19.

Mr. Knight: You have to look at section 21 as well when you're looking at section 20. All that's suggesting, of course, is that for all decision-making, municipal and provincial decision-making, the same rule applies.

Ms Blakeman: The minister is coaching me on the side that if I look at section 21, I will find out that everybody is treated the same, but I don't think that's quite answering my question.

When I look under – sorry; I have to go backwards and find out where I started here – section 14, which is changing section 19 of the original bill, by the time you get down to the bottom of page 10 in the paper bill, it's talking about, again, 19.1(10), that the Lieutenant Governor in Council, which is cabinet, may make regulations – that's regulations – "respecting the form and manner of making applications to the Crown, the Compensation Board or the Court of Queen's Bench under this section." I don't like it, but I understand what that's about. Then it talks about "respecting the application or modification of Part 3, Division 3, and the regulations made under that Division, in respect of applications to the Compensation Board or the Court of Queen's Bench under this section."

Part 3, division 3, of the main bill is that compensation section. The whole thing is conservation directives. That says that this can be changed without coming back here because it's empowering cabinet to change that part 3, division 3. I'm still questioning that, so I'd like to hear the minister talk about that one.

Now, what I would expect to see, what I would hope to see from this bill, what the Official Opposition really wanted to see, was a fair and transparent expropriation process. First of all, it needs to be a transparent process for determining the need of a given project, and this is referencing other bills that have come through at the same time, in particular the big electrical one.

An Hon. Member: Bill 50.

Ms Blakeman: Bill 50.

There does need to be a transparent process about the need for something. If the government, you know, believes that it's right to proceed with that, then it shouldn't be worried about a process in which it explains itself to the public. So demonstrating the need; two, the transparent expropriation process; three, a fair compensation process; and four, a clear appeals process. You always have to have an appeals process built in. Any of us that work in our constituency offices are often dealing with that appeals process that's built into almost everything that we have in provincial government rule. So with this bill in my portfolio, that's what I as critic for Sustainable Resource Development wanted to see out of this. I'm not entirely convinced that that's what we got.

The whole issue of a land-use framework and the ability to make that plan is critically important, and trying to get that concept of public good is really important. When I talk to my constituents in downtown Edmonton, they say to me: "What? Land use? What are you talking about? I don't know it. What is this stuff?" It's true that for many urban dwellers this stuff doesn't touch their lives. But you talk about public good, you know: are my people interested in a high-speed rail link between Edmonton and Calgary? Now their eyes light up. Yes. Now they get it. When you say that the government would need to be able to assemble the land in order for that track to run on it – okay? – now they've got it. When you say, "We're talking about not having urban sprawl decimate agricultural land," that's about the plan.

Those are some of the questions I'd like the minister to answer. I look forward to continued debate.

The Deputy Speaker: From my list here the next hon. member I recognize is the hon. Member for Livingstone-Macleod.

Mr. Berger: Thank you, Mr. Speaker. I'm pleased to rise today to speak to Bill 10, the Alberta Land Stewardship Amendment Act, 2011. The amendments in this act explicitly protect and enshrine landowner rights and make them front and centre in Alberta's land-use planning. The freedom to own and enjoy private property is a fundamental right that Albertans have had since Alberta became a province.

I would like to speak today on the importance of land-use planning in the protection of property rights. Mr. Speaker, the connection that Albertans have with the land is something that this government respects and will always protect. Land is unlike any other asset on a number of grounds. Every parcel is unique, it is fixed in place, it is finite in quantity, it will outlast any of its possessors, and it is necessary for virtually every human activity.

As a landowner myself my own family's livelihood has been dependent on the land for generations. As a rancher property rights are not only fundamental to my way of life but to all Albertans. This is why I strongly support the land-use framework and Bill 10, which will enhance the rights of rural landowners.

Mr. Speaker, the necessity of land-use planning is essential for Alberta's future prosperity. With 5 million people projected to reside in Alberta within the next 10 to 20 years, it is of paramount

importance that we have planning legislation in place that will coordinate in an organized fashion the goals and objectives of Albertans. It should be Albertans, not the courts or foreign environmental groups, that provide input and decide on Alberta's future.

While some in opposition suggest they would rather have land-use decisions decided in the courts, I believe Albertans know what is at stake and that Albertans should have the final say on land-use planning. So I have to ask myself: what is behind the motives of the opposition when they throw out wild accusations about the Alberta Land Stewardship Act, or ALSA? I've had friends call me up and ask questions like: "Why did the government pass legislation that will take away my land? Why did the government pass legislation that will turn Alberta into a Soviet-style communist state?" There are many other wild accusations that are so far out there, it's almost laughable. All I can guess is that they are telegraphing their innermost thoughts to Albertans on how they would use such legislation if they were ever in power.

4:50

However, Alberta's future is a very serious matter. We need to get it right, and, Mr. Speaker, we have got it right. Bill 10 will it make it absolutely clear that ALSA must respect the rights of individual property holders, that Albertans will continue to have a right to compensation, and that public consultation and transparency in the development of regional plans will be required.

These amendments make it so plain that this government supports landowner rights and their right to compensation that even the Member for Airdrie-Chestermere should be clear on the matter. Once a supporter of property rights, the Member for Airdrie-Chestermere previously stated about the Alberta Land Stewardship Act that "at first glance much of this legislation may be interpreted as a regression on property rights, but it would be a very large mistake to think so as this bill, in my view, does the exact opposite. It strengthens landowner rights." He also stated that the former Bill 36 "is an unprecedented victory for the rights of landowners in this province." Mr. Speaker, the member's analysis of this legislation was as correct then as it is today. Albertans who earn their living from the land know how important land-use planning is for their livelihoods.

Long-time rancher Harvey Buckley recently stated to the *Cochrane Eagle* that "ALSA is the best piece of legislation this province has done in 60 years" and that "it does not infringe on your property rights."

Mr. Speaker, I believe that there is a direct correlation between land-use planning and property rights. Albertans enjoy their property entirely based on previous land-use initiatives. To see this, we can go back all the way to the pioneers that settled our land in accordance with the Dominion Lands Act. The Dominion Lands Act encouraged the orderly settlement of western Canada, which included numerous land-use regulations. For example, prospective landowners were required to be at least 21 years old. They were required to occupy the land for a set period of time, to build improvements on the land, and to cultivate a portion of the land, usually around 30 acres.

The Dominion Lands Act also set out how land should be divided; for example, into townships each containing 36 sections and for each section to be divided into quarter sections. It provided for public road allowances every mile by two miles to enable the travel and transportation of people and produce with minimal use of private land.

Mr. Speaker, these were land-use initiatives needed at that time to establish private property. It was through this planning process that Albertans gained proprietary interest in property. This is because the value of property comes largely from factors that are beyond one's property line. External qualities like infrastructure improvements, road access, water quality, and viewscapes are examples of external elements which can quantify the value of property. That is why I would suggest that property rights go beyond the four quadrants of a piece of real estate in that effective land-use planning as provided in ALSA would strengthen property rights, not diminish them. Essentially, proper land-use planning is an effective method to optimize property values of landowners.

However, there are also rights protecting what lies within your property, which is why it is essential that any land-use plan find an acceptable balance respecting both public and private property rights. That is why fair compensation is a key element of the Alberta Land Stewardship Act, and Bill 10 makes this abundantly clear.

Mr. Speaker, I would like to quote a long-time friend of mine, Mr. Neil Wilson, the immediate past president of the Alberta property rights initiative, who stated last week on CBC radio in relation to the Alberta Land Stewardship Act that if in any way proprietary interest is diminished, compensation should be available. When asked if ALSA achieves that, he replied: I think this government has tried its very best to take legislation in the interest of public and make it compensatory, certainly.

The Alberta Land Stewardship Act creatively found a balance which protects and enhances both external and internal properly rights, and Bill 10 makes this even clearer. Albertans have told us they want leadership in provincial planning, and I believe that our economy is dependent upon ensuring we have the proper land-use plans in place. Property rights, economic growth in Alberta's future are all tied together in this important piece of legislation. We need to ensure investors that their rights are protected, and this bill does that. We need to ensure property owners that their property rights, whether it be surface, subsurface, or public, are respected, and this bill does that. We also need to assure Albertans that our province will continue to be a beacon of prosperity, freedom, and democracy, and I believe Bill 10 is a shining example of this Alberta tradition.

Mr. Speaker, I support Bill 10, the Alberta Land Stewardship Amendment Act, 2011, and I would suggest all members stand in support of this legislation. Thank you.

The Deputy Speaker: Standing Order 29(2)(a) allows for five minutes of comment or questions. The hon. Member for Edmonton-Highlands-Norwood.

Mr. Mason: Yes. Thank you very much, Mr. Speaker. I'd like to ask the hon. member if he can clarify comments which he attributed the hon. Member for Airdrie-Chestermere. I was shocked, frankly – shocked – to hear those comments, and I would like it if he would please identify his source.

Mr. Berger: Thank you, hon. member. I would clearly identify the source. It is *Hansard*, May 13, 2009.

An Hon. Member: Say it isn't so.

Mr. Berger: It's so. It's a page and a half, pages 1137 through to 1138, if that clarifies that for you. It's quite a lengthy speech on that.

The Deputy Speaker: The hon. Member for Fort McMurray-Wood Buffalo.

Mr. Boutilier: Yes. To follow up on the question to the hon. Member for Livingstone-Macleod on the comments that were made, I have not met anyone more knowledgeable in terms of

property rights than the hon. Member for Airdrie-Chestermere. It's clear to me that the understanding of the hon. member is something that he needs to review because, quite simply, what was said in *Hansard* is not the rest of the story.

Clearly, the Wildrose caucus supports the infinite rights of landowners. In fact, in some recent town hall meetings in many of your constituencies I understood that a gentleman by the name of Keith Wilson had presented some very, very interesting facts impartially, Mr. Speaker. I'd be really interested in the hon. Member for Livingstone-Macleod – he heard the comments that were made. In fact, it's my understanding that the Minister of SRD invited Mr. Wilson to meet with him, and I understand he had a very clear understanding of the facts. I'd be really interested: is he saying that what Mr. Wilson is saying is not accurate relative to the issue of the assault on property rights of Albertans?

The Deputy Speaker: The hon. member.

Mr. Berger: Thank you, Mr. Speaker. I kind of got lost in the preamble there, but I think what he was really asking is: was this the Member for Airdrie-Chestermere's actual speech? I would submit it, table it, if he would like or give you copies. There are lots of them.

Mr. Boutilier: Keith Wilson is what I'm asking about now.

5:00

Mr. Berger: Mr. Wilson's comments at those meetings: I would like to comment that it would be nice if he would put the whole line of the act in when he quotes a line. Dot, dot, dot doesn't really extend to the content of it.

To go a little further on that whole issue here, when we go through this, there was a point here where the hon. Member for Airdrie-Chestermere had claimed that he was given a speech to read. I think he also claimed something similar to the 1974 or '75 abduction of Patty Hearst, where she'd been kidnapped, and then she went and robbed a bank and just acted like her kidnappers. So that was why he read this speech, because he had been kidnapped by our party and then read this speech.

Well, Mr. Speaker, I'd like to submit that when you go through the content of this speech, the content of this speech has a lot of local content on the area of Airdrie-Chestermere, and I think the member did a wonderful job of putting forward his points in this exact speech and on the members of his community that he brought up and talked about freely here. He quoted Doc Seaman's generous donation of conservation easements on the OH Ranch. He spoke of a fellow here, Jim Hole, who would have really liked this legislation because it would have enabled him to continue on with his operation and gain some value out of it without actually selling it. And it goes on for the next page, basically discussing these different things.

I think the member, being a trained legal fellow, four years of postsecondary, three years of legal training, knew what he was reading here and was very impressed with it. I have to say that that was one legal opinion, now we have another legal opinion, and I'm sure we'll have more legal opinions to come forward. But I have to say that I think he was bang on on this one. He did a wonderful job of conveying it. Now I'm surprised that he's not in here this afternoon to discuss it further.

Mr. Boutilier: Excuse me. Point of order, Mr. Speaker.

The Deputy Speaker: You should not mention the presence or absence of a member.

Mr. Berger: Oh, okay. I apologize. Point well taken. Thank you.

The Deputy Speaker: The point of order has been retracted. He has apologized for that.

On my list here, the hon. Member for Edmonton-Highlands-Norwood. Do you wish to speak?

Mr. Mason: Yes. Thank you very much, Mr. Speaker. You know, I'm pleased to rise to speak to Bill 10. I think that some context is valuable here, and I think also some history is valuable here. The context of this is the fact that there is widespread discontent in the province, in rural areas in particular, with a suite of Tory legislation, and that's not just Bill 36, but it is also Bill 19, and it is also Bill 50. The three of them have to be taken together, in my view, in order to get the entire picture of what this government is actually attempting to do.

Some of the history is attempts to site a north-south transmission line in this province a few years ago which fell afoul of landowners in rural Alberta, particularly in the Rimbey area where a group of landowners got together and actively challenged what was actually being proposed. The whole process was compromised when the ERCB was caught spying on this group. That created quite a firestorm of conflict. So the government decided that they were going to basically legislate a sledgehammer in order to crush the flea that had thwarted their attempts. But it wouldn't have been thwarted had there been more openness about the proposal and if the ERCB had not resorted to illegal tactics in its attempt to overcome opposition. Keep in mind, Mr. Speaker, the ERCB is supposed to be a neutral body that adjudicates these sorts of things and does not take sides or advocate one side or the other. So it was kind of a dark day, I think, in terms of privacy and basic civil rights of Alberta citizens.

The government, having gone ahead with its deregulation of electricity in the area of transmission, decided that a massive set of projects was required. Now, we have about $2 billion worth of infrastructure for transmission currently in the province, and it serves the province well and has for a long time. It's getting older, but it's by no means going to fall apart. The government wants to initiate a whole series of new projects that would be worth $16 billion when you add everything in; in other words, an eightfold increase in value over what we have today.

No adequate explanation has ever been provided for this massive increase in transmission infrastructure. But the one explanation that presents itself is that they want to create a huge market for the buying and selling of electricity, the generation of electricity in Alberta for export purposes to the United States because domestic consumption cannot explain the massive scale of infrastructure that's being proposed.

In order to ram this through, the government passed a series of laws to give them the power that they needed to do this. I know that Bill 36, which this is supposed to amend, gave the cabinet a huge amount of power. It gave them overwhelming control over every aspect of regional plans, and it doesn't reflect the land-use framework's commitment to public input and community involvement. The government can create regional plans, regional advisory councils, and so on.

I think that you also have to take a look at Bill 19, which preceded it, and that allows for an area of land to be designated as a land assembly project. The minister has to publish a plan of the project to create a project area, but once it has been declared, the cabinet can make regulation about how that land can be used, developed, or occupied. Some amendments were made to that legislation, but it gives an enormous amount of power to the cabinet in order to essentially designate any land that they wish and to

control any sort of development on that in a long-term sense. So if they are going to build a project 10 years down the road, they can effectively sterilize that land.

So Bill 19 was a key piece of this. With Bill 36, again the same thing. Bill 50 took away the authority from the Alberta Utilities Commission, the power to approve the need for transmission lines. It eliminates that the public interest needs to be shown before the project is approved, and it is paving the way for the construction of this massive infrastructure for transmission for profit, all of which, by the way, will now be paid for by all electricity consumers in the province. These pieces of legislation need to be taken together as a way of taking away traditional rights of landowners and taking away regulatory oversight of major projects in our electrical system in this province. That is really, I think, what has to be seen.

Now, it is true that some members of the Wildrose caucus, who were then members of the Progressive Conservative caucus, did support these bills. We made a motion, for example, to try and stop Bill 50, and that was opposed as well. Mr. Speaker, I'm very proud of the role that the NDP played as the only party at the time leading the fight against these three bills and trying to connect the bills to the root source of this problem, which is electricity deregulation, which has created a situation where in order to allow big electricity companies to make more profits, the very ratepayers who are supposed to be served by them are going to be shaken down dramatically to pay for all of this unnecessary infrastructure.

5:10

It's interesting that in recent weeks the Minister of Infrastructure has gone on the record in his community newspaper indicating that some of this infrastructure is required in order to facilitate the development of nuclear power in our province. That is a startling admission which flies in the face of other statements that we've had from the government.

Mr. Speaker, I just want to indicate one more point, and that is the distinction between the position of the NDP on this legislation and the present position of the Wildrose Alliance. Both parties are opposing these pieces of legislation, but the Wildrose Alliance is taking the position of property rights as an absolute, and that's not the position that we take. They would like to protect property rights absolutely, and we would like to protect the public interest.

Where we draw the line with the government is that we think you should never be able to take peoples' property unless there's an urgent public necessity to do so, there is full consultation, and there is full and adequate compensation. These bills violated those principles, and that's why we were so strongly not in favour of them. There is a risk that in the reaction against these bills that the government has created, there may actually be changes that take away the legitimate role of land-use planning by municipalities and by the provincial government, so it's important to us that the ability to plan land use and the ability of the public interest to trump property rights when that's necessary should be retained. We don't want to throw the baby out with the bathwater, as do our friends in the Wildrose Alliance.

The point that I think is most important is that there is a drive towards centralizing power that's inherent in each of these pieces of legislation that I find very disturbing. In other words, the government has decided that because of some problems down the road, largely of its own making and of the ERCB's own making, they're going to abandon the democratic process when it comes to approval of these projects and push ahead with centralized decision-making, and that goes too far in our view. For those reasons I think we are going to draw the line here.

Bill 10 does not remove all of the egregious elements of Bill 36, and I think that it's certainly insufficient as far as I can see. For example, the minister will be able to issue directives to the stewardship commissioner and staff. The minister will still maintain, in our view, an undue amount of political control in the regional plan process, in their implementations. Some of the changes are cosmetic. It replaces the word "extinguish" with "rescind" in reference to statutory consent in section 8. Instead of saying, "No person has a right to compensation by reason of this Act" and then listing the exceptions to the rule, the act will now state, "A person has a right to compensation by reason of this Act" and then list the avenues available for compensation.

I think, Mr. Speaker, that the bill fails to adequately address the problems in Bill 36, and it certainly does nothing to address the significant problems that the other two companion pieces of legislation provide: overriding the rights of property owners, overriding proper regulatory oversight of the construction of major infrastructure projects that would be paid for by ratepayers.

For those reasons we cannot support the bill. Thank you.

The Deputy Speaker: Standing Order 29(2)(a) allows for five minutes of questions and comments. The hon. Member for Calgary-Glenmore.

Mr. Hinman: Thank you, Mr. Speaker. I listened intently to the hon. Member for Edmonton-Highlands-Norwood. I have a couple of clarification questions, I guess, that I'd like to ask him. He made reference to the Wildrose several times, wanting to make distinctions. I do not believe that at any time the Wildrose has ever said that the Expropriation Act isn't valid or shouldn't be in place. There is actually a long tradition since, you know, the BNA Act where expropriation can and should be allowed for public good. What we have been referring to over and over again and have declared is that we need to entrench property rights in the Constitution because if those were in fact entrenched in the Constitution, bills 19, 36, and 50 could have been challenged in the courts. Again, the Member for Livingstone-Macleod says: oh, we don't ever want to be in the courts. This certainly sounds like a monarchy, that they will control the courts.

I guess I would take issue and ask for your clarification on why you feel that we do not think the Expropriation Act is applicable in developing, whether it's power lines, pipelines, roads, transportation, and in having that process if, in fact, someone has been challenged by the government.

You've eloquently talked about Bill 50 and how they can push these power lines through, and it's not in the public good. In the old act, where they had to have proof of need, that was critical. Now, like I say, with Bill 50 they've wiped that aside and said: "Oh, no. This is essential." Again, it's a policy that the government has put out, thereby not allowing us to challenge it in the courts because they can just dictate it. It's a government policy. It goes forward.

Perhaps you could clarify why you feel that we do not think the public good is ever addressed through the Expropriation Act and that property rights are paramount, and therefore there would be an absolute juggernaut of any movement forward.

The Deputy Speaker: The hon. Member for Edmonton-Highlands-Norwood.

Mr. Mason: Thanks very much, Mr. Speaker. Well, you know, I'm surprised that the hon. Member for Calgary-Glenmore would want us to be making legislation in the courts. I didn't think that was a conservative principle.

Province of Alberta

The 27th Legislature
Fourth Session

Alberta Hansard

Tuesday evening, April 26, 2011

Issue 29e

The Honourable Kenneth R. Kowalski, Speaker

internationally. We don't have enough elk meat. What's happened is that the price was down for so long, yet we were developing markets. Now the markets are developed, but we don't have enough animals. So we want to grow this business back up to supply the international market. There is a huge market for venison and elk and deer meat in other countries, so this is actually a prime time to get going.

We might be a little bit late on the numbers of animals because too many animals have been lost due to farmers quitting and selling off their breeding stock and maybe not breeding animals in the last couple of years because of the low prices. This is a cyclical thing that happens in all industries. It happens in the beef industry. It happens in the pork industry. It's just part of agriculture that you go through these cycles. People make decisions to get in or get out, and it's just business. It's a business decision that people will make, to stay in or get out or to supply the market or not to.

It's much the same in the bison market today. The bison market has probably doubled in value. The animals themselves have doubled in value in the last year because people have acquired a taste for this type of meat. It's healthy meat. They say it has ZIP: zinc, iron, and protein. It's very, very healthy, and this is what people want. Peoples' diets are changing, and they're going to this type of meat.

We want to have a strong industry that is regulated under Agriculture, and we want to protect consumers in the health of the product. We don't want to cut corners. We want this industry to survive and prosper.

Mr. Hinman: I appreciate those answers. Just to clarify, then, when you're allowing family to come in, you're not allowed to receive any money for that? And did you say that you'd bring them into a chute, and then you'd possibly shoot them through the lungs or the heart, or is it just an area that you don't have enough experience in so you won't comment on it? How do they process these five animals that we allow? Again, can we actually sell them to family, or do we have to give them to them under this legislation?

The Chair: The hon. Member for Lacombe-Ponoka.

Mr. Prins: Thank you, Mr. Chairman. I don't think the legislation addresses on-farm slaughter. I think that's probably regulated under a different act. How they do it is entirely up to the operator. If I were to kill five animals, I'd bring them into a squeeze, and I would humanely euthanize them and have them slaughtered. I think that every operator would have their own way of doing it. But if I didn't do it on a farm, I would bring them into a provincially inspected abattoir and have them kill them in the normal way that they would do cattle and pigs and any other animal.

The Chair: Any other hon. members wishing to speak on amendment A1?

Seeing none, the chair shall now call the question on amendment A1.

[Motion on amendment A1 carried]

The Chair: The committee shall now get back on the bill as amended. The hon. Member for Airdrie-Chestermere on the bill as amended.

Mr. Anderson: Okay. The other questions I've been getting regarding Bill 11 surround section 10 of the bill. It says there in 10.1(1), "The Minister may issue a permit authorizing a prescribed activity." [interjections] Never mind. Question answered.

The Chair: On the bill as amended?

All right. Seeing no other hon. member wishing to speak on the bill as amended, the chair shall now call the question.

[The clauses of Bill 11 as amended agreed to]

[Title and preamble agreed to]

The Chair: Shall the bill be reported? Are you agreed?

Hon. Members: Agreed.

The Chair: Opposed? Carried.

Bill 10
Alberta Land Stewardship Amendment Act, 2011

The Chair: The hon. Minister of Sustainable Resource Development.

Mr. Knight: Thank you, Mr. Chair. It is a pleasure for me to stand here tonight and open debate in committee with respect to Bill 10, amendments to the Alberta Land Stewardship Act. The bill, of course, is entitled the Alberta Land Stewardship Amendment Act, 2011.

A little bit of background if I might. I think that everybody understands that the province of Alberta has had a period of time when there was a tremendous amount of growth in the province. In fact, if we look back in 2006, '07, and '08, that growth in certain areas of the province, particularly in Wood Buffalo, was at a point where many Albertans were indicating to the government that something needed to be done in order to be sure that we had the proper type of facilities in place and the proper infrastructure in place in order for us to continue to develop our resources in the province. And it wasn't just there. As a matter of fact, Mr. Chair, if you look at Fort McMurray, Grande Prairie, Red Deer, Medicine Hat, Lethbridge, Edmonton, areas around Fort Saskatchewan, the city of Calgary, the growth was tremendous, and the pressure was also tremendous.

We have to realize that the economic engine of Alberta and Canada is the investment in the energy industry and particularly the energy industry in Alberta. There was $172 billion invested, capital deployed in the province of Alberta in five years, from 2005 to 2010, and this is in conventional oil and gas plus the oil sands. That's a tremendous amount of capital for an area that has a population of about three and a half million people.

What happened along with this is that the economic engine also fuelled population growth. The population growth in the province of Alberta over the five-year period of time from '01 to '06 was about 315,000 new Albertans, and we're now attracting about 60,000 people to the province of Alberta per year. So you can see that I think in 13 or 14 years we've increased the population in Alberta by about a million people.

This is a busy place. It's a busy landscape. There was economic and human pressure on the land. There was a need to manage our land and multiple land uses. There was also a need to manage the combined impact of all of the work that was going on, whether it was development of resources, building homes, building highways: all of the kinds of combined impacts that we needed to have managed. We needed a new planning concept.

10:10

Mr. Chair, this new concept is the land-use framework. We started consultation with Albertans in 2008, working on the land-use framework. It came with a number of, I think, very good and solid potential planning tools. First of all, a need and a require-

ment to balance our economy, the environment, and social objectives that people in the province of Alberta need and desire, want, I think have been provided with respect to social requirements for living and working, raising their families in the province of Alberta. Social requirements like health care, education, social services programs, the opportunities for recreation, the opportunities for touring and tourism: the land-use framework was laid out to provide these types of things.

We also have there the development in the framework of seven regional planning areas, the seven regions based on major watersheds in the province. Each region had unique challenges and unique needs. So we divided this into seven areas and started the work on the lower Athabasca region first. Of course, as I said, the majority of the pressure that Albertans were feeling was because of a tremendous amount of activity, probably in the neighbourhood of $40 billion to $50 billion worth over a couple of years there, development that was taking place in the Wood Buffalo region.

We have regional land-use plans that were spawned from the land-use framework. Regional land-use plans, Mr. Chair. They're regional in their concept, regional in their development. They're regional in the strategies that were deployed to put them together, and they will be regional in their implementation. There's nothing centralized about this issue at all. The regional plans start with regional advisory councils, individuals from the areas that they represent, bringing forward an opportunity for them to give government their vision and their advice with respect to how a regional plan for their particular unique area should roll out and should look for the future of Alberta. These plans will be tailored to regional needs.

There was a requirement, when we started into this, for legislation to enable regional planning, and we needed legal support to implement regional plans, and we needed certainty of regulation. We have the Alberta Land Stewardship Act. The intent of the legislation – the intent of the legislation – is very clear. We intend to respect private property rights. We intend to respect statutory consent holders. We intend to respect existing compensation and the appeal mechanisms that people have toward compensation. We have respect for local governments and the work that they continue to do and are responsible for. Many rights are defined in other Alberta statutes. ALSA doesn't provide these rights, Mr. Chair, and ALSA does not take them away. They exist in other legislation.

But there was a need to clarify this intent. ALSA and this government and this Premier required clarity. I was asked by the Premier to go out and listen to Albertans. While we were doing the consultation around the first couple of regional plans that we were working on, particularly lower Athabasca, I heard a lot from Albertans. The Premier asked me to go back and listen, and if necessary, to make adjustments. The result of that listening and the adjustment is Bill 10.

Bill 10 clarifies the respect for existing rights that Albertans have, and it creates some new processes. There is a commitment in Bill 10, right in the front end of it, to property rights. There is a refined scope to the regional plans. There is a very solid and firm explanation that statutory consents exclude land title, and there are no changes to the right to compensation of any entity or person in the province of Alberta relative to something that may be put in place with a regional plan. All of the rights to compensation that existed previously are maintained and clearly spelled out in Bill 10.

Local decision-making by municipal governments and coordinated planning with municipal governments is another one of the things that Bill 10 very clearly spells out. We as a government cannot make laws under municipal authority. Mr. Chairman, the municipalities are great partners for the province of Alberta and for the Alberta government. We respect them, and we have no intention of interfering with municipal authority. Municipal development permits, for instance, cannot be cancelled or changed once work has commenced on new projects. Bill 10 very clearly respects all existing rights.

Statutory consent holders: if there is any impact on statutory consent holders, they must be provided with notice of compensation, under what laws compensation applies to them, and how that compensation will be determined.

With respect to private landowners, Mr. Chairman, the regional plan cannot – cannot – remove a title. It can affect an interest in property – that's very true – but if it does, it would be very limited and in cases where you might have something like a conservation directive. In the case of a conservation directive it would be very likely that the landowner would agree. In most cases landowners already understand what special pieces of real estate they actually own. Conservation directives do not include your title and would not remove title from the land. All it would ask is to put a directive in place. By the way, compensation is paid if that directive has any negative effect on the value of the owner's real estate.

Where there is a right to compensation, compensation is paid. The legal term "compensable taking" was included in Bill 10 to make it very, very clear that the right that we're now giving titleholders in the province of Alberta goes well beyond the right in almost any other jurisdiction in North America. It is a very, very solid addition to the Alberta Land Stewardship Act. Landowners also for other reasons can apply for compensation, and they can appeal the compensation to the Land Compensation Board and, Mr. Chairman, also to the courts if that is their desire.

There are some new provisions in Bill 10 that would be added to ALSA as we move forward. Of course, these plans are region-wide. There is a tremendous amount of work that goes into this, but these plans on purpose, Mr. Chairman, have a five-year review and a 10-year renewal. You could not foresee every circumstance and every situation when you start developing a regional plan. There are cases where this could affect someone's existing use. What we've done with this is said: "Okay. This could be a case. This is possible. Let's give people an opportunity." So they can apply for a variance. They can apply for a variance to land-use designation in a regional plan. Titleholders and leaseholders can apply to avoid unreasonable hardship on themselves and still honour the intent of the regional plan. I think these are very, very solid movements forward with respect to planning in Alberta.

Also, you can apply for a review. Anyone directly and adversely affected can apply for a review to a regional plan. They would apply to an appointed panel. The results of such a review would be made completely public in a transparent process. These, I believe, are new checks and balances that add to the strength of land-use planning in Alberta.

10:20

We also have as checks and balances in the amendments a public consultation requirement. Previously that was not the case. I heard very strongly from Albertans that they wanted public consultation. There is now consultation required. The consultation report would go to cabinet, and the draft regional plans, also another check in the system, will be filed at the Legislature.

Mr. Chairman, I think that there's some very solid meat in the amendments that we're bringing forward in Bill 10, and I am going to encourage that, again, people take a good look at this. I hope that all Albertans take a look at what we're doing with respect to land-use planning for the future in Alberta. Again, it

respects, I think, the existing rights and all rights of Albertans, it respects existing compensation, and of course it respects our existing methods of appeal.

There are new provisions to review regional plans, new provisions that make it more transparent in a more transparent planning process. There is very strong support for regional planning across the province. I found almost no people that did not feel we needed to move forward with regional plans. I think it's very essential that we do this with respect to multiple land use that is going on and will continue in the province.

Mr. Chairman, I will end by saying: it's your land, it's your plan, and it's your future. Thank you.

The Chair: The hon. Member for Edmonton-Gold Bar on the bill.

Mr. MacDonald: Yes. Thank you very much, Mr. Chairman. That was an interesting speech from the hon. minister, and I listened intently to it.

Certainly, it's only two years since we dealt with Bill 36 in the Assembly, and of course it was quite a comprehensive piece of legislation. It was viewed by many different people across the province with suspicion, and certainly I wasn't confident enough to support it at third reading. Here we are two years later, after the public is beginning to figure out this government and this government's habit of wanting to do so much without public consultation, behind closed doors. It's a cabinet decision. "The cabinet is benevolent. It knows what's best for the citizens. Don't worry. We will look after your interests." That theme is, unfortunately, quite popular with this government, Bill 36, and now we see the companion piece of legislation two years later, Bill 10, and we see the problems.

It's interesting to listen to the hon. minister talk about the need for land-use planning and a land-use framework, and the hon. minister would be right. But when this government was cheered on wildly by the Deep Six, a group of MLAs, one of whom is in the Premier's chair at the moment, whenever cuts were made and programs were dismantled, well, I would remind hon. members of this House that the regional planning commissions in the term between 1993 and 1997 were abolished: we didn't need any regional planning commissions; it was a waste of time; it was a bureaucratic exercise; let's get rid of them. Look what happened. Look what happened.

Now, I know the hon. Minister of Sustainable Resource Development is too young to remember all this, but when Steve West was here and cut and slash was the theme, the regional planning commissions went. They disappeared, and we have the same party now indicating that we need them.

I couldn't help but notice at the AAMD and C just how defensive the Premier was in his lunchtime remarks. He was talking about silk-suited lawyers running around the province spreading misinformation, causing trouble. I wondered: who is the gentleman talking about? [interjection] Well, I had the opportunity, hon. member, of attending the ag society and the Eckville Chamber of Commerce debate that they hosted between this very silk-suited lawyer, Keith Wilson, and two of your distinguished seatmates. There was a rumour circulating in that community hall before the meeting started that you, hon. minister, were going to arrive by plane. It was a large meeting. I didn't see you there, and I didn't hear the buzz of an airplane over the community, but that possibly could have happened.

The government is certainly very defensive about these issues around planning, land use, and they're very defensive now about Bill 19, Bill 36, and, of course, Bill 50. They're all related. They all have the same issues. This is a government that has a tendency to want to make decisions behind closed doors: don't ask us any questions; we're doing what's in your interests. But the public knows, clearly, that it's not in their interests.

Now, Mr. Chairman, one of the things I would suggest we need to do in committee is . . .

Mr. Knight: If you're not going to make sense, I'm going home.

Mr. MacDonald: Well, before you go home, I would like you to consider giving Bill 10 some public consultation, a round of public consultation. We could send it to a policy field committee, the Resources and Environment Committee. The hon. Member for Lacombe-Ponoka was at the meeting on Thursday night in Eckville. Let's let that committee have a series of public meetings and public hearings across the province in central Alberta, northern Alberta, southwestern Alberta.

Citizens have a lot of issues about the direction you're going in with Bill 10. If Bill 36 was so well drafted, we wouldn't have it here less than two years later, amending the thing, trying to make it sellable to the citizens. That's why I think we would be better off with the policy field committee going around and having a public hearing in a place like – oh, dear. I'll say: let's just stop in Red Deer. We could go to the Legion in Rimbey. There are a number of places we could go if we would not want to go to the ag society, where the meeting occurred on Thursday night. That's one thing we could do. We could ask the people. We could ask the citizens how they feel about regional planning and regional planning commissions and what role they should play. We could also ask the citizens, the property owners, if they're comfortable with the explanations that this government is providing regarding these companion pieces of legislation.

No one denies that we need a form of planning. We had a perfectly good one, but we decided: "Hey, we don't need it. What's that doing?" Then we realized that we've got problems, and we've got no one to blame but ourselves, and ourselves in this case is the Progressive Conservative caucus.

10:30

Now, also with Bill 10 there are a few other individuals that indicate – one is a citizen acting on his own, Mr. Sam Gunsch. He has a publication dated April 20, 2011, and he indicates that Albertans deserve a public hearing on the Bill 10 amendment act before the provincial government proclaims it into law. Well, let's give it to the hon. Member for Lacombe-Ponoka and let him go across the province and hear directly from citizens.

Mr. Gunsch goes on to say:

> Albertans deserve to have [a] public review in plain language of proposed Bill 10 Amendments Act before it becomes law so they can participate on an informed basis in the making of law in Alberta. Albertans have a democratic right to know whether this proposed Bill 10 law is an American-style law, a type of takings legislation which could insulate, by threat of lawsuits, the industrial corporations using Alberta's public lands and forests from enforcement of environmental regulations. Albertans deserve a hearing to determine whether Bill 10 is American-style takings legislation, before the Alberta government proclaims it as law. As citizens, our ability to have control of our democracy, to serve the common good and potentially millions of dollars in lawsuits and payouts to corporations are all at stake.

That's one gentleman. That's one gentleman's request.

I heard many requests in Eckville on Thursday night. The Minister of Education heard many requests there. What is the response of this government? What is their response? It's not to have a committee of this Legislative Assembly have public hear-

to see. I absolutely spoke in favour of it, and I did so of my own free will and choice. I could sit here in this Assembly and say: "You know what? I didn't have enough time." And there's truth in that. I didn't have enough time to look over the bill. I don't think any of us did over there. It was rammed through very quickly, very short time period, very thick bill, and I don't think we had anywhere near the time we needed to consult with our constituents, et cetera, et cetera, et cetera. I could say that. That is an excuse. [A cellphone rang] That's not me, by the way.

I could also say that I trusted the opinion of the minister and the Justice minister at the time as well as the Premier. I thought that they had more thoroughly reviewed the bill and gotten expert legal opinion on it, et cetera, et cetera, et cetera, and I trusted them. I could use that as an excuse, but I'm not going to use that as an excuse.

I could also say that when I was over on that side of the House, all votes were whipped. We all know that that's the case, especially for any kind of important legislation or any kind of government legislation.

An Hon. Member: No.

Mr. Anderson: Yeah, I know. It's hard to believe. It's hard to believe.

I could say that that's why I voted for the bill, but I'm not going to say that.

I voted for the bill because I made a mistake, and I want to apologize to the people of Alberta for standing up in this Assembly and speaking in favour of a bill that absolutely is a harmful bill, is not what Albertans want. I made a mistake. I fess up to it fully. No questions asked, no excuses.

Our former Premier, Ralph Klein, taught Albertans, I think, a lot of things. One of the things he taught us, one of his lasting legacies – and he'll have a lot as opposed to the current Premier – is that when he made a mistake, he acknowledged it. Whether it was a personal issue or whether it was a policy issue, he'd say, "I made a mistake," and he would back away. He would say "Sorry," correct it, and move on. That is what made that man so popular in this province. Even though no doubt everyone agrees that he made quite a few mistakes, by and large he stepped back when he made a mistake. He listened to the people of Alberta. He would step away, and he would say: "You know what? I made a mistake there." Obviously, you can't make up for all your mistakes, but he would sure try, and that made him popular and beloved by most people in this province. There is a lesson to be learned from that politically. There was a reason he was able to be so popular for so long, because when he made a mistake, he was willing to say sorry and make up for it and make restitution.

In contrast we have this government, which is absolutely unable to admit when they have stepped on a snake and made a mistake. They just physically cannot seem to be able to do it. It's like it's beyond their capacity. I don't know where that started, but for some reason it's the case. We saw that with the royalty framework. We saw that, clearly, it was an absolute disaster. It was a botched policy that cratered thousands of jobs in this province, sent billions of dollars fleeing to Saskatchewan and British Columbia and the United States. It did so at the beginning of a recession, when we needed all hands on deck and all the economic stimulus possible. They had every excuse in the book to say: "You know what? We made a mistake to jump on this too quickly. We're entering a recession. We need to stabilize things. We need to take another look." No. Full steam ahead, no questions asked, and Albertans suffered because of it.

I don't care what the bloody intentions of the government opposite were in that regard. Yeah, there were a few of us in that caucus that spoke out against that royalty framework, but every single time we did, we were shouted down, belittled, told to just relax, et cetera, et cetera, ignored, ignored, ignored. They went forward with that new royalty framework, and it was an absolute mistake. They started to back away from it slowly but surely, step by step, eight different changes, and they still wouldn't admit that they had made a mistake, and they still don't today. They blame it on the former finance minister, Dr. Oberg, or whatever. I mean, it's just incredible. Just admit that a mistake was made and move on. Make up for the mistake. So there was the royalty disaster.

There was the health care disaster. I mean, the centralization of health care delivery and the superboard has been a total train wreck, and everybody can see that. I mean, costs have escalated out of control, double-digit increases in less than two years. There have been virtually no efficiencies made in health care due to this superboard amalgamation. It hasn't worked, but has there been a mistake? Did Mr. Iron Hands over there, you know, Energy Minister Iron Hands make a mistake? No, he didn't make any mistakes. Absolutely not. Good grief. Of course he made a mistake. Government made a mistake. They should back away from that and realize that the centralization of health care did not work.

We see this with the public inquiry. Mistakes have been made. Mistakes have been made with regard to the public inquiry. Clearly, people have been bullied. They've been intimated. Doctors, nurses, physicians, specialists, health care workers have been bullied time and time again, and there has been no admission of a mistake by this government. They're not even necessarily involved in it. We don't know. It would be nice to know. It would be nice to have a public inquiry on it. Then they could absolve their names. But no. Here we are. No mistakes. Full steam ahead. First it was: "No. We don't need the Health Quality Council." Then it was: "Okay. Yeah. We need the Health Quality Council but not a public inquiry." I mean, they just don't seem to understand what Albertans want, and then they don't react to it accordingly. They don't respect the will of the people in this regard.

And here we are with these property bills: Bill 50, a brutal bill. Absolutely no question that the Energy minister at the time, now the SRD minister, made a huge mistake with Bill 50. There's no doubt. I know the debate that went on in caucus there. That was one of the few bills that there actually was a debate on in caucus. It was blasted through, and every single person in this Legislative Assembly except for a few who abstained from the vote voted for it. You know it's a bad bill. You know we shouldn't have usurped the role of the Alberta Utilities Commission. Everyone here knows that. Everyone knows the mistake that was made. Everyone knows these lines are probably not needed. We all know that, yet we barrel ahead with it.

10:50

We had a chance to repeal the bill here with a motion just the other day, the motion that I brought forward to the House. No, we're not going to do anything. We had people here that I know voted against it in caucus standing up to vote for it here. What a joke. What an absolute joke that is, so dishonest with people's constituents that they would vote for it in the House and against it in caucus. It's worse than the people that are voting for it in caucus and in the House. Anyway, it's just unbelievable.

Bill 36 is the next example. That was a mistake. I was part of that mistake. I voted for it. I spoke to it. It was wrong. Everywhere we go in this province – take it to the bank, guys – you're going to lose dozens of seats in rural Alberta because of this bill. Take it to

the bank. I mean, we could start naming names. We won't, but I guarantee it's going to happen because you won't admit that a mistake has been made and that you need to correct course. Your constituents are not going to put up with it. You have a chance here to put this to a committee, do the right thing, and regain some of that lost support. Just do the right thing.

We were in Eckville the other night, as the Member for Edmonton-Gold Bar put it. It was an incredible night, and 400 or 500 people showed up. It was a healthy, good debate. There was no doubt in my mind who won the crowd that night. Then all the comments I heard from the ministers after, from the Minister of Education and others: "The fact was that it was a Wildrose crowd. You know, they put a whole bunch of Wildrose people in." Come on. Good grief. You guys have been the government for 40 years, for Pete's sake. You can't fill a room? Holy smokes.

We didn't put out any call or anything. We knew about this about 10 days ago and decided that, well, we'd better go see that; that sounds interesting. So we went. And guess what? So did 400 to 500 Albertans. And guess what? Frankly, the former Minister of SRD was booed out of the room by 500 rural Albertans. You know what? I guarantee that of those 500 rural Albertans – guarantee – 90 per cent of them voted Progressive Conservative the last election. I guarantee you that 90 per cent of the people in that room will not be voting Progressive Conservative in the next election. Take that to the bank. And their families and their friends and their neighbours won't be either because this government won't listen.

So I would ask the government again to learn from that very noble man Premier Klein, who came before the current Premier. When you make a mistake, admit it, back away from it, and do what your constituents want. That's why we absolutely need to reexamine this bill, take it back to the drawing board and see how we want to proceed going forward.

One thing the Minister of SRD and the government is right on is this. Everybody wants good regional planning. No one is arguing against good regional planning, good conservation practices, making sure we take into account cumulative effects when we're approving new projects, making sure we have enough water in the South Saskatchewan basin: all that stuff. We all agree on that. But Bill 36 and Bill 10 as an amendment to Bill 36 do not do that.

It is a central planning document; it is not a regional planning document. I don't care. In the bill itself it specifically says that these regional commissions, that the government appoints, by the way, these RACs – what are they called? – regional advisory panels, commissions, whatever they are, are appointed by the government, so that's not democratic to start. Aside from all that – say that it was democratic and that these were locally elected officials – they don't have to take into account anything that these people talk about, anything that they advise, anything where they say: here's what we advise the government to do. They don't have to listen. The government doesn't have to listen to a word they say.

You know, it's great that they say, "Oh, we'll take it under advisement," and "We're doing consultation." No. That just means that the central planning government is going to talk to local people, a few people that they appoint, about what they think should be in the plan. That's not democracy. That's not regional planning and decentralized decision-making. That is socialistic central planning, and it's wrong. It's not what we should be doing. There's no doubt we should be giving these folks tools. One of the reasons I voted for the bill in the first place was, quite frankly, because I like the idea of transferable development credits and these types of things, but I like them as tools. They should be tools that municipalities and regional authorities have to use in order to compensate landowners. It should be a tool in the tool box, et cetera, and those are good. Let's talk about giving the municipalities and giving these local authorities those tools in their tool box. That's a good part of the bill.

Where we went way wrong on this, where the big mistake was made, clearly, was by enshrining all power to plan land use in this province in the hands of cabinet ministers behind closed doors. We have 13 individuals that, essentially, have dictatorial power over every land-use planning decision in this province. They can do whatever. Shake your head, Minister of Education, but every single decision has to comply with the regional plan. Whatever you say from cabinet, you may allow them to do stuff, you know, by your good graces, allow the municipalities to have some autonomy and do some things, but it's completely at your discretion. If you want to come down with the hammer and plan, you can do it. You're allowed to do it, and they have to comply. That's just the way it is. Every landowner, every company, every individual, every municipality has to comply with what the government says the planning should be in that area.

Everyone should know that intentions don't matter in this case. Do you honestly think that I think or that any of us over here think that the master plan of the former Minister of SRD, the Member for Foothills-Rocky View, who's running for leader right now, is to take and expropriate people's land and not give them any compensation? Clearly, it's not. There's no way I believe that, and I won't ever believe it, but the problem is that he's not always going to be SRD minister – clearly, he's not right now – and neither is the current SRD minister.

When you give people power, politicians will abuse the power. When you create a position of power, it can be abused, and we have given the cabinet unfettered power to plan every piece of land in this province. It's ridiculous. There's no check or balance. They say that you can appeal these decisions of the cabinet. No, you can't if the cabinet will say what you can and what you can't appeal, and they appoint the committee that's going to hear your appeal. I mean, it's just asinine to say that the cabinet doesn't have total power in this case.

Anyway, it's very frustrating to watch. If Eckville taught us anything – and it's not just been Eckville. Look, 300 people came out to Crossfield, for crying out loud. I went to a meeting in Trochu. There were 250 people in Trochu. I went out to Beiseker as well for a different meeting that Joe Anglin, the former Green Party leader, put on. He put on something, and it was a little different. It was on the power lines, but this was in the middle of the day in Beiseker. There were over a hundred people there. It was incredible.

I mean, how can you deny those numbers? The people don't want these bills. They don't want them. Your intentions could be good and wonderful and all that, but they don't want them. They've looked at them. They've had time to look at them. They don't want them. This will be your Achilles heel for the next year until the next election. I guarantee it. But it doesn't have to be that way. All you have to do is stand up and say: "Look, you know what? We're going to do some more consulting with the people of Alberta. We're going to put this thing to a committee, and we're going to have all kinds of experts through to talk to the committee to thoroughly vet this bill, to thoroughly vet Bill 36, and see if it needs to be repealed or if it needs to be taken back to the drawing board or what have you."

The other thing that's amazing to me has been the arguments that I've heard from the SRD minister regarding the original Bill 36 and then its changes regarding section 11 of Bill 36. I'm just going to read the bill with regard to this. Section 11 says that "a regional plan may, by express reference to a statutory consent or

type or class of statutory consent, affect, amend or extinguish the statutory consent or the terms or conditions of the statutory consent." Okay? It's in Bill 36.

11:00

Now Bill 10 changes Bill 36, and instead of "extinguish" the statutory consent, it's "rescind." They changed the word to "rescind." So now it reads: a regional plan may, by express reference to a statutory consent or type of class of statutory consent, affect, amend, or rescind the statutory consent or the terms or conditions of the statutory consent.

Okay. Now, what is a statutory consent? There's this argument that I keep hearing from the SRD minister, who says: well, statutory consent doesn't apply to a land title. It doesn't apply to any kind of land title or interest in land in that regard. Well, that's malarkey. Look at what statutory consent means. It's in the definition of Bill 36.

I'll come back to this point many times.

The Chair: The hon. Member for Calgary-Currie.

Mr. Taylor: Thank you very much, Mr. Chair. Some interesting comments by the Member for Airdrie-Chestermere.

An Hon. Member: Really?

Mr. Taylor: Yes, really, hon. member. There were some interesting comments there.

One of the most interesting comments, I think, touched on this whole notion that the government for whatever reason is refusing to acknowledge, refusing to listen, refusing to understand what's going on out there in the hinterland. The Member for Airdrie-Chestermere was right. It does so at its peril. There's something going on out there that is big, really big. You don't get hundreds upon hundreds upon hundreds of people out to meeting after meeting after meeting and have nothing happening. You don't get those numbers out to these sorts of meetings and be able to completely dismiss it as just: well, you know, that's all the people who are interested in the subject. People talk to people, and as they talk to people, they're going to be telling people how the government has treated them on these issues. The word is going to spread that you guys on the other side have done really a horrendous job of wrapping your heads around and understanding and comprehending the depth of the opposition to Bill 36, and that opposition continues with Bill 10, I'm afraid.

Alberta's land-use framework was visionary, in my opinion. I think I can say that with some credibility, hoping now that I don't have to go down the same road as Airdrie-Chestermere and apologize for a mistake that I made in the past. I did in 2007 bring forward a private member's bill, Bill 211, the Planning for the Future of Communities Act. That was not my title. That was the title that Parliamentary Counsel gave the bill for whatever reason. We brought this forward, and it was, in fact, a first attempt at a land-use and regional planning bill for the province of Alberta. Of course, it was defeated because that's what the government did at the time to Official Opposition private member's bills. They defeat them, and then they look at them and go: but, you know, there were a lot of good ideas in there, so we better get on with doing something of our own.

Well, out of that came the land-use framework. As I said, Mr. Chair, it was a visionary document. It was full of ideals and principles and, more specifically than that, I think, real clear directions in terms of what we needed to do around land use and regional planning in the province of Alberta. Then the government took those visionary principles of the land-use framework, ran them through a sausage machine, and turned them into Bill 36, a law that, in my opinion – but it's an opinion shared by very many Albertans – is fundamentally undemocratic.

It gave too much power to cabinet: complete plan-making authority; the ability to override plans; the ability and the power to make decisions, to ignore a plan, to ignore a regional advisory council, to ignore the secretariat; no checks or balances; a lack of compensation for landowners; a lack of consultation requirements; no appeals to the court; the extinguishing of statutory consent in section 11, which the Member for Airdrie-Chestermere touched on a few moments ago; all kinds of things like that. I guess the government did hear the groundswell of opposition, primarily in rural Alberta but I think to a much lesser extent but to some extent in urban Alberta as well, to the extent that they went: "Oh my gosh. We have to amend Bill 36. Let's bring in Bill 10."

Well, can Bill 10 be repaired? I have my doubts, but I think we have a duty to try to the extent that the government is going to allow us to try by bringing in time allocation and limiting debate at committee on Bill 10. I think we have to try and amend this bill because I think Bill 10, as introduced by the government, is a flawed attempt to amend a seriously flawed act that was based on, in my opinion, quite a remarkable land-use framework.

In my opinion, where it all went off the rails and into the rhubarb where Bill 36 was concerned is in applying those principles in a way that gave cabinet virtually all the say in how this should be done. That certainly wasn't my intention in Bill 211. My intention and the intention that I think existed in the land-use framework and that I would even go so far as to suggest or assume was probably the intention – and we all know the road to hell is paved with good intentions – of the former Minister of Sustainable Resource Development was to give local decision-makers the authority to make their regional plans.

If this had been done right, I would submit, Mr. Chair, the regional advisory councils would have been constructed and comprised in such a way and the contents of the growth plans of the regional plans would have been spelled out in such a way and the principles and process around consultation, real public consultation as opposed to sham public consultation, would have been spelled out in such a way that the regional advisory councils would have done a proper job of consulting with the public and would have designed the regional plans on that basis and, quite frankly, would have brought the regional plans forward to cabinet pretty much to be rubber-stamped.

If cabinet said, "Hey. We've got a problem with this. We've got a problem with this section and this section. We're sending it back to you" then the regional advisory councils would have had the authority to say: "Well, okay, cabinet. We'll go through the hearing process again. We'll go through the submission process again. We'll hear from the public again, and now that we've done that," jumping forward 90 days or whatever the consultation period would be, "we've found out that the public really thinks that you should go pound salt. You're sitting in Edmonton, sitting in judgment of what the regional plans should be in this area or that area. We actually live in that area. We have to live with this every day. Our plan respects the principles, and now you're niggling over the details, so we've decided, based on putting this out to the public again, that you're wrong and we're right. We're going to sing the 'I was right' song, so here's the original plan back to you for ratification. This time ratify it."

That's how it should have been done. That would be true regional planning. The current Minister of Sustainable Resource Development, when he started debate tonight, made quite a speech where he tried to convince this House that this is not about centralized planning; this is all about regional planning. Well, the land-

use framework, Mr. Chair, was, I believe, all about good, responsible land-use principles and establishing a process or establishing a context within which good regional planning could be done. But by the time it went through the Bill 36 sausage machine, it came out the other end looking like something that the Kremlin could have come up with, not to put too much torque on the story. But it's like: really? We've got cabinet deciding what can go where?

11:10

Mr. Hehr: Not the Kremlin, the politburo.

Mr. Taylor: Okay. The politburo. The Member for Calgary-Buffalo says it was the politburo. I'm not up enough on my Soviet politics to know whether he's right or I'm right, but you get the basic message.

Bill 10 attempts to address the need for further public consultation on regional plans before those plans are approved by cabinet and to enhance the compensation scheme for land expropriation, but in my view those attempts fall well short of the mark. What are we going to do about it? Well, I don't know. Part of that depends on how long we go tonight, I suppose, because we know that tomorrow the government will use its majority to pass the time allocation motion, the notice of which the Government House Leader gave this Assembly this afternoon. He's required to provide 24 hours' notice of that motion, so in about 16 hours from now or a little bit less that time allocation motion will click in, and from that point on the meter is running, and we've got five more hours in committee to debate this bill.

That's significant, Mr. Chairman, because the committee stage is the stage at which we can propose amendments. We can't really do that except in terms of bringing forward amendments that would seek in one way or another to kill the bill altogether in third reading, nor could we have done it in second reading. What we really have to do if we want to amend the content of Bill 10 in whole or in part is to propose amendments and have a full and fair debate on those amendments in committee stage. You limit debate to five hours, it clearly limits the number of amendments that can be brought forward, and that does limit debate and democracy as concerns, well, certainly one of the most unpopular bills that this government has brought forward in recent years, certainly not the only one but one of the most unpopular bills. It limits not only our ability but the government's ability to try and improve a flawed bill.

I think what's going to happen, Mr. Chairman, over the next however long we have in committee to debate this bill is that various members of this House will put forward or will attempt to put forward some amendments to Bill 10 to at least try and make it a more worthwhile piece of legislation than I think it currently is. I know that if I have the opportunity, I would like to bring forward amendments, if I have the time, that will seek to include rangeland and agricultural land within the definition of land to be considered in a regional plan to make it a little more specific there, to further clarify the proposed public consultation process, to create a process for appealing ministerial decisions so that cabinet no longer has absolute power over land-use planning in our province, to ensure or to try and ensure that fair principles guide the compensation process.

I hope to ensure as well that all regional plans are developed and approved in sync with one another. I'm not sure how I'm going to do that one yet, but I think that there's a need not only for seven regional plans to be approved individually; there's a need for a cumulative final ratification of the seven plans together to ensure that the last regions to go through the regional planning process are not negatively impacted or in some way held hostage, if you will, by decisions made in earlier regional plans. It's entirely possible that the seventh region to develop its plan will be – maybe held hostage is the wrong way to put it – in a sense held captive by decisions made in the previous six plans. I believe that needs to be addressed.

Well, because the government is bringing in closure to limit debate on Bill 10 in Committee of the Whole, we don't know if we'll run out of time to present all our amendments. I don't think any of us who may be proposing amendments do know that. If time runs out or our amendments are defeated, well, then we'll have a decision to make in third reading as to whether we're going to support Bill 10 as a flawed piece of legislation or whether we're going to vote against it because it just doesn't do the job that it's supposed to do. I believe as it sits now it doesn't do the job that it's supposed to do.

There is, of course, a way to avoid all of this. There's a way to avoid bringing in the closure motion, going through five hours of very limited debate, a way to avoid partisan contentiousness, if you will, around some of the amendments that may be proposed. That way is that the government – and at this stage I believe it can only be the government that can do this because at this stage we can amend sections of the bill, but we can't propose an amendment, really, about the whole bill – could decide, the minister could decide to refer Bill 10 to the Standing Committee on Resources and Environment.

According to the standing orders there is a process which that standing policy committee will follow to put this through another round of public hearings, of appropriate and worthy public consultation. It's one thing to consult with the public. It's another thing to consider what the public has told you and to consider it thoroughly and honestly and openly and to take those consultations into consideration in a meaningful way as you're developing a regional plan or anything else that you consult with the public on. There is no point, Mr. Chair, in consulting with the public if you have no intention of listening to what they say in the first place. There is no point in consulting with the public if you're only consulting with the public so that you can listen to those members of the public who happen to agree with your point of view and discount everybody else's. That is sham public consultation.

You put it before the all-party, by nature at least somewhat bipartisan or multipartisan policy field committee, the standing policy committee. The process of inviting and taking in public submissions, the process of holding public hearings, is not an ironclad guarantee by any stretch of the imagination, but it certainly has at least as much of a shot at getting to the truth of how people feel about Bill 10 and Bill 36, what they feel is right and what they feel is wrong about the bill and how to improve it, really improve it as, for instance, the Health Quality Council has of getting to the bottom of the allegations of fear and intimidation around health care professionals in this province. It's not a guarantee, but it's at least as good a shot as the health minister's Health Quality Council investigation into fear and intimidation.

That's what the government should do, Mr. Chair. They should – I'll be nonsexist about this – person-up tonight or tomorrow at the very latest and refer Bill 10 to the Standing Committee on Resources and Environment and let the standing policy committee do its job, do the job that those standing policy committees were designed to do, which is to take proposed legislation, whether it's government or private members' legislation, that we all know misses the mark as written right now and fix it and come up with something better.

I know that it's very important to some members of the government – I don't know to how many, but I know to some – to get this bill passed. Maybe it's a legacy for the outgoing Premier. I

Province of Alberta

The 27th Legislature
Fourth Session

Alberta Hansard

Wednesday afternoon, April 27, 2011

Issue 29a

The Honourable Kenneth R. Kowalski, Speaker

tracts, I was called before the superintendent of the Calgary public board and had to explain why I was communicating with the Minister of Education. That's the type of intimidation that happens far too frequently in a variety of professions. That is not a good investment.

We need to be working for a sustainable vision in this province, and we need to get rid of our dependency on externally set global prices. We have to diversify our economy within this province, and the route to diversification comes back to education, Mr. Chair.

I appreciate this opportunity to speak about where we could save money and where we could better invest money. This should be a collaborative, collegial process. I'm glad that time allocation is not being set on this particular Bill 17, the appropriation bill, although time allocation was certainly the case in each of our budget debates. There was very limited opportunity to ask the questions, and I received no sense of commitment that for the numerous questions I asked in Tourism, Parks and Recreation and in Children and Youth Services and in Employment and Immigration I would receive the written answers that I have requested. Of course, we will soon recess, and I don't have those answers. I could have been asking more directed questions today, for example, during this debate, but without that feedback it's very hard to do so.

Thank you for this opportunity, Mr. Chair. I'll allow other members to participate and look forward to again rising.

Thank you.

The Chair: The hon. Minister of Housing and Urban Affairs.

Mr. Denis: Thank you, Mr. Chair. At this juncture I would move that we adjourn debate on this bill.

[The voice vote indicated that the motion to adjourn debate carried]

[Several members rose calling for a division. The division bell was rung at 4:40 p.m.]

[Ten minutes having elapsed, the committee divided]

[Mr. Cao in the chair]

For the motion:

Ady	Elniski	Marz
Allred	Fritz	McQueen
Benito	Goudreau	Prins
Berger	Groeneveld	Renner
Bhullar	Hayden	Rodney
Danyluk	Johnston	Rogers
Denis	Knight	Sarich
Doerksen	Liepert	VanderBurg
Drysdale	Lukaszuk	

Against the motion:

Chase	Hinman	Notley
Forsyth	MacDonald	Swann

Totals: For – 26 Against – 6

[Motion to adjourn debate carried]

Bill 10
Alberta Land Stewardship Amendment Act, 2011

The Chair: The hon. Minister of Infrastructure.

Mr. Danyluk: Thank you very much, Mr. Chairman. I am pleased to speak today to Bill 10, the Alberta Land Stewardship Amendment Act, 2011. As a former Minister of Municipal Affairs and a local councillor and a reeve I would like to address some specific aspects of this bill that pertain to municipal powers and responsibilities. But first, as a current rural landowner I would to make some general comments about the importance of this legislation.

Agriculture has been the backbone industry of our province and still is, only now it is reinforced by the energy sector, making Alberta an economic powerhouse on a scale we never could have predicted. Because of this, there has never been a more important time to put the necessary plan in place to accommodate the impending growth. Albertans recognize this and have clearly told us that they support and expect long-term planning. They have told us to make plans to help preserve our air, our land, our water, and the rural Alberta way of life for future generations.

As growth continues, our major cities will continue to expand and industrial activity on our landscape will increase. Our government is working hard to make sure that this happens in a strategic, well-planned way. As this planning occurs, our government is committed to ensuring that the landowners who are affected are being treated fairly and that as few of them are being impacted as possible. That is what the Alberta Land Stewardship Amendment Act and other planning legislation is about.

The need for co-ordinated land-use planning makes ALSA a very valuable legislative tool. Economic and population growth are putting pressure on the landscape. Albertans have told us that they want a more co-ordinated approach to managing growth in our province. ALSA provides the authority to develop regional plans that will help guide local and regional land-use decisions to balance economic, environmental, and community objectives. We need to plan now to manage future growth, and ALSA lets us do this. This legislation is about ensuring that the land Albertans have a deep attachment to is preserved for future generations.

Mr. Chairman, my family has farmed land in Alberta since 1896. My land is not only my livelihood; it is my legacy for my children and my grandchildren. I need to say to you that it wasn't very long ago when I wanted to purchase some extra land, and my family said, "Do we really need it?" I answered them, "Well, the value of land will not decrease and will maintain its value." The comments from my family were, "You would never ever sell it, so maintaining value really means nothing." In fact, one of them said that I would possibly be in the grave still holding on to the last piece of grass, making sure that that land stayed in the family.

That is the attachment that I have for the land. That is the attachment that landowners have for the land in Alberta. That is why I believe strongly that we must be good stewards of the land and we must always protect the rights of landowners. I have always worked to protect these rights, and so has this government. In fact, Mr. Chairman, I have worked as a surface rights advocate to deal with well spacing, soil protection and compensation, and the need for regulators to work together. I have worked to protect the land that my family has farmed all of my life. This is why I support the land-use framework and why I support Bill 10, which strengthens and enhances landowners' protections.

Unfortunately, there has been a lot of misinformation circulating about this law and other legislation. Bill 10 is intended to clarify that the government will respect the property and other rights of individuals and that it must not unfairly infringe on those rights. The amendments in Bill 10 make it clear that nothing in the act or regional plan takes away an individual's existing rights to compensation under Alberta law, and the amendments further ensure that the landowners are treated fairly.

Section 1(1) emphasizes that government must respect property rights and other rights of individuals and must not infringe on

these rights except with due process of law and to the extent necessary for the overall public interest. New sections outline mandatory consultation requirements before regional plans are adopted. In addition, new sections 15.1 and 19.2 strengthen and clarify rights to request variances and reviews of plans. Mr. Chairman, these are meaningful clarifications and improvements to the landowner protections already present in the Alberta Land Stewardship Act.

5:00

I would now like to discuss in greater detail some of the other provisions of Bill 10 that relate to municipal government. Municipalities are key partners in land stewardship along with the province, private landowners, and other stakeholders. They have a long record of working co-operatively to protect our air, our water, and our land. I would like to discuss how that partnership will continue under ALSA as strengthened by Bill 10.

Mr. Chairman, this government recognizes the critical importance of municipalities through the development of the land-use framework. Government held consultations with municipalities from the start of the process in 2006. A total of 237 municipal decision-makers participated in consultation sessions that year. I need to repeat: a total of 237 municipal decision-makers participated in consultation sessions that year. Nearly 30 municipal representatives were involved in stakeholder working groups in 2007 and 2008. We have continued to value municipal contributions during work on the regional plans.

The two regional advisory councils so far have each had three members with a municipal perspective. In the lower Athabasca region these representatives included the mayor of Wood Buffalo, the deputy mayor of Lac La Biche county, and the director of planning for the city of Cold Lake. The South Saskatchewan representatives include the mayor of Airdrie, councillors from the town of Nanton and from the municipal districts of Foothills and Taber, and the director of water resources for the city of Calgary.

Last September the government held three sessions that included all municipalities in the lower Athabasca region. This was on top of nearly 60 municipal representatives who had been part of the previous consultations on the South Saskatchewan region. These ongoing discussions demonstrate the value this government places on our relationships with municipal leaders.

Respect for municipalities is also demonstrated in specific amendments contained in Bill 10. Bill 10 proposes changes to the Alberta Land Stewardship Act that will strengthen the relationship between provincial and local governments and will provide better planning in Alberta for present and future generations. This relationship is important when you look at the goals of long-term planning and the purposes of the Alberta Land Stewardship Act.

When the government started work on this planning process, we heard from Albertans about the need for decisions made by different groups to be better co-ordinated. I draw your attention to section 1(1)(c), which states the purpose of the act. The purpose includes "to provide for the co-ordination of decisions by decision-makers concerning land, species, human settlement, natural resources and the environment." I'm pleased to see this clarification. It is important that the legislation encourage provincial government and local bodies, including municipalities, to co-ordinate decisions about the land and land use-related planning and decision-making.

The proposed change recognizes that all decision-makers need to work together to achieve these purposes. While there is a need for co-ordination, this does not mean that the provincial government is taking away the authority of the municipal government over local decisions and resources. The success of this process depends on municipal governments' detailed knowledge of their local areas' challenges, attributes, and priorities. For example, Bill 10 repeals section 9(2)(f), an earlier provision in the legislation that allowed a regional plan to make laws about matters that municipalities are authorized to do. Section 11(3) also makes it clear that a regional plan cannot change or rescind a development permit or approval granted by a municipality. I need to say this again, Mr. Chairman. In section 11(3) it also makes it clear that a regional plan cannot change or rescind a development permit or approval granted by a municipality if the project has already progressed to a point of actual improvements on the land. These changes emphasize our respect for the existing role of municipalities and our support for the authority of local governments.

We also have been responsive to municipalities' need for time to co-ordinate their planning with the regional plan. They asked for a five-year window to do that, and we have agreed.

Finally, the proposed amendments in Bill 10 give municipalities the ability to request a review of a regional plan. Mr. Chairman, that gives municipalities a say in the future. Bill 10 makes it clear that the provincial government respects the authority of municipalities. The Alberta Land Stewardship Act will ensure that regional plans become a way to align decision-making and provincial policies. The act will ensure that all provincial ministries and agencies and local governments work together towards a common vision and common objectives within each region. Local governments will retain decision-making authority but will need to ensure that their plans, bylaws, and policies align with the regional plans. This reflects what Albertans have said they wanted from regional planning. This is what this bill does. Albertans said that they wanted everyone to work together to manage the pressures of the present and future growth. The government is committed to working with municipalities and other decision-makers to create that alignment.

Mr. Chairman, we all live in this province. We all work here. We all drive on the highways. We rely on power to be there when we turn on the switch and on water to be there when we turn on our tap. It is important that we work together for the preservation of this province as we see it and as we know it today. We need to work together, all forms of government. We all want our natural heritage and our rural way of life maintained and strengthened for future generations.

I think, Mr. Chairman, I've made it very clear that I don't have any intention of selling my land. My land is to be passed on to my children and to my grandchildren. It is important that we are stewards. There are 30 members in this caucus who have and own land. If we look to my left, the hon. Minister of Agriculture and Rural Development has been on his farm for over a hundred years.

5:10

An Hon. Member: How long?

Mr. Hayden: No wonder I'm tired.

Mr. Danyluk: He was. He may have not been physically there, but he was a twinkle.

This is just as critical to our future as infrastructure and public services, and we have a responsibility to plan for it. As we do so, we are committed to maintaining our long-standing respect for property rights and for those who own them. As a government we have understood and protected Alberta's rural way of life for the past 40 years, and we will continue to do so. That is our responsibility not only as members of this Assembly but as landowners, as parents, as grandparents.

Thank you very much, Mr. Chairman, for giving me the oppor-

tunity to say a few words about how precious and passionate I am about the land that I farm. If you went around to landowners, you would not find many that look at that land as an opportunity for an investment for the future that is monetary. It is an investment for the future of their children and their grandchildren. We need to keep in mind that this country is very young, this province is very young, and land is our most precious commodity.

Thank you.

The Chair: The hon. Leader of the Official Opposition.

Dr. Swann: Thank you very much, Mr. Chairman. A pleasure to rise in committee on Bill 10, Alberta Land Stewardship Amendment Act, 2011. Thank you to the minister for his heartfelt message and his acknowledgement that he is precious. I concur that all of us are precious, and the future is precious. We need good leadership, and we need to rebuild a sense of trust and integrity and relationship with those in the province that have carefully placed their trust in us and given us the responsibility to plan well into the future.

A famous Liberal once said that trust is the only currency in politics. Indeed, it is the element that allows for relationships, for authentic communication, for decisions to be made, and for collective actions to be taken in the public interest. Trust is the foundation of all that we do in our lives and particularly relates to public policy and the role of representatives in the Legislature. The foundation of trust is respect, integrity of purpose, and honesty in dealing with all people regardless of their position and place in society. Trust is not only the glue of civilization; it is the essence of business, education, health care, environmental stewardship, and indeed progress, all progress, Mr. Chairman.

This government has squandered its capital in trust over this past decade with poor planning and consulting, marginalizing, dismissing, and ignoring science, intimidating dissenters, and weakening the institutions that hold elected people accountable. This government's sense of entitlement and arrogance, its stifling of dissent have created a climate of fear and silence even in the last election, where only 40 per cent of people felt their vote was significant enough to turn up. This government has become the butt of jokes in Canada with its disrespect for democratic process. Average citizens are alienated and cynical. Even our esteemed health professionals have disengaged and are fearful of retaliation in this one-party state, this one-party health system. Such is the loss of trust in Alberta that we now see our most revered professionals cowed into frustrated silence as they attempt to restore some semblance of confidence and competence in our health care system.

Similarly, the good citizens of Alberta are attempting to address this gross attempt to correct inadequacies in land stewardship, Bill 10. Let me be clear, Mr. Chairman. The Alberta Liberals do not support expropriation of land without due process, including a public process, a formal appeals process, and an appropriate compensation mechanism. The bill does not address these issues in a comprehensive way. While the Land Stewardship Act does offer some positive mechanisms for long-term planning in the development of our key resources and our land, this must be done with a transparent public process. The power should not be exclusively held in the hands of cabinet and decisions made behind closed doors.

The Alberta Liberals believe in the protection of Alberta's Crown land, sustainable development of our resources, and growth of our urban and rural communities. Bill 36 is one of the most important bills passed in this House in the last decade, the Alberta Land Stewardship Act. It put land stewardship – that is, proper land-use planning – at the forefront of government responsibility, a responsibility ignored for over a decade. I acknowledge this attempt. It is a positive if inadequate beginning in a province with the largest growth in population and industry yet with low freshwater supplies. This kind of planning document is long overdue, and this opposition party has been pressing for land-use planning throughout that decade.

Government is charged with setting priorities ensuring protection for the long term of our natural places, food production, and efficient transportation as well as protecting property rights and freedom of citizens and business to operate. Without a thoughtful plan based on our water systems, the continuing free-for-all land scramble would continue since the Klein-era dissolution of regional planning commissions. Instead of bringing in the best evidence from around the world, including Europe, where they're right up against limits of growth and land and water, we ignored the experience of other jurisdictions and charged ahead without ensuring Albertans were meaningfully consulted in establishing their values in terms of land stewardship, sound economic development, and property rights.

Let me be clear. Bill 19, the land assembly act, and Bill 50, the Electric Statutes Amendment Act, or what I like to call the Transmission Lines White Elephant Act, are not the same category as land stewardship. We must be careful not to throw out the baby – that is, the land stewardship – with the bathwater, Bill 10, which is inadequate in dealing with the land stewardship shortcomings. We need to retain Bill 36 with proper amendments, not these poor excuses for public accountability and landowner rights.

I supported Bill 36 as a beginning. It needs amendments to ensure a proper appeal process, open consultation before final decisions, and a compensation process that is not going to tie everything up in courts indefinitely. Bill 10 does not provide this assurance.

I'd like to quote someone who has been very thoughtful in analyzing this bill and has no axe to grind, University of Calgary professor Nigel Bankes, an environmental lawyer.

> The Bill will encourage the adoption of timid plans that will not achieve the noble purpose of the legislation. I [believe] the amendments will create significant uncertainty and encourage litigation. The big winners from this Bill will be lawyers; the environment will be the loser.

We can do better than this, Mr. Chairman, and we must do better than this in the interests not only of our citizens but, as the hon. minister has said, our children and our grandchildren.

5:20

After 40 years of rule by the PCs, however, there is such a sense of entitlement and transparent self-interest along with a lack of objective scientific analysis of key issues that the result of the Land Stewardship Act is not better land stewardship but confusion and mistrust now in the land. The government's effort to stem this distrust by following with Bill 10, this amendment act, is inadequate. It purports to deal with the lack of an appeal mechanism, lack of respect for landowners and those affected, and fails to address the government's growing appetite to control all decisions irrespective of the will of the people living in these regions, and so it fails. This government cannot hide the fact that they have lost the confidence of the people, and these frantic efforts to fix land stewardship are one misguided push.

Now, in addition, we see the limiting of debate with closure to these debates, and the government demonstrates its arrogance again for proper democratic process and the intimidation and silencing of opposition views. This is not acceptable. It's not adequate. It's hardly believable in 21st century Alberta. Once

case of grazing lease holders this means section 82 of the Public Lands Act.

To summarize, then, the Alberta Land Stewardship Act always protected grazing lease holders' rights to compensation under the Public Lands Act and added new procedural protections. These procedural protections are now further strengthened by the Bill 10 amendments that shift legal responsibility to the government to notify the affected cattlemen of the compensation provided under the Public Lands Act.

Mr. Chairman, with the clarifications and the amendments described above, I am confident that fair-minded Albertans will agree that both landowners and grazing lease holders are now better protected by the Alberta Land Stewardship Act and Bill 10 than they were before.

Further proof of this is found in the recently released South Saskatchewan Regional Advisory Council report, with its call for enhanced protection of Alberta's remaining grasslands, continued use of stock grazing as the best way to manage these grasslands, and a repeated emphasis on the protection of property rights as a guiding principle. In there they also suggest that for water protection, purity, quality and quantity grazing, those specific native grasslands are the best use, and the statutory consents should be amended to lengthen the tenure. I think that's a very positive thing.

There's no going back to the good old days, Mr. Chairman. Since the Leduc 1947 discovery there have been 50,000 new Albertans per year. That's half a million people every decade. In six decades we've gone from half a million people to 3.7 million people in this province, and 80 per cent of them live along the highway 2 corridor between Edmonton and Fort Macleod. They're going to keep coming at 50,000 to 60,000 people per year and keep settling along the highway 2 corridor in Foothills, Rocky View, Willow Creek, Mountain View, all the way up and down the line. We project to be at 4 million by 2015 and 5 million by 2030. That means more subdivisions, more acreages, more cars, more trucks, more roads, more quads, more OHVs, more hikers and campers, more transmission lines, more drilling rigs and pipelines, more gas plants and tank farms.

Do we really want no plan to deal with another 2 million new Albertans in the next 20 years? No. Mr. Chairman, failure to plan is planning to fail, and this is way too important to allow to fail. Do we have a plan? Yes. We're getting there. We have the Alberta Land Stewardship Act, supplemented by the clarifications and amendments in Bill 10, a plan that supports the development of seven regional plans based on our major watersheds and incorporating the most expansive and generous protection of property rights of any Canadian province or U.S. state.

To close off, Mr. Chairman, I'd just like to quote from a printout from Fraser Milner Casgrain LLP, who have reviewed Bill 10 and put forward their opinion, their concluding paragraph.

> In conclusion, Bill 10 and the Proposed Regulations have written a new chorus of property and procedural rights protections into the revisited [Alberta Land Stewardship Act]. How these changes will play will, of course, depend on the interpretation given to the new lyrics by critics and the reaction of folk fans.

With that, Mr. Chairman, I'll take my seat. I appreciated the opportunity to address the Legislature this afternoon.

Thank you.

The Chair: The hon. Member for Calgary-Glenmore.

Mr. Hinman: Thank you, Mr. Chair. Once again it's an honour to be able to have a few minutes to get up and speak to this because of what this government has done, invoking closure on the discussion of the most important bill that we have before the Legislature. They seem to think that five hours is ample time. But what's most remarkable is that we're going to see the government members pop up now and speak and take two and a half hours of that time to not allow us to be able to address the concerns of this bill. The concerns are really deep.

You know, to listen to the Minister of Infrastructure get up and say that he'll never sell land: well, never is a long time. If you go bankrupt, you won't have a choice, Mr. Minister, so hang on to that grass. It's just pathetic to listen to the gibberish that's coming out of these government members saying that there's nothing to worry about. It's amazing to listen to them speak of property rights when they have absolutely no respect for them.

The minister talked about the importance of protecting property rights. I ask you: how do you protect property rights? It's interesting, Mr. Chairman, when we look around the world and we see where there's real peace, where there's real prosperity. It's where there is rule of law. It's where property is protected. It's also interesting because, again, there are areas in here where they're well meaning – there's no question about it – but they don't understand the intent, or they have the intent, but they don't understand the wording and what it is doing to property rights with Bill 36 and, again, the lack of proper amendments coming in.

The Premier and the Minister of Education want to accuse us. "Well, where are the amendments? Where are the amendments?" Let's first talk about the problems. But, again, we won't be able to bring forward very many amendments because of the time allocation, the closure, that this government voted on. Again, it's just truly sad that they think that this is the democratic way. They have a majority, and they say: "Oh, we don't want to listen to the opposition. They're just full of gibberish."

Well, I would say, Mr. Chair, that there isn't a better judge of what we have to stand up and speak to in here than the people of Alberta. To allow us to stand up and to speak and to disgrace ourselves, as the government wants to say: that is just absolutely wonderful. Give us the rope to hang ourselves. If you're so bold and you think that you know what you're talking about, give us the time to speak, and let Albertans judge us rather than the House leader or this caucus saying: "We don't want to listen to these individuals here anymore. We know what's best."

To listen to the Member for Livingstone-Macleod talk, if I didn't know where I was at, I would think I was dreaming and living in a communist country as we listen to central planners say: "We're going to look after everything. How many people are going to be here by 2050? How many more oil rigs and how many more wells?" These great, great central planners are going to fix the world. If you look anywhere in the world where central planning has taken place, that's where they looked after the environment the worst, did the poorest job. Central planning has never worked. Even with a benevolent dictator they're not going to say: "This is what's best for your land. This native grass may not be touched. This wonderful woodland may not be touched."

It's amazing how opportunities change. We can just look at the oil sands and realize what wonderful potential has changed in the last 50 years, where people have been up there. They've tried to be innovative. They've tried to extract the oil from the sands, and it has been a huge challenge. Yet the entrepreneurs have cracked that challenge. They've got some incredible businesses going up there that are going to again allow the world to continue to prosper and live in peace because of the availability and the entrepreneurs that have developed that.

5:40

Mr. Chair, today we put out the Wildrose caucus's six steps to

regional planning. This isn't an amendment that we can bring forward, but I want to bring the six points for the government to listen to. What's the purpose of this debate? The hope is – and again there's always hope until the judgment day or until the vote – that they'll come to their senses and realize that, you know, this really should go to a committee, that we need to get it right.

The comical thing is that they got Bill 36 right. Wow. What a repercussion once Wildrose got on the scene and said that we will stand up for property rights. Then we have such I want to say patriotic Albertans like Keith Wilson, who has sacrificed so much to go out and educate Albertans on what's really in this bill.

Isn't it interesting that we have the Minister of Transportation laughing and cackling in here like a chicken who just laid an egg? It's pathetic that they have those types of feelings towards a patriotic Albertan sacrificing so much to make sure that this government gets it right. He's their best friend because if they were to listen to the advice that he gave and make those proper amendments – and there's no reason why we couldn't do that with this bill – they could save themselves. But they won't even save themselves. They've been thrown the rope to climb back up, but will they do it? No. Their arrogance doesn't allow them to. They've dug themselves into this hole.

There's a six-step approach, and it isn't about amendments. The first one is that we need to repeal and entrench.

> Immediately repeal the Alberta Land Stewardship Act (Bill 36) and pass an Alberta Property Rights Preservation Act. When private property is used for a genuine public need, there absolutely must be full, fair and timely compensation with full recourse to the courts.

This isn't in the amendment. It's not in the old bill. There isn't recourse to the courts. It's carefully crafted and worded so that the minister can say: "Oh, you can bring a variance to me, the minister. Trust me. I am like justice. I am blind." Boy, they are blind. They don't see it when it's right in front of their eyes.

Step 2, honour existing deals. This government is unbelievable. They seem to think we can just throw one or two under the bus, and it's okay. There's nothing wrong with that because everyone else is okay. It's a very small number. "Grandfather existing leases and licenses and establish conservation areas, or 'no-go zones,' before issuing [these licenses]. Investor confidence in the Alberta economy depends on it."

Yes, they can look at the percentages and say that they are small, and those companies that aren't affected can say: well, it's okay; it didn't affect us. But there's always a risk factor when a government for the third or fourth or fifth time breaches contracts, and there's nothing these companies can really do because they have them over a barrel. We should be honouring those contracts. They haven't. Again, very, very disappointing that in Committee of Supply and in question period we've asked the minister – they spent $1.9 million on the Athabasca plan, the Athabasca draft. Isn't that interesting? In here it's a draft. When they're out there, it's a plan. The only draft is between their ears, Mr. Chair. It's just blowing through, and there's nobody home.

The problem is that they don't even know, and I think they do. Again, it's a cover-up. They're not going to tell Albertans how much. There are 24 leases that have been affected. Just tell us the dollar value of the lease land that is being rescinded. I would expect that they're going to try and save face and at least reimburse the actual lease funds that they received as they leased out those lands. But they won't give it to us. Unbelievable.

Step 3, use what we've got. "Let Alberta Environment perform cumulative effects analysis on impacted areas. They've got the experience and expertise, let's put it to use." What kind of an excuse is it to say: oh, we can't do cumulative effects? That's ridiculous. Put it under the Minister of Environment. He's passionate. He's worked hard on it. They're very capable. The workers that they have, hundreds and hundreds of workers, have been going around the province monitoring, doing all these things. Give them the mandate to do the cumulative effects. There's no reason we couldn't do it under the current Environment minister. But, again, no, we need to create all this new bureaucracy, all of this other area. Very, very disappointing. Let's use the Environment minister. Again, we've heard the government so many times. This is the first government in North America, I believe, for sure in Canada, to have an Environment minister, yet we don't allow him to be capable to do cumulative effects. That's shameful that we don't do that.

Step 4, let the Water Act work. We have a Water Act. It was reworked in 1992 or 1993, yet the government seems to want to step in and do it. This law has allowed for a stable water supply for those with water licences in Alberta for decades. We need to get it out from under ALSA and promote it. It's been thoughtfully put forward. We have a great opportunity. Why don't we use it?

Step 5, cut the red tape, find the best models for a streamlined regulatory framework that is balanced between Alberta Environment's authority over the stewardship of air, land, and water. You know, nobody says that we want to go out and just willy-nilly have these developments pop up and say: oh, we have no plan. We have an extensive environmental protection act – extensive. To say that there is no plan – the point is that they don't use it. I mean, how many times have we heard . . . [interjection] Well, the hon. Leader of the Opposition says that they don't have the resources, that they'll spend it foolishly in other areas. The point is that we've got so much red tape and such a mess that it's not being efficient, effective, and it certainly isn't being environmentally friendly. So we need to cut the red tape.

Step 6, involve the community. This is the most critical point. How many times have I heard this government, the Premier himself, say that if we didn't do something, Ottawa is going to step in and do it to us? Really. Really. We're not going to stand up and fight Ottawa? What we're going to do is rescind licences and contracts here in Alberta so that we can have this facade to say: oh, we're looking after our area. It's a joke, Mr. Chairman. What we need to do is involve local community because if they're going to say – and again, yes, they've put these RAC, regional committees, together for the different areas, but then they just abandon them. They put it in there. This is a total disconnect with the community.

In my own personal experience in business life, back in the early '80s, I found that out. You go to municipal government, and you ask: "Oh, what's the act? What's allowed to be developed here?" Here it is. I took it at face value. They said that no more subdivisions are going to go on in this area. So I thought: "Oh, well. You know, I don't want to buy this land if there's no potential for subdivision." Six years later, two elections later, all of a sudden subdivisions were allowed, and I thought: "Wow. Why didn't I realize that people can change these things, that these laws aren't set in stone." And, again, to think that central government can do it.

So step 6, involve the community. Let's invite locally elected officials, landowners, industry stakeholders, and other regional and government representatives to work together to guide regional development in a sustainable way, and recognize that central planning does not work. If we're going to follow the Premier . . . [interjections] They're just like chickens that have laid their first egg, and they're cackling away. It's quite a sight to see. You hear all those hens cackling, and you go in there, and there's one or two eggs.

Mr. Anderson: Explain how the RACs aren't binding.

Mr. Hinman: They seem to think that these RACs can be put forward and be part of the planning, but it's not binding. The minister can say, "I appreciate that; great work," and then do whatever he wants. There is nothing binding in this bill or the amendment. When the RAC puts forth a recommendation, the minister can say: "Thank you for your time. We're going forward. We appreciate that." It's about locally elected people and the landowners and industry going forward.

Mr. Chairman, there are so many areas in this bill that are so flawed. We need to go back to step 1. We need to repeal it, and we need to entrench the Alberta property rights preservation act. Without doing that, we are on an extremely slippery and steep slope that's all downhill.

5:50

Yes, I was here in Edmonton when the Premier, speaking to the AAMD and C, was so passionate and talked about his heritage and where they came from and not being able to own land. Why? Why, if he understood that, would he pass this bill? To sit there and say, "I am the king, and I wouldn't do that" doesn't matter, because he's gone. In five months he's gone. Who's the next king, and what is that king's agenda? What are they going to do?

I mean, I was astounded when they talked about taking back 30 per cent of the lower Athabasca because this is a great thing to do. Yet the total disregard for those leases that have been put out there is shameful. Again, these contracts are written.

I mean, it's interesting, too, because in 2008 many of the regional areas were saying: "Make this a no-go zone. Do not put this land up for auction." What was this government's response, this very government, this very Premier? Oh, no. We don't know what our regional land plan is yet, so we're not going to – what would we say? – restrict our pocketbooks. If we can sell some of these leases, it's okay.

I truly believe that they had this plan all along, that we will eventually pass a plan because they understood that if they pass a plan and it's a regional plan, it becomes government policy, and it cannot be challenged in the courts. That is the key of this whole LARC and every other plan, that because it's government policy, it's therefore not challengeable in court.

That – that – Mr. Chair, is the biggest dilemma with this problem. To say that, "Oh, we're going to change section 15.1 and allow variances to come to the minister," that's a joke. What good is a variance going to the minister? That's like if a person just beat you up, and then you go in there and say: "I'd like fair compensation, please, for the beating that you just gave me. What are you going to give me?" "Oh, well, here it is." It doesn't work.

Under section 11, cabinet's regional plans can amend or rescind existing rights – they changed extinguish to rescind; that isn't good enough – including development rights, resource extraction rights, mineral rights, water licences, grazing leases, and any dispositions, approvals, or permits issued by the Alberta government.

Section 13(1): "exclusive and final jurisdiction over its contents." It doesn't matter what the big letter giveth; it's the small letter. If it taketh away, it is gone. It's in the contract. So, Mr. Chair, it isn't good enough. "Exclusive and final jurisdiction over its content" is pretty clear, and people cannot go forward.

Section 15(1). It's binding on municipalities and all Albertans. It's binding. It even goes on to explain that municipalities that don't accept this – and, oh, they keep talking about if it's already been started, it gets to continue, one area where they actually grandfather it, which is great to see that they, I guess – what would I say? – thought they could slip this through by saying that we'll grandfather any existing municipal plans. Boy, after this is in there, and they start to bring a new one that doesn't go along with the minister, they can smack him down in a minute and say: "No, you can't do that. Rewrite your bylaws." Even more disgusting is that they can say: "You know what? We're not going to transfer your money back to your municipality. You're not listening to our regional plan. You bad, bad person. Listen up, and if you don't, we're going to strangle you to death economically. No money. We'll get you knuckled down. You'll get down on your knees begging to come onside. We've got all the authority because there's nothing binding."

Sections 15(3) and 15(4): no rights to make a claim against government. The regional plan does not create anything with a cause of action or create any claim exercisable by any person or confer jurisdiction on any court or decision-making body. There's absolutely no recourse for compensation. So when the minister has made his decision, it's done. I do not know of a place in the world where I would want to live where a minister of the government can be the final jurisdiction and no courts can intervene or that you can appeal to. I'll say it again and again: this is the crux of the problem. Jurisdiction has to stay in the courts. Appeals have to be able to have a process to the courts. This bill is so carefully crafted to say and make sure that there is no appeal to the courts. They can shut it down, and the door is slammed shut.

Section 17(4). Bill 36 trumps all other acts. What does that mean? Pretty clear to me. Bill 36, the Alberta Land Stewardship Act, trumps all other acts. So it doesn't matter what it says in the Mines and Minerals Act, it doesn't matter what it says in the Water Act, and it doesn't matter what it says in the environmental protection act because Bill 36, the Alberta Land Stewardship Act, trumps all of those, and there's no amendment coming forward to that.

Section 19: restricted right to compensation if government approvals, water licences, grazing leases, subdivision approvals, mineral leases, timber rights, et cetera are amended or rescinded. I mean, it's very restricted on what they can decide. How can you say that this is protecting property rights when, if someone has something they want to develop, the restriction is: that doesn't go along with the minister's idea of what we're going to have go on in that little region. That isn't good enough, Mr. Chair.

The Chair: The hon. Minister of Transportation.

Mr. Ouellette: Well, thank you, Mr. Chairman. I stand today to speak to Bill 10, Alberta Land Stewardship Amendment Act, 2011. Perhaps one of the most important things to point out about the amendments in Bill 10 is the fact that this legislation is and always has been about protecting landowners' rights and making a better quality of life for Albertans. This is the fundamental reason I got into politics. As I suspect, it is also the reason a lot of my colleagues did as well. This government has heard from Albertans about the need to reinforce the protective mechanisms in the wording of Bill 10. The reason Albertans wanted this is because the previous wording did not sufficiently safeguard against individuals misinterpreting the information and spinning it to advance their own personal or maybe even political interests.

We heard from many Albertans that the language in the legislation was being misinterpreted by some and needed to be clarified, and that is exactly what this government is doing with Bill 10. We have listened, and we are acting. What the wording in the amendment does is safeguard against some wild lawyers creating a culture of fear among Alberta landowners when there is nothing to fear.

Mr. Chairman, what also needs to be clarified is that Alberta is the most compensating jurisdiction in Canada. Albertans need to know that our government understands, perhaps better than most governments, that land-use planning is intended to benefit all Albertans in the province as a whole while making sure that individuals always have a say in the process.

The Premier ordered a review of the legislation to make sure the words clearly reflect the intention of the act. Some key points are: consultation would become a legal requirement before a plan or amendment is made; any person who believes he or she is directly and adversely affected will be able to request a review of a regional plan; titleholders will be able to apply for a variance to a regional plan; the amended act makes it clear that nothing in the act or a regional plan takes away an individual's existing rights to compensation. This supports the intention of government to stay out of the lives of Albertans by giving them as many opportunities as possible to represent their own individual needs and interests in the land-use planning process, and I believe the amendments achieve that, Mr. Chairman.

I would like to also say that when you listen to the other side, they mustn't read the plan because they get a completely different interpretation out of the act than I do when I read it. Mr. Chairman, that's what I guess the law is all about. Some lawyers interpret something one way, another lawyer interprets something another way, and then there's a judge in the middle that makes a decision. When I'm out speaking, there doesn't have to be a judge there that gets to judge me, and when they're out speaking or their great wild lawyer is out speaking, they don't have a judge there to make a judgment either.

Thank you very much, Mr. Chairman.

Mr. Anderson: Well, I have to admit, I do always enjoy watching the hon. Transportation minister speak. It's very entertaining, so thank you for joining the debate. That's for sure.

We don't obviously have much time. We only have about 30 seconds left, most likely, but I thought I would stand and – maybe at this time I can adjourn debate till we get back tonight, and we can pick up where we left off. Can I make a motion for that, a motion that we adjourn for the afternoon?

The Chair: Well, in fact, it's 6 o'clock, so the Chair doesn't need a motion to adjourn.

The committee will be in recess until 7:30 p.m.

[The committee adjourned at 6 p.m.]

Province of Alberta

The 27th Legislature
Fourth Session

Alberta Hansard

Wednesday evening, April 27, 2011

Issue 30e

The Honourable Kenneth R. Kowalski, Speaker

Legislative Assembly of Alberta

7:30 p.m. **Wednesday, April 27, 2011**

Government Bills and Orders
Committee of the Whole

[Mr. Mitzel in the chair]

The Deputy Chair: I'd like to call the committee to order. The Committee of the Whole has under consideration Bill 10. Continuing on from this afternoon, the hon. Member for Airdrie-Chestermere.

Bill 10
Alberta Land Stewardship Amendment Act, 2011

Mr. Anderson: Thank you, Mr. Chair. It's good to be back. Obviously, I want to continue on with some of the comments about Bill 10, the Alberta Land Stewardship Amendment Act, 2011. Yesterday I started speaking a little bit about it, and I went through several things on the bill. I talked about one of the important things that we need to realize, that when we make a mistake, it's important to fess up to that mistake and say: "You know, we made a mistake. We need to correct it, and we need to back away." That's what Premier Klein really taught a lot of politicians, that when you do make a mistake, it's important to admit to it, try to make up for that mistake, and make restitution as quickly as possible.

I find myself feeling somewhat like that with regard to Bill 36 and so forth. One of the things that I didn't read or understand, I guess would be a better way of putting it, in the first go-round with Bill 36 was the issue around statutory consent and the power that Bill 36 gives the cabinet to revoke property rights and to extinguish – this is the language used in the act – property rights, things such as land titles. Obviously, Bill 10 works to correct that. The government says clarify, but let's look at what Bill 36 says and then how Bill 10 clarifies, hopefully, what their intent is.

In Bill 36 under section 11 it says: "A regional plan may, by express reference to a statutory consent or type or class of statutory consent, affect, amend or extinguish the statutory consent or the terms or conditions of the statutory consent." Now, there was some argument about whether statutory consent in Bill 36 meant land titles and other forms of licences, and there was quite a debate around that. In Bill 10 there was an effort made to clarify that, but the government continues to say that the original Bill 36 never did allow the government to unilaterally extinguish land titles. Well, this is just simply not the case. This isn't just a matter of one lawyer disagreeing with another lawyer. As any first-year law student would know, when you're trying to look for the definition of something in a bill, the first place you look to – it's not the only place you look to – is the act. You look to the act, right? Isn't that true, hon. members? You look to the act first.

What does the act say about statutory consent? According to section (z) of Bill 36 statutory consent means

> a permit, licence, registration, approval, authorization, disposition, certificate,

as in a certificate of title,

> allocation, agreement or instrument . . .

Titles are instruments.

> . . . issued under or authorized by an enactment

such as the Land Titles Act

> or regulatory instrument.

So there's really little doubt in the definitions section of what statutory consent is and that it can include land titles.

If one looks to what instrument means, we can go further to instrument. They even clarify it further. Instrument means

> (i) a grant, certificate of title, conveyance, assurance, deed, map, plan, will . . .

Et cetera, et cetera, et cetera.

It also includes a judgment of the court, so that could include a maintenance enforcement order or a marriage annulment, or

> (iv) any other document in writing relating to or affecting the transfer of or dealing with land or evidencing title to land.

That's the definition of instrument, okay? So this whole idea that it did not apply to land titles or mortgages or these types of things is garbage. It did.

This government, that is famous for not understanding, you know, the unintentional consequences of its actions, has come and said: "Okay. Well, under Bill 10 we're going to make a difference. We're going to make some exceptions. We're going to make it clear in section 3(2)."

> For greater clarification . . .

This is kind of funny.

> . . . the definition of statutory consent does not include any permit, licence, registration, approval, authorization, disposition, certificate [et cetera, et cetera, et cetera] under or authorized by
> (a) the Land Titles Act,

They put it right in there.

> (b) the Personal Property Security Act,
> (c) the Vital Statistics Act,
> (d) the Wills Act,
> (e) the Cemeteries Act,
> (f) the Marriage Act,

So they can no longer get rid of your marriage. That's good.

> (g) the Traffic Safety Act, or
> (h) any enactment prescribed by the regulations.

It's pretty clear when we look at this clarification that the fear that people had that the government would be able to unilaterally take away their land titles when this bill is passed – that will not be the case. Under the law right now under Bill 36, indeed the government, the cabinet can seize people's land titles. I don't know how you missed that. You obviously did.

Now, let's be very clear. Was it ever your intention to seize people's land titles? I certainly hope not. I don't think it was. But the fact is that that is what the act, Bill 36, clearly authorized or else why would you be passing Bill 10 and one section to clarify that?

That lawyer in a silk suit, as the government always likes to say, that was running around Alberta telling people that the government had just authorized giving itself the power and authority to seize your land title if they felt it was in furtherance of their regional land-use planning, was correct. He was not lying at all. Thankfully, he pointed it out because now it has been dealt with in Bill 10.

There are many things that Bill 10 does not include. For example, it does not specifically exempt the Mines and Minerals Act although it does now exempt the Land Titles Act from extinguishment of a property right. We saw that in action. We saw what happens when you don't have something exempted under this act, that in fact the government can come and seize. It is doing so right now with the lower Athabasca regional plan. It is seizing a couple dozen mineral and mine leases that belong to these companies. It's unilaterally coming in there and seizing them.

Now, there is still a question around what the compensation would be, which is amazing, that the government would allow that kind of uncertainty. But there still is a question. We don't know much the government plans to compensate these companies if at all. We don't know if they plan to give them the value of the lease when they bought it and that's it or if it's going to be the value of

wall. Let's do some more research on this. Let's talk a little bit more about this so that we make sure we get these plans right or we make sure that the amendments to these plans are right, okay?

I mean, I look at some of the members in there: the Member for Drayton Valley-Calmar. I know full well you trust the people's representatives to make a good decision here. I think that it's important that we let them do that. To just say that the government is going to come here and, you know, is just going to plunk the regional plan or the amendment to the regional plan in front of us and say, "Okay; this is what we decided; here you go," is not accountability at all. I don't even know why that's in the act. They would do that without this act, without it saying that they had to lay it before the Legislative Assembly. Of course, they're going to put the plan out there. They've got to give it to somebody to implement.

So that's not really an accountability measure. But having the Assembly have to actually vote on it elevates it and at least makes sure that the people in this House have the final say.

I mean, we have the Speaker of the House, remember, who goes through every month and tells us all the recognized days that come up, you know, like basket weaving awareness day and kiss your lawyer day and all these different days that we . . .

Ms Blakeman: Administrative support day is today.

Mr. Anderson: Administrative support day is today?

Ms Blakeman: Yes.

Mr. Anderson: There you go. Administrative support is important, I'll tell you, especially when you've got the resources and the office that we have. I mean, you really rely on that staff.

The point is that he's making us aware of that. That's all this is saying right here. This is saying that somebody is going to come and make us aware of this report. It's basically at the same level of importance as the Speaker standing up and telling us all these different days and awareness weeks, et cetera, that are out there.

7:50

Now, the difference is that this amendment, if passed, will make sure that the people's representatives have the final say on whether they want to go ahead. I think this is a reasonable amendment. I would like to hear from government the reasons. If they support it, that's great, but if they don't support it, why not? Why is it not important that the people's representatives have the power and authority to make the final decision with regard to one of the seven regional plans in this province? Why wouldn't that be important to you, or why would it be important to you? I'd like to know that.

With that, I'll leave this amendment for some debate.

The Deputy Chair: On the amendment. Do any other members wish to speak? The hon. Member for Edmonton-Centre.

Ms Blakeman: Thanks for the opportunity to speak on amendment A1. I agree with the attempt to remove the reporting in section 5 away from presenting a report of the findings of the consultation to Executive Council, which, of course, is the cabinet, and trying to widen it to a larger group. That I agree with because I think that too much of what's wrong with the amending act, Bill 10, is that it has tried to address some issues, but it didn't address them enough. The original Alberta Land Stewardship Act had concentrated too much power in the hands of cabinet. I think that Bill 10 did not address that enough. So this amendment is trying to take it a step further, but where my problem is with this amendment is in having it come back to the Assembly for the Assembly's approval.

We're in a time of change, I hope, and we have no idea what is coming and how the political structure is going to look, who is actually going to have the balance of power, the majority of it. We have a lot of experience in this Assembly and in this province with a party that gets into power for 40 years and counting and is dictatorial in the way it sets about writing legislation.

We have a number of things that come back to this Assembly for approval. Frankly, Member, look around. So what? Lots of things come here for approval. You still have a government in power that does basically what they want to. I understand that you're trying to protect the integrity of the plans and to involve the elected members, but you could end up with the same thing happening that you've got right now, and that is a majority that just barrel rolls stuff through.

So there are two things that you need to have in place, I think, to make this plan work better. One is – and you always should default to this – more local control, more local input because communities really do understand how to take the one-size-fits-all that you're trying to build as a provincial plan to make sure that we are moving forward and implementing general policies as a province. They understand how to take that overall policy and augment it to make it really work locally. They can't be allowed to say, for example: well, we're not going to have environmental protection in this particular area because we just choose not to. No, no. They have to. There are certain things that are required, but they can say: "You know what? This little bit extra would really make a difference for us because we've got a lot of forestry here or a lot of this." They can fine-tune it to make it work on a local level, but you still need that sort of broad province-wide policy setting that you want everybody to use.

My problem with the way this is put is that we could get exactly what we've got now. It could come to the Assembly, and look how many decisions and how many times – I'm getting into trouble with my dentist for grinding my teeth, which is a relatively new problem for myself, but part of it is from when I hear the Premier stand up and say things like, "Well, it's going to an all-party committee," and, you know, "That will be wonderful because it's an all-party committee."

Well, I was at the negotiating table when these all-party committees were established, and believe you me, the second, third, and fourth parties may have something to say occasionally. I've actually been in the position where those all-party committees have passed, duly debated and passed, a motion I put on the floor only to have at the next meeting a member come forward and basically rescind my motion on the instruction of government. So much for all-party discussion and all-party approval of something. That rarely happens. So you're basically putting back in place what we have now, and that's the problem for me, I think. Yeah.

Additionally, you're not clear on what you're going to do with 5(b). You're going to amend 5(a), but are you leaving 5(b) there? Because that's the same thing again, to "lay before the Legislative Assembly the proposed regional plan or amendment." I think you're right in trying to draw power away from the cabinet. I just think the way it potentially could play out here is problematic for us in that it basically puts into place the same institution that we have now, that's already causing us problems. You'd end up with something that read the same way. You're going to present a report of findings to the Assembly for its approval, and then in 5(b) you're going to lay the plan before the Legislative Assembly, the proposed regional plan or amendment.

I'm not quite sure how that works, but I definitely think you're right to make the point that you need to draw some of that power

straightforward. The hon. Member for Airdrie-Chestermere summarized it and the hon. Member for Edmonton-Centre as well as the hon. Member for Calgary-Fish Creek. What this is about is section 5(a). "Ensure that appropriate public consultation with respect to the proposed regional plan or amendment has been carried out, and present a report of the findings of such consultation to the Executive Council." There is the problem. Again, this is just solely at the minister's discretion, and what we need is to have it reported to the House.

Not only that, the government members always get up and say: oh, we've done all these consultations. We've done this. We've done that. We've had 238, I think, people that they talked about earlier. Present the report to the Assembly so that we can actually see and ask questions about it and verify what they're actually saying rather than just vague comments and commentary on what their so-called consultation is. We need to have the consultation. It needs to come.

I'm looking forward to the vote. We'll see. The government says: what amendments? We have several that we want to bring forward. We feel this is a good and plausible one and hope that the government will vote in favour of this.

Perhaps we can have the question now.

The Deputy Chair: The hon. Member for Calgary-McCall.

Mr. Kang: Thank you, Mr. Chair. I am also standing up in favour of the amendment. I have heard the Member for Edmonton-Centre, the Member for Airdrie-Chestermere, and the Member for Calgary-Fish Creek. I don't think that the Member for Airdrie-Chestermere is asking for much. It's just bringing the process more into the open. I do believe that the decisions or any changes we want to make into regional plans or anything should be done here in the Legislature, not by 23 or 22 or 16 Executive Council members.

Here with Bill 10 the government is trying to address what was not done in bills 36, 19, or 50. I think they should do the right thing. You know, those bills gave the cabinet too much power. Here the government is still trying to keep all the power with the cabinet.

What this amendment is trying to do is take the power away from the Executive Council and have everything come to the Legislature so that we could have reasonable debate in the Assembly and make the right decisions. This amendment may not address what the member intends to do with this, but still I think it will be better to have a decision made by the majority in the Legislature, by the elected representatives of Albertans. Well, I think it still will be better to make the changes here in the Legislative Assembly after a reasonable debate instead of making a decision, you know, behind closed doors. It should be up to the elected representatives to come up with what is good for all Albertans. For those reasons, Mr. Chair, I'm supporting this amendment.

I don't think the Member for Airdrie-Chestermere is asking for much. The government with the majority will still be able to blow through whatever they want, but we want to have everything in the open so that everybody knows what we're going to do. For those reasons I'm supporting the amendment.

Thank you.

8:10

The Deputy Chair: The hon. Member for Calgary-Currie.

Mr. Taylor: Thank you very much, Mr. Chair. I will just add my two cents' worth briefly to this because we have a lot of business to get through in a limited period of time tonight. I would not normally support this amendment. I would not normally say that this is something that the Legislative Assembly needs to consider and vote on in terms of regional plans for each region.

I think that there is a real interest, obviously, on the part of MLAs from that particular region for which the regional plan is being prepared to have a say in this, but as to whether all 83 of us need to weigh in on it or not, under – maybe I shouldn't say normal – ideal circumstances I would say that if we had done all the preparation work properly, this would not be necessary. Unfortunately, Mr. Chair, we haven't done all the preparation work properly, and even the government recognizes this, which is why they brought Bill 10 forward in the first place.

The amendments that are put on the floor tonight, whether we all agree on them or not, I think will all be put on the floor sincerely with the effort to try and improve this bill further. I think absent a whole process that we cannot amend because it's not in Bill 10, you'd have to go back to the ALSA itself, which would change the way in which these regional plans were prepared, change the way in which the regional advisory councils were constructed and put together, and that sort of thing. I think there is a need for elected representatives to weigh in before these plans were approved and vote on each one of them.

To just lay the plans before the Legislative Assembly as it reads in section 5 of Bill 10 right now, which says exactly under 5(b), "lay before the Legislative Assembly the proposed regional plan or amendment" – okay. That says we're tabling the proposed regional plan or amendment for the interest and edification of all Members of the Legislative Assembly, but it does not allow for any input from the MLAs or any decision-making power. That power still rests with cabinet. I think that's a problem. That's a problem because of the way in which we go about under Bill 36 and Bill 10 creating these regional plans without enough democratic participation going into it. I think for that reason rather than leaving the power with cabinet to approve these regional plans, I can support this amendment, which gives that power to the Legislative Assembly.

Thank you.

The Deputy Chair: Do any other members wish to speak? The hon. Member for St. Albert on the amendment.

Mr. Allred: Mr. Chair, just speaking briefly to the amendment, I appreciate the intent of the amendment, but if you look closely, the amendment replaces section 5(a), but by doing so, it makes section 5(b) totally redundant.

For that reason, I don't think we can support the amendment.

The Deputy Chair: Do any other members wish to speak?

I will call the question on amendment A1 as proposed by the hon. Member for Airdrie-Chestermere.

[Motion on amendment A1 lost]

The Deputy Chair: We'll move on to the bill. We're back to Bill 10 and the next speaker. The hon. Member for Edmonton-Centre.

Ms Blakeman: Thank you so much, Mr. Chair. I appreciate being recognized. This is my first opportunity to really speak to this bill given the interesting progression of Bill 10 through this House. What we have is what people commonly call Bill 36, but of course each year we start over in our numbering, so we need to start referring back to the Alberta Land Stewardship Act, which was passed in 2009. It hasn't gone over well. This, what we have before us today called Bill 10, is an amending act to the Alberta Land Stewardship Act.

Let me talk about the intentions of the Alberta Land Stewardship Act and then relate back to that what I think about this amending act. The way I approached the Alberta Land Stewardship Act from the start is that we need a planning tool. We need a planning tool in this province that allows all of the user groups, who are often in conflict with each other – and their activities may conflict with other groups' activities over the use of a piece of land. We need a planning tool to be able to sort this out in the province.

Of course, we're referring to the use of what we call Crown land, or public land, the land that is held in stewardship by the province. How do we determine who gets to use it and how they use it? Here are some of the groups whose activities start to conflict with each other. We've got conventional oil and gas exploration; conventional oil and gas production; mining, including aggregate mining, so gravel mining, in aquifers and river basins and things like that; coal mining. We've got an application right now in the Castle Crown area to mine magnetite I think it's called, which is a product that is used in conjunction with coal.

We have conservationists that are saying: "We have some very precious land here. We should leave it alone. We should not allow anything to happen on it and preserve it." We have people that say that it should be used for recreational purposes by horseback riders, by hikers, by cross-country skiers. There are others that say: "Well, we want to have motorized vehicle access. We want to use ATVs," that my family calls quads. "We want to go in the winter and snowmobile; we want to go heliskiing." How do you put those two groups together, and do they conflict?

We have municipalities that want to expand their boundaries onto prime agricultural land. Well, at what point do we the province, we the people lose our ability to say no? We need to protect prime agricultural land. We need to be able to say: you can't keep building subdivisions, precious little acreage parks for the wealthy, farther and farther out from our cities, which stresses the resources of the cities to put the services in and, of course, the roads to bring everybody, you know, into town to work and all of that stuff. At the same time, they're building it on the very land we need to produce food.

There are immense conflicting groups and activities, and we need a planning mechanism. The Alberta Land Stewardship Act was supposed to be that mechanism.

Now, I agree with many others that have criticized the original act. Actually, in our caucus there are people that were in favour of the Alberta Land Stewardship Act in 2009 who are not in favour now and, the reverse of that, people that have never been in favour of it at all. We've certainly had even some hearty discussions in my own caucus about that particular bill.

The real criticism you've heard quite a bit about was that the government concentrated too much power in the hands of the cabinet and, in particular – and this offended me at the time, and I was, to put it mildly, blown off by members of the government – the use of what they call the Henry VIII clause, which literally said that a minister can change legislation without bringing it before the House. "Oh, this is common," they said. "This is used all the time to fix little things, and we should be able to do this." No, not in conjunction with our land, Crown land. Public land is the other way that that space is referred to. It's public land. It's held in trust by the government, in trust on behalf of the people of the province. So too much power held in the hands of the cabinet.

There was no compensation offered when the Crown indicated that it was going to do something and that it was going to take somebody's land to do it, or in some cases activities that are currently going on on Crown land or expected to go on on Crown land would be curtailed; for example, conventional oil and gas development leases or oil sands leases or forestry. All of that's possible. All of that goes on now on Crown land, and the government makes money from it. It's revenue, and that helps offset the taxes that Albertans pay. It's not that this is particularly new activity here.

8:20

The idea that the government would extinguish somebody's property rights or the money that they were making from their activity without any kind of recognition of compensation just goes against the heart of fairness, of justice, and it really bugs people. When a province gets beyond itself, gets too big for its britches, gets too high on its horse, or flies too close to the sun, you know, the wax melts, the feathers come off, guys, and you plummet to Earth. That's essentially what has happened to the government in this whole process. I'm sure that there will be a master's thesis and maybe a PhD or two based on the process around this Land Stewardship Act and Bill 10. So those of you who are currently pages who tend to be particularly brilliant students: there's your master's thesis because you sat here and watched this happen. It has not gone well for this province and for this government.

The third thing is that there was no right of appeal. So too much power in the hands of government, no recognition of compensation or ability to compensate people, and, three, no avenue of appeal. There is always avenue of appeal; there has to be. Mistakes get made, you know, Friday afternoon screw-ups. People make mistakes: deliberate, benign, whatever. You've got to have the ability to say: "Whoa, whoa, whoa. Something went wrong here, and I need to be heard. I need my day in court. I need to be able to appeal the decision that was made." Not because you don't like it. I mean, you don't get an appeal process just because you don't like the finding. You get an appeal process because something went wrong in the way the process worked, and you need to be heard. Your case needs to be heard and re-examined for a good reason. So those are the three things in this particular bill that really offended the core of the Alberta psyche.

The other interesting thing that developed out of this was public knowledge and public participation. This I actually find very exciting because increasingly Albertans, Canadians have been saying to their politicians: "We want in. We want access to this process. We want to be able to tweet you and tell you what we think of the comments you just made in the House. We disagree. We want input from the beginning on this." That's what happened. People started to get access to real knowledge, to factual knowledge. This is what the bill says. Here is the interpretation from the lawyer. Here is the interpretation from the government. People could go to town hall meetings and hear well-versed people talk about this, and they could learn it, too, and be able to understand it, to hold the bill in their hand and look at what it said and go: "Okay. I understand that. I get it, and I don't like it. I don't agree with the decisions that have been made here."

People got an opportunity to get educated on the process, to get educated on the content of the bill itself, and then to be able to push back with government. So not just, you know, yelling and screaming, not just carrying placards with rhetoric on it, but very specific points being raised in a well-informed manner by the public back to the government saying: you have chosen to use certain words in this language – a word like extinguish is a very, very specific and powerful word, and it carries with it a lot of action that goes behind the word extinguish, especially when that word is held by government: to extinguish your right, to stop it, to put it out. That's a very powerful word, and it was a deliberate choice by government. So we have people that became involved in

"We're revoking your licence" is concerning. The government's response to section 2 in their amendment is to put in, I think, seven areas, seven different acts to say: well, this power doesn't go into the Land Titles Act. This is section 2(2)(a), (b), (c), (d), (e), (f), and (g): the personal property act, the Vital Statistics Act, the Wills Act, the Marriage Act, the traffic act, and the Cemeteries Act.

The problem is, Mr. Chair, that once again this government is trying to rush these things through and is realizing – it has been brought up so many times – that the pressure is growing in Alberta as they understand the latitude that the minister has. They're wanting to rush this through, hopefully thinking: if we get this through and there's nobody talking about it, this will have a quiet death here in the province, and on we can go. It just doesn't happen that way. The problem is that Bill 36 is 18 months going strong and causing problems. Again, when we saw LARP come out, this was exactly the suspect that industry and other people felt was going to happen, where licenses are rescinded. It just isn't good enough.

So we would like to bring in another amendment, and I'll hand this off to the page to bring up to the table.

The Deputy Chair: Hon. members, we'll pause for a moment while the amendment is passed around.

Okay. This is amendment A4.

9:20

Mr. Hinman: Thank you, Mr. Chair. In law there's something that's very important. Once a list is started, it becomes exclusive. We want this to be inclusive. Because it's exclusive, those bills that aren't mentioned are therefore not part of it.

In section 3 in the proposed section 2(2) by adding the following after clause (a):

(a.01) the Water Act,
(a.02) the Mines and Minerals Act,
(a.03) the Forests Act,
(a.04) the Environmental Protection and Enhancement Act,
(a.05) the Public Lands Act,
(a.06) the Fisheries (Alberta) Act,
(a.07) the Agricultural Operation Practices Act,
(a.08) the Oil Sands Conservation Act,
(a.09) the Oil and Gas Conservation Act,
(a.10) the Coal Conservation Act,
(a.11) the Highways Development and Protection Act,
(a.12) the Animal Health Act,
(a.13) the Marketing of Agricultural Products Act,
(a.14) the Livestock Identification and Commerce Act,
(a.15) the Animal Protection Act,
(a.16) the Pipeline Act,
(a.17) the Dairy Industry Act,
(a.18) the Farm Implement Act,
(a.19) the Pharmacy and Drug Act,
(a.20) the Gaming and Liquor Act.

We hope that we've included all of the acts that should be under this bill that have failed to be listed under section 3. We feel that this amendment is critical. We cannot allow these other acts to be in the arbitrary decision of the minister.

In section 3 of Bill 10 statutory consent authorized by a certain act is excluded from those which Bill 10 can rescind. One of the most notable is the Land Titles Act. It is reassuring to know that Albertans will not simply have their land titles extinguished. The Marriage Act is also enumerated. It's reassuring to know that the SRD minister can't decide to annul my marriage when they pass the South Saskatchewan regional plan. There are a number of acts missing from section 3. They say that it's comical, but the fact is that it was put in there. Obviously, there's a reason why they put it in yet missed so many more.

There are a number of acts missing from section 3. Our amendment seeks to add 20 relevant acts, ones that grant various sorts of permits, licences, registrations, approvals, authorizations, dispositions, certificates, allocations, agreements, or instruments upon which people's livelihoods depend.

One of the most basic yet fundamental roles of government is the protection and preservation of property rights. Without such protection our peace and prosperity would be jeopardized. Property rights are the foundation of each individual's and family's financial security and quality of life. For example, farmers and ranchers need to know that their investment in their land and livelihood is protected, that it will not be devalued by others, including government, without just compensation. Those owning residential or commercial properties in urban and rural areas need to feel confident that not only will wrongdoers be criminally prosecuted for trespassing and vandalism but also that the government won't pull the rug out from underneath their investments without fair notice and compensation.

In order for Alberta's economy to prosper, businesses need to know that their investments are stable. They need to trust that the government won't suddenly reverse course and confiscate their land or rescind leases after these companies have spent their time and money developing projects in Alberta. The way to do this is the rule of law, predictable and precedent based, not arbitrary ministerial decisions. Rights which are subject to the discretion of a politician or bureaucrat are not rights at all.

The current government has shown a lack of respect for basic property rights with Bill 19, the Land Assembly Project Area Act of 2009. The government granted itself the authority to freeze large tracts of private land for public purposes without having to compensate landowners for the cost of forgoing development, business interruptions, relocations, or other related damages.

Bill 50, the Electric Statutes Amendment Act, 2009, eliminated the role of the Alberta Utilities Commission to determine Alberta's needs for electrical expansion and allowed the cabinet to declare unilaterally that a 16-fold increase in capacity is urgently needed. Last fall the PC government passed Bill 24, the Carbon Capture and Storage Amendment Act, 2010, which went against the common law understanding of property rights, and simply declared that the government owns all underground pore space, pores that they want to pump CO_2 into. These are two more examples of the current government passing laws that consolidate the decision-making authority in cabinet while undermining your property rights and the rule of law.

Now we have Bill 10, which proposes various amendments to ALSA, the Alberta Land Stewardship Act, 2009. ALSA divides the province into seven land regions and authorizes cabinet to implement sweeping regional plans for each area of the province that override whatever had previously been in place. This means that central planning at the Legislature rather than by locally elected and accountable municipal councils and landowners will ultimately decide what types of activities are going to be permitted or prohibited on private land in every region of the province.

The act allows cabinet to extinguish or rescind, whatever word the government wants to use, rights held under these licenses, permits, leases, and approvals with limited or no compensation. Because they classify the decisions made in the regional plan's policy, there is no right to appeal the decision to the courts.

That is why this amendment is important. These acts are designed to give licences to Albertans to operate businesses. Whether it's the Forests Act or the Public Lands Act or the Water Act, each of them is mandated to distribute their licences for various industries in a sustainable way. The Forests Act, for example, is explained on the SRD website. "This Act establishes an annual

allowable cut in coniferous and deciduous forests. It prohibits persons from damaging the forest in any way and allows the Minister to construct and maintain forest recreation areas." So there are conservation provisions in it, and those who get a tree harvesting licence assume that they are granted the freedom, the right, the licence to harvest certain trees. This would be a reasonable assumption until now.

After LARP came out, the lower Athabasca regional – again, whether it's a plan or a draft, which I always find comical, they want to say that it's a draft. We know that these licences are liable to be extinguished if the minister decides suddenly that for whatever reason, because nobody can appeal or demand the rationale, he wants to extinguish their licences in his regional plan. The point is that all kinds of industries and professionals rely on the acts to plan their business, hire employees, raise capital, and even base their decisions on whether they want to come to Alberta to do business and hire people on the reliability of this framework.

As indicated, there are stewardship provisions already built into these other acts, so there is no need for a huge new act to trump all of this and throw it out and throw everything into doubt, no economic reasons and not environmental ones. We just need to use the acts that we already have. Some of the acts we are talking about even have "conservation" in the title: the Coal Conservation Act, the Oil and Gas Conservation Act, the Oil Sands Conservation Act. If they're not doing their job, Mr. Chair, why not bring each of them in to make the adjustments, like the government is doing with Bill 16, the Energy Statutes Amendment Act?

We need the rule of law, not a superlaw that overrules everything else and gives all kinds of arbitrary powers to the minister and cabinet. There has been an undeniable trend in the current government to concentrate power in the executive and undermine all the checks that exist on their prerogative. This is something that we should all expect when one party has ruled for 40 years. Everyone in that party starts to utterly trust the government and lose the vigilance they owe their constituents as MLAs. They forget the reason why independent commissions, property rights, local governments, and the rule of law are essential.

These checks are in place to ensure that government doesn't go too far, but when you give utter trust to a centralized government, you begin to see these checks and balances as nothing more than a nuisance. Bill 36, or ALSA, undermines, supersedes, or eliminates all these competing authorities and centralizes decision-making authority in cabinet. The amendments in Bill 10 do little to change this fact as the government embarks upon the admittedly difficult task of engineering a new framework for land-use planning. Whenever they encountered attention, they decided: let's just give that power to the stewardship minister.

A government that respected local authorities, independent commissions, existing legislation, and the right of Alberta property owners to have recourse to the law would have come up with a much more balanced land-use framework. ALSA, even as amended, not only pushes municipal authorities aside; it utterly undermines their authority. Not only does it direct municipal councils to rewrite their bylaws to suit the minister's plans; it make provisions for the stewardship minister to withhold transfers to the municipalities or to rewrite the municipal bylaws directly if he's not satisfied with what they have done.

9:30

As with the regional advisory council, that governed land planning from 1955 to 1995, we need to empower local municipalities in the decision-making process in order to have actual democratically based regional planning instead of central planning under Bill 36. The minister does not know how to plan for a region better than the regional authorities. Vague promises of giving the locals a hearing is not good enough.

It's always interesting to me, Mr. Chair, that they start off by having a regional advisory council. This is where they're going to ask advice on what they should do. Why don't we just leave it there, in those regional areas, with the so-called council that they're looking for?

Alberta currently has a number of respected, experienced bodies that regulate growth and development: the Alberta Surface Rights Board, the Energy Resources Conservation Board, the Alberta Utilities Commission, the Land Compensation Board. These independent bodies have been in power to balance economic growth with property rights in the overall interest of Albertans. For the most part they have been doing a reasonable job. Reforms should be made within the existing framework to address problems so that Alberta's regulatory system is open and fair for all.

When ministries override these independent authorities, the results are often disastrous, as we are seeing with Bill 50, where the current government took the power line needs assessment out of the hands of independent experts. The Wildrose caucus believes that government should resist the temptation to overrule and undermine independent bodies. They are there precisely to serve as a nonpolitical check that acts in the public interest while treating individuals fairly, but this government seems incapable of seeing the value of independence. They don't appreciate that there need to be checks and balances to ensure that the government is limited and accountable and does not either trample the rights of the individual or set the whole province back by pursuing misguided ideological projects, with all kinds of dangerous and unforeseen consequences.

We also have a great deal of existing legislation, passed by this House over the years, that has evolved to handle growth and conservation issues. The most troubling act that Bill 36 overrides, in my opinion, is the Water Act. The Water Act is designed to manage this precious resource. We need to work within it rather than let the stewardship minister trample the water rights it bestows. Water licences, especially in southern Alberta, are a valuable piece of property. The first in time, first in right principle has been working well, and it has handled our shortages for decades. All this is threatened to be overturned. The Water Act is predictable, and we know when and how and in which priority the water is going to be allocated.

Organizing our regions along watersheds makes some sense even if they are too big in the current model, but we don't need to generate a whole new provincial department under the sustainability minister to duplicate what it should be doing in the Environment department. Under the Water Act and under the Environmental Protection and Enhancement Act the Environment minister sets overall limits, guided by consideration of cumulative effects. Local authorities are empowered to make decisions for their communities within these broad limits established by the province. This should continue to be the basis of land-use planning. The Wildrose believes that we should let the Water Act work and let the Environment ministry do its job of monitoring specific emitters and setting overall parameters based on cumulative effects.

We also believe that the most offensive aspect of Bill 36 is the utter disregard for individual rights. This concern was not adequately addressed by the window dressing of this Bill 10. The provincial government has a leading role in protecting the environment and establishing the powers of local authorities. It has been doing so for a century. There are many established practices and rights that have been conferred over the last century. It is important that these not all be overturned for the sake of ministeri-

Mr. Campbell: I'll just say again that on April 27, 2009, we announced Bill 36, the Alberta Land Stewardship Act. The news release included a backgrounder that outlined the regional planning process and one that provided a full history of public consultation going all the way back to May of 2006. I bring this up in the interest of showing transparency in a public process that has had wide public participation. That public participation continued and continues today.

Two days after announcing the legislation, we announced province-wide public open house information sessions on Bill 36. Eleven sessions brought Bill 36 to public attention and discussion from Grande Prairie to Wainwright to Pincher Creek. Sessions were added for Edmonton, Calgary, and Medicine Hat. These were followed with community sessions in the lower Athabasca and neighbouring communities on the lower Athabasca regional planning process and Bill 36.

Over the course of May and June of 2009 government officials were in 26 communities discussing Bill 36. This was all fully transparent. It was publicly announced, posted, advertised, and promoted, and it was all done in the spirit of and commitment to accountability. In the meantime the bill was going through debate in this Assembly, during which every MLA, including those now on the other side of the House, had full opportunity to participate.

In fact, a number of amendments were made to Bill 36 before this Assembly voted to pass the legislation. Those amendments defined the term compensation board for appeal to the amounts of compensation. They clarified how regional plans would apply to Métis settlements. Changes were made to ensure that any tax-based conservation and stewardship tools developed under the act are not implemented without the approval of the Minister of Finance and Enterprise. Another amendment required that the Minister of Infrastructure and the Minister of Transportation receive prior notice of plans to register a conservation easement. To my recollection property rights were not raised as an issue to be amended during that original debate, and there's no reason why it should have been because property rights were always protected under Bill 36.

I note that the news release, when we tabled Bill 36, was titled Bill 36, the Alberta Land Stewardship Act, Sets the Bar for Responsible Regional Planning. The news release was subtitled Proposed Act Respects Property Rights and Local Decision-making. That is important because it shows that right from the start this government was committed to property rights and was acting to protect them.

Land titles were always excluded from the definition of statutory consent, so it would be very clear that although both are instruments of an enactment, they are very different instruments. A statutory consent is permission to access a public resource. A land title indicates private ownership. Owned by the public or owned privately: very different.

It is true that Bill 36 did not provide for compensation if a statutory consent is rescinded under a regional plan. That's because those provisions already exist in other legislation; for example, in the Mines and Minerals Act, the Forests Act, and the Expropriation Act. Bill 36 respected those provisions and took nothing away from them. Bill 36 actually created a new market-based compensation provision if a landowner retained title but a portion of the land was subject to a conservation directive under a regional plan.

10:20

The Alberta government has good reason to be committed to property rights. First, this is a Conservative government. The rights of the individual is a basic principle of Conservative ideology. Second, many MLAs in this government are landowners. Some, including the Premier, are landowners for the third or fourth generation. We have a personal interest in seeing property rights protected.

In spite of the protections in the act and the government's reasons for protecting property rights, critics with an agenda succeeded in scaring or angering a lot of people over a situation that never existed, and they claimed that we did all of it behind closed doors in spite of a history of consultation going back to 2006, in spite of a populated and accessible website, in spite of public advertising and open houses and information sessions.

The Premier responded. He ordered a review of the Alberta Land Stewardship Act because the intent and the language clearly were being misinterpreted. He made a promise. No regional plan would be approved until the act was clarified to show full respect for property rights, including compensation and appeal and respect for the right of Albertans to be consulted on decisions that affect them.

That brings us to Bill 10, the Alberta Land Stewardship Amendment Act, 2011. The wording of Bill 10 has been clarified specifically to show that all existing rights under other legislations are respected.

In particular, I wish to speak to section 5, entitled Consultation Required. This section creates new checks and balances to ensure a transparent consultation process. As a result, regional plans under the land-use framework must be developed through a transparent and accountable process that requires public consultation. We were already doing that, but we weren't required to do it under the law. Now the law is being changed to require what we were doing anyway as a good practice and out of respect for the opinions of Albertans.

Government recognizes that regional planning needs to be informed by regional representatives and by people who live in the planning region. Regional advisory councils of Alberta have provided advice to the government in the development of the first two regional plans, for the lower Athabasca and the South Saskatchewan regions. Many of the people on these councils live and work in their region, representing a broad cross-section of experience and expertise. They generously provide local perspective and wisdom.

In the lower Athabasca the government conducted three rounds of consultation with the public, stakeholders, and municipalities. The first round was the sessions I already mentioned, in May and June of 2009. Those awareness sessions were held in a number of communities in the lower Athabasca and the adjacent upper Athabasca and North Saskatchewan regions. More than 250 people were involved in 13 public and stakeholder sessions, including two in Fort McMurray. The other communities were Lac La Biche, Bonnyville, Cold Lake, Vermilion, St. Paul, Fort Chipewyan, Fort Smith, Athabasca, Smoky Lake, Wabasca, and Fort Vermilion.

For the second round, in September of 2010, the government sought input on the regional advisory council advice in lower Athabasca and in nearby communities in the adjacent regions and in Edmonton and Calgary. Just under 800 people participated in public open houses and stakeholder sessions in the following communities: Bonnyville, Cold Lake, Fort Smith, Fort Chipewyan, Fort McMurray, Lac La Biche, Elk Point, St. Paul, Athabasca, Edmonton, and Calgary.

At this very moment the government is once again consulting with Albertans on the third phase of consultation, this time on the draft lower Athabasca regional plan.

In the South Saskatchewan region the government conducted awareness sessions in 16 communities in the fall of 2009. More than 850 people participated in the stakeholder and public sessions

throughout the South Saskatchewan. Sessions were held in the following communities: Calgary, Vulcan, Strathmore, Claresholm, Cochrane, Okotoks, Airdrie, Canmore, Lethbridge, Brooks, Fort Macleod, Pincher Creek, Medicine Hat, Taber, Cardston, and Milk River. The advice to government from the South Saskatchewan regional advisory council has been recently released for public scrutiny, and consultation with the public will occur through an online workbook.

[Mr. Marz in the chair]

Aboriginal consultation is also critical and has being conducted in an ongoing and continuous fashion throughout the planning process. For example, aboriginal consultation for the lower Athabasca regional planning has been very extensive and inclusive. Since the regional process began in January of 2009, a total of 79 meetings have been held with aboriginal groups. Twenty-five different First Nations aboriginal groups have been contacted, and an additional 16 meetings will be held this April and June with aboriginal groups to discuss the draft plan.

We are doing all this without the law saying we had to. Now under Bill 10 we have a legal requirement to do what we are committed to doing anyway, consulting with Albertans in developing a regional plan. Furthermore, section 5 of Bill 10 requires that the findings of these public consultations must be presented to cabinet. That's accountability. This ensures that the thoughts, concerns, local wisdom, and the special knowledge of regional residents and other Albertans are brought to the cabinet to assist them with responsive decision-making.

Proposed regional plans or amendments will now be required under the amended section 5 in Bill 10 to be laid before the Legislative Assembly. This is all before cabinet can make a final decision about any plan. This gives all members of the Assembly an opportunity to review a regional plan, the same opportunity they had to review the original Bill 36.

All these aspects of section 5 of Bill 10 contribute to a more open, transparent, and accountable process that engages and involves Albertans. It's what we were doing anyway. Bill 10 makes it the law. By doing so, Bill 10 responds to concerns about accountability and strengthens that commitment to Albertans.

For the sake of increased transparency and accountability I ask you to support Bill 10, the Alberta Land Stewardship Amendment Act, 2011.

Thank you, Mr. Chair.

The Acting Chair: The hon. Member for Edmonton-Strathcona.

Ms Notley: Thank you, Mr. Chair. It's a pleasure to be able to rise to speak to Bill 10, an act to amend the Alberta Land Stewardship Amendment Act. This, of course, is a bill that has received a great deal of political attention over the last few weeks arising from a fairly animated debate within the public about what the implications of the bill are to all Albertans and, in particular, to those who are concerned about property rights. This is something that has been discussed at some length throughout communities in the province, and it raises some legitimate concerns.

Probably the key thing to point out at this point, however, is that those concerns that have been expressed throughout Alberta relate not solely to the Alberta Land Stewardship Amendment Act but really relate as much or, I would suggest, more to the former Bill 19, the land assembly act, and Bill 50, which is related to issues of transmission lines. If any two acts were actually directed at undermining the rights of property owners, particularly in rural Alberta, then it was really those two acts.

It's very disappointing to see the government come here today, in this session, claiming to address concerns but not actually addressing the two acts, which had much more wrong with them in many respects than the third act which has been lumped into this so-called property rights discussion and concern that has been generated in parts of rural Alberta. So it's really quite disappointing to see that neither Bill 19 nor Bill 50 has been addressed.

Just briefly to identify, to go back to that. With respect to Bill 19 we saw situations where we had the ability of the government to designate certain project areas that could easily overlap on private land and put land under a project area order for an indefinite period of time and, thus, substantially impact the rights of the people who own that land. That was a significant concern, and that continues to be a concern that remains entirely unaddressed by any of the efforts that we see reflected in Bill 10.

Bill 50, of course, we talked quite a bit about. That was a key bill that limited transparency and limited public accountability and limited the opportunity for property owners and other members of the public who have an equal interest in many of these decisions, property owners or not property owners, to engage in a discussion about the merits and the degree to which a particular initiative actually met the public interest through the AUC process. That was clearly more evidence of this government's trend towards moving everything behind closed doors and making all their decisions amongst their little group of friends and excluding Albertans from the major decision-making processes in this province.

Bill 19 and Bill 50 were probably the most critical bills, quite frankly, that generated or sparked off a lot of the controversy. Those are the ones that the government is absolutely unwilling to touch because those are the ones that are so important to folks in industry, so the government won't touch them.

10:30

Well, what was Bill 36? What was the Alberta Land Stewardship Act? What was it supposed to do, this bill that the government is now proposing to amend? As we said when that bill first came through, it was premised on several years of consultation, and it was premised on the notion of a land-use framework, which included a number of worthy principles and ideas and policy initiatives. When that bill came forward a couple of years ago, we identified that, certainly, it grew out of a very positive process that was designed to achieve good things in the best interests of all Albertans. Unfortunately, at the time we said: hear this; there are some real problems with how you're planning on going about it. We had some very significant concerns.

One of the concerns that we had at the time, which continues to this day, was that there were far too many mechanisms through which the government would be able to keep ultimate control of what the outcome was and to make those decisions about what the ultimate outcome was behind closed doors, with a tremendous and profound lack of transparency, you know, notwithstanding that we're going to set regional advisory councils, appointed, of course, hand-picked by the government. Those regional advisory councils themselves would just simply make recommendations, but then the government would certainly have the ability to review and revise and have more meetings behind closed doors and then change what those advisory councils were putting forward. That was the kind of thing that actually went directly against the very transparency that the government claimed was part of the original land stewardship approach.

Indeed, what we've seen since then is exactly that kind of thing. We have the lower Athabasca regional plan. We had an advisory panel, that was appointed very much by government. Although there were some good people on that panel, it was definitely a

panel that did not fully reflect the broad range of groups and stakeholders whose public interests were at stake in terms of the outcome of that plan. Nonetheless, the regional advisory committee did come up with a plan and submitted it to the government, and then the government, behind closed doors, clearly had more conversations with people. We don't know who. We don't know on exactly what. We can make assumptions. But we certainly didn't have it all on the public record. Then changes were made.

Then we brought out another draft land-use framework for that area, which, strangely, accorded much more with the wishes and desires of industrial players in that area and ignored a number of the concerns put forward by community members, First Nations groups downstream from major industrial activity sites, and scientists who were concerned about environmental implications. Those things were mostly ignored, and then we sort of went back to what it was that industry had been advocating for most of the time. Of course, that whole process: we didn't see exactly how that deliberation was done. That was all done by cabinet and by the minister. Now we have another draft report, and we don't know exactly what's going to come of it. We won't be at that table when those decisions are made. It'll just be provided to us.

That was one of the problems that we had with the Alberta Land Stewardship Act in the first place. It was absolutely founded on very good principles, but at the end of the day there needs to be a level of trust with this government, and this government has not earned the trust of the majority of Albertans for years and decades. We simply don't have enough trust in this government to let them go behind closed doors and make these kinds of decisions. As a result, some of the concerns around this Alberta Land Stewardship Act have inflamed people from all different ends of the political spectrum because there are so many opportunities for government to fiddle with the process in a way that does not reflect the public interest.

The question now is whether Bill 10, which we're talking about tonight, deals with any of these problems that we first identified when we said: listen; a good concept, good principles, but you're not implementing it in a way that's going to be the best for Albertans. I would suggest that, in fact, Bill 10 does not address many of the concerns that have been raised throughout this process.

What are some of the failures? Well, generally speaking, I think it's fair to say that what Bill 10 will do is it will cause more confusion and more delay and more opportunities for legal wrangling that will extend this period in-freaking-definitely. It is really quite unfortunate because as it is, although there were grand pronouncements and fabulous articulations of good principles around the Land Stewardship Act and around the land-use framework, the fact of the matter is that the government is way behind schedule in terms of moving forward with any of the land-use frameworks.

[Mr. Mitzel in the chair]

When I first got elected, in 2008, we had all of these great, shiny timelines that we could all look forward to, and we are well behind all of them. The Minister of Sustainable Resource Development tells us that maybe by 2017, all things being equal, we'll be there. Well, I think we all know that he's dreaming in technicolour, and I think he knows that, too.

We don't have the resources dedicated to the work, the Ministry of Environment is completely unable to provide the sort of support that's necessary to do the work, and it's clearly an intensely political process, where we go through sort of the facade of public consultation. Then the draft report is picked up, and everyone scurries behind closed doors and meets with countless vested interest groups, and then we come up with another version. Then we delay and delay and delay, and more conversations are had.

We've been waiting around for two years for the first LARC, and we're still not there. I can't even begin to imagine how much longer it will take for that to be complete because I know that it is an intensely political process. I suspect it will be subject to unprecedented levels of ongoing lobbying before we get anywhere with it.

Does Bill 10 change that? No. It just opens the door for that many more opportunities for behind-closed-door lobbying to take place and for more delay to be suffered by Albertans. The thing of it is that, you know, I've heard people argue: well, you know, it's okay because we've got a legal regime in place that sort of deals with the unfettered, unplanned, chaotic development that we see in this province. But the reality is that even that has been put on hold. Whenever we say to representatives of government, "Gee, you know, you do have this other piece of legislation here, and through that maybe you could engage in some form of planning, some form of conservation, some form of disposition, depending on whatever it is that you want done," we're told, "Well, we could, but let's just wait for the regional land-use framework to come into place." "When will that be?" "Well, sometime between now and 2000-and-whenever." In fact, we've actually now succeeded in some ways in crippling the current legislative regime that's in place. That's sort of the general gist of what Bill 10 does.

Now, we see the new section 15.1 under section 12 of Bill 10. It talks about this whole new process. It injects this whole new process, that after we've gone through this five-, 10-year process, however long it is until we actually get to a land-use framework plan in a particular region, well, then there's the opportunity for applications for variances to be made.

The trigger or the basic level that makes one eligible to make a variance is so low that we will probably see nothing but variance applications for another two years afterward, which will effectively render the regional plan unrecognizable in many cases. Even if it doesn't, it will ensure yet more delay. So I'm not really entirely sure how well thought out that process is, and of course it all goes to the minister, who's not having public hearings. You know, we're not seeing what the arguments are in public, in a transparent way. There's just an application, and the minister kind of goes: maybe, maybe not. This actually puts more discretion back to the cabinet, back to the minister, which is exactly the kind of thing that everybody said was one of the fundamental problems with this act when it first came through. So that doesn't fix it.

10:40

Then we have this whole question of: what triggers the ability to apply for a variance or for variance reviews? It's no longer the kind of thing where we're looking at simply sort of the loss of a land right, but we're now looking at any kind of – I think language is diminution of property value. That's a tremendously vague term. Again, I think what we're going to end up doing is opening the door to copious applications, that will invariably delay the whole thing and ultimately mean that this act dies an untimely and very early death. I mean, it's already on its way because it's very clear that the political will and the resources to support this initiative are only partially supported by this very divided government caucus. It's very clear that it's already, you know, starting to heave its last breaths, but this will ensure that it really does.

You know, another point that I came across in doing a little bit of reading around Bill 10 and what it stands for is this notion that we have the new 19.2, which allows persons directly affected to request the review of the regional plan. I find it very concerning that people who are directly affected, i.e. the property owners,

his life, decided: oh, we'll protect property rights. Here we are 800 years later, and coming up in three years, we're going that full circle, where we think that the king should be able to make the rules and say: "This is what's best for these areas. This is what we're going to invoke, the plan." Again, like I say, it's so comical to think that they would go to a regional advisory committee and say, "What do we need to do there?" and then pass that off to the minister to say, "Now it's yours, and you can go" when they supposedly are relying on a regional advisory committee. Yet they're empowering the minister to make those decisions, to have the discretion to say: "You know, we're not going to listen to the regional advisory committee. We've listened, we've consulted, but we don't have to do."

The most important thing, if we really want to have accountability, is to pass recall. A Wildrose government will have recall, and when government steps out of line, we can stop something. I see the hon. Member for Edmonton-Centre is shaking her head, afraid of allowing the people to hold the power. There's nothing more important than power in the people's hands and accountability 24/7, not once every four years.

Ms Blakeman: Recall doesn't do that.

Mr. Hinman: It does. People haven't researched it. They don't understand it.

We need accountability, and this bill doesn't give accountability. It's just the opposite. It empowers the cabinet. It empowers the minister to make arbitrary decisions over land, over development, over industry, and basically instead of extinguishing rights, they now say that they're going to rescind rights. [interjection] Isn't it interesting that the Minister of Energy is now commenting that he likes to support the Liberals. We've always known that, that they're closer to the Liberals' thoughts.

Again, big government is better government in their mind. This bill absolutely shows that. We understand the intent, what they want with this, Mr. Chair. It's a sad day for Alberta that this bill is going to pass out of Committee of the Whole this evening with no amendments accepted though the government has brought forward numerous amendments because of their shortfall. It's very disappointing.

With that, I'll sit down, and the Energy minister maybe now wants to pontificate on why it's so great.

The Deputy Chair: The hon. Minister of Justice and Attorney General.

Mr. Olson: Well, thank you, Mr. Chair. I don't believe I have too much time left to speak here, but I just want to get a few comments on the record. I'm happy to speak to this Bill 10 because I am a third-generation rural landowner. I have a passion for my land, and I know all of my neighbours around me have a passion for their land. I'm also a lawyer, and I'm familiar with a circumstance where lawyers don't agree on any number of issues. With that in mind, you know, I want to talk a little bit about what motivates me to support this bill and also to have supported Bill 36.

This is difficult because anytime you're talking about planning, you are potentially talking about limiting people's rights. When I go to a meeting of landowners who have concerns about property rights, I'm thinking they probably drove on a highway that went past somebody's house, that maybe limited their rights because maybe there wasn't always a highway there. The fact of life is that we have to plan for the future in Alberta. This legislation is about planning for the future, and we have to create a balance between protecting property rights, which I am passionate about, while at the same time planning.

The Deputy Chair: I hesitate to interrupt the hon. Minister of Justice and Attorney General, but pursuant to Government Motion 15, agreed to on April 27, 2011, the time allotted for debate in Committee of the Whole on Bill 10, the Alberta Land Stewardship Amendment Act, 2011, has expired. I must now put the following question. On the clauses of the bill, are you agreed?

[The voice vote indicated that the clauses of Bill 10 were agreed to]

[Several members rose calling for a division. The division bell was rung at 11:30 p.m.]

[Ten minutes having elapsed, the committee divided]

[Mr. Mitzel in the chair]

For:

Ady	Goudreau	Prins
Allred	Groeneveld	Renner
Benito	Knight	Rodney
Bhullar	Leskiw	Rogers
Campbell	Liepert	Sarich
Denis	Lukaszuk	Tarchuk
Drysdale	Marz	VanderBurg
Elniski	McQueen	Webber
Fawcett	Olson	

Against:

Anderson	Kang	Pastoor
Blakeman	MacDonald	Taylor
Hinman	Notley	

Totals: For – 26 Against – 8

[The clauses of Bill 10 agreed to]

[Title and preamble agreed to]

The Deputy Chair: Shall the bill be reported? Are you agreed?

Hon. Members: Agreed.

The Deputy Chair: Opposed? That's carried.

The hon. Deputy Government House Leader.

Mr. Renner: Thank you, Mr. Chairman. I move that the committee rise and report Bill 10.

[Motion carried]

[Mr. Mitzel in the chair]

The Acting Speaker: The hon. Member for Calgary-North Hill.

Mr. Fawcett: Thank you, Mr. Speaker. The Committee of the Whole has had under consideration a certain bill. The committee reports the following bill: Bill 10. I wish to table all copies of amendments considered by the Committee of the Whole on this date for the official records of the Assembly.

The Acting Speaker: All those members of the Assembly who concur with the report, please say aye.

Hon. Members: Aye.

The Acting Speaker: Opposed, please say no. So ordered.

Province of Alberta

The 27th Legislature
Fourth Session

Alberta Hansard

Tuesday evening, May 10, 2011

Issue 33e

The Honourable Kenneth R. Kowalski, Speaker

Legislative Assembly of Alberta

7:30 p.m. **Tuesday, May 10, 2011**

Government Bills and Orders
Committee of the Whole

[Mr. Mitzel in the chair]

The Deputy Chair: I'd like to call the committee to order.

Bill 16
Energy Statutes Amendment Act, 2011

The Deputy Chair: Are there any comments, questions, amendments to be offered with respect to this bill?

Some Hon. Members: Question.

Mr. Chase: We all wish. It's not you wish; it's we all wish tonight.

With regard to Bill 16, Energy Statutes Amendment Act, 2011, I had already expressed my opinion that for the most part I was supportive of Bill 16. There is concern, however, in our caucus – and it's important to get that concern on the record – that this is such a complex bill that while we've received a certain amount of briefings and we appreciate the briefings that we've received, there are still unanswered questions as to the extent of this bill.

We continue to have concerns with regard to the sequestration aspects of it. We have a good understanding of the value of the coal resource, as I pointed out when I first spoke to this bill, and the idea of the gasification of coal I very much appreciate. The underground process involved is somewhat of a concern based on the sequestration elements involved. The government has chosen to spend $2 billion on carbon sequestration, which is not an absolutely solid-proof science, but that large commitment of funds is a concern to us. The federal government has kicked in approximately a billion dollars, so we've got $3 billion worth of taxpayers' funds riding on this, and we don't have a similar commitment from industry. In other words, there isn't a $6 billion pool out there should things not work as we would hope. Industry to a large extent has been left off the hook on this particular bill just as they're left off the hook when we get to be talking about Bill 10.

Those are the primary concerns that we have. The idea of the regulatory framework is important. Obviously, we need those regulations. We'd like to see the role of the ERCB in terms of the regulatory process strengthened. As I mentioned before, and I don't want to go into detail again: the possibility of the regular gasification of coal as opposed to putting it up the chimney, as is currently the process, and adding to the pollution. Despite Premier Klein's assertions there is no such thing as clean coal. We have cleaner versions of coal in Alberta, but it's a myth to suggest that there is no pollution associated with the burning of coal. Whether it's turned into a synthetic gas or not, there are still emissions that have to be dealt with.

Those primarily, Mr. Chair, are the concerns that I have over Bill 16. The complexity, as I say, will hopefully not come back to bite us at some point in the future.

Thank you, Mr. Chair.

The Deputy Chair: Any other members wish to speak?

Seeing none, I will call the question.

[The clauses of Bill 16 agreed to]

[Title and preamble agreed to]

The Deputy Chair: Shall the bill be reported? Are you agreed?

Hon. Members: Agreed.

The Deputy Chair: Opposed? That is carried.

The hon. Deputy Government House Leader.

Mr. Zwozdesky: Thank you very much, Mr. Chairman, and thank you to all members for their support at this juncture of Committee of the Whole on Bill 16. I would move that we now rise and report the Energy Statutes Amendment Act, 2011, otherwise known as Bill 16.

[Motion carried]

[Mr. Mitzel in the chair]

The Acting Speaker: The hon. Member for Whitecourt-Ste. Anne.

Mr. VanderBurg: Thank you, Mr. Speaker. The Committee of the Whole has had under consideration a certain bill. The committee reports the following bill: Bill 16.

Thank you, sir.

The Acting Speaker: All those members that concur with the report, please say aye.

Hon. Members: Aye.

The Acting Speaker: Opposed, please say no. So ordered.

Government Bills and Orders
Third Reading

Bill 10
Alberta Land Stewardship Amendment Act, 2011

The Acting Speaker: The hon. Deputy Government House Leader.

Mr. Zwozdesky: Thank you very much, Mr. Speaker. On behalf of the hon. Minister of Sustainable Resource Development it's my pleasure to move Bill 10, the Alberta Land Stewardship Amendment Act, 2011, for third reading.

The Acting Speaker: The hon. Member for Calgary-Varsity.

Mr. Chase: Thank you very much. Bill 10 is the equivalent of trying to stuff the winds back into Pandora's box and then keep them there when they should never have been released in the first place, as was the case with bills 50, 36, and 19. I will give the government credit for trying to repair three pieces of questionable legislation, but this doesn't quite achieve what the government had intended.

I have spoken in praise of the former minister of sustainable resources, who is now seeking the leadership of the Conservative Party, for dealing with land stewardship. Unfortunately, we just got basically to the opening chapters. A previous minister, prior to my time in this Assembly, Lorne Taylor, talked about the idea of water stewardship, the blue gold aspects. He is still sort of in the background in terms of being connected with the location and mapping of underground aquifers, which is part of the whole process of stewardship.

Unfortunately, what has happened is bills like Bill 50, Bill 36, Bill 19 are the equivalent of the cart before the horse because until the actual land stewardship is dealt with we have a series of one-

offs. We have, for example, the one-off that is happening in the Castle-Crown area, and that's the clear-cutting where over a period of 30 years one-third of the Castle will have been decimated with this approach to clear-cutting.

Also, with regard to land stewardship in the north the government continues to approve ever-growing tailings ponds. The new methodology, whether it's the sun-dried, spread-it-out, scatter-it-across circumstances, is not keeping pace with the ever-expanding tailings ponds. This is another concern I have.

Also, the whole idea of land stewardship – the land-use framework is the term that I've been searching for – started off correctly in terms of identifying six regions based on water. Obviously, water has to be our starting point. The current system, where anything goes anywhere at any time, makes the whole notion of the land-use framework of no consequence.

7:40

This is a concern that Bill 10 is attempting to address but still does not provide sufficient relief, I guess would be the word I would use, for individuals concerned about the expropriation of their land. The highlights of this bill are that it allows for a wider consultation process, both before a regional plan is developed and when plans are being amended. It allows for compensation for those who are directly impacted, and it apparently allows for appeals regarding either a regional plan or an amendment to a regional plan.

Mr. Speaker, we're aware that there has to be a balance between private ownership and public good. For example, the Liberal Party believes that the rapid rail, the speed train from Calgary through Red Deer and on to Edmonton, is a very good concept. There are chances that, depending on which route is taken – and of course the people in Red Deer hope it goes by their municipal airport because they've purchased land there to develop a station, hoping that that will be the chosen route. But there is the possibility that individuals along whatever right-of-way is chosen will not necessarily agree with the land price that is being offered by the government.

Under certain circumstances for the good of the entire province expropriation has to happen. It's the scale of expropriation that concerns people, particularly with regard to the utility corridors. There is an awful lot of doubt, particularly with the route chosen from northern Alberta to carry electricity down south, where, despite a slight improvement in the price of gas, the idea of local production of electricity as opposed to lengthy line losses is still a preferable option. People aren't convinced, an awful lot of rural landowners aren't convinced that this isn't just taxpayer subsidized, whether it be $10 billion or $16 billion, for the company to export our power down south.

The people in Montana aren't exactly thrilled about what's happening either. We've seen what's happening in terms of Montana and Idaho with bringing up the heavy equipment for the Kearl project. So there are legitimate reasons for people to be concerned about who's benefiting from this Alberta Land Stewardship Act.

We still, unfortunately, create a lot of our energy through coal. It's not the gasified coal. It's the up-the-chimney, polluting variety. In terms of our bitumen processing developments we're putting out an awful lot of chemicals unscreened through the chimneys there. So what's happening is that we are benefiting the countries to whom we export, but we're basically, to use the bird analogy, fouling our own nest, and other individuals are reaping the benefits of our lack of balance.

Now, there is no doubt that we need to expand our exports. There is a concern – and it possibly is playing politics with President Obama – and whether the line down south is not only going to export bitumen but is going to export jobs, it is going to be a circumstance worthy of pursuing.

I believe most members in this House, Mr. Speaker, have seen presentations by Dr. Brad Stelfox where he takes us back to the first oil and gas discoveries, the first development of cities. In other words, he takes us back, rolls the clock back to about 1905, and then with a series of dots he brings us up to where we are in 2011. Then he expands the notion of, if we continue at the pace we're going, what Alberta is going to look like and what places, unfortunately, are going to be overrun if the industrialization continues at the pace it is going.

Land stewardship is about a balance between industrial growth and environmental protection. I think a number of us in this Assembly are either parents or some of us have reached that grandparent stage, and passing on a legacy of value to our grandchildren and our children is extremely important. The Alberta Land Stewardship Amendment Act attempts to make the process more open, more subject to appeal, but this government is going to have to do an awful lot of convincing, particularly in the rural areas affected, that it's acting in the best interests of landowners as well as the best interests of the province in terms of going forward.

Regardless of the concerns that opposition members will be expressing tonight, this bill will go ahead. The government will pass it, and Albertans are left basically holding their breath and once more, because they don't have much choice until the next election is called, trusting that the government is not going to steamroll their land acquisition.

As I began, Mr. Speaker, we've got bits and pieces. We've got a series of loose ends which are not going to be tied together by Bill 10. The whole land act remains basically on hold, so it's an anything goes circumstance.

Mr. Speaker, I don't wish to hold the floor. I have expressed the concerns I have that Bill 10 does not go far enough in relieving the pressure or providing the stewardship that its name suggests.

Thank you for the opportunity, Mr. Speaker.

The Acting Speaker: Any other members wish to speak? The hon. Member for Calgary-McCall.

Mr. Kang: Thank you, Mr. Speaker. My colleague from Calgary-Varsity shed some light on Bill 10, the Alberta Land Stewardship Amendment Act. This goes on to correct some, maybe all of the fears that were created by Bill 36, Bill 19, Bill 50. If we had had Bill 36 done correctly, we wouldn't be here today.

The bill is designed to take some power away from the cabinet, which was originally awarded to it not by a bit but in heaps, and allow compensation for those who were directly impacted by the regional plans. It also creates a public appeals process, all well and good. It also changes "extinguish" to "rescind" in section 8.

However, amendments to this bill do raise some concerns regarding the extent of future regional plans. Will what we see coming forward from regional advisory councils and later the government be too weak or have any real impact in protection of the environment? Is it out of concern that if they're too forceful, the government will face appeal after appeal?

The bill does remove some of the powers that had originally been given to the cabinet, which is a positive move, and it provides for a greater consultation and opportunity for compensation.

7:50

Section 5 requires consultation with respect to the proposed regional plan and requires that proposed regional plans or amendments be tabled in the Legislature. Further on section 14 amends section 19 of the act. This allows the person who is directly or adversely affected by either the region plan or the amendment

plan to request a review again within 12 months. Section 5 requires a proposed regional plan or amendments to be tabled in the Legislature. Will this be debatable as a concurrence motion, for example, or will it simply be tabled, and we move on? There are lots of questions still that have to be answered.

We do not support the expropriation of land without due process, Mr. Speaker, including a public process, a formal appeal process, and appropriate compensation. This bill does address some of these issues, but we continue to have some questions about how.

While the Land Stewardship Act does offer some positive mechanisms for long-term planning for the development of our key resources and our land, this must be done with a transparent public process, and the power should not be exclusively in the hands of cabinet, with decisions to be made behind closed doors. We do believe in the protection of Alberta's Crown lands, sustainable development of our resources, and the growth of our urban communities.

With Bill 16, that we just passed, I don't know what kind of impact those developments in the province are going to have on the environment.

There are so many issues that Bill 16 has created. Even with Bill 10 I don't think we are going all the way. It must provide a fair expropriation process, a transparent process of determining the need for the project. Is it, in effect, for the public good? It must also include fair compensation when land is expropriated. There should be a clear process. With all those issues, you know, we're still not really clear with Bill 10. We still have our concerns, Mr. Speaker.

With that, thank you for the time.

The Acting Speaker: Any other members wish to speak? The hon. Member for Lethbridge-East.

Ms Pastoor: Thank you, Mr. Speaker. I have some notations that I got from the Red Deer Chamber of Commerce, and I'd certainly like to share them on Bill 10. One of the comments was that

> the imminent passage of Bill 10 and the proposed process of adopting each regional plan independently represent a potential for significant economic instability which may generate a lack of investor confidence.

I believe what they're getting at here is that there will be long-term, cumulative effects, and if things are done piecemeal instead of looking at what should be anticipated as long-term effects, how these long-term effects would affect different regions.

In the long run, ultimately, the land-use framework will be the overriding legislation that will probably try to draw it all together, but in the meantime many of these regional plans have gone ahead and may well have to be adopted if the land-use framework is the umbrella that would be over top.

In section 19.1, which is the compensation, which is certainly one of the more contentious issues in bills 36 and 10,

> according to Section 17(4), the Alberta Land Stewardship Act takes precedence over all other legislation including the Expropriation Act. This is a serious concern for the Chamber of Commerce as this Act gives our government over-arching authority to affect the future value of property and impact property development . . . Simply stated, the government has the power under this Act to impact the value and marketability of real property, both in the short term, and the long term.

It's their opinion that

> this section of the Act needs to be enhanced to protect and preserve the interests of the private landholder and interested parties.

Certainly, in Crown land, et cetera, I believe that interested parties are actually sometimes always all Albertans, not just somebody that happens to be within a small radius of a particular problem. That small radius or that problem could well affect us all. I think the woman in Rosebud has already spoken to the United Nations about her problem and the fact that fracking has affected her water supply from the water well. So this is a concern. It should be all Albertans that really understand what's going on in each area and how each area would be affected both short term and long term.

The protection and the preserving of the interests of the private landholder and the other interested parties would recognize injurious affection and the concept of fair market value.

> The definition of Market Value does not fairly consider that a forced devaluation is different from a sale [between] a willing seller and a willing buyer. A willing seller would choose the time to sell the property. [But] the case law under the Expropriation Act recognizes this difference and considers "highest and best use" in its deliberations by expanding the consideration beyond what would normally be considered in a market analysis. ALSA attempts to limit compensation to a "fair market analysis." This is a significant variance and places the burden of loss on individual land-owners and those with present or future interests in land, who are negatively impacted by the Plans.

The recommendations that the Red Deer Chamber of Commerce wanted the government of Alberta to consider were

> (1) Delay the third reading of Bill 10 and immediately conduct a thorough review of all other legislation that would be impacted by ALSA, since it is intended to take precedence over any other Act;
> (2) Prior to passing Bill 10, hold a moratorium on all Regional Plans under the Alberta Land Stewardship Act, keeping it open and active until all regional plans have been submitted and all issues related to procedural fairness have been fully set out and codified in the legislation;
> (3) Prior to adopting any of the regional plans, appoint an independent adjudicator to review each and all of the regional plans individually and collectively to ensure that appropriate public consultation has been considered; and
> (4) Prior to adopting any of the regional plans, conduct a thorough assessment of how any one plan may impact or interact with the plan of another region, and how all of the plans as a whole impact investment, development, and competitiveness throughout the Province of Alberta.

As we know, we live in a global economy, and I believe that investment, development, and competitiveness throughout the province of Alberta are important. However, they certainly will reflect, in the end, how we compete in the global market.

Thank you, Mr. Speaker.

The Acting Speaker: Standing Order 29(2)(a) is available for anyone who wishes to comment or question. The hon. Member for Calgary-Varsity.

Mr. Chase: Thank you. To the hon. Member for Lethbridge-East. I know there is considerable concern about two situations happening in southern Alberta. One is the potential exporting of electricity to the States and the transmission towers that will be necessary to put in place, that will take up a significant footprint in southern Alberta. Then there is also the concern that has been raised in a number of local papers and by local citizens, and that's the clear-cutting of the Castle-Crown. I wonder if the member would like to comment on those two southern Alberta concerns.

The Acting Speaker: The hon. member.

your $675 back." Whoop-de-do. Big deal. Poke you in the eye. He has probably put out $30,000.

Bill 10 has this: if there's a problem of how you're being compensated for what we're taking back – rescinding, extinguishing, whatever word the government wants to use – you can make a variation to the minister, and he'll be happy to listen. We need the court of law. The minister's office has already very much told him: "You know what? You're going to get your $675 back." That isn't what it's about. He has already struggled trying to raise capital to do exploratory mining here in the province.

Again, when mineral leases, mineral permits are rescinded at the whim of the minister, there's no stability. He says that Alberta is the absolute worst place in Canada to try and open and develop a mine. This is one of the reasons why. It's because of Bill 36 and Bill 10 and this government's bulldozing. It's interesting to use the term "bulldozing" because that's what his family first did when he was very young. They had a D8 Cat and did bulldoze mining up in the Yukon to expose the rock. [interjection] It would appear that the Minister of Infrastructure wants to make a comment. I will really enjoy his time to get up and comment on this, seeing as how there is a time allocation. You'll have your 15 minutes. You can answer it or ask me under Standing Order 29(2)(a).

It's just really disappointing that this government doesn't understand that there was a turning point in history – and the member brought it up – in 1215 with the Magna Carta where the people, the citizens of the country had had enough of the dictatorship. They wanted property rights, and 1215 was a turning point.

This bill is a turning point, but it's a turning point in the wrong direction to where people once again no longer have the recourse to the courts. It's a recourse to the minister, who is going to make his own judgments on his own bias and say: "Oh, no. We're compensating you fairly. You never should have invested $30,000 in that mineral permit. Why would you do that?" When his friends went up to the Yukon or Northwest Territories, he said: "No. This government gets it, and I've been assured that this is a safe place to try and develop and to get the mining going." It's just extremely disappointing that this government doesn't understand that. It's screamed to investors throughout the world that it doesn't in this Bill 10 in the fact that there is no recourse to the courts. It's explicit in there that there is no recourse to the courts. It's a recourse to the minister.

8:30

The other thing that they've done very, very well and the best legislation – and my computer, lo and behold, when you're counting on it, won't open up tonight in here, so I can't get my notes that I need. There's an individual out east who looked at Bill 36, and she says that she's never seen such a well-written piece of legislation that crafts it to say that this is a plan, that this is a government policy. When they craft and use those words in legislation, which Bill 10 fails to amend, what it means is that there is no recourse to the courts because it's government policy. When it's government policy, you can't be compensated through the courts on that. It takes the whole process out of the courts and lands it right in the lap of government and government ministries. At best, cabinet or maybe a few more people will debate it.

I was down in Eckville. I witnessed the government trying to defend this. I guess, you know, to show due respect to the government members who were there, none of us outside of the government MLAs were bright enough to understand that these amendments protect us. People just don't buy it. If, in fact, we're all wrong on this, then amend it into language that the common people – those who own property, those who have mineral permits, those who have oil and gas leases – can understand and feel comfortable with. But the bottom line is that those who want to invest in this province look at it, judge it, and they say: "You know what? There's a red zone around here." It's a red zone.

I remember a conference down in Florida back in 2009. There is a red zone around the oil and gas industry because of the new royalty framework, and that red zone is a communist zone. It's a five-year plan zone saying that we don't know which oil and gas companies, which mineral leases, which properties are going to be rescinded by this government and protected from the courts. There's no recourse to the courts.

It's unacceptable, Mr. Speaker. We should not be passing this bill. Bill 10 is wrong. Albertans have spoken out throughout this province. I would ask the government, the Minister of SRD now: what other rallies, what other groups have been so outspoken and come forward since Bill 11? I can't remember which year that was, when they were changing the health care, when people came out by the hundreds, by the thousands to oppose this. Yet this government just bulldozes ahead and says: "Oh, trust us. Trust us. We know what's best for you." History has proven time and time again that government doesn't know what's best for the people.

You know, we always get caught up in our passion. But if central planning is so wonderful and is the way to go, then why don't we go to our senior brothers in Ottawa and say: "Oh, you're more senior. You're bigger. You're smarter. Why don't you look after our planning and tell us what we can and can't do here in the province?" Better yet, why don't we go to the UN and say: "You know what? You're looking after world peace, world interests, and the environment, and you put out these edicts. Why don't you be the ones to tell us what we can and can't do here in Alberta?" I mean, is there any purpose in a sovereign nation with that attitude of centralization? I would say no. We're giving up our sovereignty. The people, the businesses, the entrepreneurs are giving up their sovereignty in this bill to a cabinet minister, who is going to say: we know what's best.

I kind of get a chuckle out of the idea that, you know, local planners sometimes will say: "You know what? There are not going to be any more bridges built across this river that divides our town in half." They go through excruciating pain sometimes for 20 or 30 years before they finally admit: oh, well, you know, what we should have said was that there'll be no more houses built outside this area and only up. But they limit something like a bridge across a river and say: there'll be no more of those because we want to protect the river. Yet the people keep coming and building.

This bill is going to be the downfall of Alberta. It's going to crush our economy. The question is: when? How long? Is it going to be death by a thousand cuts, or is this government going to do something drastic, like it did on January 1, 2009, when they implemented the new royalty program? They'd already done two years' worth of damage to the industry and then said: "Oh, no. It was the economy." No. It was the rules, the regulations, and the legislation that this government passed with its idea that centralization is best. Central planning hasn't worked anywhere in the world. We all relate it back to the Iron Curtain countries, where central planners say: "We know what's best. We'll tell you what industries to build and what other ones you can't build."

We need to go back to the founders. We want peace. We want prosperity. We want pristine wilderness here. How do we do that? How do we create the wealth of our nation? Adam Smith wrote it right back in the 1700s. It's by allowing those people to develop their resources, to use their intelligence, to have universities, to develop how they want to in a sovereign nation, develop and compete how they want to.

This government is squashing all of that. It's putting the fear factor over the entrepreneur through the individual who raises capital to have a new idea that might be something with new non-renewable energy, or it might be renewable energy. Can we do that? No. The government, again, with its new Premier's council on the future is saying: "We know best. We're going to tax a huge amount to go forward." This is all part of a package – Bill 19, Bill 36, Bill 50, Bill 10 now – of central planning at its absolute worst, which is not going to allow us to recover and to enjoy the peace, the prosperity, and the pristine wilderness that we have here. To step in and to write off a whole area might be the absolute best we have.

What are they going to do with shale gas? How are they going to implement this? There are so many areas, Mr. Speaker, we could and should be looking at, but it goes back to one important point, and that is the rule of law. Are we going to respect the rule of law? Are we going to have a constitutional democracy that protects the individual's life, their freedom, and their property, or are we going to have a government that says: "You know, it's in the best interests of the people that we're doing this, and it's okay to sacrifice a few"? This sounds like a war that's going on. A percentage of those first soldiers: we know we're going to have a loss. There's no reason to have an economic loss.

The Acting Speaker: Standing Order 29(2)(a) is available. The hon. Member for Calgary-Varsity.

Mr. Chase: Thank you. The hon. Member for Calgary-Glenmore has a southern perspective. You farmed, I believe, in the Cardston area. What we have been proposing for a number of years in terms of land-use framework and sustainability is the idea of returning the land in the Castle-Crown, which is relatively close to where you were – it's kind of en route – to a provincial park, the Andy Russell I'tai Sah Kòp park, and the protection of areas, whether it be for parkland or environmental purposes; in other words, establishing a balance. I'm just wondering how you feel about some of the clear-cutting that's going on versus the preservation of parkland. Back in the 1930s this land was part of Waterton park, and I'm wondering how you feel about allowing one-third of it to be clear-cut and other questionable uses. As a landowner in that area how do you feel?

The Acting Speaker: The hon. member.

Mr. Hinman: Yes? Oh, I thought that you were going to give me some counsel or something.

The Acting Speaker: I was hoping you could draw it into Bill 10.

Mr. Hinman: Well, I don't know how I can with that question. Perhaps you could give me some guidance.

Mr. Chase: Land use.

Mr. Hinman: He's saying land use, so I guess, Mr. Speaker, what he's bringing up and what I would point out in relevance to Bill 10 is that that is a watershed area. Again, you know, I think that the South Saskatchewan is going to be the next regional plan that's going to be coming forward.

The important part, I guess, looking at this and relating it back to Bill 10 and the problems that it causes, is that here we're having decisions made in Edmonton rather than by the local people. Those local people should have a far greater impact on deciding what is right and how they want to develop. Probably the most exciting part about having, you know, local regional areas decide those things is that they might want to try something different. Maybe there's an area further north that does want to clear-cut, and everyone else looks and watches and observes that and says: "Look at the problems that they're having. Let's not do that in our area. Let's have selective cutting. Let's have this boundary area."

8:40

Human nature is that we all want to progress and do better, and we love to live in wonderful, clean environments, but when you have a regional plan that's pushed down on you and they make those decisions, whether it's good or whether it's bad, there's nothing that we can do, and we don't get to try those things. I mean, many people have tried and failed, but others have looked at their failures and have been able to turn that into success. This is the problem with central planning. One area might come up with a new, innovative way or pass new laws or legislation saying: this is how you're going to care for the forest in this area. Then, we're all going to turn our eyes to that and say: wow, that's really innovative, and it really doesn't cost more. We can allow smaller lumber companies to come in and do selective cutting or to do those other areas.

The whole problem with this is the fact that what we're going to have is a central planner deciding everywhere, and what might work great in northern Alberta in a vast tract of 20 million acres for forestry to do some clear-cutting doesn't work down where you have major slopes, running water, fish habitat. Yet that person says, "Well, it worked here," and wants to impose that.

So what we need to do is to go back and respect property owners. We need to respect local people to actually make a decision: this is what we want. Whether they want more or fewer subdivisions, let them decide it, not have it imposed by some bureaucrat or higher government official saying: "Oh, why don't we step down and say that, you know, Calgary and Edmonton can no longer expropriate any land. You live within your borders. Done." That would change a lot on the development and the problems that we're facing if we were to do something like that. So it's just disappointing that we get to that point, that aristocracy where we know best, that we're entitled to make those decisions. That is so backwards. That is so wrong, in my opinion.

So many people have come and talked to me. They're so concerned about whether they're going to make this decision: oh, we need $16 billion worth of power lines. Why? Because the parameter that they've set up is zero congestion when they don't think we should be paying . . . [Mr. Hinman's speaking time expired]

The Acting Speaker: Any other members wish to speak to the bill? The hon. Member for Airdrie-Chestermere.

Mr. Anderson: Thank you, Mr. Speaker.

Mr. Hinman: It's funny that the government member leaves when it's his opportunity to speak.

Mr. Anderson: Aw, who knows?

You know, I always find it really funny when we talk about this bill and the peanut gallery over there just gets so uptight and chatty. You know, if you have nothing to worry about, if you're not worried about losing your seats or anything like that, why babble? Why chat? Why chirp? Anyway, it's interesting. It's almost like they've got something to fear, and if they don't, they probably should.

There's a huge failure to listen on the part of this government, and a huge failure, in particular, by the rural MLAs to listen to their constituents. There's just a total, utter lack of respect for what their constituents have been telling them for the last months

upon months and months and months and months. It's funny that the former Justice minister from Calgary-Elbow and the leadership candidate, an urban MLA, has actually listened and has actually done the right thing and decided: "You know what? We didn't look at this as closely as we needed to. We made some mistakes on this. We need to go back to the drawing board."

Mr. Hinman: She might actually want to be the Premier.

Mr. Anderson: Yeah, she might actually want to be the Premier. Who knows?

It's just amazing to me that she would figure that out while the peanut gallery over there, the rural MLAs for the government, continue to be the biggest promoters of this act. It is absolutely ridiculous, in my view. We don't have any excuse anymore. From when this bill was introduced to passage, it was done quickly. It was done in just a couple of months. We barely had time to review it.

Mr. Hinman: It was a big, thick bill.

Mr. Anderson: It was a big, thick bill, et cetera, and it was passed.

You know, people can make mistakes. I certainly made a mistake because I sat in this House and supported it. I spoke to it and said that it would adequately protect land rights, as the hon. Member for Livingstone-Macleod still loves to point out. You know what? We all make mistakes, and I certainly did make a huge mistake there. I apologize to Albertans for supporting this bill. That was wrong to do, and I'm more than happy to be accountable for that moving forward.

But I'll tell you: I don't understand why after this year and a half that's gone by since then – I mean, it's almost been two years that have gone by – the rural government MLAs in particular still fail to get it. They're not listening to their constituents. The constituents have passed the verdict. They've gotten educated on it, and they've passed the verdict on the bill. They don't want it. It is too much of a central planning document.

That's what it is. It's a central planning document. Just because you go and talk to a regional RAC that you appoint does not make it a regional document. It's a central planning document, plain and simple. The minister doesn't have to listen to the RAC. There's nothing in the legislation that says that he does. As long as he feels that he has consulted properly, he can do whatever the heck he wants. That is not regional planning. That is central planning. And to say anything otherwise is just completely separated from reality.

I don't understand because I know that there are – you know, it isn't about the intentions. I know that the members over there, particularly the rural government MLAs, are not anti property rights, but they've gotten into this blinder thing where all they can hear is the drivel coming from their bureaucracy telling them that this is the right way to go and from this Premier telling them that this is the right way to go. [interjection] It's drivel, and you should know that, hon. member. You should know that.

I mean, how many times did we sit there and listen about the blue blobs? You remember those conversations we had with the Minister of Municipal Affairs and others about the blue blobs and how that would affect your constituency if they didn't have a veto over those things? You remember that? You were an advocate behind closed doors of that. So why not stand in this House right now and be an advocate for it? I don't understand.

I'll tell you: that's when I became absolutely aware that this was going down the wrong track fast, when we got into the nuts and bolts of actually how this was going to be implemented and who was going to be forced to join the Calgary regional plan, for example, the Calgary Regional Partnership, and we started talking about how that was going to be possibly imposed on our county, the one that the former agriculture minister represents, myself, as well as the members for Foothills-Rocky View and Strathmore-Brooks.

We started getting into that, and it became very clear very quickly that what was being talked about here was imposing a set of regional requirements, the density requirement that our communities would have to abide by and would have to build according to moving forward if they were forced into the regional plan, otherwise there would be no water for them, and that they were going to be forced to join this. Well, that scared the heck out of me because I knew that my constituents sure didn't want that, my rural constituents. So we talked as a group on that, and it became very clear that that is exactly where the government was headed.

Now, I don't know when they're going to force those counties to join the Calgary Regional Partnership or if they're going to do it before the next election. I don't know. But I'll tell you one thing. That's when I knew that this was a BS document. That's when I realized that this was nothing more than a central planning document that was going to enforce the will of cabinet and the will of the bureaucracy, frankly, on locally elected councils and locally elected officials. It's wrong. From that point on, you know, things started to go downhill. It certainly wasn't more than a couple of months after that that I crossed the floor.

There have been other things since then. In listening to the presentation from Keith Wilson, who I'd never even met till three months ago, when I went to Crossfield to listen to his presentation – I'd never met the guy. He's a lawyer. I went in to listen to him. He knew about property rights, and he's done these transmission bills before. He's been involved in those cases and those hearings before. I went and listened to him, and I'm telling you that is a convincing and compelling case. It is.

It's not just him talking about it. There's Richard Jones, who's going to be running against the Minister of Housing and Urban Affairs in Calgary. Twenty years at the bar, a water rights expert, going to be running here for the Wildrose in the next election. Before he was running for us, he came to us and said, "Do they realize what they are doing here?" and went through the bill and tried to make people understand how this type of government centralized planning was going to affect those with water rights moving forward and the dangers that it presented.

8:50

These are not stupid people. These are people that are leaving huge amounts of money behind to run, to travel the province in Keith Wilson's case. As far as I know, he doesn't have any intention of running, but he's travelling the province on his own dime to get this message out. On his own dime, not paid as far as I know. He's not paid. [interjection] Not paid at all. Very sure.

On top of that, you have the member that is going to run there in Calgary-Acadia leaving a – who knows? – million-dollar-a-year job just basically on this issue because he's so ticked off at this PC government becoming a central planning machine. That's essentially what's happened here. That to me says all I need to know. That's commitment. That's not political. That's commitment. They really believe it, and they're case is compelling.

I know there are arguments on the other side. I understand that. Obviously, you know, not every lawyer and every expert is going to agree. There are arguments to be made on the other side. But just the fact that there's so much uncertainty – at a minimum the government could admit that there's a massive amount of uncer-

tainty out there with regard to this legislation. Even that uncertainty shows that it is a poorly drafted bill, that it hasn't been thought through properly.

If you're going to draft a bill with such reaching implications as this one has, then it makes perfect sense to make absolutely certain that it's put through the proper committee and vetting process in our standing policy committee so that we can have the experts in, so we can make sure that we get it right. Because some of the things in that bill are okay. There are some transferable development credits and things like that. These are tools that we could give to municipalities and so forth to empower them, truly regional planning organizations, give them these things as tools so that they can use them to do their own regional planning. What's happened here is that we haven't given them these tools at all. We've taken over the entire planning process, so the province is going to be implementing these plans across the board. That's not the way we should be doing it. It's not right, and Albertans don't want it.

You know, aside from everything else, right or wrong – is my legal argument wrong; is the government's legal argument right, et cetera? Take all that aside. Albertans don't want it. Rural Albertans don't want it. And I'm telling you that if you don't think that this is going to be an election issue, you're smoking something really good. It is going to be a huge election issue. Huge. And there will be multiple MLAs on that side of the House that will lose their seats just based on this one bill. One bill, and Bill 50 as well.

Ms Notley: And 19.

Mr. Anderson: And 19. But Bill 36 is really the big one. Really the big one.

An Hon. Member: That's three times as many.

Mr. Anderson: That's right. It's three times as many. You know what? Maybe if it was just one, it would be only a few, but it's these multiple land-use bills.

You don't understand the effect that you've had. I'm just still waiting for people to stand up on that side of the House and show the courage to speak out against their own government. For those of you who think that this is something your constituents want, I don't know where you're getting your information. I mean, the best information we can have is talking to people. The best information we can have is obviously doing a lot of polling. I've done both, and I know what the people are saying out there. They're certainly not saying they want this legislation. They want it back to the drawing board. They want regional planning – no doubt about it – but they want us to go back to the drawing board and get it right. They do not want centralized planning.

People are going to lose seats. Good people in here are going to lose seats because of that huge mistake that they've made in that regard, misjudging the public's anger, particularly in rural Alberta where it will have the biggest effect.

Now, everyone in here, I think, agrees with the need for better regional planning. The question is not do we need better regional planning, but how do we accomplish better regional planning? The Wildrose, as I'm sure the other opposition parties have done, have put out some alternatives in that regard. How can we have better regional planning? Well, step one, you can immediately repeal the Alberta Land Stewardship Act and pass an Alberta property rights preservation act. When private property is used for a genuine public need, there absolutely must be full, fair, and timely compensation with recourse to the courts. There's step one. Let's get the legislation right. Let's go through the proper process and put landowners first.

Step two, honour existing deals. Grandfather existing leases and licences and establish conservation areas or no-go zones before issuing leases. Investor confidence in the Alberta economy depends on it. After you've issued a licence as a government, you cannot go and just take it away and then say: we're going to pay you back what you paid for it originally. That is banana republic stuff. It is absolutely not the way to do business, and on top of the old royalty framework debacle it's just another step that this government has undertaken to make our province less competitive and really hurt investor confidence when it comes to investing in Alberta.

Step three, use what we've got. Let Alberta Environment perform cumulative effects analysis on impacted areas. They've got the experience and expertise, so let's put them to work. That's what the Department of Environment is for, to oversee the provincial environmental regulations, et cetera. Why on earth can we not empower the Ministry of Environment to oversee cumulative effects management? We all agree it's needed. Why can't they do it? They should be able to do it.

Step four, let the Water Act work. The law has allowed for a stable water supply for those with water licences in Alberta for decades. We need to get it out from under ALSA and promote it. There are many tools within the Water Act – they're there – for the transfer of water licences and the use of water. They're there. But so many can't be approved right now because they're waiting on the land-use framework, particularly the South Saskatchewan regional plan. So they've got all these people that want to do transfers using these tools under the Water Act that can't right now. They're not allowed because they can't get approval from Alberta Environment because everything is being held up by this blinking central planning document, which is the whole problem with overregulation. This is not a Conservative thing we're doing here. We're slowing down commerce, agriculture, business, et cetera, residential, commercial development because we're just not using the tools that are in the Water Act. It's becoming burdensome and full of red tape.

That brings us to step five, cut red tape. Find the best models for a streamlined regulatory framework that is balanced by Alberta Environment's authority over the stewardship of air, land, and water. And I'm glad to see the government is looking into that with Bill 16. We've had some debates on that, and that's good. Very much too late in the game, but it's better late than never. You know, it's like this bill. You could repeal it tomorrow if you really wanted to – better late than never – but I don't think you will.

Step six, the last one, involve the community. Invite locally elected officials, landowners, industry stakeholders, and other regional and government representatives to work together to guide regional development in a sustainable way. Recognize that central planning does not work. This goes back to my first point. These RACs, these – what are they called? – regional advisory councils, are appointed by the government, by the minister, I believe. So, first of all, that's not democratic at all. Who knows what special interests and what favours are being paid back there, okay?

Mr. Hinman: Kind of like the Hunter report.

Mr. Anderson: Yeah, that's right. Exactly. Kind of like the Hunter report with the royalties, very similar.

The point is that you have these people appointed by the government to give counsel on these regional plans, and even if it was a perfect mix . . . [Mr. Anderson's speaking time expired]

The Acting Speaker: Standing Order 29(2)(a) is available. The hon. Member for Calgary-Varsity.

Mr. Chase: Thank you very much. A couple of questions. You talked about the Calgary regional plan and the loss of local autonomy. You mentioned centralization quite a bit. Now, Okotoks, for example, wanted to set boundaries; they didn't want to expand. They saw the problems associated with gobbling up land. They also saw their water limitations and so on, and they were trying to restrict development. They've done some very smart things in terms of solar housing, very smart things with regard to 10 inches of topsoil because it holds the water. I'm just wondering how the Airdrie-Chestermere area is feeling about potentially being gobbled up by larger concerns as Calgary expands its 1.3 million. Is that a concern?

Also, because of your legal background, several government members seem to be very worried about courts being involved in the legislative process. So from your legal background, the relationship between courts and legislation: if legislation is done right, then courts shouldn't need to interfere and turn it over.

I'd be interested in your perception: regional planning, beating up on local areas, and legislation versus legal action.

Mr. Anderson: Thank you for that. I would say to the first part that, yeah, I am concerned about the loss of regional autonomy. It goes back to what we were talking about when that conversation was happening behind closed doors with regard to how we move forward to possibly force the counties of Rocky View, Wheatland, and Foothills into the Calgary Regional Partnership. Think about that for a second.

9:00

One of the reasons that the counties didn't want to get involved is because –for example, a place like Langdon in my constituency. There are about 4,000 people there. If they join the Calgary Regional Partnership, they would have to build to eight units per acre. In Langdon, okay? Now, if anybody knows about density requirements at all, that's insane. That means you'd have to have apartment buildings in Langdon, lots of them, in order to build towards eight units per acre. It's not reasonable, but that's what Rocky View county would have to sign on to if they are forced to join the Calgary Regional Partnership because that's what the CRP is saying: in order to get water out of the CRP, you need to build eight units per acre.

We all want better planning, and we at least want to limit urban sprawl. I don't think we all want to live in cookie-cutter houses that look the same. If I wanted that, I'd go live in Calgary. No offence to Calgary; Varsity is a very nice area and not really a cookie cutter. But if I wanted to live in Calgary, in a cookie-cutter house in suburban Calgary, I would. But that's not why people live in Airdrie, and it's not why people live in Langdon, and it's not why they live on acreages, and it's not why they live on farms. The point is that variety is good. We don't want complete urban sprawl. We want to protect the eastern slopes, for example. That's not a good place to have urban sprawl. I agree that we don't want to go any further west with urban sprawl.

Put protected areas in, do something, but why would you force communities to join this Calgary Regional Partnership, have the province force them to do so, and then have the province come forward and force those communities to build to a certain density and decide that this is what you will build to? How is that not central planning? How is it not? It is central planning in the worst possible sense.

Mr. Hinman: And how is it good?

Mr. Anderson: And how is that good? You know what? It's un-Albertan, frankly. That's what it is. It's got this Big Brother knows best, we're going to tell you how you can develop your land, we're not going to leave it to local people that, you know, have an actual stake democratically or with regard to property rights in the area – it's a top-down, centralized, quasi-socialist system, and it's wrong.

With regard to the legal question about letting courts decide land-use issues, I don't think anybody in here, as far as I know, is a legal expert on water rights or land use. That's why we need to bring people into these committees and actually listen to the experts. Imagine that. That's tough to understand, isn't it? That we're not experts on this. [interjection] I've never claimed to be an expert, hon. member. Never, ever. Quote me. [interjection] When did I? Exactly. Once again, you don't know what you're talking about. Revisionist history. That's clear. Anyway, it's just sad to see.

The Acting Speaker: Any other members wish to speak?

The hon. Member for Edmonton-Strathcona.

Ms Notley: Thank you. It's a pleasure to be able to rise and add my comments to the debate on Bill 10 in third reading. This is an interesting piece of legislation because it's one that is intensely political and not one that comes from good policy planning or development. It's not a bill that comes forward in response to any sort of genuine outcry on the part of the public. It's not a forward-looking bill that represents sort of the best of good governance. It really is a slap-happy attempt to respond to a political crisis, some of which is quite legitimate and some of which is not entirely legitimate, in my point of view.

Nonetheless, it's an attempt to create an impression of responding to that political crisis, yet it doesn't respond to that political crisis, either the real one or the alleged one. It doesn't deal with the real issues that have been raised by a number of people around the concerns with respect to this government's approach to land development generally over the course of the next many years in Alberta.

I want to say that I approach this concern from the perspective of one of these, you know, scary socialists that's been referred to by colleagues in the opposition.

Mr. Anderson: I didn't call you a socialist.

Ms Notley: I think there's been reference to my being a socialist, but they've never actually called me scary, although I think it's implicit in some of the comments they make.

Nonetheless, what I think has happened with Bill 36, which Bill 10 is designed to amend, or with the Alberta Land Stewardship Amendment Act, 2011, and with Bill 50 and with Bill 19, because I see them all as being actually quite linked in certain ways, particularly as it relates to the politics, which I believe is the underlying rationale for this particular attempt at changing the Land Stewardship Amendment Act, is that this government has really given a bad name to thoughtful, consultative, responsive, community-based planning on behalf of the public interest as a whole.

Maybe that's wild socialist language that I'm talking about there, but that's what I believe in. I believe that when you're talking about land and economic development and environmental development and growing into the future, there's nothing wrong with actually planning. In fact, it's kind of a good thing in the long run. To do it thoughtfully in a well-informed way with reference to the environmental science and the demographic plans and the economic needs of the province is a wise thing. To do it in full, open, transparent settings in consultation with the people of Alberta where your primary mandate is one and one thing only, which is

the overall public interest of the people of the province, is a good thing.

I think that some of the people that began to contribute, in particular, to the Alberta Land Stewardship Amendment Act might have actually had those objectives in place as they worked on it, but the act itself did not meet those objectives. Certainly, the act in combination with Bill 19, the Land Assembly Project Area Act, and Bill 50, the We're Going To Try and Make Sure Nobody Ever Has To Question Us on the Public Interest Around Building Transmission Lines Again Act – when you put them all together, what we've done is we've bastardized the goodwill that I think we were attempting to achieve, or some people in government might have been attempting to achieve, when we first approached the concepts inherent in Bill 36.

The Land Stewardship Amendment Act was designed to do some good things, but even when it came forward a couple of years ago, the NDP did vote against it. We voted against it for a number of reasons, probably the most important of which was that we were very concerned that the cabinet, as with all pieces of legislation that this government passes, was given an unprecedented amount of power under the act. It gave the cabinet complete control over the regional plans, and it did not provide for the type of accountability and transparency and sort of completion of the consultation or feedback loop with Albertans that was necessary in order for the kinds of decisions that were authorized under this act to be done truly in the best interests of Albertans after genuinely responding to their contribution to the discussion.

The act did not adequately, in short, reflect the land-use framework's commitment to public input and community involvement because, of course, the document, the land-use framework, preceded the land stewardship act. The land-use framework was quite genuine about public commitment. The piece of legislation that followed was a great deal more superficial in terms of the guarantees that were provided with respect to the public consultation that we were looking for. It allowed cabinet to create and amend regional plans without ever creating a regional advisory council, for example, the kind of thing that means that it was really mostly a lot of window dressing. Certainly, in what little we've seen happen under the authority of Bill 36 since then, we have seen that regional advisory councils are indeed hand-picked and that the reports are greatly massaged. Way too much happens behind closed doors, and it's way too vulnerable to behind-closed-doors lobbying to cabinet members that the public just doesn't see. The government is not held accountable for that kind of process.

Ultimately we didn't believe that Bill 36 actually provided adequate environmental protection in terms of what it required the government to do. It simply required a plan to describe a vision for planning and then to state one or more objectives for the planning region. It didn't actually identify the public interest, or it didn't identify preserving the environment. It didn't identify these things as mandatory components of regional plans.

9:10

At the time the NDP put forward a number of amendments to Bill 36 and focused particularly on efforts to honour the land rights of Albertans and also to improve the consultative processes that existed under the act. They were unfortunately rejected. So then what happened is that we had this sort of political firestorm that was developed through an analysis of Bill 36 and Bill 19 and Bill 50. The government decided to come up with Bill 10 and bring that forward and then say: "Look. We've addressed all of your issues." As I say, it's a highly superficial response, and most people who have evaluated Bill 10 and assessed whether in fact it deals with any of the issues that were originally raised around the concerns with Bill 36 have concluded that it doesn't really relate to almost any of them.

In terms of even dealing with the concerns that it did fundamentally impact property rights: really, truly, just superficial amendments there, so not addressing those issues. Then, of course, those people who particularly address property rights and who were concerned about property rights also always identified the combined authority that the government has given itself not only through Bill 36 but through bills 19 and 50.

You know, I mentioned Bill 19, or I sort of heckled Bill 19, and one of the members opposite suggested that that had nothing to do with this, but I think it really does. What I would have liked to have seen is the government come back and address some of those significant concerns because those are really the concerns that I think are probably the most substantive in many cases to the greatest number of property owners. In this case, I'm not thinking about potential industrialists. I'm thinking about Joe Average Albertan who currently owns property, maybe a bit of farmland, maybe an acreage, whatever. These are the folks that I'm thinking about.

When I think about Bill 19, you know, what did we have concerns about and what did many Albertans across the province – what were their concerns with Bill 19? Well, landowners whose land is part of a project area that can be identified through that bill don't get any compensation for the development restrictions that are placed on their land. Is that addressed through Bill 10? No. Could it be? Should it have been? Yes, because it's all part of the same discussion that generated this. [interjection] It doesn't matter. It's all part of the same political discussion.

My point is that Bill 10 is a superficial response to a political discussion. But the real substance in there as well included the concerns around bills 19 and 50. It also allowed the government to cancel project area orders at any time or without penalty. It allowed the government to choose the appeal body that a property owner might seek to have their rights assessed under. It allowed the government to impose an injunction where someone appeared to be about to commit an offence. It ultimately defined a public project without including the need for it to have any relation to the public good.

That's particularly interesting when you then combine it with Bill 50 and the fact that with Bill 50 – once again, part of this overarching theme of not consulting with Albertans, just as they don't with Bill 36 but also with Bill 10 – they've removed significant obligations on the part of the government to consult with Albertans. We've heard today about how power lines are going to be increasingly expensive. They are not in the public interest. Most Albertans would say that we don't want them, yet through Bill 50 the government has removed their obligation to consult with Albertans on it. They have given themselves more power to take it behind closed doors and have it addressed in cabinet.

This was probably the most significant complaint of Albertans. If this government thinks that this little Bill 10, this teeny-weeny little superficial bit of a bill that casually makes ever so minor amendments to Bill 36, is going to address the significant problems and concerns that have been raised by Albertans across the province with all three bills – with Bill 19, with Bill 50, and with Bill 36 – they are sorely mistaken.

They are going to, I think, suffer the consequences of that when it comes time for people to be campaigning about it in the next election. In every case they've taken the control away from the citizens of Alberta. They have given themselves the opportunity to make those decisions behind closed doors, and they will not give Albertans an opportunity to have public hearings about these very things which ought to be considered in their best interests, in the

Responsible Energy Development Act, SA 2012, c R-17.3

RESPONSIBLE ENERGY DEVELOPMENT ACT
Chapter R-17.3

HER MAJESTY, by and with the advice and consent of the Legislative Assembly of Alberta, enacts as follows:

Interpretation

1(1) In this Act,

(n) "Minister" means the Minister determined under section 16 of the Government Organization Act as the Minister responsible for this Act;

Part 4
Ministerial Direction to Regulator

Direction to Regulator

67(1) When the Minister considers it to be appropriate to do so, the Minister may by order give directions to the Regulator for the purposes of

(a) providing priorities and guidelines for the Regulator to follow in the carrying out of its powers, duties and functions, and

(b) ensuring the work of the Regulator is consistent with the programs, policies and work of the Government in respect of energy resource development, public land management, environmental management and water management.

(2) The Regulator shall, within the time period set out in the order, comply with directions given under this section.

TAB 65

Government Organization Act, RSA 2000, c G-10

GOVERNMENT ORGANIZATION ACT
Chapter G-10

HER MAJESTY, by and with the advice and consent of the Legislative Assembly of Alberta, enacts as follows:

Transfer of Responsibilities

Responsibility for Acts

16(1) The Lieutenant Governor in Council may, by regulation,

(a) designate a Minister by the Minister's personal name or name of office as the Minister responsible for an Act;

(b) transfer the responsibility for an Act to another Minister in the Minister's personal name or name of office;

(c) transfer a power, duty or function of a Minister contained in an Act or regulation to another Minister in the Minister's personal name or name of office.

(2) If a Minister is transferred the responsibility for an Act under subsection (1)(b), then notwithstanding anything in that Act

(a) a reference in that Act or a regulation under it to a Minister is to be read as a reference to the Minister to whom the responsibility is transferred,

(b) a reference in that Act or a regulation under it to the deputy of a Minister is to be read as a reference to the deputy of the Minister to whom the responsibility is transferred, and

(c) a reference in that Act or a regulation under it to the department of a Minister is to be read as a reference to the department of the Minister to whom the responsibility is transferred.

(3) If, under subsection (1)(c), a Minister is transferred the responsibility for the exercise or discharge of a power, duty or function contained in a provision of an Act or regulation, then notwithstanding anything in that provision

(a) a reference in that provision to a Minister is to be read as a reference to the Minister to whom the responsibility is transferred,

(b) a reference in that provision to the deputy of a Minister is to be read as a reference to the deputy of the Minister to whom the responsibility is transferred, and

(c) a reference in that provision to the department of a Minister is to be read as a reference to the department of the Minister to whom the responsibility is transferred.

(4) Two or more Ministers may be given common responsibility for the same Act, and in that case any reference in the Act or a regulation under that Act to a Minister, the Minister's deputy or the Minister's department is to be read as a reference to any of those Ministers and their deputies and departments.

(5) Two or more Ministers may be given common responsibility for the exercise or discharge of the same provision of an Act or regulation, and in that case any reference in the provision to a Minister, the Minister's deputy or the Minister's department is to be read as a reference to any of those Ministers and their deputies and departments.

(6) If an Act identifies a Minister as the member of the Executive Council charged with the administration of the Act, that reference is to be read as a reference to the Minister designated under subsection (1) as the Minister responsible for that Act.

Government Organization Act

DESIGNATION AND TRANSFER OF RESPONSIBILITY REGULATION

Energy

9 (3) The Minister of Energy and the Minister of Environment and Parks

(a) are designated as the Ministers with common responsibility for the *Responsible Energy Development Act*, except section 16,

TAB 67

SECTION 67 OF THE *RESPONSIBLE ENERGY DEVELOPMENT ACT*: SEEKING A BALANCE BETWEEN INDEPENDENCE AND ACCOUNTABILITY

GIORILYN BRUNO*

In 2012, the Alberta Government introduced Bill 2, the Responsible Energy Development Act, *to replace the Energy Resource Conservation Board and to establish a single energy regulator. Among the most controversial aspects of this* Act *is section 67, which allows the Minister to give mandatory directions to the regulator. This article looks at the implications of that provision including its effect on board independence, board accountability, and the democratic process as a whole. After evaluating the case law, exploring issues of statutory interpretation, and comparing section 67 with similar provisions in Ontario and British Columbia, the author concludes that section 67 leaves open significant questions about the scope, legal status, and procedural requirements of directives issued under section 67.*

En 2012, le gouvernement de l'Alberta présenta un projet de loi 2 intitulé Responsible Energy Development Act *(Loi sur le développement responsable de l'énergie) pour remplacer le Energy Resource Conservation Board (Conseil pour la conservation de l'énergie) et pour créer un seul organisme de réglementation énergétique. La clause 67 représente un des aspects les plus controversés de cette* Loi, *en ce sens qu'elle permet au ministre de donner des instructions obligatoires à l'organisme de réglementation. Cet article examine les implications de cette disposition incluant son effet sur l'indépendance du Conseil, sa responsabilité et le processus démocratique dans son ensemble. Après avoir étudié la jurisprudence, examiné les questions d'interprétation des lois et avoir comparé la clause 67 aux dispositions semblables des lois en Ontario et en Colombie-Britannique, l'auteur conclut que la clause 67 laisse sans réponse d'importantes questions sur la portée, la capacité juridique et les modalités d'applications des directives émises en vertu de ladite clause.*

TABLE OF CONTENTS

* Research Fellow, Canadian Institute of Resources Law, Faculty of Law, University of Calgary, gbruno@ucalgary.ca. I would like to thank Professor Nigel Bankes for supervising this article and providing feedback throughout its development. I would also like to thank Professor Alastair Lucas, Professor Shaun Fluker, Jim Dilay, and Rob McManus for their insightful comments and suggestions, and the *Alberta Law Review* Editorial Board for its assistance in getting the article ready for publication. Lastly, I am grateful for the generous funding of the Alberta Law Foundation to the Canadian Institute of Resources Law which made this research possible.

I. INTRODUCTION

In response to complaints of inconsistency and complexity in the legislative scheme for reviewing and approving energy development projects in Alberta, the provincial government in 2010 launched a broad initiative to enhance Alberta's competitiveness in attracting energy investments.[1] After commissioning research studies, the Task Force established by the Alberta Government released a technical report in December 2010 observing that "Alberta's regulatory system is complex, lacking integrated policy or policy development, and involving multiple regulators with largely uncoordinated delivery."[2] In particular, the Task Force noted that multiple ministries and agencies were involved in various aspects of upstream oil and gas development and at various points in the project lifecycle.[3] To improve the system, the Task Force provided several recommendations including the creation of a single energy regulatory body.[4]

In the system envisioned by the Task Force, a single regulator would offer one point of contact for industry and other stakeholders, streamline the process for project proponents, and thus encourage investment in the province's resources.[5] Furthermore, the Task Force observed that a single regulator might be a better fit for the province's recent attempts to achieve a broader integrated management system able to address the cumulative impacts of natural resource developments.[6]

The Alberta Government promptly implemented these recommendations starting with the single regulator. As a first step, it published *Enhancing Assurance: Developing an Integrated*

Energy Resource Regulator in May 2011.[7] In October 2012, it introduced Bill 2, the *Responsible Energy Development Act*, establishing the new Alberta Energy Regulator (AER).[8] In December 2012, *REDA* received Royal Assent and came into force in three different phases to ensure operational certainty during the transition.[9] This transition is now complete and, as of 1 April 2014, the Regulator has full-lifecycle regulatory oversight of coal, oil sands, and oil and gas development in Alberta, from project application to abandonment and reclamation. The mandate of the Regulator is "to provide for the efficient, safe, orderly and environmentally responsible development of energy resources in Alberta."[10] The new Regulator is the successor to the Energy Resources Conservation Board, and assumes the regulatory functions of the Department of Environment and Sustainable Resource Development (ESRD) concerning energy projects, including granting permits, licences and approvals under the *EPEA*,[11] the *Public Lands Act*,[12] and the *Water Act*.[13] Furthermore, the Regulator is responsible for upstream oil, gas, oil sands, and coal development under Part 8 of the *Mines and Minerals Act*.[14]

Amongst the most significant changes, the legislature included in *REDA* a provision, namely section 67, which allows the Minister to give mandatory directions to the new Regulator.[15] While the power to issue directions may assure appropriate oversight and offer guidance within the broader policy framework of the Alberta Government, this type of provision may also cause difficulties concerning the ability of the Regulator to carry out its mandate with the required level of independence from the executive branch.[16]

This framework for energy projects established under the recent legislation is quite different from the previous system in which the ERCB had formal independence from the executive branch.[17] Thus, a series of questions arise. To what extent will the Minister of

17 See ERCB Board Governance Charter, September 2011 at 3, online: <www.finance.alberta.ca/business/agency-governance/agencies/B-I/ERCB-Mandate-and-Roles.pdf> (stating that the ERCB exercises its quasi-judicial and regulatory functions within the broader policy framework of the government of Alberta. While the Chair of the Board is accountable to the Alberta Legislature through the Minister of Energy for ensuring that the ERCB fulfills its legislative mandate, the ERCB maintains formal independence from the executive with respect to adjudicative and regulatory decision-making processes. Therefore, due to its independence from the government of Alberta and its specific expertise in the

Energy or the Minister of Environment and Sustainable Resource Development interfere with the regulatory and adjudicative functions of the Regulator in order to set policies, priorities, and guidelines? Will the Ministers be able to interfere with the decision-making of the Regulator? How will the ministers communicate with the Regulator in a manner that ensures transparency?

This article analyzes the power of the Minister under section 67 of *REDA*, and attempts to determine how this power may be used and its implications. The article is structured as follows. Part II discusses the rationale for establishing independent or arm's length administrative agencies and analyzes the general advantages and drawbacks of ministerial directions. Part III analyzes section 67 of *REDA* and specifically addresses (i) who may issue directions, (ii) the purpose of a direction, (iii) the legal status of a direction issued under section 67 of *REDA*, (iv) whether the Minister may issue policy directions concerning the adjudicative functions of the Regulator, (v) the procedural requirements to issue a direction, (vi) the scope of section 67 of *REDA*, and (vii) the manner in which section 67 of *REDA* has currently been used. Part IV provides a comparative analysis, and discusses ministerial directions in the context of the BC Oil and Gas Commission, the BC Utilities Commission, and the Ontario Energy Board. Part V provides some concluding thoughts on the jurisdictional comparison and on the future of directions issued under section 67 of *REDA*.

II. ACCOUNTABILITY AND MINISTERIAL DIRECTIONS

Delegation of authority from a government to agencies, boards and commissions is a common feature of contemporary liberal democracies.[18] These public bodies enjoy varying degrees of independence and exercise specialized public functions.[19] However, they also add complexity to democratic government and have been referred to as "constitutional anomalies" since they are neither directly elected by constituents nor formally part of a governmental department, and have been created outside traditional structures to maintain some level of autonomy.[20]

---

regulation of oil and gas exploration and development, the courts recognize decisions of the ERCB as worthy of considerable judicial deference).

18 *Ibid* at 7. Several Directives of the European Union and their supporting Regulations emphasize the importance of independent regulators as essential in the goal of promoting competition and achieving full liberalization of electricity and gas markets. See EC, *Commission Directive 2003/54/EC of 26 June 2003 concerning common rules for the internal market in electricity and repealing Directive 96/92/EC*, [2003] OJ, L 176/37; EC, *Commission Directive 2003/55/EC of 26 June 2003 concerning common rules for the internal market in natural gas and repealing Directive 98/30/EC*, [2003] OJ, L 176/57; EC, *Commission Regulation (EC) 1228/2003 of 26 June 2003 on conditions for access to the network for cross-border exchanges in electricity*, [2003] OJ, L 176/1; EC, *Commission Regulation (EC) 1229/2003 of 26 June 2003 laying down a series of guidelines for trans-European energy networks and repealing Decision No 1254/96/EC*, [2003] OJ, L 176.

20 See Anders Larsen et al, "Independent Regulatory Authorities in European Electricity Markets" (2006) 34 Energy Policy 2858 at 2859-60; *Public Agencies Governance Framework*, *supra* note 19 at 6; Lorne Sossin "The Puzzle of Independence for Administrative Bodies" at 9 online: <www.law.yale.edu/documents/pdf/CompAdminLaw/Lorne_Sossin_CompAdLaw_paper.pdf>; McCrank, Hohol & Tupper, *ibid* at 21.

There are no universal criteria to determine when it is appropriate to delegate authority to administrative agencies. The literature identifies four main reasons. First, a government may decide to delegate decision-making to technical experts in areas of policy complexity to improve functionality and decrease transaction costs. In recent years policy making has become more technically complex and requires interaction between different policy areas.[21] Political actors may not have the resources or the incentive to develop such expertise for themselves and may require the support of policy experts.[22] Furthermore, since independent institutions are closer to the regulated sector than ordinary bureaucracy, they may be able to adjust regulations to changing conditions and enhance efficiency in rule making.[23] Second, a government may delegate authority to independent bodies to partially shift the blame for unpopular policies or regulatory failure. In particular, Fiorina argues that with delegation "legislators not only avoid the time and trouble of making specific decisions, they avoid or at best disguise their responsibility for the consequences of the decisions ultimately made."[24] Third, political uncertainty, short-term goals, and poor credibility are intrinsic problems of democratic governance. Therefore, a further reason to delegate authority is to enhance political stability and increase the credibility of political commitments.[25] Since independent bodies are isolated from daily political influence or electoral constraints and have a longer time-horizon than politicians, they have the potential to increase the credibility of governments' commitments and help pursue policy objectives more efficiently.[26] As a result, a government may delegate power on the assumption that independent experts will be able to balance conflicting interests and thus make better decisions in the public interest.[27] In addition, delegation may ensure that a government's policies last beyond its term of office or will not be easily changed in the future by political opponents.[28] Finally, administrative bodies may offer the advantage of low-cost expert tribunals because, due to their structure,

they may be able to gather relevant information and carry out adjudicative functions with more efficiency than courts.[29]

While a government may establish an agency as independent or arm's length, in practice no institution is completely autonomous.[30] All administrative bodies are expected to exercise their functions within the government policy framework, and to implement those polices in an independent, professional, and transparent manner.[31] Furthermore, they must do so in accordance with the rule of law.[32] Since they are not elected bodies, there has been much discussion concerning their accountability and the legitimacy of their decisions, especially decisions that may have far-reaching policy implications.[33] Certainly, some administrative agencies have large statutory mandates that are open to a broad suite of different interpretations and considerable discretion.[34] Some may operate in fields that are also occupied by departments of a government, which may enhance the desire of a government to have more control over policy development within the agencies.[35]

In this context, ministerial directions are generally proposed as an instrument to provide guidance, ensure accountability, and ensure consistent application of policies between the executive, or a department of the executive, and the agency.[36] However, ministerial directions are very controversial and the interference of the executive branch is often seen as an unjustifiable threat.[37] Some argue that the executive branch should refer any specific concerns and policy changes to the legislature to avoid undermining the integrity of the decision-making process and raising questions about who is really in charge.[38] Accountability for decision-making is owed to the legislature, not cabinet, and if the legislature wishes to maintain the integrity of the process it should be careful about delegating supervisory responsibility to the executive.[39]

35 *Ibid*. For example, in Alberta, this tension was evident in the package of amendments to various provincial statutes that was adopted in 2010 with Bill 24, *Carbon Capture and Storage Statutes Amendment Act, 2010*, 3rd Sess, 27th Leg, Alberta, 2010, to provide for the regulation of carbon capture and storage projects in the province. Under this scheme, the Department of Energy has assumed a number of technical responsibilities that one might have expected to be assigned to the ERCB, including issuing the closure certificate for a CCS project. For further details on this discussion, see Nigel Bankes "Alberta makes significant progress in establishing a legal and regulatory regime to accommodate carbon capture and storage (CCS) projects" (3 November 2010), *ABlawg* (blog), online: <ablawg.ca/wp-content/uploads/2010/11/blog_nb_ccsNov2010.pdf>.

37 *Ibid*.

38 *Ibid*.

39 *Ibid* at 44.

When important changes to the overall objectives of the agency are involved, it may be easy to agree that the legislature should be in charge of legitimizing those changes. However, policy is by nature dynamic and governments have an ongoing role in refining existing policies and developing new policies to anticipate or respond to changing conditions.[40] Not all policy can be rooted in legislation because sometimes the parliamentary process is too slow or of peripheral interest to the government such that addressing it through legislation may be inefficient.[41] As a result, ministerial directions are appealing when timely guidance from the government is needed to ensure that regulatory boards do not compromise larger policy goals.[42]

Despite these advantages, there seems to be broad consensus that routine involvement by the executive may undermine the very reasons that prompted governments to create independent agencies. The greatest danger with ministerial directions arises if a government issues a direction with the intent of influencing a policy question that has arisen in the context of an existing application before the agency.[43] The tension that generally arises is that a public agency or officer may have a duty to comply with the direction but must also make a decision fairly.[44] Even though it may seem a practical approach for the government to attempt to provide guidance to the administrative agency, some may question whether the direction entailed policy-making or was an illegitimate attempt to interfere with the procedure of the specific case.[45]

Ministerial directions may also give rise to lobbying battles to overturn decisions reached in a more transparent regulatory process.[46] As a result, while applicants may still formally proceed before the regulatory agency, their real efforts may move to influence the minister who might in turn affect the content of the direction.[47] It is not only the government that may abuse directions and raise doubts about the integrity of the whole process, but also the regulatory agencies themselves.[48] For instance, in some tough cases, an agency may be

45 See e.g. *Shaw v Alberta (Utilities Commission)*, 2012 ABCA 100, 72 Alta LR (5th) 23 [*Shaw*] (The Alberta Utilities Commission approved the construction and operation of a proposed major electrical transmission line and substation known as the Heartland Transmission Project. This project was the first one considered under Bill 50. Those opposed to the project brought an application for leave to appeal Commission's decision. The test for leave to appeal was satisfied on certain grounds of appeal. In particular, the second ground of appeal was based upon the intervention of the Minister of Energy, who wrote two letters to the Chairman of the Commission requesting that the Commission adjourn or suspend its consideration of the Heartland Transmission Project. The Court found that it was arguable that the alleged interference of the Minister would cause a reasonable person to apprehend bias). See also Fluker, *supra* note 16 at 3 (questioning the independence of the Alberta Energy Regulator); *Independent Administrative Agencies*, *supra* note 34 at 25; Majone, "OECD Report," *supra* note 25 at 129.

48 *Ibid* at 491.

tempted to seek clarification from the minister to reduce the risk of appeals or to find relief from the criticisms of an unpopular decision.[49]

The extent to which the legislature should allocate responsibility to the executive or to an "independent" agency is a question of political judgment and raises larger issues.[50] However, while accountability might be achieved by placing responsibility for decision-making in the hands of a political body such as cabinet, "[p]olitical decision-making is not an end in itself, but a means to an end — and that is accountability to the public for achievement of public goals."[51] To maintain its integrity and make better decisions in the public interest an independent agency is expected to bring some autonomy of thought to the decision even though this may entail leaving it some room to make policy determinations.[52] In any case, as Murray Rankin, Member of Parliament, notes, many of the technical or narrow issues decided by regulatory agencies are generally not the ones upon which governments are elected or defeated.[53]

III. ANALYSIS OF SECTION 67 OF *REDA*

This part analyzes the power of the Minister under section 67 of *REDA* and attempts to determine its scope and implications.

A. TEXT OF SECTION 67

Section 67 reads as follows:

> (1) When the Minister considers it to be appropriate to do so, the Minister may by order give directions to the Regulator for the purposes of
>
> (a) providing priorities and guidelines for the Regulator to follow in the carrying out of its powers, duties and functions, and

---

49 *Ibid*.

53 Rankin, *supra* note 24 at 53.

(b) ensuring the work of the Regulator is consistent with the programs, policies and work of the Government in respect of energy resource development, public land management, environmental management and water management.

(2) The Regulator shall, within the time period set out in the order, comply with directions given under this section.[54]

B. WHO MAY ISSUE DIRECTIONS UNDER SECTION 67 OF *REDA*?

The responsibility for section 67 of *REDA* "is transferred to the common responsibility of the Minister of Energy and the Minister of Environment and Sustainable Resource Development."[55] The *Government Organization Act* provides that, when two or more ministers are given common responsibility for the exercise of the same provision, any reference in the provision to a minister is to be read as a reference to any of those ministers.[56] Thus, it may be inferred that the power to issue directions under section 67 of *REDA* is assigned *disjunctively* to the Minister of Energy and Minister of Environment and Sustainable Resource Development.

Generally, the statutory power to give directions to energy regulatory boards is assigned to the Lieutenant Governor in Council.[57] This approach also seems to be common outside the oil and gas sectors.[58] The difficulty with the approach adopted under section 67 of *REDA* is that a single minister may not have the required skills or tools to address broader governmental policies, or it may be difficult for them to coordinate their work.[59] In addition, a single minister may be individually exposed to conflicts with stakeholders and the general public.[60] Even though the Policy Management Office may address some of the above issues, there is currently not enough information to determine how this office will exactly operate and coordinate with the Ministers.[61]

C. PURPOSES UNDER SECTION 67 OF *REDA*

Directions may be issued to the Regulator for two purposes. First, directions may be issued to provide priorities or guidelines that the Regulator must use in carrying out its "powers, duties and functions" (subsection (a)).[62] Second, directions may be issued to ensure that "the work of the Regulator is consistent with the programs, policies and work of the Government" (subsection (b)).[63]

It is not entirely clear how these two subsections of section 67(1) *REDA* should be read, and what legal effects the conjunction *and* at the end of subsection (a) produces. In other

58 See e.g. *Nuclear Safety and Control Act*, SC 1997, c 9, s 19; *Telecommunications Act*, SC 1993, c 38, s 8; *Broadcasting Act*, SC 1991, c 11, s 7.
59 For a general discussion on this point, see *Independent Administrative Agencies*, *supra* note 34 at 28.
60 *Ibid*.
61 The Policy Management Office is discussed in Part III.G, below.
62 *REDA*, *supra* note 8, s 67(1)(a).
63 *Ibid*, s 67(1)(b).

words, could the Minister give directions to the Regulator for the sole purpose of providing priorities on the powers, duties, and functions of the Regulator? Alternatively, could the Minister give directions to the Regulator for the sole purpose of ensuring that the work of the Regulator is consistent with the programs, policies, and work of the Government? Or is the Minister only allowed to issue directions that have both purposes concurrently?

As pointed out by Professor Dickerson, the conjunction *and* is semantically ambiguous as "it is not always clear whether the writer intends the several "and" (A and B, jointly or severally) or the joint "and" (A and B, jointly but not severally)."[64] Both uses are grammatically correct and common in both popular and legal language.[65] Determining which meaning is appropriate depends on the context.[66] Professors Dickerson and Driedger indicate that, in an enumeration of powers in the legislation, the conjunction *and* tends to be used with the several meaning.[67] In particular, "if the separate items are joined by *and*, the powers are normally regarded as joint and several, and the authority may exercise all or any of them."[68] However, Professor Sullivan indicates that this presumption may be rebutted by linguistic considerations or by knowledge of the world.[69]

Based on this analysis, the conjunction *and* at the end of subsection (a) arguably creates the presumption that the Minister may issue directions for all the purposes indicated in section 67(1) or any of those purposes individually. However, the debate in the Legislature on section 67 of *REDA* may help to rebut this presumption.[70] When Bill 2 (*REDA*) was under

64 Reed Dickerson, *The Fundamentals of Legal Drafting*, 2nd ed (Boston: Little, Brown & Company, 1986) at 105. See also EA Driedger, *Construction of Statutes*, 2nd ed (Toronto: Butterworths, 1983) at 15. However, Professor Dickerson notes that even though *and* sometimes can produce a similar result to *or*, saying that *and* may mean *or* is inaccurate.

65 Driedger, *ibid* at 16.

66 *Ibid* at 18.

67 *Ibid* at 16; Reed Dickerson, *Materials on Legal Drafting* (St Paul, Minnesota: West Publishing, 1981) at 250-51; Ruth Sullivan, *Sullivan on the Construction of Statutes*, 5th ed (Markham: LexisNexis Canada, 2008) at 82-83.

68 Driedger, *supra* note 64. A number of courts have adopted a similar analysis. See e.g. *R v Welsh (No 6)* (1977), 15 OR (2d) 1 (CA).

69 Sullivan, *supra* note 67 at 83.

70 See e.g. Ruth Sullivan, *Statutory Interpretation* (Concord: Irwin Law, 1997) at 199. In *R v Morgentaler*, [1993] 3 SCR 463 at para 31, the Supreme Court of Canada held that Hansard and government publications are admissible evidence of legislative intent in constitutional cases. The Court stated that "[p]rovided that the court remains mindful of the limited reliability and weight of Hansard evidence, it should be admitted as relevant to both the background and the purpose of legislation. Indeed, its admissibility in constitutional cases to aid in determining the background and purpose of legislation now appears well established." See also *Reference re Firearms Act (Canada)*, 2000 SCC 31, [2000] 1 SCR 783 at para 17 (stating that "[w]hile such extrinsic material was at one time inadmissible to facilitate the determination of Parliament's purpose, it is now well accepted that the legislative history, Parliamentary debates, and similar material may be quite properly considered as long as it is relevant and reliable and is not assigned undue weight"). The admissibility of *Hansard* for statutory interpretation in non-constitutional cases remains uncertain but there is a trend towards allowing this type of evidence. See e.g. *Shaw*, *supra* note 45. In that case the Alberta Court of Appeal had to determine under Bill 50 whether and how the amendments to the Commission's governing statutes altered the scope of the public interest inquiry delegated to the Commission in assessing a project designated as critical transmission infrastructure. The Court at para 39 states that "Canadian courts have long recognized that legislative history can play a useful, if limited, role in the interpretation of legislation…. Although, in my view, it is not necessary to resort to the *Hansard* debates to discern the legislative intent in enacting Bill 50 (which is clear on the face of the legislation), a review of those debates bolsters the conclusion reached by the Commission." Similarly, the Ontario Superior Court of Justice in *Branch v Ontario (Minister of Environment)* (2009), 93 OR (3d) 665 (Sup Ct J) at para 20 held that "[l]egislative debates are admissible as evidence of the intent or purpose of the legislature in enacting the legislation, although a court must be mindful of the limited reliability and weight of Hansard evidence." In that case the Ontario Superior Court of Justice relied on the legislative debate to interpret the *Environmental Protection Act*, RSO 1990, c E-19, s 163.1(2).

consideration, the opposition Liberal Party made a motion to strike out subsection (b), describing it as "entirely redundant" or potentially misleading. The following excerpt of the *Alberta Hansard* provides the discussion on this motion.

> Hon. member, you may speak to the amendment.
>
> Dr. Swann: Thank you very much, Mr. Chair. Under part 4 Mr. Hehr moves that Bill 2, Responsible Energy Development Act, 2012, be amended in section 67(1) by striking out the word "and" at the end of clause (a) and striking out all of clause (b), which appears to be entirely redundant. (…)
>
> We fail to see how that [subsection (b)] adds materially to the bill and may give a false impression to some ministers that they can carry out far more intervention than is appropriate. So we see nothing that isn't included under subsection (a) and would suggest that part (b) is either redundant or could be misused. Thank you, Mr. Chair.
>
> The Chair: The hon. Government House leader.
>
> Mr. Hancock: Thank you, Mr. Chair. I'd have to speak against this amendment. Clause (b) is clearly a very important part of the bill. What the report that was done as a backdrop to this bill very clearly set out is that in order for us to do appropriate sustainable development in this province, balancing the interests of industrial development and the environment, the interest of Albertans, there needs to be a policy process that's set by government through the Legislature on behalf of Albertans. The government sets the policy. The Legislature sets the legislation. Those are the structures that are put in place. The regulators don't make policy. They carry out policy in terms of implementation.
>
> Section 67(1) very clearly says in (a) that the minister can give priorities and guidelines in terms of how they carry out their duty and in (b) ensures that the way they carry out their duty is done in compliance with the policies, rules, and processes set out by government. It sets out the very clear delineation of responsibility.
>
> Policy is the role of government and the Legislature. Carrying out the policy with respect to this area is the role of the regulator.[71]

The Opposition did not succeed in its attempt to amend section 67 of *REDA*. As seen in the above discussion, in response to the motion to strike out subsection (b), the Government House Leader emphasized that the importance of subsection (b) is to establish a policy process that is set by the government and to set a clear delineation of responsibility between policy-making (assigned to the Government of Alberta) and policy implementation (assigned to the Regulator).

Based on the statements of the Government House Leader, the role of subsection (a) is unclear if the powers under subsection (a) and (b) are several. A main underlying purpose of executive directions is precisely to allow a government to provide policy guidance to regulators and coordinate their work within the broader framework, regardless of whether or not the provision expressly indicates this purpose. In this context, the criticism of the

[71] Alberta, Legislative Assembly, *Alberta Hansard*, 28th Leg, 1st Sess, No 20e (20 November 2012) at 801.

Opposition that subsection (b) is "redundant" seems understandable. Also, the effect of viewing the powers as several is that under subsection (b) the Ministers might claim to have a power that goes beyond setting priorities and guidelines such as the power to exercise political control over the adjudicative functions of the Regulator (although this interference would still be prohibited by the *Alberta Public Agencies Governance Act*).[72] The whole discussion of the Government House Leader does not seem to support this interpretation; rather, it seems to suggest that the main concern of the Alberta Government was to ensure that section 67 of *REDA* would clearly allow it to set policy guidelines and legitimately require the Regulator to comply with them. That the Government wanted this purpose to be expressly stated in the legislation for sake of clarity does not seem to be an issue. However, the above discussion supports the argument that the powers under subsection (a) and (b) are joint and not several. This interpretation only allows the Minister to set priorities and guidelines for the Regulator to ensure that the work of the Regulator is in compliance with the policy framework set out by the Government.

D. THE LEGAL STATUS OF A DIRECTION ISSUED UNDER SECTION 67 OF *REDA*

Before analyzing the legal status of a ministerial direction issued under section 67 of *REDA*, it is necessary to discuss the status of ministerial directions in general. This discussion is necessary because of the uncertainties and lack of clarity concerning ministerial directions, exacerbated by the fact that the term *direction* is often used interchangeably with other terms such as *guidelines*, *directives*, *rules*, *ordinances*, or *circulars* and that all of these terms are generally undefined in the applicable legislation.

The Supreme Court of Canada has indicated that when the term of the instrument is not defined in the statute, the term in itself is not indicative of its legal status or effects and it is necessary to look at its substance.[73] It seems that three different types of guidance can be distinguished: informal policy statements, administrative policy directions, and policy directions having the nature of delegated legislation.[74] (1) Informal policy statements are an

---

72 See discussion in Part III.E, below.

73 *Friends of the Oldman River Society v Canada (Minister of Transport)*, [1992] 1 SCR 3 at 34 [*Friends of the Oldman River Society*]. See also *R v Simmermon* (1996), 37 Alta LR (3d) 298 (CA) for the proposition that, in the absence of some express statutory distinction based on nomenclature, the nature of a statutory instrument should be decided on its substance, not its form (at para 12): "If the substance and effect of the instrument is legislative, it will be treated as a regulation." The Court's ruling on this point is based upon, and supported by, the decision in *Canadian Pacific Ltd v Canada (Canadian Transport Commission)*, [1985] 2 FCR 136 (CA).

74 There is also the type of policy statements issued by the agency itself that are in the nature of self-imposed limitations on discretion. See *British Columbia Hydro and Power Authority v British Columbia (Utilities Commission)* (1996), 20 BCLR (3d) 106 (CA). In that case, the Utilities Commission issued guidelines for the utility planning process. The guidelines stated that they did not mandate a specific outcome to the planning process or take away responsibility for making decisions from utility management, but rather that consistency with the guidelines would be an additional factor that the Commission would consider in judging the prudence of investments and rate applications. The Commission made an order against the applicant, a public utility company, outlining the Commission's finding that the applicant had not complied with the guidelines. The order required the applicant to comply with certain directions relating to the guidelines and threatened sanctions should the applicant fail to implement the directions. The applicant appealed from the order and applied for a declaration that the guidelines related to aspects of the order that were void on the ground that Commission had exceeded its jurisdiction in giving the guidelines the force of a Commission order. Held: The declaration was granted. The enforcement by order of the guidelines was an exercise of management of a public utility business beyond the scope of the powers granted to the Commission under the Act. Looking at the Act as a whole, it did not reflect any intention on the part of the legislature to confer upon the

expression of purpose of a government.[75] They may emerge in ministerial speeches or in announced government programs.[76] These statements generally have no legally binding effects.[77] (2) A government may give administrative directions to dictate administrative policy within the ranks of government departments. They may be binding on those to whom the direction is addressed depending on whether they are drafted in indicative or imperative terms.[78] Administrative directions do not need to be authorized by statute because "a minister has an implicit power to issue directives to implement the administration of a statute for which he is responsible."[79] Sometimes they are authorized by statute, but nonetheless the case law seems to suggest that the infringement of administrative directions can only have administrative and non-judicial consequences.[80] Administrative directions might create a legitimate expectation that the public officer or agency will follow a certain procedure depending on the content of the direction and whether it is drafted with mandatory language.[81] Their infringement may be subject to judicial review,[82] however, they generally do not create substantive rights regardless of whether third parties are adversely affected by non-compliance with the direction.[83] (3) Finally, there are directions that are in the nature of delegated legislation or regulations. The power to issue this type of direction only exists if provided for by statute.[84] These directions bind all those to whom the direction is addressed, create substantive rights on third parties, and are legally enforceable in court.[85] It may not be

Commission a jurisdiction to determine, punishable on default by sanctions, the manner in which the directors of a public utility were to manage its affairs.

75 *Independent Administrative Agencies*, *supra* note 34 at 24, n 28.

76 *Ibid*.

77 *Ibid*, n 29 ("The Cabinet review/ appeal process can, in some cases, be used in such a way that it makes enforceable 'non-binding' statements of policy").

78 For instance, in *Maple Lodge Farms Ltd v Canada*, [1982] 2 SCR 2 [*Maple Lodge*], the Supreme Court found that the public servants to whom the directives applied were free to decide whether or not to obey them since the directives were worded in an indicative manner. By contrast, the directives issued by the Commissioner of Penitentiaries in *Martineau v Matsqui Institution Inmate Disciplinary Board*, [1978] 1 SCR 118 [*Martineau*], were found to be mandatory on the public servants involved because they clearly indicated an intention to bind those to whom the directive was addressed.

79 *Friends of the Oldman River Society*, *supra* note 73 at 35 (stating that "[t]here is little doubt that ordinarily a Minister has an implicit power to issue directives to implement the administration of a statute for which he is responsible; … It is also clear that a violation of such directives will only give rise to administrative rather than judicial sanction because they do not have the full force of law"). See also *Martineau*, *ibid* at 129, stating that:

> [i]t is significant that there is no provision for penalty and, while they are authorized by statute, they are clearly of an administrative, not a legislative, nature. It is not in any legislative capacity that the Commissioner is authorized to issue directives but in his administrative capacity. I have no doubt that he would have the power of doing it by virtue of his authority without express legislative enactment. It appears to me that s. 29(3) is to be considered in the same way as many other provisions of an administrative nature dealing with departments of the administration which merely spell out administrative authority that would exist even if not explicitly provided for by statute.

80 *Friends of the Oldman River Society*, *ibid*.

81 See e.g. *Martineau*, *supra* note 78.

82 *Peet v Canada (Attorney General)*, [1994] 3 FCR 128 (TD) [*Peet*].

83 *Ibid*. In that case, the Court discussed decisions taken under directives that had been issued by the Commissioner of Penitentiaries. The Commissioner's authority to issue these directives derived from section 29(3) of the *Penitentiary Act*, RSC 1970, c P-6. The majority of the Court, at 129, held that a review of the decision in question was not within the jurisdiction of the Federal Court of Appeal because the directives were administrative and did not have the force of law. *Friends of the Oldman River Society*, *supra* note 73 at 35; *Hassum v Contestoga College Institute of Technology and Advanced Learning*, 2008 CanLII 12838 (Ont Sup Ct J) at paras 27, 77, online: <http://canlii.ca/t/1w8np> [*Hassum*].

84 *Hassum*, *ibid* at para 26.

85 *Friends of the Oldman River Society*, *supra* note 73 at 33, 36.

easy to challenge them on the ground that they fettered the discretion of the decision-maker.[86] Also, since they must be interpreted and applied as any other law, an interested party may have a direction enforced by way of prerogative relief, including mandamus or certiorari, if the public officer or agency does not comply with the direction.[87] Similarly, a decision of the agency may be subject to judicial review to determine whether or not it complies with the direction or whether the agency committed an error in law in its dispositions.[88]

The test for whether policy directives, guidelines, circulars, directions or other instruments authorized under a statute have the force of law was set out in *Friends of the Oldman River Society v. Canada (Minister of Transport)*.[89] In that case, the court had to consider an application brought by a third party seeking an order for certiorari and mandamus to require the Minister of Transport and the Minister of Fisheries and Oceans to conduct an environmental assessment in compliance with the federal *Environmental Assessment and Review Process Guidelines* (Guidelines). The principal ground on which the Crown contended that the Guidelines were *ultra vires* is that, by using the term "guidelines," section 6 of the *Department of the Environment Act*[90] could not empower the enactment of mandatory subordinate legislation, but only administrative directives not intended to be legally binding on those to whom they were addressed.[91] In determining whether the Guidelines were subordinate legislation or administrative directions, the Supreme Court determined that the denomination of the instrument in itself is neutral, and formulated a two-step analysis.[92] First, the enabling statute needs to be analyzed to determine whether it supports the power to create subordinate legislation of a mandatory nature.[93] This is a question of legislative intent and the wording of the authorizing provision must be considered as a whole.[94] Second, the specific direction, guideline, directive or other instrument needs to

---

86 See e.g. *Bell Canada Inc v Canadian Telephone Employees Association*, 2003 SCC 36, [2003] 1 SCR 884 at paras 35-38, 45 [*Bell*]. In that case, the independence and impartiality of the Canadian Human Rights Tribunal were challenged due to the power of the Canadian Human Rights Commission to issue binding guidelines to the Tribunal. When Bell started the lawsuit, the Commission had the broad power to make guidelines concerning the application of the Act in a particular case, but the legislation was subsequently amended to allow guidelines to be issued only in relation to a "class of cases." The Court ruled that general guidelines having the form of delegated legislation and falling within the scope of statutory authority are similar to regulations, and may be a way for Parliament to ensure that the Act will be interpreted in a manner that furthers the ultimate purpose of the Act as a whole. However, sufficient evidence that, in practice, the guidance has unduly influenced the impartiality of the tribunal in a specific case may produce a different result.

87 See e.g. *Friends of the Oldman River Society*, *supra* note 73.

88 See e.g. *BC Hydro and Power Authority v Terasen Gas (Vancouver Island) Inc*, 2004 BCCA 346, 30 BCLR (4th) 305; *BC Hydro and Power Authority v Terasen Gas (Vancouver Island) Inc*, 2003 BCCA 594, [2003] BCJ No 2531 (QL) (the issue arose from an order of the British Columbia Utilities Commission setting rates for the transmission and distribution of natural gas on Vancouver Island. The British Columbia Hydro and Power Authority contended that the order was unlawful essentially because it conflicted with a Special Direction issued by the Lieutenant Governor-in-Council determining on rates); see also *Yukon Energy Corp v Yukon Utilities Board* (1996), 74 BCAC 58 (CA) (in that case, the Utility board made certain orders in a decision on an application by utility companies for approval of changes in rates charged for electricity. The utility companies appealed orders alleging jurisdictional error and errors of law by the board).

89 *Friends of the Oldman River Society*, *supra* note 73 at paras 35-36.

90 RSC 1985, c E-10. Section 6 reads as follows:

> For the purposes of carrying out his duties and functions related to environmental quality, the Minister may, by order, with the approval of the Governor in Council, establish guidelines for use by departments, boards and agencies of the Government of Canada and, where appropriate, by corporations named in Schedule III to the *Financial Administration Act* and regulatory bodies in the exercise of their powers and the carrying out of their duties and functions.

91 *Friends of the Oldman River Society*, *supra* note 73 at 33.

92 *Ibid* at 34-35.

93 *Ibid* at 33.

94 *Ibid* at 34-35.

be analyzed to determine if it is framed as mandatory.[95] This is a question of fact and the answer depends on the wording of the direction and, for example, whether it uses terms such as "shall" or "must."[96] The Court also quoted the following passage of Dussault and Borgeat to emphasize the "vital distinction" between administrative instruments (intended for the control of public servants under a minister's authority), and instruments having the nature of subordinate legislation or regulation:

> When a government considers it necessary to regulate a situation through norms of behaviour, it may have a law passed or make a regulation itself, or act administratively by means of directives. In the first case, it is bound by the formalities surrounding the legislative or regulatory process; conversely, it knows that once these formalities have been observed, the new norms will come within a framework of "law" and that by virtue of the Rule of Law they will be applied by the courts. In the second case, that is, *when it chooses to proceed by way of directives*, whether or not they are authorized by legislation, *it opts instead for a less formalized means based upon hierarchical authority, to which the courts do not have to ensure obedience. To confer upon a directive the force of a regulation is to exceed legislative intent*. It is said that the Legislature does not speak without a purpose; its implicit wish to leave a situation outside the strict framework of "law" must be respected.[97]

In this case, the Court concluded that the E.A.R.P. Guidelines were subordinate legislation and could be enforceable through prerogative relief despite being called "guidelines" because they were authorized by statute, were specifically framed in mandatory language, and had been promulgated by order-in-council.[98]

Turning the analysis back to section 67 of *REDA*, it does not seem possible to give a definite answer on whether a direction issued under this provision would have the nature of an internal administrative direction or the force of law. The characterization of a direction turns in part on the language of section 67 of *REDA* but also in part on the language of the direction itself (i.e. a conclusion about the characterization of one direction under this section may not be conclusive with respect to other directions). Despite the reference to "guidelines," section 67 of *REDA* unequivocally allows the Ministers to give mandatory directions to the Regulator because subsection (2) states that "[t]he Regulator shall, within the time period set out in the order, comply with directions given under this section."[99] Determining whether or not section 67 of *REDA* allows the creation of delegated legislation is less straightforward. This issue arises because, as previously discussed, this power exists only if statutorily provided.[100] However, the mere existence of a statutory power to issue directions is not in itself indicative.[101] In *Friends of the Oldman River Society* the Court emphasized that if issuance of the instrument is subject to formal requirements, such as formal enactment by

96 *Ibid*.
97 René Dussault & Louis Borgeat, *Administrative Law: A Treatise*, 2nd ed, translated by Murray Rankin (Toronto: Carswell, 1985) 338-39, cited in *ibid* at 36 [emphasis added].
98 *Friends of the Oldman River Society*, *ibid*. The Court, at 36 stated the following:
> Here though we are dealing with a directive that is not merely authorized by statute, but one that is required to be formally enacted by "order", and promulgated under s 6 of the *Department of the Environment Act*, with the approval of the Governor in Council. That is in striking contrast with the usual internal ministerial policy guidelines intended for the control of public servants under the minister's authority. To my mind this is a vital distinction.

99 *REDA*, *supra* note 8, s 67(2).
100 *Hassum*, *supra* note 83 at para 26.
101 *Maple Lodge*, *supra* note 78.

order in council and approval of the Lieutenant Governor-in-Council, then this may generally indicate that the legislature intended to allow the creation of delegated legislation.[102] Subsequent cases have followed *Friends of the Oldman River Society* and distinguished administrative directions from directions that have the force of law primarily by analyzing whether the provision authorizing the creation of policy directions requires a procedure similar to the creation of legislative acts and regulations.[103] Based on the case law, it may be argued that section 67 of *REDA* does not allow the Minister to create delegated legislation because there is nothing in section 67 of *REDA* indicating that the Legislature intended to confer on the Minister anything more than an administrative function. For instance, section 67 of *REDA* does not specifically require a formal procedure similar to the enactment of regulations, such as the approval of the Lieutenant Governor-in-Council or publication of directions in the Alberta Gazette.[104] In addition, the general power to create regulations under *REDA* is assigned to the Lieutenant Governor-in-Council in Part 6 of the *Act*.[105] This may indicate that the legislature did not intend to assign a similar function to an individual Minister under section 67 of *REDA*. By contrast, it may be argued that section 67 of *REDA* allows the Minister to create delegated legislation because section 67 of *REDA* requires directions to be issued by way of "order" and does not exclude that a direction under section 67 of *REDA* may have the status of regulation. In addition, the *Interpretation Act* defines a "regulation" as "a regulation, *order*, rule, form, tariff of costs or fees, proclamation, bylaw or resolution enacted (i) in the execution of a power conferred by or under the authority of an Act, or (ii) by or under the authority of the Lieutenant Governor-in-Council."[106] However, the case law seems to focus on whether the provision authorizing the direction requires a procedure similar to the creation of legislative acts and regulations. Consequently, it may be difficult to conclude that section 67 of *REDA* allows delegated legislation given the absence of explicit procedural requirements under this provision.

---

102 *Friends of the Oldman River Society*, *supra* note 73 at 36. The conclusion of the Court strongly relied on the *Department of Environment Act*, *supra* note 90, s 6, which requires the approval of the Governor-in-Council for Ministerial Orders issued under this provision.

103 *Hassum*, *supra* note 83 at para 23; *Bell*, *supra* note 86 at para 36 (according to the Court, the guidelines issued by the Commission under the *Act* are, like regulations, of general application since, under the amended section 27(2) of the *Act*, they must pertain to a class of cases. Furthermore, these guidelines are subject to the *Statutory Instruments Act*, RSC 1985, c S-22, and must be published in the *Canada Gazette*. Moreover, the process that is followed in formulating particular guidelines resembles the legislative process, involving formal consultations with interested parties and revision of the draft guidelines in light of these consultations.); See also *Peet*, *supra* note 82 at para 133; *Hewko (Guardian ad litem of) v British Columbia (Attorney General)*, 2006 BCSC 1638, 2006 CarswellBC 2703 at paras 314, 318; *Turner-Lienaux v Nova Scotia (Attorney General)* (1993), 122 NSR (2d) 119 at paras 17-20; *Thamotharem v Canada (Minister of Citizenship and Immigration)*, 2007 FCA 198, [2008] 1 FCR 385 at para 68; *Martineau*, *supra* note 78 at 129, where the majority of the Court concluded that, as the directives in issue were not of a legislative nature, they were not subject to judicial review.

104 In *Friends of the Oldman River Society*, *supra* note 73 at 34-35 the Court emphasized the importance of looking at the provision to determine whether is contains such requirements. For example, as discussed in Part IV below, directions to the BC Oil and Gas Commission, the BC Utilities Commission and OEB all require publication in the relevant Gazette.

105 *REDA*, *supra* note 8, ss 77-80.

106 *Interpretation Act*, RSA 2000, c I-8, s 1(1)(c) [emphasis added].

E. POLICY DIRECTIONS IN RELATION TO THE ADJUDICATIVE FUNCTIONS OF THE REGULATOR

Like its predecessor ERCB, the Alberta Energy Regulator performs both regulatory and adjudicative functions. The new legislative scheme under *REDA* separates the corporate governance, operational responsibilities, and adjudicative functions of the Regulator. In particular, the chair and the board of directors are responsible for the general direction of the Regulator's business affairs and setting performance expectations for the Regulator and its chief executive officer.[107] The chief executive officer reports directly to the chair and oversees day-to-day operations, including making decisions and delegating decision-making on applications, monitoring, remediation, and reclamation in relation to the closure of energy projects.[108] Finally, hearing commissioners act as decision-makers on applications subject to hearings, regulatory appeals, and reconsiderations.[109]

Before *REDA* received Royal Assent, several critics, including Ecojustice and the Environmental Law Centre, publically recommended that section 67 be deleted from the Bill.[110] Perhaps, the most significant concern is that the Minister will interfere with the adjudicative functions of the Regulator, thus undermining the independence of the Regulator and the integrity of the decision-making process. The general rules concerning the governance of public agencies address some of these concerns. In particular, they address the issue of whether the Minister may give directions concerning the adjudicative functions of the Regulator; the answer seems to be no.[111] The *Public Agencies Governance Framework*,[112] and the *Alberta Public Agencies Governance Act*,[113] both attempt to balance ministerial accountability with the need for independence in some agencies' decision-making.[114] Section 10 *APAGA* reads as follows:

> (1) Subject to subsection (2), a Minister who is responsible for a public agency may set policies that must be followed by the public agency in carrying out its powers, duties and functions.

---

107 *REDA*, *supra* note 8, ss 5-6.

108 *Ibid*, s 7.

109 *Ibid*, ss 11-13.

110 See "Legal Backgrounder, Bill 2: Responsible Energy Development Act" *Ecojustice* (May 2013), online: <www.ecojustice.ca/wp-content/uploads/2015/03/REDA-backgrounder-May-2013.pdf>; Letter from Cindy Chiasson, Executive Director, Environmental Law Centre, to Ken Hughes, Minister of Energy (6 November 2012), online: <www.elc.ab.ca/Content_Files/Files/Bill_2_brief_Nov_2012.pdf>.

111 In 2007, the Alberta government launched an initiative to improve the transparency, accountability, and governance of the numerous public agencies existing in the province. The Task Force commissioned by the government identified approximately 250 agencies with different responsibilities, functions, and structures. See McCrank, Hohol & Tupper, *supra* note 19 at 7, 12. To improve the transparency, accountability, and governance of public agencies, the Task Force recommended enhancing standardization and institutionalization, and passing a new piece of legislation. Furthermore, the Task Force (McCrank, Hohol & Tupper, *ibid* at 17-18) recommended the following "functional classification" system based on the primary purpose of agencies: (i) Regulatory/adjudicative agencies; (ii) Public trusts; (iii) Corporate enterprises; (iv) Service delivery agencies; (v) Advisory agencies.

112 *Public Agencies Governance Framework*, *supra* note 19.

113 *Alberta Public Agencies Governance Act*, SA 2009, c A-31.5 [*APAGA*]. Section 80(a) was proclaimed in force 8 July 2009. Sections 1-36, 38-44, 46-52, 54-63, 65-72, 74-79, 80(b)-(e) were proclaimed in force 12 June 2013.

114 See *Public Agencies Governance Framework*, *supra* note 19 (discussing accountability at 3, 5-6 but stating at 7 that "this Framework should *not* be construed so as to interfere with the principles of judicial independence and administrative law that are essential to the functioning of quasi-judicial agencies"); see also McCrank, Hohol & Tupper, *supra* note 19 at 15 (stating that an agency "[i]s accountable to government through a defined reporting relationship, recognizing the need for quasi-judicial independence in some agencies' decision making).

(2) A policy must not be set under this section

(a) in respect of a public agency's adjudicative functions, or

(b) if an Act, the regulations under this Act or any other regulation made by the Lieutenant Governor in Council prohibits the making of policies of that type.

This provision allows a minister responsible for a public agency to set policies that must be followed by the agency in carrying out its powers, duties, and functions.[115] However, this provision also prohibits a minister from setting policy on the public agency's adjudicative functions.[116] The *APAGA* provides the following definition of "adjudicative function":

(i) a function assigned or authorized to be performed by the public agency under an enactment, the performance of which includes

(A) the making of binding decisions in respect of applications, if the enactment authorizes the public agency to hold hearings respecting the applications,

(B) the making of binding decisions in respect of disputes, other than disputes respecting applications, or

(C) the hearing of reviews or appeals and the making of binding decisions in respect of those reviews or appeals,

(ii) any alternative dispute resolution process that is ancillary to a function described in subclause (i), and

(iii) a function specified in the regulations.[117]

Section 2(1) of the *APAGA* makes the *APAGA* paramount over *REDA*.[118] Thus, by reference to section 10(2)(a) *APAGA*, it seems that neither the Minister of Energy nor the Minister of Environment and Sustainable Resource Development are allowed to set mandatory polices on the adjudicative functions of the Regulator. Applying the definition of 'adjudicative functions' provided under section 1(1)(a) *APAGA*, section 67 of *REDA* does not permit at least four types of direction. First, policy directions are not allowed with respect to binding decisions on applications, if the Regulator is authorized to hold hearings on those applications.[119] Second, policy directions are not allowed with respect to the Regulator's

115 *APAGA*, *supra* note 113, s 10. For the general powers and responsibilities of ministers, see also ss 6-12.
116 *Ibid*, s 10(2)(a). For a major restriction on the powers of the minister see also section 9(1)(a) (prohibiting the disclosure of information if it may "reasonably be expected to affect the independence of the public agency respecting that matter").
117 *Ibid*, s 1(1)(a).
118 *Ibid*, s 2(1), "Except where this Act or the regulations provide otherwise, the provisions of this Act and the regulations under this Act prevail to the extent of any inconsistency or conflict with one or more provisions of any other enactment except the *Freedom of Information and Protection of Privacy Act* and the *Health Information Act*." No regulations have yet been issued under *APAGA*.
119 *REDA*, *supra* note 8, s 34(2); *APAGA*, *supra* note 113, s 1(1)(a)(i)(b).

making of binding decisions on disputes other than disputes on applications.[120] Third, policy directions are not allowed on the hearing of reviews or appeals and the Regulator's making of binding decisions with respect to those reviews.[121] Lastly, policy directions are not allowed on any alternative dispute resolution process that is ancillary to a function identified in (1), (2) or (3).

F. PROCEDURAL REQUIREMENTS

Directions under section 67 of *REDA* must be issued by way of "order" and the Regulator must comply with these directions within a prescribed time period.[122] Section 67 of *REDA* does not clarify if the Minister must follow a formal procedure to give orders, including their publication in the Alberta Gazette, or if an order might be issued by way of an informal communication between the Minister and the Regulator.

Given the reference to "order" in section 67(1) of *REDA*, it is arguable that a ministerial direction of a legislative nature issued under this provision must be filed with the Registrar and published in the Alberta Gazette.[123] However, as previously discussed, it is not clear whether section 67 of *REDA* assigns to the Minister a legislative function or whether the function of the Minister under this provision is only administrative.[124] If we assume (contra the tentative conclusion of Part III.D), that the Minister is allowed to issue an order of a legislative nature under section 67 of *REDA*, the Minister has to comply with the procedure prescribed under section 3 of the *Regulations Act*.[125] An order of a legislative nature that is not filed has no effect, and an unpublished order is not effective against a person unless that person has had actual notice of the order.[126] By contrast, a ministerial order of an administrative nature presumably does not need to be filed or published in the Alberta Gazette.

The Ontario Court of Appeal in *Rose v. The Queen.*[127] addressed the issue of whether an order in council was of a legislative nature and thus subject to the *Ontario Regulations Act.*[128] In this case, the plaintiff was seeking a judgment for damages due to lack of maintenance of repair of a highway.[129] By order in council, the Crown had transferred to the municipality

---

120 This would, for example, include a decision on a dispute concerning private surface agreements. See *REDA*, *ibid*, ss 62-66 and the regulations enacted under it. For a discussion on the enforcement of private surface agreements see Giorilyn Bruno "Phase 2 of the Implementation of the Alberta Energy Regulator: The Private Surface Agreement Registry" (20 January 2014) *ABlawg* (blog), online: <ablawg.ca/2014/01/20/phase-2-of-the-implementation-of-the-alberta-energy-regulator-the-private-surface-agreement-registry>.

124 See discussion in Part III.D, above.

125 See the combined effect of the *Regulations Act*, *supra* note 123, s 1(1)(f) and the *Interpretation Act*, *supra* note 106, s 1(1)(c).

126 *Regulations Act*, *ibid*, s 3(5).

127 *Rose v The Queen*, [1960] OR 147 (CA) [*Rose*].

128 *Regulations Act*, RSO 1950, c 337. Section 3 of the *Act* provides the following: "[e]very regulation shall, within one month of the filing thereof, be published in *The Ontario Gazette*." Section1(*e*) defines *regulation* as follows: "'[r]egulation' means any regulation, rule, order or by-law of a legislative nature made or approved under any Act of the Legislature by the Lieutenant-Governor in Council, a minister of the Crown, a department of the public service, an official of the government or a board or commission all the members of which are appointed by the Lieutenant-Governor in Council."

129 *Rose*, *supra* note 127 at para 1.

certain sections of a highway under section 71(2) of the *Highway Improvement Act*.[130] However, the Crown did not file the order in council with the registrar and the municipality had no notice of it.[131] Therefore, the municipality contended that the order had no effect and that, since the highway was still vested in the Department of Highways, the Crown was liable under section 87 of the *Highway Improvement Act* for the condition of non-repair.[132] The Ontario Court of Appeal emphasized the following criteria in determining whether an order is of a legislative or administrative nature:

> In coming to a conclusion as to the nature of the act performed, not only must one look at the substance rather than the form but indeed in the inquiry upon which one must embark, all the surrounding circumstances must be looked at and by that I include the nature of the body enacting the order in question, the subject matter of the order, the rights and responsibilities, if any, altered or changed by that order.[133]

The Ontario Court of Appeal concluded that the order was of a legislative nature. In doing so, the Court relied on the fact that the order altered the rights and responsibilities of the general public as well as the nature and extent of those responsibilities.[134] Since the order had not been filed under the *Regulations Act* and the municipality had no actual notice of it, the Court concluded that the order had no effect and was not valid against the municipality.[135] Thus, the Crown was liable to the plaintiff. In *Reference re Manitoba Language Rights (No. 2)*[136] the Supreme Court of Canada addressed in a very different context the issue of whether an instrument is of a legislative nature. In that case, the issue was relevant to determine whether certain documents produced by the Government of Manitoba were required to be published in both English and French under section 23 of the *Manitoba Act*.[137] The Supreme Court of Canada identified some criteria indicative of a legislative nature. These criteria can approximately be divided into the headings of *form*, *content*, and *effect*.[138] These criteria do not operate cumulatively, and an instrument may be determined to be legislative in form, though not in content, but would nonetheless be determined to be of a legislative nature.[139]

131 *Rose*, *ibid* at paras 21-23.

132 *Ibid* at paras 14-17.

133 *Ibid* at para 31.

134 *Ibid*. The Ontario Court of Appeal also states that
> [w]e think that to an extent generally applicable to the public or large segments thereof it alters rights and responsibilities and even the nature and extent of those responsibilities. Upon that ground alone we think sufficient has been said to indicate the legislative nature of the action taken by the Lieutenant Governor in council as set out in the order in council referred to.

135 *Ibid*.

136 *Reference re Manitoba Language Rights*, [1992] 1 SCR 212 [*Reference re Manitoba Language Rights (No 2)*].

137 *Ibid* at 216-17

138 *Ibid* at 223.

139 *Ibid*. The criteria identified in *Manitoba Language Rights Reference (No 2)*, *ibid*, are applied in *AUPE v Alberta* (2002), 310 AR 240 (QB). In that case, the Court of Queen's Bench had to determine whether a deputy ministerial order was "of a legislative nature" to address the issue of whether the Minister had improperly sub-delegated its powers to the Deputy Minister under section 21(1) of the *Interpretation Act*. Applying the criteria set out in *Manitoba Language Rights Reference (No 2)*, the Court concluded that the Deputy Ministerial Order did not fit within the general definition of "a rule of conduct, enacted by regulation-making authority pursuant to an Act of Parliament, which has the force of law for an undetermined number of persons" (para 76). In particular, Justice Murray states at para 79: "In my opinion, a declaration made by the Minister under s. 28(2) of the *Hospitals Act* is not an enactment by Government, nor is it subject to the approval of Government. It does not require positive action of Government 'to breathe life into it.' It is not tabled in the Legislative Assembly. It is not subordinate legislation and is not legislative in nature." See also para 83 "I am satisfied that an instrument such as D.M.O. 4/97 is not subordinate legislation or delegated legislation. Rather, it is simply an administrative function being performed by the Minister, or in this case, the Deputy Minister, as permitted under s.

With respect to the *form* of the instrument, the Supreme Court of Canada determined that a sufficient connection between the legislature and the instrument in question is indicative of a legislative nature.[140] This connection is established if a government enacts the instrument, if it is made subject to the approval of a government, or wherever "positive action of the Government is required to breathe life into [it]."[141] Even if some instruments are not necessarily "Acts of the Legislature," they are determined to be legislative in form if they are tabled in the Legislative Assembly.[142] With respect to the *content* and *effect* of the instrument, the Supreme Court of Canada indicated that the following criteria are indicative of a legislative nature: (i) the instrument sets a "rule of conduct," (ii) the instrument has the "force of law," and (iii) the instrument applies to "an undetermined number of persons."[143] The Court further explains this point as follows:

> A "rule of conduct" can be described as a rule which sets norms or standards of conduct, which determine the manner in which rights are exercised and responsibilities are fulfilled. Pairing this with the phrase "force of law," the rule must be unilateral and have binding legal effect. Finally, it must also apply to "an undetermined number of persons," that is, it must be of general application rather than directed at specific individuals or situations.[144]

Even though the case law provides some criteria, there are "grey areas" and sometimes it may be difficult to distinguish whether an instrument is of an administrative or legislative nature. In addition, the Supreme Court of Canada indicated that these criteria are merely indicative and "[i]t is neither possible nor desirable to propose an ironclad test given the proliferation of instruments generated by contemporary governments."[145] For this reason, the Alberta Legislative Counsel recommended that, if in doubt, the safest choice is to file the ministerial order with the Registrar.[146]

Ministerial orders issued under section 67 of *REDA* of an administrative nature presumably do not need to be filed or published in the Alberta Gazette and it remains uncertain whether they must be published elsewhere, such as on the Regulator's website. The value of transparency and accountability require that, regardless of their nature, directions

---

21(1) of the *Interpretation Act*." Similar criteria are identified in *Tsuu T'ina Nation v Alberta (Minister of Environment)*, 2008 ABQB 547, 96 Alta LR (4th) 65 [*Tsuu T'ina Nation*]. In that case, one of the remedies sought by the Tsuu T'ina Nation was a declaration to set aside the order in council that had approved the Water Management Plan for the South Saskatchewan River Basin. In deciding whether the order in council was of a legislative nature, the Alberta Court of Queen's Bench determined at para 61 that "[t]he Court must consider the nature of the body enacting the order, the subject matter of the order, the application of the order, and the rights and responsibilities altered by the order." The case was further appealed, 2010 ABCA 137, 482 AR 198, but the appellants on appeal withdrew their request to set aside the order in council approving the Plan and proceeded on other grounds.

140 *Reference re Manitoba Language Rights (No 2)*, *supra* note 136 at 223-24 referring to *Blaikie v Quebec (Attorney General)*, [1979] 2 SCR 1016 at 328-29.

141 *Ibid*.

142 *Ibid* at 224.

143 *Ibid* at 224-25, 233. In identifying these criteria, the Court relies on the following definition of "regulation" to describe the criteria indicative of a "legislative nature": "[a] regulation is a rule of conduct, enacted by a regulation-making authority pursuant to an Act of Parliament, which has the force of law for an undetermined number of persons." The Court notes that, even if in its original context the definition relates specifically to regulations, it provides assistance in developing a general definition of the phrase "of a legislative nature."

144 *Ibid* at 224-25.

145 *Ibid* at 223.

146 See Alberta, Alberta Justice, "A Guide to the Legislative Process — Acts and Regulations" (Edmonton: Alberta Justice, 2005) at 13-14, online: <https://www.solgps.alberta.ca/Publications1/Legislative%20process%20manual.pdf>.

under section 67 of *REDA* should be published on the Regulator's website and be easily accessible to the public.[147] The public should be able to distinguish between a decision made by the Regulator and a decision made by the Alberta Government. If the Government interferes with a decision of the Regulator, it should be held politically responsible for it. Furthermore, when the direction involves substantial policy changes, interested parties should have a reasonable opportunity to comment on the proposed direction.[148] Given that the Policy Management Office was established to act as an interface on policy issues between the Ministers and the Regulator, it could offer a forum for consultation on these proposed directions.

G. THE APPROPRIATENESS OF DIRECTIONS

The appropriateness of directions or the extent to which the Ministers should use them to ensure that the work of the Regulator is "consistent with the programs, policies and work of the Government" remains unclear under the current legislation.[149] The concerns of the Opposition in the legislative debate, voiced by MLA Dr. Swan, that section 67(1)(b) "could be misused" or "give a false impression to some ministers that they can carry out far more intervention than is appropriate" seem to suggest that section 67 of *REDA* was not introduced in the statute to allow the Minister to routinely interfere with the work of the Regulator.[150] However, in response to these concerns the Government House Leader firmly stated that the Regulator is only responsible for policy implementation and that policy-making is the role of the Alberta Government.[151] Drawing a line is not easy and part of this debate depends on the meaning ascribed to the term *policy*. While there may be a general consensus that the Alberta Government is responsible for *general* policy-making, it is less clear that the Minister should also issue directions when policy-making entails technical issues.[152]

Executive directions are generally considered appropriate when a government foresees that the regulations of the agency "may touch sensitive issues of central policy planning."[153] One of the main criticisms of the previous regime for reviewing energy projects in Alberta was that the broad mandate of the ERCB and the lack of guidance from the Government in certain areas created a policy vacuum that left the ERCB with no choice but to make its own policy. A pointed example was the controversy surrounding the decision of the ERCB to

147 See discussion in Part IV, below (directions to the British Columbia Utilities Commission and to the Ontario Energy Board are published on the website of the Commission and Board). See Nigel Bankes, "Constitutional Questions and the Alberta Energy Regulator" (24 October 2013), *ABlawg* (blog), online: <ablawg.ca/2013/10/24/constitutional-questions-and-the-alberta-energy-regulator> (commenting on the AER's policy in deciding what to publish on its website).

148 See e.g. *Broadcasting Act*, *supra* note 58, s 7(6) and *Telecommunications Act*, *supra* note 58, s 10(2) (requiring the Minister of Canadian Heritage to consult with the Commission before the Governor-in-Council makes an order under the *Broadcasting Act*, and the Minister of Industry for consulting with the Commission before the Governor-in-Council makes an order under the *Telecommunications Act*. Both Acts require the Ministers to lay before each House of Parliament the proposed policy order and publish it by notice in the Canada Gazette inviting interested persons to make representations to the Ministers.)

153 *Independent Administrative Agencies*, *supra* note 34 at 26.

issue "Directive 074" that identified specific performance criteria for the management of tailing ponds.[154] With the recent adoption of the *Land-Use Framework*[155] and the *Alberta Land Stewardship Act*[156] the Alberta Government is attempting to establish an innovative approach to managing the province's natural resources through integrated regional planning. This scheme is designed to ensure that natural resources are developed more efficiently while preserving the life-supporting capacity of air, water, land and biodiversity.[157] Regional Plans established under *ALSA* are "an expression of the public policy of the Government" and will be binding on all statutory decision-makers in Alberta.[158] They will inform, guide, and direct uses of natural resources in order to achieve the desired outcome.[159] This new scheme provides the Government with an important set of tools to establish policy on a number of important matters including cumulative impacts on air, land, and water.[160] In addition, the Alberta Government established a new Policy Management Office for Natural Resources and Environment that will act as an interface between policy development and policy implementation.[161] The Policy Management Office will report to the Department of Energy and ESRD, and will be responsible for ensuring that they develop coordinated policies as a collaborative effort, and that the policies are clearly communicated and understood by the Alberta Energy Regulator.[162] While the Policy Management Office will initially focus only on the Regulator, its focus could also expand to other strategic policy initiatives in the future, including the *Alberta Land Stewardship Act* and the Land-Use Secretariat established under it.[163] In this context, section 67 of *REDA* offers the legislative link that will allow the

---

154 In April 2008 the deaths of 500 ducks on a Syncrude tailing pond drew international attention to the ponds. The ERCB stated that mine operators had failed to meet their targets as promised in mine applications, but there was no sign from the Environment Department that they would address this gap. Therefore, the ERCB took the lead and in February 2009 issued a Ministerial Directive: Alberta Energy Regulator, "Directive 074: Tailings Performance Criteria and Requirements for Oil Sands Mining Schemes," (Calgary: Energy Resources Conservation Board, 3 February 2009) ["Directive 074"], online: <www.aer.ca/documents/directives/Directive074.pdf> identifying specific performance criteria for the proper management of tailing ponds. The Directive is a policy instrument, and the final version reflects feedback from government, industry and the public. The Directive established enforceable cleanup programs and deadlines for tailing pond construction, operations, closure and abandonment. The Directive also allows ERCB inspectors to take action if companies do not respect their commitments. On 13 March 2015, the Alberta Government suspended "Directive 074" and released the Tailings Management Framework for Mineable Athabasca Oil Sands (TMF). The TMF is a new government policy that provides direction to the Regulator on fluid tailings volumes and decreasing risks associated with the accumulation of fluid tailings on the landscape. See Alberta Energy Regulator, "Bulletin 2015-11: Directive 074: Tailings Performance Criteria and Requirements for Oil Sands Mining Schemes Suspended," by Kirk Bailey (AER, 13 March 2015), online: <www.aer.ca/documents/bulletins/Bulletin-2015-11.pdf>. See also *Technical Report*, *supra* note 2 at 54-56; "New eco-Rules can shut oilsands," *Edmonton Journal* (26 June 2008), online: Canada.com <www.canada.com/edmontonjournal/news/story.html?id=315bdd4d-24ad-4f6f-bcll-066823d55add>; for a further example of the tension existing between the Alberta Government and the ERCB, see discussion in *supra* note 35.

155 *LUF*, *supra* note 6.

156 *ALSA*, *supra* note 6.

157 An integrated approach to natural resources promotes the coordinated development and management of water, land and related resources in order to make systematic and strategic decisions concerning appropriate land uses. For a detailed analysis of this type of approach, see Isobel W Heathcote, *Integrated Watershed Management, Principles and Practice*, 2nd ed (New Jersey: John Wiley & Sons, 2009).

158 *ALSA*, *supra* note 6, ss 13(1), 15; *REDA*, *supra* note 8, s 20(1).

159 *Ibid*.

160 Cumulative effects are the impacts on the environment that result from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency or person undertakes such other actions. See Government of Canada, Aboriginal Affairs and Northern Development Canada, *Cumulative Impact Monitoring Program*, online: Aboriginal Affairs and Northern Development Canada <www.aadnc-aandc.gc.ca/eng/1100100023828/1100100023830>.

162 *Ibid*.

163 *Ibid* at 56.

Government to formally coordinate the work of the new Alberta Energy Regulator within the broader provincial framework. Thus, if used carefully, directions to the Regulator might play an essential role particularly during this transitional phase and the shift to an integrated approach for the management of natural resources.

Some directions presumably will be based on the recommendations of the Policy Management Office according to the policy issues identified by the Regulator itself and communicated to the Policy Management Office.[164] Directions could be used to clarify the Regulator's interpretation of its statutory mandate or clarify the general policies that should guide the Regulator in carrying out its mandate. Directions may also be an efficient way to address policy inconsistencies or gaps in the mandate of the Regulator. Section 2 of the *REDA*, requires the Regulator to carry out its mandate with both "energy resource enactments" and with "specified enactments" as defined under *REDA*.[165] Examination of these definitions reveals that the Regulator has several powers, duties, and functions assigned under a variety of acts and that the policies of these different sectors are not necessarily aligned.[166] Therefore, directions could be used to promptly address these issues as they arise and avoid delays in the Regulator's decision-making.

Perhaps pending the implementation of additional Regional Plans, directions might be used to address policy issues concerning the approval of energy projects and other dispositions. At the moment, only the Lower Athabasca Region and South Saskatchewan have an approved Regional Plan under the *ALSA*, but clear thresholds for the environment have not been established. The North Saskatchewan Regional Plan is under development, while the other four regions (Upper Peace, Lower Peace, Red Deer, and Upper Athabasca) have not started the planning process yet.[167] As more information on the status of these regions becomes available, directions could promptly set priorities and guidelines on certain activities, or limits and standards to land disturbance for certain areas.

165 *REDA*, *supra* note 8, s 2(1). For the definition of "energy resource enactment" and "specified enactment" under *REDA*, see ss 1(1)(j), 1(1)(s). These enactments include the *Coal Conservation Act*, RSA 2000, c C-17; the *Gas Resources Preservation Act*, RSA 2000, c G-4; the *Oil and Gas Conservation Act*, RSA 2000, c O-6; the *Pipeline Act*, RSA 2000, c P-15; the *EPEA*, *supra* note 9; the *Public Lands Act*, *supra* note 9; the *Water Act*, *supra* note 9; and Part 8 of the *Mines and Minerals Act*, *supra* note 9.

166 *Ibid*. See also *REDA*, *ibid* note 8, s 2(2) (identifying without limitation the long list of the powers, duties and functions assigned to the Regulator including the following: applications under energy resource enactments in respect of pipelines, wells, processing plants, mines and other facilities and operations for the recovery and processing of energy resources; applications for the use of land in respect of energy resource activities, including approving energy resource activities on public land; applications and other matters under the *EPEA* in respect of energy resource activities; applications and other matters under the *Water Act* in respect of energy resource activities; to oversee the abandonment and closure of pipelines, wells, processing plants, mines and other facilities and operations in respect of energy resource activities at the end of their life cycle in accordance with energy resource enactments; to regulate the remediation and reclamation of pipelines, wells, processing plants, mines and other facilities and operations in respect of energy resource activities in accordance with the *EPEA*).

167 See Alberta Environment and Sustainable Development, "Land Use Alberta, Governance," online: Alberta Environment and Sustainable Development <https://www.landuse.alberta.ca/Governance/Pages/default.aspx>.

In 2013, the former Minister of the Department of Energy, Ken Hughes, stated that both the Policy Management Office and the Ministers will be allowed to give directions to the Regulator when necessary and that there will be regular discussions between the parties.[168] In addition, he stated that the Policy Management Office will be responsible for, among other functions, monitoring the Regulator to ensure that water and other environmental permits will be properly issued to energy project proponents.[169] Even though it is positive that, in response to several concerns, the Alberta Government has expressed its intention to ensure that energy development will be conducted in an environmentally responsible way, these statements are not completely reassuring.[170] The new Regulator is not an agent of the Crown and the role of the Government is not to constantly influence its work.[171] As previously discussed, the Regulator will be able to render decisions free of influence from political short-term goals, and thus make better decisions in the public interest, only if it is not subject to the direct control of the Government when exercising its duties and functions. Furthermore, depending on the perceived independence and impartiality of the Regulator in performing its functions, ministerial directions may be subject to litigation, which may itself compromise the vaunted goal of securing additional investments in the energy sector. Drawing a line is not easy and, to a certain extent, it is for the government of the day to make this decision. However, the Regulator was established at arm's length from the executive because its independence allows it to achieve its objective more readily than if it fell under the direct control of a ministry. Thus, ministerial directions should be issued cautiously or they may defeat the same reasons that prompted the Alberta Government to create the new Regulator.

H. THE *ABORIGINAL CONSULTATION DIRECTION*

On 26 November 2013, the Minister of Energy issued to the Regulator the first direction under section 67 of *REDA*, namely the Ministerial Order 141/2013 (or the *Aboriginal Consultation Direction*).[172] On 31 October 2014, the Minister of Energy and the Minister of Environment and Sustainable Resource Development (ESRD) issued a revised *Aboriginal*

168 See Sheila Pratt, "New Energy Regulator will Weaken Environmental Protection, Say Critics," *Edmonton Journal* (17 March 2013), online: <www.albertalandwonerscouncil.com/March%2017,%202013,%20Edmonton%20Journal-New%20energy%20regulation%20will%20weaken%20environmental%20protection.pdf>. In December 2013, Diana McQueen replaced Ken Hughes as Minister of Environment and Sustainable Resource Development.

169 *Ibid*.

170 Several commentators have raised concerns that by taking over the functions previously administered by ESRD with respect to energy projects, environmental protection may be weakened. See e.g. Nigel Bankes, "Bill 2 and its implications for the jurisdiction of the Environmental Appeal Board" (9 November 2012), *ABlawg* (blog), online: <ablawg.ca/2012/11/09/bill-2-and-its-implications-for-the-jurisdiction-of-the-Environmental-Appeal-Board>; Nigel Bankes, "A single window for the permitting of energy projects in Alberta: who will look out for the chickens?" (16 May 2011), *ABlawg* (blog), online: <ablawg.ca/2011/05/16/a-single-window-for-the-permitting-of-energy-projects-in-Alberta-who-will-look-out-for-the-chickens>; Cindy Chiasson, "Single energy regulator bill a poor deal for Alberta's environment" (1 November 2012), *Environmental Law Centre* (blog), online: ELC <environmentallawcentre.wordpress.com/2012/11/01/single-energy-regulator-bill-a-poor-deal-for-albertas-environment>.

171 *REDA*, *supra* note 8, s 4.

172 Alberta, Department of Energy, "Ministerial Order 141/2013" (Edmonton: Department of Energy, 2013) at 2, online: <www.energy.alberta.ca//Org/pdfs/MO141_2013woSignature.pdf>. For a commentary on this Ministerial Order, see Giorilyn Bruno & Nigel Bankes, "The First Ministerial Direction to the Alberta Energy Regulator: The Aboriginal Consultation Direction" (24 April 2014), *ABlawg* (blog), online: <ablawg.ca/2014/04/24/the-first-ministerial-direction-to-the-alberta-energy-regulator-the aboriginal-consultation-direction>.

Consultation Direction to the Regulator.[173] This is the second Ministerial Order issued under section 67 of the *REDA* and it repeals the previous one.

The Regulator does not have the jurisdiction to assess the adequacy of Crown consultation.[174] The current regulatory framework assigns this function to the Aboriginal Consultation Office (ACO), a new office established under the Aboriginal Relations Department.[175] In this context, the *Aboriginal Consultation Direction* sets out a process that the Regulator must follow to ensure that it acts consistently with the decisions of the Government and to facilitate information exchange between the Regulator and the ACO.[176] The *Aboriginal Consultation Direction* applies to applications to the Regulator in respect of energy resource activities under "specified enactments," as defined in the *REDA*.[177] The main purpose of this Direction is "to ensure that the AER considers and makes decisions in respect of energy applications in a manner that is consistent with the work of the Government of Alberta"[178] in meeting its consultation obligations associated with the existing rights of Aboriginal people.

The *Aboriginal Consultation Direction* gives nine directions to the Regulator which are grouped under four subheadings: (1) Coordination; (2) Applications; (3) Decisions; and (4) Appeal and Reconsideration. Under "Coordination," the *Aboriginal Consultation Direction* requires the Regulator to create and maintain a consultation unit that will work with the Aboriginal Consultation Office (ACO).[179] The *Aboriginal Consultation Direction* also requires the Regulator to collaborate with the ACO in establishing operating procedures that address how these two organizations will administer and coordinate their work.[180] The Regulator is required to follow these procedures.[181] Under "Applications," the Regulator must require all proponents to contact the ACO before submitting an energy application to the Regulator.[182] Once submitted, the Regulator is to provide the ACO with certain

---

173 Alberta, Department of Energy, "Energy Ministerial Order 105/2014 Environment and Sustainable Resource Development Ministerial Order 53/2014" (Edmonton: Department of Energy, 31 October 2014) [*Aboriginal Consultation Direction*], online: <www.energy.gov.ab.ca/Org/pdfs/MOAboriginal ConsultationDirection.pdf>. For a commentary on this Ministerial Order, see Giorilyn Bruno & Nigel Bankes, "A Revised Aboriginal Consultation Direction issued to the Alberta Energy Regulator" (8 December 2014) *ABlawg* (blog), online: <ablawg.ca/2014/12/08/a-revised-aboriginal-consultation-direction-issued-to-the-alberta-energy-regulator>.

174 *REDA*, *supra* note 8, s 21.

175 The ACO is also responsible for all other aspects of First Nations consultation, including pre-consultation assessment, management, and execution of the consultation process. See generally Alberta, Ministry of Aboriginal Relations, online: <www.aboriginal.alberta.ca/1.cfm>.

176 *Aboriginal Consultation Direction*, *supra* note 173 at 2.

177 *Ibid* at 2. On 10 December 2014, the Assistant Deputy Minister of Aboriginal Relations (Alberta) and the Vice President of Government and Stakeholder Relations (AER) signed the "Joint Operating Procedures for First Nations Consultation on Energy Resource Activities," (Edmonton: AER & ACO, 10 June 2015) ["Joint Operating Procedures"], online: <www.aer.ca/documents/actregs/JointOperating Procedures.pdf>. The Agreement, which came into effect 2 March 2015 (the June 2015 revised version also sets out an application supplement requirement effective 1 July 2015), clarifies that the *Aboriginal Consultation Direction*, *supra* note 173 applies to applications made to the AER under the specified enactments. The Agreement at (iii) states: "The ministerial order issued on October 31, 2014 (*Energy 105/2014* and *Sustainable Resource Development 53/2014*) and the *Procedures* apply only to applications made to the AER under the specified enactments, as defined by the *Responsible Energy Development Act* (i.e., *Public Lands Act*, *Mines and Minerals Act* (Part 8), *Water Act*, and the *Environmental Protection and Enhancement Act*), in respect of energy resource activities."

178 *Aboriginal Consultation Direction*, *ibid* at 2.

179 *Ibid* at 3.

180 *Ibid*. The "Joint Operating Procedures" have recently come into force: see discussion in *supra* note 177.

181 *Aboriginal Consultation Direction*, *ibid* at 3.

182 *Ibid*.

information with respect to the application.[183] Assuming that consultation is required, the Regulator must ensure that proponents have included information about the potential adverse impact of the proposed project on existing rights and traditional uses by Aboriginal people in their application.[184] Also, the Regulator is required to advise the ACO of any changes to the application, whether alternate dispute resolution involving Aboriginal people will be used, whether a hearing will be held on the application, and whether Aboriginal people will be included in the hearing process.[185] Under "Decisions," the *Aboriginal Consultation Direction* requires the Regulator to seek advice from the ACO with respect to the adequacy of consultation and mitigation actions on potential adverse impacts on Aboriginal rights and traditional uses.[186] The Regulator is also required to notify the ACO and provide the ACO with a copy of its decision and related reasons concerning the outcome of an energy application at the same time it notifies the proponent.[187] Finally, under "Appeal and Reconsideration," the Regulator is required to provide the ACO with a copy of any application for regulatory appeal, reconsideration, or leave to appeal to the Court of Appeal filed by Aboriginal people.[188]

Some of the issues previously discussed may be analyzed in the context of the *Aboriginal Consultation Direction*. For instance, neither the first Ministerial Order nor the second one has been published in the Alberta Gazette. The first Ministerial Order 141/2013 was not even published on the Regulator's website; it was published on the website of the Department of Energy but only (and inexplicably) under the heading "Travel Reports."[189] This type of promulgation certainly raises concerns about the transparency of the process. Further, could the latest *Aboriginal Consultation Direction* be challenged on the ground that it was not formally published? Presumably, the Minister has to comply with the procedure prescribed under section 3 of the *Regulations Act* if the *Aboriginal Consultation Direction* is of a legislative nature.[190] However, qualifying its nature is not straightforward. On one side, it may be argued that the *Aboriginal Consultation Direction* is of an administrative nature because it is directed at specific individuals (that is, the Regulator), and its overall thrust is to ensure a coordinated process and efficient information exchange between the Regulator and the ACO on energy applications that require Aboriginal consultation.[191] In this case, the Minister would have no obligation to comply with the procedure prescribed under section 3 of the *Regulations Act*. On the other hand, other requirements of the *Aboriginal Consultation Direction* apply to the public and are concerned with setting standards of conduct. For instance, a proponent is required to contact the ACO before submitting an energy application and to include in the application certain documents and information.[192]

---

183 *Ibid* (in particular, the *Direction* requires that a copy of or access to the application be submitted to the Regulator, as well as a copy of any statement of concern, submission, evidence and information filed by any Aboriginal group concerning the application).

184 This requirement does not operate if the application concerns an activity that is deemed not to require consultation. This would happen in two instances: (1) the application concerns an activity that is listed under Appendix C of the Consultation Guidelines or (2) the application is accompanied by a pre-consultation assessment of the ACO indicating that no consultation is required. See *ibid* at 4.

185 *Ibid*.

186 *Ibid*.

187 *Ibid*.

188 *Ibid*.

189 *Supra* note 172.

190 See discussion in Part III.F, above.

191 See *Aboriginal Consultation Direction*, *supra* note 173 at 3-4, Directions 1, 2, 5, 8.

192 *Ibid*, Directions 4, 6.

Since these requirements alter the exercise of rights and responsibilities of the public, it may be difficult to conclude that the *Aboriginal Consultation Direction* is purely of an administrative nature. In this case, it would have no effect because it was not issued in compliance with the procedure prescribed under section 3 of the *Regulations Act*.

Uncertainties arise also in the context of Direction 7, which requires the Regulator to seek advice on actions that may reduce the potential impacts on existing rights or on traditional uses of Aboriginal people. This direction states as follows:

> 7) Prior to making a decision in respect of an energy application for which First Nations consultation is required by the Consultation Guidelines or by the ACO, the AER shall request advice from the ACO
>
> a) respecting whether Alberta has found consultation to have been adequate, adequate pending the outcome of the AER's process, or not required, and
>
> b) on whether actions may be required to address potential adverse impacts on existing rights of aboriginal peoples as recognized and affirmed under Part II of the *Constitution Act, 1982* or traditional uses as defined in the Consultation Policy.[193]

The Government's duty to consult may include the need to accommodate Aboriginal concerns.[194] The standard of sufficient accommodation remains extremely vague but it may entail adjusting plans and projects to minimize impacts. Therefore, the rationale of Direction 7(b) seems to be to ensure that the duty to accommodate is adequately reflected in the regulatory approval process. However, to what extent can the ACO interfere with a decision of the Regulator concerning mitigating measures? Is the Regulator required to implement the measures recommended by the ACO? Does the Regulator maintain some level of discretion and the ultimate responsibility for the decision? The requirement that the Regulator must seek advice on mitigating measures seems to suggest that the ACO has oversight over the Regulator's decision. At the same time, Direction 7(b) does not require the Regulator to implement the advice received. Thus, presumably the Regulator maintains some level of discretion. Whether and to what extent the Regulator will in practice exercise discretion remains uncertain.

Lastly, it does not seem possible to identify the legal effects of the *Aboriginal Consultation Direction* on third parties or whether third parties have judicially enforceable rights. The reason is that it is first necessary to determine whether section 67 of the *REDA* generally allows legislative or administrative directions. But, as previously discussed, the answer to this issue is not clear.[195]

In conclusion, several issues remain unclear under section 67 of the *REDA* including the scope of the ministerial power, the legal status of directions issued under this provision, and the procedural requirements to issue directions. These legislative gaps create significant uncertainties in the current regulatory regime.

VI. A COMPARATIVE ANALYSIS WITH THE BC OIL AND GAS COMMISSION, THE BC UTILITIES COMMISSION, AND THE ONTARIO ENERGY BOARD

Even though the power of the Minister under section 67 of *REDA* seems to be quite unique in Alberta,[196] executive directions are not isolated in the tradition of Canadian administrative agencies. This part provides a comparative analysis of the BC Oil and Gas Commission, the BC Utilities Commission, and the Ontario Energy Board. The discussion is structured around the following questions:

- What is the scope of executive directions?
- Who has the power to issue directions?
- What type of procedure must be followed to issue directions?
- Has the power to issue directions been used?

A. THE BC OIL AND GAS COMMISSION

The BC Oil and Gas Commission is a single-window regulatory agency responsible for overseeing oil and gas operations in British Columbia, including exploration, development, pipeline transportation and reclamation.[197] Some see it as the model on which *REDA* is based. The Commission performs regulatory functions and is considered to have a sufficient measure of decision-making authority to warrant being called arm's length or "independent."[198] Regulatory responsibility is delegated to the Commission through the *Oil and Gas Activities Act*[199] and includes specified enactments including provisions of the *Forest Act*,[200] the *Heritage Conservation Act*,[201] the *Land Act*,[202] the *Environmental Management Act*,[203] and the *Water Act*.[204]

1. COMMISSION SUBJECT TO DIRECTIONS

The Commission may be subject to mandatory executive directions under section 25(1.1) of the *Oil and Gas Activities Act.* The provision states as follows:

> (1) Subject to subsection (1.1), on application by a person under section 24 and after considering

196 A search (6 July 2015) using the term <"minister may by order" /p directions> in the Alberta CanLII data base returned 66 hits — none involving a tribunal like the Alberta Energy Regulator. The closest analogy was perhaps section 57.1 of *ALSA* which allows the "Stewardship Minister may by order" issue *directives* that the secretariat and the stewardship commissioner must follow in carrying out their powers, duties and functions under this Act, the regulations and regional plans" [emphasis added].

197 The BC Oil and Gas Commission was originally established under the *Oil and Gas Commission Act*, SBC 1998, c 39. The Commission is now governed by the *Oil and Gas Activities Act*, SBC 2008, c 36, which repealed the *Oil and Gas Commission Act* effective 4 October 2010 (BC Reg 274/2010)).

198 BC Oil and Gas Commission, "About Us" online: BC Oil and Gas Commission <www.bcogc.ca/about-us>.

199 *Ibid*.

200 *Forest Act*, RSBC 1996, c 157.

201 *Heritage Conservation Act*, RSBC 1996, c 187.

202 *Land Act*, RSBC 1996, c 245.

203 *Environmental Management Act*, SBC 2003, c 53.

204 *Water Act*, RSBC 1996, c 483.

(a) written submissions made under section 22(5), if any, and

(b) the government's environmental objectives, if any have been prescribed for the purposes of this section,

the commission may issue a permit to the person if the person meets the requirements prescribed for the purposes of this section.

(1.1) The Lieutenant Governor in Council, by regulation, may issue a direction to the commission with respect to the exercise of the commission's power under subsection (1), and the commission must comply with the direction despite any other provision of this Act, the regulations or an order made under this Act.[205]

2. WHAT IS THE SCOPE OF EXECUTIVE DIRECTIONS UNDER THE *OIL AND GAS ACTIVITIES ACT*?

By reference to section 25(1), executive directions may be issued with respect to the exercise of the Commission's power to issue permits and authorizations for oil and gas activities.[206] An executive direction has the force of law and far-reaching implications since it trumps any other provision of the *Oil and Gas Activities Act*, the regulations or orders made under the *Oil and Gas Activities Act*.[207]

3. WHO HAS THE POWER TO ISSUE DIRECTIONS TO THE BC OIL AND GAS COMMISSION?

Section 25(1.1) of the *Oil and Gas Activities Act*, gives the power to issue directions to the Lieutenant Governor-in-Council.

4. WHAT TYPE OF PROCEDURE MUST BE FOLLOWED TO ISSUE DIRECTIONS?

The Lieutenant Governor-in-Council may give directions to the BC Oil and Gas Commission by way of regulation.[208] Directions must be published in the British Columbia Gazette and have binding effect when deposited and published in the Gazette.[209]

5. HAS THE POWER TO ISSUE DIRECTIONS BEEN USED?

The Lieutenant-Governor-in-Council recently issued under section 25(1.1) of the *Oil and Gas Activities Act*, the first direction to the Commission. This direction prohibits the Commission from issuing a permit to a person to convert a liquified natural gas facility

But see section 6 for publication exemptions (showing, for example, if publication in the Gazette is impracticable or unduly expensive due to the length of the regulation, or the regulation is or will be available to persons who are likely to be affected by it).

pipeline into a pipeline for transporting oil or diluted bitumen.[210] In 2011, the BC Government directed the Oil and Gas Commission not to issue permits under section 25 of the *Oil and Gas Activities Act* in relation to the exploration, development, and production of oil and gas resources in the Flathead watershed area.[211] Even though this restriction on the powers of the Commission might have fallen under the scope of executive directions, in that instance, the BC Government instructed the Commission through the more formal and legitimate legislative process.[212]

B. THE BC UTILITIES COMMISSION

The BC Utilities Commission is an independent regulatory agency primarily responsible for the regulation of British Columbia's natural gas and electricity utilities under the *Utilities Commission Act*.[213] Additional responsibilities include the regulation of intra-provincial pipelines, electric power transmission facilities, and universal compulsory automobile insurance.[214]

1. COMMISSION SUBJECT TO DIRECTIONS

The BC Utilities Commission is subject to mandatory directions under section 3 of the *Utilities Commission Act*. The provision states as follows:

> (1) Subject to subsection (3), the Lieutenant Governor in Council, by regulation, may issue a direction to the commission with respect to the exercise of the powers and the performance of the duties of the commission, including, without limitation, a direction requiring the commission to exercise a power or perform a duty, or to refrain from doing either, as specified in the regulation.
>
> (2) The commission must comply with a direction issued under subsection (1), despite
>
> (a) any other provision of
>
> (i) this Act, except subsection (3) of this section, or
>
> (ii) the regulations,
>
> (a.1) any provision of the *Clean Energy Act* or the regulations under that Act, or
>
> (b) any previous decision of the commission.
>
> (3) The Lieutenant Governor in Council may not under subsection (1) specifically and expressly

214 *Ibid*.

(a) declare an order or decision of the commission to be of no force or effect, or

(b) require the commission to rescind an order or a decision.[215]

2. WHAT IS THE SCOPE OF EXECUTIVE DIRECTIONS UNDER THE *UTILITIES COMMISSION ACT*?

Executive directions to the BC Utilities Commission may be issued with respect to the exercise of the powers and the performance of the duties of the commission.[216] Similar to directions issued to the BC Oil and Gas Commission, a direction under section 3(2) of the *Utilities Commission Act* has far-reaching implications since it trumps any provision of the *Utilities Commission Act* and the *Clean Energy Act* or the regulations under these acts, as well as any previous decision of the commission.[217]

Section 3(3), sets an important substantive limit and prohibits the executive from declaring an order or decision of the commission to be of no force or effect, or requiring the commission to rescind an order or a decision.[218]

3. WHO HAS THE POWER TO ISSUE DIRECTIONS TO THE BC UTILITIES COMMISSION?

Section 3 of the *Utilities Commission Act* gives the power to issue directions to the Lieutenant Governor-in-Council.

4. WHAT TYPE OF PROCEDURE MUST BE FOLLOWED TO ISSUE DIRECTIONS?

The Lieutenant Governor-in-Council may give directions by way of regulation.[219] Executive directions must be published in the British Columbia Gazette, and have binding effects when deposited and published in the Gazette.[220] As a matter of practice, directions are also published on the website of the BC Utilities Commission.[221]

218 *Ibid*, s 3(3). This restriction is consistent with the decision to eliminate Cabinet appeals in the province. See Janisch, *supra* note 30 at 82; *Cabinet Appeals Abolition Act*, SBC 1993, c 38.

219 *Utilities Commission Act*, *supra* note 213, s 3.

220 See *Regulations Act*, *supra* note 209, ss 3-5, but see section 6 for publication exemptions (showing, for example, if publication in the Gazette is impracticable or unduly expensive due to the length of the regulation, or the regulation is or will be available to persons who are likely to be affected by it); *Interpretation Act*, *supra* note 207, s 41.

221 See British Columbia Utilities Commission, "Special Directions and Regulations to the British Columbia Utilities Commission," online: British Columbia Utilities Commission <http://www.bcuc.com/SpecialDirection.aspx>.

5. HAS THE POWER TO ISSUE DIRECTIONS BEEN USED?

The Lieutenant Governor-in-Council has issued several directions requiring the Commission: (i) to set specific rates or to achieve specific outcomes when setting rates;[222] (ii) to consider certain objectives before issuing a project certificate;[223] (iii) to take into account specific factors when making decisions in the public interest;[224] (iv) to exercise certain powers and functions in relation to the corporation generally;[225] and (v) to not exercise certain powers.[226]

C. THE ONTARIO ENERGY BOARD

The Ontario Energy Board regulates the province's electricity and natural gas utilities in accordance with the *Ontario Energy Board Act, 1998*.[227] Additional statutes that give jurisdiction to the Board are the *Electricity Act, 1998*,[228] the *Municipal Franchises Act*,[229] the *Oil, Gas and Salt Resources Act*,[230] the *Assessment Act*,[231] and the *Toronto District Heating Corporation Act*.[232]

1. BOARD SUBJECT TO DIRECTIONS

The Board is subject to mandatory directions under more than eleven provisions of the *Ontario Energy Board Act*.[233] Only two of the main provisions are reproduced here.

> 27. (1) The Minister may issue, and the Board shall implement, policy directives that have been approved by the Lieutenant Governor in Council concerning general policy and the objectives to be pursued by the Board.
>
> (2) A policy directive issued under this section shall be published in *The Ontario Gazette*.

---

224 *Special Direction No 10*, *supra* note 222, s 4.

225 *Special Direction IC2 to the British Columbia Utilities Commission*, BC Reg 307/2004. This direction was challenged in *BC Old Age Pensioners' Org v British Columbia (Minister of Public Safety & Solicitor General)*, 2006 BCSC 257, [2006] BCJ No 330 (QL) (concerning the Lieutenant Governor-in-Council issued Special Direction IC2 requiring the Insurance Corporation of British Columbia to transfer $530,000,000 of capital allocated to its optional business to its basic insurance business, and further directed the British Columbia Utilities Commission to accept that transfer. The Petitioners alleged that Special Direction IC2 perverted the regulatory scheme in that it created a new regulatory chain of command that circumvented the statutory authority of the British Columbia Utilities Commission. The application was dismissed and the Court determined that the ICBC was an agent of government and all of its property and money was deemed to be property of government. As principal, the government, through the Lieutenant Governor-in-Council, was simply directing its agent ICBC in conduct of an aspect of its undertaking. The Special Direction IC2 did not turn the chain of command on its head, but it merely directed the British Columbia Utilities Commission to recognize and accept such direction).

226 *Direction to the British Columbia Utilities Commission Respecting the Iskut Extension Project*, BC Reg 137/2013.

229 *Municipal Franchises Act*, RSO 1990, c M-55. The *Municipal Franchises Act* provides for the granting of a franchise to a natural gas distributor to provide natural gas service within a municipality.

230 *Oil, Gas and Salt Resources Act*, RSO 1990, c P-12.

231 *Assessment Act*, RSO 1990, c A-31.

232 *Toronto District Heating Corporation Act, 1998*, SO 1998, c 15, Schedule C.

233 See *Ontario Energy Board Act, 1998*, *supra* note 227, ss. 27-28.7.

> 27.1 (1) The Minister may issue, and the Board shall implement, directives that have been approved by the Lieutenant Governor in Council that require the Board to take steps specified in the directives to promote energy conservation, energy efficiency, load management or the use of cleaner energy sources, including alternative and renewable energy sources.
>
> (2) A directive issued under this section shall be published in *The Ontario Gazette*.[234]

2. WHAT IS THE SCOPE OF EXECUTIVE DIRECTIONS UNDER THE *ONTARIO ENERGY BOARD ACT*?

The initial 1998 version of the *Ontario Energy Board Act* contained only two provisions allowing executive directions with respect to (i) "general policy and the objectives to be pursued by the Board,"[235] and (ii) "market rules made under section 32 of the *Electricity Act, 1998* and existing or proposed licence conditions" in order to address market abuses.[236] Subsequent amendments to the *Ontario Energy Board Act* in 2002, 2006, and 2009 have broadened the scope of directions. The *Act* currently allows directions for several purposes, including the following: (i) "to promote energy conservation, energy efficiency, load management or the use of cleaner energy sources, including alternative and renewable energy sources,"[237] (ii) "to establish conservation and demand management targets to be met by distributors and other licensees,"[238] (iii) to require the Board "to take such steps as are specified in the directive relating to the establishment, implementation or promotion of a smart grid for Ontario,"[239] and (iv) in relation "to the government's smart metering initiative."[240]

In 2010, a further amendment to the Act introduced section 28.7 allowing executive directions "in relation to the marketing of gas and the retailing of electricity in Ontario."[241] The length and scope of this provision is significant. In particular, subsection (3) of this provision allows the Minister to "require the Board *to amend all licences* so issued [under section 48 in respect of gas marketers or under section 57 in respect of retailers of electricity] or *to amend specific licences of specified licensees*."[242] Subsection (4) provides a long and non-exclusive list of conditions that the Minister may require the Board to implement on licences already issued.[243] Finally, subsection (6) allows directions requiring the Board to exercise audit, inspection, or investigating powers in certain circumstances.[244]

237 *Ibid*, s 27.1(1).
238 *Ibid*, s 27.2(1).
239 *Ibid*, s 28.5(1). Under section 28.5(2), a directive may also specify whether the Board is to hold a hearing and the circumstances under which a hearing may or may not be held.
240 *Ibid*, s 28.3(1). Under subsection 2 of this provision, the directives may also require the Board, in the manner specified in the directives, to amend conditions in licences issued by the Board, and provides a list of permissible conditions.
241 *Ibid*, ss 28.7.(1)
242 *Ibid*, s 28.7(3) [emphasis added].
243 *Ibid*, s 28.7(4).
244 *Ibid*, s 28.7(6).

3. WHO HAS THE POWER TO ISSUE DIRECTIONS TO THE ONTARIO ENERGY BOARD?

The power to issue mandatory directions is assigned to the Minister of Energy subject to the approval of the Lieutenant Governor-in-Council.[245]

4. WHAT TYPE OF PROCEDURE MUST BE FOLLOWED TO ISSUE DIRECTIONS?

The *Ontario Energy Board Act* uses the term *directive* as the instrument by which directions are communicated to the Board.[246] The term is not defined, but the Act requires that directives "shall be published in the *Ontario Gazette*."[247] All directives are approved by Orders in Council and published on the OEB's website.[248]

5. HAS THE POWER TO ISSUE DIRECTIONS BEEN USED?

The Minister has used the direction power several times, principally to issue "conservation directives" under section 27.1 of the *Act*.[249] In a few instances, the Minister has also provided policy guidance through this instrument.[250]

---

245 The power to issue directives is given to the minister that is responsible for the administration of the *Ontario Energy Board Act, 1998*, *ibid*. At different times, that has been the Minister of Energy, Science and Technology, the Minister of Energy and Infrastructure and the Minister of Energy.

246 See *Ontario Energy Board Act, 1998*, *ibid*, ss 27, 28.7.

247 *Ibid*, s 27-27.2, 28.3, 28.5, 28.7.

248 See Ontario Energy Board, "Directives Issued to the OEB by the Minister of Energy," online: Ontario Energy Board <www.ontarioenergyboard.ca/OEB/Industry/Regulatory+Proceedings/Directives+Issued+to+the+OEB>.

249 See the following directives issued under section 27.1 of the *Ontario Energy Board Act*: directive Jun 4-03 (requiring the Board to consult with stakeholders to identify and review options for the delivery of demand side management and demand response activities within the electricity sector, and to report back to the Minister of Energy with the Board's analysis and recommendations); directive Jun 23-04 (requiring the Board to develop and provide to the Minister of Energy an implementation plan for the achievement of the Government's smart meter targets, as well as in relation to the need for and potential effectiveness of non-commodity time of use rate structures); directive Aug 10-06 (requiring the Board to dispense with compliance by Enbridge Gas Distribution Inc. and Union Gas Limited with sections of their respective undertakings given to the Lieutenant Governor in Council, such that these gas utilities can provide services related to the promotion of conservation, electricity management and the promotion of cleaner energy sources); directive Sep 8-09 (requiring the Board to dispense with compliance by Enbridge Gas Distribution Inc. and Union Gas Limited with sections of their respective undertakings given to the Lieutenant Governor in Council, such that these gas utilities can own and operate certain generation facilities as well as assets required in respect of the provision of energy conservation services); directive Mar 31-10 (requiring the Board to establish electricity conservation and demand management (CDM) targets to be met by licensed electricity distributors and to issue a code pertaining to CDM). *Ibid*, s 27.1.

250 See Directive Jun 7-00 (requiring that the Board give primacy to the objective of protecting the interests of consumers in setting electricity distribution rates, and that the Board invite representations from the council of the municipal corporation(s) within the service area of an electricity distributor before making an order setting that distributor's distribution rates) and Directive May 16-07 (requiring the Board to implement such measures as the Board considers necessary to address the issue of stray voltage as it affects the farm sector). *Ibid*.

D. TABLE OF RESULTS

Instrument by which the Authority may issue directions	Regulation	Regulation	Directive
Has the power to issue directions been used?	Yes	Yes	Yes
Are directions subject to mandatory publication in the relevant Gazette?	Yes	Yes	Yes
Are directions published on the Commission or Board's website?	No	Yes	Yes

V. CONCLUSION

Section 67 of *REDA* was justified as an attempt to reconcile the need of the executive to delegate decision-making to the Regulator, while preserving oversight of the Regulator's decision-making to ensure accountability. It follows that balancing these two conflicting interests is essential to achieve good governance.

The current legislation leaves open significant issues under section 67 of *REDA*, including the scope, the legal status of directions, and the procedural requirements to issue them.[251] In addition, while this article addressed some aspects of the relationship between section 67 of *REDA* and section 10 of *APAGA*, future research should analyze this topic more extensively.[252] These gaps create uncertainties in the current regulatory regime and exacerbate the concern that ministerial directions will be improperly used.

The comparative analysis with British Columbia and Ontario suggests that section 67 of *REDA* could be improved with respect to three aspects. First, the statutory power to give directions to the Regulator could be either assigned directly to the Lieutenant Governor-in-Council (as in the case of the BC Oil and Gas Commission and BC Utilities Commission) or require the approval of the Lieutenant Governor-in-Council (as in the case of the Ontario Energy Board).[253] This approach may be perceived as more legitimate and may protect the Ministers of Energy and ESRD from direct conflicts with the stakeholders and the general public.[254] Furthermore, this approach may ensure that directions reflect broad policy of the Alberta Government and not the policy of a single department.[255] Second, section 67 of *REDA* could prescribe that orders be published in the Alberta Gazette. This requirement would define the manner in which the executive should communicate with the Regulator and may clarify that issuing policy directions is a legislative act in nature and effect. As we have seen, directions to the BC Oil and Gas Commission and Utilities Commission must be formally issued and have the status of regulation.[256] Similarly, and despite being referred to as "directives," the procedure to issue directions to the Ontario Energy Board resembles the legislative process; thus, they also seem to have the status of delegated legislation.[257] This formal approach avoids the difficulties concerning directions of an administrative nature which may be binding on the agency but unenforceable in the courts.[258] In addition, this approach enhances transparency and may protect the agency from undue political interference.[259] The third lesson that we could learn from the comparative analysis concerns transparency. Transparency requires the information to be easily retrievable and not buried in bureaucracy or, as in the case of Ministerial Order 141/2013, under the "Travel Reports" of the Minister of Energy.[260] The public should be able to distinguish between a decision made by the Regulator and a decision made by the Alberta Government. If the Government interferes with a decision of the Regulator it should be held politically responsible for it. The

259 *Ibid*.
260 See discussion in Part III.H, above.

executive directions issued to the BC Utilities Commission and the Ontario Energy Board offer a pointed example of transparent information. Not only are they published on the agency's website but they are also easily retrievable by the public.[261]

The comparative analysis seems to be less useful when attempting to draw conclusions as to the appropriateness of directions or the extent to which the executive should use section 67 of *REDA* to ensure that "the work of the Regulator is consistent with the programs, policies and work of the [Alberta] Government."[262] The different structure and mandate of both the BC Utilities Commission and the Ontario Energy Board do not allow a meaningful comparison. With respect to the BC Oil and Gas Commission, the Lieutenant Governor-in-Council has only issued one direction under section 25(1.1) of the *Oil and Gas Activities Act*. Reasons may include that the Lieutenant Governor-in-Council has a broad power to make regulations under other provisions of the Act. For instance, the Lieutenant Governor-in-Council has the power to make regulations concerning the "policies and procedures to be followed by the Commission in conducting its affairs, exercising its powers and discretion carrying out its functions and duties and discharging its responsibilities."[263] The Lieutenant Governor-in-Council may make regulations concerning "actions that a permit holder and a person carrying out an oil and gas activity must take or refrain from taking to protect or effectively manage the environment."[264] The Lieutenant Governor-in-Council may make regulations to prohibit the carrying out of an oil and gas activity.[265] Last, the Lieutenant Governor-in-Council may make regulations to exempt "a person, class of persons, place, thing, transaction or activity" from a provision of the *Oil and Gas Activities Act* or the regulations, as well as to restrict the Commission's authority to provide for exemptions in certain matters.[266] An executive direction issued to the BC Oil and Gas Commission under section 25(1.1) would trump these regulations in case of inconsistencies.[267] However, the legislative scheme seems to imply that executive directions should be issued as a last resort given that the Lieutenant Governor-in-Council has a broad power to issue regulations under other provisions. This may partly explain why the power under section 25(1.1) of the *Oil and Gas Activities Act* has been used only once.

By contrast, in Alberta the circumstances are different. The reasons that lead to the enactment of *REDA* include the desire of the Alberta Government to shift to an integrated management system able to address the cumulative impacts of natural resource development.[268] Section 67 of *REDA* was introduced in the Act to facilitate this shift and allow the Government to ensure that the work of the Regulator does not compromise the broader policy framework set out by the Government.[269] Thus, we should not be surprised if section 67 of *REDA* ends up playing a significant role, particularly during this transitional phase.

As we keep searching for the right balance between independence and accountability, we may accept the political reality that the Regulator is not absolutely independent and that the executive has a role in its governance. However, we should also keep in mind that delegation of statutory authority to arm's length regulatory bodies typically occurs when it would be ineffective or inappropriate for the executive to exercise those functions directly. Thirty years ago, the Law Reform Commission of Canada perhaps gave the best general advice. Executive directions should be used as a means of formal guidance when the intervention of the legislature would be inefficient, and following a process that is open to public involvement and transparent.[270]

Court of Queen's Bench of Alberta

Citation: Calgary (City) v Renfrew Chrysler Inc, 2017 ABQB 197

Date: 20170322
Docket: 1501 10147
Registry: Calgary

2017 ABQB 197 (CanLII)

Between:

City of Calgary

Appellant

- and -

Renfrew Chrysler Inc., Represented by AEC Property Tax Solutions and Assessment Review Board for the City of Calgary

Respondent(s)

Memorandum of Decision
of the
Honourable Mr. Justice R.A. Neufeld

Introduction

[1] In this proceeding, the City of Calgary (the "Appellant", or the "City") appeals a decision by the Assessment Review Board for the City of Calgary (the "Board") dated 13 August, 2015. In it, the Board reduced the assessed value of land leased by the City of Calgary to the Respondent Renfrew Chrysler Inc. (the Respondent" or the "Taxpayer") from $22,130,000 to $16,520,000.

[2] The Appellant contends that it was denied procedural fairness at the hearing of the Taxpayer's complaint. It says that the Board unfairly raised a new issue regarding the impugned assessment during questioning of the City's two witnesses. It also says that the Board unfairly relied on its own expertise, rather than the evidence, in making a finding that the new issue warranted a substantial (20%) reduction in the property assessment.

[3] The Respondent denies that the issue raised by the Board in questioning was new, saying that the need for a downward adjustment to account for restrictions in land use was a enumerated ground of complaint from the beginning. It contends that there was nothing unfair in the Board acting on its own expertise, and in reliance on the evidence before it in concluding a downward adjustment to reflect zoning restrictions was required.

2017 ABQB 197 (CanLII)

Background

[4] The land parcel in question in this case is approximately eight acres in size. It is located at the extreme west end of Calgary's downtown district, in the community of Sunalta. In the past, a creosote treatment plant was operated on an adjacent parcel, resulting in substantial contamination of the site.

[5] The land was purchased by the Appellant, City of Calgary, a number of years ago, and leased back to the Respondent, which is responsible for payment of municipal taxes. It is not the only parcel purchased by the City in the area; the City has acquired most of the land in the immediate vicinity with the long term intention of remediation and resale for development in accordance with its West Village Area Redevelopment Plan. Following its purchase, the Land was redesignated by the City as a DC (Direct Control) district, with Urban Reserve Guidelines, and additional Permitted and Discretionary Uses of automobile sales and rentals.

[6] In 2014, the assessed value of the land was $8,530,000. In 2015, it was assessed at $22,130,000- a 160% increase.

[7] The Respondent complained. It gave ten reasons for its complaint, including the absence of an adjustment in market value to account for the restriction of land use.

[8] In support of its complaint, and as required by the Matters Relating to Assessment Complaints Regulation *Alta. Reg. 310/2009* ("MRAC") the taxpayer filed a package of written submissions and supporting evidence within the Board. The submission summarized the complaint issues as follows:

1. The subject has been assessed in excess of market value.
2. The subject assessment is inequitable.
3. The City of Calgary uses inappropriate value adjustments.

[9] As part of its written submissions, the Respondent filed an appraisal report prepared by Mr. Ian Pritchard- an expert land appraiser. That report used as a base assumption that the land could only be legally used as an automobile dealership (or rental). It estimated the land's market value at $11,950,000 by comparing it to land parcels around Calgary that were designated for automobile sales.

[10] The Respondent argued that the market value estimated by Mr. Pritchard should be used by the Board as a base value, and should then be adjusted downward by 30%. Such an adjustment, it said, would be equitable as all similarly-contaminated sited are eligible for a market value adjustment of 30% for assessment purposes.

[11] The Respondent's written submissions did not advocate a reduction in its assessment due to land use restrictions per se, even though a reduction of 20% was an enumerated ground of its complaint.

[12] In reply to the Respondent's submissions, the Appellant filed a 50 page evidence package comprised of property details; a response to the complainant's evidence; comparable information relating to downtown assessment, and a brief conclusion. It also provided 127 pages of appendices compromised of legislation, a glossary of terms supporting sales documentation, and case law and review board decisions.

[13] The thrust of the Appellant's case was that the market value evidence provided by Mr. Pritchard should be rejected on the basis that his sales comparables could not be used to establish market value.

2017 ABQB 197 (CanLII)

The Hearing

[14] The complaint was heard by a 3 person panel of the Composite Assessment Review Board.

[15] The Respondent was represented by an experienced agent, Mr. John Smiley of AEC Property Tax Solutions. Mr. Smiley gave evidence, along with Mr. Pritchard.

[16] The Appellant City was represented by two of its expert assessors – Mr. Steven Berzins and Mr. Jared Young. No counsel were involved.

[17] Unsworn oral presentations were made by each side with the participants cross-examining each other. At the conclusion of cross-examination, the Panel members asked questions of their own. Following completion of oral evidence, an opportunity was provided for closing argument. Each side availed itself of that opportunity.

The Decision

[18] On August 13, 2015, the Board decided that the assessment was excessive. As its reasons were brief, I will quote them in their entirety.

> [30] The Board will limit its comments to the relevant facts pertaining to the stated issues(s).
>
> [31] The Board finds that a year-over-year percentage increase in assessment does not in itself, constitute grounds to change an assessment. While an increase may suggest that an assessment could be incorrect, it does not prove market value amount is correct.
>
> [32] On the issue of market value, the Board considered the market evidence presented by both parties, and finds that the Complainant's evidence is not sufficiently compelling to warrant a change to the assessment. The Subject Property's locational proximity is next to Calgary's Central Core. The Board finds the sale comparable utilized by the Appraiser were in non-comparable locations and lacked adjustments.
>
> [33] In respect of the +5% corner lot value adjustment, the Board finds the adjustment is not warranted; the property is not on a corner. The property does not receive the positive effects of superior exposure; the access/degree is considered to be rather circuitous.

[34] With regards to the issue of equity, the Board finds that the Subject Property is currently receiving the -30% adjustment for contamination.

[35] The Board noted the restrictive DC Land Use Guidelines currently in place on the Subject Property. While the Board recognizes that the UR designation currently in place is merely a transitional zoning (pending the environmental clean-up of the site as argued by the Respondent), it is nevertheless, the Land Use that is currently in place. The Board finds that the sole permitted use of "automotive services" is extremely restrictive, and would surely impact the sale of the Subject Property. Consequently, the Board has determined that a -20% adjustment per the City of Calgary's "*Land Influence Chart*" [R1; Pg.48] applies to the Subject Property.

[36] In summary, having considered the evidence presented by both parties, the Board finds sufficient cause to change the assessment per the reasons indicated above.

[37] The Assessment is reduced to **$16,520,000**.

Did the Board Discharge its Duty of Procedural Fairness?

[19] As noted earlier, the Appellant contends that the Board acted unfairly by:

1. Raising and relying on a new issue in finding that the assessment was excessive, without affording the City the opportunity to respond
2. Using its own expertise to decide the matter in substitution for evidence presented at the hearing.

a) Standard of Review

[20] Procedural fairness is not subject to assessment under the correctness versus reasonableness dichotomy discussed in ***Dunsmuir v New Brunswick***, 2008 S.C.R. 190. Instead, the issue is whether the conduct of the tribunal having regard to all of the circumstances, conformed to the standards expected. In ***Thomas v Alberta (Transportation and Safety Board***, 2003 ABCA 256 (***Thomas***) Paperny JA discussed the flexible nature of that standard, as follows:

> 61. The content of the duty of fairness is flexible and variable depending upon the context of the particular statute involved and the rights, privileges or interests affected. "[T]he purpose of the participatory rights contained within the duty is to ensure that administrative decisions are made using a fair and open procedure, appropriate to the decision being made and its statutory, institutional and social context, with an opportunity for those affected to put forward their views and evidence fully and have them considered by the decision-maker." Baker v Canada (Minister of Citizenship and Immigration), [1999] 2 S.C.R. 817 at para 22.
>
> 62. The several criteria to determine what procedural rights the duty of fairness requires in the circumstances of the operation of this civil law program, as set out in Baker at paras. 23-28, include: (1) the nature of the decision being made and process followed in making it; (2) the nature of the statutory scheme and the terms of the statute pursuant to which the body operates; (3) the importance of the decision to the individual or individuals affected; (4) the legitimate expectations

2017 ABQB 197 (CanLII)

of the person challenging the decision; (5) the choices of procedure made by the agency itself. The list is not exhaustive.

b) Did the Board act unfairly in raising and relying on a new issue, without giving the City a fair opportunity to respond?

[21] The Appellant argues that in order for a party to have a fair opportunity to respond, it must receive timely notice of the evidence as well as the issues that will be considered at the hearing. It quotes Blake, Administrative Law in Canada, 5th Edition for the following proposition:

> In addition to the evidence, the essential issues to be considered should be identified. A party should not be left in the position of discovering upon receipt of the tribunal's decision, that it turned on a matter on which the party had not made representations because the party was not aware it was in issue. Nor is it fair to have an important issue sprung on a party during a hearing without prior notice or an adjournment...(at page 43)

[22] The Appellant says that the question of whether a land use restriction adjustment should be made to the assessed value of the land was sprung for the first time on its representatives by Board member Massey his questioning of the City's two representatives.

[23] The Respondent denies that the Board treated the City unfairly. It says that the issue of whether a land use restriction adjustment should be made was one of its reasons in support of its complaint. Therefore, the Appellant knew that the issue was on the table, even if the Respondent's submissions did not elaborate on that ground. Moreover, it says that both the Respondent and the Appellant included the 2015 Downtown Land Influence Chart that contains a 20% reduction for properties whose use is restricted by a Direct Control district by-law.

[24] At the leave stage, this Court found that leave to appeal should be granted, stating as follows:

> It's obvious to me that in making this minus 20 percent adjustment and the basis upon which it was done, the Board made its decision without giving the parties, and in particular the City of Calgary which has been more negatively affected by this, the opportunity to provide evidence to support its position and its position is obviously contrary to the decision that was ultimately made by the Board. [*Unreported, ABQB Action no. 1501-10147, April 19, 2016, at p.2*]

Findings

[25] In determining whether a tribunal has discharged its duty of procedural fairness, it is necessary to have regard for the statutory scheme, the nature of the issue before the tribunal, and the reasonable expectations of the parties (among other factors) (***Baker***).

[26] In this case, the procedure of adjudication of a complaint regarding a municipal tax assessment is prescribed by the MGA, and the MRAC Regulation promulgated thereunder.

[27] It begins with the filing of a complaint within a specified time period following receipt of an assessment. The complaint must set out the grounds for challenging the assessment.

2017 ABQB 197 (CanLII)

[28] Those grounds form the jurisdictional foundation for review of the assessment by the tribunal. For the Board to consider a ground that has not been identified in the complaint constitutes on error of jurisdiction. (***City of Edmonton v. Edmonton East (Capilano Shopping Centres Ltd*** 2016 SCC 47 at para 116)

[29] The second step is the filing of written material in support of the complaint, including "the documentary evidence, a summary of testimonial evidence including a signed witness report for each witness, and any written argument that the complainant intends to present at the hearing in sufficient detail to allow the respondent to respond to or rebut the evidence at the hearing." (MRAC, s.8 (2) (a)). This information must be disclosed at least 42 days prior to the hearing date.

[30] The third step is for the Respondent to disclose its documentary evidence, a summary of the testimonial evidence including a signed witness report for each witness, and any written argument that it intends to present at the hearing in sufficient detail to allow the complainant to respond to or rebut that evidence. This must be done at least 14 days before the hearing.

[31] The fourth step is for the complainant to disclose its rebuttal evidence and argument, at least 7 days before the hearing.

[32] The intention of these provisions of MRAC is to ensure that the evidence and arguments to be relied on and advanced by either side, is disclosed in advance. S. 9 (2) of MRAC entrenches goes one step further and prohibits a board from hearing any evidence that has not been disclosed in accordance with s.8.

[33] The Appellant does not dispute that the land use restriction adjustment issue was listed in the Complaint.

[34] However, it says that the Respondent's evidence disclosure made no reference to that issue, leading the Appellant's hearing representatives to believe that it would not be addressed at the hearing. For that reason, when they were questioned on the land use restriction and entitlement to a 20% reduction (as per the City's Land Influence Chart), they were taken by surprise, and were in no position to present considered evidence and argument on the issue.

[35] The Respondent does not dispute the fact that its pre-filed evidence and argument did not in the first instance seek an adjustment for the land use restrictions imposed on the site. It maintains, however, that the City's expert assessors should have been ready to discharge its onus of proof in demonstrating that its assessment was fair and equitable. The Respondent says that the City's experts should have been prepared to defend their decision to not apply such an adjustment irrespective of whether the issue was specifically addressed in the Respondent's pre-filed evidence and in its oral submissions to the Board.

[36] In my view, there is considerable merit to the Respondent's submissions in this regard. The appraisal report submitted by the Respondent did not specifically address the 20% land use restriction adjustment, as was ultimately found by the Board to be warranted. However, it is clear that the limited use to which the land could be put was reflected in the appraiser's choice of comparable land sales, which in turn led him to opine that the market value of the Land was approximately $11 Million, as opposed to the Appellant's estimate of over $22 Million.

[37] The Appellant's own evidence also included an information package prepared by the City explaining how it approaches the estimation of market value for downtown – with the Bow Trail land value listed at $85.00/sq. foot (the base value used in this particular assessment). It then

2017 ABQB 197 (CanLII)

discusses out of market adjustments that are or can be made to these base values for assessment purposes. A 2015 Downtown Land Influence Chart is provided, listing adjustments for corner lots (+5%), environmental contamination (-30%) and land use restrictions (-20%). The City's assessment in this case included a 5% upward adjustment for a corner lot and a 30% downward adjustment for environmental contaminating, but stated "NA" in respect of land use restriction.

[38] In the circumstances, the questions put to the City's expert assessors by Board member Massey (an expert appraiser in his own right) as to why a land use restriction adjustment had not been made were logical, reasonable, and somewhat predictable. Having argued against Mr. Pritchard's use of automotive sites as comparables, the City's assessors should have expected to be asked how, then, the restriction on land use contained in the Direct Control district by law could or should be accounted for (if at all).

[39] Unfortunately, it is clear from the transcript that the City's expert assessors were indeed surprised by the question. A considered response would not have included statements such as the City's assessment division being "hooped" by the land use restrictions imposed by the City itself; nor would it likely have included the somewhat circular argument that the restrictions could be ignored because the City of Calgary could just as easily re-designate the land to some other use.

[40] Rather than providing such off the cuff responses, the City's representatives would have been more prudent and helpful to the Board had they noted that the question had taken them by surprise (having not been articulated in the complainant's evidence), and requested an adjournment to provide a considered response. They did not do so, choosing to respond to the Board's questions, and to then provide additional argument on the issue in their final submissions.

[41] For these reasons, it is not at all clear-cut that the Appellant was denied procedural fairness. The broad question of how the market value of the property was affected by its restricted land use was clearly at issue in the hearing. The narrow question of whether a land use restriction adjustment – as described in the City's own landowner information package submitted as evidence- should be applied was raised initially as a specific ground for complaint, and was a question that could reasonably have been anticipated. To the extent that the City's representatives were surprised and unprepared to respond, they could have advised the Board of that and sought an adjournment rather than ploughing ahead.

[42] On the other hand, the Respondent -which was represented by an agency experienced in these hearings-, chose not to advance its complaint regarding the absence of a land use restriction adjustment in its written evidence and argument. It also chose to not mention the need for such an adjustment in its oral evidence at the hearing. It addressed the issue only in closing argument, after it had been raised in the Board's questioning of the City's experts. This clearly contributed to the City's experts being caught by surprise by that questioning and was contrary to the spirit and intent of the regulations to ensure fair disclosure of evidence and arguments before commencement of a hearing.

[43] Procedural fairness accomplishes two broad objectives in administrative hearings. First and foremost, it fulfills the parties' fundamental right to be heard when a decision is being made that affects their interests. Second, (and occasionally overlooked) procedural fairness assists the decision- making process itself by improving the quality of the record through the testing of evidence, and allowing for considered argument on that evidence.

2017 ABQB 197 (CanLII)

[44] In my view, the Board was entitled to raise the land use restriction adjustment issue at the hearing. However, in the circumstances it should not have awaited questioning of the City's witnesses to do so. It should have noted its interest in receiving evidence and argument on that ground of complaint at the outset of the hearing, or at the conclusion of the complainants' evidence, and sought submissions from the parties regarding their readiness to proceed. This would have been fair to both sides, and would have increased the quality of evidence and argument received on what turned out to be an important issue. It would also have been in better accord with the spirit and intent of the MRAC Regulation. The Board's failure to take such an approach constituted a beach of procedural fairness.

c) Did the Board act unfairly by using its own expertise to decide the matter in substitution for the evidence presented at the hearing?

[45] Given my decision on the first procedural fairness issue, it is not necessary to decide the second question of law upon which leave was granted.

[46] Had it been necessary to do so, however, I would not have allowed the appeal on this ground.

[47] The decision of the Board to apply a land use restriction adjustment of 20% was not made in the absence of evidence. In fact, there was evidence before the Board – particularly from the City itself- that showed the land use restrictions currently in place under the Direct Control District by-law for this site. There was written and *viva voce* evidence from the Respondent's expert appraiser that discussed those land use restrictions. There was written and *viva voce* evidence from the City's experts that described how downtown land assessments are made, and that identified or discussed the adjustment factors that can be applied. The Board also heard final submissions from both sides on this issue, (among others), which given the informal nature of the hearing process included an evidentiary aspect, as well as pure argument.

[48] Accordingly, while the process used to receive evidence and argument fell short in respect of procedural fairness, it cannot be said that the Board substituted its own expertise for evidence.

Remedy

[49] S. 470.1 (1) (b) of the *Municipal Government Act* provides that on hearing of an appeal the Court may confirm or cancel the decision. S. 470.1(2) states:

> (2) In the event that the Court of Queen's Bench cancels a decision, the Court must refer the matter back to the assessment review board, and the board must rehear the matter and deal with it in accordance with the opinion of or any direction given by the Court on the question of law or the question of jurisdiction.

For the reasons discussed earlier, I have concluded that the procedure used by the Board fell short of its duty to provide procedural fairness. When the Board concluded that the applicability of a 20% land use restriction adjustment was in issue, it should have offered the parties the opportunity to provide additional evidence and argument on that issue. On rehearing of the matter, the Board will need to decide how best to proceed in ensuring that this specific issue is fully and fairly adjudicated while preserving balance of the hearing record to the extent reasonable.

2017 ABQB 197 (CanLII)

Costs

[50] The City has sought costs against the Respondent. In my view, an award of costs is not appropriate in this case, given the mixed result and the circumstances leading to the Board's error.

Heard on the 22nd day of February, 2017.
Dated at the City of Calgary, Alberta this 23rd day of March 2017.

EN APPEL DE LA COUR D'APPEL FÉDÉRALE

Immigration — Raisons d'ordre humanitaire — Intérêts des enfants — Mesure d'expulsion contre une mère d'enfants nés au Canada — Demande écrite fondée sur des raisons d'ordre humanitaire sollicitant une dispense de l'exigence de présenter à l'extérieur du Canada une demande d'immigration — Demande rejetée sans audience ni motifs écrits — Y a-t-il eu violation de l'équité procédurale? — Loi sur l'immigration, L.R.C. (1985), ch. I-2, art. 82.1(1), 114(2) — Règlement sur l'immigration de 1978, DORS/93-44, art. 2.1 — Convention relative aux droits de l'enfant, R.T. Can. 1992 nº 3, art. 3, 9, 12.

Droit administratif – Équité procédurale — Mesure d'expulsion contre une mère d'enfants nés au Canada — Demande écrite fondée sur des raisons d'ordre humanitaire sollicitant une dispense de l'exigence de présenter à l'extérieur du Canada une demande d'immigration — Les droits de participation accordés étaient-ils compatibles avec l'obligation d'équité procédurale? — Le défaut d'exposer les motifs de décision a-t-il enfreint les principes d'équité procédurale? — Y a-t-il une crainte raisonnable de partialité?

1999 CanLII 699 (SCC)

Courts — Appellate review — Judge on judicial review certifying question for consideration of Court of Appeal — Legal effect of certified question — Immigration Act, R.S.C., 1985, c. I-2, s. 83(1).

Immigration — Humanitarian and compassionate considerations — Standard of review of humanitarian and compassionate decision — Best interests of claimant's children — Approach to be taken in reviewing humanitarian and compassionate decision where children affected.

Administrative law — Review of discretion — Approach to review of discretionary decision making.

The appellant, a woman with Canadian-born dependent children, was ordered deported. She then applied for an exemption, based on humanitarian and compassionate considerations under s. 114(2) of the *Immigration Act*, from the requirement that an application for permanent residence be made from outside Canada. This application was supported by letters indicating concern about the availability of medical treatment in her country of origin and the effect of her possible departure on her Canadian-born children. A senior immigration officer replied by letter stating that there were insufficient humanitarian and compassionate reasons to warrant processing the application in Canada. This letter contained no reasons for the decision. Counsel for the appellant, however, requested and was provided with the notes made by the investigating immigration officer and used by the senior officer in making his decision. The Federal Court — Trial Division, dismissed an application for judicial review but certified the following question pursuant to s. 83(1) of the Act: "Given that the Immigration Act does not expressly incorporate the language of Canada's international obligations with respect to the International Convention on the Rights of the Child, must federal immigration authorities treat the best interests of the Canadian child as a primary consideration in assessing an applicant under s. 114(2) of the *Immigration Act*?" The Court of Appeal limited its consideration to the question and found that the best interests of the children did not need to be given primacy in assessing such an application. The order that the appellant be removed from Canada, which was made after the immigration officer's decision, was stayed pending the result of this appeal.

Tribunaux — Contrôle en appel — Certification, par le juge siégeant en contrôle judiciaire, d'une question à soumettre à la Cour d'appel — Effet juridique d'une question certifiée — Loi sur l'immigration, L.R.C. (1985), ch. I-2, art. 83(1).

Immigration — Raisons d'ordre humanitaire — Norme de contrôle d'une décision fondée sur des raisons d'ordre humanitaire — Intérêt supérieur des enfants de la demanderesse — Approche du contrôle d'une décision fondée sur des raisons d'ordre humanitaire touchant des enfants.

Droit administratif — Contrôle du pouvoir discrétionnaire — Approche du contrôle de décisions discrétionnaires.

Une mesure d'expulsion a été prise contre l'appelante, mère d'enfants à charge nés au Canada. Elle a alors demandé d'être dispensée de faire sa demande de résidence permanente de l'extérieur du Canada, pour des raisons d'ordre humanitaire, conformément au par. 114(2) de la *Loi sur l'immigration*. Sa demande était appuyée de lettres exprimant des inquiétudes quant à la possibilité d'obtenir un traitement médical dans son pays d'origine et quant à l'effet de son départ éventuel sur ses enfants nés au Canada. Un agent d'immigration supérieur a répondu par lettre qu'il n'y avait pas suffisamment de raisons humanitaires pour justifier de traiter sa demande au Canada. Cette lettre ne donnait pas les motifs de la décision. L'avocat de l'appelante a cependant demandé et reçu les notes de l'agent investigateur, que l'agent supérieur d'immigration avait utilisées pour rendre sa décision. La Section de première instance de la Cour fédérale a rejeté une demande de contrôle judiciaire mais a certifié la question suivante en application du par. 83(1) de la Loi: «Vu que la Loi sur l'immigration n'incorpore pas expressément le langage des obligations internationales du Canada en ce qui concerne la Convention internationale relative aux droits de l'enfant, les autorités d'immigration fédérales doivent-elles considérer l'intérêt supérieur de l'enfant né au Canada comme une considération primordiale dans l'examen du cas d'un requérant sous le régime du par. 114(2) de la *Loi sur l'immigration*?» La Cour d'appel a limité son examen à cette question et a conclu qu'il n'était pas nécessaire d'accorder la primauté à l'intérêt supérieur des enfants dans l'appréciation d'une telle demande. Un sursis à la mesure d'expulsion de l'appelante prononcée après la décision de l'agent d'immigration, a été ordonné jusqu'à l'issue du présent pourvoi.

1999 CanLII 699 (SCC)

Held: The appeal should be allowed.

Per L'Heureux-Dubé, Gonthier, McLachlin, Bastarache and Binnie JJ.: Section 83(1) of the *Immigration Act* does not require the Court of Appeal to address only the certified question. Once a question has been certified, the Court of Appeal may consider all aspects of the appeal lying within its jurisdiction.

The duty of procedural fairness is flexible and variable and depends on an appreciation of the context of the particular statute and the rights affected. The purpose of the participatory rights contained within it is to ensure that administrative decisions are made using a fair and open procedure, appropriate to the decision being made and its statutory, institutional and social context, with an opportunity for those affected to put forward their views and evidence fully and have them considered by the decision-maker. Several factors are relevant to determining the content of the duty of fairness: (1) the nature of the decision being made and process followed in making it; (2) the nature of the statutory scheme and the terms of the statute pursuant to which the body operates; (3) the importance of the decision to the individual or individuals affected; (4) the legitimate expectations of the person challenging the decision; (5) the choices of procedure made by the agency itself. This list is not exhaustive.

A duty of procedural fairness applies to humanitarian and compassionate decisions. In this case, there was no legitimate expectation affecting the content of the duty of procedural fairness. Taking into account the other factors, although some suggest stricter requirements under the duty of fairness, others suggest more relaxed requirements further from the judicial model. The duty of fairness owed in these circumstances is more than minimal, and the claimant and others whose important interests are affected by the decision in a fundamental way must have a meaningful opportunity to present the various types of evidence relevant to their case and have it fully and fairly considered. Nevertheless, taking all the factors into account, the lack of an oral hearing or notice of such a hearing did not constitute a violation of the requirement of procedural fairness. The opportunity to produce full and complete written documentation was sufficient.

It is now appropriate to recognize that, in certain circumstances, including when the decision has important significance for the individual, or when there is a statutory right of appeal, the duty of procedural fairness will require a written explanation for a decision. Reasons are

Arrêt: Le pourvoi est accueilli.

Les juges L'Heureux-Dubé, Gonthier, McLachlin, Bastarache et Binnie: Le paragraphe 83(1) de la *Loi sur l'immigration* n'exige pas que la Cour d'appel traite seulement la question certifiée. Lorsqu'une question a été certifiée, la Cour d'appel peut examiner tous les aspects de l'appel qui relèvent de sa compétence.

L'obligation d'équité procédurale est souple et variable et repose sur une appréciation du contexte de la loi et des droits visés. Les droits de participation qui en font partie visent à garantir que les décisions administratives sont prises au moyen d'une procédure équitable et ouverte, adaptée au type de décision et à son contexte légal, institutionnel et social, comprenant la possibilité donnée aux personnes visées de présenter leur point de vue et des éléments de preuve qui seront dûment pris en considération par le décideur. Plusieurs facteurs sont pertinents pour déterminer le contenu de l'obligation d'équité procédurale: (1) la nature de la décision recherchée et le processus suivi pour y parvenir; (2) la nature du régime législatif et les termes de la loi régissant l'organisme; (3) l'importance de la décision pour les personnes visées; (4) les attentes légitimes de la personne qui conteste la décision; (5) les choix de procédure que l'organisme fait lui-même. Cette liste de facteurs n'est pas exhaustive.

L'obligation d'équité procédurale s'applique aux décisions d'ordre humanitaire. En l'espèce, il n'y avait pas d'attente légitime ayant une incidence sur la nature de l'obligation d'équité procédurale. Compte tenu des autres facteurs, bien que certains indiquent des exigences plus strictes en vertu de l'obligation d'équité, d'autres indiquent des exigences moins strictes et plus éloignées du modèle judiciaire. L'obligation d'équité dans ces circonstances est plus que minimale, et le demandeur et les personnes dont les intérêts sont profondément touchés par la décision doivent avoir une possibilité valable de présenter les divers types de preuves qui se rapportent à leur affaire et de les voir évalués de façon complète et équitable. Néanmoins, compte tenu de tous ces facteurs, le fait qu'il n'y ait pas eu d'audience ni d'avis d'audience ne constituait pas un manquement à l'obligation d'équité procédurale. La possibilité de produire une documentation écrite complète était suffisante.

Il est maintenant approprié de reconnaître que, dans certaines circonstances, notamment lorsque la décision revêt une grande importance pour l'individu, ou lorsqu'il existe un droit d'appel prévu par la loi, l'obligation d'équité procédurale requerra une explication écrite de

1999 CanLII 699 (SCC)

required here given the profound importance of this decision to those affected. This requirement was fulfilled by the provision of the junior immigration officer's notes, which are to be taken to be the reasons for decision. Accepting such documentation as sufficient reasons upholds the principle that individuals are entitled to fair procedures and open decision-making, but recognizes that, in the administrative context, this transparency may take place in various ways.

Procedural fairness also requires that decisions be made free from a reasonable apprehension of bias, by an impartial decision-maker. This duty applies to all immigration officers who play a role in the making of decisions. Because they necessarily relate to people of diverse backgrounds, from different cultures, races, and continents, immigration decisions demand sensitivity and understanding by those making them. They require a recognition of diversity, an understanding of others, and an openness to difference. Statements in the immigration officer's notes gave the impression that he may have been drawing conclusions based not on the evidence before him, but on the fact that the appellant was a single mother with several children and had been diagnosed with a psychiatric illness. Here, a reasonable and well-informed member of the community would conclude that the reviewing officer had not approached this case with the impartiality appropriate to a decision made by an immigration officer. The notes therefore give rise to a reasonable apprehension of bias.

The concept of discretion refers to decisions where the law does not dictate a specific outcome, or where the decision-maker is given a choice of options within a statutorily imposed set of boundaries. Administrative law has traditionally approached the review of decisions classified as discretionary separately from those seen as involving the interpretation of rules of law. Review of the substantive aspects of discretionary decisions is best approached within the pragmatic and functional framework defined by this Court's decisions, especially given the difficulty in making rigid classifications between discretionary and non-discretionary decisions. Though discretionary decisions will generally be given considerable respect, that discretion must be exercised in accordance with the boundaries imposed in the statute, the principles of the rule of law, the principles of administrative law, the fundamental values of Canadian society, and the principles of the *Charter*.

la décision. Des motifs écrits sont nécessaires en l'espèce, étant donné l'importance cruciale de la décision pour les personnes visées. Cette obligation a été remplie par la production des notes de l'agent subalterne, qui doivent être considérées comme les motifs de la décision. L'admission de ces documents comme motifs de la décision confirme le principe selon lequel les individus ont droit à une procédure équitable et à la transparence de la prise de décision, mais reconnaît aussi qu'en matière administrative, cette transparence peut être atteinte de différentes façons.

L'équité procédurale exige également que les décisions soient rendues par un décideur impartial, sans crainte raisonnable de partialité. Cette obligation s'applique à tous les agents d'immigration qui jouent un rôle significatif dans la prise de décision. Parce qu'elles visent nécessairement des personnes de provenances diverses, issues de cultures, de races et de continents différents, les décisions en matière d'immigration exigent de ceux qui les rendent sensibilité et compréhension. Elles exigent la reconnaissance de la diversité, la compréhension des autres et l'ouverture d'esprit à la différence. Les déclarations contenues dans les notes de l'agent d'immigration donnent l'impression qu'il peut avoir tiré des conclusions en se fondant non pas sur la preuve dont il disposait, mais sur le fait que l'appelante était une mère célibataire ayant plusieurs enfants, et était atteinte de troubles psychiatriques. En l'espèce, un membre raisonnable et bien informé de la communauté conclurait que l'agent n'a pas traité cette affaire avec l'impartialité requise dans une décision rendue par un agent d'immigration. Les notes donnent donc lieu à une crainte raisonnable de partialité.

La notion de pouvoir discrétionnaire s'applique dans les cas où le droit ne dicte pas une décision précise, ou quand le décideur se trouve devant un choix d'options à l'intérieur de limites imposées par la loi. Le droit administratif a traditionnellement abordé le contrôle judiciaire des décisions discrétionnaires séparément de décisions sur l'interprétation de règles de droit. Le contrôle des éléments de fond d'une décision discrétionnaire est mieux envisagé selon la démarche pragmatique et fonctionnelle définie par la jurisprudence de notre Cour, compte tenu particulièrement de la difficulté de faire des classifications rigides entre les décisions discrétionnaires et les décisions non discrétionnaires. Même si en général il sera accordé un grand respect aux décisions discrétionnaires, il faut que le pouvoir discrétionnaire soit exercé conformément aux limites imposées dans la loi, aux principes de la primauté du droit, aux principes du droit administratif, aux valeurs fondamentales de la société canadienne, et aux principes de la *Charte*.

1999 CanLII 699 (SCC)

In applying the applicable factors to determining the standard of review, considerable deference should be accorded to immigration officers exercising the powers conferred by the legislation, given the fact-specific nature of the inquiry, its role within the statutory scheme as an exception, and the considerable discretion evidenced by the statutory language. Yet the absence of a privative clause, the explicit contemplation of judicial review by the Federal Court — Trial Division, and the individual rather than polycentric nature of the decision also suggest that the standard should not be as deferential as "patent unreasonableness". The appropriate standard of review is, therefore, reasonableness *simpliciter*.

Dans l'application des facteurs pertinents à la détermination de la norme de contrôle appropriée, on devrait faire preuve d'une retenue considérable envers les décisions d'agents d'immigration exerçant les pouvoirs conférés par la loi, compte tenu de la nature factuelle de l'analyse, de son rôle d'exception au sein du régime législatif et de la large discrétion accordée par le libellé de la loi. Toutefois, l'absence de clause privative, la possibilité expressément prévue d'un contrôle judiciaire par la Cour fédérale — Section de première instance, ainsi que la nature individuelle plutôt que polycentrique de la décision, tendent aussi à indiquer que la norme applicable ne devrait pas en être une d'aussi grande retenue que celle du caractère «manifestement déraisonnable». La norme de contrôle appropriée est celle de la décision raisonnable *simpliciter*.

The wording of the legislation shows Parliament's intention that the decision be made in a humanitarian and compassionate manner. A reasonable exercise of the power conferred by the section requires close attention to the interests and needs of children since children's rights, and attention to their interests, are central humanitarian and compassionate values in Canadian society. Indications of these values may be found in the purposes of the Act, in international instruments, and in the Minister's guidelines for making humanitarian and compassionate decisions. Because the reasons for this decision did not indicate that it was made in a manner which was alive, attentive, or sensitive to the interests of the appellant's children, and did not consider them as an important factor in making the decision, it was an unreasonable exercise of the power conferred by the legislation. In addition, the reasons for decision failed to give sufficient weight or consideration to the hardship that a return to the appellant's country of origin might cause her.

Le libellé de la législation révèle l'intention du Parlement de faire en sorte que la décision soit fondée sur des raisons d'ordre humanitaire. L'exercice raisonnable du pouvoir conféré par l'article exige que soit prêtée une attention minutieuse aux intérêts et aux besoins des enfants puisque les droits des enfants, et la considération de leurs intérêts, sont des valeurs humanitaires centrales dans la société canadienne. Une indication de ces valeurs se trouve dans les objectifs de la Loi, dans les instruments internationaux, et dans les lignes directrices régissant les décisions d'ordre humanitaire publiées par le ministre. Étant donné que les motifs de la décision n'indiquent pas qu'elle a été rendue d'une manière réceptive, attentive ou sensible à l'intérêt des enfants de l'appelante, ni que leur intérêt a été considéré comme un facteur décisionnel important, elle constituait un exercice déraisonnable du pouvoir conféré par la loi. En outre, les motifs de la décision n'accordent pas suffisamment d'importance ou de poids aux difficultés qu'un retour de l'appelante dans son pays d'origine pouvait lui susciter.

Per Cory and Iacobucci JJ.: The reasons and disposition of L'Heureux-Dubé J. were agreed with apart from the effect of international law on the exercise of ministerial discretion under s. 114(2) of the *Immigration Act*. The certified question must be answered in the negative. The principle that an international convention ratified by the executive is of no force or effect within the Canadian legal system until incorporated into domestic law does not survive intact the adoption of a principle of law which permits reference to an unincorporated convention during the process of statutory interpretation.

Les juges Cory et Iacobucci: Les motifs du juge L'Heureux-Dubé et le dispositif qu'elle propose sont acceptés sauf pour ce qui concerne la question de l'effet du droit international sur l'exercice du pouvoir discrétionnaire conféré au ministre par le par. 114(2) de la *Loi sur l'immigration*. La question certifiée devrait recevoir une réponse négative. Le principe qu'une convention internationale ratifiée par le pouvoir exécutif n'a aucun effet en droit canadien tant qu'elle n'est pas incorporée dans le droit interne ne peut pas survivre intact après l'adoption d'un principe de droit qui autorise le recours dans le processus d'interprétation des lois, aux dispositions d'une convention qui n'a pas été intégrée dans la législation.

The judgment of L'Heureux-Dubé, Gonthier, McLachlin, Bastarache and Binnie JJ. was delivered by

L'HEUREUX-DUBÉ J. — Regulations made pursuant to s. 114(2) of the *Immigration Act*, R.S.C., 1985, c. I-2, empower the respondent Minister to facilitate the admission to Canada of a person where the Minister is satisfied, owing to humanitarian and compassionate considerations, that admission should be facilitated or an exemption from the regulations made under the Act should be granted. At the centre of this appeal is the approach to be taken by a court to judicial review of such decisions, both on procedural and substantive grounds. It also raises issues of reasonable apprehension of bias, the provision of written reasons as part of the duty of fairness, and the role of children's interests in reviewing decisions made pursuant to s. 114(2).

I. Factual Background

Mavis Baker is a citizen of Jamaica who entered Canada as a visitor in August of 1981 and has remained in Canada since then. She never received permanent resident status, but supported herself illegally as a live -in domestic worker for 11 years. She has had four children (who are all Canadian citizens) while living in Canada: Paul Brown, born in 1985, twins Patricia and Peter Robinson, born in 1989, and Desmond Robinson, born in 1992. After Desmond was born, Ms. Baker suffered from post-partum psychosis and was diagnosed with paranoid schizophrenia. She applied for welfare at that time. When she was first diagnosed with mental illness, two of her children were placed in the care of their

and the Law, la Défense des enfants-International-Canada et le Conseil canadien pour les réfugiés.

John Terry et *Craig Scott*, pour l'intervenant le Comité de la Charte et des questions de pauvreté.

Barbara Jackman et *Marie Chen*, pour l'intervenant le Conseil canadien des églises.

Version française du jugement des juges L'Heureux-Dubé, Gonthier, McLachlin, Bastarache et Binnie rendu par

LE JUGE L'HEUREUX-DUBÉ — Le règlement passé en vertu du par. 114(2) de la *Loi sur l'immigration*, L.R.C. (1985), ch. I-2, autorise le ministre intimé à faciliter l'admission au Canada d'une personne quand il est convaincu, pour des raisons d'ordre humanitaire, que l'admission devrait être facilitée ou qu'une dispense d'application des règlements passés aux termes de la Loi devrait être accordée. Le présent pourvoi porte essentiellement sur la démarche à suivre lorsqu'un tribunal procède au contrôle judiciaire de ces décisions, à la fois sur le fond et sur le plan de la procédure. Ce pourvoi soulève également des questions relatives à la crainte raisonnable de partialité, à la rédaction de motifs écrits dans le cadre de l'obligation d'agir équitablement et au rôle de l'intérêt des enfants dans le contrôle judiciaire de décisions rendues conformément au par. 114(2). 1

I. Les faits

Mavis Baker, citoyenne de la Jamaïque, est entrée au Canada à titre de visiteur en août 1981 et y vit depuis. Elle n'a jamais obtenu le statut de résidente permanente, mais a subvenu illégalement à ses besoins en travaillant pendant 11 ans comme travailleur domestique. Elle a eu quatre enfants (qui sont tous citoyens canadiens) au Canada: Paul Brown, né en 1985, les jumeaux Patricia et Peter Robinson, nés en 1989, et Desmond Robinson, né en 1992. Après la naissance de Desmond, M^me^ Baker a souffert d'une psychose post-partum et on a diagnostiqué qu'elle était atteinte d'une schizophrénie paranoïde. À cette époque, elle a présenté une demande d'assistance sociale. Quand 2

1999 CanLII 699 (SCC)

situations involving family dependency, and emphasize that the requirement that a person leave Canada to apply from abroad may result in hardship for close family members of a Canadian resident, whether parents, children, or others who are close to the claimant, but not related by blood. They note that in such cases, the reasons why the person did not apply from abroad and the existence of family or other support in the person's home country should also be considered.

ment de situations où il existe des liens familiaux de dépendance, et soulignent que l'obligation de quitter le Canada pour présenter une demande de l'étranger peut occasionner des difficultés à certains membres de la famille proche d'un résident canadien, parents, enfants ou autres proches qui n'ont pas de liens de sang avec le demandeur. Elles précisent que dans de tels cas, il faut aussi tenir compte des raisons pour lesquelles la personne n'a pas présenté sa demande à l'étranger et de la présence d'une famille ou d'autres personnes susceptibles de l'aider dans son pays d'origine.

C. *Procedural Fairness*

C. *L'équité procédurale*

18 The first ground upon which the appellant challenges the decision made by Officer Caden is the allegation that she was not accorded procedural fairness. She suggests that the following procedures are required by the duty of fairness when parents have Canadian children and they make an H & C application: an oral interview before the decision-maker, notice to her children and the other parent of that interview, a right for the children and the other parent to make submissions at that interview, and notice to the other parent of the interview and of that person's right to have counsel present. She also alleges that procedural fairness requires the provision of reasons by the decision-maker, Officer Caden, and that the notes of Officer Lorenz give rise to a reasonable apprehension of bias.

Comme premier moyen pour contester la décision de l'agent Caden, l'appelante allègue qu'elle n'a pas bénéficié de l'équité procédurale. L'appelante estime que l'obligation d'agir équitablement exige le respect des procédures suivantes quand des parents ayant des enfants canadiens présentent une demande fondée sur des raisons d'ordre humanitaire: une entrevue orale devant le décideur, un avis de la tenue de cette entrevue aux enfants et à l'autre parent, un droit pour les enfants et l'autre parent de présenter des arguments au cours de cette entrevue, un avis à l'autre parent de la tenue de l'entrevue et du droit de cette personne d'être représentée par un avocat. Elle allègue également que l'équité procédurale exige que le décideur, soit l'agent Caden, motive sa décision, et que les notes de l'agent Lorenz donnent lieu à une crainte raisonnable de partialité.

19 In addressing the fairness issues, I will consider first the principles relevant to the determination of the content of the duty of procedural fairness, and then address Ms. Baker's arguments that she was accorded insufficient participatory rights, that a duty to give reasons existed, and that there was a reasonable apprehension of bias.

En traitant des questions d'équité, j'examinerai d'abord les principes applicables à la détermination de la nature de l'obligation d'équité procédurale, et ensuite les arguments de M^me^ Baker sur l'insuffisance des droits de participation qui lui ont été accordés, sur l'existence d'une obligation de motiver la décision et sur la crainte raisonnable de partialité.

20 Both parties agree that a duty of procedural fairness applies to H & C decisions. The fact that a decision is administrative and affects "the rights, privileges or interests of an individual" is sufficient to trigger the application of the duty of fairness: *Cardinal v. Director of Kent Institution,*

Les deux parties admettent que l'obligation d'équité procédurale s'applique aux décisions d'ordre humanitaire. Le fait qu'une décision soit administrative et touche «les droits, privilèges ou biens d'une personne» suffit pour entraîner l'application de l'obligation d'équité: *Cardinal c.*

1999 CanLII 699 (SCC)

1999 CanLII 699 (SCC)

[1985] 2 S.C.R. 643, at p. 653. Clearly, the determination of whether an applicant will be exempted from the requirements of the Act falls within this category, and it has been long recognized that the duty of fairness applies to H & C decisions: *Sobrie v. Canada (Minister of Employment and Immigration)* (1987), 3 Imm. L.R. (2d) 81 (F.C.T.D.), at p. 88; *Said v. Canada (Minister of Employment and Immigration)* (1992), 6 Admin. L.R. (2d) 23 (F.C.T.D.); *Shah v. Minister of Employment and Immigration* (1994), 170 N.R. 238 (F.C.A.).

(1) Factors Affecting the Content of the Duty of Fairness

The existence of a duty of fairness, however, does not determine what requirements will be applicable in a given set of circumstances. As I wrote in *Knight v. Indian Head School Division No. 19*, [1990] 1 S.C.R. 653, at p. 682, "the concept of procedural fairness is eminently variable and its content is to be decided in the specific context of each case". All of the circumstances must be considered in order to determine the content of the duty of procedural fairness: *Knight*, at pp. 682-83; *Cardinal*, *supra*, at p. 654; *Old St. Boniface Residents Assn. Inc. v. Winnipeg (City)*, [1990] 3 S.C.R. 1170, *per* Sopinka J.

Although the duty of fairness is flexible and variable, and depends on an appreciation of the context of the particular statute and the rights affected, it is helpful to review the criteria that should be used in determining what procedural rights the duty of fairness requires in a given set of circumstances. I emphasize that underlying all these factors is the notion that the purpose of the participatory rights contained within the duty of procedural fairness is to ensure that administrative decisions are made using a fair and open procedure, appropriate to the decision being made and its statutory, institutional, and social context, with an opportunity for those affected by the decision to put forward their views and evidence fully and have them considered by the decision-maker.

Directeur de l'établissement Kent, [1985] 2 R.C.S. 643, à la p. 653. Il est évident que la décision quant à savoir si un demandeur sera dispensé des exigences prévues par la Loi entre dans cette catégorie, et il est admis depuis longtemps que l'obligation d'équité s'applique aux décisions d'ordre humanitaire: *Sobrie c. Canada (Ministre de l'Emploi et de l'Immigration)* (1987), 3 Imm. L.R. (2d) 81 (C.F. 1re inst.), à la p. 88; *Said c. Canada (Ministre de l'Emploi et de l'Immigration)* (1992), 6 Admin. L.R. (2d) 23 (C.F. 1re inst.); *Shah c. Ministre de l'Emploi et de l'Immigration* (1994), 170 N.R. 238 (C.A.F.).

(1) Les facteurs ayant une incidence sur la nature de l'obligation d'équité

21 L'existence de l'obligation d'équité, toutefois, ne détermine pas quelles exigences s'appliqueront dans des circonstances données. Comme je l'écrivais dans l'arrêt *Knight c. Indian Head School Division No. 19*, [1990] 1 R.C.S. 653, à la p. 682, «la notion d'équité procédurale est éminemment variable et son contenu est tributaire du contexte particulier de chaque cas». Il faut tenir compte de toutes les circonstances pour décider de la nature de l'obligation d'équité procédurale: *Knight*, aux pp. 682 et 683; *Cardinal*, précité, à la p. 654; *Assoc. des résidents du Vieux St-Boniface Inc. c. Winnipeg (Ville)*, [1990] 3 R.C.S. 1170, le juge Sopinka.

22 Bien que l'obligation d'équité soit souple et variable et qu'elle repose sur une appréciation du contexte de la loi particulière et des droits visés, il est utile d'examiner les critères à appliquer pour définir les droits procéduraux requis par l'obligation d'équité dans des circonstances données. Je souligne que l'idée sous-jacente à tous ces facteurs est que les droits de participation faisant partie de l'obligation d'équité procédurale visent à garantir que les décisions administratives sont prises au moyen d'une procédure équitable et ouverte, adaptée au type de décision et à son contexte légal institutionnel et social, comprenant la possibilité donnée aux personnes visées par la décision de présenter leur points de vue complètement ainsi que des éléments de preuve de sorte qu'ils soient considérés par le décideur.

REASONS FOR JUDGMENT

MAINVILLE J.A.

[1] The Minister of Fisheries and Oceans ("Minister") is appealing a judgment of the Federal Court cited as 2010 FC 1233 ("Reasons") in which Russell J. ("Federal Court judge") declared that ministerial discretion does not "legally protect" critical habitat under section 58 of the *Species at*

2012 FCA 40 (CanLII)

[5] The first ground of appeal concerns the standard of review. The Minister submits that Parliament made him responsible for the administration of the regulatory schemes of the SARA and of the *Fisheries Act*; hence, his interpretation of their provisions is entitled to deference. The Minister bases that submission on a judgment rendered fairly recently by the Supreme Court of Canada: *Dunsmuir v. New Brunswick*, 2008 SCC 9, [2008] 1 S.C.R. 190 ("*Dunsmuir*"). That judgment emphasized the deference owed to an administrative tribunal when it interprets a provision of its enabling (or "home") statute or statutes closely related to its functions.

[6] In my view, no deference is owed to the Minister as to the interpretation of the relevant provisions of the SARA or of the *Fisheries Act*. The Minister's interpretation of the Supreme Court's most recent pronouncements is erroneous as it fails to consider the context in which they were developed and the reasons which may warrant deference to an administrative tribunal when it interprets its enabling statute. The reasonableness standard of review does not apply to the interpretation of a statute by a minister responsible for its implementation unless Parliament has provided otherwise. I thus conclude – as did the Federal Court judge in this case – that where an application for judicial review of a decision as to the implementation of the SARA is based on an allegation that the Minister has misinterpreted a provision of the SARA – or of the *Fisheries Act* as it relates to the SARA – the Minister's interpretation must be reviewed on a standard of correctness. The courts owe no deference to the Minister in that respect.

TAB 71

Date: 20090909

Docket: T-1529-07

Citation: 2009 FC 878

2009 FC 878 (CanLII)

Ottawa, Ontario, September 9, 2009

PRESENT: The Honourable Mr. Justice Campbell

BETWEEN:

ENVIRONMENTAL DEFENCE CANADA
GEORGIA STRAIT ALLIANCE
WESTERN CANADA WILDERNESS COMMITTEE
and DAVID SUZUKI FOUNDATION

Applicants

and

MINISTER OF FISHERIES AND OCEANS

Respondent

REASONS FOR ORDER AND ORDER

[1] By these reasons, the Nooksack Dace, a small minnow whose habitat is four fresh water streams in the Lower Mainland of British Columbia, has the distinction of being the first endangered species in Canada to benefit by a comprehensive interpretation by this Court of key elements of its protective legislation: the *Species at Risk Act*, 2002, c. 29 (*SARA*).

[29] I agree with the Applicants that the decision-making conducted by Ms. Webb and Mr. Murray requires a definitive interpretation of s. 41 of *SARA* to dispel any idea that policy can supersede Parliament's purpose as expressed in *SARA*. Indeed, the present Application brings the constitutional imperative of the rule of law into sharp focus.

[30] As an outcome to the present pressure exerted by the Applicants to have the Minister and the officials at DFO recognize and meet their statutory responsibility under *SARA*, which has been met by initial resistance but ultimate willingness, the interpretation of s. 41(1)(c) and (c.1) has become less of a challenge. On some key features there is agreement while on others there is a difference of opinion. The following analysis distinguishes between these two results.

IV. The Correct Interpretation of s. 41 (1)(c) and (c.1)

A. *Points of agreement*

1. The standard of review is correctness

[31] In the present Application the Applicants question the Minister's authority to alter the terms of *SARA* by government policy. As authority is a question of law, it is agreed that the Minister's decision must be considered on the standard of correctness (*Dunsmuir v. New Brunswick*, [2008] 1 S.C.R. 190).

2020 ABCA 163 (CanLII)

Memorandum of Judgment

2020 ABCA 163 (CanLII)

The Majority:

Introduction

[1] This appeal arises out of negotiations that began in 2003 between the Government of Alberta and the Fort McKay First Nation (FMFN) to develop a Moose Lake Access Management Plan (MLAMP) to address the cumulative effects of oil sands development on the First Nation's Treaty 8 rights. The MLAMP has not yet been finalized.

[2] The Alberta Energy Regulator (AER) approved an application by Prosper Petroleum Ltd (Prosper) in June 2018 for the Rigel bitumen recovery project (Project), which would be located within 5 kilometers of the FMFN's Moose Lake Reserves. The AER approval is subject to authorization by the Lieutenant Governor in Council (Cabinet), which has yet to be granted.

[3] The FMFN was granted permission to appeal on the question of whether the AER erred by failing to consider the honour of the Crown and refusing to delay approval of the Project until the FMFN's negotiations with Alberta on the MLAMP are completed.

[4] For the reasons that follow, the appeal is allowed.

Background

[5] The FMFN is an "aboriginal people of Canada" under s 35 of the *Constitution Act*, *1982* and a "band" within the meaning of the *Indian Act*, RSC 1985, c I-5 that has Treaty 8 rights to hunt, fish and trap within the Moose Lake Area, part of its traditional territory. The Moose Lake Area is north west of Fort McKay and consists of the area around Moose Lake (also known as Gardiner Lake) and Buffalo Lake (also known as Namur Lake), on which lakes the FMFN has two reserves (Moose Lake Reserves). The Moose Lake Area is of cultural importance to the FMFN.

[6] Due to the extensive industrial and resource development surrounding Fort McKay, FMFN is concerned that the ability of its members to pursue their traditional way of life in the Moose Lake Area has been severely and adversely affected by the cumulative effect of oil sands development in the surrounding area. The record shows that 70% of FMFN's traditional territory is leased for oil sands purposes: Lagimodiere Report, p. 3, AEKE Tab 31, A165. The FMFN's traditional territory has been described as "the *most* severely affected of all First Nations by oil sands development in the region": Review Panel Report 2015, p. 156, AEKE Tab 11, A50, emphasis in original.

2020 ABCA 163 (CanLII)

[7] A March 2010 report commissioned by FMFN and submitted to a Joint Review Panel established in 2012 as part of the AER process for a separate project proposed by Shell Canada was also submitted to the AER in its consideration of the Rigel Project at issue in this appeal. This report spoke to the need for "the mitigation and accommodation of cumulative effects … beyond the project-level": Fort McKay Specific Assessment, Disturbance and Access: Implications for Traditional Use, p. 61. The Joint Review Panel found that the cumulative effects of oil sands development on the First Nation's cultural heritage are "already adverse, long-term, likely irreversible and significant": 2013 ABAER 011 at para 1741. However, the Panel found that these cumulative effects could not be addressed within the context of the project-specific AER review process: *ibid* at para 1720.

The MLAMP Negotiations

[8] The FMFN began negotiating with Alberta in 2001 to obtain protection for the Moose Lake Area. They began discussing a possible MLAMP in 2003 to address the cumulative effects of oil sands development on the FMFN's Treaty 8 rights. The MLAMP negotiations were delayed while the Lower Athabasca Regional Plan (the LARP) was negotiated and implemented. It is envisaged that when the MLAMP is finalized, it will be adopted as a sub-plan of the LARP.

[9] The LARP is a regional plan under the *Alberta Land Stewardship Act*, SA 2009, c A-26.8 [*ALSA*] to manage the region's natural resources. The purpose of the *ALSA* includes providing "a means to plan for the future, recognizing the need to manage activity to meet the reasonably foreseeable needs of current and future generations of Albertans, including aboriginal peoples": s 1(2)(b). The LARP addresses conservation areas, water, recreation, air quality and sustainable resource development. The "Regulatory Details" section of LARP is legally binding on the Crown and administrative decision-makers. The Regulatory Details section stipulates that the Strategic Plan and Implementation Plan sections of LARP, while not themselves legally binding, must be considered by decision-makers before they make their decisions: LARP, s 7(1).

[10] During negotiations with Alberta about the LARP between 2009 and 2010, FMFN specifically sought a 10 km buffer zone from oil sands development around the Moose Lake Reserves. Alberta denied this request. The LARP was proclaimed into force in September 2012.

[11] In August 2013, FMFN applied for a review of the LARP, which led the Minister responsible for administration of the *ALSA* to appoint a Review Panel. The Review Panel's June 2015 report found that "[t]he LARP has not taken adequate measures to protect the Applicant's Treaty and Aboriginal rights, Traditional Land Use and culture. In fact, it has done quite the opposite ... in the not-too-distant future, FMFN will not be able to utilize *any* of their Traditional Land because of industrial development activities".

[12] In November 2014, Alberta's then Premier, the late Jim Prentice, met with Chief Jim Boucher of FMFN to discuss the MLAMP. In February 2015, Alberta advised FMFN that it "could

commit to developing a Moose Lake Access Management Plan under LARP on an expedited basis pursuant to terms of a letter of intent that would be agreed upon" by the parties: Affidavit of Karla Buffalo.

[13] In March 2015, Premier Prentice and Chief Boucher signed a Letter of Intent to confirm "our mutual commitment and interest in an expedited completion of the [MLAMP]". It went on to state that "Alberta acknowledges the importance of Moose Lake to the community of Fort McKay and looks forward to advancing mutual goals for the management of the region". The letter contemplated that the draft MLAMP was to be completed and approved by March 31, 2016 and that planning and implementation of the portion of the Access Management Plan within 10 kilometers of the Moose Lake Reserves was to be completed by September 30, 2015.

[14] Alberta issued a press release on March 25, 2015 titled "Traditional First Nations lands in the heart of Alberta's Oil Sands region to be protected". It states:

> The Moose Lake area is culturally significant to the First Nation and Metis people of Fort McKay, so the Alberta government is taking steps to ensure this sacred land is protected for generations to come.
>
> Premier Jim Prentice, Environment and Sustainable Resource Development Minister Kyle Fawcett and Fort McKay First Nation Chief Jim Boucher signed a Letter of Intent in March to develop an access management plan for the Moose Lake area.
>
> > The Fort McKay First Nation has done a wonderful job of preserving their traditional way of life. While allowing for responsible oil sands development near their community. This has enabled their people to thrive economically within the oil sands region. But it has also meant that some land that is meaningful to them near their reserve has been used for development. When Chief Boucher asked for our support to protect the small parcel of land near Moose Lake for his community, I didn't hesitate to say yes.
>
> - Jim Prentice, Premier of Alberta and Minister of Aboriginal Relations

[15] Despite the 2015 Letter of Intent, characterized by FMFN as the "Prentice Promise", the MLAMP has still not been finalized and is the subject of ongoing negotiations between Alberta and the FMFN.

2020 ABCA 163 (CanLII)

2020 ABCA 163 (CanLII)

Prosper's application to the AER

[16] Prosper is the proponent of the Rigel Project, a proposed bitumen recovery project that would use steam-assisted gravity drainage to produce 10,000 barrels a day. Prosper applied to the predecessor of the AER in 2013 for three approvals for the Project under the *Oil Sands Conservation Act*, RSA 2000, c O-7 [*OSCA*], the *Environmental Protection and Enhancement Act*, RSA 2000, c E-12, and the *Water Act*, RSA 2000, c W-3.

[17] The Project would be located within the 10-kilometer buffer zone surrounding the Moose Lake Reserves; that is, within the area covered by the MLAMP.

[18] On May 6, 2016, the AER suspended its consideration of Prosper's application as "a result of its recognition of the ongoing discussions between the Government of Alberta and Fort McKay First Nation regarding the [MLAMP] and the close proximity of the activities proposed in the Applications to the areas under consideration in those discussions". It was further noted in the same letter that land use policies stemming from these discussions will "directly impact the outcome of the Applications before the AER".

[19] Prosper requested the AER reconsider its decision to suspend processing of its application for the Project.

[20] On November 2, 2016, the AER resumed the approval process for the Project. By letter dated November 8, 2016, counsel for the AER advised that its "decision was made because MLAMP is still not finalized, there is no indication that finalization of the MLAMP is imminent and there is no certainty when submission of the plan will occur" and that it was prohibited by s 7(3) of the LARP from postponing its consideration of the Project until the MLAMP negotiations were completed.

[21] The AER issued a notice of hearing with respect to Prosper's application in January 2017. The FMFN took part in the hearing as a full participant. After receiving submissions from the parties on the process, scope and timing for the hearing, the AER identified the issues to be addressed. The following issues were "deemed to be not in the scope of this proceeding":

1. The adequacy of Crown consultation. The AER has no jurisdiction with respect to assessing the adequacy of Crown consultation.

2. The adequacy of LARP and any existing subregional plans under LARP.

3. MLAMP does not exist as a subregional plan and consideration of it is not within the panel's mandate.

4. Cumulative effects unrelated to the effects that might be caused by the Rigel Project.

2018 ABAER 005 at para 16 (AER Decision)

[22] The AER hearing was held in Fort McMurray. Evidence was heard by the AER from January 9 to 18, 2018, the Aboriginal Consultation Office (ACO) report was issued on February 22, 2018, and final oral arguments were heard on March 14, 2018.

The AER Decision

[23] The AER issued its decision on June 12, 2018. It found the Project to be in the public interest and approved the Project on conditions, subject to authorization by Cabinet pursuant to s 10(3)(a) of *OSCA*.

[24] The AER recognized that the overarching question to be answered was whether the Project is in the public interest: AER Decision at para 46. It addressed safety, efficiency, and the effects on existing rights of aboriginal peoples. The AER understood the FMFN submission was that it either deny the Prosper application or, if approval is given, that it be subject to the condition that the central processing facility be located more than 10 kilometers from the Moose Lake reserves: AER Decision at para 92.

[25] In considering the potential effects of the Project on FMFN's Treaty 8 rights, the AER found that: (1) the Project will cause members of the First Nation to experience a sense of disruption to their connection to the land but this is not an impact on a Treaty 8 right; and (2) the Project will not render the First Nation's Treaty 8 rights meaningless and will not prevent the First Nation from continuing to exercise its treaty rights on the Moose Lake Reserves or in reasonable proximity to them: AER Decision at paras 126 and 130-32. With respect to several discrete Treaty 8 rights, the AER found that the evidence was insufficient to allow it to determine how the Project will affect those rights.

[26] The AER posed the question for deciding the *OSCA* application as "whether the impacts on Fort McKay First Nation's treaty rights identified above are or are not in the public interest when weighed in the balance with the other impacts, such as social, environmental, and economic impacts": AER Decision at para 134. In finding the Project to be in the public interest, the panel declined to consider the MLAMP negotiations that contemplated a 10-kilometer buffer zone, the Prentice Promise, and whether it implicates the honour of the Crown.

[27] The AER concluded the status of the MLAMP negotiations was not a valid reason to deny Prosper's application. Specifically, the AER concluded that s 21 of the *Responsible Energy Development Act*, SA 2012, c R-17.3 [*REDA*] precludes it from assessing the adequacy of Crown consultation, and that it is prohibited from deferring consideration of a project on the basis that a LARP regional plan is incomplete. The AER also noted that Cabinet is required to authorize the Project and concluded that "Cabinet is the most appropriate place for a decision on the need to finalize the MLAMP". These conclusions were set out at paras 180-182 of the AER Decision:

2020 ABCA 163 (CanLII)

2020 ABCA 163 (CanLII)

> [180] In our view, the balance between the overall economic benefits, including employment, and the negative impacts of the Prosper Rigel project are more or less even. So to answer the question of whether the Rigel project is in the public interest, we also considered the following public-interest considerations: first, Fort McKay First Nation's argument that we should not frustrate the MLAMP negotiations; second, Prosper's submissions about the desirability of regulatory and investment certainty; and third, public policy guidance expressed through the OSCA, EPEA, the Water Act and REDA.
>
> [181] Fort McKay First Nation described MLAMP as accommodation owed to it by the Crown to address historical impacts on their treaty and Aboriginal rights. LARP indicates that, once finalized, MLAMP will be a LARP regional plan.
>
> [182] Fort McKay First Nation provided a significant amount of evidence—e.g. Ms. Buffalo's affidavit and her oral evidence about the adequacy of the LARP and MLAMP processes. To the extent that Fort McKay First Nation frames LARP and MLAMP as elements of Crown consultation, section 21 of REDA says we may not assess their adequacy. LARP prohibits decision makers, including the AER, from "adjourning, deferring, denying, refusing, or rejecting any application…" by reason only of incompletion of a LARP regional plan. We may not deny Prosper's application solely because MLAMP negotiations are not yet complete. Furthermore, AER approval of an application made under section 10 of OSCA is subject to prior authorization by the lieutenant governor in council (cabinet). Cabinet is the most appropriate place for a decision on the need to finalize MLAMP. Consequently, Fort McKay First Nation's assertion that we must not frustrate MLAMP negotiations does not tip the public interest balance against approving the Rigel project.

Permission to Appeal

[28] A decision by the AER can be appealed to this court with permission on a question of law or jurisdiction: *REDA*, s 45(1). The FMFN sought permission to appeal various questions arising out of the AER decision. Permission was granted on the following question (*Fort McKay First Nation v Prosper Petroleum Ltd*, 2019 ABCA 14):

> Did the AER commit an error of law or jurisdiction by failing to consider the honour of the Crown and, as a result, failing to delay approval of the Project until the First Nation's negotiations with Alberta about the MLAMP are completed?

2020 ABCA 163 (CanLII)

Standard of Review

[29] As this is a statutory appeal brought pursuant to s 45(1) of *REDA*, the standard of review to be applied to the question of law on which permission to appeal was granted is correctness: *Canada (Minister of Citizenship and Immigration) v Vavilov*, 2019 SCC 65 at para 37.

Positions of the Parties

FMFN

[30] FMFN submits the AER erred in failing to ensure Alberta's obligation to act honourably with respect to its treaty and aboriginal rights when determining whether approval of the project was in the public interest. The honour of the Crown is implicated by treaty implementation issues and requires consideration of whether approval of the Project is consistent with maintaining a mutually respectful long-term relationship. The direct promise to get the MLAMP completed by March 31, 2016 in the Letter of Intent signed by Alberta's Premier and the Chief of the First Nation attracts the honour of the Crown, and required Alberta to fulfill its promise to complete the MLAMP process to ensure that additional development would proceed in accordance with a cumulative-effects-based approach before any further oil sands facilities were approved within the Moose Lake Area.

[31] The FMFN also submits that the AER erred in finding that it was precluded by s 21 of *REDA* and s 7(3) of the LARP from considering matters relating to the MLAMP. The FMFN says that s 21 of *REDA* only removes assessment of the sufficiency of consultation, and s 7(3) of the LARP only contemplates delay by reason of the Crown's noncompliance with a provision of the LARP Strategic or LARP Implementation Plan or any direction or commitment made therein, none of which are at issue in relation to the MLAMP process.

Prosper

[32] Prosper submits the AER has no statutory authority to consider whether the honour of the Crown required finalization of the MLAMP before the Project is approved, or authority to delay hearing the Project application until the MLAMP was implemented. The AER properly reserved determinations on the MLAMP to Cabinet; because Cabinet has not issued its decision, the appeal is premature.

AER

[33] The AER's submissions were limited to the record of the proceeding, the standard of review and an explanation of the statutory scheme. It did not address the merits of the appeal.

2020 ABCA 163 (CanLII)

Alberta

[34] Alberta submits that FMFN's assertion that the AER erred in not considering the honour of the Crown would effectively require the AER to consider the adequacy of Crown consultation (which is contrary to s 21 of *REDA*), or place the AER in a supervisory role over whether, when or how the Crown makes policy decisions, which is beyond its jurisdiction. The AER is a statutory tribunal that is required to act within the confines of its statutory authority. It is neither required nor permitted to indefinitely delay an application for approval of a project while Alberta engages in negotiations with First Nations. Moreover, the LARP specifically prohibits it from doing so.

[35] Alberta also submits that the honour of the Crown is a narrow and circumscribed doctrine that only applies in four situations, none of which require the AER to delay approval of a project while the Crown and a First Nation are discussing a land management policy. The Letter of Intent was a good faith commitment to work with the First Nation and other stakeholders, not an accommodation of the Project.

[36] In oral argument, Alberta conceded that if the honour of the Crown is implicated by the Project in light of the outstanding MLAMP negotiations, Cabinet bears the responsibility for ensuring any resulting obligations are met.

Discussion

The Jurisdiction of the AER

[37] The AER is a public agency which exercises adjudicative functions pursuant to the *Alberta Public Agencies Governance Act*, SA 2009, c A-31.5. As the regulator of energy development in Alberta under *REDA*, its constituent statute, the AER is mandated to provide for the efficient, safe, orderly and environmentally responsible development of energy resources in Alberta: *REDA*, s 2. It has final decision-making power over many energy project applications. However, Cabinet authorization is required where, as here, a project is governed by s 10 of *OSCA*.

[38] In deciding whether to approve a project, the AER is required to consider various factors prescribed by its governing regulations: *REDA*, s 15; *Responsible Energy Development Act General Regulation*, Alta Reg 90/2013, 3 [*REDA General Regulation*]. To this end, the AER has broad powers of inquiry to consider the "public interest" in making its decisions: *OSCA*, s 10.

[39] Tribunals have the explicit powers conferred upon them by their constituent statutes. However, where empowered to consider questions of law, tribunals also have the implied jurisdiction to consider issues of constitutional law as they arise, absent a clear demonstration the legislature intended to exclude such jurisdiction: *Rio Tinto Alcan Inc. v Carrier Sekani Tribal Council*, 2010 SCC 43 at para 69, [2010] 2 SCR 650 [*Rio Tinto*]. This is all the more so where the tribunal is required to consider the "public interest": *ibid* at para 70. In such circumstances, the

regulatory agency has a duty to apply the Constitution and ensure its decision complies with s 35 of the *Constitution Act, 1982*: *Clyde River (Hamlet) v Petroleum Geo ‑ Services Inc.*, 2017 SCC 40 at para 36, [2017] 1 SCR 1069 [*Clyde River*]. As the Supreme Court has noted, "[a] project authorization that breaches the constitutionally protected rights of Indigenous peoples cannot serve the public interest": *ibid* at para 40. The tribunal cannot ignore that aspect of its public interest mandate.

[40] It follows from a review of its constituent legislative scheme that the AER has the implied jurisdiction to consider issues of constitutional law as they arise in its proceedings. As discussed further below, that jurisdiction is explicitly removed where the adequacy of Crown consultation is concerned: *REDA*, s 21. However, issues of constitutional law outside the parameters of consultation remain within the AER's jurisdiction, including as they relate to the honour of the Crown. Section 21 of *REDA* does not prevent the AER from considering other relevant matters involving Aboriginal peoples when carrying out its mandate to decide if a particular project is in "the public interest".

[41] Nor is the AER confined to considering "questions of constitutional law" as that term is defined in the *Administrative Procedures and Jurisdiction Act*, RSA 2000 c A-3 [*APJA*]. Section 11 of *APJA* provides that "a decision maker has no jurisdiction to determine a question of constitutional law unless a regulation made under section 16 has conferred jurisdiction on that decision maker to do so". In the case of the AER, it has been given the jurisdiction to determine "all questions of constitutional law" (*Designation of Constitutional Decision Makers Regulation*, Alta Reg 69/2006, s 2 and Schedule 1), subject to notice requirements being complied with under s 12 of *APJA*. However, not all constitutional issues that arise in an AER hearing will fall within the definition of "questions of constitutional law" in the *APJA*, meaning that the AER will at times be asked to consider constitutional issues for which it has not received formal notice under *APJA*.

[42] In other words, a statute like the *APJA* should not be read as confining the AER's jurisdiction to consider constitutional issues as they relate to the "public interest": *Rio Tinto* at para 71-72. Indeed, the AER itself acknowledges its responsibility to address such issues, having considered under "the public interest" the potential adverse impacts of the Project on Aboriginal rights under s 35 of the *Constitution Act, 1982*. This broad jurisdiction to consider treaty rights outside the scope of the *APJA* is itself recognized in Ministerial Order (Energy 105/2014 and ESRD 53/2014).

[43] The AER therefore has a broad implied jurisdiction to consider issues of constitutional law, including the honour of the Crown, as part of its determination of whether an application is in the "public interest". The question raised by this appeal is whether the AER should have considered the honour of the Crown in relation to the MLAMP negotiations as part of this assessment.

2020 ABCA 163 (CanLII)

[44] In determining whether the Project was in the "public interest", the AER considered the effect on FMFN's treaty rights generally but declined to consider whether approval would frustrate MLAMP negotiations. It gave three reasons for that narrow approach:

a. Section 21 of *REDA* prohibits the AER from assessing the adequacy of Crown consultation;

b. Section 7(3) of LARP prohibits the AER from "adjourning, deferring, denying, refusing, or rejecting any application" by reason only of incompletion of a LARP regional plan; and

c. AER approval of the Project under s 10(3) of *OSCA* is subject to authorization by Cabinet, which is "the most appropriate place for a decision on the need to finalize MLAMP".

[45] A statutory decision-maker is required to perform its mandate as outlined in the applicable legislation. Where directed by legislation to grant an approval "if in its opinion it is in the public interest to do so", consideration must be given to all matters relevant to determining the "public interest". A conclusion that legislation precludes considering certain matters does not relieve the decision-maker of its obligation if that legislative interpretation proves incorrect. Nor can a decision-maker decline to consider issues that fall within its legislative mandate because it feels the matter can be better addressed by another body. As a result, the three reasons given by the AER for declining to consider anything relating to the MLAMP process when considering the public interest must be examined to determine if their reasons justify its decision.

Section 21 of *REDA*

[46] When an energy project is under consideration in Alberta that could affect the treaty interests of a First Nation, the provincial Crown has a duty to consult and potentially accommodate. This duty stems from the honour of the Crown, a constitutional principle (*Mikisew Cree First Nation v Canada (Governor General in Council)*, 2018 SCC 40 at para 24, [2018] 2 SCR 765 [*Mikisew 2018*], citing *Beckman v Little Salmon/Carmacks First Nation*, 2010 SCC 53 at para 42, [2010] 3 SCR 103) that has as its ultimate objective the reconciliation of pre-existing Aboriginal interests with the assertion of Crown sovereignty: *Manitoba Metis Federation Inc v Canada (Attorney General)*, 2013 SCC 14 at para 66, [2013] 1 SCR 623 [*Manitoba Metis*].

[47] The responsibility to ensure the honour of the Crown is upheld remains with the Crown: *Chippewas of the Thames First Nation v Enbridge Pipelines Inc*, 2017 SCC 41 at para 37, [2017] 1 SCR 1099; *Clyde River* at para 22. However, the Crown can determine how, and by whom, it will address its obligations to First Nations, meaning that aspects of its obligations can be delegated to regulatory bodies.

[48] Alberta has delegated procedural aspects of the duty to consult and to consider appropriate accommodation arising out of that consultation to the AER. Under Ministerial Order (Energy

2020 ABCA 163 (CanLII)

105/2014 and ESRD 53/2014), the AER must "consider potential adverse impacts of energy applications on existing rights of Aboriginal peoples as recognized and affirmed under Part II of the *Constitution Act, 1982* within its statutory authority under *REDA*". It is said that "AER processes will constitute part of Alberta's overall consultation process as appropriate". The Order also sets out the Aboriginal Consultation Direction, which describes its objective as follows:

> [T]o ensure that the AER considers and makes decisions in respect of energy applications in a manner that is consistent with the work of the Government of Alberta
>
> (a) in meeting its consultation obligations associated with the existing rights of aboriginal peoples as recognized and affirmed under Part II of the Constitution Act, 1982; and
>
> (b) in undertaking its consultation obligations pursuant to The Government of Alberta's [consultation policies] as amended and replaced from time to time ("Consultation Policy") and associated Consultation Guidelines ("Guidelines")

[49] The AER is ultimately responsible for considering and accommodating potential adverse impacts on the advice of the Aboriginal Consultation Office (ACO), a specialized office housed within the Ministry of Indigenous Relations. Most of the responsibility for managing Crown consultation on AER applications rests with the ACO. The ACO has the responsibility to: (1) determine if consultation is required; (2) manage the consultation process; (3) assess the adequacy of consultation undertaken; and (4) advise the AER on whether actions may be required to address potential adverse impacts of a project on Treaty rights and traditional uses.

[50] The Government of Alberta has retained the responsibility to assess the adequacy of Crown consultation on AER-regulated projects. This is reflected in s 21 of *REDA*, which provides as follows:

> The Regulator has no jurisdiction with respect to assessing adequacy of Crown consultation associated with the rights of aboriginal peoples as recognized and affirmed under Part II of the *Constitution Act, 1982*.

[51] In the present case, the ACO held consultations with FMFN regarding the Rigel Project, and the AER considered the recommendations of the ACO and the impact of the Project on the FMFN's treaty rights as part of its hearing. FMFN has challenged the adequacy of the ACO process in another proceeding, and it is not the subject of this appeal.

[52] Neither the ACO nor the AER considered the issue raised on this appeal, namely whether the honour of the Crown was implicated by the MLAMP process and the Letter of Intent. Are the

2020 ABCA 163 (CanLII)

matters that FMFN sought to put before the AER in relation to the MLAMP negotiations limited to the "adequacy of Crown consultation"? We find they are not.

2020 ABCA 163 (CanLII)

[53] The honour of the Crown can give rise to duties beyond the duty to consult. The Supreme Court of Canada in *Manitoba Metis* at para 73 stated that the "duty to consult" is only one of four situations recognized "thus far" where the honour of the Crown arises:

> (1) The honour of the Crown gives rise to a fiduciary duty when the Crown assumes discretionary control over a specific Aboriginal interest (*Wewaykum*, at paras. 79 and 81; *Haida Nation*, at para. 18);
>
> (2) The honour of the Crown informs the purposive interpretation of s. 35 of the *Constitution* Act, 1982, and gives rise to a duty to consult when the Crown contemplates an action that will affect a claimed but as of yet unproven Aboriginal interest (*Haida Nation*, at para. 25);
>
> (3) The honour of the Crown governs treaty-making and implementation (*Province of Ontario v. Dominion of Canada* (1895), 25 S.C.R. 434, at p. 512, per Gwynne J., dissenting; *Mikisew Cree First Nation v. Canada (Minister of Canadian Heritage)*, 2005 SCC 69, [2005] 3 S.C.R. 388, at para. 51), leading to requirements such as honourable negotiation and the avoidance of the appearance of sharp dealing (*Badger*, at para. 41); and
>
> (4) The honour of the Crown requires the Crown to act in a way that accomplishes the intended purposes of treaty and statutory grants to Aboriginal peoples (*R. v. Marshall*, [1999] 3 S.C.R. 456, at para. 43, referring to *The Case of The Churchwardens of St. Saviour in Southwark* (1613), 10 Co. Rep. 66b, 77 E.R. 1025, and *Roger Earl of Rutland's Case* (1608), 8 Co. Rep. 55a, 77 E.R. 555; *Mikisew Cree First Nation*, at para. 51; *Badger*, at para. 47).

[54] While the honour of the Crown is always at stake in its dealings with Aboriginal peoples, it is not engaged by every interaction: *Haida Nation v British Columbia (Minister of Forests)*, 2004 SCC 73 at para 16, [2004] 3 SCR 511 [*Haida Nation*]; *Mikisew 2018* at para 23; *Manitoba Metis* at para 68. Rather than being an independent cause of action, the honour of the Crown "speaks to *how* obligations that attract it must be fulfilled": *Manitoba Metis* at para 73, emphasis in original. It will give rise to different duties in different circumstances: *Haida Nation* at para 18; *Mikisew 2018* at para 24. In the present case, FMFN asserts that the honour of the Crown is implicated through treaty implementation, relying on *Manitoba Metis* and *Mikisew Cree First Nation v Canada (Minister of Canadian Heritage)*, 2005 SCC 69, [2005] 3 SCR 388 [*Mikisew 2005*]. It notes that the honour of the Crown infuses the performance of every treaty obligation, and stresses the ongoing relationship between the Crown and First Nations brought on by the need to balance the exercise of treaty rights with development under Treaty 8.

2020 ABCA 163 (CanLII)

[55] Since *Haida Nation*, it is clear that the honour of the Crown and its attendant focus on reconciliation arise prior to questions of rights infringement, or even proof of Aboriginal rights claims. Where rights have yet to be concluded through treaty, "the honour of the Crown requires negotiations leading to a just settlement of Aboriginal claims": *Haida Nation* at para 20. And while treaties "serve to reconcile pre-existing Aboriginal sovereignty with assumed Crown sovereignty" (*ibid*), they do not end the need for reconciliation, which is "not a final legal remedy" but a "process flowing from rights guaranteed by s 35(1)": *Haida Nation* at para 32; see also Brian Slattery, "Aboriginal Rights and the Honour of the Crown" (2005) 29 SCLR 433 at 440.

[56] In this case, FMFN argues that the MLAMP process and the Letter of Intent give rise to additional obligations stemming from the honour of the Crown beyond the duty to consult on an individual project. Specifically, FMFN suggests that the honour of the Crown is engaged in this case on the basis of treaty implementation.

[57] Section 21 does not prevent the AER from considering relevant matters involving aboriginal peoples when carrying out its mandate to decide if a particular project is in the public interest. The issues raised here are not limited to the adequacy of the consultation on this Project, but raise broader concerns including the Crown's relationship with the FMFN and matters of reconciliation. These issues engage the public interest and their consideration is not precluded by the language of s 21.

[58] Accordingly, the AER erred in concluding that s 21 of *REDA* prevented it from considering whether the MLAMP process was relevant to assessing whether the Project was in the public interest. While that provision removes the adequacy of Crown consultation from the AER's jurisdiction, the issues raised here are not so limited.

Section 7(3) of LARP

[59] The AER is required to "act in accordance with any applicable ALSA regional plan": *REDA*, s 20. The LARP is the applicable *ALSA* regional plan for the area where the Project is proposed. Section 7(3) of the LARP states:

> Notwithstanding subsections (1) and (2), a decision-maker or local government body must not adjourn, defer, deny, refuse, or reject any application, proceeding or decision-making process before it by reason only of
>
> (a) the Crown's non-compliance with a provision of either the LARP Strategic Plan or LARP Implementation Plan, or
>
> (b) the incompletion by the Crown or any body of any direction or commitment made in a provision of either the LARP Strategic Plan or LARP Implementation Plan.

[60] The AER interpreted s 7(3) as prohibiting it from delaying or denying approval of the Project because "LARP indicates that, once finalized, MLAMP will be a LARP regional plan" (para 181). However, the only mention of the MLAMP in the LARP is a statement in the "Introductory Section" that "the Moose Lake Access Management planning initiatives will be assessed for inclusion in the LARP implementation" (LARP, page 5). A planning initiative that will be assessed for inclusion in the LARP implementation does not fall within the scope of a "provision of either the LARP Strategic Plan or LARP Implementation Plan" or a "direction or commitment made in a provision of either the LARP Strategic Plan or Implementation Plan" so as to be subject to s 7(3).

[61] The AER failed to properly interpret s 7(3) of the LARP when it concluded that it applied to the MLAMP process.

Deferring consideration to Cabinet under s 10(3) of *OSCA*

[62] Section 10(3) of *OSCA* provides that the AER may "if in its opinion it is in the public interest to do so, and with the prior authorization of the Lieutenant Governor in Council, grant an approval on any terms and conditions that the Regulator considers appropriate ".

[63] As noted, the AER viewed the positive and negative impacts of the Project as being "more or less even" (para 180), and that FMFN's "assertion that we must not frustrate MLAMP negotiations does not tip the public interest balance against approving the Rigel project" (para 182). The AER referred to s 10 of *OSCA* and concluded that Cabinet was "the most appropriate place for a decision on the need to finalize MLAMP".

[64] A statutory decision-maker is required to follow the directions in the applicable legislation. It is the legislature, not the statutory decision-maker, which delegates responsibility for making a particular decision. The responsibility to determine whether projects reviewed under s 10 of *OSCA* are in "the public interest" was delegated to the AER. Only projects deemed by the AER to be in the public interest may proceed to the next stage. Cabinet then has the authority to decide whether "to authorize" and impose "terms and conditions" on the project. Matters that fall within the scope of the "public interest", within the meaning of s 10(3) of *OSCA*, must be considered by the AER as part of its public interest mandate; the regulator is not entitled to decline to address such matters because, in its view, they could be better addressed by Cabinet. This is not to say that Cabinet cannot also take such matters into account when considering whether to authorize the Project, but that does not relieve the AER of its responsibility.

[65] The legislature granted to the AER a broad mandate to determine whether a project is in the public interest; factors to consider include the social and economic effects of the energy resource activity, the effects of the energy resource activity on the environment, and the impacts on a landowner as a result of the use of the land on which the energy resource activity is or will be located: *REDA*, s 15; *REDA General Regulation*, s 3. The "public interest" also includes adherence

2020 ABCA 163 (CanLII)

2020 ABCA 163 (CanLII)

to constitutional principles like the honour of the Crown, and the AER is no less responsible for considering the Crown's constitutional obligations than is Cabinet. To the extent the MLAMP negotiations implicate the honour of the Crown and therefore need to be considered as part of the "public interest", the AER was under a statutory duty to consider that issue.

[66] The need for ultimate Cabinet approval does not provide the AER a lawful reason to decline to consider the MLAMP negotiations and related issues insofar as they implicate the honour of the Crown. For that reason, we reject Prosper's argument that this appeal is premature on account of the fact that Cabinet has yet to give final authorization to the Project. Prosper notes that only final decisions can be reviewed and likens the decision of the AER to the National Energy Board (NEB), whose recommendations to Cabinet are said not to be amenable to judicial review: *Tsleil-Waututh Nation v Canada (Attorney General)*, 2018 FCA 153 at paras 170-203, leave to appeal to SCC refused, 38379 (2 May 2019). However, as FMFN points out, the decision of the AER regarding whether the Project is in the public interest is, unlike an NEB recommendation, a final decision subject to statutory appeal. Whether the AER erred in failing to consider the honour of the Crown as it relates to MLAMP negotiations when determining "the public interest" is a matter for which permission to appeal was granted and is properly before us.

[67] Moreover, the AER's consideration of these issues does not, contrary to Alberta's argument, place the AER in an improper role with respect to government policy decisions. The issue before the AER is whether the approval of a project is in the public interest. Considerations of the effect of the project on aboriginal interests and adherence with constitutional principles are part of the AER's public interest mandate. The AER's consideration of these issues in the context of a proposed project does not relieve the Crown of its ultimate constitutional responsibilities.

Conclusion

[68] We are satisfied that there was no basis for the AER to decline to consider the MLAMP process as part of its assessment of the public interest rather than deferring the issue to Cabinet. The public interest mandate can and should encompass considerations of the effect of a project on aboriginal peoples, which in this case will include the state of negotiations between the FMFN and the Crown. To preclude such considerations entirely takes an unreasonably narrow view of what comprises the public interest, particularly given the direction to all government actors to foster reconciliation.

[69] At the oral hearing, FMFN asked that the matter be remitted back to the AER to consider this issue, acknowledging it is for that decision-maker to determine whether the Project should be delayed, approved or denied. We agree.

[70] We have had the opportunity to review the concurring judgment of Greckol JA. She concludes that the honour of the Crown was engaged by the MLAMP negotiation process. As the AER declined to consider this issue at the hearing, a full evidentiary record relating to this matter is

not available. We are therefore of the view that the issue should be determined by the AER on an appropriate record.

[71] Accordingly, the appeal is allowed and the AER's approval of the Project vacated. The AER is directed to reconsider whether approval of the Project is in the public interest after taking into consideration the honour of the Crown and the MLAMP process. In so concluding, we stress that nothing in this decision should be viewed as a comment on whether approval of the Project is in the public interest.

Appeal heard on October 29, 2019

Memorandum filed at Edmonton, Alberta
this 24th day of April, 2020

Authorized to sign for: Veldhuis J.A.

Authorized to sign for: Strekaf J.A.

2020 ABCA 163 (CanLII)

Greckol J.A. (concurring in the result):

[72] I agree that the appeal must be allowed and join with them in the reasons for doing so. However, I wish to make a few additional comments by way of guidance regarding the honour of the Crown and the MLAMP negotiations in this case.

[73] The honour of the Crown is a constitutional principle which governs the relationship between Aboriginal peoples and the Crown: *Mikisew Cree First Nation v Canada (Governor General in Council)*, 2018 SCC 40, [2018] 2 SCR 765 at paras 21, 24 [*Mikisew 2018*]. Dating back to the *Royal Proclamation of 1763*, the Crown's duty of honourable dealing arises out of its assertion of sovereignty over an Aboriginal people who had *de facto* control of land and resources: *Haida Nation v British Columbia (Minister of Forests)*, 2004 SCC 73 at para 32, [2004] 3 SCR 511 [*Haida Nation*]; *Manitoba Metis Federation Inc. v Canada (Attorney General)*, 2013 SCC 14 at para 66, [2013] 1 SCR 623 [*Manitoba Metis*]; *Mikisew 2018* at para 21.

[74] Reconciliation of these opposing realities – pre-existing Aboriginal societies with the assertion of Crown sovereignty – is the ultimate purpose of the honour of the Crown: *Mikisew 2018* at para 22; *Manitoba Metis* at para 66. The duty to treat Aboriginal peoples honourably is also enshrined in s 35 of the *Constitution Act, 1982*, of which "[t]he reconciliation of Aboriginal and non-Aboriginal Canadians in a mutually respectful long-term relationship is the grand purpose": *Beckman v Little Salmon/Carmacks First Nation*, 2010 SCC 53 at para 10, [2010] 3 SCR 103.

[75] The continued need to reconcile Aboriginal interests with Crown sovereignty through treaty implementation is evident from *Mikisew Cree First Nation v Canada (Minister of Canadian Heritage)*, 2005 SCC 69, [2005] 3 SCR 388 [*Mikisew 2005*], itself a case involving the Crown's ability to "take up" land under Treaty 8. As noted by Binnie J at para 54, "[t]reaty making is an important stage in the long process of reconciliation, but it is only a stage". In *Mikisew 2005*, the Supreme Court of Canada held that the duty to consult imposed upon the Crown in *Haida Nation* similarly applied to the "taking up" of land where a First Nation's treaty rights might be affected. The implementation of Treaty 8 was said to "demand a *process* by which lands may be transferred from the one category (where the First Nations retain rights to hunt, fish and trap) to the other category (where they do not)", the content of which was dictated by the duty of the Crown to act honourably: *Mikisew 2005* at para 33, emphasis in original.

[76] That the honour of the Crown attaches to the implementation of its constitutional obligations is particularly clear from *Manitoba Metis*, where the Supreme Court of Canada granted a declaration that the Crown failed to implement the *Manitoba Act, 1870* in a manner consistent with the honour of the Crown. *Manitoba Metis* considered s 31 of that constitutional document, which obliged the Crown to distribute 1.4 million acres of land to the children to Metis families. In implementing such obligations, the honour of the Crown requires that the Crown (1) take a broad

2020 ABCA 163 (CanLII)

purposive approach to the interpretation of the promise, and (2) act diligently to fulfill it: para 75. The latter duty was said to arise because "the honour of the Crown requires the Crown to endeavour to ensure its obligations are fulfilled" (para 79) and not leave the Aboriginal group "with an empty shell of a treaty promise" (para 80, citing *R v Marshall*, [1999] 3 SCR 456 at para 52).

[77] Alberta points out that the promise at issue in *Manitoba Metis* is quite different from any promise in this case. However, in my view, the question is not whether the so-called Prentice Promise must itself attract the label "solemn obligation" or "solemn promise", or even whether it is sufficiently exacting to preclude any development in the Moose Lake area. The question, rather, is whether it was made in furtherance of the Crown's obligation to protect FMFN's rights under Treaty 8. If so, then it can properly be said to fall within treaty implementation as a measure designed to ensure the Crown's obligations are fulfilled. To see why this is the case, the precise nature of FMFN's treaty rights must be considered.

[78] First Nations groups who adhered to Treaty 8 in 1899 – of which FMFN is a descendant – ceded a large amount of land to the Crown in exchange for certain guarantees, chief among them a provision protecting the right of the signatories to hunt, trap, and fish: *Mikisew 2018* at para 5. Indeed, it has been said that "the guarantee that hunting, fishing and trapping rights would continue was the *essential element* which led to their signing the treaties": *R v Badger*, [1996] 1 SCR 771 [*Badger*] at para 39, emphasis added. These rights as set out in Treaty 8 were subsequently circumscribed by the *Natural Resources Transfer Agreement*, a schedule of the *Constitution Act, 1930*, of which paragraph 12 provided for a continuing right to hunt for food on unoccupied land: *Badger* at para 100. The right to hunt will accordingly be lost where land has been "taken up" as contemplated by Treaty 8, meaning it will not extend to private lands put to a visible use incompatible with hunting: *Badger* at paras 49, 51, 58, 66.

[79] As later clarified in *Mikisew 2005*, however, not every "taking up" by the Crown constitutes an infringement of Treaty 8: para 31. Instead, an action for treaty infringement will only arise once, as a result of the Crown's power to take up land, "no meaningful right to hunt" remains over the Aboriginal group's traditional territories: *Mikisew 2005* at para 48; *Grassy Narrows First Nation v Ontario (Natural Resources)*, 2014 SCC 48 at para 52, [2014] 2 SCR 447. This raises the prospect that the effects of any one "taking up" of land will rarely, if ever, itself violate an Aboriginal group's Treaty 8 right to hunt; instead, the extinguishment of the right will be brought about through the *cumulative effects* of numerous developments over time. In other words, no one project on FMFN's territory may prevent it from the meaningful right to hunt – however, if too much development is allowed to proceed, then, taken together, the effect will be to preclude FMFN from being able to exercise their treaty rights.

[80] The right to hunt (in a meaningful way) in Treaty 8 is a "solemn promise" (*Badger* at para 41) made by the Crown, just as the promise of land in *Manitoba Metis* was a solemn constitutional

2020 ABCA 163 (CanLII)

obligation. And yet it is clear that, given the nature of the respective rights, their implementation will necessarily look very different. The obligation in *Manitoba Metis* was met at the point in which the Crown distributed the 1.4 million acres of land to Metis children (and would have accorded with the honour of the Crown had it been done diligently). Conversely, the "promise" of hunting – given the reality of large-scale oil and gas developments in Treaty 8 territory, which is incompatible with Aboriginal hunting – is not fulfilled definitively. Rather, the promise is easy to fulfill initially but difficult to *keep* as time goes on and development increases.

[81] The foregoing makes clear that the Crown's obligation to ensure the meaningful right to hunt under Treaty 8 is an *ongoing* one. Proper land use management remains a perennial concern for the Crown, as "none of the parties in 1899 expected that Treaty 8 constituted a finished land use blueprint": *Mikisew 2005* as para 27. Reconciling this "inevitable tension" (para 33) between Aboriginal rights and development in Treaty 8 territory has, first and foremost, been a matter of the Crown adhering to its duty to consult on individual projects, as mandated in *Mikisew 2005*. Acting honourably in this fashion has promoted reconciliation, in part, by "encouraging negotiation and just settlements as an alternative to the cost, delay and acrimony of litigating s. 35 infringement claims" (*Mikisew 2018* at para 26), much as *Haida Nation* had counselled with respect of unproven Aboriginal rights claims. And yet, as this record itself attests, the long-term protection of Aboriginal treaty rights, including the right to hunt under Treaty 8, is increasingly thought to require negotiation and just settlement of disputes outside the context of individual projects in order to address the *cumulative effects* of land development on First Nation treaty rights.

[82] That is exactly what has been taking place in this case between the Crown and FMFN. The Crown has long been on notice that the piece-meal approach to addressing FMFN's concerns through consultation on individual projects has not adequately considered the cumulative effects of development. Whether MLAMP itself is mandated by Treaty 8 is not the issue. If the evidence establishes that the Crown entered into negotiations with FMFN on a buffer zone and ultimately agreed to implement MLAMP as a way of seeking to uphold its ongoing constitutional obligation to protect FMFN's right to hunt within its traditional area, then these were not, as suggested by Alberta, mere "policy" discussions. They would instead be negotiations designed to ensure that the Crown meet its treaty obligations. In such circumstances, the honour of the Crown would be engaged.

[83] Nor would it be an answer to say – as both Prosper and Alberta have suggested – that FMFN's concerns could instead be addressed in its treaty infringement claim against the Crown. The honour of the Crown has as its ultimate purpose the reconciliation of Aboriginal interests with Crown sovereignty. It is engaged *prior* to treaty infringement (*Mikisew 2018* at para 67) and seeks to protect Aboriginal rights from being turned into an empty shell. Whether or not the treaty rights of FMFN have been infringed remains to be seen. Regardless, the Crown must deal honourably with First Nations in negotiations designed to stave off infringement. The honour of the Crown may not mandate that the parties agree to any one particular settlement, but it does require that the

2020 ABCA 163 (CanLII)

Crown keep promises made during negotiations designed to protect treaty rights. It certainly demands more than allowing the Crown to placate FMFN while its treaty rights careen into obliteration. That is not honourable. And it is not reconciliation.

ON APPEAL FROM THE COURT OF APPEAL FOR QUEBEC

Constitutional law — Professions Tribunal — Writs of evocation — Privative clauses — Express general exclusion of the supervisory authority of the Superior Court in respect of jurisdiction and law — Power to determine limits of jurisdiction without appeal or review — Whether a s. 96 court created — British North America Act, art. 96 — Professional Code, R.S.Q. 1977, c. C-26, arts. 162, 163, 164, 169, 175, 193, 194, 195 — Code of Civil Procedure, arts. 33, 846.

The appellant obtained two writs of evocation from a judge of the Superior Court of Quebec from two decisions of the Professions Tribunal quashing a decision of a Discipline Committee of a professional corporation on the ground that that body had acted beyond its authority. The Superior Court held that the wide powers conferred upon the Professions Tribunal—powers encompassing review of law or fact and jurisdiction—offended s. 96 of the *B.N.A. Act* because the question whether a body has exceeded its jurisdiction fell within the superintending and reforming power belonging solely to a superior court whose members are appointed by the Governor General in Council. That decision was reversed by a majority of the Quebec Court of Appeal. Hence the appeal to this Court.

EN APPEL DE LA COUR D'APPEL DU QUÉBEC

Droit constitutionnel — Tribunal des professions — Brefs d'évocation — Clauses privatives — Exclusion expresse et générale du pouvoir de surveillance de la Cour supérieure à l'égard des questions de droit et de compétence — Pouvoir de définir les limites de sa propre compétence sans appel ni révision équivaut à créer une cour visée par l'art. 96 de l'A.A.N.B. — Acte de l'Amérique du Nord britannique, art. 96 — Code des professions, L.R.Q. 1977, chap. C-26, art. 162, 163, 164, 169, 175, 193, 194, 195 — Code de procédure civile, art. 33, 846.

L'appelant a obtenu deux brefs d'évocation d'un juge de la Cour supérieure du Québec à l'encontre de deux décisions du Tribunal des professions qui a infirmé une décision du comité de discipline d'une corporation professionnelle au motif que cet organisme avait excédé sa compétence. La Cour supérieure a statué que les pouvoirs étendus accordés au Tribunal des professions (pouvoirs englobant la révision de questions de droit, de fait ou de compétence) étaient de nature à contrevenir à l'art. 96 de l'*A.A.N.B.* car la question de savoir si un organisme a excédé sa juridiction relève du pouvoir de surveillance et de contrôle lequel seul est réservé à une cour supérieure dont la nomination des membres relève du gouverneur général en conseil. La Cour d'appel, à la majorité, a infirmé ce jugement, d'où le pourvoi devant cette Cour.

1981 CanLII 30 (SCC)

Held: The appeal should be allowed.

The Professions Tribunal is given no function other than that of a general tribunal of appeal in respect of all professions covered by the *Professional Code* and it was, therefore, impossible to see its final appellate jurisdiction as part of an institutional arrangement by way of a regulatory scheme for governance of the various professions.

Where a provincial legislature purports to insulate one of its statutory tribunals from any curial review of its adjudicative functions, and where that insulation encompassing jurisdiction, the legislation must be struck down as unconstitutional because it constitutes, in effect, a s. 96 court. It is unquestioned that privative clauses, when properly framed, may effectively oust judicial review on questions of law and on other issues not touching jurisdiction. However, given that s. 96 is in the *British North America Act* and that it would make a mockery of it to treat it in non-functional formal terms as a mere appointing power, there is nothing that is more the hallmark of a superior court than the vesting of power in a provincial statutory tribunal to determine the limits of its jurisdiction without appeal or other review. Consequently, a provincially-constituted statutory tribunal could not constitutionally be immunized from review of decisions on questions of jurisdiction.

The present case was no different in principle from the *Farrah* case, [1978] 2 S.C.R. 638, when regard is had to ss. 175, 194 and 195 of the *Professional Code*. In both cases there was a purported exclusion of the reviewing authority of any court, whether by appeal or by evocation.

Attorney General of Quebec v. Farrah, [1978] 2 S.C.R. 638, followed; *Tomko v. Labour Relations Board (N.S.)*, [1977] 1 S.C.R. 112, distinguished; *Re Residential Tenancies Act, 1979*, [1981] 1 S.C.R. 714; *Farrell v. Workmen's Compensation Board*, [1962] S.C.R. 48; *Toronto Newspaper Guild, Local 187 v. Globe Printing Company*, [1953] 2 S.C.R. 18; *L'Alliance des Professeurs Catholiques de Montréal v. Labour Relations Board of Quebec*, [1953] 2 S.C.R. 140; *Executors of the Woodward Estate v. Minister of Finance*, [1973] S.C.R. 120, referred to.

APPEAL from a decision of the Court of Appeal of Quebec[1], reversing a judgment of the

[1] [1979] C.A. 333.

Arrêt: Le pourvoi est accueilli.

Le Tribunal des professions n'a pas d'autre fonction que celle d'un tribunal d'appel à l'égard de toutes les professions que vise le *Code des professions* et il est, par conséquent, impossible de considérer sa compétence d'appel en dernier ressort comme une partie d'un mécanisme institutionnel sous forme de dispositif de réglementation de la conduite des diverses professions.

Chaque fois que le législateur provincial prétend soustraire l'un des tribunaux créé par la loi à toute révision judiciaire de sa fonction d'adjuger, et que la soustraction englobe la compétence, la loi provinciale doit être déclarée inconstitutionnelle parce qu'elle a comme conséquence de faire de ce tribunal une cour au sens de l'art. 96. Il est incontestable que des clauses privatives bien formulées peuvent efficacement écarter le contrôle judiciaire sur des questions de droit et sur d'autres questions étrangères à la compétence. Toutefois, comme l'art. 96 fait partie de l'*Acte de l'Amérique du Nord britannique* et que ce serait le tourner en dérision que de l'interpréter comme un pouvoir de nomination simple et sans portée, la Cour ne peut trouver de marque plus distinctive d'une cour supérieure que l'attribution à un tribunal provincial du pouvoir de délimiter sa compétence sans appel ni autre révision. En conséquence, un tribunal créé par une loi provinciale ne peut être constitutionnellement à l'abri du contrôle de ses décisions sur des questions de compétence.

L'affaire en l'espèce n'est pas différente en principe de l'affaire *Farrah*, [1978] 2 R.C.S. 638, si l'on considère les art. 175, 194 et 195 du *Code des professions*. Dans les deux affaires on a voulu écarter le pouvoir de contrôle de tout autre tribunal, sous forme d'appel et d'évocation.

Jurisprudence: arrêt suivi: *Procureur général du Québec c. Farrah*, [1978] 2 R.C.S. 638; distinction faite avec l'arrêt *Tomko c. Labour Relations Board* (N.-É.), [1977] 1 R.C.S. 112; arrêts mentionnés: *Re Loi de 1979 sur la location résidentielle*, [1981] 1 R.C.S. 714; *Farrell c. Commission des accidents de travail*, [1962] R.C.S. 48; *Toronto Newspaper Guild, Local 187 c. Globe Printing Company*, [1953] 2 R.C.S. 18; *L'Alliance des Professeurs Catholiques de Montréal c. Commission des relations ouvrières du Québec*, [1953] 2 R.C.S. 140; *Succession Woodward c. Ministre des Finances*, [1973] R.C.S. 120.

POURVOI contre un arrêt de la Cour d'appel du Québec[1], qui a infirmé un jugement de la Cour

[1] [1979] C.A. 333.

1981 CanLII 30 (SCC)

Superior Court [2], authorizing writs of evocation to be issued. Appeal allowed.

Robert Lesage, Q.C., and *Daniel Lavoie*, for the appellant.

Henri Brun, Louis Crête and *Jean-François Jobin*, for the respondent the Attorney General of the Province of Quebec.

Pierre Saint-Martin, for the respondents Aubry and Cofsky.

B. A. Crane, Q.C., for the intervener.

The judgment of the Court was delivered by

THE CHIEF JUSTICE—The issue in this appeal is whether the Professions Tribunal, established under s. 162 of the *Professional Code,* R.S.Q. 1977, c. C-26, may competently exercise the powers conferred upon it under s. 175 and under ancillary provisions such as s. 169 or whether, by reason of such powers and having regard also to the privative terms of s. 194, there would be a violation of s. 96 of the *British North America Act* in their exercise. The issue so stated requires a close examination of the recent judgment of this Court in *Attorney General of Quebec v. Farrah* [3], to determine whether there is a sufficient distinction between the challenged legislation here and that involved in the *Farrah* case to warrant a different answer, one of validity rather than invalidity as in *Farrah*.

I need make but a brief allusion to the facts. The *Professional Code* governs some 38 professional corporations listed in an annex to the Code. Each of these corporations is required to establish a Discipline Committee in conformity with the Code to deal with allegations of professional misconduct. The Discipline Committees have authority under s. 156 to impose a range of sanctions upon a finding of guilty, such as a reprimand or a temporary or permanent striking off the rolls of the particular corporation or a fine of at least $200 for each offence. The Discipline Committee has no authority to admit members to the particular

[2] [1977] C.S. 324.
[3] [1978] 2 S.C.R. 638.

supérieure [2], autorisant la délivrance de brefs d'évocation. Pourvoi accueilli.

Robert Lesage, c.r., et *Daniel Lavoie*, pour l'appelant.

Henri Brun, Louis Crête et *Jean-François Jobin*, pour l'intimé le procureur général de la province de Québec.

Pierre Saint-Martin, pour les intimés Aubry et Cofsky.

B. A. Crane, c.r., pour l'intervenant.

Le jugement de la Cour a été rendu par

LE JUGE EN CHEF—La question en litige dans ce pourvoi est celle de savoir si le Tribunal des professions, institué par l'art. 162 du *Code des professions*, L.R.Q. 1977, chap. C-26, a compétence pour exercer les pouvoirs que lui attribuent l'art. 175 et des dispositions complémentaires comme l'art. 169 ou si, à cause de ces pouvoirs et compte tenu des dispositions privatives de l'art. 194, leur exercice contrevient à l'art. 96 de l'*Acte de l'Amérique du Nord britannique*. Ainsi formulée, la question en litige appelle un examen attentif de l'arrêt récent de cette Cour *Procureur général du Québec c. Farrah* [3], pour déterminer s'il y a suffisamment de différence entre la loi contestée en l'espèce et celle visée dans l'affaire *Farrah* pour justifier une réponse différente, savoir que la loi est valide et non pas nulle comme dans l'affaire *Farrah*.

Il me faut faire un bref rappel des faits. Le *Code des professions* régit quelque 38 corporations professionnelles énumérées en annexe au Code. Chacune d'elles est tenue de constituer un comité de discipline conformément au Code pour entendre les plaintes d'inconduite. Les comités de discipline ont, en vertu de l'art. 156, le pouvoir d'imposer une gamme de sanctions sur déclaration de culpabilité, dont la réprimande, la radiation temporaire ou permanente du tableau de la corporation concernée ou l'imposition d'une amende d'au moins $200 pour chaque infraction. Le comité de discipline n'a pas le pouvoir d'admettre des membres à une

[2] [1977] C.S. 324.
[3] [1978] 2 R.C.S. 638.

1981 CanLII 30 (SCC)

with a provincial statutory provision which purported to make certain determinations by the Minister final and conclusive and not open to appeal or review in any court. Martland J., speaking for this Court, dealt with this provision as follows (at p. 127):

> The effect which has been given to a provision of this kind is that, while it precludes a superior court from reviewing, by way of *certiorari*, a decision of an inferior tribunal on the basis of error of law, on the face of the record, if such error occurs in the proper exercise of its jurisdiction, it does not preclude such review if the inferior tribunal has acted outside its defined jurisdiction. The basis of such decisions is that if such a tribunal has acted beyond its jurisdiction in making a decision, it is not a decision at all within the meaning of the statute which defines its powers because Parliament could not have intended to clothe such tribunal with the power to expand its statutory jurisdiction by an erroneous decision as to the scope of its own powers.

Although this was not a direct pronouncement on constitutional power (jurisdiction as such was not expressly involved as it is in the case at bar), it was a clear indication that the constitutional issue was in the background. It is necessary to bring it forward, however, when it is raised as squarely as it has been under the *Professional Code*.

It is true that this is the first time that this Court has declared unequivocally that a provincially-constituted statutory tribunal cannot constitutionally be immunized from review of decisions on questions of jurisdiction. In my opinion, this limitation, arising by virtue of s. 96, stands on the same footing as the well-accepted limitation on the power of provincial statutory tribunals to make unreviewable determinations of constitutionality. There may be differences of opinion as to what are questions of jurisdiction but, in my lexicon, they rise above and are different from errors of law, whether involving statutory construction or evidentiary matters or other matters. It is now unquestioned that privative clauses may, when properly framed, effectively oust judicial review on questions of law and, indeed, on other issues not touch-

disposition législative provinciale qui prétendait rendre certaines décisions du Ministre définitives sans recours ni appel à aucun tribunal. Le juge Martland, au nom de la Cour, s'exprime ainsi à propos de cette disposition (à la p. 127):

> L'effet qui a été donné à une disposition de ce genre est que même si elle empêche une cour supérieure de réviser, par voie de *certiorari*, la décision d'un tribunal inférieur pour erreur de droit manifeste à la lecture du dossier, si pareille erreur est commise dans l'exercice approprié de la compétence de ce dernier tribunal, elle n'empêche pas cette révision si le tribunal inférieur a outrepassé les limites de sa compétence définie. Le fondement de ces arrêts est que si le tribunal a excédé sa compétence dans une décision, cette dernière n'est pas une décision du tout, selon la loi qui définit les pouvoirs du tribunal, parce que le Parlement ne pouvait pas avoir l'intention de conférer à pareil tribunal le pouvoir d'étendre sa compétence légale au moyen d'une décision erronée quant à l'étendue de ses propres pouvoirs.

Même s'il ne s'agit pas là d'une décision directement reliée à la compétence constitutionnelle (la juridiction n'était pas expressément visée comme en l'espèce), il est manifeste que l'aspect constitutionnel était présent en arrière-plan. Il est nécessaire cependant de le mettre au premier plan lorsqu'il est mis en cause aussi précisément que dans le cas du *Code des professions*.

C'est la première fois, il est vrai, que cette Cour déclare sans équivoque qu'un tribunal créé par une loi provinciale ne peut être constitutionnellement à l'abri du contrôle de ses décisions sur des questions de compétence. A mon avis, cette limitation, qui découle de l'art. 96, repose sur le même fondement que la limitation reconnue du pouvoir des tribunaux créés par des lois provinciales de rendre des décisions sans appel sur des questions constitutionnelles. Il peut y avoir des divergences de vues sur ce que sont des questions de compétence, mais, dans mon vocabulaire, elles dépassent les erreurs de droit, dont elles diffèrent, que celles-ci tiennent à l'interprétation des lois, à des questions de preuve ou à d'autres questions. Il est maintenant incontestable que des clauses privatives bien formulées peuvent efficacement écarter le contrôle

1981 CanLII 30 (SCC)

David Dunsmuir *Appellant*

v.

Her Majesty the Queen in Right of the Province of New Brunswick as represented by Board of Management *Respondent*

INDEXED AS: DUNSMUIR *v.* NEW BRUNSWICK

Neutral citation: 2008 SCC 9.

File No.: 31459.

2007: May 15; 2008: March 7.

Present: McLachlin C.J. and Bastarache, Binnie, LeBel, Deschamps, Fish, Abella, Charron and Rothstein JJ.

ON APPEAL FROM THE COURT OF APPEAL FOR NEW BRUNSWICK

Administrative law — Judicial review — Standard of review — Proper approach to judicial review of administrative decision makers — Whether judicial review should include only two standards: correctness and reasonableness.

Administrative law — Judicial review — Standard of review — Employee holding office "at pleasure" in provincial civil service dismissed without alleged cause with four months' pay in lieu of notice — Adjudicator interpreting enabling statute as conferring jurisdiction to determine whether discharge was in fact for cause — Adjudicator holding employer breached duty of procedural fairness and ordering reinstatement — Whether standard of reasonableness applicable to adjudicator's decision on statutory interpretation issue — Public Service Labour Relations Act, R.S.N.B. 1973, c. P-25, ss. 97(2.1), 100.1(5) — Civil Service Act, S.N.B. 1984, c. C-5.1, s. 20.

Administrative law — Natural justice — Procedural fairness — Dismissal of public office holders — Employee holding office "at pleasure" in provincial civil service dismissed without alleged cause with four months' pay in lieu of notice — Employee not informed of reasons for termination or provided with opportunity to respond — Whether employee entitled to procedural fairness — Proper approach to dismissal of public employees.

David Dunsmuir *Appelant*

EN APPEL DE LA COUR D'APPEL DU NOUVEAU-BRUNSWICK

Droit administratif — Contrôle judiciaire — Norme de contrôle — Démarche appropriée pour le contrôle judiciaire d'une décision administrative — Le contrôle judiciaire devrait-il s'effectuer au regard de deux normes seulement : celle de la décision correcte et celle de la raisonnabilité?

Droit administratif — Contrôle judiciaire — Norme de contrôle — Fonctionnaire provincial amovible congédié sans motif avec indemnité de quatre mois de salaire tenant lieu de préavis — Arbitre concluant que sa loi habilitante l'autorisait à déterminer si le congédiement constituait en fait un congédiement pour motif — Arbitre statuant que l'employeur avait manqué à son obligation d'équité procédurale et ordonnant la réintégration de l'employé — La norme de la décision raisonnable s'appliquait-elle à l'interprétation de la loi par l'arbitre? — Loi relative aux relations de travail dans les services publics, L.R.N.-B. 1973, ch. P-25, art. 97(2.1), 100.1(5) — Loi sur la Fonction publique, L.N.-B. 1984, ch. C-5.1, l'art. 20.

Droit administratif — Justice naturelle — Équité procédurale — Congédiement d'un titulaire de charge publique nommé à titre amovible — Congédiement sans motif avec indemnité de quatre mois de salaire tenant lieu de préavis — Employeur n'ayant pas précisé les motifs du congédiement ni donné à l'employé la possibilité d'y répondre — L'employé avait-il droit à l'équité procédurale? — Démarche appropriée pour le congédiement d'un fonctionnaire.

2008 SCC 9 (CanLII)

D was employed by the Department of Justice for the Province of New Brunswick. He held a position under the *Civil Service Act* and was an office holder "at pleasure". His probationary period was extended twice and the employer reprimanded him on three separate occasions during the course of his employment. On the third occasion, a formal letter of reprimand was sent to D warning him that his failure to improve his performance would result in further disciplinary action up to and including dismissal. While preparing for a meeting to discuss D's performance review the employer concluded that D was not right for the job. A formal letter of termination was delivered to D's lawyer the next day. Cause for the termination was explicitly not alleged and D was given four months' pay in lieu of notice.

D commenced the grievance process under s. 100.1 of the *Public Service Labour Relations Act* ("*PSLRA*"), alleging that the reasons for the employer's dissatisfaction were not made known, that he did not receive a reasonable opportunity to respond to the concerns, that the employer's actions in terminating him were without notice, due process or procedural fairness, and that the length of the notice period was inadequate. The grievance was denied and then referred to adjudication. A preliminary issue of statutory interpretation arose as to whether, where dismissal was with notice or pay in lieu thereof, the adjudicator was authorized to determine the reasons underlying the province's decision to terminate. The adjudicator held that the referential incorporation of s. 97(2.1) of the *PSLRA* into s. 100.1(5) of that Act meant that he could determine whether D had been discharged or otherwise disciplined for cause. Ultimately, the adjudicator made no finding as to whether the discharge was or was not for cause. In his decision on the merits, he found that the termination letter effected termination with pay in lieu of notice and that the termination was not disciplinary. As D's employment was hybrid in character, the adjudicator held that D was entitled to and did not receive procedural fairness in the employer's decision to terminate his employment. He declared that the termination was void *ab initio* and ordered D reinstated as of the date of dismissal, adding that in the event that his reinstatement order was quashed on judicial review, he would find the appropriate notice period to be eight months.

On judicial review, the Court of Queen's Bench applied the correctness standard and quashed the adjudicator's preliminary decision, concluding that the adjudicator did not have jurisdiction to inquire into the

D travaillait pour le ministère de la Justice du Nouveau-Brunswick. Il occupait un poste suivant la *Loi sur la Fonction publique* et était titulaire d'une charge à titre amovible. Sa période d'essai a été prolongée deux fois, et l'employeur l'a réprimandé à trois occasions distinctes en cours d'emploi. La troisième réprimande a pris la forme d'une lettre officielle l'informant que s'il n'améliorait pas son rendement, il s'exposait à de nouvelles mesures disciplinaires pouvant aller jusqu'au congédiement. Lors d'une rencontre préalable à l'évaluation du rendement de D, l'employeur a conclu que ce dernier ne répondait pas aux exigences du poste. Le lendemain, un avis de cessation d'emploi a été transmis à l'avocat de D. Nul motif de congédiement n'était expressément invoqué, et D avait droit à une indemnité de quatre mois de salaire tenant lieu de préavis.

D a présenté un grief sur le fondement de l'art. 100.1 de la *Loi relative aux relations de travail dans les services publics* (« *LRTSP* »), alléguant que l'employeur n'avait pas précisé ses motifs d'insatisfaction, qu'il ne lui avait pas donné la possibilité raisonnable de répondre aux reproches, que les mesures pour mettre fin à l'emploi avaient été prises sans préavis, sans application régulière de la loi et au mépris de l'équité procédurale et que l'indemnité versée était insuffisante. Le grief a été rejeté, puis renvoyé à l'arbitrage. Une question préalable d'interprétation législative s'est alors posée : dans le cas d'un congédiement avec préavis ou indemnité en tenant lieu, l'arbitre est-il autorisé à déterminer les raisons de la décision de la province de mettre fin à l'emploi? L'arbitre a estimé que l'incorporation par renvoi du par. 97(2.1) de la *LRTSP* au par. 100.1(5) de la même loi l'autorisait à déterminer si D avait été congédié ou avait autrement fait l'objet d'une mesure disciplinaire, pour motif. Finalement, il n'a pas conclu qu'il s'agissait ou non d'un congédiement pour motif. Dans sa décision au fond, il a statué que l'avis de cessation d'emploi opérait un congédiement avec indemnité tenant lieu de préavis et que la cessation d'emploi n'était pas de nature disciplinaire. Vu la nature hybride de l'emploi, il a conclu que D avait droit au respect de l'équité procédurale, mais que l'employeur ne s'était pas acquitté de son obligation à cet égard en mettant fin à l'emploi. Il a déclaré nulle *ab initio* la cessation d'emploi et ordonné la réintégration de D dans ses fonctions à compter de la date du congédiement et, pour le cas où son ordonnance de réintégration serait annulée à l'issue d'un contrôle judiciaire, il a ajouté qu'un préavis de huit mois lui paraissait indiqué.

Saisie d'une demande de contrôle judiciaire, la Cour du Banc de la Reine a appliqué la norme de la décision correcte et annulé la décision sur la question préalable, arrivant à la conclusion que l'arbitre n'avait pas

2008 SCC 9 (CanLII)

reasons for the termination, and that his authority was limited to determining whether the notice period was reasonable. On the merits, the court found that D had received procedural fairness by virtue of the grievance hearing before the adjudicator. Concluding that the adjudicator's decision did not stand up to review on a reasonableness *simpliciter* standard, the court quashed the reinstatement order but upheld the adjudicator's provisional award of eight months' notice. The Court of Appeal held that the proper standard with respect to the interpretation of the adjudicator's authority under the *PSLRA* was reasonableness *simpliciter*, not correctness, and that the adjudicator's decision was unreasonable. It found that where the employer elects to dismiss with notice or pay in lieu of notice, s. 97(2.1) of the *PSLRA* does not apply and the employee may only grieve the length of the notice period. It agreed with the reviewing judge that D's right to procedural fairness had not been breached.

Held: The appeal should be dismissed.

Per McLachlin C.J. and Bastarache, LeBel, Fish and Abella JJ.: Despite its clear, stable constitutional foundations, the system of judicial review in Canada has proven to be difficult to implement. It is necessary to reconsider both the number and definitions of the various standards of review, and the analytical process employed to determine which standard applies in a given situation. Notwithstanding the theoretical differences between the standards of patent unreasonableness and reasonableness *simpliciter*, any actual difference between them in terms of their operation appears to be illusory. There ought to be only two standards of review: correctness and reasonableness. [32] [34] [41]

When applying the correctness standard in respect of jurisdictional and some other questions of law, a reviewing court will not show deference to the decision maker's reasoning process; it will rather undertake its own analysis of the question and decide whether it agrees with the determination of the decision maker; if not, the court will substitute its own view and provide the correct answer. A court conducting a review for reasonableness inquires into the qualities that make a decision reasonable. Reasonableness is concerned mostly with the existence of justification, transparency and intelligibility within the decision-making process and with whether the decision falls within a range of possible, acceptable outcomes which are defensible in respect of the facts and the law. It is a deferential standard which requires respect for the legislative choices to leave some matters in the hands of administrative decision makers, for the processes and determinations

compétence pour s'enquérir des motifs de la cessation d'emploi et qu'il lui était seulement permis de déterminer si le préavis était raisonnable. Sur le fond, elle a statué que D avait bénéficié de l'équité procédurale du fait de l'audition de son grief par l'arbitre. Comme la décision de ce dernier ne satisfaisait pas à la norme de la raisonnabilité *simpliciter*, elle a annulé l'ordonnance de réintégration, mais confirmé la décision subsidiaire portant le préavis à huit mois. La Cour d'appel a estimé que la norme de contrôle applicable à l'interprétation des pouvoirs conférés à l'arbitre par la *LRTSP* était celle de la raisonnabilité *simpliciter*, et non celle de la décision correcte, et que la décision de l'arbitre était déraisonnable. Elle a conclu que lorsque l'employeur opte pour le congédiement avec préavis ou indemnité en tenant lieu, le par. 97(2.1) de la *LRTSP* ne s'applique pas et le seul recours dont dispose l'employé réside dans la contestation du préavis par voie de grief. Elle a convenu avec la cour de révision qu'il n'y avait pas eu d'atteinte au droit de D à l'équité procédurale.

Arrêt : Le pourvoi est rejeté.

La juge en chef McLachlin et les juges Bastarache, LeBel, Fish et Abella : Malgré ses assises constitutionnelles claires et stables, le mécanisme canadien de contrôle judiciaire se révèle difficile à appliquer. Il faut repenser tant le nombre que la teneur des normes de contrôle, ainsi que la démarche analytique qui préside à la détermination de la norme applicable dans un cas donné. Malgré ce qui distingue théoriquement la norme du manifestement déraisonnable et celle du raisonnable *simpliciter*, toute différence réelle d'application paraît illusoire. Il ne devrait y avoir que deux normes de contrôle, celle de la décision correcte et celle de la décision raisonnable. [32] [34] [41]

La cour de révision qui applique la norme de la décision correcte relativement à certaines questions de droit, y compris une question de compétence, n'acquiesce pas au raisonnement du décideur; elle entreprend plutôt sa propre analyse au terme de laquelle elle décide si elle est d'accord ou non avec la conclusion du décideur. En cas de désaccord, elle substitue sa propre conclusion et rend la décision qui s'impose. La cour de révision qui applique la norme de la décision raisonnable se demande si la décision contestée possède les attributs de la raisonnabilité. Le caractère raisonnable tient principalement à la justification de la décision, à la transparence et à l'intelligibilité du processus décisionnel, ainsi qu'à l'appartenance de la décision aux issues possibles acceptables pouvant se justifier au regard des faits et du droit. Empreinte de déférence, la norme de la raisonnabilité commande le respect de la volonté du législateur de s'en remettre, pour certaines choses, à des décideurs

2008 SCC 9 (CanLII)

that draw on particular expertise and experiences, and for the different roles of the courts and administrative bodies within the Canadian constitutional system. [47-50]

An exhaustive analysis is not required in every case to determine the proper standard of review. Courts must first ascertain whether the jurisprudence has already determined in a satisfactory manner the degree of deference to be accorded to a decision maker with regard to a particular category of question. If the inquiry proves unfruitful, courts must analyze the factors making it possible to identify the proper standard of review. The existence of a privative clause is a strong indication of review pursuant to the reasonableness standard, since it is evidence of Parliament or a legislature's intent that an administrative decision maker be given greater deference and that interference by reviewing courts be minimized. It is not, however, determinative. Where the question is one of fact, discretion or policy, or where the legal issue is intertwined with and cannot be readily separated from the factual issue, deference will usually apply automatically. Deference will usually result where a decision maker is interpreting its own statute or statutes closely connected to its function, with which it will have particular familiarity. While deference may also be warranted where an administrative decision maker has developed particular expertise in the application of a general common law or civil law rule in relation to a specific statutory context, a question of law that is of central importance to the legal system as a whole and outside the specialized area of expertise of the administrative decision maker will always attract a correctness standard. So will a true question of *vires*, a question regarding the jurisdictional lines between two or more competing specialized tribunals, and a constitutional question regarding the division of powers between Parliament and the provinces in the *Constitution Act, 1867*. [52-62]

The standard of reasonableness applied on the issue of statutory interpretation. While the question of whether the combined effect of ss. 97(2.1) and 100.1 of the *PSLRA* permits the adjudicator to inquire into the employer's reason for dismissing an employee with notice or pay in lieu of notice is a question of law, it is not one that is of central importance to the legal system and outside the specialized expertise of the adjudicator, who was in fact interpreting his enabling statute. Furthermore, s. 101(1) of the *PSLRA* includes a full privative clause, and the nature of the regime favours the standard of reasonableness. Here, the adjudicator's

administratifs, de même que le respect des raisonnements et des décisions fondés sur une expertise et une expérience dans un domaine particulier, ainsi que de la différence entre les fonctions d'une cour de justice et celles d'un organisme administratif dans le système constitutionnel canadien. [47-50]

Il n'est pas toujours nécessaire de se livrer à une analyse exhaustive pour arrêter la bonne norme de contrôle. Premièrement, la cour de révision vérifie si la jurisprudence établit déjà de manière satisfaisante le degré de déférence correspondant à une catégorie de questions en particulier. En second lieu, lorsque cette démarche se révèle infructueuse, elle entreprend l'analyse des éléments qui permettent d'arrêter la bonne norme de contrôle. L'existence d'une clause privative milite clairement en faveur d'un contrôle suivant la norme de la raisonnabilité, car elle atteste la volonté du législateur que la décision du décideur administratif fasse l'objet de plus de déférence et que le contrôle judiciaire demeure minimal. Cependant, elle n'est pas déterminante. En présence d'une question touchant aux faits, au pouvoir discrétionnaire ou à la politique, ou lorsque le droit et les faits s'entrelacent et ne peuvent aisément être dissociés, la retenue s'impose habituellement d'emblée. Lorsqu'un décideur interprète sa propre loi constitutive ou une loi étroitement liée à son mandat et dont il a une connaissance approfondie, la déférence est habituellement de mise. Elle peut également s'imposer lorsque le décideur administratif a acquis une expertise dans l'application d'une règle générale de common law ou de droit civil dans son domaine spécialisé, mais la question de droit qui revêt une importance capitale pour le système juridique dans son ensemble et qui est étrangère au domaine d'expertise du décideur administratif appelle toujours la norme de la décision correcte. Il en va de même pour une question touchant véritablement à la compétence, une question liée à la délimitation des compétences respectives de tribunaux spécialisés concurrents et une question constitutionnelle touchant au partage des pouvoirs entre le Parlement et les provinces dans la *Loi constitutionnelle de 1867*. [52-62]

La question de l'interprétation législative était assujettie à la norme de la raisonnabilité. Bien que la question de savoir si, ensemble, le par. 97(2.1) et l'art. 100.1 de la *LRTSP* autorisent l'arbitre à s'enquérir des motifs d'un congédiement avec préavis ou indemnité en tenant lieu constitue une question de droit, elle ne revêt pas une importance capitale pour le système juridique et elle n'est pas étrangère au domaine d'expertise de l'arbitre, lequel a en fait interprété sa loi habilitante. En outre, le par. 101(1) de la *LRTSP* constitue une clause privative absolue et la nature du régime milite en faveur de la norme de la raisonnabilité. En l'espèce, l'interprétation

2008 SCC 9 (CanLII)

interpretation of the law was unreasonable and his decision does not fall within the range of acceptable outcomes that are defensible in respect of the facts and the law. The employment relationship between the parties in this case was governed by private law. The combined effect of ss. 97(2.1) and 100.1 of the *PSLRA* cannot, on any reasonable interpretation, remove the employer's right, under the ordinary rules of contract, to discharge an employee with reasonable notice or pay in lieu thereof without asserting cause. By giving the *PSLRA* an interpretation that allowed him to inquire into the reasons for discharge, the adjudicator adopted a reasoning process that was fundamentally inconsistent with the employment contract and, thus, fatally flawed. [66-75]

On the merits, D was not entitled to procedural fairness. Where a public employee is employed under a contract of employment, regardless of his or her status as a public office holder, the applicable law governing his or her dismissal is the law of contract, not general principles arising out of public law. Where a dismissal decision is properly within the public authority's powers and is taken pursuant to a contract of employment, there is no compelling public law purpose for imposing a duty of fairness. The principles expressed in *Knight v. Indian Head School Division No. 19* in relation to the general duty of fairness owed by public authorities when making decisions that affect the rights, privileges or interests of individuals are valid and important. However, to the extent that *Knight* ignored the important effect of a contract of employment, it should not be followed. In the case at bar, D was a contractual employee in addition to being a public office holder. Section 20 of the *Civil Service Act* provided that as a civil servant he could only be dismissed in accordance with the ordinary rules of contract. To consider a public law duty of fairness issue where such a duty exists falls squarely within the adjudicator's task to resolve a grievance. Where, as here, the relationship is contractual, it was unnecessary to consider any public law duty of procedural fairness. By imposing procedural fairness requirements on the respondent over and above its contractual obligations and ordering the full "reinstatement" of D, the adjudicator erred and his decision was therefore correctly struck down. [76-78] [81] [84] [106] [114] [117]

Per Binnie J.: The majority reasons for setting aside the adjudicator ruling were generally agreed with, however the call of the majority to re-evaluate the pragmatic and functional test and to re-assess "the structure and characteristics of the system of judicial review as a whole" and to develop a principled framework that is

du droit par l'arbitre était déraisonnable et sa décision ne faisait pas partie des issues acceptables au regard des faits et du droit. Le lien d'emploi entre les parties ressortissait au droit privé. L'application concomitante du par. 97(2.1) et de l'art. 100.1 de la *LRTSP* ne saurait donc raisonnablement supprimer le droit de l'employeur, suivant les règles contractuelles ordinaires, de congédier un employé avec préavis raisonnable ou indemnité en tenant lieu et sans invoquer de motif. En concluant que la *LRTSP* lui permettait de rechercher les motifs du congédiement, l'arbitre a tenu un raisonnement foncièrement incompatible avec le contrat d'emploi et, de ce fait, entaché d'un vice fatal. [66-75]

Sur le fond, D n'avait pas droit à l'équité procédurale. En présence d'un contrat d'emploi, le renvoi d'un fonctionnaire, que ce dernier soit ou non titulaire d'une charge publique, est régi par le droit contractuel, et non par les principes généraux du droit public. Lorsqu'un organisme public prend la décision de congédier une personne conformément à ses pouvoirs et à un contrat d'emploi, nulle considération supérieure du droit public ne justifie l'imposition d'une obligation d'équité. Les principes formulés dans l'arrêt *Knight c. Indian Head School Division No. 19* relativement à l'obligation générale d'équité à laquelle est tenu l'organisme public dont la décision touche les droits, les privilèges ou les biens d'une personne demeurent valables et importants. Toutefois, dans la mesure où cet arrêt n'a pas tenu compte de l'effet déterminant d'un contrat d'emploi, il ne devrait pas être suivi. Dans la présente affaire, D était à la fois titulaire d'une charge publique et employé contractuel. L'article 20 de la *Loi sur la Fonction publique* prévoyait qu'à titre de fonctionnaire, il ne pouvait être congédié que suivant les règles contractuelles ordinaires. L'examen d'une question touchant à l'obligation d'équité en droit public, lorsqu'une telle obligation existe, ressortit clairement au mandat de l'arbitre chargé du règlement d'un grief. Lorsque, comme en l'espèce, le lien est contractuel, il n'est pas nécessaire de tenir compte de quelque obligation d'équité procédurale en droit public. En assujettissant l'intimée à l'obligation d'équité procédurale en sus de ses obligations contractuelles et en ordonnant la réintégration de D, l'arbitre a commis une erreur, et sa décision a été annulée à bon droit. [76-78] [81] [84] [106] [114] [117]

Le juge Binnie : Malgré l'accord général avec les motifs invoqués par les juges majoritaires pour annuler la décision de l'arbitre, l'invitation à réévaluer l'analyse pragmatique et fonctionnelle ainsi qu'à revoir « l'architecture et les caractéristiques du mécanisme de contrôle judiciaire dans son ensemble » et à « établir

2008 SCC 9 (CanLII)

"more coherent and workable" invites a broader reappraisal. Judicial review is an idea that has lately become unduly burdened with law office metaphysics. Litigants find the court's attention focussed not on their complaints, or the government's response, but on lengthy and arcane discussions of something they are told is the pragmatic and functional test. The Court should at least (i) establish some presumptive rules and (ii) get the parties away from arguing about the tests and back to arguing about the substantive merits of their case. [119-122] [133] [145]

The distinction between "patent unreasonableness" and reasonableness *simpliciter* is now to be abandoned. The repeated attempts to explain the difference between the two, was in hindsight, unproductive and distracting. However, a broad reappraisal of the system of judicial review should explicitly address not only administrative tribunals but issues related to other types of administrative bodies and statutory decision makers including mid-level bureaucrats and, for that matter, Ministers. If logic and language cannot capture the distinction in one context, it must equally be deficient elsewhere in the field of judicial review. [121-123] [134-135] [140]

It should be presumed that the standard of review of an administrative outcome on grounds of substance is reasonableness. In accordance with the ordinary rules of litigation, it should also be presumed that the decision under review is reasonable until the applicant shows otherwise. An applicant urging the non-deferential "correctness" standard should be required to demonstrate that the decision rests on an error in the determination of a legal issue not confided (or which constitutionally could not be confided) to the administrative decision maker to decide, whether in relation to jurisdiction or the general law. The logic of the constitutional limitation is obvious. If the limitation did not exist, the government could transfer the work of the courts to administrative bodies that are not independent of the executive and by statute immunize the decisions of these bodies from effective judicial review. Questions of law outside the administrative decision maker's home statute and closely related rules or statutes which require his or her expertise should also be reviewable on a "correctness" standard whether or not it meets the majority's additional requirement that it be "of central importance to the legal system as a whole". The standard of correctness should also apply to the requirements of "procedural fairness", which will vary with the type of decision maker and the type of decision under review. Nobody should have his or her rights,

un cadre d'analyse rationnel qui soit plus cohérent et fonctionnel » appelle un réexamen plus large. Ces dernières années, des débats métaphysico-juridiques ont indûment embrouillé la notion de contrôle judiciaire. La cour de révision ne met l'accent ni sur la prétention du justiciable ni la mesure prise par l'État, mais arbitre plutôt un long et mystérieux débat sur une méthode dite « pragmatique et fonctionnelle ». La Cour devrait à tout le moins (i) établir quelques présomptions et (ii) faire en sorte que les parties cessent de débattre des critères applicables et fassent plutôt valoir leurs prétentions sur le fond. [119-122] [133] [145]

La distinction entre le « manifestement déraisonnable » et le raisonnable *simpliciter* doit désormais être abandonnée. Avec le recul, les tentatives répétées d'expliquer la différence entre les deux étaient vaines et importunes. Cependant, la réévaluation globale du mécanisme de contrôle judiciaire devrait explicitement viser non seulement les tribunaux administratifs, mais aussi d'autres types d'organisme administratif et de décideur d'origine législative, y compris des fonctionnaires de rang moyen, voire des ministres. Lorsque ni la logique ni la langue ne peuvent saisir la distinction dans un contexte, elles ne peuvent non plus le faire par ailleurs dans le domaine du contrôle judiciaire. [121-123] [134-135] [140]

Il devrait être présumé que la norme de contrôle d'une décision administrative sur le fond est celle de la raisonnabilité. Conformément aux règles qui régissent habituellement les litiges, on devrait aussi présumer que la décision visée par le contrôle est raisonnable, sauf preuve contraire du demandeur. Celui qui préconise l'application de la norme de la décision correcte — soit l'absence de déférence — devrait être tenu de prouver que la décision contestée résulte du règlement erroné d'une question juridique ne relevant pas (ou ne pouvant pas constitutionnellement relever) du décideur administratif, qu'elle ait trait à la compétence ou au droit en général. La raison d'être de l'obstacle constitutionnel est manifeste. S'il n'existait pas, l'État pourrait confier la tâche des tribunaux judiciaires à des organismes administratifs qui ne sont pas indépendants de l'exécutif et, par voie législative, soustraire les décisions de ces organismes à un véritable contrôle judiciaire. Les questions de droit ne relevant pas de la loi constitutive du décideur administratif ou de quelque règle ou loi très connexe faisant appel à son expertise devraient aussi être assujetties à la norme de la décision correcte, qu'elles satisfassent ou non à l'exigence de l'« importance capitale pour le système juridique dans son ensemble » formulée par les juges majoritaires. Cette norme devrait également s'appliquer à l'obligation d'« équité procédurale », qui varie selon la catégorie à laquelle appartient le décideur et la

2008 SCC 9 (CanLII)

interests or privileges adversely dealt with by an unjust process. [127-129] [146-147]

On the other hand when the application for judicial review challenges the substantive outcome of an administrative action, the judge is invited to cross the line into second-guessing matters that lie within the function of the administrator. This is controversial because it is not immediately obvious why a judge's view of the reasonableness of an administrative policy or the exercise of an administrative discretion should be preferred to that of the administrator to whom Parliament or a legislature has allocated the decision, unless there is a full statutory right of appeal to the courts, or it is otherwise indicated in the conferring legislation that a "correctness" standard is intended. [130]

Abandonment of the distinction between reasonableness *simpliciter* and patent unreasonableness has important implications. The two different standards addressed not merely "the magnitude or the immediacy of the defect" in the administrative decision but recognized that different administrative decisions command different degrees of deference, depending on who is deciding what. [135]

"Contextualizing" a single standard of "reasonableness" review will shift the courtroom debate from choosing between two standards of reasonableness that each represented a different level of deference to a debate within a single standard of reasonableness to determine the appropriate level of deference. [139]

Thus a single "reasonableness" standard will now necessarily incorporate both the degree of deference owed to the decision maker formerly reflected in the distinction between patent unreasonableness and reasonableness *simpliciter*, and an assessment of the range of options reasonably open to the decision maker in the circumstances. The judge's role is to identify the outer boundaries of reasonable outcomes within which the administrative decision maker is free to choose. [141] [149]

A single "reasonableness" standard is a big tent that will have to accommodate a lot of variables that inform and limit a court's review of the outcome of administrative decision making. "Contextualizing" the reasonableness standard will require a reviewing court to consider the precise nature and function of the decision maker including its expertise, the terms and objectives

nature de la décision en cause. Nul ne devrait voir ses droits, ses intérêts ou ses privilèges faire l'objet d'une décision défavorable à l'issue d'une procédure injuste. [127-129] [146-147]

Par contre, lorsque le demandeur conteste la mesure administrative quant au fond, la cour de révision est invitée à faire un pas de plus et à remettre en question une décision relevant du décideur administratif. Cela prête à controverse, car en ce qui concerne la raisonnabilité d'une politique administrative ou de l'exercice d'un pouvoir discrétionnaire administratif, il n'y a pas de raison évidente de préférer l'appréciation judiciaire à celle du décideur administratif auquel le législateur a attribué le pouvoir de trancher, sauf lorsque la loi prévoit un droit d'appel devant une cour de justice ou que l'intention du législateur d'assujettir le décideur à la norme de la décision correcte ressort par ailleurs de la loi habilitante. [130]

L'abandon de la distinction entre la norme de la décision raisonnable *simpliciter* et celle de la décision manifestement déraisonnable a d'importantes répercussions. Les deux normes ne s'intéressaient pas seulement à « l'importance du défaut » entachant la décision administrative ou à son « caractère flagrant », mais reconnaissaient aussi le fait que différentes décisions administratives appellent différents degrés de déférence, selon l'identité du décideur et la nature de la décision. [135]

L'application d'une norme unique en fonction du contexte transforme le débat : il ne s'agit plus de choisir entre deux normes de raisonnabilité correspondant chacune à un degré de déférence distinct, mais bien de déterminer le bon degré de déférence à l'intérieur d'une seule norme de raisonnabilité. [139]

Ainsi, dorénavant, une norme de « raisonnabilité » unique englobera nécessairement le degré de déférence auquel a droit le décideur et que traduisait auparavant la distinction entre le manifestement déraisonnable et le raisonnable *simpliciter*, et la prise en considération des décisions qui auraient pu raisonnablement être rendues dans les circonstances. Le rôle de la cour de révision est de délimiter les résultats raisonnables parmi lesquels le décideur administratif est libre de choisir. [141] [149]

La notion de « raisonnabilité » est vaste et l'application d'une norme unique devra prendre en compte un grand nombre de variables qui délimitent le contrôle judiciaire d'une décision administrative. Appliquer la norme de la raisonnabilité en fonction du contexte exige de la cour de révision qu'elle tienne compte de la nature et de la fonction précises du décideur, y compris

2008 SCC 9 (CanLII)

of the governing statute (or common law) conferring the power of decision including the existence of a privative clause and the nature of the issue being decided. Careful consideration of these matters will reveal the extent of the discretion conferred. In some cases the court will have to recognize that the decision maker was required to strike a proper balance (or achieve proportionality) between the adverse impact of a decision on the rights and interests of the applicant or others directly affected weighed against the public purpose which is sought to be advanced. In each case careful consideration will have to be given to the reasons given for the decision. This list of "contextual" considerations is non-exhaustive. A reviewing court ought to recognize throughout the exercise that fundamentally the "reasonableness" of the administrative outcome is an issue given to another forum to decide. [144] [151-155]

Per Deschamps, Charron and Rothstein JJ.: Any review starts with the identification of the questions at issue as questions of law, questions of fact or questions of mixed fact and law. In the adjudicative context, decisions on questions of fact, whether undergoing appellate review or administrative law review, always attract deference. When there is a privative clause, deference is owed to the administrative body that interprets the legal rules it was created to interpret and apply. If the body oversteps its delegated powers, if it is asked to interpret laws in respect of which it does not have expertise or if Parliament or a legislature has provided for a statutory right of review, deference is not owed to the decision maker. Finally, when considering a question of mixed fact and law, a reviewing court should show an adjudicator the same deference as an appeal court would show a lower court. [158-164]

Here, the employer's common law right to dismiss without cause was the starting point of the analysis. Since the adjudicator does not have specific expertise in interpreting the common law, the reviewing court can proceed to its own interpretation of the applicable rules and determine whether the adjudicator could enquire into the cause of the dismissal. The applicable standard of review is correctness. The distinction between the common law rules of employment and the statutory rules applicable to a unionized employee is essential if s. 97(2.1) of the *PSLRA* is to be applied *mutatis mutandis* to the case of a non-unionized employee as required by s. 100.1(5) of the *PSLRA*. The adjudicator's failure to inform himself of this crucial difference led him to look for a cause for the dismissal, which was not relevant. Even if deference had been owed to the adjudicator, his interpretation could not have stood. Employment security is so fundamental to an employment relationship

son expertise, du libellé et des objectifs de la loi (ou de la common law) conférant le pouvoir décisionnel, y compris la présence d'une clause privative, et de la nature de la question à trancher. L'examen attentif de ces éléments révélera l'étendue du pouvoir discrétionnaire. La cour de révision devra parfois reconnaître que le décideur devait établir un juste équilibre (ou une proportionnalité) entre, d'une part, les répercussions défavorables de la décision sur les droits et les intérêts du demandeur ou d'autres personnes directement touchées et, d'autre part, l'objectif public poursuivi. Elle devra toujours considérer attentivement les motifs de la décision. D'autres éléments « contextuels » pourront s'ajouter. Tout au long de la démarche, la cour de révision doit se rappeler que, fondamentalement, ce n'est pas à elle de juger de la « raisonnabilité » de la décision administrative. [144] [151-155]

Les juges Deschamps, Charron et Rothstein : Lors de toute révision, il faut d'abord déterminer si la question en litige est une question de droit, de fait ou mixte de fait et de droit. Dans le contexte juridictionnel, qu'elle fasse l'objet d'un appel ou d'un contrôle judiciaire, la décision sur une question de fait commande toujours la déférence. En présence d'une clause privative, la déférence s'impose à l'égard de l'organisme administratif qui interprète les règles juridiques pour l'interprétation et l'application desquelles il a été créé. La déférence ne s'impose pas lorsque l'organisme administratif outrepasse ses pouvoirs délégués, qu'il interprète des dispositions législatives ne relevant pas de son expertise ou que la loi prévoit expressément un droit de révision. Enfin, la cour de révision qui se penche sur une question mixte de fait et de droit devrait manifester autant de déférence envers le décideur que le ferait une cour d'appel vis-à-vis d'une cour inférieure. [158-164]

En l'espèce, le droit que la common law confère à l'employeur de congédier un employé sans invoquer de motif était le point de départ de l'analyse. Comme l'arbitre ne possède aucune expertise particulière dans l'interprétation de la common law, la cour de révision peut s'en remettre à sa propre interprétation des règles applicables et déterminer si l'arbitre pouvait ou non s'enquérir du motif du congédiement. La norme de contrôle applicable est celle de la décision correcte. La distinction entre les règles de la common law régissant l'emploi et celles d'origine législative applicables à l'employé syndiqué est essentielle à l'application du par. 97(2.1) de la *LRTSP* à un employé non syndiqué, avec les adaptations nécessaires, conformément au par. 100.1(5) de la même loi. L'omission de tenir compte de cette différence cruciale a amené l'arbitre à rechercher un motif de congédiement, ce qui était hors de propos. Même si l'arbitre avait eu droit à la déférence, son interprétation

2008 SCC 9 (CanLII)

that it could not have been granted by the legislature by providing only that the *PSLRA* was to apply *mutatis mutandis* to non-unionized employees. [168-171]

The judgment of McLachlin C.J. and Bastarache, LeBel, Fish and Abella JJ. was delivered by

BASTARACHE AND LEBEL JJ. —

I. Introduction

[1] This appeal calls on the Court to consider, once again, the troubling question of the approach to be taken in judicial review of decisions of administrative tribunals. The recent history of judicial review in Canada has been marked by ebbs and flows of deference, confounding tests and new words for old problems, but no solutions that provide real guidance for litigants, counsel, administrative decision

Version française du jugement de la juge en chef McLachlin et des juges Bastarache, LeBel, Fish et Abella rendu par

LES JUGES BASTARACHE ET LEBEL —

I. Introduction

[1] Une fois de plus, la Cour est appelée à se pencher sur l'épineuse question de la démarche qu'il convient d'adopter pour le contrôle judiciaire des décisions des tribunaux administratifs. Au Canada, l'évolution récente du contrôle judiciaire a été marquée par une déférence variable, l'application de critères déroutants et la qualification nouvelle de vieux problèmes, sans qu'une solution n'offre de vérita-

2008 SCC 9 (CanLII)

the decision maker transgresses the principle of the rule of law. Thus, when a reviewing court considers the scope of a decision-making power or the jurisdiction conferred by a statute, the standard of review analysis strives to determine what authority was intended to be given to the body in relation to the subject matter. This is done within the context of the courts' constitutional duty to ensure that public authorities do not overreach their lawful powers: *Crevier v. Attorney General of Quebec*, [1981] 2 S.C.R. 220, at p. 234; also *Dr. Q v. College of Physicians and Surgeons of British Columbia*, [2003] 1 S.C.R. 226, 2003 SCC 19, at para. 21.

[30] In addition to the role judicial review plays in upholding the rule of law, it also performs an important constitutional function in maintaining legislative supremacy. As noted by Justice Thomas Cromwell, "the rule of law is affirmed by assuring that the courts have the final say on the jurisdictional limits of a tribunal's authority; second, legislative supremacy is affirmed by adopting the principle that the concept of jurisdiction should be narrowly circumscribed and defined according to the intent of the legislature in a contextual and purposeful way; third, legislative supremacy is affirmed and the court-centric conception of the rule of law is reined in by acknowledging that the courts do not have a monopoly on deciding all questions of law" ("Appellate Review: Policy and Pragmatism", in *2006 Isaac Pitblado Lectures*, *Appellate Courts: Policy, Law and Practice*, V-1, at p. V-12). In essence, the rule of law is maintained because the courts have the last word on jurisdiction, and legislative supremacy is assured because determining the applicable standard of review is accomplished by establishing legislative intent.

[31] The legislative branch of government cannot remove the judiciary's power to review actions and decisions of administrative bodies for compliance with the constitutional capacities of the government. Even a privative clause, which provides a strong indication of legislative intent, cannot be determinative in this respect (*Executors of the Woodward Estate v. Minister of Finance*, [1973] S.C.R. 120, at

ils portent atteinte au principe de la primauté du droit. C'est pourquoi lorsque la cour de révision se penche sur l'étendue d'un pouvoir décisionnel ou de la compétence accordée par la loi, l'analyse relative à la norme de contrôle vise à déterminer quel pouvoir le législateur a voulu donner à l'organisme en la matière. Elle le fait dans le contexte de son obligation constitutionnelle de veiller à la légalité de l'action administrative : *Crevier c. Procureur général du Québec*, [1981] 2 R.C.S. 220, p. 234; également, *Dr Q c. College of Physicians and Surgeons of British Columbia*, [2003] 1 R.C.S. 226, 2003 CSC 19, par. 21.

[30] Non seulement le contrôle judiciaire contribue au respect de la primauté du droit, mais il joue un rôle constitutionnel important en assurant la suprématie législative. Comme l'a fait observer le juge Thomas Cromwell, [TRADUCTION] « la primauté du droit est consacrée par le pouvoir d'une cour de justice de statuer en dernier ressort sur l'étendue de la compétence d'un tribunal administratif, par l'application du principe selon lequel il convient de bien délimiter la compétence et de bien la définir, en fonction de l'intention du législateur, d'une manière à la fois contextuelle et téléologique, ainsi que par la reconnaissance du fait que les cours de justice n'ont pas le pouvoir exclusif de statuer sur toutes les questions de droit, ce qui tempère la conception judiciarisée de la primauté du droit » (« Appellate Review : Policy and Pragmatism », dans *2006 Isaac Pitblado Lectures, Appellate Courts : Policy, Law and Practice*, V-1, p. V-12). Essentiellement, la primauté du droit est assurée par le dernier mot qu'ont les cours de justice en matière de compétence, et la suprématie législative, par la détermination de la norme de contrôle applicable en fonction de l'intention du législateur.

[31] L'organe législatif du gouvernement ne peut supprimer le pouvoir judiciaire de s'assurer que les actes et les décisions d'un organisme administratif sont conformes aux pouvoirs constitutionnels du gouvernement. Même si elle est révélatrice de l'intention du législateur, la clause privative ne saurait être décisive à cet égard (*Succession Woodward c. Ministre des Finances*, [1973] R.C.S. 120, p. 127).

2008 SCC 9 (CanLII)

p. 127). The inherent power of superior courts to review administrative action and ensure that it does not exceed its jurisdiction stems from the judicature provisions in ss. 96 to 101 of the *Constitution Act, 1867*: *Crevier*. As noted by Beetz J. in *U.E.S., Local 298 v. Bibeault*, [1988] 2 S.C.R. 1048, at p. 1090, "[t]he role of the superior courts in maintaining the rule of law is so important that it is given constitutional protection". In short, judicial review is constitutionally guaranteed in Canada, particularly with regard to the definition and enforcement of jurisdictional limits. As Laskin C.J. explained in *Crevier*:

Le pourvoir inhérent d'une cour supérieure de contrôler les actes de l'Administration et de s'assurer que celle-ci n'outrepasse pas les limites de sa compétence tire sa source des art. 96 à 101 de la *Loi constitutionnelle de 1867* portant sur la magistrature : arrêt *Crevier*. Comme l'a dit le juge Beetz dans l'arrêt *U.E.S., Local 298 c. Bibeault*, [1988] 2 R.C.S. 1048, p. 1090, « [l]e rôle des cours supérieures dans le maintien de la légalité est si important qu'il bénéficie d'une protection constitutionnelle ». En résumé, le contrôle judiciaire bénéficie de la protection constitutionnelle au Canada, surtout lorsqu'il s'agit de définir les limites de la compétence et de les faire respecter. Le juge en chef Laskin l'a expliqué dans l'arrêt *Crevier* :

> Where . . . questions of law have been specifically covered in a privative enactment, this Court, as in *Farrah*, has not hesitated to recognize this limitation on judicial review as serving the interests of an express legislative policy to protect decisions of adjudicative agencies from external correction. Thus, it has, in my opinion, balanced the competing interests of a provincial Legislature in its enactment of substantively valid legislation and of the courts as ultimate interpreters of the *British North America Act* and s. 96 thereof. The same considerations do not, however, apply to issues of jurisdiction which are not far removed from issues of constitutionality. It cannot be left to a provincial statutory tribunal, in the face of s. 96, to determine the limits of its own jurisdiction without appeal or review. [pp. 237-38]

> [Q]uand la disposition privative englobe spécifiquement les questions de droit, cette Cour n'a pas hésité, comme dans l'arrêt *Farrah*, à reconnaître que cette limitation du contrôle judiciaire favorise une politique législative explicite qui veut protéger les décisions des organismes judiciaires contre la rectification externe. La Cour a ainsi, à mon avis, maintenu l'équilibre entre les objectifs contradictoires du législateur provincial de voir confirmer la validité quant au fond des lois qu'il a adoptées et ceux des tribunaux d'être les interprètes en dernier ressort de l'*Acte de l'Amérique du Nord britannique* et de son art. 96. Les mêmes considérations ne s'appliquent cependant pas aux questions de compétence qui ne sont pas très éloignées des questions de constitutionnalité. Il ne peut être accordé à un tribunal créé par une loi provinciale, à cause de l'art. 96, de définir les limites de sa propre compétence sans appel ni révision. [p. 237-238]

Voir aussi D. J. Mullan, *Administrative Law* (2001), p. 50.

[32] Despite the clear, stable constitutional foundations of the system of judicial review, the operation of judicial review in Canada has been in a constant state of evolution over the years, as courts have attempted to devise approaches to judicial review that are both theoretically sound and effective in practice. Despite efforts to refine and clarify it, the present system has proven to be difficult to implement. The time has arrived to re-examine the Canadian approach to judicial review of administrative decisions and develop a principled framework that is more coherent and workable.

[32] Ses assises constitutionnelles claires et stables n'ont pas empêché le contrôle judiciaire de connaître une évolution constante au Canada, les cours de justice s'efforçant au fil des ans de concevoir une démarche tout autant valable sur le plan théorique qu'efficace en pratique. Malgré les efforts pour l'améliorer et le clarifier, le mécanisme actuel s'est révélé difficile à appliquer. Le temps est venu de revoir le contrôle judiciaire des décisions administratives au Canada et d'établir un cadre d'analyse rationnel qui soit plus cohérent et fonctionnel.

2008 SCC 9 (CanLII)

[52] The existence of a privative or preclusive clause gives rise to a strong indication of review pursuant to the reasonableness standard. This conclusion is appropriate because a privative clause is evidence of Parliament or a legislature's intent that an administrative decision maker be given greater deference and that interference by reviewing courts be minimized. This does not mean, however, that the presence of a privative clause is determinative. The rule of law requires that the constitutional role of superior courts be preserved and, as indicated above, neither Parliament nor any legislature can completely remove the courts' power to review the actions and decisions of administrative bodies. This power is constitutionally protected. Judicial review is necessary to ensure that the privative clause is read in its appropriate statutory context and that administrative bodies do not exceed their jurisdiction.

[52] L'existence d'une clause privative milite clairement en faveur d'un contrôle suivant la norme de la raisonnabilité. En effet, elle atteste la volonté du législateur que les décisions du décideur administratif fassent l'objet de plus de déférence et que le contrôle judiciaire soit minimal. Cependant, elle n'est pas déterminante. La primauté du droit exige des cours supérieures qu'elles s'acquittent de leur rôle constitutionnel et, nous le rappelons, ni le Parlement ni une législature ne peuvent écarter totalement leur pouvoir de contrôler les actes et les décisions des organismes administratifs. Il s'agit d'un pouvoir protégé par la Constitution. Le contrôle judiciaire est nécessaire afin que la clause privative soit interprétée dans le bon contexte législatif et que les organismes administratifs respectent les limites de leurs attributions.

[53] Where the question is one of fact, discretion or policy, deference will usually apply automatically (*Mossop*, at pp. 599-600; *Dr. Q*, at para. 29; *Suresh*, at paras. 29-30). We believe that the same standard must apply to the review of questions where the legal and factual issues are intertwined with and cannot be readily separated.

[53] En présence d'une question touchant aux faits, au pouvoir discrétionnaire ou à la politique, la retenue s'impose habituellement d'emblée (*Mossop*, p. 599-600; *Dr Q*, par. 29; *Suresh*, par. 29-30). Nous sommes d'avis que la même norme de contrôle doit s'appliquer lorsque le droit et les faits s'entrelacent et ne peuvent aisément être dissociés.

[54] Guidance with regard to the questions that will be reviewed on a reasonableness standard can be found in the existing case law. Deference will usually result where a tribunal is interpreting its own statute or statutes closely connected to its function, with which it will have particular familiarity: *Canadian Broadcasting Corp. v. Canada (Labour Relations Board)*, [1995] 1 S.C.R. 157, at para. 48; *Toronto (City) Board of Education v. O.S.S.T.F., District 15*, [1997] 1 S.C.R. 487, at para. 39. Deference may also be warranted where an administrative tribunal has developed particular expertise in the application of a general common law or civil law rule in relation to a specific statutory context: *Toronto (City) v. C.U.P.E.*, at para. 72. Adjudication in labour law remains a good example of the relevance of this approach. The case law has moved away considerably from the strict position evidenced in *McLeod v. Egan*, [1975] 1 S.C.R. 517, where it was held that an administrative decision

[54] La jurisprudence actuelle peut être mise à contribution pour déterminer quelles questions emportent l'application de la norme de la raisonnabilité. Lorsqu'un tribunal administratif interprète sa propre loi constitutive ou une loi étroitement liée à son mandat et dont il a une connaissance approfondie, la déférence est habituellement de mise : *Société Radio-Canada c. Canada (Conseil des relations du travail)*, [1995] 1 R.C.S. 157, par. 48; *Conseil de l'éducation de Toronto (Cité) c. F.E.E.E.S.O., district 15*, [1997] 1 R.C.S. 487, par. 39. Elle peut également s'imposer lorsque le tribunal administratif a acquis une expertise dans l'application d'une règle générale de common law ou de droit civil dans son domaine spécialisé : *Toronto (Ville) c. S.C.F.P.*, par. 72. L'arbitrage en droit du travail demeure un domaine où cette approche se révèle particulièrement indiquée. La jurisprudence a considérablement évolué depuis l'arrêt *McLeod c. Egan*, [1975] 1 R.C.S. 517, et la Cour

Applicants

- and -

Elizabeth Métis Settlement and the Métis Settlements General Council

Respondents

Reasons for Judgment
of the
Honourable Mr. Justice N. Devlin

I. Introduction

[1] Elizabeth Métis Settlement ("Elizabeth") is a small Métis community of just over 600 residents on the eastern edge of Alberta, south of Cold Lake. In 2019, Elizabeth levied property taxes amounting to 187% of assessed land value on four natural resource companies whose lands comprise virtually its entire taxable base. Those companies ask this Court to quash the bylaw which imposed this rate of tax (the "Property Tax Bylaw") on the basis that it was invalidly enacted and is substantively unreasonable.

[2] Elizabeth responds that the Applicants have no standing to challenge the Property Tax Bylaw, that its unusual procedures in enacting it were justified by a looming financial

emergency, and that the context of Alberta's Métis settlements uniquely informs the question of what constitutes a reasonable rate of taxation in this situation.

[3] For the reasons that follow, the Application is allowed and the Tax Bylaw is quashed as unlawfully enacted and unreasonable in substance.

II. Facts

[4] Determination of this case requires consideration of both the legislative history of the impugned Property Tax Bylaw, as well as the overall context of the Métis people in Alberta and their emergent form of self-government.

a. Alberta's Métis Settlements

[5] The Métis people are the descendants of 18th-century unions between European explorers, fur traders and pioneers, and Indian women: see *Daniels v Canada (Indian Affairs and Northern Development)*, 2016 SCC 22 at paras 17*ff*. They first gained formal recognition as one of Canada's three aboriginal groups in section 35 of the *Constitution Act, 1982*, 1982, c 11 (UK), which recognized existing aboriginal and treaty rights of "Indian, Inuit and Métis peoples of Canada".

[6] Unlike First Nations, however, the Métis people lacked any territory to call their own. Beginning with a Joint Government-Métis Committee report in 1984, a movement began towards securing lands to support Métis communities in Alberta attaining self-governance: Alberta, *Report of the MacEwan Joint Métis-Government Committee to Review the Métis Betterment Act and Regulations: Foundations for the Future of Alberta's Métis Settlements* (Edmonton: Municipal Affairs, 1984).

[7] A period of negotiations between the Métis and the Government of Alberta followed, focusing on providing settlement lands for Métis communities and extending self-government powers to them: see ***Alberta (Aboriginal Affairs and Northern Development) v Cunningham***, 2011 SCC 37 [***Cunningham***] at paras 5-19. This consultation ultimately led to the *Alberta-Métis Settlements Accord* dated July 1, 1989. This framework agreement and related legislation created eight Métis settlement corporations (the "Settlements" or "Métis Settlements") and granted fee simple title to those lands to the Métis Settlements General Council ("MSGC").

[8] This process also led to the incorporation of the Métis people in the *Constitution of Alberta Amendment Act, 1990*, RSA 2000, c C-24, which expressly recognized that the Métis people were to gain self-governance, and protected their land base with the specific stated aim of preserving and enhancing Métis culture and identity.

[9] Ultimately, the *Métis Settlements Act*, RSA 2000, c M-14 (the "*MSA*") was brought into force to provide a structure of delegated authority by which these communities could govern themselves individually, and collectively through the MSGC. All legal authority for the Métis Settlements flows through the *MSA*, Recital 0.1 of which states that:

> This Act is enacted
>
> (a) recognizing the desire expressed in the *Constitution of Alberta Amendment Act, 1990* that the Metis [*sic*] should continue to have a land base to provide for the preservation and enhancement of Métis culture and identity

2020 ABQB 210 (CanLII)

> and to enable the Metis [*sic*] to attain self-governance under the laws of Alberta...

[10] The top level of Métis governance established by the *MSA* is the MSGC. This umbrella body creates policies from which each of the Settlements derive sub-delegated authority to run their own communities. The individual Métis Settlements, in practice, operate at a quasi-municipal level. While their existence has a deeper social, cultural and historical underpinning than ordinary municipal corporations, they perform many of the same functions of a local municipal government and provide the panoply of local services and infrastructure common to municipalities across the province.

[11] Similar to municipalities, the sole source of tax revenue for the Settlements is through property taxation. Due to the structure of land holding on the Settlements, however, Elizabeth appears to have only four taxpayers – Canadian Natural Resources Limited ("CNRL"), Husky Oil Operations Limited, Crescent Point Energy Corp., and Altagas Limited and its related companies, who are the Applicants in this case.

b. Structure of Métis Landownership

[12] The lands comprising the eight Métis Settlements were granted under patent to the MSGC, and their interest can only be devolved in narrow circumstances provided by the *Métis Settlements Land Protection Act*, RSA 2000, c M-16. Settlement members are permitted to own and occupy homes on the Settlements, on terms defined by the MSCG and the Settlements themselves. As discussed below, however, these lands are exempt from taxation.

c. Self-Governance and Financial Sustainability

[13] The roots of this case lie in the challenges of attaining viable self-government and fiscal stability for a small and newly-autonomous series of communities. In July 2013, the Government of Alberta and the MSGC signed Long-Term Governance and Funding Arrangements (the "LTGFA"). Ms. Irene Zimmer, Elizabeth's elected Chairperson, swore an affidavit on December 2, 2019 in response to the Application (the "Zimmer Affidavit"). She stated that the purpose of the LTGFA was to secure initiatives that would allow the Settlements "to effectively and efficiently deliver core services, including infrastructure, on par with neighbouring communities, provide access to sustainable housing, promote safe and healthy communities."

[14] The recitals of the LTGFA state that both Alberta and the MSGC are committed to achieving certain goals over the 10-year period of 2013-2023, including:

- strengthened settlement governance and enhanced accountability;
- long-term sustainability of settlement communities; and
- a fiscal relationship with the Government of Alberta comparable to that of other local governments.

[15] The LTGFA contain detailed schedules covering essential services, infrastructure, housing, governance, capacity building in local government, education, training, consultation between settlements, government and industry, and financial sustainability. The LTGFA came into being together with a Co-Management Agreement, designed to allow the MSGC and Métis

2020 ABQB 210 (CanLII)

Settlements to negotiate royalties and working interests with oil and gas operators wishing to secure mineral leases on Settlement lands.

[16] It is clear from all of these documents that both Alberta and the MSGC envisioned a situation whereby the Settlements would receive substantial ongoing financial support from the government, but would also receive funding from the MSGC, along with contributions from individual households and property owners. This, together with a clear intention that industrial development in the natural resources sector continue to the benefit of the Settlements, appears to have formed the financial vision on which the Settlements were to operate.

2020 ABQB 210 (CanLII)

d. Settlement Taxation Powers

[17] Métis Settlements first gained independent taxation powers in 1997. Prior to that, any taxation was subject to direct ministerial approval. Section 166(1) of the *MSA* allows Settlement councils to make bylaws taxing interests in land if the MSGC has enacted a General Policy permitting them to do so. MSGC policy defines the parameters of Settlement taxation powers and the process for property assessment. Each Settlement in turn is left to pass its own property tax bylaw.

(i) Taxation structure beginning in 1997

[18] Effective in 1997, the MSGC enacted a tax policy called the *Business Property Contributions Policy*, GC-P9602 ("*BPCP*"). Section 1.02 of the *BPCP* defined its purpose as follows:

> The purpose of this Policy is to establish a fair, orderly, and equitable system by which those who use land in a Settlement area for business purposes can be required to contribute a fair share, based on valuation or agreement, to the cost of maintaining a viable Metis [*sic*] community in the Settlement area.

[19] The *BPCP* permitted Settlements to make annual business property contribution bylaws, through which the Settlements levied property tax based on the deemed value of land holdings. The *BPCP* limited any Settlement's tax rate to 130% of the maximum mill rate for similar classes of property in adjacent local government areas: *BPCP*, s 2.03(3)(b).

[20] In the case of Elizabeth, its mill rate from 2014 to 2018 was 40.97, which translates to a tax rate of 4.097% of the assessed value of the property. The Applicant, CNRL, had filed complaints (which remain pending) that these rates significantly exceeded that permitted by the *BPCP*. By comparison, the equivalent tax rate in the adjacent Municipal District of Bonnyville was 1.4% in 2019.

(ii) A new property taxation structure comes into force for 2019

[21] In 2019, the basis and structure of property taxation within the Métis Settlements changed fundamentally. On November 14, 2018, the MSGC revoked the *BPCP* and replaced it with a new instrument called the *Métis Settlements General Council Property Taxation Policy 2018*, GC-P1806 (the "*Tax Policy*"). This policy was intended to work in conjunction with the *Métis Settlements General Council Property Assessment Policy 2018*, GC-P1807 (the "*Assessment Policy*"), which was enacted on March 6, 2019.

[22] Neither of these documents contained any cap on Settlement property tax rates. Notably, gone is any mention of "fair, orderly, and equitable" contributions being required by businesses

operating on Settlement lands. The relevant section of the new preamble of the *Assessment Policy* reads instead:

> B. The General Council deems it to be in the best interests of the settlements of Alberta to make such a policy to authorize settlements to assess and tax business property located within settlement areas for the purposes of raising revenue for the cost of settlement expenditures and community services;

[23] The *Tax Policy* specified a new formula by which the tax rate was to be calculated. It is based on dividing its total budget by the value of its assessed taxable base. Each Settlement was to determine its tax rate by dividing its budget by the total value of its tax base. The relevant terms of the *Tax Policy* are as follows:

> **PART VI – LEVY OF TAX**
>
> **Tax Levy**
>
> **8(1)** No settlement Council may pass a property tax bylaw in respect of the year unless the operating and capital budget for that year's been passed by the settlement Council.
>
> **(2)** A property tax bylaw that sets the rate of tax to be applied to each assessment class must be passed by a settlement Council on or before May 15 each taxation year. [Emphasis added]
>
> **(3)** A tax rate is calculated by dividing the amount of revenue required pursuant to the budget by the total assessed value of all property in which the tax is to be imposed.
>
> ...

[24] Four facets of the *Tax Policy* bear on the issues in this Application. They are:

- the total exemption of any Métis-held property from taxation;
- the elimination of any rate cap;
- the calculation of the tax rate by dividing the community's financial needs by its assessed taxable base; and
- the establishment of a May 15 deadline for the enactment of each Settlement's annual property tax bylaw.

[25] Under section 7(1) of the *Tax Policy*, any property held or occupied by a Settlement member is exempt from taxation. This exemption extends to property held or occupied by member-owned corporations as well. The result of this structure is that the Settlements appear to have a very small taxable base, comprised almost exclusively of non-Métis businesses or residents. In the case of Elizabeth, the four oil and gas companies who brought this Application appear to make up the entire taxable property base of the community.

e. The New Tax Regime Comes into Force

[26] The *Tax Policy* was passed by the MSCG on November 14, 2018, and came into force on February 14, 2019 by operation of section 224(1) of the *MSA.* The MSGC's new *Assessment Policy* was passed on March 6, 2019 and came into force on March 16, 2019 through direct

2020 ABQB 210 (CanLII)

Ministerial Approval pursuant to section 224(1)(a) of the *MSA*: *MSA-03/2019*. Both instruments were published in the *Alberta Gazette, Part I* on April 30, 2019 at pages 359 and 380, respectively.

[27] In this case, the role of the Minister and the exact date the MSGC Polices came into force take on significance. Both are governed by section 224 of the *MSA*, which provides that:

> **Ministerial veto**
>
> **224(1)** General Council Policies made under section 222 or an amendment or repeal of those Policies must be sent to the Minister and come into effect 90 days after they are received by the Minister, or any other period to which the General Council and the Minister agree, unless
>
> (a) the Minister by order approves the Policy in writing at an earlier date, in which case the Policy comes into effect when it is approved, or on any later date specified in the Policy, or
>
> (b) the Minister vetoes the Policy or any portion of it by notice in writing to the President of the General Council.
>
> (2) A General Council Policy or any portion of it that is vetoed by the Minister has no effect.
>
> [Emphasis added]

[28] Under section 224(1), the Minister may do three things when an MSGC Policy is sent to him or her: (i) nothing, in which case the Policy comes into force automatically after 90 days; (ii) actively approve a Policy, which brings it into force immediately, unless her or she specifies another date; or (iii) veto all or part of a Policy, which prevents those sections coming into force at all.

[29] In this case, the Minister vetoed certain provisions of the *Tax Policy* on February 7, 2019, and noted that the balance would come into force automatically by operation of the *MSA*. He specifically approved the *Assessment Policy* on March 15, 2019, bringing it into force that day pursuant to section 224(1)(a).

f. Elizabeth's Original 2019-2020 Budget

[30] Elizabeth had a 2019-2020 budget in place by March 21, 2019 under the previous *BPCP*. This budget forecast total operating expenditures of $7,171,411.68, offset against revenues in the same amount. Industrial property taxation contributed $662,592.44 of the revenue contemplated in the original budget. This amount appears to be in line with previous Elizabeth budgets. The lion's share of Elizabeth's revenues were budgeted to come from federal and provincial grants and transfers, though the original 2019-2020 budget listed "Road Maintenance" of $439,922 to be provided by the Applicant, CNRL.

g. Elizabeth Passes a New Amended Budget and the Property Tax Bylaw

[31] Under the *Tax Policy*'s new formula, Elizabeth was permitted, and chose, to include additional capital infrastructure items in its budget. Elizabeth sought to take advantage of this change by preparing and passing a new budget for the 2019-2020 year (the "Amended Budget"). This was accompanied by the contentious Property Tax Bylaw, which was to implement the new rate of taxation.

2020 ABQB 210 (CanLII)

[32] The timing of these events is key to this dispute. The Zimmer Affidavit states that it was only after the *Tax Policy* was published in the *Alberta Gazette* on April 30, 2019, that "Elizabeth's Council and administrative staff immediately began considering how the new MSGC Taxation policy would effect Elizabeth's budget process." [Emphasis added]

[33] The Zimmer Affidavit gives the impression that the Settlement's leaders and managers were operating under the misconception that the new MSGC *Tax Policy* was not in force until published in the *Alberta Gazette*. This timeline married awkwardly with the *Tax Policy*'s requirement that any bylaw, and the budget underlying it, must be in place by May 15. Elizabeth's late start in responding to the new tax regime left it only 15 calendar days in which to draft and enact the Amended Budget and Property Tax Bylaw.

[34] The resulting time-crunch collided with the *MSA*'s requirements for bylaw enactment, discussed in more detail below, including that at least 14 days' public notice be given between the second and third reading of any proposed bylaw: *MSA*, s 54.

2020 ABQB 210 (CanLII)

h. "Emergency" Enactment of the Amended Budget and the Property Tax Bylaw

[35] All three readings of the Budget Amendment Bylaw and Property Tax Bylaw took place on May 6, 2019, at two notionally distinct meetings of the Elizabeth Settlement Council. Minutes of the first meeting reveal that the first and second readings of the Budget Amendment Bylaw and Property Tax Bylaw took place right before the first meeting adjourned at 3:09 p.m.

[36] The second meeting convened at 3:10 p.m., and had only three items of business: (i) declaration of an emergency under section 56 of the *MSA*, allowing the Elizabeth Settlement Council to dispense with the public notice, public hearing, and quorum requirements in sections 54-55 of the *MSA*; (ii) third reading of the Budget Amendment Bylaw; and (iii) third reading of the Property Tax Bylaw.

[37] The Record on review shows that all three motions passed without recorded discussion or debate. The second meeting adjourned four minutes after it began, at 3:13 p.m. No discussion, reports, or debate were recorded in respect of the first and second readings of either bylaw at the first meeting either. Notably, the minutes record specific details from reports from two Settlement officials on other matters at the first meeting, showing that if any substantive discussion on the merits of the bylaws had taken place, there would be a record of it.

i. The Amended Budget

[38] The Amended Budget, passed during the May 6 meetings, was essentially the same as the original budget, except that it added $25,000,733 in infrastructure spending, itemized in broad, round numbers. These amounts were outlined in the Zimmer Affidavit, as reproduced below:

Renovations	
Homes – 183 homes at $65,000/home	$9,150,000
Office	$500,000
Hall	$600,000
Fire Hall	$500,000
Seniors Building	$200,000

Daycare	$200,000
Water & Sewer	$3,488,141
Gas Lines	$500,000
Road Upgrades	$6,000,000
Driveways 183 driveways – $10,000/driveway	$1,000,000
Gravel	$1,000,000
Garbage Truck	$300,000
Security Positions	$100,000
Fire Department Upgrades	$200,000
Existing Dump Maintenance	$600,000
Total Industry[1]	**$24,338,141**
Operating – Department Disbursements	$662,592
Total Industry and Operating	**$25,000,733**

[39] The addition of these amounts increased Elizabeth's total annual operating budget from $7.17 million to $31.55 million for the 2019-2020 year.[2]

j. Impact of the Amended Budget on Taxation

[40] The net result of the Amended Budget, by operation of the formula dictated by the MSGC *Tax Policy*, was to increase the total property tax bill levied against the four Applicants from $624,692.44 to $25,000,733. In short, it increased the Applicants' property tax bills 40-fold. This additional $24.4 million from the Applicant taxpayers was allocated to repair or replace virtually all infrastructure at the Elizabeth Settlement, including $75,000 in repairs and renovations to each and every residence in the community.

k. Evidence of Economic Impact or Viability

[41] There is no evidence that Elizabeth considered the economic impact or viability of this rate of taxation. This includes a complete absence of discussion on whether taxes in this amount could possibly be paid, and what the economic and legal impact on the subject landowners would be. Counsel for Elizabeth was pressed on what thought-process could be ascribed to Elizabeth in formulating the Amended Budget and Property Tax Bylaw. His response was that, since these are revenue-generating properties, the tax may exceed the assessed value, "but that's not necessarily saying it's taxing more than they are making on it...and how much they've made per year for the last ten years." He emphasized that Elizabeth is suffering a very large and growing infrastructure deficit and, when advised by the MSGC that they could put into place a needs-based tax system, the Elizabeth Settlement Council felt that this course of action was reasonable.

[1] The reference to "Total Industry" appears to be the amount of corresponding revenue to be derived from industrial taxpayers.
[2] The Amended Budget also appears to contemplate a small increase in grants expected from Government sources.

2020 ABQB 210 (CanLII)

[42] The Applicants were never given an opportunity to provide an economic analysis of the impact of this level of taxation on their operations and their ability to continue owning their land interests in Elizabeth. There was no point during the formulation of the disputed Property Tax Bylaw at which their input was sought or welcomed.

[43] The sole source of evidence on the economic impact of the impugned tax is in the affidavit of the Supervisor of General Accounting for CNRL, Darren Hrycak, in which he states that "the effect of the tax rate imposed by Elizabeth settlement is to make the operation of the assessed property uneconomic". While not supported in numerical detail, this assertion has intuitive force, was not challenged in evidence, and I accept it as a fact on this Application.

2020 ABQB 210 (CanLII)

III. The Application for Judicial Review

[44] On July 4, 2019 the Applicants filed this Application for Judicial Review, asking this Court:

- to quash the Property Tax Bylaw and notices issued under it;
- to quash the *Assessment Policy* or for a declaration that the *Assessment Policy* is of no force and effect;
- for a declaration that the Applicants are exempt from further property assessment and taxation for the 2019 year;
- for an order in the nature of *quo warranto* requiring the Settlement to produce a record of all matters concerning the consideration, adoption and implementation of the Property Tax Bylaw; and
- for an order in the nature of *quo warranto* requiring the MSGC to produce a record of all matters concerning the consideration, adoption and limitation of the *Tax Policy* and the *Assessment Policy*.

[45] In their brief filed on November 22, 2019, the Applicants allege that the *Tax Policy* is discriminatory. Elizabeth and the MSGC object that this is a new issue not pled in the original Notice of Application and accordingly should not be considered by this Court. This issue will be discussed below.

a. Preliminary Issue: Whether the Minister was a Necessary Respondent

[46] The Applicants initially challenged the MSGC *Assessment Policy* along with the Property Tax Bylaw. The *Assessment Policy* came into force as a result of the express consent of the Minister of Indigenous Relations, leading Elizabeth and the MSGC to assert that the Minister should be named as a respondent. Rule 3.15(3)(a) of the *Alberta Rules of Court*, Alta Reg 124/2010 requires that "[a]n originating application for judicial review must be served on (a) the person or body in respect of whose act or omission a remedy is sought...".

[47] However, the Application as argued focussed solely on whether the Property Tax Bylaw was validly enacted and reasonable, and the whether the Applicants had standing to challenge it. The Minister was not a necessary respondent in respect of that issue and his absence was not asserted as a procedural bar to proceeding.

[48] The role of the Minister in respect of approval of MSGC policies is not always that of a decision-maker for the purpose of judicial review under Rule 3.15. Judicial review of a

ministerial veto would require him or her to be named as a respondent and to receive notice of the proceedings. Inaction, leading to a policy automatically coming into force by operation of the statute, does not, however, obviously engage any decision-making function necessitating the Minister to be a party to a judicial review of that policy. That is the case with the *Tax Policy*. The Minister's veto of specific provisions is not challenged. The relevant provisions came into force absent any ministerial action. He is thus not a necessary party to this Application. Whether the Minister would be a necessary party in a case where his or her overt approval hastens the coming into force of a policy is a question for another day.

2020 ABQB 210 (CanLII)

IV. The Issues

[49] The following issues must be determined based on how the matter was advanced in the oral hearing before me:

a. Do the Applicants have standing to challenge Elizabeth's Property Tax Bylaw?

b. If so, was the Property Tax Bylaw lawfully enacted under the emergency provisions of section 56 of the *MSA*?

c. Is the Property Tax Bylaw unreasonable?

d. Should the Applicants be permitted to argue that the *Tax Policy* and the Property Tax Bylaw are discriminatory and, if so, are they?

V. Law and Analysis

a. Applicants' Standing

(i) Standing to challenge the Property Tax Bylaw

[50] The Respondents assert that the Applicants have no legal standing to challenge the Property Tax Bylaw. The basis for their argument is section 245 of the *MSA*. That provision grants three specific groups a time-limited procedure to have the legality of Settlement bylaws judicially reviewed:

> **Application to quash illegal bylaws**
>
> **245(1)** The Minister, the General Council or a settlement member may apply to the Court of Queen's Bench to quash a settlement bylaw or resolution in whole or in part for illegality.
>
> **(2)** The application must be made within 2 months of the coming into force of the bylaw or resolution.
>
> **(3)** The Court may make whatever order it considers appropriate in the circumstances.
>
> [Emphasis added]

[51] Elizabeth and the MSGC argue that this statutory provision is the one and only way in which the bylaws of a Settlement may be challenged. Since this provision does not extend that right to any of the Applicants in this case, the Respondents say that this challenge to the Property Tax Bylaw is brought without standing and should be dismissed. In support of their position,

they invoke the interpretive maxim *expression unius est exclusio alterius* – that to expressly include one thing is to exclude another: ***R v Ochotta***, 2004 ABQB 552 at para 22.

[52] The Respondents further point to the special context in which Métis Settlements were established and their nascent self-governance powers as a reason to give the *MSA* an ameliorative reading that both explains and justifies the bar on third parties attacking Settlement bylaws. In ***Cunningham*** at para 53, the Supreme Court of Canada noted that:

> ...Ameliorative programs, by their nature, confer benefits on one group that are not conferred on others. These distinctions are generally protected if they serve or advance the object of the program, thus promoting substantive equality. ...

[53] Two principles, however, preclude interpreting section 245 in the manner the Respondents ask. The first is that, as a fundamental tenet of our constitutional order and the rule of law, no statute can immunize legislative or executive acts from judicial review for root illegality. The second is that the Courts will not infer a significant derogation of private rights in the absence of explicit statutory language. In short, there is no such creature as a 'stealth super-privative clause' in our legal system.

[54] These principles merge and find expression in a definitive line of authority from the Supreme Court of Canada that entrenches the right of taxpayers to challenge the legality of property taxation. That jurisprudence protects the Applicants' standing to challenge the Property Tax Bylaw in this case.

(ii) No absolute immunity from judicial review

[55] Elizabeth and the MSGC argue that section 245 absolutely precludes the Applicant taxpayers from challenging the legality of the Property Tax Bylaw, even for non-compliance with mandatory pre-conditions imposed by the enabling legislation. This interpretation asks what the legislature cannot give, namely insulation from judicial review of the basic legality of executive or legislative action. As the Supreme Court of Canada has commented:

> The legislative branch of government cannot remove the judiciary's power to review actions and decisions of administrative bodies for compliance with the constitutional capacities of the government. Even a privative clause, which provides a strong indication of legislative intent, cannot be determinative in this respect (*Executors of the Woodward Estate v. Minister of Finance*, [1973] S.C.R. 120, at p. 127). The inherent power of superior courts to review administrative action and ensure that it does not exceed its jurisdiction stems from the judicature provisions in ss. 96 to 101 of the *Constitution Act, 1867...*: ***Dunsmuir v New Brunswick***, 2008 SCC 9 at para 31.

[56] Simply put, the Superior Courts always retain the constitutional power and obligation to ensure the foundational lawfulness of governmental actions. No legislation can abrogate this authority: ***Crevier v Québec (Attorney General)***, [1981] 2 SCR 220 at 234-38; ***Canada (Canadian Human Rights Commission) v Canada (Attorney General)***, 2018 SCC 31 at para 40; ***Canada (Minister of Citizenship and Immigration) v Vavilov***, 2019 SCC 65 ["***Vavilov***"] at para 24.

[57] Even if section 245 were interpreted as erecting an absolute bar on parties such as the Applicants from challenging the lawfulness of bylaws which impact them, constitutionally it cannot have this effect. The Supreme Court of Canada has repeatedly made clear that:

2020 ABQB 210 (CanLII)

> In the presence of a full privative clause, judicial review exists not by reason of the wording of the statute (which is, of course, fully preclusive) but because as a matter of constitutional law judicial review cannot be ousted completely...: ***United Brotherhood of Carpenters and Joiners of America, Local 579 v Bradco Construction Ltd,*** [1993] 2 SCR 316 at 333.

[58] The rationale underlying the courts' abiding jurisdiction to review state acts for foundational lawfulness was well-articulated by Stratas JA in ***Fisher-Tennant v Canada (Minister of Citizenship and Immigration)***, 2018 FCA 132 at paras 23-24, where he explained that:

> 23 "L'etat, c'est moi" and "trust us, we got it right" have no place in our democracy. In our system of governance, all holders of public power, even the most powerful of them--the Governor-General, the Prime Minister, Ministers, the Cabinet, Chief Justices and puisne judges, Deputy Ministers, and so on--must obey the law: *Reference re Secession of Quebec*, [1998] 2 S.C.R. 217, 161 D.L.R. (4th) 385; *United States v. Nixon*, 418 U.S. 683 (1974); *Marbury v. Madison*, 5 U.S. 137 (1803); *Magna Carta* (1215), art. 39. From this, just as night follows day, two corollaries must follow. First, there must be an umpire who can meaningfully assess whether the law has been obeyed and grant appropriate relief. Second, both the umpire and the assessment must be fully independent from the body being reviewed...
>
> 24 Tyranny, despotism and abuse can come in many forms, sizes, and motivations: major and minor, large and small, sometimes clothed in good intentions, sometimes not. Over centuries of experience, we have learned that all are nevertheless the same: all are pernicious. Thus, we insist that all who exercise public power--no matter how lofty, no matter how important--must be subject to meaningful and fully independent review and accountability.

[59] Irrespective of the interpretation given it, section 245 of the *MSA* cannot have the effect of ousting this Court's jurisdiction to review a bylaw enacted under its delegated authority for compliance with the legal preconditions permitting that authority to flow-through to the delegate. Therefore, section 245 cannot bar this Application or deprive the Applicants of standing to bring it, irrespective of the interpretation given it.

(iii) A material derogation of rights will not be inferred

[60] The second flaw in the Respondents' proposed interpretation of section 245 is that it is not expressly drafted as a privative clause. Nothing in the language purports to oust the Superior Court's supervisory jurisdiction. Privative clauses exist to curtail rights. It follows, therefore, that privative clauses should normally be explicit in their scope and meaning. The fact that this provision requires active interpretation to be read as a privative clause, and in particular as one stripping the fundamental right to challenge the lawfulness of a delegated legislative act that may amount to functional expropriation, reduces the viability of that interpretation.

[61] While courts may infer a legislative intent that deference be accorded to an administrative body (***Vavilov*** at paras 23-24), the same cannot be said for a material derogation of rights a citizen affected by administrative action may otherwise have. This is especially true in the

2020 ABQB 210 (CanLII)

context of the removal of private land rights. In such cases, Canadian courts have long applied the interpretive principle established by Lord Blackburn that:

> It is clear that the burden lies on those who seek to establish that the legislature intended to take away the private rights of individuals, to show that by express words or by necessary implication, such an intention appears: ***Metropolitan Asylum District v Hill*** (1881), 6 App Cas 193 (HL) at 208, adopted in ***Venning v Steadman*** (1884), 9 SCR 206 at 216; see also ***British Columbia Electric Railway Co v British Columbia (Utilities Commission)***, [1960] SCR 837 at 846.

[62] Although this principle has been promulgated and applied in respect of property rights, I find that it applies by logical analogy to rights of legal recourse relating to substantial governmental inference with property rights and any attempt to insulate that interference from review. This conclusion is consonant with the Supreme Court of Canada's guidance on citizens' rights to challenge the legality of taxation on their lands.

(iv) An enduring right to challenge unlawful taxation

[63] The Supreme Court of Canada has repeatedly affirmed the common law right of citizens to seek judicial review of municipal bylaws taxing their property. That right is effectively constitutional in nature and supersedes any provincial enactment, as explained by McLachlin CJ in ***Catalyst Paper Corp v North Cowichan (District)***, 2012 SCC 2 ["***Catalyst Paper***"] at paras 10 to 11:

> ***A. Judicial Review of Municipal Bylaws***
>
> 10 It is a fundamental principle of the rule of law that state power must be exercised in accordance with the law. The corollary of this constitutionally protected principle is that superior courts may be called upon to review whether particular exercises of state power fall outside the law. We call this function "judicial review".
>
> 11 Municipalities do not have direct powers under the Constitution. They possess only those powers that provincial legislatures delegate to them. This means that they must act within the legislative constraints the province has imposed on them. If they do not, their decisions or bylaws may be set aside on judicial review.

[64] The Supreme Court's decision in ***Catalyst Paper*** establishes a fundamental, non-derogable right of taxpayers to judicially review the legality of municipal taxation imposed under subordinate legislation. Specifically, it has been repeatedly held that sub-delegated decision-makers, such as municipalities, must strictly adhere to their statutory procedural requirements when exercising powers that directly or indirectly strip citizens of property. In ***Costello and Dickhoff v City of Calgary***, [1983] 1 SCR 14 ["***Costello***"] at 21, the Court unanimously held that:

> The courts have endeavoured to avoid interference with municipal enactments by an overly strict approach to their construction, but have generally insisted upon strict compliance with enabling legislation that authorizes municipalities to exercise extraordinary powers or pass by-laws concerning taxation, expropriation, or other interference with private rights. ... [Emphasis added]

2020 ABQB 210 (CanLII)

[65] In that same judgment, the Supreme Court described this rule of strict compliance as being "of long-standing", and cited Ian Rogers, *The Law of Canadian Municipal Corporations*, 2nd ed (Toronto: Carswell, 1971) at 432 for the proposition that:

> As a general rule, in the exercise of extraordinary powers conferred by legislation authorizing interference by the municipality with private rights, all conditions precedent to the exercise of such power must be strictly complied with prior to the performance thereof, which, if done without specific statutory authority, would be tortious. Likewise with formalities required for the exercise of taxing and expropriation powers and other powers entitling local authorities to interfere with common law rights: ***Costello*** at paras 22-23. [Emphasis added]

[66] Métis Settlements are not completely analogous to municipal governments. They may well be afforded different and/or greater range in decision-making that touches upon the core animating values that underlie their existence, namely the preservation and promotion of Métis culture and society. That said, when Settlements levy property tax, they perform a function virtually indistinguishable from municipal governments, and derive their authority to do so through a similar process of sub-delegation. Moreover, the power they exercise in this capacity is no less impactful on the people against whom it is used. Therefore, I adopt the approach taken by Desjardins JA in her concurring opinion in ***Canadian Pacific Ltd v Matsqui Indian Band*** (1999), [2000] 1 FC 325, 1999 CanLII 9362 (FCA) ["***Matsqui CA***" cited to CanLII] at para 76, where, speaking in the context of a First Nation, she says:

> I am of the view that band councils are a *sui generis* type of subordinate statutory bodies. As such, I fail to see, however, how they could escape the principles of administrative law which govern subordinate statutory bodies.

[67] In the context of this case, I conclude that the principles of administrative law apply to Settlements as subordinate statutory bodies, just as Desjardins JA concluded in ***Matsqui CA***. On this basis, the decisions of the Supreme Court of Canada in ***Costello*** and ***Catalyst Paper*** apply with equal force to Métis Settlement taxation bylaws.

(v) A preferred understanding of section 245

[68] There is also a preferable reading of section 245 that does not generate the extreme result advocated by Elizabeth and the MSGC. Specifically, this section is better understood as creating a process and limitation period for the three parties responsible for decision-making under the *MSA* (Settlement members, the MSGC and the Minister) to challenge the validity of bylaws they had a hand in making. On a plain reading, section 245 operates to require the key actors in the bylaw-making process to bring any concerns about a Settlement bylaw to the fore in a timely fashion. It does not oust ordinary powers of judicial review, but rather creates an estoppel against politically interested entities and individuals from retroactively attacking Settlement bylaws, potentially years after the fact, as a result of changing political winds.

[69] This interpretation of the section is bolstered by the fact that s. 245(3) provides the Court broader remedial scope than that afforded under the inherent power of judicial review. This extension of authority to the Court hearing an application under section 245 is more consistent with this provision being a free-standing mechanism to deal with internal conflicts between political stakeholders, rather than a privative clause limiting judicial review. It also makes sound policy sense to require these participants to assert any concerns with the legality of bylaws

2020 ABQB 210 (CanLII)

within a limited time frame, and to permit this Court a broad remedial power to resolve these disputes pragmatically.

[70] Overall, this interpretation of section 245 is more consistent with the principles of statutory interpretation mandated by the Supreme Court of Canada in ***Rizzo & Rizzo Shoes Ltd (Re)***, [1998] 1 SCR 27, as well as administrative and constitutional principles, than the privative interpretation urged by Elizabeth and the MSGC.

(vi) Conclusion on standing

[71] In conclusion, section 245 of the *MSA* does not have a preclusive effect. The Applicants have standing to challenge the lawfulness of the Property Tax Bylaw.

b. Enactment of the Taxation Bylaw did not Comply with the Requirements of the *MSA*

[72] The *MSA* establishes mandatory procedures which must be followed to pass Settlement bylaws. These procedures are found in sections 52, 54 and 55 of the *MSA*, and prescribe four key procedural elements necessary for a valid enactment (the "Democratic Process Requirements"). These are:

(i) three readings of the proposed bylaw at two separate meetings (s 52(1));

(ii) 14 days' notice between the second and third reading (s 54(2));

(iii) an opportunity for affected persons to participate in discussion on the issues raised by the bylaw in a public meeting between second and third reading (s 55(3)); and

(iv) a quorum of 15 Settlement members eligible to vote on the bylaw (s 55(1)).

[73] The relevant sections of the *MSA* read:

Enactment of bylaws

52(1) No bylaw has any effect unless it is given 3 distinct and separate readings at a meeting of a settlement council, and no more than 2 readings may be given at the same meeting.

(2) If a proposed bylaw is in writing and available to councillors and the public, only the title or identifying number need be read at each reading of the bylaw.

(3) A bylaw must not be given second reading unless it is in writing and available to councillors.

(4) Following each reading and debate, if any, of a proposed bylaw, a vote of the councillors must be taken and the proposed bylaw can be given the next reading only if at least 3 councillors vote in favour of the bylaw.

Public notice of bylaws

54(1) Every proposed bylaw must be presented at a public meeting in the settlement area after second reading but before third reading.

(2) At least 14 days' public notice of the date, time and place of the public meeting must be given.

2020 ABQB 210 (CanLII)

> **Approval of bylaws**
>
> **55(1)** A quorum for public meetings called to vote on settlement bylaws is 15 settlement members who are eligible to vote on the bylaw, or any other number specified by settlement bylaw.
>
> **...**
>
> **(3)** Persons affected by an issue under discussion at a public meeting have the right to participate in the discussion of the issue but may not vote on it unless they are settlement members and eligible to vote on it.
>
> [Emphasis added]

[74] There is no dispute that the Democratic Process Requirements were not met in this case. There was no public notice. There was no public meeting. There was no opportunity for affected parties to express their views and concerns about the bylaw. There was no quorum of Settlement members present for passing.

(i) Invocation of Emergency Powers Provision of the MSA

[75] The Elizabeth Settlement Council was aware of these defects. For this reason, it passed it passed the Property Tax Bylaw and Budget Amendment Bylaw together with a declaration that it was relying on the exemptions from procedural requirements allowed by the *MSA* in urgent circumstances. Specifically, the *MSA* provides that the public meeting, notice, and right to participate requirements may be dispensed with in the case of an emergency:

> **Emergencies**
>
> **56** In an emergency that affects the health or safety of the community, the settlement council may, by unanimous resolution, declare that sections 54 and 55 do not apply to a bylaw designed to deal with the emergency, in which case no public meeting or vote is required.

[76] Elizabeth and the MSGC strenuously argued that the late publication of the *Tax Policy* and the companion *Assessment Policy* in the *Alberta Gazette* left the Settlement with only 15 days to enact its own budget and Property Tax Bylaw. They characterized the purported emergency in the following terms: "The reason the settlement council invoked section 56 was the sudden change in taxation policy."

[77] The circumstances of this case do not, however, permit Elizabeth and the MSGC to rely on the emergency powers granted in section 56.

(ii) Any emergency was self-created

[78] The changes to the property taxation regime applying to Métis Settlements came as a surprise to no one. The MSGC passed its new *Tax Policy* in mid-November 2018. Every Elizabeth Councillor is, *ex officio*, a member of the MSGC: *MSA*, s 214(2). At the hearing, it was acknowledged that Ms. Zimmer, the elected Chairperson of Elizabeth, was present when the *Tax Policy* was passed. Irrespective of that, the Settlement's leadership would certainly have known these changes were coming by virtue of the notification requirement in section 224(3) of the *MSA* requiring a copy of General Council Policies to be sent to each Settlement council.

2020 ABQB 210 (CanLII)

[79] Therefore, the Elizabeth Settlement Council knew, as of November 14, 2018, that a major change to the taxation landscape was likely coming, and that it would include a May 15 deadline for enactment of a property tax bylaw. By February 14, it was a certainty that the tax changes were taking place and, by March 15, every piece of the regulatory framework was fully in force. The Settlement had six months' notice of the overall change, and two months from the complete finalization of the new regime in which to plan its approach to 2019-2020 property taxation.

[80] Elizabeth and MSGC contends that these two polices could not be acted upon until they were published in the *Alberta Gazette*, which only occurred on April 30. They are mistaken in this contention. The *MSA* contains no requirement that MSGC policies enacted under section 222 be published before taking force. To the contrary, these instruments gain legal effect on the timeline specified in section 224(1), which mandates that General Council Policies "come into effect 90 days after they are received by the Minister, or any other period to which the General Council and the Minister agree", subject to several exceptions. Indeed, the Minister's own letter to the MSGC stated:

> The rest of the MSGC Taxation Property Taxation policy GC-P1806 will come into effect on February 14, 2019, as per section 224(1) of the MSA. [emphasis added]

[81] Similarly, the Ministerial Order of March 15, 2019, approving the *Assessment Policy*, stated that "The Policy is in effect as of the date of this Order." If the Settlement acted on a contrary impression regarding either policy, they were functioning under a mistake of law.

[82] Perhaps more relevantly, however, I find as a matter of fact that there was no element of surprise, no basis for doubt that the new regime would govern for the upcoming year, and no sudden event that caught Elizabeth unaware. Rather, there was, a failure to plan for a known and foreseen change in operating parameters.

[83] A governmental authority's failure to adequately plan and prepare for impending changes in its legislative ecosystem does not constitute the sort of 'emergency' in which the Democratic Process Requirements constraining its authority can be bypassed. This was a self-created crisis and not a situation for which section 56 was intended. Indeed, it would be ironic, and an affront to democratic principles, if a local government could invoke its own failure to do its job as a basis to dispense with the statutory constraints circumscribing its authority.

[84] The fact that Elizabeth declared that an emergency existed does not make it so: ***Kuypers v Langley (Township)*** (1992), 87 DLR (4th) 303, 1992 CarswellBC 9 (SC) (WL) at paras 50-52. The emergency exception to the Democratic Process Requirements is intended for true emergencies, such as natural disasters or other unforeseeable events that impair the basic democratic functioning of the community. These provisions exist to make it possible for communities to respond in situations of disaster and danger. The language of the *MSA* makes this clear by referring to emergencies "that affect the health or safety of the community". The powers in section 56 do not exist to remedy inadequate administrative planning.

[85] Elizabeth's emergency argument fails for two further factual reasons. First, it ignores that Elizabeth could simply have carried on levying property taxes for 2019-2020 on the basis of its original budget. It had months to pass the required bylaws to set this *status quo* rate of taxation in place. It was entirely open to Elizabeth to forego increased tax rates under the new *Tax Policy* if it believed the new regime was not yet in force. This would have avoided any crisis.

2020 ABQB 210 (CanLII)

[86] Second, even if Elizabeth found itself without any ability to levy property taxes, those charges were expected to contribute less than 10% of expected revenue in the original 2019-2020 budget. Loss of that income would have been difficult, but far from devastating. Even if the potential consequences of a financial emergency could warrant the invocation of the extraordinary powers contained in section 56, I am not satisfied that Elizabeth's impending problem rose to the requisite level of severity.

[87] That said, the Court is sympathetic to the challenges of running the equivalent of a very small municipality on what must be a skeleton staff, supporting a council of local citizens acting on a part-time basis for the betterment of their community. I do not find that Elizabeth's reliance on the emergency provisions of the *MSA* was anything other than a *bona fide* attempt to deal with the unfortunate situation the Elizabeth Settlement Council found itself in.

[88] However, no emergency within the meaning of section 56 existed in this case. The emergency powers it provides were improperly invoked. Consequently, the Property Tax Bylaw was invalidly enacted and is of no force: ***Costello*** at 21, 27; ***London (City) v RSJ Holdings***, 2007 SCC 29 ["***London v RSJ***"] at paras 38-42; Ian Rogers, *The Law of Canadian Municipal Corporations*, 2nd ed, Vol 2 (Toronto: Carswell, 1971) at 1025.

[89] The Application to quash the Property Tax Bylaw is granted on this basis.

c. The Taxation Bylaw is Substantively Unreasonable

[90] Quashing the Property Tax Bylaw for its procedural defects is dispositive of this Application. The parties would benefit, however, from knowing whether taxation at the impugned rate would be reasonable if properly enacted, since property tax is a recurring annual event. As this issue was fully argued, it is ripe for decision. I conclude that, even if the Property Tax Bylaw was upheld in the face of its procedural defects, it is substantively unreasonable and must be quashed on that basis.

(i) The bar to challenge a valid taxation bylaw is high

[91] While the Supreme Court of Canada has jealously guarded the citizen's right to challenge the reasonableness of property taxation bylaws, the highest level of deference is paid to decisions on rates of taxation reached through a proper legislative process. Once the procedural preconditions for valid public decision making are met, the policy merits of any given approach to taxation are left within the municipal decision-maker's ambit. The Supreme Court's guidance in ***Catalyst Paper*** definitively delineates the realm of protected public policy making and sets a very high bar for judicial intervention:

> ...[C]ourts reviewing bylaws for reasonableness must approach the task against the backdrop of the wide variety of factors that elected municipal counsellors may legitimately consider in enacting bylaws. The applicable test is this: only if the bylaw is one no reasonable body informed by these factors could have taken will the bylaw be set aside. The fact that wide deference is owed to municipal councils does not mean that they have *carte blanche*: ***Catalyst Paper*** at para 24. [Emphasis added]

[92] To reach this level of "unreasonableness", a bylaw must be shown to have been passed in bad faith, have an improper ulterior purpose, or have a confiscatory effect: ***Hlushak v City of Fort McMurray***, 1982 ABCA 140 (1982), 37 AR 149, [1982] AJ No 1029 (CA) (QL) at para

2020 ABQB 210 (CanLII)

16; ***Falardeau v Hinton (Town)*** (1983), 50 AR 120, [1983] AJ No 693 (QB) (QL) at paras 24, 31, aff'd (1985), 65 AR 387 (CA).[3]

(ii) Defining the standard of "unreasonableness"

[93] In effect, the party challenging a property taxation bylaw will have to show that the impugned levy has stopped making sense as a form of the tax it purports to be. There are numerous examples in the jurisprudence of where taxes have been found to possess this prohibited character. In Alberta, the Social Credit government of the 1930s took aim at financial institutions through a number of pieces of legislation, including an act which increased the tax on banks almost 28-fold in a single year. Unsurprisingly, this legislation failed to find favour with the courts. The Privy Council held that the effect of the legislation was such that it would prevent banks from carrying on their businesses at all, concluding that:

> ...there is no escape from the conclusion that, instead of being in any true sense taxation in order to the raising of a revenue for Provincial purposes, the Bill No. 1 is merely "part of a legislative plan to prevent the operation within the Province of those banking institutions...": ***Reference re An Act respecting the Taxation of Banks (Alberta)***, [1939] AC 117, [1938] JCJ No 3 (PC) (QL) at para 26.

[94] The Supreme Court of Canada reached a similar result in ***Texada Mines Ltd v Attorney-General of British Columbia***, [1960] SCR 713 at 724-25, where it struck down a provincial tax on raw iron ore designed to make it uneconomical to export the raw material, thus structurally mandating the establishment of a smelter in the province. Writing for the Court, Locke J held:

> The very high rate of the tax authorized, which would in ten years' time impose in the aggregate an amount of tax equal to the assessed value of the minerals, indicates, in my opinion, that the true nature and purpose of the legislation is something other than the raising of revenue for provincial purposes under head 2 of s. 92. ...

[95] In a similar vein, in ***McCormick (Re)***, [1948] 3 DLR 70, [1948] OJ No 361 (HC) (QL), the Ontario High Court of Justice quashed a City of Toronto bylaw which purported to impose regulatory fees, but was found in fact to be an attempt to drive a certain type and segment of business out of the community altogether. Since the City lacked the power to enact such a prohibition, and in particular to do so in the guise of regulatory fees, the Court quashed the bylaw, concluding:

> What was given here was a power to pass by-laws for the licensing, regulating and governing of tourist camps. It was not a right to prohibit tourist camps, but to regulate and govern them. Under the guise of a licensing by-law the municipality cannot, in my opinion, impose fees which in effect are confiscatory and prohibitive. ...: at para 8.

[96] A taxation measure will be quashed as invalid when it is driven by an ulterior motive, even when that motive may, in and of itself, be a legitimate policy aim of the enacting body. In ***TimberWest Forest Corp v Campbell River (City)***, 2009 BCSC 1804 at para 100, the Court

[3] This line of authority derives from the judgment of Duff J in ***City of Montréal v Beauvais***, [1909] 42 SCR 211 at 216, where the Supreme Court of Canada held that a bylaw will only be found unreasonable where "it was not passed in good faith in the exercise of the powers conferred by the statute or… is so unreasonable, unfair or oppressive as to be upon any fair construction an abuse of those powers."

2020 ABQB 210 (CanLII)

struck down as *ultra vires* a property tax bylaw which imposed differential taxation on a particular class of property at such a level that it would compel landowners to withdraw those lands from that class and convert them to a use consistent with the city's planning objectives. The fact that zoning and planning are legitimate municipal undertakings did not save the infringing tax measures.

[97] In summary, the jurisprudence describes a standard of review whereby the impugned decision must be shown to transcend the spectrum of reasonable policy options available in view of the legitimate legislative purpose in play. The decision must be so out of range vis-à-vis the power the municipality was purporting to exercise that it is only understandable as an attempt to achieve an improper purpose, an act of raw irrationality, or a bad faith taking. The standard is not so much one of examining the reasonableness of the taxing authority's policy choice, but asking whether the delegated legislator has remained within the object of the enabling statute: ***Katz Group Canada Inc v Ontario (Health and Long-Term Care)***, 2013 SCC 64 at para 24. This is as deferential a standard as exists in judicial review.

2020 ABQB 210 (CanLII)

(iii) Deference to Ameliorative Legislation Involving Métis and First Nations

[98] An additional layer of context is added to the analysis of 'reasonableness' when reviewing administrative acts of Métis Settlements. In such cases, it is appropriate for the Court to take into account the unique role, structure, and mandate of the Settlements in preserving and promoting Métis life and culture. This is an additional component of the "context and nature of the impugned administrative act" under consideration and may, in certain cases, mean that the flexible deferential standard the court should apply will result in greater leeway being given to Settlement decisions: ***Catalyst Paper*** at para 23.

[99] This approach honours the principle of prioritizing protection of Indigenous interests when interpreting legislation dealing with their rights. As explained by the Supreme Court of Canada in ***Osoyoos Indian Band v Oliver (Town)***, 2001 SCC 85 at para 49, citing La Forest J in ***Mitchell v Peguis Indian Band***, [1990] 2 SCR 85 at 143:

> ... it is clear that in the interpretation of any statutory enactment dealing with Indians, and particularly the *Indian Act*, it is appropriate to interpret in a broad manner provisions that are aimed at maintaining Indian rights, and to interpret narrowly provisions aimed at limiting or abrogating them ....
>
> At the same time, I do not accept that this salutary rule that statutory ambiguities must be resolved in favour of the Indians implies automatic acceptance of a given construction simply because it may be expected that the Indians would favour it over any other competing interpretation. It is also necessary to reconcile any given interpretation with the policies the Act seeks to promote. [Emphasis in ***Osoyoos***]

[100] This principle finds traction in the taxation context. While Métis Settlements are broadly analogous to municipalities, they remain fundamentally different in their history, evolution, and context. That lens of difference must be applied when considering the revenue-generating powers granted to them under the *MSA*. As the Supreme Court of Canada held in ***Canadian Pacific Ltd v Matsqui Indian Band***, [1995] 1 SCR 3 ["***Matsqui***"] at para 18:

> ... [I]t is important that we not lose sight of Parliament's objective in creating the new Indian taxation powers. The regime which came into force in 1988 is intended to facilitate the development of Aboriginal self-government by allowing bands to exercise the inherently governmental power of taxation on their reserves. Though this Court is not faced with the issue of Aboriginal self-government directly, the underlying purpose and functions of the Indian tax assessment scheme provide considerable guidance in applying the principles of administrative law to the statutory provisions at issue here. I will therefore employ a purposive and functional approach where appropriate in this ruling.

[101] While the history and constitutional position of Métis people is not entirely the same as that of First Nations, similar principles apply here. In ***Matsqui***, Lamer CJ and Cory J characterized the broader purposes of First Nations' taxation powers in the following terms:

> Here, the evidence indicates that the purpose of the tax assessment scheme is to promote the interests of Aboriginal peoples and to further the aims of self-government. Although the scheme resembles the kind of tax assessment regime we see at the municipal level of government in Canada, it is more ambitious in what it sets out to achieve. The scheme seeks to provide governmental experience to Aboriginal bands, allowing them to develop the skills which they will need for self-government: at para 43.

[102] The historic disadvantages suffered by Métis communities, coupled with the unique challenges that arise in operating small-scale self-governing communities, suggest there is more leeway to what a "reasonable body" might decide is a reasonable taxation structure. Put simply, Métis Settlements did not begin with very much. They have limited sources of funding. They lack any traditional property tax base, as a result of the unique communal ownership structure of their land base. Their need for infrastructure development is often intense, as described by Ms. Zimmer in this case. They may also feel that they have historically received little or no benefit for the resource riches extracted from their lands. I expressly consider all of these factors in determining whether the Property Tax Bylaw in this case meets the broad range of "reasonable outcomes" defined by the Supreme Court's jurisprudence, including the direction to consider broader social, economic and political issues: ***Catalyst Paper*** at para 32.

[103] Despite the deferential and contextually-sensitive approach mandated for reviewing Elizabeth's Property Tax Bylaw, a number of factors specific to this case operate to undercut that deference.

(iv) Procedural defects compromise the deference afforded

[104] A core rationale for according the utmost level of deference to taxation policy choices made by democratic local governments is that their decisions are reached through an inclusive and consultative decision-making process: ***Catalyst Paper*** at paras 17-20, 24. This in turn stems from the belief that the available policy alternatives, and the costs and benefits associated with them, have been openly and thoroughly considered: see ***Catalyst Paper*** at paras 29-30.

[105] In this case, that robust policy making processes is absent. For the reasons outlined above, the Property Tax Bylaw was passed without discussion, debate or examination. Policy options and implications were not considered. Part of this is attributable to the absence of the public hearing mandated by section 55(3) of the *MSA*. However, even the meeting minutes of

2020 ABQB 210 (CanLII)

the hastily convened May 6, 2019, meetings reflect no substantive discussion of the tax rates being imposed.

[106] If the merits and viability of this approach to taxation was ever discussed, this was done in secret.

[107] Elizabeth's failure to undertake any public deliberation of the social and economic impact wrought by the Property Tax Bylaw strikes at the core of the rationale for deference to municipal councils on what constitutes reasonable policy. On this point, the Supreme Court of Canada's decision in ***Catalyst Paper*** is illuminative. In that case, the struggle between the industrial taxpayer and the municipality over the former's share of the municipal tax burden had been going on for decades. Conscious of the impact of squeezing out one of its largest employers and taxpayers, the municipality conducted extensive studies into the problem of tax burden allocation. The issue was examined from numerous perspectives. The industrial taxpayer even proposed a detailed alternative model of tax allocation. The municipality undertook corrective steps to achieve a more sustainable balance. The social and economic impact of the competing policy alternatives were studied, discussed and publicly debated. In the end, the municipality made its difficult social choice; it did so on the basis of a thorough understanding of the problem and the economic realities involved. The Supreme Court deferred to the Council's decision, notwithstanding the grave impact on the industrial taxpayer upon whom an undue burden of funding the community fell: ***Catalyst Paper*** at para 36; 2010 BCCA 199 at paras 15-23; 2009 BCSC 1420, at paras 94-108.

[108] The contrast with the present case is stark. Here, the impacted taxpayers were never informed about the proposed Property Tax Bylaw and never given the opportunity to be heard, despite both of those rights being statutorily guaranteed: *MSA*, ss 54, 55(3).

[109] In his thoughtful and elegant defence of Elizabeth's position, Mr. Epp pointed out that, in a small community such as Elizabeth, the members of the community and the Council have an inherent understanding of the scale and scope of economic activity taking place. This local knowledge, he argued, attenuates the absence of a more formal record of policy deliberation. Mr. Epp also emphasized that Elizabeth offered to meet with the Applicants after the tax bills had been sent out, but this invitation was declined.

[110] However, the absence of the Democratic Process Requirements, coupled with the absence of any apparent deliberative process whatsoever, undercuts the rationale for deference in assessing the Property Tax Bylaw's reasonableness. As was observed by the British Colombia Court of Appeal in ***Pitt Polder Preservation Society v Pitt Meadows (District)***, 2000 BCCA 415, a public hearing provides an opportunity "for those whose interests might be affected by such a decision to make their views known to the decision-maker and it gives the decision-maker the benefit of public examination and discussion.": at para 45. The Court also noted that public hearings enhance the quality of a decision and the public's acceptance of it while dispelling perceptions of arbitrariness, bias, or impropriety: at paras 46-47.

[111] Allowing impacted citizens to be meaningfully heard in the public consultation process preceding enactment of a bylaw is fundamental to the legality and legitimacy of the legislative process: ***Keefe v Clifton Corporation***, 2005 ABCA 144 at para 17. The failure to notify the small number of parties who were profoundly impacted by this proposed bylaw, together with the absence of a public hearing, are the sort of indicators of bad faith that erode the deference

2020 ABQB 210 (CanLII)

normally granted to a democratic decision-maker like the Elizabeth Settlement: ***HG Winton Limited and Borough of North York*** (1978), 20 OR (2d) 737 at 744.

[112] Similarly, where the procedure used by the decision-maker appears to be a contrivance allowing the body to remain facially compliant with the letter of its enabling statute, while obviating the spirit of those said-same requirements, courts will often look askance at the practice: see ***London v RSJ*** at paras 38-42. The curious procedure adopted to pass the Property Tax Bylaw through short, sequential meetings is a contextual factor undermining deference in this case.

[113] The lack of deliberation, coupled with the abrogation of the Democratic Process Requirements enshrined in the *MSA*, operate to deprive the Property Tax Bylaw of much of the deference accorded to properly enacted policy measures of democratically-constituted public decision makers.

(v) The Rate Tax is Unreasonable on its Face

[114] Irrespective of the process problems seen in this case, the raw quantum of this tax is breathtaking and beyond anything previously known in Canada. It demands that landowners pay almost twice the value of their holdings to the local government as an annual levy. This amount is 47 times higher than the rate over which the Supreme Court deliberated in ***Catalyst Paper***. This amount is unreasonable *per se* given the nature and purpose of a property tax.

[115] Assessments on which this tax is based are meant to reflect the properties' objective market rate. Therefore, it is difficult to comprehend how a tax of this magnitude is anything other than a functional expropriation. A failure to pay property tax will result in the land being seized and sold for the arrears: MSGC *Tax Policy*, s 28. Pursuant to section 28(1):

> Where taxes remain unpaid more than nine (9) months after a Tax Arrears Certificate is issued, the tax administrator may levy the amount of unpaid taxes by way of the seizure and assignment of the taxable property.

[116] Six months after the delivery of the notice contemplated in section 28(1), "the tax administrator may sell the right to an assignment of the taxable property by public tender or auction": *Tax Policy*, s 28(3). Land taxed above its worth is unlikely to have any economic value. The only potential market would be tax-exempt entities. In this case, that group is restricted to Settlement members and their majority-owned corporations. There is thus a logical straight-line from the Property Tax Bylaw to the subject properties to ending up in the hands of Elizabeth's members, without any compensation to their present owners.

[117] If a foreign government levied taxes at the rates in issue here on a Canadian company operating within their territory, one can only imagine that allegations of an improper state expropriation would be leveled against the tax measure, as occurred in an arbitration claim brought by Yukos Oil Company alleging that the Russian Federation unlawfully dispossessed it of its assets through illegitimate tax levies: ***Quasar de Valores SICAV v Russian Federation***, Stockholm Chamber of Commerce Case No 24/2007, Award (20 July 2012) at para 48.

[118] The Supreme Court of Canada recently pronounced on disguised expropriations. In ***Lorraine (Ville) v 2646-8926 Québec inc***, 2018 SCC 35 at para 27, Wagner CJ said the following:

2020 ABQB 210 (CanLII)

> It is settled law that a "disguised" expropriation, insofar as it occurs in the guise of a zoning by-law, constitutes an abuse of the power of regulation conferred on the body in respect of such matters (*Développements Vaillancourt Inc. v. Rimouski (City)*, 2009 QCCA 1475, 98 L.C.R. 1, at para. 22). Where a municipal government limits the enjoyment of the attributes of the right of ownership of property to such a degree that the person entitled to enjoy those attributes is *de facto* expropriated from them, it therefore acts in a manner inconsistent with the purposes being pursued by the legislature in delegating to it the power "to specify, for each zone, the structures and uses that are authorized and those that are prohibited"... [Emphasis added]

[119] This conclusion is consistent with the Supreme Court of Canada's earlier holding that "[t]he courts have often set aside municipal decisions perpetrating a manifest injustice against one or more taxpayers...": ***Immeubles Port Louis Ltée v Lafontaine (Village)***, [1991] 1 SCR 326 at 346, citing ***Ville de la Tuque v Desbiens*** (1919), 30 Que KB 20 at 21, per Lamothe CJ.

[120] The quantum of tax in this case is so extreme that the language of "manifest injustice" is properly invoked. Elizabeth appears to have decided to effectively take the Applicants' land, without proper process, deliberation, or even notice. This is not reasonable.

(vi) The MSA permits property tax only – not an income or profit tax

[121] Elizabeth defended the rate of tax on the basis that it had not been established that it destroyed the economic value of the taxed assets, as they may be generating income that could offset the tax. This argument must be understood in light of Ms. Zimmer's evidence that the Métis Settlements do not reap any benefits of mineral leases pre-existing the *MSA*, and that a moratorium on new leases between 2008 and 2013 deprived the Settlements of the economic benefits that might have flowed from the Co-Management Agreements contemplated by the *MSA* during the richest years of Alberta's energy heyday.

[122] While the Record reveals no contemplation or consideration of the economic viability or rationale for the 187% tax rate, the subtext of Ms. Zimmer's evidence, and the Respondents' argument, is that the Applicant resource companies have done very well off their holdings within the Settlement and will continue to reap profits from these, allowing them to contribute generously to the community's needs.

[123] Section 222(1)(i) of the *MSA* permits and empowers the MSGC and the Settlements to impose "assessment or taxation, or both, of land, interests in land or improvements on land, in a settlement area, including rights to occupy, posses or use land in a settlement area." This is a power to impose a tax on the value of property. It is expressly not a power to tax on revenues, profitability, or ongoing commercial activity. A property tax must be reasonable as a tax on the assessed value of the land, not as a disguised income tax, profit-sharing scheme, or social redistribution of economic resources.

[124] Elizabeth's defence of the Property Tax Bylaw, put at its highest, is that it was reasonable to believe that these taxpayers could and would pay because they were making enough money off these properties over time. That reasoning transforms the Property Tax Bylaw into a form of income tax. That is *ultra vires* of the Settlement, and outside the proper purposes of the taxing powers granted by the *MSA*, irrespective of how valid Elizabeth's need for the money may be.

2020 ABQB 210 (CanLII)

[125] Providing renewed and viable infrastructure may be a proper purpose driving Elizabeth's Amended Budget, but the laudability of this aim does not salvage a property tax that, at best, would function, and is defended, as a disgorgement of past and future commercial income. Moreover, the Record does not contain any evidence supporting the contention that the taxpayers in this case could afford the punishing tax being levied by virtue of their long-term profitability. This approach to taxation in not within Elizabeth's authority, and is not supported as factually reasonable on the Record in any event.

(vii) Minimum taxes of low-value land engage different principles

[126] Elizabeth and the MSGC argue that even a tax at or near the assessed value of the property may be reasonable, relying on this Court's decision in ***Bergman v Innisfree (Village)***, 2018 ABQB 326. That case, however, concerned the imposition of a $750 minimum tax that would apply to low-value properties in the municipality. It is broadly distinguishable. First, the Court in ***Bergman*** found that the Legislature had expressly contemplated that the authorization of a minimum property tax could result in a very high assessment-to-tax ratio for a handful of low valued properties: at para 59. The minimum tax, and its impact, were the product of a considered, express decision to permit this result.

[127] Second, and more importantly, it is reasonable that landowners be levied a modest minimum charge for holding land within a municipal district. That principal bears no resemblance or analogy to demanding that commercial industrial enterprises give-over millions of dollars, far in excess of the assessed value of developed properties, in order to wholly fund the capital (re)construction of an entire community.

(viii) The Property Tax Bylaw operates at cross-purposes to the MSA

[128] Imposing taxation at the level seen in this case is both practically and conceptually inconsistent with the economic structure contemplated for the Settlements by the underlying legislative and contractual framework. The *MSA* specifically contemplates that resource extraction companies will be able to access Settlement lands and conduct mineral and resource development in exchange for compensation separate and apart from the tax they may pay on their property interests: ***Fishing Lake Métis Settlement v Métis Settlements Appeal Tribunal Land Access Panel***, 2003 ABCA 143 at paras 6, 43; *MSA*, Part 4, Division 7.

[129] The Property Tax Bylaw clashes with this legislative vision because, as I find based on the Record before me, it would rapidly have the effect of expropriating the resource operators. Partnership, not expropriation without compensation, was the contemplated model.

[130] Levying taxes at a rate that obviates the commercial activities for which an entire Part of the statutory regime was drafted is internally contradictory to the purposes of legislation. This factor is a potent indicator that the taxation in this case exceeds its intended purpose and is unreasonable. Concluding Observations

[131] While Elizabeth's Property Tax Bylaw is unreasonable, it did not come about in a vacuum. The evidence in this case also showed that Elizabeth's infrastructure need is very real, and that the stated aim of creating self-sufficient Métis communities has been thwarted by chronic capital underfunding: see, for example, *MSA* ss 114-128 on surface and mineral rights, and Schedule 3 Co-Management Agreement for Resource Development; see also the LTGFA, Schedule J regarding Financial Sustainability. It is noteworthy that the preamble of the LTGFA states that:

2020 ABQB 210 (CanLII)

> The 1989 Alberta-Métis Settlements Accord and the subsequent corresponding legislation, including the *Constitution of Alberta Amendment Act*, 1990, established the foundation for Métis people in Alberta to secure their own land base, preserve and enhance Métis culture and identity, gain local autonomy and achieve economic self-sufficiency; [Emphasis added]

[132] I find that the impugned Property Tax Bylaw is the product of Métis frustration with the failure to achieve this objective. Ironically, the lack of adequate capital funding for Métis Settlements, or a viable model for the Settlements to raise capital funds through economic benefits derived on their territory, has driven Elizabeth to enact a measure that would severely, if not fatally, impair its ability to attract the investment it needs to develop a viable tax base in the future. The present circumstance is thus unsatisfactory from many perspectives.

d. Discrimination

[133] Given this Court's conclusions on the legality of the enactment and the unreasonableness of the Property Tax Bylaw, it is not necessary to consider the allegation that the Property Tax Bylaw is improperly discriminatory. The Applicants' right to argue this late-arising ground is also contentious. Therefore, I decline to address this issue.

VI. Conclusion

[134] The Application is allowed and the Property Tax Bylaw is quashed. At the hearing, counsel indicated that the Applicant companies had made tax payments to Elizabeth equal to the previous year's levy, and would not seek reimbursement of these amounts if successful. That is a fair and reasonable position. The applicants are therefore granted the declaration they seek that they have paid their allotted share of property tax for 2019.

Heard on the 11th day of December, 2019.
Dated at the City of Calgary, Alberta, this 27th day of March, 2020.

Federal Court of Appeal

D.W. Stratas J.A.

Heard: In writing.

Judgment: July 4, 2018.

Docket: A-104-18

[2018] F.C.J. No. 707 | *[2018] A.C.F. no 707* | *2018 FCA 132*

Between The Minister of Citizenship and Immigration, Appellant, and Andrew James Fisher-Tennant by his Guardian at law, Jonathan Tennant, Respondent

(30 paras.)

Case Summary

Immigration law — Naturalization or citizenship — Application for grant of citizenship — Appeals and judicial review — Motion by respondent for order removing the Minister's notice of appeal from court file because the Court lacked jurisdiction to hear the appeal dismissed — Minister appealed Federal Court decision granting respondent citizenship although the Citizenship Act gave this power only to Minister — Although Federal Court had not certified question for consideration on appeal, Federal Court judgment on its face, if upheld, would be a clear exceedance of authority that implicated the rule of law in a serious way.

Motion by the respondent for an order removing the Minister's notice of appeal from the court file because the Court lacked jurisdiction to hear the appeal. The Minister appealed a Federal Court decision declaring the respondent to be a citizen of Canada although the Citizenship Act gave this power only to the Minister. The Federal Court did not certify a question. Section 22.2(d) of the Citizenship Act provided that the Court could not hear an appeal from the Federal Court unless the Federal Court had certified a question for its consideration.

HELD: Motion dismissed.

The judgment of the Federal Court granted the respondent citizenship although the clear language of the Citizenship Act gave this power only to the Minister. The judgment on its face, if upheld, would be a clear exceedance of authority not requiring a contentious debate over statutory interpretation, a fundamental flaw going to the very root of the Federal Court's judgment or striking at the Federal Court's very ability to decide the case in the way it did. The clear, apparent exceedance of authority implicated the rule of law in a serious way. This Court thus had jurisdiction over the notice of appeal.

Counsel

Greg George, David Joseph, Eleanor Elstub, for the Appellant.

Martha A. Cook, for the Respondent.

REASONS FOR ORDER

D.W. STRATAS J.A.

1 The Minister appeals from the judgment dated February 13, 2018 of the Federal Court (per Ahmed J.): *2018 FC 151*. The Federal Court declared the respondent to be a citizen of Canada.

2 The Federal Court did not certify a question under subsection 22.2(*d*) of the *Citizenship Act*, R.S.C., 1985, c. C-29. This subsection provides that this Court cannot hear an appeal from the Federal Court unless the Federal Court has certified a question for its consideration.

3 The respondent has brought a motion under Rule 74 of the *Federal Courts Rules*, *SOR/98-106*, asking for the notice of appeal to be removed from the court file and the court file to be closed because this Court lacks jurisdiction.

A. Has this Court already decided the matter?

4 Upon the filing of the notice of appeal in March, 2018, the Registry forwarded it to this Court for direction. In a single-sentence direction, this Court allowed the notice of appeal to be filed. In making this direction, has this Court already decided the issue under Rule 74?

5 The Minister answers that question in the affirmative. The respondent obviously thinks not: he has brought a motion under Rule 74.

6 The transmittal sheet from the Registry that prompted the Court's direction suggested that at that time Rule 72 was the concern. Thus, it may be that this Court's earlier direction that the notice of appeal may be accepted for filing was only a ruling on Rule 72, not Rule 74.

7 Rule 72 and Rule 74 fulfil different purposes. Rule 72 concerns formal defects in a document presented for filing or the failure to satisfy conditions precedent for the filing of a document; Rule 74 deals with

whether a document should be removed because it suffers from a fatal substantive defect, such as jurisdiction. See *Rock-St Laurent v. Canada (Citizenship and Immigration)*, 2012 FCA 192, 434 N.R. 144 at paras. 20-29.

8 The certified question requirement can be a matter of form to be addressed under Rule 72. A notice of appeal must be in Form IR-4 under Rule 20 of the *Federal Courts Immigration and Refugee Protection Rules*, *SOR/93-22* and the Form requires the appellant to set out the certified question. In this case, it is possible that the Court noticed the absence of a question on the notice of appeal, thought that one had been stated, regarded the absence as a mere oversight of form, and allowed the notice of appeal to be filed. Left only with a single sentence directing the Registry to file the notice of appeal, I cannot be certain that this Court considered the substantive issue. Therefore, I shall entertain the substantive issue raised in the respondent's motion under Rule 74: whether this Court has jurisdiction to consider this appeal despite the absence of a certified question.

B. The applicable law

9 The certified question requirement serves only a "gatekeeping" function: *Kanthasamy v. Canada (Citizenship and Immigration)*, 2015 SCC 61, [2015] 3 S.C.R. 909. Once appellants get past the requirement, they can raise any issues that affect the validity of the appeal. This Court explained this as follows:

> Once an appeal has been brought to this Court by way of certified question, this Court must deal with the certified question and all other issues that might affect the validity of the judgment under appeal: *Baker v. Canada (Minister of Citizenship and Immigration)*, [1999] 2 S.C.R. 817, 174 D.L.R. (4th) 193 at para. 12; *Harkat v. Canada (Citizenship and Immigration)*, 2012 FCA 122, [2012] 3 F.C.R. 635 at para. 6. The certification of a question "is the trigger by which an appeal is justified" and, once triggered, the appeal concerns "the judgment itself, not merely the certified question": *Pushpanathan v. Canada (Minister of Citizenship and Immigration)*, [1998] 1 S.C.R. 982, 160 D.L.R. (4th) 193 at para. 25. Simply put, "once a case is to be considered by the Federal Court of Appeal, that Court is not restricted only to deciding the question certified"; instead, the Court may "consider all aspects of the appeal before it": *Ramoutar v. Canada (Minister of Employment and Immigration)* (1993), 65 F.T.R. 32, [1993] 3 FC 370 at pp. 379-380.

(*Mahjoub v. Canada (Citizenship and Immigration)*, 2017 FCA 157 at para. 50.)

10 Subsection 22.2(*d*) of the *Citizenship Act* and subsection 74(*d*) of the *Immigration and Refugee Protection Act*, S.C. 2001, c. 27 both impose a statutory bar against appeals: appeals shall not be brought to this Court unless the Federal Court has certified a question. In particular, both provide that "an appeal to the Federal Court of Appeal may be made only if, in rendering judgment, the [Federal Court] certifies that a serious question of general importance is involved and states the question." From all appearances, these are absolute bars.

11 Nevertheless this Court has recognized certain "well-defined" and "narrow" categories of exception and has allowed appeals falling within the categories to be brought: see, *e.g.*, the summary in *Es-Sayyid v. Canada (Public Safety and Emergency Preparedness)*, 2012 FCA 59, [2013] 4 F.C.R. 3 at para. 28.

12 The judicial implication of exceptions into seemingly absolute bars may strike some as strange. After all, judges, like everyone else, are subject to the laws passed by Parliament. Only Parliament can legislate, not judges. Judges have no business amending Parliament's laws. This is nothing more than the "hierarchy of law" described in *Tsleil-Waututh Nation v. Canada (Attorney General)*, *2017 FCA 128* at para. 82: a constitutional provision or principle takes precedence over statutory and subordinate legislative provisions, and they take precedence over judge-made common law. Put another way, only a constitutional principle can trump or modify legislation: *Ocean Port Hotel Ltd. v. British Columbia (General Manager, Liquor Control and Licensing Branch)*, *2001 SCC 52*, *[2001] 2 S.C.R. 781*.

13 Thus, the only plausible basis for the judge-made exceptions to the statutory bars is a constitutional principle. Here, that constitutional principle is the rule of law, recognized in the preamble to the *Constitution Act, 1982* and in the unwritten principles of the Constitution. On occasion, the case law under subsection 74(*d*) explicitly acknowledges this: see *e.g. Huntley v. Canada (Citizenship and Immigration)*, *2011 FCA 273*, *[2012] 3 F.C.R. 118* at para. 7.

14 The recognized exceptions to the statutory bars--all of which exemplify rule of law concerns--include the Federal Court's failure to exercise jurisdiction in circumstances where it must exercise it (*Canada (Solicitor General) v. Subhaschandran*, *2005 FCA 27*, *[2005] 3 F.C.R. 255*), and a lack of jurisdiction owing to some fundamental flaw in the proceedings going to the root of the Federal Court's ability to decide the case (*Narvey v. Canada (Minister of Citizenship and Immigration)* *(1999), 235 N.R. 305* (F.C.A.); *Sellathurai v. Canada (Public Safety and Emergency Preparedness)*, *2011 FCA 1* at para. 6 and *Canada (Citizenship and Immigration) v. Goodman*, *2016 FCA 126* at para. 3), such as a reasonable apprehension of bias (*Re Zundel*, *2004 FCA 394*, *331 N.R. 180*).

15 An alleged error of law--even one where "an appeal would certainly succeed if it were entertained"--is not an exception to the statutory bars: *Mahjoub v. Canada*, *2011 FCA 294*, *426 N.R. 49* at para. 12; *Huntley* at para. 8; *Goodman* at para. 9.

16 The case law has not defined particularly well the exception for loss of jurisdiction for some fundamental flaw in the proceeding going to the root of the Federal Court's ability to decide the case. This motion provides this Court with an opportunity to offer a better explanation for it. The explanation I offer does not change the threshold for the exception. It remains an exceedingly difficult one to meet. Indeed, most of the cases in para. 14, above that assert the existence of this exception deny it on the particular circumstances of the case.

17 This exception covers cases where:

* it is alleged that there is a fundamental flaw going to the very root of the Federal Court's judgment or striking at the Federal Court's very ability to decide the case--examples include a blatant exceedance of authority obvious from the face of the judgment or an infringement of the rule against actual or apparent bias supported by substantial particularity in the notice of appeal; and
* the flaw raises serious concerns about the Federal Court's compliance with the rule of law.

This exception does not include contentious debates over issues of statutory interpretation, errors of law, exercises of judicial discretion, and the weight that should be accorded to evidence and its assessment.

18 The threshold is high--one must show a flaw that is "fundamental," strikes at "the very root" of the judgment or "the very ability" of the Court to hear the case, in some circumstances has "substantial particularity," and raises "serious concerns" regarding the rule of law. This high threshold allows Parliament's preference for an absolute bar to prevail in all cases except for those most rare cases where concerns based on the constitutional principle of the rule of law are the most pronounced.

19 This explanation of the exception does not use the word "jurisdiction." "Jurisdiction" is an unhelpful word that too often is thrown around with abandon. When people speak of a body regulated by legislation, such as the Federal Court, going "beyond its jurisdiction," they usually mean that the body has gone beyond the powers given to it by the statute, properly interpreted. Seen in this way, issues of so-called "jurisdiction" are just issues of legislative interpretation: *Canadian Copyright Licensing Agency (Access Copyright) v. Canada*, *2018 FCA 58* at paras. 57-59; *Canadian National Railway Company v. Emerson Milling Inc.*, *2017 FCA 79* at paras. 15-16; *City of Arlington v. F.C.C.*, 133 S. Ct. 1863 (2013). And errors in legislative interpretation are at best just errors of law, matters caught by the statutory bar: *Mahjoub* (2011), *Huntley* and *Goodman*, above.

20 Seen in this way, "jurisdiction" is not some sort of a magic password that opens the door to access to this Court. Rather, it is nothing more than a rhetorical label people sometimes use to try to boost a garden-variety issue of statutory interpretation into something more significant. In my view, in describing this very rare exception to the statutory bars it would be best if this word were avoided altogether. Rather, the exception is for fundamental flaws in well-defined, extraordinary circumstances.

21 Further underscoring the very rare nature of this exception is the meaning of the "rule of law." The "rule of law" does not mean whatever counsel can decry as egregious or unfair: *Galati v. Harper*, *2016 FCA 39* at para. 43 (concurring but not disputed by the majority) and cases cited therein. Rather, it is a limited concept illustrated by the very rare cases that have successfully applied it in this context.

22 In this context, the rule of law takes its flavour from the ills sought to be prevented by this exception. If this exception did not exist, a judge of the Federal Court could always blatantly disregard binding law and do whatever he or she wants in a case based on her or his own ideology, whim or personal idiosyncratic feelings, and then decline to certify a question. The effect? Immunization from any accountability or review.

23 "L'etat, c'est moi" and "trust us, we got it right" have no place in our democracy. In our system of governance, all holders of public power, even the most powerful of them--the Governor-General, the Prime Minister, Ministers, the Cabinet, Chief Justices and puisne judges, Deputy Ministers, and so on--must obey the law: *Reference re Secession of Quebec*, *[1998] 2 S.C.R. 217*, *161 D.L.R. (4th) 385*; *United States v. Nixon*, 418 U.S. 683 (1974); *Marbury v. Madison*, 5 U.S. 137 (1803); *Magna Carta* (1215), art. 39. From this, just as night follows day, two corollaries must follow. First, there must be an umpire who can meaningfully assess whether the law has been obeyed and grant appropriate relief. Second, both the umpire and the assessment must be fully independent from the body being reviewed. See the discussion in *Tsleil-Waututh Nation v. Canada (Attorney General)*, *2017 FCA 128* at paras. 77-79, *Slansky v. Canada*

(Attorney General), *2013 FCA 199*, *[2015] 1 F.C.R. 81* at paras. 313-315 (dissenting but not disputed by the majority), and the numerous authorities cited therein.

24 Tyranny, despotism and abuse can come in many forms, sizes, and motivations: major and minor, large and small, sometimes clothed in good intentions, sometimes not. Over centuries of experience, we have learned that all are nevertheless the same: all are pernicious. Thus, we insist that all who exercise public power--no matter how lofty, no matter how important--must be subject to meaningful and fully independent review and accountability.

C. Application of the applicable law to this case

25 In this case, the judgment of the Federal Court granted the respondent citizenship. But the clear language of the *Citizenship Act* gives this power only to the Minister. The judgment on its face, if upheld, would be a clear exceedance of authority not requiring a contentious debate over statutory interpretation--a fundamental flaw going to the very root of the Federal Court's judgment or striking at the Federal Court's very ability to decide the case in the way it did. The clear, apparent exceedance of authority implicates the rule of law in a serious way.

26 It follows, then, that this Court has jurisdiction over the notice of appeal; put another way, this Court should not remove the notice of appeal from the court file and close the file. To the extent that, contrary to what I have held, this Court has already pronounced on this substantive matter in its earlier direction, my ruling here effectively confirms it.

27 In reaching this conclusion, this Court is not in any way deciding the appeal against the respondent. Nor are serious aspersions being cast upon the Federal Court in this case. All that is being said is that the type of ground alleged--not yet proven--is of the qualitative kind that triggers an exception to the statutory bar, nothing more. And even if this ground is borne out, it may just be a technical error: although the Federal Court cannot grant citizenship, the same practical result should follow in this case because a mandatory order against the Minister forcing him to grant citizenship passes muster under the standard of review. (Note that the appellate standard of review applies, not the administrative law standard of review, to the Federal Court's choice of remedy: *Canada v. Long Plain First Nation*, *2015 FCA 177*, *388 D.L.R. (4th) 209* at paras. 88-89.)

28 I note that the reasons of the Federal Court speak of something called a "directed verdict"--a remedy not listed under section 18.1 of the *Federal Courts Act*. Perhaps what was meant was *mandamus*, which is a listed remedy: *Canada (Public Safety and Emergency Preparedness) v. LeBon*, *2013 FCA 55*, *444 N.R. 93* at para. 13; *Garshowitz v. Canada (Attorney General)*, *2017 FCA 251* at para. 8. But *mandamus*--the requiring of an administrative decision-maker to take positive action--is granted only where certain relatively rarely occurring prerequisites are met: *LeBon* at para. 14 and authorities cited therein; see also *D'Errico v. Canada (Attorney General)*, *2014 FCA 95*, *459 N.R. 167* at para. 16. And under *mandamus*, it is the Minister that performs the required administrative action, not the Court.

29 These issues and all other issues said to affect the validity of the Federal Court's judgment will be for the hearing panel to decide.

D. Disposition

30 The respondent's motion to remove the notice of appeal from the court file and close the court file will be dismissed. Costs will be in the cause.

AFFIDAVIT OF NEIL KEOWN

Sworn on December 14, 2020

I, Neil Keown, of the City of Airdrie, Alberta, SWEAR AND SAY THAT:

1. I am the chair of the Alberta chapter of Backcountry Hunters & Anglers ("Alberta BHA"). As such, I have authority to represent Alberta BHA for the purpose of this affidavit.

2. I have personal knowledge of the matters stated in this affidavit, except where stated to be on information and belief, in which case I believe that information to be true and I have provided the source of that information.

My background and expertise

3. I have been Alberta BHA's chair since the chapter's inception in 2017.

4. As Alberta BHA's chair, I am the official spokesman and representative of Alberta BHA to the media and public. My roles as chair also include: facilitating Alberta BHA's development, implementation and strategic planning process to carry out the chapter's policies and objectives; appointing committees and special positions as needed; presiding at chapter meetings; managing social media communications and newsletters; and, generally supervising the chapter's activities.

5. My professional expertise is in electrical engineering. I have 25 years of experience working in the energy, forestry, and construction sectors. My particular focus has been using remote and near sensing technologies to help assess the safety and environmental risks of various development and recreational activities on the landscape.

The Alberta Backcountry Hunters and Anglers

6. Alberta BHA is a registered non-profit society under the *Alberta Societies Act*.

7. Alberta BHA is a non-partisan organization. It does not receive support from, nor officially supports, any political party or candidate.

8. Alberta BHA's members are all full-time residents of Alberta who pay an annual membership fee. Alberta BHA has no paid staff. All my and other members' work for Alberta BHA is on a volunteer (that is, non-paying) basis.

9. Alberta BHA is loosely affiliated with, and generally shares the values and mandate of, the North American Backcountry Hunters & Anglers. This organization, based in the U.S., was founded in 2004 as a grassroots organization to advocate for ecosystem-based conservation throughout North America. (There are two other Canadian BHA chapters, in B.C. and Yukon.)

10. Alberta BHA generally operates as a stand-alone organization, setting its own policies, agenda, and priorities, and does not receive direction, or funding from the North American affiliate. Alberta BHA is managed by its volunteer board members, with direction provided by our other members.

11. As stated in Alberta BHA's bylaws, the purposes of Alberta BHA are to:

i. Ensure the protection, and the continuance of Alberta's outdoor heritage of hunting and fishing in a natural setting, through education and work on behalf of wild public lands and waters.

ii. Encourage and promote the handling and harvesting of wild game in an ethical, humane manner consistent with the principles of fair chase.

iii. Work to protect and enhance non-motorized hunting and fishing opportunities and experiences and the lands and waters that support those activities.

iv. Work in concert with the North America BHA and other BHA chapters to preserve access for Alberta residents to public lands (including, but not limited to, provincial and crown lands) throughout Canada.

12. Since Alberta BHA's inception in 2017, the Government of Alberta has recognized Alberta BHA as a stakeholder representing public interests in hunting and fishing and in wildlife and habitat conservation. At the government's invitation, we belong to several committees, including the Southern Alberta Recreational Advisory Group (now renamed the Castle/Livingstone-Porcupine Recreation Advisory Group), the Fisheries Stakeholders Advisory committee, the Bighorn Standing Committee, the Alberta Game Policy Advisory Committee (AGPAC), the Alberta Sheep Management committee, and the Castle Provincial Park planning committee.

13. Of these committees, the Castle/Livingstone-Porcupine Recreation Advisory group was spun out of the South Saskatchewan Regional Plan (SSRP), and the Livingstone-Porcupine Hills Recreation Management Plan. [The SSRP is Exhibit B to the Affidavit of E. MacLaey Blades ("Blades Affidavit"). The Recreation Management Plan is Exhibit B to the Affidavit of Alistair Des Moulins. All Exhibit references below are to Exhibits in my affidavit, unless otherwise noted.] Hunters and anglers are recognized stakeholders for the areas covered by these plans.

14. Based on its organizational activities, and many of its members' professional and personal experiences, Alberta BHA has a deep organizational knowledge of the Eastern Slopes ecosystems where hunting and fishing occur and on which fish and wildlife generally depend. Alberta BHA is also generally knowledgeable of the threats to fish

and wildlife along the Eastern Slopes and the various provincial plans, policies, and other tools for addressing those threats.

Category 1 and 2 lands under the Coal Policy

15. The land classification map in Exhibit B of Macleay Blades' affidavit shows the lands classified as Category 1 and 2 lands under part 3.13 of *A Coal Development Policy for Alberta* (1976) (the "Coal Policy"). [The Coal Policy is in Exhibit A of the Blades Affidavit.]

16. Category 2 lands consist mostly of areas that the Alberta government has designated as "environmentally sensitive areas." (See Map 3 attached to CPAWS' November 2020 letter, in Exhibit Q to the Affidavit of Katherine Morrison, p. 111.) These designations are for areas that are either "[i]mportant to the long-term maintenance of biological diversity, soil, water, or other natural processes, at multiple spatial scales" or, that "contain rare or unique elements or that include elements that may require special management consideration due to their conservation needs."[1]

17. The map in Exhibit Y of the Morrison affidavit shows the locations of Category 2 lands relative to parks and other protected areas, and to "prime protection zones" (PPZs) designated in the Government of Alberta's *Policy for Resource Management of the Eastern Slopes* (revised 1984) (the "Eastern Slopes Policy" [Exhibit A]). My veritable belief is that the PPZs used for this map include the PPZs designated in the Integrated Resource Plans (IRPs) that cover parts of the Eastern Slopes. Coal exploration and development are not a permitted land use in those PPZs. This is shown on the tables of "compatible activities by land use zone," on page 29 of the Livingstone-Porcupine Hills IRP which is attached to the Blades Affidavit as Exhibit F, page 15 of the Eastern Slopes Policy, and Table 2 of the Ghost River IRP. (Excerpts of this IRP are in Exhibit F of my affidavit.) My understanding is that the Eastern Slopes Policy and all other relevant IRPs use the same table.

18. The environmental values and natural, renewable resources of the Category 1 and 2 regions are well known. These lands are home to the westslope cutthroat and bull trout, both of which are designated as "threatened" species under the federal *Species at*

[1] Alberta Environment and Parks, *Environmentally Significant Areas Report*, https://www.albertaparks.ca/albertaparksca/library/environmentally-significant-ar. eas-report/.

Risk Act.[2] Numerous other wildlife species, including mountain goats, bighorn sheep, grizzly bear (which are a "threatened" species[3]), elk, whitetail and mule deer are located within these lands.[4] These lands are also the source of fresh water for numerous downstream communities.

19. The ecological values of Category 1 and 2 lands have been under greater and greater threats—especially in the last few decades since the Coal Policy was adopted in 1976. These threats have been caused by Alberta's steadily (and sometimes rapidly) growing population and from increasing, often conflicting demands on the landscape from resource extraction and industrial and recreational uses.

20. These increasing demands on the landscape have led to considerable habitat fragmentation and loss[5] and direct wildlife disturbances.[6]

[6] Dan Farr, et al., *Ecological Response to Human Activities in Southwestern Alberta: Scientific Assessment and Synthesis* (Dec. 2017), https://open.alberta.ca/dataset/e77ce35a-230d-4aff-9df9-e15ccb4ddf04/resource/8a3af9fe-e4ec-4914-92ae-b25774866421/download/emsdcastlesciencereviewv58final.pdf.

21. The ecological values of Category 1 and 2 lands are also significantly at risk from climate change—which is reducing water supplies,[7] and causing or at least exacerbating forest fires[8] and timber loss from pine bark beetles[9]—and from linear disturbances.[10]

22. The Alberta Government has long acknowledged these threats, for example, in the 1984 Eastern Slopes Policy (p. 1) [Exhibit A], the 2006 Land Use Framework (p. 6) [Exhibit B], the 2007 companion to that Framework, *Understanding Land Use in Alberta* (p. i) [Exhibit C], and statements about climate change.[11]

23. Following its adoption of the Coal Policy's land classifications, the government revised its Eastern Slopes Policy in 1984 and adopted several Integrated Resource Plans (IRPs). While these plans have had some value, they have long been recognized as falling well short of the mark for establishing an integrated system for managing cumulative effects and for resolving competing demands on the land.[12]

24. The government ceased developing and updating the IRPs in the 1990s.[13]

[13] Kennett and Ross, *In Search of Public Land Law in Alberta*, *supra* note 12, p. 11.

25. These deficiencies led ultimately to the Legislature's adoption of the *Alberta Land Stewardship Act*, but that tool has been criticized for failing to *require* regional plans to manage cumulative effects and to set other *binding* benchmarks for environmental protection.[14] To date, the provincial cabinet has adopted a regional plan, under the *Alberta Land Stewardship Act*, for the South Saskatchewan region, but not for any other part of the Eastern Slopes.[15]

Effects of the Coal Policy Rescission

26. Information Letter 2020-23 states that, with the Coal Policy rescission, "all restrictions on issuing coal leases within the former coal categories 2 and 3 have been removed." [Exhibit C to the Blades Affidavit.] However, that Letter also states that Alberta will "continue to restrict coal leasing, exploration and development" on former Category 1 public lands and that this "prohibition on coal activities" is being continued to "maintain watershed, biodiversity, recreation and tourism values" along the Eastern Slopes.

27. The environmental risks and impacts of surface coal mining are described in the Morrison affidavit and in the CPAWS letter attached as Exhibit Q to that affidavit. I agree with those descriptions and stress that the impacts from mining activities on Category 2 lands will be felt even on those Category 1 lands where mining is still prohibited. Watersheds and other types of ecosystems cut across the Category boundaries.

Effects of the rescission on Alberta BHA and its members

28. The impacts from the Coal Policy rescission are already being felt, given the exploration roads and drilling sites that have appeared on the landscape since the rescission came into effect. Alberta BHA members, and others who recreate in those areas, are raising alarms over the speed and extent that these disturbances are taking place, often in critical habitat for westslope cutthroat trout, and bighorn sheep.

[15] E.g., Government of Alberta, *Environment and land use planning*, https://www.alberta.ca/environment-and-land-use-planning.aspx.

29. Alberta BHA's members generally spend much of their free time in Alberta's backcountry, from the prairies to the mountains, seeking the solitude of the wilderness, searching adventure, and foraging from the land in a sustainable fashion. Our members use fish and wildlife habitats for fishing (e.g. westslope cutthroat trout and bull trout) and hunting (e.g. bighorn sheep, goat, elk, black bear, and mule deer). Our members rely on these areas for outdoor enjoyment, in addition to supplying food for themselves and their families. Our membership has grown steadily which reflects the trend of increased hunting/fishing licence sales in Alberta over the last decade.[16] Healthy habitats and game populations are needed to sustain this trend.

30. A substantial part of our members' outdoor activities occurs on public lands within both Categories 1 and 2 of the Coal Policy, as many of us are drawn to undisturbed areas. For the last 6 years, I personally have spent an average of 25 days every year, recreating in some form—backcountry camping, hiking, hunting, or fishing—on Category 1 and 2 public lands, including lands in the Livingstone, Porcupine Hills, Castle, Oldman, Ghost, and Ram River areas.

31. Given their uses of wildlife habitat, our members are generally adversely affected by and deeply concerned about industrial and other activities that harm wildlife habitat or limit public access to wildlife habitat. The habitat disturbances and other environmental impacts of the Coal Policy, as noted above, will in turn harm my and our other members' uses of those Category 1 and 2 lands.

32. Coal developments in Category 2 lands will also remove public access for our members to important hunting and fishing areas on these lands.

33. The Coal Policy rescission adversely affects me and Alberta BHA's other members in one more respect. I and many other members spend time and effort in the field working to protect trout habitat and remediate damage from human causes. This work includes garbage removal, willow planting, and stream crossing remediation projects within the Elbow River Watershed (2018), Ghost Public Land Use Zone (2019, 2020), Maclean Creek Public Land Use Zone (2019), CPR Lake (2020), Edmonton River Valley (2020), and Manawan Lake (2020). The Coal Policy rescission will frustrate field work in any Category 2 lands by increasing coal exploration and development which in

[16] Government of Alberta, *Historic Annual Licence Sales Statistics*, https://open.alberta.ca/publications/historic-annual-licence-sales-statistics.

turn will increase threats to the same habitats or species our field work is trying to protect.

34. Government consultations on proposed land use policies provide an important tool to enable Alberta BHA to fulfill its purposes. The lack of any chance to consult on the Coal Policy rescission has therefore adversely affected Alberta BHA as an organization.

Alberta BHA's expectation of consultation before the Coal Policy rescission

35. According to a 2017 survey conducted for the Alberta government, the hunting and angling community makes up 25% of the outdoor recreationists in Alberta.[17]

36. From my experience, when the government is considering policy changes that could impact hunting and angling or wildlife habitat, these changes are brought forward to at least one of the committees in which Alberta BHA participates, or to the public as a whole, as part of a public consultation process. (Examples of these changes include the "Alberta Crown Land Vision" (2020), "Sustainable Outdoor Recreation" (2020-21), the opening of the crane hunt (2020), Wildlife Regulation revisions (2018/2019/2020), and the proposed angling ban for Central Alberta watersheds (Dec. 2018).) Alberta BHA typically provides input on these types of consultations and encourages its members to participate on an individual basis.

37. The committees then discuss the proposed changes and provide feedback to the government representatives. The records of these discussions, and any subsequent votes, are generally recorded by the government representatives, to identify the stakeholders that have been consulted and to record their input.

38. The committees listed in paragraph 12 above are among the multiple committees that meet on a regular basis to discuss land planning and other matters of concern regarding Category 1 and 2 lands. Given committee members' ongoing work in these committees, those members would have expected that any proposed major government policy changes for these lands would have been raised in these committees before the changes were made.

[17] Advanis, *2017 Albertan Recreation Survey* (July 2017), https://open.alberta.ca/dataset/58b1254f-9842-4abf-8bb5-86ecb940245e/resource/077024f6-9900-4c70-a101-d0c1c099b0c3/download/recreation-survey-2017.pdf.

39. However, since 2017, the government has never asked for input in the committees to which Alberta BHA belongs, on a proposal to rescind the Coal Policy generally or its zoning categories, in particular. Nor has the government even notified those committees that it was considering any such proposed action.

40. In addition, at least since 2017, the government has not invited the general hunting and angling community, or (to my knowledge) the public generally, to consult on any proposed changes to, or the rescission of, the Coal Policy's zoning categories. Nor has the government invited Alberta BHA or me personally to provide input on any such proposal.

41. Page 61 of the South Saskatchewan Regional Plan (SSRP) refers to IRPs and to the Coal Policy; page 62 explains that an "integrated approach" includes "coordination of engagement with other governments, industry, stakeholders and the public…." [Blades Affidavit, Exhibit G]

42. Before the Coal Policy was rescinded, I and Alberta BHA generally were aware of these cross-references and the "integrated approach" explanation, on pages 61 and 62 of the SSRP, respectively. Based on these pages, we expected that, before the government rescinded or revised the Coal Policy, the government would review Part 3.13 of the Coal Policy as part of a review of the relevant IRPs and that that review would include public consultation.

43. To my knowledge, the integrated review referenced in pages 61 and 62 of the SSRP has not occurred. In addition, the Government of Alberta did not consult with Alberta BHA before rescinding the Coal Policy.

44. For many years, the hunting and angling community has raised concerns about the destruction of wildlife habitat from resource exploitation in Alberta. According to one source, the Alberta Fish and Game Association was one of two groups "directly responsible" for spurring the provincial Environment Conservation Authority (ECA) to conduct hearings, in the early 1970s, on the impact of surface coal mining in Alberta.[18] Members of the hunting and angling community were also active participants in the ECA's 1973 consultations on land use and resource development in the Eastern

[18] P.S. Elder, "The Participatory Environment in Alberta," 12 Alta. L. Rev. 403 (1974), pp. 411 and 414, http://www.albertalawreview.com/index.php/ALR/article/download/2366/2355/2478.

Slopes.[19] And the fish and game community was represented on the Public Advisory Committee on the Environment, which provided input for the ECA's 1976 report on coal mining in the Eastern Slopes.[20] (The ECA's 1973 consultations and 1974 report are described in the Luff Affidavit filed by the Judicial Review Applicants.)

45. A more recent example of our expression of these concerns was in a public consultation held by Coalspur Mines Ltd., regarding its "Vista Coal Underground Mine and Expansion Activities Project".[21] In another public consultation, done by Coal Valley Resources, fish and game associations raised concerns about loss of access.[22]

46. Had Alberta BHA been consulted on a proposed rescission to the Coal Policy's zoning categories, it would have noted the impacts of coal mining and the threats to the Eastern Slopes discussed above—that is, the increasing threats to Category 1 and 2 lands, and the continued absence of an effective integrated land management system for addressing competing uses and cumulative effects.

Complaint to the Land Use Secretariat

47. Alberta BHA's counsel Michael Wenig informed me that, on October 23, 2020, he emailed the complaint attached to this affidavit (Exhibit D) to the Land Use Secretariat. The complaint was submitted under the *Alberta Land Stewardship Act*, on behalf of Alberta BHA.

48. On December 3, 2020, a representative from the Land Use Secretariat sent Mr. Wenig an email stating that the complaint had been received and was "currently under review." Mr. Wenig has informed me that, to date, he has not received any further response. Alberta BHA has also not received any further response.

Clarification of continuing "restrictions" on Category 1 lands

49. Information Letter 2020-23 states that "Alberta will continue to restrict coal leasing, exploration and development within public lands formerly designated as coal category 1." [Blades Affidavit, Exhibit C]

50. On November 12, 2020, Alberta BHA's counsel Mr. Wenig emailed Alberta Energy Regulator (AER) officials (with a copy to Energy Assistant Deputy Minister Martin Chamberlain, Q.C.) the letter attached to my affidavit as Exhibit E. The letter requests clarification of whether the word "restrict," in the statement quoted in the prior paragraph, means "prohibit".

51. On November 30, 2020, I received the AER response attached to this affidavit in Exhibit E.

52. This affidavit is filed in support of Alberta BHA's application for leave to intervene or, in the alternative, in support of the application of CPAWS Southern Alberta Chapter for intervenor status.

PREFACE

A Policy for Resource Management of the Eastern Slopes, published in 1977, provided for a range of opportunities in the region in keeping with the provincial social, economic and environmental goals of the day. Since its introduction, the policy has served as the regional base for an active program and more detailed sub-regional planning designed to deliver the benefits of the area to all Albertans.

During the past several years, the administrative aspects of the policy have been reviewed in detail and certain revisions have been made in order to keep the policy current and consistent.

The 1984 revision is intended to reflect the realities of the economic situation in Alberta, and to provide for the maximum delivery of the full range of values and opportunities in this important region. Given the high scenic and recreation values of the area, particular emphasis is placed on the need for the development of a strong tourist industry in the region during the next two decades. Such development must rely heavily on the private sector for success.

The policy presents the Government of Alberta's resource management policy for the public lands and resources within the region. It is intended to be a guide to resource managers, industry and publics having responsibilities or interests in the area rather than a regulatory mechanism. Resource potentials and opportunities for development are identified with a view to assisting in the economic progress of Alberta. The policy is sufficiently flexible so that all future proposals for land use and development may be considered. No legitimate proposals will be categorically rejected. Should a proposal not be in keeping with the provisions of the policy for that area, alternative means will be explored for accommodating the proposal in a more appropriate location in the region.

The on-going integrated resource plans will make the policy work — to provide opportunities and stimulate economic growth and security while maintaining the key watershed and recreation values of the area.

I am confident that the Eastern Slopes Policy will continue to serve as a strong guide for the future in this important region of Alberta.

Hon. Don Sparrow
Associate Minister
Public Lands & Wildlife

EASTERN SLOPES

SCALE 1: 5 000 000

Introduction

MANAGEMENT IN THE EASTERN SLOPES — PAST AND PRESENT

The Eastern Slopes of Alberta's Rocky Mountains covers an area of approximately 90 000 square kilometres of mainly forest-covered mountains and foothills. The region possesses a great wealth of renewable and non-renewable resources — water, scenery, timber, forage, wildlife, fisheries and mineral resources — the majority of which lie upon or beneath public lands. Demands for use of these resources have increased at a rapid rate over recent years, making it more evident that the resource base of the Eastern Slopes is not unlimited. Growing pressures for resources and land in the area have led to conflicts in land allocation and to a rising concern for the protection of environmental quality and the management of this extremely important watershed region.

To deal with issues and concerns over the years, the development of resource and land use policies for the Eastern Slopes has passed through several stages. The Eastern Rockies Forest Conservation Board, which operated under joint federal-provincial legislation between 1948 and 1973, was effective in providing a watershed management policy and planning framework for the Rocky Mountains Forest Reserve — the reserve recognized as the critical headwaters region for the prairie provinces. The Board analyzed the watershed and hydrologic characteristics of the area and provided priorities and guidelines for the management of renewable and non-renewable resources to optimize water quality and quantity.

The establishment of the Green Area in 1948 also gave policy direction for Eastern Slopes management. The Green Area, in which most of the Eastern Slopes region lies, defines the extent of those lands withdrawn from settlement. The majority of the lands in the area are public lands on which farming and residential development have been prohibited. The Rocky Mountain Forest Reserve was formally established by the Forest Reserve Act, 1964, for the conservation of forests and other vegetation, and the maintenance of conditions favourable to optimal water supply.

In 1970, in response to rapidly growing demand for resources, the Alberta Government began two planning studies in the Eastern Slopes — the Foothills Resource Allocation Study and the HintonYellowhead Regional Land Use Study. These studies initiated a planning process designed to identify resource uses for land units based on an evaluation of resource capability, present land use, economics and demand.

In 1973, the Environmental Conservation Authority (ECA) conducted hearings into land use and resource development in the Eastern Slopes in order to identify the views and concerns of the public of Alberta. Briefs presented to the hearings, and the results of a public opinion survey, strongly emphasized watershed and public recreation priorities and the need for an integrated resource policy and land use planning for the area. The importance of beginning such a program was stressed throughout the 232 recommendations of the ECA which were submitted to government in 1974. On July 18, 1975, the government announced a policy for integrated resource management in the Eastern Slopes.

In addition, the Eastern Slopes Interdepartmental Planning Committee was established in 1975 to make recommendations on an integrated resource planning approach for the management of this strategic region of Alberta. Based on these recommendations, the government approved the original policy, published in July 1977 as *A Policy for Resource Management of the Eastern Slopes*, to ensure that all public lands and resources in the Eastern Slopes are protected, managed or developed according to a philosophy of integrated resource management.

Reviews of, and revisions to, the policy will ensure that it continues to be an effective tool for the government to respond to the needs and wants of Albertans and their concerns for protection of the Eastern Slopes.

FRAMEWORK OF PROVINCIAL NATURAL RESOURCE GOALS

Provincial goals for the various resource sectors provide the framework for developing more detailed regional resource objectives. The provincial goals outlined here are those that are relevant to the Eastern Slopes and apply only to public lands and resources. They are only part of a much larger picture. Provincial social, economic and environmental goals will greatly influence the achievement of the resource objectives. However, as the Eastern Slopes is a very large area and one which is important to many of the social, economic and environmental aspects of life in Alberta, the achievement of the regional resource objectives is important to the province as a whole.

The environment of land, water, vegetation and wildlife must be managed totally and not as separate elements. Although the provincial goals and regional objectives are defined individually, the management required to achieve any one objective does consider the many interrelationships with the environment.

Because the demands are so high, there is often a competition for the same land and same resources in the Eastern Slopes. Thus, not all goals will be achieved to the same degree of success in all areas.

The following goals relate to the natural resources of the region, and are not presented in any particular order of priority.

Water Management
To ensure a continuous, reliable supply of clean water to meet the needs of Albertans and interprovincial users now and in the future.

Wildlife
To provide a variety of outdoor recreational and commercial opportunities based on wildlife resources for the benefit and enjoyment of Albertans.

Fisheries
To provide a variety of outdoor recreational opportunities based on fisheries resources for the benefit and enjoyment of Albertans.

Recreation
To provide both private and public recreation opportunities that will meet the needs of Albertans and also enhance the vacation experiences of visitors to the province.

Timber
To provide the optimal continuous contribution to the economy by the forest-based industries consistent with sound environmental practices recognizing other uses of the forest.

Rangeland
To provide a properly managed forage base of the rangelands for use by wildlife and domestic livestock.

Agriculture
To encourage the optimal development of the renewable resources for the production, processing and marketing of agricultural products for an expanding domestic and export market.

Tourism
To encourage the provision of a diverse range of private and public sector tourism facilities, attractions, accommodations and services capable of meeting increasing demands for leisure and business-related opportunities.

Mineral Resources
To encourage exploration and development of all mineral resources to meet the needs of Albertans now and in the future.

Cultural and Ecological Resources
To ensure that significant features of archaeological, ecological or historical value are identified, protected and managed for scientific, educational and recreational benefits.

DOCUMENT ORGANIZATION

The *Policy for Resource Management of the Eastern Slopes, Revised 1984* is organized into two major parts:

1. Policy statements define the management intentions for the region. These statements reflect the priorities for resource management that will ensure that the special benefits from this region will continue to be provided to Albertans.
2. The regional plan provides more specific resource management direction. Resource objectives that can be achieved in the region are stated. Zoning maps and descriptions indicate where the objectives or groups of objectives can be met. Within the zone descriptions, the compatibility of a number of land use activities and the objectives generally to be achieved from the zone are identified. In addition, a complete description of how the policy statements and the regional plan will be implemented has been included in this revised edition of the document. Guidelines for specific aspects of resource management affecting the region have been included for both the Eastern Slopes Policy statements and the regional plan.

This revised document has been organized to show the relationship among broad provincial goals, policy statements for resource management of a special region — the Eastern Slopes — and the regional plan, which provides the initial level defining what, where and how resources will be managed to meet parts of the provincial goals.

Eastern Slopes Policy

The Eastern Slopes Policy defines the emphasis for realizing resource opportunities in the area. Policy statements describe:

- The management intentions for the Eastern Slopes and the direction which is required to assure that the character of the slopes will continue to provide the special benefits the region has to offer Albertans.
- The policy guidelines which identify the most important resource opportunities of the region and the major priorities to be considered in the management of the Eastern Slopes.
- The general procedure to assure that the desired direction and the policy guidelines are recognized in the on-going management of the public lands and resources in the Eastern Slopes.

MANAGEMENT INTENTIONS FOR THE EASTERN SLOPES

Public concerns for the future of the Eastern Slopes have centred on the need for government policy which would recognize those land areas providing different types of benefits. The public has also strongly requested that government employ a comprehensive and integrated approach in managing the natural resources in the region.

Information from the Foothills Resource Allocation Study, combined with public concerns and government objectives and priorities, has led to the recognition that, within the Eastern Slopes, different intensities of land use zones are required to ensure that the desired qualities are protected and that the resources are used effectively to provide benefits to Albertans.

These broad areas are conceptual in nature; however, they are clearly defined by their intents.

BROAD AREAS	INTENTS
Protection	To provide the highest level of protection for those areas which are known to form the unique character of the Eastern Slopes.
Resource Management	To foster wise mixed use of the natural resources to achieve specific goals and objectives.
Development	To recognize existing and provide for future site-specific development.

South Kakwa River

POLICY GUIDELINES FOR THE EASTERN SLOPES

To achieve the policy intents for this special part of Alberta, and also to gain benefits from all the natural resources, the government will follow these basic policy guidelines:

- The highest priority in the overall management of the Eastern Slopes is placed on watershed management. Recreation and tourism benefits from the private and public sectors are also extremely important.
- The natural resources of the Eastern Slopes will be developed, managed and protected in a manner consistent with principles of conservation and environmental protection.
- The uniqueness of the Eastern Slopes, due to its aesthetic qualities and combination of environments, will be maintained.
- The recreation resources of the mountains and foothills will be maintained while increasing the opportunities for Albertans to enjoy this unique region.
- The management of renewable resources is the long-term priority in the Eastern Slopes. Non-renewable resource developments will be encouraged in areas where this priority can be maintained.
- Decisions for development, management and protection of natural resources in the Eastern Slopes will be based on an integrated resource planning system.
- All levels of integrated resource planning will include a public involvement program.

IMPLEMENTATION

The management intentions and policy guidelines for the Eastern Slopes are incorporated into the programs the provincial agencies use to manage Alberta's natural resources. The government has determined that public lands and resources will be protected, managed and developed with a philosophy of integrated resource management. According to this philosophy, the process for combining the intents and policy guidelines for the detailed management of the Eastern Slopes involves the allocation of resources on a regional scale through the use of a regional plan. Generally, this is a broad plan which defines what is to be achieved, where the protection, management and development emphasis will be, and what resource objectives might be met in the different parts of the region.

The regional plan considers provincial natural resource goals within the intents and policy guidelines of the Eastern Slopes, other provincial policies and goals, and information on resource capabilities, uses and demands. The plan gives broad direction to the resource management agencies and a further commitment to the public of what benefits can be expected from this region.

The management intents for the Eastern Slopes Policy are also implemented through other policies and guidelines. Some of the more relevant of these are as follows.

Above left: Provincial Legislative Assembly

Above right: Energy and renewable resources (Gas plant and cutblock)

Below: Managing the forest (Cutblock)

1. Integrated Resource Planning System

As part of the concept of integrated resource management, it is desired that decisions on the allocation and use of public lands and resources be made through an integrated resource planning system. This system has been formally developing since the completion of the Eastern Slopes Policy in 1977.

Integrated resource plans completed for the Eastern Slopes will be approved by a provincial Cabinet committee.

2. Public Involvement Process

The purpose of the public involvement process is to provide a means for involving the interested public of Alberta in integrated resource planning in an appropriate way. The government believes that this results in better and more acceptable plans for public lands and resources.

One level of public involvement is the Alberta Integrated Planning Advisory Committee which provides advice to the Associate Minister of Public Lands and Wildlife on provincial integrated resource planning issues. The committee is composed of representatives from major provincial interest groups concerned with public land and resource uses. These public interest groups are also consulted to provide their perspective at the working level.

Other concerned groups and individuals are also recognized and given the opportunity to be involved and informed during the integrated resource planning process.

A successful public involvement program allows government to learn from the concerned public, consider its views and keep it informed on a continuing basis. This provides better and more acceptable integrated resource plans for Alberta's public lands and resources.

A protected area (Willmore Wilderness)

3. Existing Legislation

A Policy for Resource Management of the Eastern Slopes, Revised 1984 was prepared with the understanding that it would be implemented within the terms of existing legislation and regulations by those government departments with appropriate administrative responsibilities. In addition, the lands affected by the policy were not to be considered exempt from requirements established by other legislation.

4. Other Government Policy Statements

Extensive areas of the Eastern Slopes designated for long-term development or large-scale resource development are frequently recognized by government policy statements. Examples are *The Policy for Recreation Development of Kananaskis Country, A Coal Development Policy for Alberta* and the *Fish and Wildlife Policy for Alberta*. The application of all such policies which have implications for the protection, management and development of public land and resources in the region must conform with the intent of the Eastern Slopes Policy.

5. Preliminary Disclosure

A preliminary disclosure is a means by which both the private and public sectors may make major development proposals, on a *confidential* basis, to government. Through preliminary review, the government may indicate whether it has objections "in principle" to a proposal's form, timing, location or any other essential feature. No objection in principle of a major development proposal resulting from preliminary disclosure constitutes approval for the filing of necessary applications and documents as required under controlling legislation.

6. Request for Proposals

A "request for proposals" is a means by which the government may play a more active role in identifying and directing the development of major resource facilities, particularly those involving the recreation sector in the Eastern Slopes. The request-for-proposals approach has been used in recent years in Alberta as the decision mechanism for major resource developments such as integrated forest products operations. This approach has allowed the government to identify key requirements prior to receiving proposals, and ensures that the best proposal, rather than the first, is accepted.

The request-for-proposals approach handles development concepts from either the private sector or government departments. Integrated resource planning will identify areas and sites having the potential for various types of developments. The request-for-proposals approach recognizes, however, the need to maintain the preliminary disclosure process as the means of reacting to development concepts from the private sector.

7. Referral Review

In the case of major developments and site-specific dispositions of public lands and resources in the Eastern Slopes, the requests are subjected to intensive referral review procedures. Referral procedures and information requirements have been defined for a number of types of major developments and site-specific requests. The approach is consistent with the shared decision-making philosophy of integrated resource management.

Regional Plan for the Eastern Slopes

The regional plan takes direction from the provincial natural resource goals and the Eastern Slopes Policy. The plan combines the direction with information on broad resource capabilities, present land uses and demands. (The Foothills Resource Allocation Study and the Environmental Conservation Authority hearings provided a significant information base for the development of the plan.) Thus, the plan is able to link the general provincial direction and ideals with the specifics of the resource base of the Eastern Slopes. This gives clearer direction to the government agencies involved with the management of the natural resources of the region. The regional plan is the first stage and one part of integrated resource management for the Eastern Slopes.

The regional plan considers three major questions:

- What are the main resource objectives that will be striven for in this region in order to meet some of the various needs of Albertans?
- Where are these objectives going to be met and where are the development, management and protection intents, vital to the Eastern Slopes Policy, to be achieved?
- How are the various resource uses going to occur together in the region in order to ensure that the policy guidelines for the Eastern Slopes are being followed?

The plan has three main parts:

1. Regional Objectives, which outlines those objectives that will be striven for in various parts of the region.
2. Regional Land Use Zones, as shown on the three map sheets in the back-cover pocket, which describes the resource objectives that might be achieved in each zone and the intent of the zone in terms of development, resource management or protection.
3. Implementation, which describes how the regional plan is to be implemented through both the more detailed integrated resource planning and the Table of Compatible Activities.

REGIONAL OBJECTIVES

Identification of objectives for each resource sector is necessary in order to determine what range of benefits can possibly be gained from the region's resources. For the regional plan, the objectives have been developed from broad information gathered during studies such as the Foothills Resource Allocation Study and through the continuing management programs of the departments involved in the management of the Eastern Slopes. The objectives, however, have not been modified in terms of how one affects another in any particular area. Thus, although it is expected that all objectives have a high possibility of being achieved in the Eastern Slopes, not all objectives will necessarily be achieved in all areas. If the objective is not achievable in a particular zone, every attempt will be made to accommodate it in another area.

A source of prairie water (Kananaskis Country creek)

Watershed Management

1. To manage and develop natural resources in the region to maintain or increase the volume of water yield and the natural timing of surface and sub-surface discharge.
2. To manage headwaters in the region to maintain the recharge capabilities and protect critical fisheries habitat.
3. To manage intensively the South Saskatchewan River Basin for water supply stability.
4. To manage the North Saskatchewan and Athabasca river watersheds to maintain natural flows and provide the option for future increases in water yield through intensive management.

Wildlife

The following are the general objectives for wildlife management. More specific population goals will be identified in the *Status of the Fish and Wildlife Resource in Alberta* and the subsequent detailed species management plans.

1. To allocate benefits derived from the wildlife resources with priority to recreation benefits to Albertans followed by economic benefits gained from various uses of wildlife through tourism.
2. To ensure that wildlife populations are protected from severe decline and that viable populations are maintained.
3. To identify very rare, scarce or special forms of outdoor recreation opportunities from wildlife and to ensure that access to these opportunities continues to be available.
4. To ensure that significant local resource shortfalls between demand and supply are addressed regionally.
5. To maintain wildlife on the basis of fundamental ecological principles.

Mountain wildlife (Mountain goat)

Fisheries

1. To protect aquatic habitat and ensure high water quality.
2. To establish optimal instream flow for fish through modification of land/water use practices.
3. To recognize sport fishing as the principal use of the fishery resources in the Eastern Slopes.
4. To maintain naturally reproducing salmonid (trout, char, grayling and whitefish) populations in the region and to expand these fish resources into presently vacant and appropriate aquatic habitat.
5. To supplement or enhance game fish stocks by stocking when natural reproduction does not occur or is limited.

Recreation

1. MAJOR RECREATION OPPORTUNITIES
   To establish recreation development opportunities to be provided by the private and public sectors based on present and future recreation demand. To develop and manage a diverse range of resource-based recreation developments.
2. CAMPING FACILITIES
   ☐ Auto Access
   To increase the number and scope of designated camping opportunities by expanding existing facilities and developing new sites.
   ☐ Group Camping
   To increase group camping facilities throughout the Eastern Slopes.
   ☐ Remote Camping
   To increase the number of camping sites accessible on foot, by horse, and by off-highway vehicles (OHV).
3. TRAILS
   ☐ Land-Based
   To increase the number of kilometres of long-distance trails in the region for hiking, skiing, horse-riding and OHV use.
   ☐ Water-Based
   To designate and manage water-based trails to provide opportunities for a variety of activities such as canoeing, power boating, kayaking and rafting.
4. DAY USE
   To increase extensive day-use sites, e.g., rest stops, picnic areas and viewing points.
5. VISITOR SERVICES
   To provide for a variety of trails oriented toward nature and historical appreciation and understanding resource management. To increase public awareness toward the preservation of representative and unique features of natural and/or cultural significance for interpretation, education and appreciation throughout the Eastern Slopes.
6. WILDERNESS
   To maintain areas of wilderness or primitive character.
7. WATER ACCESS
   To develop and manage a range of facilities and services to provide access to various water bodies throughout the region.
8. FISH AND WILDLIFE
   Within the context of the *Status of the Fish and Wildlife Resource in Alberta*, to establish fish and wildlife outdoor recreation objectives and priorities related to the supply and the present and projected demands.

Cultural and Ecological Resources

To protect both representative and unique areas of natural or cultural significance for the recreational, scientific and educational use of Albertans.

Tourism

1. To encourage the provision of a wide variety of tourism opportunities and services in the Eastern Slopes.
2. To encourage the development of tourism opportunities and services capable of operation on a year-round basis.
3. To support the provision of tourism opportunities and services by the private sector wherever feasible and to minimize the occurrence of public sector competition with private sector developments for specific tourism markets.
4. To ensure the provision of an adequate land base for tourism activities while maintaining the high aesthetic quality and thus maintaining the value of the tourism experience.
5. To maintain the environmental and aesthetic qualities of the Eastern Slopes, while expanding tourism opportunities in the area through:
   - ☐ grouping tourism facilities and services where feasible (recognizing the need for unique siting and scenic requirements of particular types of facilities)
   - ☐ ensuring the careful design of facilities to limit impact on the environment
   - ☐ encouraging environmentally-conscious operation of facilities and services after their completion

Recreational use of the land (Outfitting)

Timber

1. BOW/CROW FOREST

☐ Crowsnest Portion

To increase the sustained-yield timber supply available to quota holders and the general public through an expanded permanent forest land base consistent with optimal forest land allocation.

☐ Southern Bow Portion (Kananaskis Country)

To ensure a healthy forest environment in this prime recreational area and provide a reasonable supply of timber on a sustained-yield basis to wood utilizing facilities and the general public. The high standard of harvest operations will ensure maintenance of aesthetic qualities and a quality environment for the prime use of recreation.

☐ Northern Bow Portion (Ghost, Little Red Deer, Red Deer and Burnt Timber river areas)

To maintain a sustained-yield timber supply to wood utilizing facilities and for local public use. To increase the sustained-yield timber supply available to timber quota holders and/or forest management agreement holders and the general public through an expanded permanent forest land base consistent with optimal forest land allocation.

2. ROCKY/CLEARWATER, EDSON, WHITECOURT AND GRANDE PRAIRIE FORESTS

To maintain a sustained-yield timber supply to the wood utilizing facilities and for local public use. To increase the sustained-yield timber supply available to timber quota holders and/or forest management agreement holders and for local use consistent with optimal forest land use allocation.

Mineral Resources

1. COAL
   To increase income and job benefits from the coal resources and to meet Alberta's growing demands for coal for energy and other industrial requirements. To encourage the supply of coal and coal products to other parts of Canada and foreign countries after ensuring the long-term adequacy of supply for provincial needs.
2. OIL AND NATURAL GAS
   To create income and job benefits from oil and natural gas resources throughout the region.
3. QUARRIABLE AND METALLIC MINERALS
   To create income and job benefits from quarriable and metallic mineral resources.
4. AGGREGATE RESOURCES
   To make aggregate resources in the region available to meet present and future needs.

Rangeland

1. To maintain rangelands in good condition through sound range management practices.
2. To restore rangelands on which forage productivity has declined from the encroachment of unproductive brush species.
3. To improve rangeland capability through more intensive range management.

Agriculture

1. To ensure the continued viability of existing livestock operations by sustaining 1977 levels of livestock numbers through the use of public lands.
2. To provide for the cultivation of lands that are suitable for production of annual and/or forage crops.
3. To expand domestic livestock grazing opportunities on public lands in that part of the region north of the Trans-Canada Highway.

A prime protection area (Mountains west of Hinton)

REGIONAL LAND USE ZONES

The three broad areas of protection, management and development can be defined, on the land base of the region, as eight regional land use zones.

Broad Areas	Regional Zones
Protection	1. Prime Protection
	2. Critical Wildlife
Resource Management	3. Special Use
	4. General Recreation
	5. Multiple Use
	6. Agriculture
Development	7. Industrial
	8. Facility

Regional zoning identifies units of land for which intents and objectives are specified. While regional zoning recognizes opportunities and allocates resources at a broad regional scale, it does not allocate land to specific projects within a zone. Through the recognition of zone intents, the process provides general guidance in locating specific project proposals within the region and often resolves land use conflicts.

Integrated resource planning at more detailed levels will provide further guidance for the future. It will also be the means used to develop more specific objectives and subsequent zones. Through integrated resource planning regional objectives and zoning will be confirmed and/or changed in order to ensure the appropriate delivery of benefits to Albertans.

Regulations under existing legislation ensure a high standard of resource protection, management and development control. Regional zoning does not replace or impinge upon these, but rather gives positive direction for future management of the Eastern Slopes.

The key to successful implementation of the regional plan will be co-operative, integrated decision-making. Regional zone names do not imply that a particular department or agency maintains jurisdiction over a given zone. All resources, wherever they are found, will be administered according to principles of integrated resource management.

The eight regional land use zones are discussed in the following text and displayed on the three map sheets in the pocket of the back cover. Activities considered to be generally consistent with the intent of each zone are summarized in the Table of Compatible Activities (page 15). The activities and uses listed are only a representative group of those which may be consistent with any given zone intent. For some activities or land uses such as transportation and utility corridors, commercial and industrial developments and residential development, it is not always possible to identify where and when they might be required. Exceptions may be made for these activities.

In all zones, watershed protection will be of paramount concern along with essential fish and wildlife habitat. The Eastern Slopes also will provide different types of opportunities for scientific study within the intents of the zones.

1. Prime Protection Zone

The intent of the prime protection zone is to preserve environmentally sensitive terrain and valuable ecological and aesthetic resources.

It contains high-elevation forests and steep rocky slopes of the major mountain ranges in the Eastern Slopes. The lower boundary for this zone has been defined by elevation, ecological variables and aesthetic qualities. The boundary generally represents the lower extremities of the more sensitive terrain in the Eastern Slopes.

This zone is intended to protect the rugged mountain scenery for which the region is highly valued. It is the zone which receives the greatest amounts of precipitation and produces most of the streamflow of the Eastern Slopes. Many critical wildlife ranges, especially for bighorn sheep and mountain goats, are found within this zone.

Regional objectives which are considered compatible with the intent of this zone include those of watershed, fisheries and wildlife management, and extensive recreational activities such as hunting, trail use (non-motorized) and primitive camping. The objective for commercial fur harvesting will also be met to some degree. Future access or utility corridors may be required through this zone. Approved snowmobile trails may also cross this zone. Future commercial ski development may be considered in this zone, as it contains the only suitable snow and terrain conditions in the Eastern Slopes. In these cases, the ski lifts and associated facilities will be permitted in the prime protection zone, while accommodation and other services will be located in adjacent zones where such commercial development is appropriate.

Where considered essential and under strict operating guidelines, management programs may include activities such as wildlife habitat improvement, fire control, and timber sanitation cutting to protect merchantable timber in other zones.

2. Critical Wildlife Zone

The Eastern Slopes is a unique and important wildlife region due to the many combinations of climate, topography and vegetation which provide habitat for a wide variety of species.

The intent of the critical wildlife zone is to protect ranges or terrestrial and aquatic habitats that are crucial to the maintenance of specific fish and wildlife populations.

The zone consists of such areas as key winter range, migration routes and calving areas that are essential to the survival of specific wildlife species such as mountain goats, bighorn sheep, elk and caribou, and of spawning areas vital to maintaining naturally

Ensuring wintering area for wildlife (Bighorn sheep)

reproducing salmonid populations. The zoning recognizes only those habitat areas which are crucial to the life cycle of particular species due to vegetation, climate or topography. Regional objectives which are considered compatible with the intent of this zone include watershed, fisheries and wildlife management, serviced camping and extensive recreation activities such as hunting and fishing, trail use and primitive camping. Resource extraction objectives such as those of trapping, logging, domestic grazing, petroleum, natural gas, coal and mineral exploration and development may be achieved. Future roads or utility corridors may require access through this zone.

3. Special Use Zone

The intent of this zone is to recognize historic resources, lands set aside for scientific research and any lands which are required to meet unique management requirements, or legislative status, which cannot be accommodated within any of the other zones.

Examples include the Frank Slide and the abandoned mining community of Lille, the Marmot Creek Watershed Research Basin, the Cache Percotte Forest Reserve, the northern portion of Whaleback Ridge, Indian reserves and other federal Crown land.

Any regional objective may be achieved to a limited extent in special use zones which fall within provincial jurisdiction. Management guidelines will be defined according to the purpose and need on a site-specific basis.

4. General Recreation Zone

The intent of the general recreation zone is to retain a variety of natural environments within which a wide range of outdoor recreation opportunities may be provided. Most of the areas of the general recreation zones are associated with river valley corridors or lakes.

Regional objectives which are considered compatible with the intent of this zone include those of watershed management, fishing, hunting, trail use (non-motorized), use of off-highway vehicles on designated trails, all types of camping, and day-use recreation. Resource extraction objectives such as those of trapping, logging, domestic grazing, petroleum and natural gas exploration and development, and coal and mineral exploration and development may be achieved to a limited degree. Future roads or utility corridors may require access through this zone. Commercial development which serves the general public may occur. Management emphasis will be on maintaining the natural environment for recreation purposes, an example being to maintain or improve vistas or improve stream habitat to increase sport fishing opportunities.

Important recreational resources (Water and fisheries)

5. Multiple Use Zone

The intent of the multiple use zone is to provide for the management and development of the full range of available resources, while meeting the objectives for watershed management and environmental protection in the long term.

This zone contains broad areas of forested lands and comprises approximately 65 percent of the Eastern Slopes, exclusive of the national parks. A variety of natural resources — water, timber, oil, gas, coal, scenic areas, forage and fish and wildlife — is found in this zone. Much of the area is accessible and is experiencing growing pressures for private uses and resource development.

The multiple use zone produces an important portion of the water supply and associated fisheries from the Eastern Slopes by a dense network of stream courses. The zone contains coniferous and deciduous forests of varying age classes which have development potential and considerable economic value. A significant num-

ber of jobs and other benefits are provided by the forest industries in the region. These industries depend largely on this zone to provide a permanent land base for sustained production. The large area of forested land also provides the major habitats for wildlife. Those portions of the zone which are suitable are utilized for improved and unimproved summer grazing by domestic livestock.

The multiple use zone has been extensively explored and developed for petroleum and natural gas and contains a number of producing fields. Future energy needs will exert pressure for additional recovery of oil and gas reserves. Mineral and coal exploration and development continue at an increasing rate in this zone. Present and future recreation use of the zone will include all types of camping, trail use, hunting and fishing.

All regional objectives may be achieved to a greater or a lesser degree within the multiple use zone. As with all zones, decisions as to the primacy of use and allocation of land and resources will occur through the integrated resource planning or referral processes which operate within a framework of existing regulations.

Relatively small areas of land in the zone will be disturbed by resource development at any one time. Areas for off-highway vehicle use, such as snowmobiling, have been identified within this zone. Commercial and residential development may occur on a limited basis as required.

6. Agriculture Zone

The intent of the agriculture zone is to recognize those lands within the Eastern Slopes which are presently utilized or are considered suitable for cultivation and/or improved grazing.

Such lands are located along the eastern boundary of the region. Designation of lands to the zone was based on a combination of soil capability, existing land use patterns and land ownership. The zone includes a mixture of public leased lands and private lands. As the integrated resource planning proceeds, increased agricultural opportunities in new areas could be identified.

Some regional objectives may be achieved to a greater or lesser degree in this zone. As intensive agriculture now occurs on private lands, other land and resource uses will generally be governed by the owner in conformity with local land use orders and bylaws under the Planning Act of Alberta. The Eastern Slopes Policy has no jurisdiction over privately owned lands.

7. Industrial Zone

The intent of the industrial zone is to recognize existing or approved industrial operations, such as coal mines, gas processing plants, cement plants and large permanent forest product mills.

The size of each zone is limited to that which will reasonably support the specific development. The zones are essentially single use as the intensity of development generally precludes other activities. However, users of these zones are encouraged to develop compatible facilities for public use.

Because infrastructure and transportation facilities are a requirement of most major developments they are frequently adjacent to transportation and utility corridors and existing settlements.

8. Facility Zone

The intent of the facility zone is to recognize existing or potential settlement and commercial development areas. The zone must be able to accommodate future growth and additional areas will be zoned as required.

Settlement areas are primarily confined to existing major corridors, hamlets, villages or towns. Commercial areas not within the corridors include the existing and potential recreation service centre developments and visitor accommodations. Resource objectives which may be consistent with the intent of this zone include those of logging, oil and gas development, and most types of outdoor recreation.

IMPLEMENTATION: Integrated Resource Planning, and Policies and Guidelines

1. Integrated Resource Planning

The regional plan for the Eastern Slopes is a guide for the future at the broad regional scale and does not permanently zone the areas. It is an intermediate step between the Eastern Slopes Policy and the integrated resource plans that will provide more detailed and comprehensive land use allocations and guidance. Secondly, the regional plan through the Table of Compatible Activities also provides interim guidance for resource managers who must make daily decisions on land and resource uses until the more detailed integrated resource plans are completed.

Both the integrated resource plans and site-specific decisions made using the Table of Compatible Activities conform generally to the regional plan and the Eastern Slopes Policy. It is recognized, however, that additional and more detailed information may support decisions that would be contrary to the initial direction. Requests for changes or adjustments of zones may originate during the detailed integrated resource planning projects or on a site-specific decision. The requests may come from resource management agencies, other government departments, industry or the general public.

During the integrated resource planning process, resource objectives for each area are tested for compatibility with the intent of that area as defined in the regional plan. If compatible, the planning process will describe how the objectives are to be achieved through management guidelines. If not, the request should be forwarded to a higher level of authority (ministerial) to test the requested decision with the intents of the Eastern Slopes Policy.

On a site-specific decision where there is not an integrated resource plan to provide direction, decisions are tested against the Table of Compatible Activities. If the Table indicates that the activity or land use is not permitted, a request for a zoning change can be made. This request is also tested against the intents of the regional plan and the Eastern Slopes Policy and can be accepted or rejected. The objectives and zoning for the regional plan will also be implemented through the following policies and guidelines.

As part of the implementation, detailed planning will identify designated vehicle access routes which may include routes in all zones.

2. Existing Land Use Commitments

Existing land use activities and industrial operations will continue, subject to the regulatory systems now in effect.

3. Sale of Public Lands

Most of the public lands in the Eastern Slopes will be retained in public ownership for the use of all Albertans. The sale of parcels of public land for permanent and seasonal residential use may be considered. Parcels of public land may also be sold for site and capital-intensive development where site-specific conditions are met.

4. Service Centres

Service centre development will generally be directed to defined nodes associated with transportation corridors.

■ Compatible Use — Uses that are considered to be compatible with the intent of a land use zone under normal guidelines and land use regulations.

□ Permitted Use — Uses that may be compatible with the intent of a land use zone under certain circumstances and under special conditions and controls where necessary.

Not Permitted Use — Uses that are not compatible with the intent or capabilities of a land use zone.

These activities are only representative of the range of activities that occur in the Eastern Slopes. For these and any other activities, the possibility of whether they should or should not take place in a particular area must always be measured against the fundamental management intentions for that zone. Since economic opportunities are not all known in advance, site-specific developments may be considered in any zone.

As integrated resource plans are completed and approved, this table and the regional zoning maps will no longer apply.

For information concerning the guidelines, regulations, conditions and procedures, contact the Current Planning Section, Resource Planning Branch, Alberta Energy and Natural Resources, Edmonton, Alberta. (Telephone: (403) 427-3608).

5. Surface Developments

Dispositions for facility and ancillary uses will be by lease or sale in accordance with established policies under the Public Lands Act.

6. Recreational Townhouse Units

Private development of recreational townhouse units will be allowed on a controlled basis in appropriate zones. All necessary services, such as sewage, water, garbage disposal and fire protection, will normally be provided by the owner or the municipal authority. Permanent residency will not be permitted without the approval of the local development authorities.

7. Recreational Cottages

Cottage development for seasonal recreation use will be considered. Such sites will be developed and managed on a carefully controlled basis.

8. Improved Grazing

Various programs may be carried out in order to improve domestic grazing on rangeland including that within forested areas. Methods may include mechanical clearing of aspen and brush, chemical brush control, fertilization, fencing and the provision of dugouts.

9. Public Access to Public Lands

All public land in the province is available for public use unless specifically restricted by regulation or disposition.

Access to public lands that are held under Grazing Lease or Grazing Permit is presently restricted by common law. The government encourages the disposition holder and the general public to co-operate in the use of these lands where outdoor recreation activities are involved. Forest Grazing Licences, Head Tax Permits and Forest Reserve Grazing Permits do not convey any interest in land and therefore, permission to gain access is not needed.

Except when vehicular access could cause damage to the road, holders of Licences of Occupation for roadways must allow non-commercial users access over such roads. Holders of Licences of Occupation for roadways can request the Minister to restrict vehicular access when conditions are such that vehicular traffic will damage the road.

Access to timber dispositions is available to the public as no interest in the land is conveyed with these types of dispositions.

10. Petroleum and Natural Gas Exploration and Development

"Step-out" drilling may be permitted in Zone 1 so that an oil or gas field can be (would be) developed to the point of recovering the reserves in place. Geophysical activity may be permitted in Zone 1 on a very limited scale and under stringent operating conditions where localized geophysical activity is required to determine a "step-out" location.

New petroleum and natural gas dispositions will also be considered in Zone 1 for lands for which drilling prior to July 1977 has identified the existence of petroleum or natural gas. Where this existence was not identified, dispositions in Zone 1 near zones where petroleum and natural gas exploration and development is a permitted use may be granted with restrictions of surface activity for all lands which fall within Zone 1. Such a restriction will be identified in an addendum to the sales notice.

Applications for mineral surface leases will continue to be handled using the referral system currently in place and applications may be approved in Zone 1 where adequate environmental protection can be ensured.

Conclusion

The policy continues to provide broad direction for resource protection, management and development. This direction has led to the regional plan and its major parts — resource objectives and regional zoning. The policy also provides the direction for more detailed planning and resource management, to provide the various benefits the Eastern Slopes has to offer Albertans.

The policy is not the final plan or end product in integrated resource planning for the Eastern Slopes. It is not a prescription of land use that is unreceptive to new information and changing conditions; rather than the document that constrains resource management, it is the positive response leading to better resource management in this special region — the Eastern Slopes.

With a program in place for implementing the Eastern Slopes Policy through integrated resource planning, the monitoring of changing public needs and the incorporation of new information will serve to identify the need for future reviews of the policy. Determination of the timing and extent of future reviews will remain the responsibility of the Associate Minister of Public Lands and Wildlife.

Major or significant changes to the policy will continue to require approval by the provincial Cabinet.

Glossary

Camping	The following levels of camping can be provided by either the private or public sectors.
☐ Auto Access	A formally designated camping facility that is accessible to normal vehicles from designated highways or improved roads.
☐ Group	The same as auto access camping but designed and managed to meet the needs of recognized groups.
☐ Primitive	An undesignated camping area accessible only by non-motorized means.
☐ Random	An undesignated area used for camping that is accessible by any means.
☐ Remote	A formally designated camping facility that is accessible by off-highway vehicles, helicopters or by non-motorized means.
☐ Serviced	A major designated camping facility that is directly accessible by designated road or improved road and that provides significant services such as electricity and pressurized water systems.
Coal Exploration and Development	All activities and infrastructure development associated with the exploration, development and production of coal.
Commercial Development	All activities and infrastructure associated with the development of facilities for the use of the general public, including fixed-roof recreation accommodation such as hunting, fishing, skiing and backcountry lodges, hotels, motels, apartments, townhouses, cottages and commercial recreation activities involving facilities such as ski hills and golf courses, whether owned and/or operated by the private or public sectors.
Cultivation	Agricultural practices associated with the regular tillage of land for the production of annual and/or forage crops.
Disposition	A lease, licence, permit or letter of authority issued under provincial legislation for activities either surface or sub-surface.
Domestic Grazing	All activities associated with the production and utilization of forage for domestic livestock.
Fishing	The removal of fish species under a licence for any purpose including commercial, recreational or domestic use and for management purposes.
Forage	All browse and non-woody plants that are available to livestock or game animals and used for grazing or harvested for feeding.
Goal	An end to be striven for but not necessarily achievable.
Hunting	The stalking of any wild animal for recreational and management purposes or as a source of food.
Industrial Development	All activities and infrastructure associated with the development of an industrial base to accommodate the extraction, removal and processing of resources.
Integrated Resource Management	A co-operative and comprehensive approach to the establishment of plans and to the delivery of benefits from the resource base in an efficient and effective manner.

Integrated Resource Planning	A co-operative and comprehensive approach to decision making on resource uses.
Logging	All activities associated with the removal and transport of timber for manufacture into forest products.
Mineral Exploration and Development	All activities and infrastructure associated with the exploration, development and production of industrial minerals.
Objective	A clear and specific statement of planned results to be achieved.
Off-Highway Vehicle (OHV) Activity	Any activity using motorized transportation to traverse any area not designated as a highway or improved road.
Petroleum and Natural Gas Exploration and Development	All activities and infrastructure associated with the exploration, development and production of petroleum and natural gas resources.
Public Lands	Lands of the Crown in right of Alberta.
Rangeland	Land used for grazing by domestic livestock and wildlife including natural grasslands, savannas, shrublands, alpine communities and wet meadows. The term has also come to include forest lands with an understorey or periodic cover of herbaceous or shrubby vegetation. Seeded lands which are managed under ecological principles rather than agronomic principles are properly termed range.
Recreation	The followings levels of recreation can be provided by either the public or private sectors.
☐ Dispersed	Various kinds of recreation activities that generally occur throughout a large area and are not confined to a specific place. Activities that would be associated with dispersed recreation include hiking, remote or primitive camping, hunting, fishing, horseback riding and cross-country skiing.
☐ Extensive	Low-density, dispersed recreational use that does not require sustained recreation management to maintain the recreation opportunities.
☐ Intensive	High-density recreational use such as developed camp and picnic grounds, swimming beaches, ski hills, sky trams, golf courses and other sites or areas requiring continuous recreation management and services to maintain the recreation opportunities.
☐ Non-Motorized	All recreational activities that do not involve or require the use of motorized equipment.
Residential Subdivisions	All activities and infrastructure associated with permanent-housing subdivisions for residents.
Resource	Any part of the natural environment which society perceives having value.
Resource Management	The planned and wise use of a particular natural resource to achieve a specific end.
Restricted Activity	An activity which will not be permitted until such time as more strict than normal conditions are defined through integrated decision-making processes such as integrated resource planning and referrals.
Sanitation Cutting	The removal of dead, diseased, infested, damaged, or susceptible trees, essentially to prevent the spread of pests or pathogens and so promote forest hygiene.

Executive Summary

Whaleback, Southern Alberta

Alberta's prosperity has created opportunities for our economy and people, but it also has created challenges for Alberta's landscapes. Industrial activity, municipal development, infrastructure, recreation and conservation interests often are competing to use the same piece of land. There are more and more people doing more and more activities on the same piece of land. The competition between user groups creates conflict, and often puts stress on the finite capacity of our land, air, water and habitat.

What worked for us when our population was only one or two million will not get the job done with four, and soon five million. We have reached a tipping point, where sticking with the old rules will not produce the quality of life we have come to expect. If we want our children to enjoy the same quality of life that current generations have, we need a new land-use system.

The purpose of the Land-use Framework is to manage growth, not stop it, and to sustain our growing economy, but balance this with Albertans' social and environmental goals. This is what the Land-use Framework is about—smart growth.

Our consultations with Albertans indicate widespread support for greater provincial leadership on land-use issues. This does not mean creating a heavy-handed, centralized bureaucracy in Edmonton. It does mean that the Alberta government must provide the kind of policy direction and guidelines, and opportunities that the local levels of government cannot. The Land-use Framework will leave local decision-making authority with the same officials who currently exercise it. However, in the future, these decisions will have to be consistent with regional plans. Accordingly, the Land-use Framework consists of seven basic strategies to improve land-use decision-making in Alberta.

Strategy 1

Develop seven regional land-use plans based on seven new land-use regions.

Alberta does not currently have formalized regional-level planning. Nor is there any formalized co-ordination between Government of Alberta land-use decisions on Crown lands and municipal land-use decisions. To remedy this, the government will create seven new land-use regions and develop a regional plan for each. The regional plans will integrate provincial policies at the regional level; set out regional land-use objectives and provide the context for land-use decision-making within the region; and reflect the uniqueness and priorities of each region. Municipalities, other local authorities and provincial government departments will be required to comply with each regional plan.

Strategy 2

Create a Land-use Secretariat and establish a Regional Advisory Council for each region.

Strong provincial leadership will be critical to the success of land-use planning and resource management. Establishing a formal governance structure for implementing the Land-use Framework will be necessary. To meet this need, the Land-use Framework creates a Land-use Secretariat to support implementation of the framework. The Secretariat will develop regional plans in conjunction with government departments and Regional Advisory Councils. Final decision on regional plans rests with Cabinet.

Strategy 3

Cumulative effects management will be used at the regional level to manage the impacts of development on land, water and air.

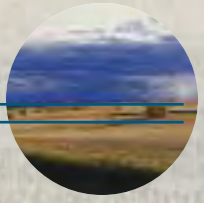
Our watersheds, airsheds and landscapes have a finite carrying capacity. Alberta's system for assessing the environmental impacts of new developments has usually been done on a project-by-project basis. This approach worked at lower levels of development activity. However, it did not address the combined or cumulative effects of multiple developments taking place over time.

A cumulative effects management approach will be used in regional plans to manage the combined impacts of existing and new activities within the region.

Strategy 4

Develop a strategy for conservation and stewardship on private and public lands.

Clean water and air, healthy habitat and riparian areas, abundant wild species and fisheries are all "public goods" that Albertans enjoy and value. The costs of supplying these goods on private lands are left largely on the shoulders—and pocketbooks—of our ranchers and farmers. Public lands that are managed for a variety of purposes also supply these goods. If Albertans value these landscapes and the benefits they provide to all of us, we have to find new ways to share the costs of conserving them. To do this, the Government of Alberta will develop new policy instruments to encourage stewardship and conservation on private and public lands.



Strategy 5

Promote efficient use of land to reduce the footprint of human activities on Alberta's landscape.

Land is a limited, non-renewable resource and so should not be wasted. Land-use decisions should strive to reduce the human footprint on Alberta's landscape. When it comes to land use, other things being equal, less is more—more choices for future generations. This principle should guide all areas of land-use decision-making: urban and rural residential development, transportation and utility corridors, new areas zoned for industrial development, and agriculture.

Strategy 6

Establish an information, monitoring and knowledge system to contribute to continuous improvement of land-use planning and decision-making.

Good land-use decisions require accurate, timely and accessible information. A sound monitoring, evaluation and reporting system is needed to ensure the outcomes of the Land-use Framework are achieved. The Government of Alberta will collect the required information to support land-use planning and decision-making, and create an integrated information system to ensure decision-makers have access to relevant information. The system will include regular monitoring, evaluation and reporting on the overall state of the land, and progress toward achieving provincial and regional land-use outcomes. A key component of this system will be the province's Biodiversity Monitoring Program.

Strategy 7

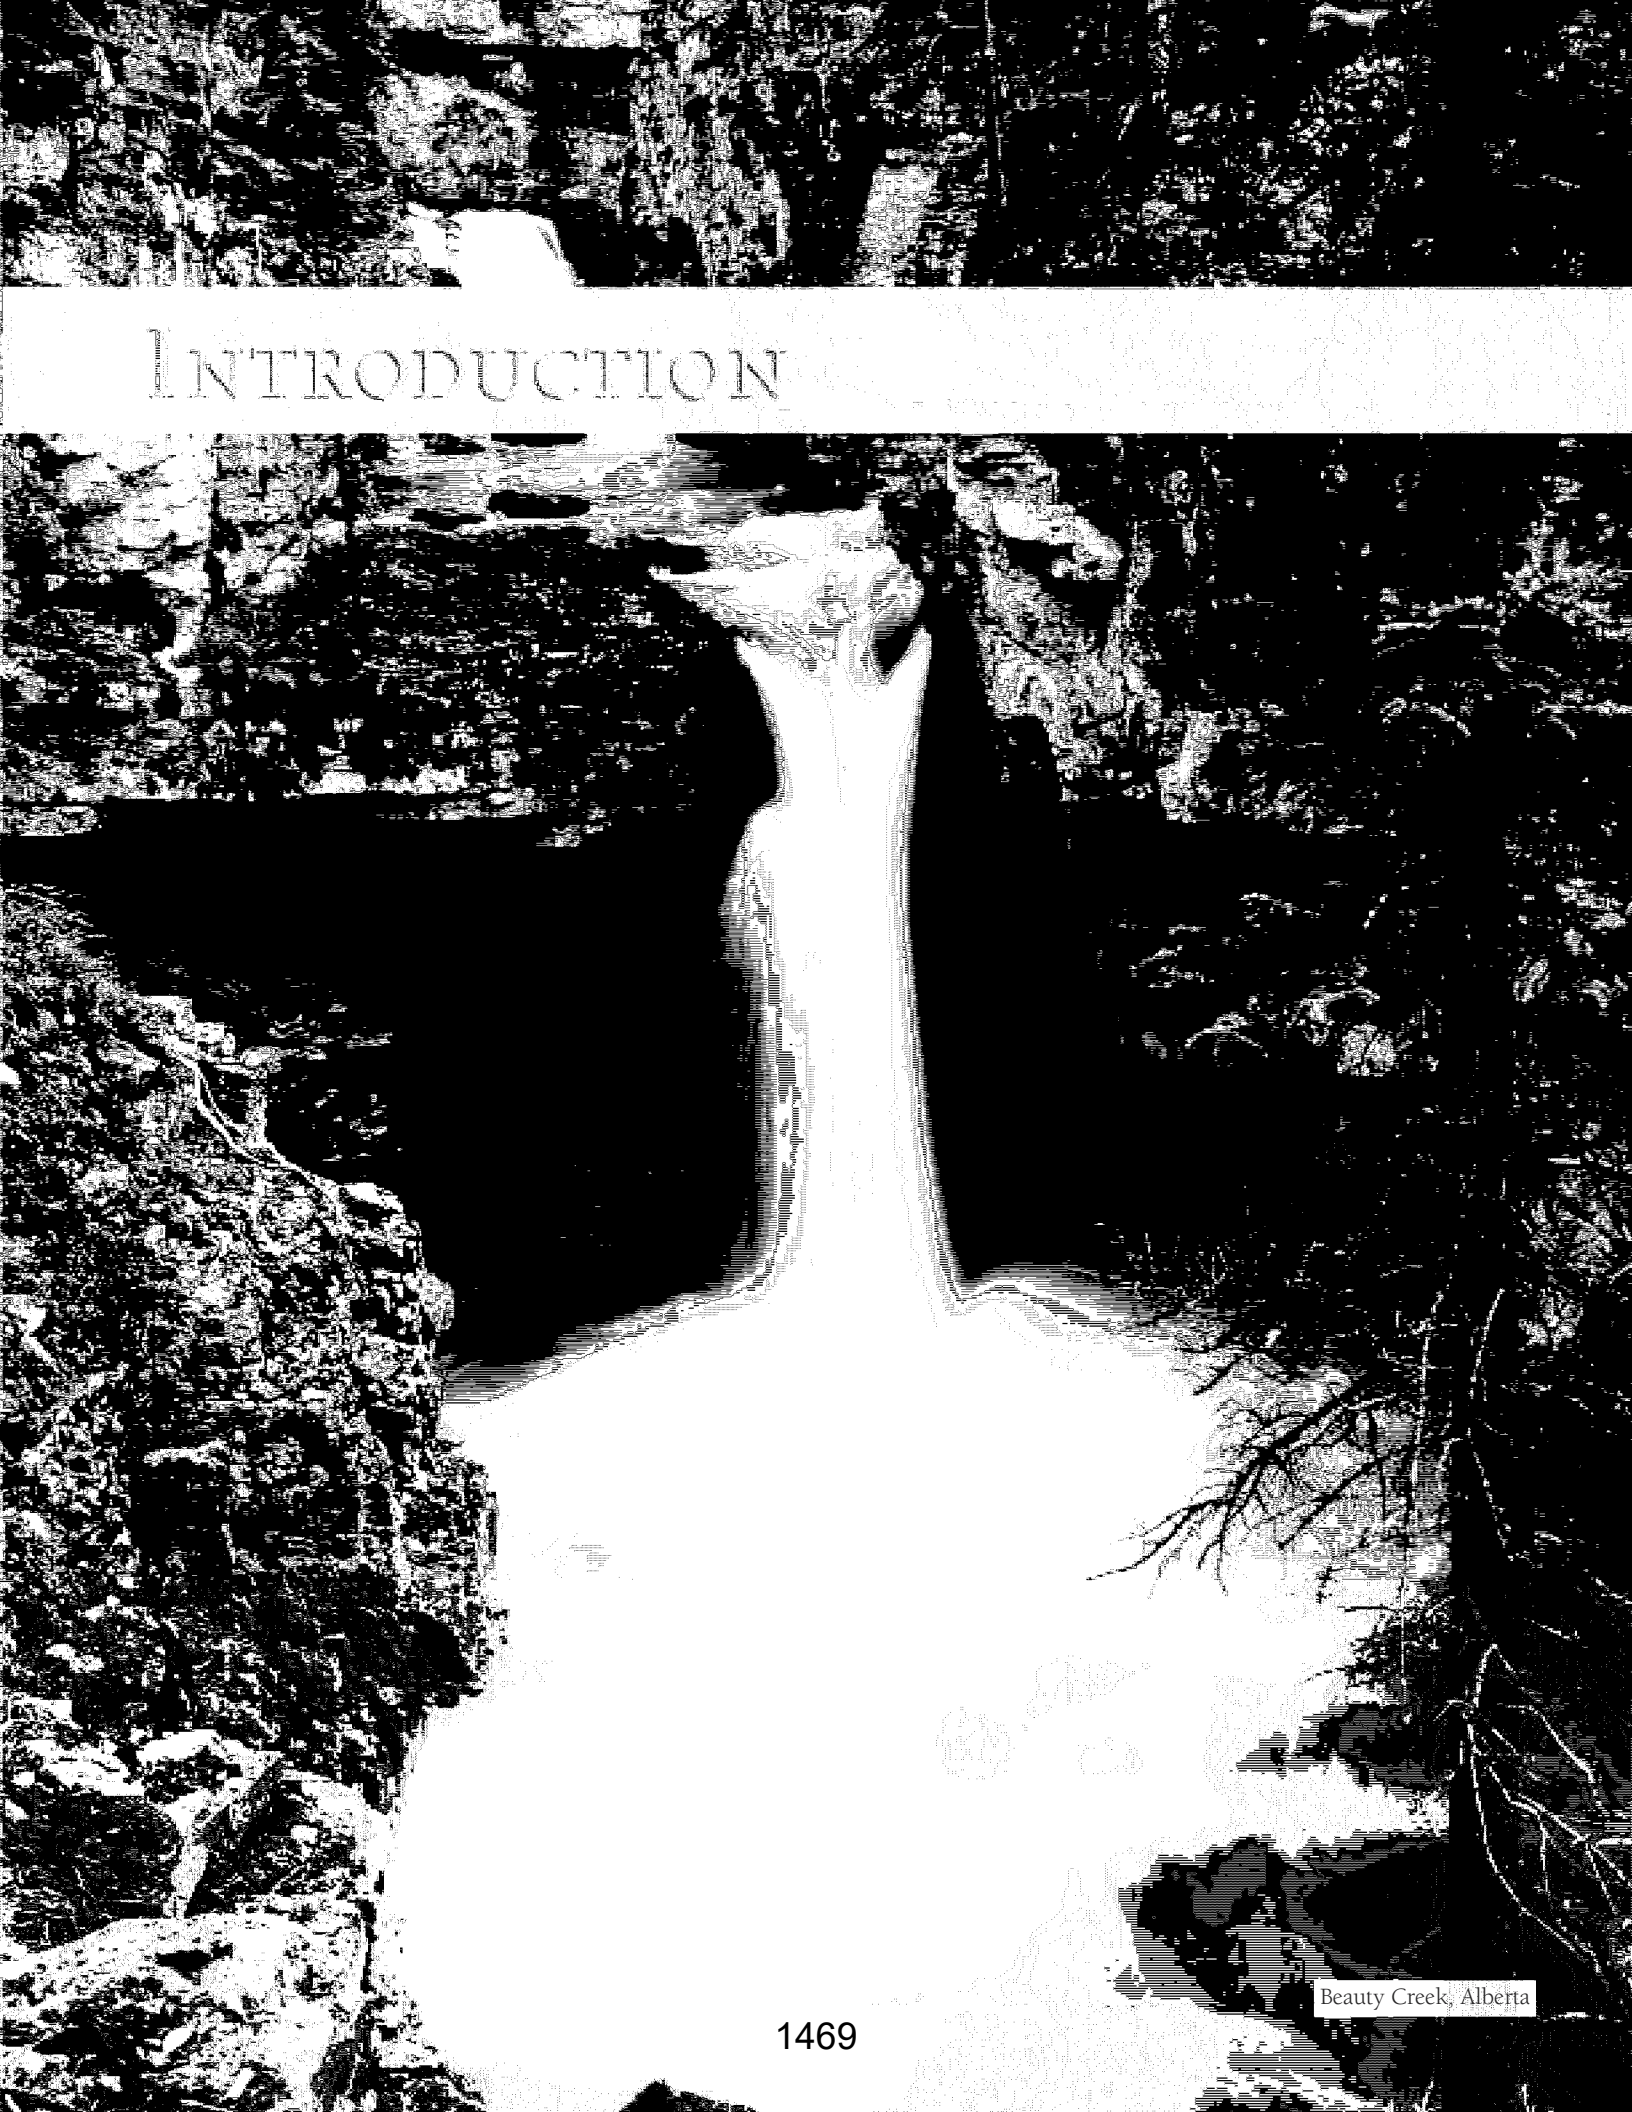
Inclusion of aboriginal peoples in land-use planning.

The provincial government will strive for a meaningful balance that respects the constitutionally protected rights of aboriginal communities and the interests of all Albertans. The Government of Alberta will continue to meet Alberta's legal duty to consult aboriginal communities whose constitutionally protected rights, under section 35 of the *Constitution Act, 1982 (Canada)*, are potentially adversely impacted by development. Aboriginal peoples will be encouraged to participate in the development of land-use plans.

Priority actions for the Land-use Framework.

There are five immediate priorities that the provincial government will support and implement on a priority basis. These are: legislation to support the framework, metropolitan plans for the Capital and Calgary regions, the Lower Athabasca Regional Plan, and the South Saskatchewan Regional Plan. In addition, a number of policy gaps and areas of provincial interest will be addressed by the provincial government in the short-term.

Introduction



Beauty Creek, Alberta

A. Why we need a Land-use Framework

Albertans have a special relationship with the land. Our prairies and parklands, our forests and foothills, the Northern Boreal and the majestic Rockies—each shape our communities and lives in unique and powerful ways. Our province is big, beautiful and bountiful, and we are grateful for the opportunities it has given us.

Over the past 10 years, the province has enjoyed record prosperity. But this prosperity has brought new challenges and responsibilities. Today's rapid growth in population and economic activity is placing unprecedented pressure on Alberta's landscapes. Oil and gas, forestry and mining, agriculture and recreation, housing and infrastructure are all in competition to use the land—often the same parcel of land. There are more and more people doing more and more activities on the same piece of land. This increases the number of conflicts between competing user groups and often stresses the land itself. Our land, air and water are not unlimited. They can be exhausted or degraded by overuse.

We need to ensure this land—and all the activities it sustains—is managed responsibly for those who come after us. This means developing and implementing a land-use system that will effectively balance competing economic, environmental and social demands. Our current land management system, which served us well historically, risks being overwhelmed by the scope and pace of activity.

What worked for us when our population was only one or two million will not get the job done with four, and soon five million. We have reached a tipping point, where sticking with the old rules will not produce the quality of life we have come to expect. If we want our children to enjoy the same quality of life that current generations have, we need a new plan.

The purpose of the Land-use Framework is to manage growth, not stop it. The Government of Alberta rejects the simplistic view that to save the environment, we must stop development. The best environmental regimes in the world are found in the wealthiest countries. And this is not by accident. Protecting the environment costs money—lots of money when an economy is resource-based such as ours. The goal of the Land-use Framework is to sustain our growing economy, but balance this with Albertans' social and environmental goals. This is what the Land-use Framework is about—smart growth.

B. What is a Land-use Framework?

It may appear that the Land-use Framework is something new. It is not. In the first hundred years of our province's history, far-sighted leaders such as Ernest Manning and Peter Lougheed responded to our growing population and economy by putting in place new land-use guidelines.

In 1948, Premier Manning responded to the growth spurt stimulated by the great Leduc oil discovery by dividing the province into two areas. Public lands in the Green Area were to be managed primarily for forest production, watershed protection, fish and wildlife management, and recreation. Permanent settlement was excluded, except on legally subdivided lands, as were agricultural uses other than grazing. The White Area was designated for settlement, including agriculture. Premier Manning's initiative was an early and enlightened form of land-use planning.

A more recent example is the *Policy for Resource Management of the Eastern Slopes*, introduced by Premier Lougheed in 1977, during the last period of rapid growth in the province. The Eastern Slopes Policy identified watershed integrity as the highest priority use for this region of the province, followed by public recreation and tourism. It stated that the management of renewable resources would be the priority, but that non-renewable resource development—primarily oil and gas—would be encouraged in areas where it was compatible. The policy also mandated detailed subregional and local integrated resource management plans (IRPs) for its subregions. These IRPs included multiple objectives—timber, minerals and agriculture in addition to watershed, wildlife, fisheries, and recreation—but noted that "not all objectives will necessarily be achieved in all areas."

The Land-use Framework thus represents continuity with past policy, not a break. There are precedents in which far-sighted leaders responded to our growing population and economy with new land-use guidelines.

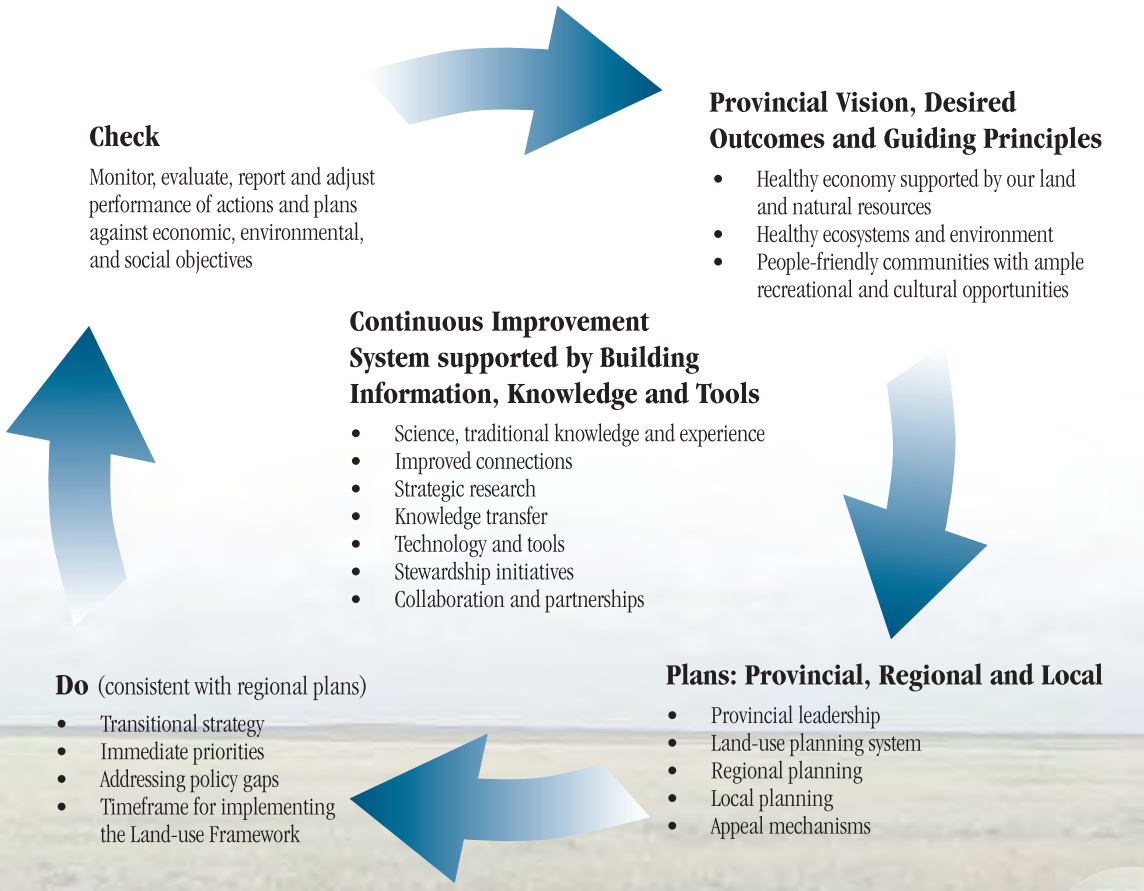
The Land-use Framework sets out an approach to manage public and private lands and natural resources to achieve Alberta's long-term economic, environmental and social goals. It provides a blueprint for land-use management and decision-making that addresses Alberta's growth pressures.

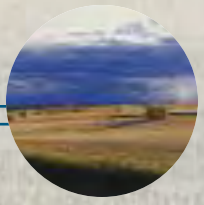
It complements the province's water and air policies—*Water for Life* (2003), the *Clean Air Strategy for Alberta* (1991) both of which have been updated, and *Alberta's 2008 Climate Change Strategy*. What uses are permitted on land—or more precisely, how they are done—clearly impact adjacent watersheds and airsheds.

It is just as important to recognize how land use is different from air and water policies. It is relatively easy to reach broad consensus on the appropriate standards for air and water; minimum standards must ensure that people, wildlife or plants are not harmed.

The scope of a Land-use Framework is not so easily defined. Is it about extending water and sewers from towns into adjacent rural communities? Or the proximity of feedlots to populated areas? Or addressing cumulative effects of development on the quality of our air, land and water on a region-by-region basis? Suffice to say, it is a more difficult topic to contain than air and water, and the implementation of the Land-use Framework will entail ongoing public discussion.

The diagram below shows the components of the systems approach, including outcomes-setting, planning, monitoring and improvement of land-use management and decision-making.





C. Consulting with Albertans

Land-use decisions affect all of us. The ideas and opinions of Albertans have played a vital role in developing the framework.

- **May 2006 to December 2006** — Input and advice was gathered from a broad spectrum of stakeholders (landowners; municipal leaders and planners; agricultural, forestry, transportation and energy associations; conservation and environmental groups; recreational groups; and academics) and members of First Nations, the Métis Settlement General Council and the Métis Nation of Alberta.
- **May 2007** — Seventeen provincewide public consultation sessions were held in 15 locations. Albertans provided their views on the future of land use in the province through a workbook questionnaire.
- **June 2007 to October 2007** — Four working groups of stakeholders developed strategies and actions for the government to consider in the following four primary policy areas: (1) growth and resource management, (2) planning and decision-making, (3) conservation and stewardship, and (4) monitoring and evaluation.
- **September 2007 to December 2007** — The Alberta government sought input from First Nations and Métis community organizations. They provided their views on the future of land use in the province in conjunction with their concerns on upholding their traditional and cultural values.
- **May 2008 to October 2008** — Four stakeholder working groups reviewed the Draft Land-use Framework released by the Government of Alberta on May 21, 2008. The government sought input from First Nations and Métis organizations on the draft framework. Public input was also received via a survey of Albertans.

Through these consultations, Albertans told us that they want the following improvements:

Provincial leadership to provide clear direction and parameters for regional, local and landowner decisions.

Integration and co-ordination of provincial policies governing air, water and land.

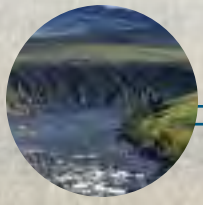
Clearer definitions of roles and responsibilities for land-use decisions at the provincial, regional and local levels.

Improved processes to deal with conflicts between land users, including surface and subsurface rights holders.

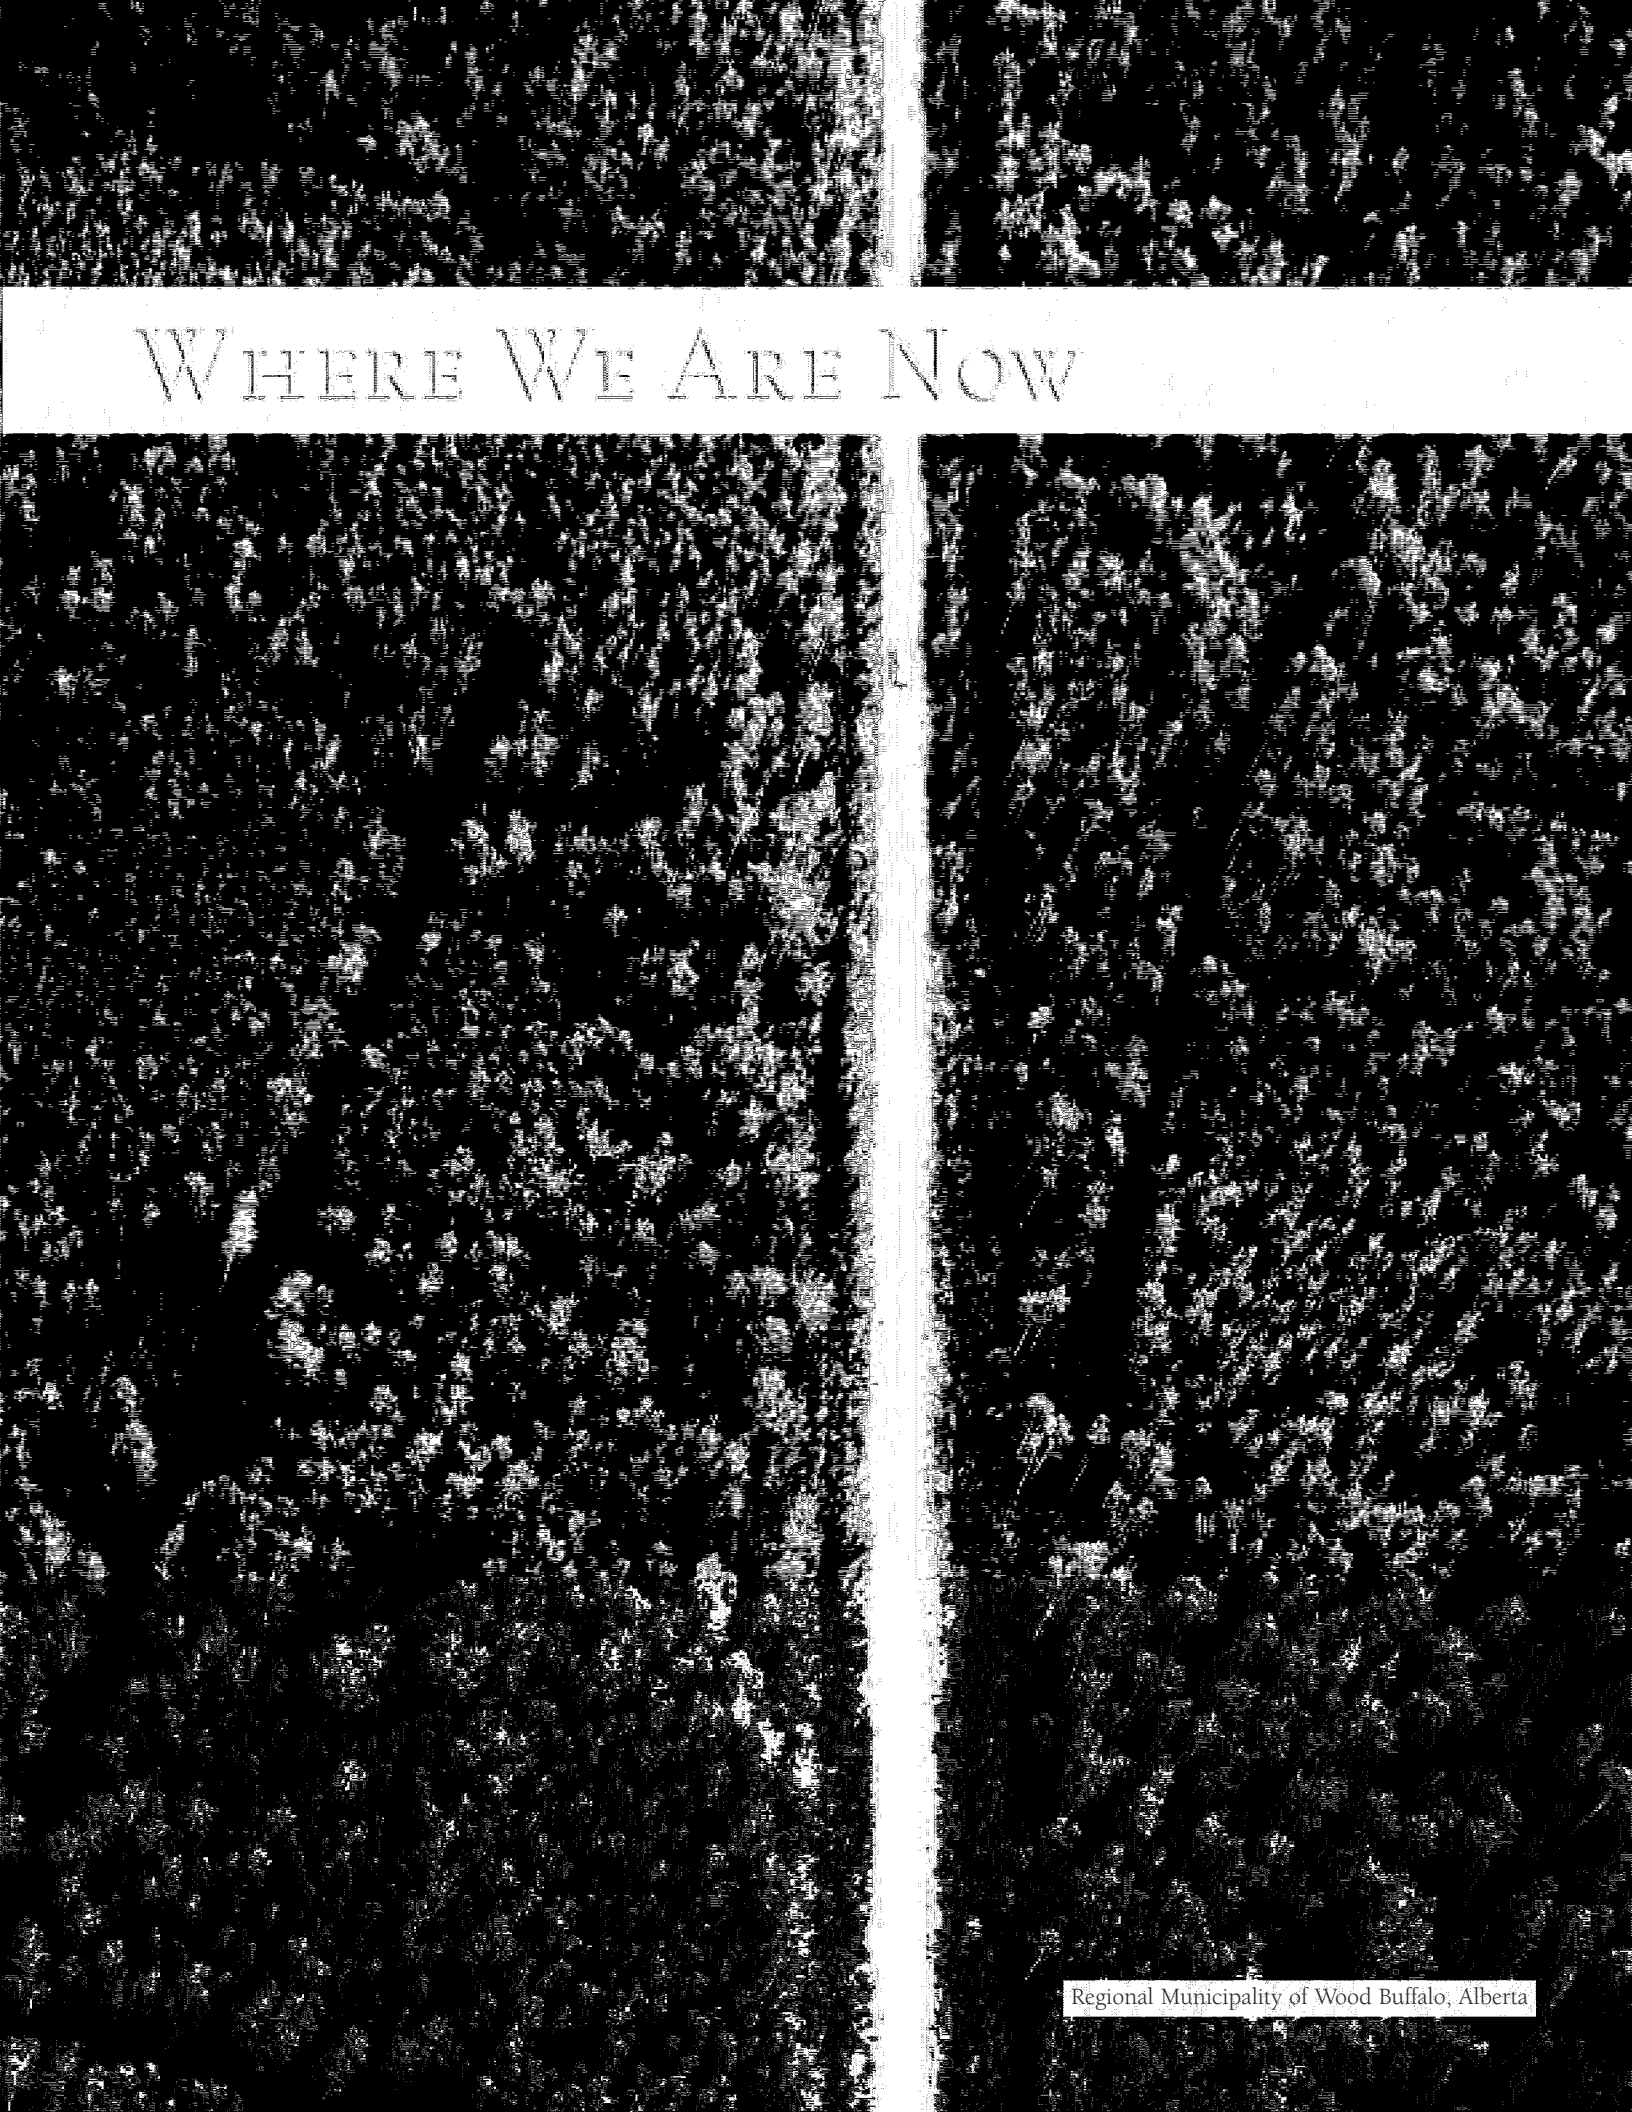
Enhanced conservation and stewardship on both private and public lands to promote ecological sustainability.

Improved information sharing about the condition of the land and the effects of activities on the land.

Increased consultation with First Nations and Métis communities, stakeholders and the public to ensure a fair opportunity to influence new policies and decisions.

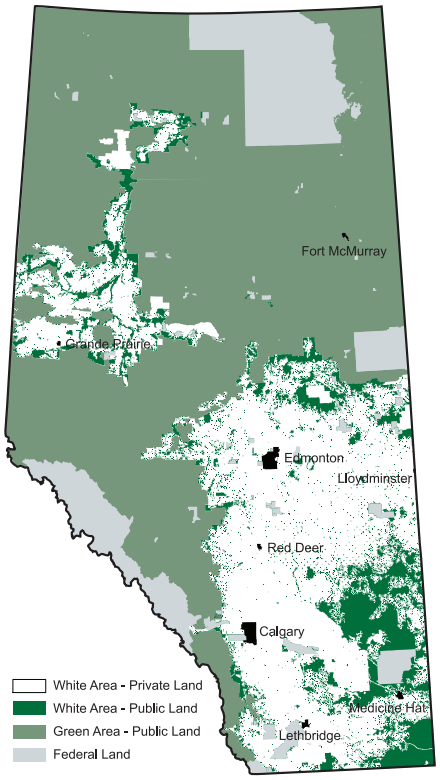


Where We Are Now



Regional Municipality of Wood Buffalo, Alberta

A. How land-use decisions are made today



Land-use decision-making in Alberta today is shaped by the government's 1948 decision to divide the province into the White and Green Areas.

1. White and Green Areas of Alberta

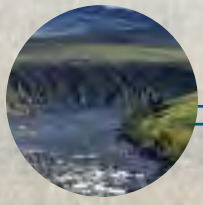
The White Area covers about 39 per cent of the province. It is largely comprised of land owned by individuals and groups (homeowners, farmers, companies, organizations, etc.). Generally, ownership rights are limited to the land surface and do not include subsurface non-renewable natural resources. While private landowners can make decisions about how to use and manage their land, they must follow laws, bylaws and regulations set out by municipal and provincial governments.

Note 1: There are approximately 1,330 quarter sections—and scattered small pockets—of private land within the Green Area public lands.

Note 2: The eight Métis settlements cover 1.23 million acres.

White and Green Areas of Alberta

White Area	Green Area
• **Settled** lands	• **Forested** lands
• Covers about **39 per cent of Alberta**	• Covers about **61 per cent of Alberta**
• Three-quarters **privately owned** – by more than 1.7 million individual title holders (50,000 own or use most of the land for agriculture)	• Nearly all **publicly owned**
• Primarily in the **populated central, southern and Peace River areas**	• Primarily in **northern Alberta**, some in the **mountains and foothills**
• Main land uses: **settlements, agriculture, oil and gas development, tourism and recreation, conservation of natural spaces, and fish and wildlife habitat**	• Main land uses: **timber production, oil and gas development, tourism and recreation, conservation of natural spaces, watershed protection, and fish and wildlife habitat**
• Authority to set regulations and make decisions is primarily with **municipal governments on private land and with the provincial government on public land**	• Authority to set regulations and make decisions is primarily with the **provincial government**



The Green Area covers about 61 per cent of the province, mainly in the north and along the Eastern Slopes. It is largely owned by the provincial Crown and is referred to as public lands. It is set aside primarily for renewable and non-renewable resource development, limited grazing, conservation, and recreational use. The provincial government has the mandate to manage how public land is used.

The federal government controls about 10 per cent of the total land base in the White and Green areas. This federal land is primarily comprised of national parks, Indian Reserves and military bases and installations. Alberta's land-use planning and decision-making authority does not ordinarily apply to federal land.

In 1938, Alberta set aside land for Métis use. In July 1989, the Government of Alberta and the Federation of Métis Settlement Associations signed the (Alberta) Métis Settlements Accord which provided the political foundation for the eventual transfer of land (1.23 million acres) to Métis settlements and provided for a co-management agreement for the management of subsurface resources under the settlement lands.

2. Responsibilities for land use

The Government of Alberta has a number of province-wide policy responsibilities across several departments and boards that set rules for land use.

Aboriginal Relations works with First Nations and Métis people to strengthen their participation in the economy, develop organizational and community capacity, and ensure their constitutional rights are respected. The ministry also advises and works with other ministries, industry and the federal government on policies and initiatives that affect aboriginal people.

Agriculture and Rural Development advises and works directly with other provincial ministries, municipal government, landowners, and industry organizations to sustain and expand the agriculture industry through policies, legislation and strategies. As such, the ministry has responsibility for legislation that affects agricultural land use on more than 52 million acres of land in the province.

Culture and Community Spirit is responsible for the protection of Alberta's historic places. The ministry regulates developments on Alberta's public and private lands by protecting designated historic places, archaeological and palaeontological sites, aboriginal heritage traditional use sites, and historic buildings. Conservation and stewardship incentives include grant programs and municipal partnerships.

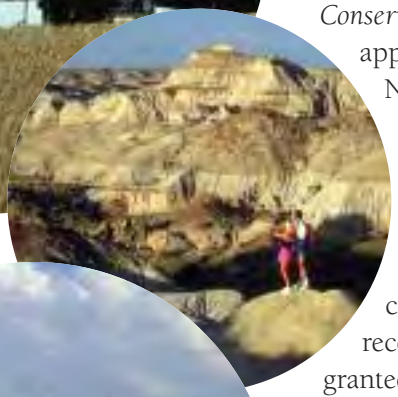
Energy manages the development of provincially owned energy and mineral resources through the sale of oil, gas and mineral rights. The ministry is also responsible for the assessment and collection of non-renewable resource revenues in the form of royalties, and freehold mineral taxes. Resources managed by the ministry include natural gas, conventional oil, oil sands, petrochemicals, electricity, coal and minerals, and renewable energy (wind, bio-energy, solar, hydro, geothermal, etc.).

Environment oversees policies and initiatives associated with air quality, water management, waste management, land use and climate change. The ministry manages the provincial environmental review process and co-ordinates public education on conservation and environmental protection. In addition, the ministry is responsible for environmental monitoring and compliance programs to enforce Alberta's environmental legislation and regulations.

Municipal Affairs provides authority and advisory services to municipalities for municipal planning, and subdivision and development control. Under the *Municipal Government Act*, municipalities may adopt plans and land-use bylaws and make planning decisions to achieve the most beneficial use of land within municipal boundaries.

Sustainable Resource Development manages the use of Alberta's public land, manages and protects Alberta's forest resource (wildfire, forest industry and forest health); and manages Alberta's fish and wildlife resources.

Tourism, Parks and Recreation has a range of responsibilities on Alberta's lands, which include managing Alberta's network of provincial parks and tourism industry development.



Energy Resources Conservation Board (ERCB) and the **Alberta Utilities Commission (AUC)** (formerly combined under the Energy and Utilities Board) are quasi-judicial agencies of the Government of Alberta that administer more than 30 pieces of legislation which regulate the province's energy resources and utility sectors. These agencies issue provincial approvals for activities such as coal and oil sands mines, oil and gas wells, electrical transmission lines and pipelines. Their approvals take priority over municipal plans and bylaws.

Natural Resources Conservation Board (NRCB) reviews non-energy projects and intensive livestock operations. It is governed by the *Natural Resources Conservation Board Act* and the *Agricultural Operation Practices Act*. Where appropriate, the NRCB co-ordinates its work with Alberta Environment. NRCB approvals take priority over municipal plans, bylaws and decisions.

Surface Rights Board is a quasi-judicial board charged with providing rights of entry to operators onto private and Crown lands for natural resource development and determination of land-owner compensation. These rights of entry are only given after operators have received approval to explore for subsurface resources or have been granted the rights to develop these resources.

3. Municipalities

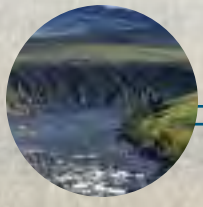
The provincial government provides direction to municipalities through the *Municipal Government Act*, its *Provincial Land-use Policies*, and the Subdivision and Development regulation. Municipalities have the authority for land-use planning and development on all lands within their boundaries. However, on public lands, the Crown is not bound by municipal decisions. Private development on Crown leases is subject to municipal planning approvals and those members of the public using Crown land (such as campers or all-terrain vehicle users) are bound by municipal bylaws and authorities. Some activities are exempt from municipal planning approval such as oil and gas well approvals, confined feeding operations, and provincial highway construction.

B. Growth indicators

While our current land management system served us well in the past, it now risks being overwhelmed by the scope and pace of activity.

Population

In the last 25 years, the population of Alberta has grown by more than a million people to approximately 3.5 million. By 2026, Alberta's population is projected to be five million. Two-thirds of Albertans live and work in the Edmonton-Calgary corridor, a pattern that is expected to continue.



Registered motor vehicles (cars and trucks)
In 1980, there were approximately 1.6 million registered vehicles in Alberta. In 2006, there were approximately 2.6 million registered vehicles—an increase of 64 per cent.

Recreational activities
Recreation activities have increased substantially. For example, the number of registered all-terrain vehicles has more than tripled from 19,000 in 1995 to 67,000 in 2006. The number of registered snowmobiles has increased from 19,000 to over 26,000 during the same period.

Oil and gas
Energy Resources Conservation Board statistics show that the number of oil and gas wells drilled annually increased from approximately 8,400 in 1995 to more than 16,500 in 2007. The number of coal bed methane wells increased from less than 1,100 wells in 2003 to a total of 12,500 in 2007.

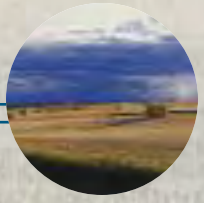
Forestry
The annual timber harvest in Alberta increased 4.6 times, from 5.93 million cubic metres in 1980 to 27.55 million cubic metres in 2005. In the early 1980s, Alberta's forest companies produced one billion board feet of lumber whereas, today, Alberta produces 3.2 billion board feet of lumber. By 2004, Alberta had become the third largest source of oriented strandboard in North America, with more than three billion square feet produced yearly.

Electricity generation and transmission
Since 1998, electricity demand has grown at a rate equivalent to adding two cities the size of Red Deer each year. In 2007, Alberta's load growth was equal to that of Ontario—a province with three times our population. As of 2006, there were over 194,000 kilometres of electrical transmission lines (250 and 500 kV)—double the number of kilometres in 1960.

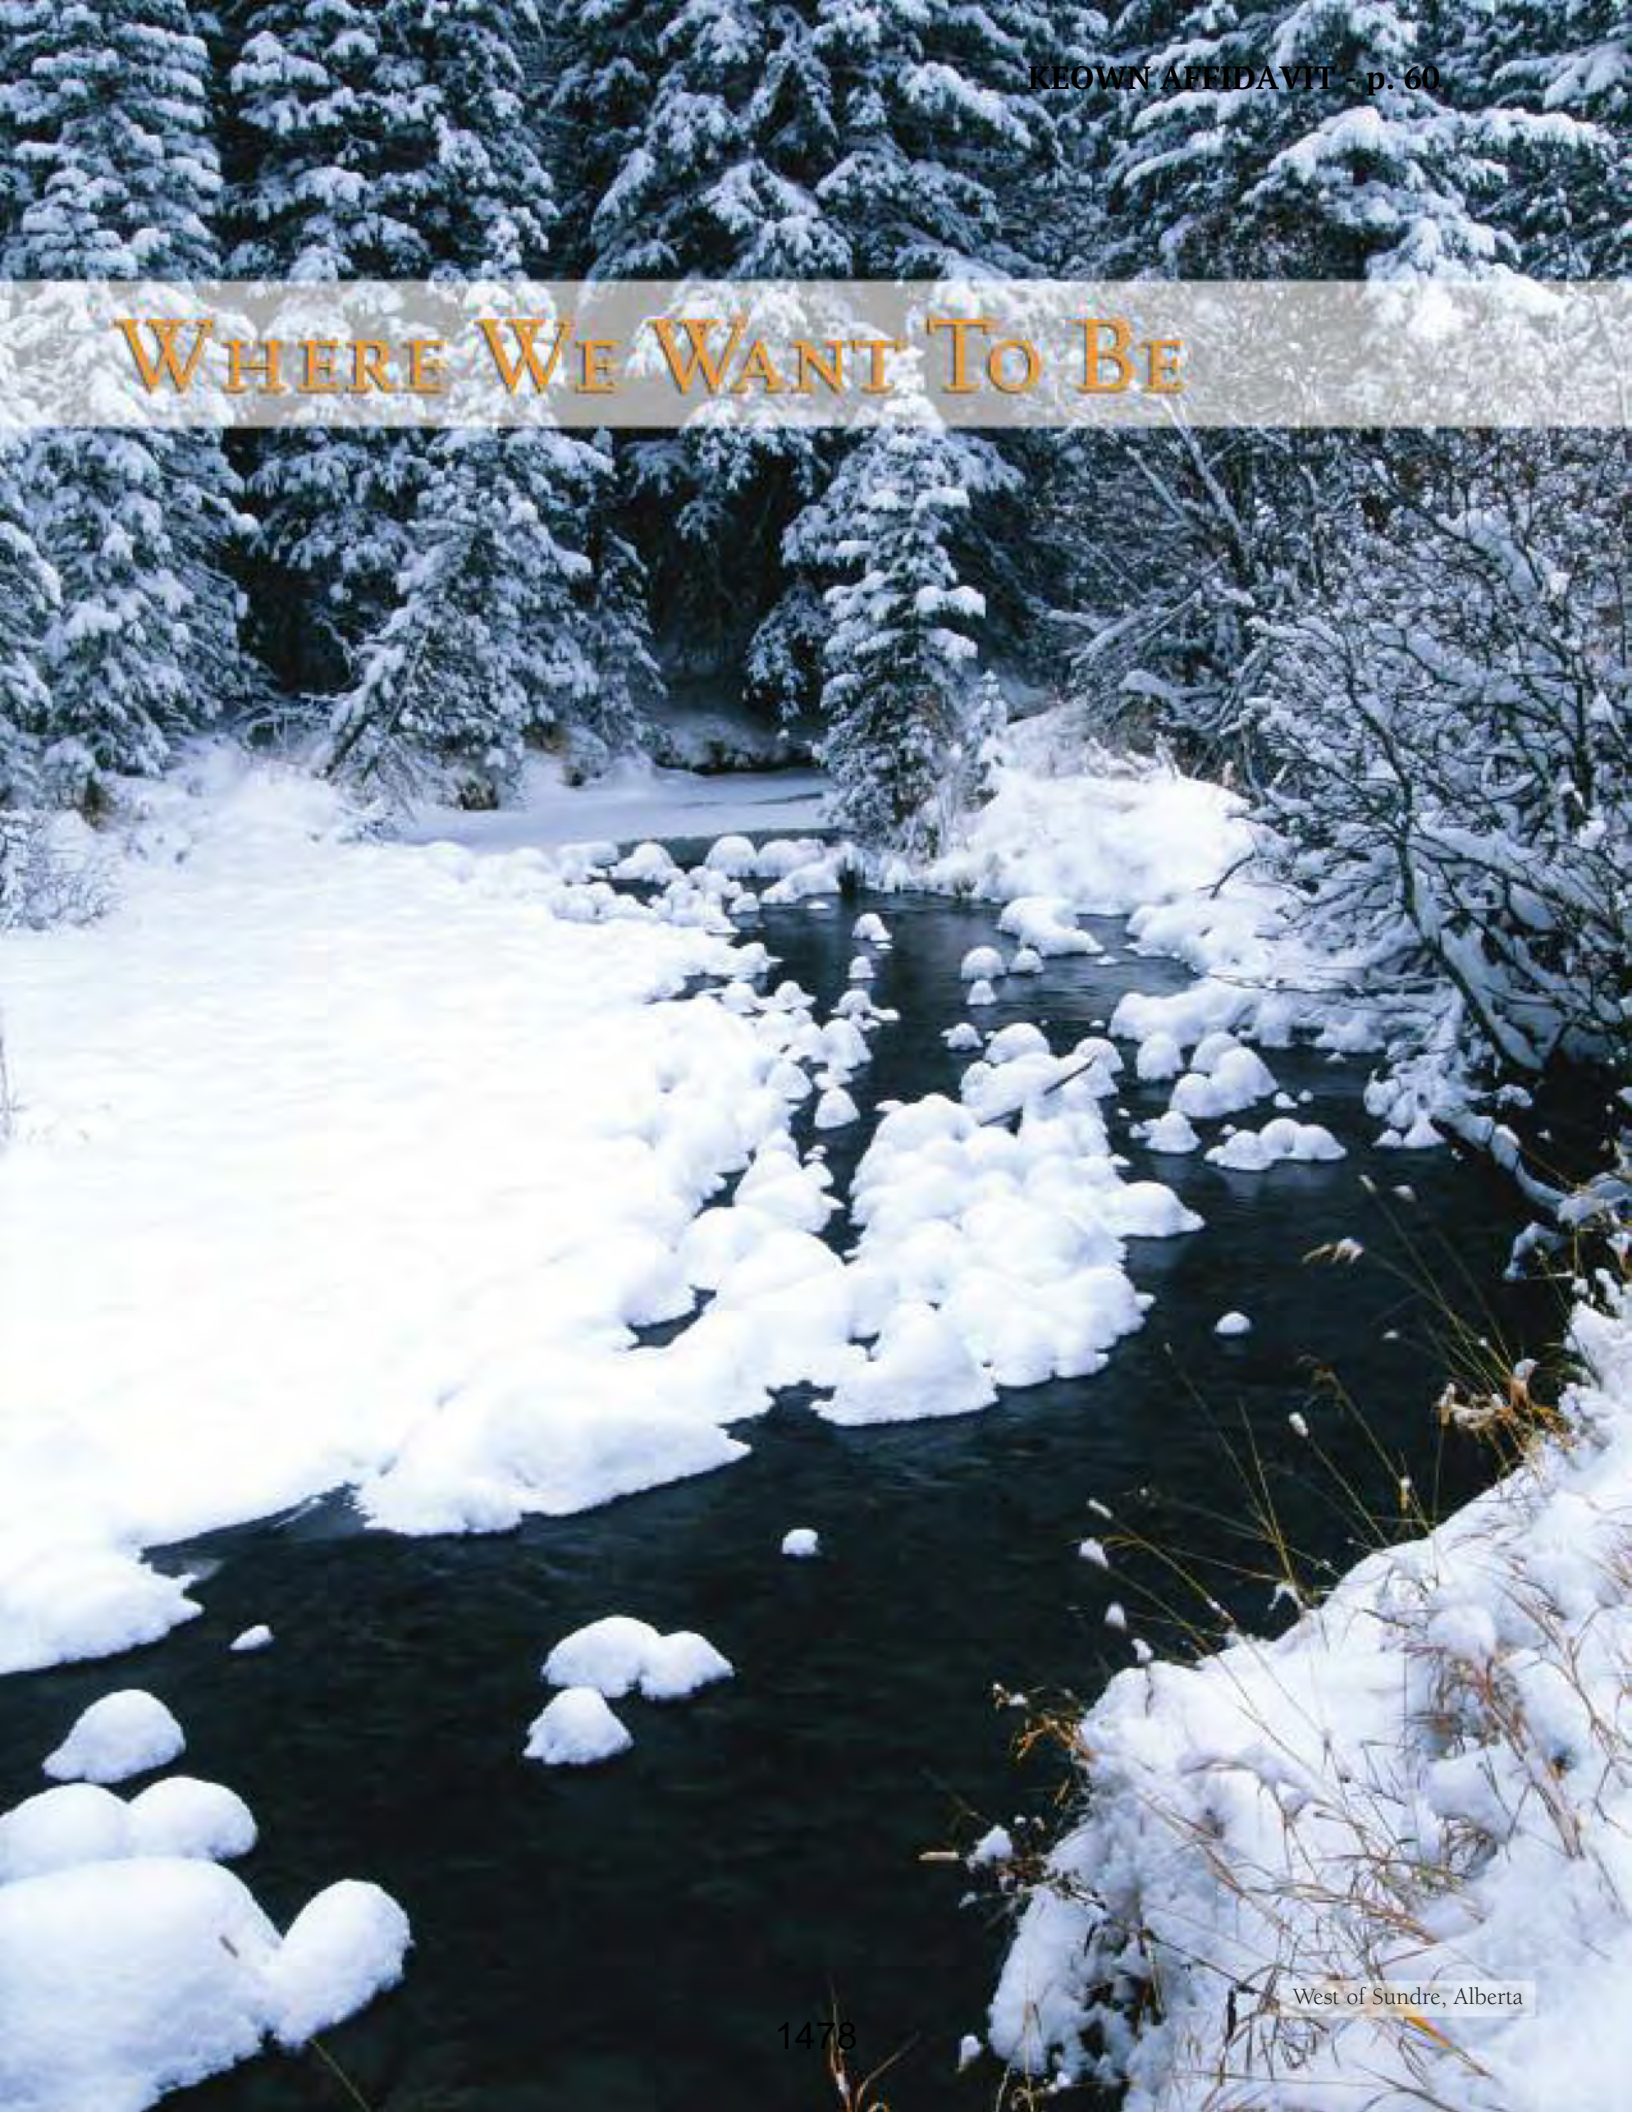
Agriculture
Alberta's farmers and ranchers own and use about one-third of the province's land. There are fewer farmers and ranchers today and it has become more cost effective for agricultural producers to have more land in production (i.e., the average size of farming operations has increased 63 per cent during the past 50 years). While the amount of land used for agriculture has been relatively stable across the province, agricultural land, particularly in areas like the Edmonton-Calgary corridor, Grande Prairie, and Lethbridge, has been increasingly divided into parcels too small to farm or ranch (i.e., fragmentation).

Rural and urban growth has resulted in the loss or conversion of some of the province's most productive farm and ranch lands to other uses. From 1960 to 2006, the number of cattle increased from 2.88 million to 6.37 million and the number of hogs increased from 1.47 million to 2.05 million. Over the past two decades, the number of confined feeding operations (i.e., feedlots) has increased significantly to over 2,400. The acres of improved cropland increased from 25,296,177 acres to 32,160,765 acres during the same time period.

While our population and number of activities on our landscape continue to grow, the size of our province does not. There are more and more people doing more and more activities on the same piece of land. We have reached a tipping point. What worked before will not work for our future. The time for change is now. We have the opportunity today to help shape the Alberta of tomorrow, but we must choose well. The Land-use Framework is about making the right choices now.



Where We Want To Be



West of Sundre, Alberta

No longer satisfied with the status quo, Albertans are looking for stronger provincial leadership to introduce the changes necessary to better balance our economic growth with our social and environmental values. The Government of Alberta welcomes this challenge, and the Land-use Framework proposes a path to the future that Albertans want.

To achieve this goal, we propose a vision that will guide and inspire our collective journey. To ensure that we can meaningfully measure successful progress, we propose three desired outcomes. To help achieve these outcomes, we adopt a set of guiding principles that will shape and inform our actions.

A. Our vision

Albertans work together to respect and care for the land as the foundation of our economic, environmental and social well-being.

We are grateful for the natural wealth and beauty that we have inherited and acknowledge our collective duty to pass this natural bounty on to the next generation—as good as, or better than, we received it. Our vision statement confirms that Albertans' well-being is more than just jobs and economic development. Our quality of life includes significant environmental, social and cultural dimensions. The vision also confirms the principles of sustainability and inter-generational responsibilities. The vision makes it clear that managing our land is a shared responsibility that involves all Albertans—including industry, landowners, aboriginal peoples, individual Albertans and governments.

B. Desired outcomes

To translate our vision into reality, we identify three outcomes. Actions taken to implement the Land-use Framework must contribute—directly or indirectly—to these outcomes. The outcomes are inter-related and of equal importance although trade-offs may be required.

Healthy economy supported by our land and natural resources
Includes current and future economic benefits realized by the use and enjoyment of our land and natural resources. Much of Alberta's prosperity is derived from the land and other natural resources. We must ensure our land and natural resources continue to provide economic benefits to Albertans over time.

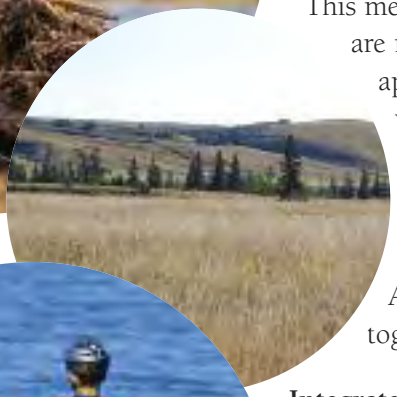
Healthy ecosystems and environment
Alberta lands should be managed to ensure healthy ecosystems. Albertans accept the responsibility to steward our land, air, water and biodiversity so that they pass on to the next generation in as good or better condition as we received them. The means to achieve this outcome may vary from region to region and be different on public and private lands, but the goal is the same.

People-friendly communities with ample recreational and cultural opportunities
Albertans live in communities. How we design, plan and recreate in and how we move through the communities, and how these communities grow, impacts the land and future land use in Alberta. We want our communities to be safe and healthy, and we want citizens of Alberta to have ready access to parks, forests and other areas to pursue outdoor recreational and cultural interests.

C. Guiding principles

The vision and the desired outcomes define where Albertans want to be when it comes to land use. But to reach this destination, we will have to make many practical decisions—decisions involving competing interests, conflicting values and complicated trade-offs. To help align these actions with our vision and desired outcomes, we are adopting a set of guiding principles that will shape and inform our actions. In Alberta, land-use decisions will be:

Sustainable
Development which meets the needs of the present without compromising the ability of future generations to meet their own needs. Contemporary



land-use decisions will balance current economic, environmental and social benefits with the consequences for future generations. This principle of inter-generational responsibility applies to all forms of human land use (residential and industrial, agriculture and forestry, energy and transportation).

Accountable and responsible
All levels of government, the private sector and the community at large will share accountability for responsible land use.

Supported by a land stewardship ethic
This means accepting the responsibility to ensure that our land-use decisions are mindful of consequences for future generations. This responsibility applies to urban planning, forestry and agriculture, habitat and wildlife, watersheds and riparian areas, and all other decisions affecting land use. Where appropriate, market mechanisms will be used to promote stewardship practices.

Collaborative and transparent
Albertans, landowners, land users and governments will work together.

Integrated
Policies, planning and decisions will integrate current and new land use on public and private lands and co-ordinate land, air, water, biodiversity, economic development and social objectives within the region.

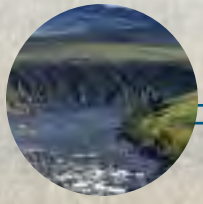
Knowledge-based
Government decision-making and choices will be informed by science, evidence and experience, including traditional knowledge of aboriginal peoples.

Responsive
Land-use decision-making processes will be responsive to changing economic, environmental and social factors over time and will be improved through periodic review. If there are negative unintended consequences, Cabinet will review policies for possible corrections or repeal.

Fair, equitable and timely
Decision-making criteria and processes will be clearly defined, consistently followed, and not subject to political expediency. Decision-making bodies will be provided with the capacity to perform their responsibilities in a timely manner.

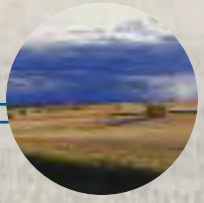
Respectful of private property rights
Decisions will respect the laws of property ownership and the positive role of free markets in making societal (public) choices.

Respectful of the constitutionally protected rights of aboriginal communities
The Government of Alberta will continue to work with aboriginal communities' governments, while respecting the special role and relationship of the federal



government regarding the aboriginal peoples. The Government of Alberta recognizes that consultation should take place on matters that impact treaty or constitutionally protected rights of First Nations and Métis peoples.

The Land-use Framework is both an end and a beginning. It is the end of 18 months of consultation and dialogue with Albertans about our collective future. It is the beginning of a time of action, a time to start putting in place new ways of making decisions about land use that will achieve the sustainability and balance that Albertans have told us that they want. This does not mean that consultation and dialogue will end. Both will be necessary to implement new laws and policies. But to get the process started, we need a plan, and this is it. The Land-use Framework constitutes the provincial leadership on land use that Albertans have told us they want.



Provincial Leadership

In any land-use policy, striking the right balance between centralized and local decision-making is crucial. Different jurisdictions do it differently, depending on their political cultures, size and relative capacity of different levels of government. In Canada and the other common law democracies, there is a strong and successful tradition of local decision-making.

Our consultations with Albertans indicate widespread support for greater provincial leadership on land-use issues. This does not mean creating a heavy-handed, centralized bureaucracy in Edmonton. It does mean that the Alberta government must provide the kind of policy guidelines and opportunities that the local levels of government cannot. The Land-use Framework leaves final decision-making authority with the same local officials who currently exercise it. However, in the future, these decisions will have to be consistent with regional plans.

The Land-use Framework consists of seven basic strategies to improve land-use decision-making in Alberta. These provide a strategic blueprint for the government to follow as we move from where we are today to where we want to be.

Strategy 1

Develop seven regional land-use plans based on seven new land-use regions.

The provincial government has numerous policies and strategies that affect land use. Most of these were developed independently from each other and at different times. While most are enabled through provincial legislation, responsibility for decision-making and enforcement may be vested in the provincial government, municipal governments, multi-stakeholder groups, industry, or a combination of all four. These processes have worked reasonably well in developing plans for a particular purpose. However, there is uncertainty about how plans in a particular geographic area should be linked and what planning process or plan takes priority over another.

Alberta does not currently have formalized regional-level planning. Nor is there any formalized co-ordination between Government of Alberta land-use decisions on Crown lands and municipal land-use decisions. Resolving these complexities will require clear provincial leadership and an integrated process for land, air, and water management.

The Government of Alberta will create seven land-use regions and will develop land-use plans for each of these regions. The regional plans will integrate provincial policies at the regional level, set out regional land-use objectives and provide the context for land-use decision-making within the region, and reflect the uniqueness of the landscape and priorities of each region. Municipalities and provincial government departments will be required to comply with regional plans in their decision-making.

Strategy 2

Create a Land-use Secretariat and establish a Regional Advisory Council for each region.

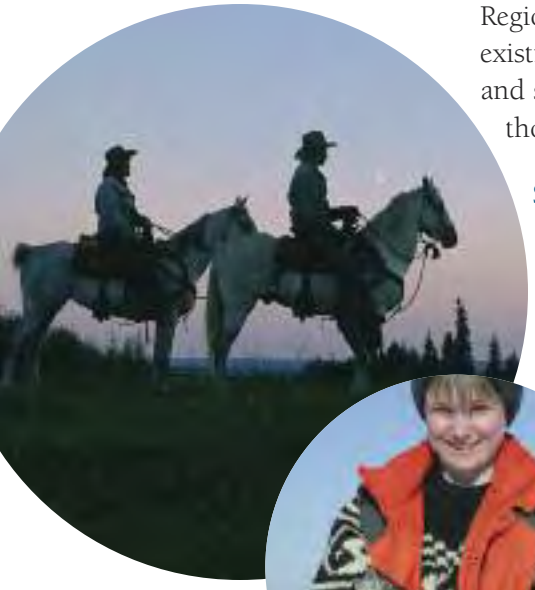
Strong provincial leadership and clear direction are critical elements for sound land-use planning and resource management in Alberta. Establishing a formal governance structure for implementing the Land-use Framework will be necessary for it to succeed.

To meet this need, the Land-use Framework creates a Land-use Secretariat to support implementation of the framework. The Secretariat will develop regional plans in conjunction with government departments and Regional Advisory Councils. Final decision on regional plans rests with Cabinet.

Strategy 3

Cumulative effects management will be used at the regional level to manage the impacts of development on land, water and air.

Our watersheds, airsheds and landscapes each have a finite carrying capacity. Alberta's system for assessing the environmental impacts of new developments has usually been done on a project-by-project basis. This approach worked at lower levels of development activity. However, it did not, in all cases, address the combined or cumulative effects of multiple developments taking place over time.



Regional plans will adopt a cumulative effects approach that includes the impacts of existing and new activities. It will reflect our understanding of environmental risks and socio-economic values in setting environmental objectives and managing within those objectives.

Strategy 4

Develop a strategy for conservation and stewardship on private and public lands.

Clean water and air, healthy habitat and riparian areas, abundant wild species and fisheries are all "public goods" that Albertans enjoy and value. The costs of supplying these goods on private lands are left largely on the shoulders—and pocketbooks—of our ranchers and farmers. This explains why much habitat and wetlands have disappeared in recent decades and why there has been an increase in the conversion of agricultural lands to other uses. Public lands are managed for a variety of uses and are also important in providing public goods. We have to find new ways to share the costs of conserving these public goods.

To do this, the Government of Alberta will develop new policy instruments to encourage stewardship and conservation on private and public lands. These could include: environmental goods and services; support for conservation easements and land trusts; "cluster development" through the transfer of development credits; and allowing land-trust tax credits to be sold to third parties.

Strategy 5

Promote efficient use of land to reduce the footprint of human activities on Alberta's landscape.

Land is a limited, non-renewable resource and so should not be wasted. Land-use decisions should strive to reduce the human footprint on Alberta's landscape. When it comes to land use, other things being equal, less is more—more choices for future generations. This principle should guide all areas of land-use decision-making: urban and rural residential development, transportation and utility corridors, new areas zoned for industrial development, and agriculture.

Strategy 6

Establish an information, monitoring and knowledge system to contribute to continuous improvement of land-use planning and decision-making.

Good land-use decisions require accurate, timely and accessible information. There needs to be greater collaboration and sharing of information between individuals and groups who have data and knowledge about land. A sound monitoring, evaluation and reporting system is needed to ensure the outcomes of the Land-use Framework are achieved.

The Government of Alberta will collect the required information to support land-use planning and decision-making and create an integrated information system to ensure decision-makers have access to relevant information. The system will include regular monitoring, evaluation and reporting on the overall state of the land and progress toward achieving provincial and regional land-use outcomes. A key component of this system will be the province's Biodiversity Monitoring Program carried out by the Alberta Biodiversity Monitoring Institute.

Strategy 7

Inclusion of aboriginal peoples in land-use planning.

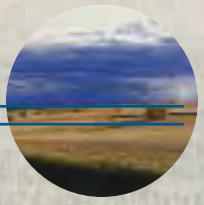
The provincial government will strive for a meaningful balance that respects the constitutionally protected rights of aboriginal communities and the interests of all Albertans. The Government of Alberta will continue to meet Alberta's legal duty to consult aboriginal communities whose constitutionally protected rights, under section 35 of the *Constitution Act, 1982 (Canada)*, are potentially adversely impacted by development. Aboriginal peoples will be encouraged to participate in the development of land-use plans.

Priority actions for the Land-use Framework

There are five immediate priorities that the provincial government will support or complete on a priority basis. These are: legislation to support the framework, metropolitan plans for the Capital and Calgary regions, the Lower Athabasca Regional Plan, and the South Saskatchewan Regional Plan. In addition, a number of policy gaps and areas of provincial public interest will be addressed by the provincial government in the short-term.

Timeframe for implementing the Land-use Framework

The Land-use Framework constitutes a significant change in how land-use decisions are made in Alberta. Implementing the recommended governance changes and developing individual plans for the seven new regions will take time. A timeframe for the implementation of the Land-use Framework is provided on page 47.



Land-use Regions and Plans

Poplar trees west of Sundre

The provincial government has numerous policies and strategies that affect land use, many developed independently and at different times to address changing circumstances. As a result, existing policies and strategies are not as well integrated as they could be and often do not provide an understanding of priorities.

The multiple processes that exist today have created considerable complexity in land-use planning and decision-making. Resolving these complexities will require provincial leadership and an integrated planning process. A single formalized and integrated process for regional-level planning currently does not exist in the province.

Establishing a formal regional planning system is the most effective way to implement provincial policy. A regional approach will establish land-use management objectives and determine land-use trade-offs. Regional planning will integrate economic, environmental and social factors and provide the context for future, more detailed planning. The regional plan will ensure that planning for land use, water and air quality are aligned with each other.

A. Provincial outcomes

The Alberta government has the primary responsibility for making decisions that meet the economic, environmental and social goals of all Albertans. Land-use decisions influence the ability of the government to meet these goals. Therefore, land-use planning and decision-making need to be guided by and consistent with defined outcomes and principles. This applies equally to municipal governments as well as government departments and agencies.

The desired outcomes for Alberta are;

- healthy economy supported by our land and natural resources,
- healthy ecosystems and environment, and
- people-friendly communities with ample recreational and cultural opportunities.

The provincial government will ensure that the following outcomes and principles are reflected in the land-use plans developed for each region.

Outcome
Healthy economy supported by our land and natural resources

- Alberta's natural resources are developed in a way that optimizes value for the broadest number of Albertans and reduces waste.
- Reasonable and timely access to these resources will be ensured.
- Innovation, value-added diversification, global competitiveness, and balanced and responsible use of natural resources are crucial to sustain the momentum of Alberta's economy.
- The interests of surface users and surface and subsurface developments are balanced and managed effectively.
- Land and resource use promotes diverse industries, stimulates environmentally sound economic activity, and leaves economic opportunities open for future Albertans.

Outcome
Healthy ecosystems and environment

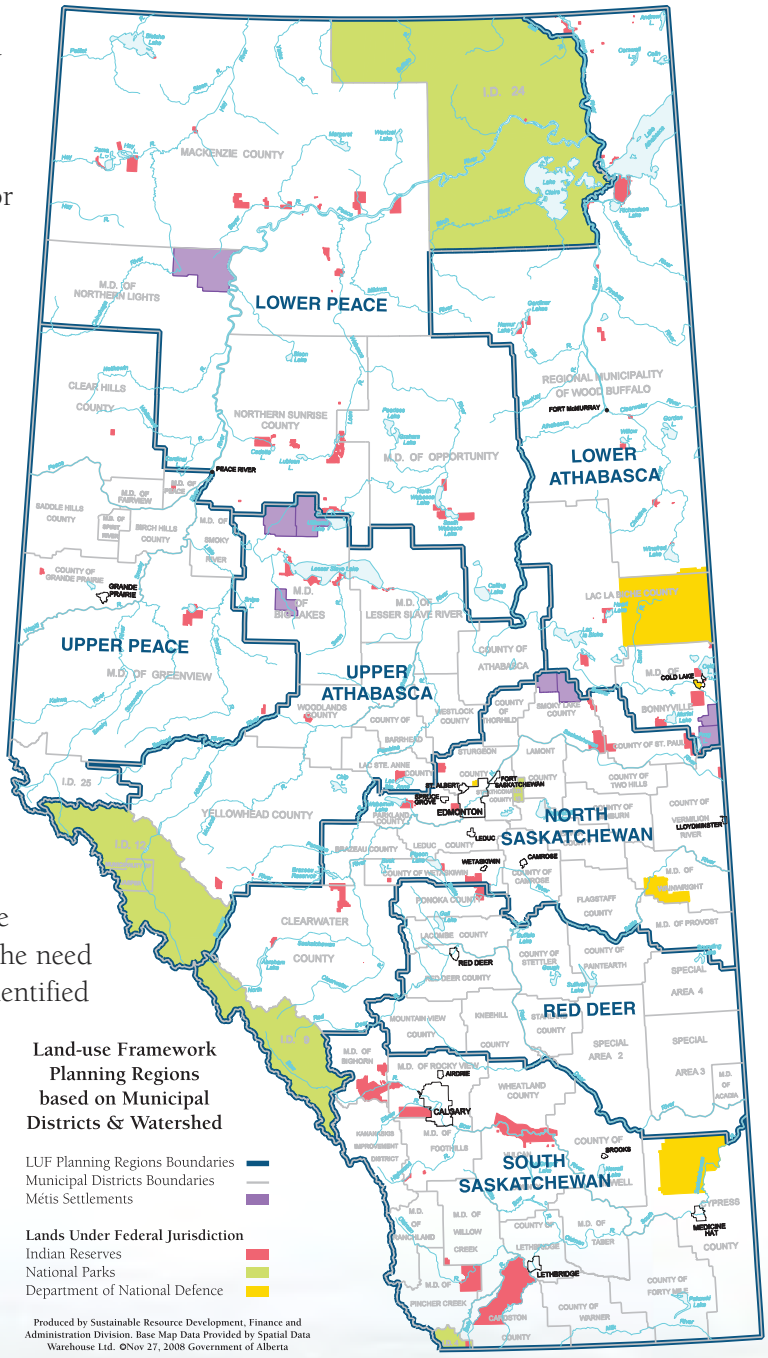
- The life-supporting capacity of air, water, land and biodiversity are maintained or enhanced, and the natural resources that form part of the environment are sustained.
- The intrinsic value of nature is respected.
- Soil and soil fertility are maintained and/or enhanced.
- The quality and quantity of ground and surface water are protected.
- Greenhouse gas emissions and air pollution are reduced, waste is minimized, and the biodiversity and abundance of native species and their natural habitats are maintained.
- Communities are prepared to respond to and adapt to a changing climate and environmental events (e.g., floods, drought).

Outcome
People-friendly communities with ample recreational and cultural opportunities

- Settlement development and land use will focus on efficient use of land, infrastructure, public services and public facilities.
- Significant historical resources are identified and protected, and potential impacts are managed effectively. Alberta's parks inspire people to value, enjoy and discover the natural world and the benefits it provides for current and future generations.
- Stakeholders are fairly engaged in planning processes, which in turn improves the quality of land-use decisions and builds confidence in the decision-making processes.

B. Regions defined

The Land-use Framework creates seven regions for Alberta based on the major watersheds, with boundaries aligned to best fit with existing municipal boundaries and the natural regions. These regions are large enough to work at the landscape level. However, the delineation of boundaries recognizes that not all important issues are completely addressed at one spatial scale. Where there are issues that cross regional boundaries, the need for linkages and compatible treatment will be identified in the relevant plans. For example, while the Red Deer Region will be considered a distinct region for land-use purposes, watershed management policy for the region will be aligned and set within the context of the planning for the greater South Saskatchewan River basin. The regional boundaries are illustrated on the map.

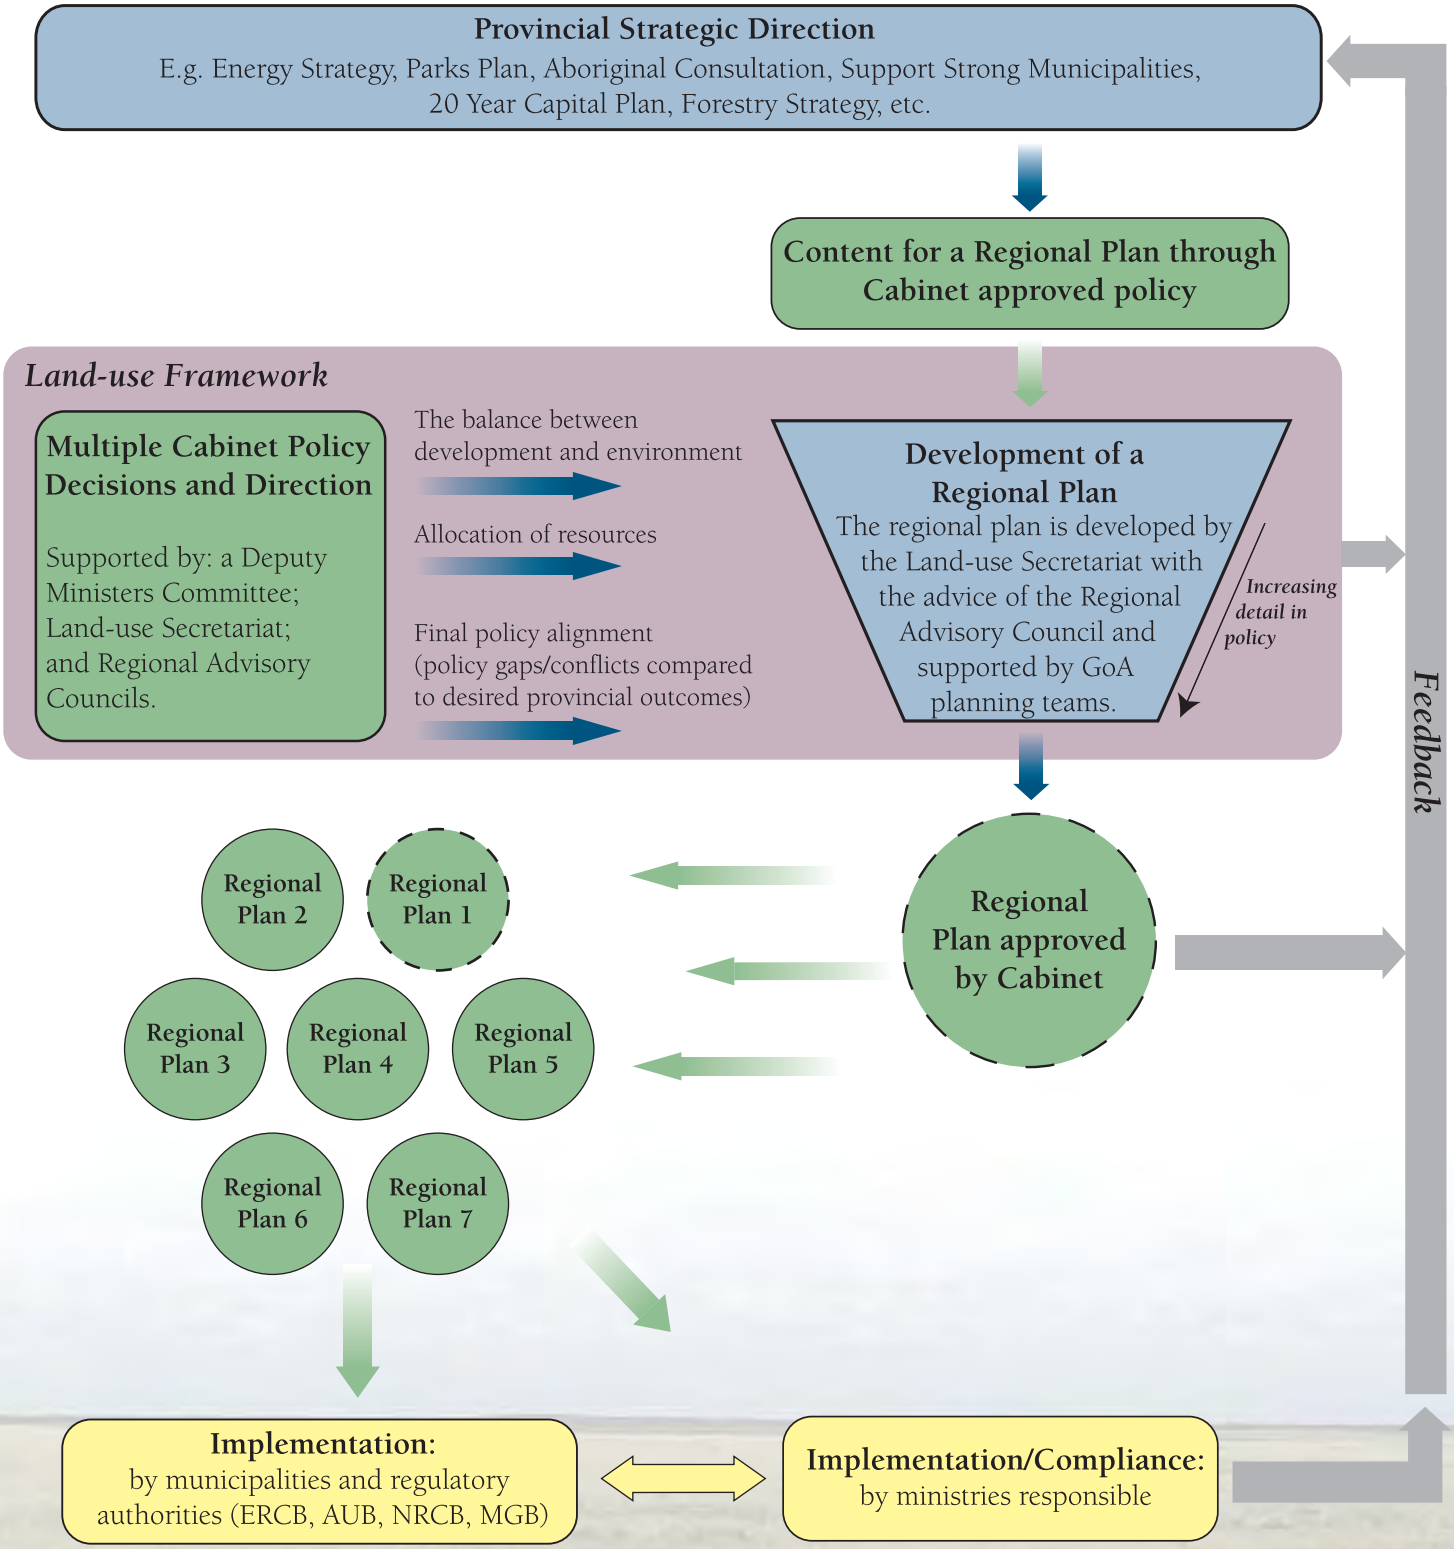


C. Establishing a model for regional planning

The diagram on the next page illustrates the model in which land-use planning and decision-making would be conducted within the Land-use Framework. It begins with provincial policy direction guiding the development of regional plans. At times, and depending on the issue, a region will be strongly directed by provincial interests. At the regional level, plans will set the economic, environmental and social outcomes for the regions. These

integrated regional plans will provide guidance to municipal and provincial planning and decision-making. For municipalities, this would include general development and area structure plans, and land-use bylaws; for provincial departments, this would include detailed integrated land and resource management plans.

Land-use Process



Regional plans will:

- reflect the vision, principles and outcomes of the Land-use Framework;
- define regional outcomes (economic, environmental and social) and a broad plan for land and natural resource use for public and private lands within the region;
- align provincial strategies and policies at the regional level;
- consider the input from First Nations and Métis communities, stakeholders, and the public;
- determine specific trade-offs and appropriate land and natural resource management for specific landscapes within a region;
- define the cumulative effects management approach for the region and identify targets and thresholds;
- provide direction and context for local plans within the region;
- recognize the authority and role of municipalities in local decision-making;
- be approved by Cabinet, thereby becoming government land-use policies for the regions; and
- will be subject to regular reviews and public reporting:
  - every five years – plan updates and reports on implementation; and
  - every 10 years – complete plan reviews.

Preparation of a regional plan may identify a need to refine provincial policy. Regional plans may also identify the need for more detailed plans to address specific needs and issues within the region. In addition, changes in provincial policy or direction will need to be reflected through amendments to regional plans to ensure that provincial policy and regional plans remain aligned.

D. Local planning

Planning and decision-making at the local level by municipalities and provincial agencies are often criticized for not reflecting higher level provincial policy directions and regional interests.

An effective land management system recognizes that planning and decision-making must take place at different levels and be integrated between levels. Alberta has a strong tradition of local government control that recognizes the diversity across the province. However, in the face of increasing pressures and conflicts, the Government of Alberta needs to ensure that provincial interests are addressed at a local scale.

1. Municipal planning

Municipalities will be required to ensure their plans and decisions are consistent with regional plans. The Government of Alberta will respect the existing land-use planning and decision-making authority of municipalities.

Municipalities will;

- prepare context statements outlining how their municipal development plans will align with and address provincial directions stated in regional plans, and
- amend municipal planning documents to adopt and align with regional planning directions.

2. Provincial planning carried out at the local level

Direction under regional plans will be defined and delivered on provincial Crown land through integrated land and resource management plans (e.g., access management planning, forest management planning, parks planning). These will further define access to and use of provincial Crown land and focus on operational activities that reflect the regional priorities and directions.

The Government of Alberta will be moving forward, in partnership with industry and other stakeholders, with the Integrated Land Management Program on provincial Crown land. The program promotes responsible use of provincial Crown land by influencing land-user behaviour, improving stewardship, and encouraging acceptance and adoption of integrated land management principles as a "way of doing business". The program aligns the operational processes and systems of land users and government to facilitate and enable integration of land-based activities.

E. Appeal mechanisms

The Land-use Framework creates a regional level of planning that does not currently exist in the province. Within the context of these regional plans, the provincial government and local governments will be making decisions. Decision-making bodies will be required to comply with regional plans and if any regional plan compliance issues arise, they will be resolved within existing review and appeal systems.

Albertans expect municipalities and provincial ministries to act in a way that is consistent with regional directions and plans. Because they are approved by Cabinet, regional plans are government policies and cannot be appealed.

Land-use Governance

Burrowing Owl
Photo Credit: Gordon Court

The provincial government will create a Land-use Secretariat and establish a Regional Advisory Council for each region. Final decisions on regional plans under the Land-use Framework are Cabinet-level responsibilities. Cabinet will:

- provide provincial oversight of regional planning,
- review and decide terms of reference for regional plans,
- review and make final decisions on regional plans,
- ensure integration of provincial land-use related policies, and
- ensure regional plans are implemented to achieve provincial outcomes.

A. Land-use Secretariat

A provincial Land-use Secretariat is established to support Cabinet decision-making. The Secretariat will:

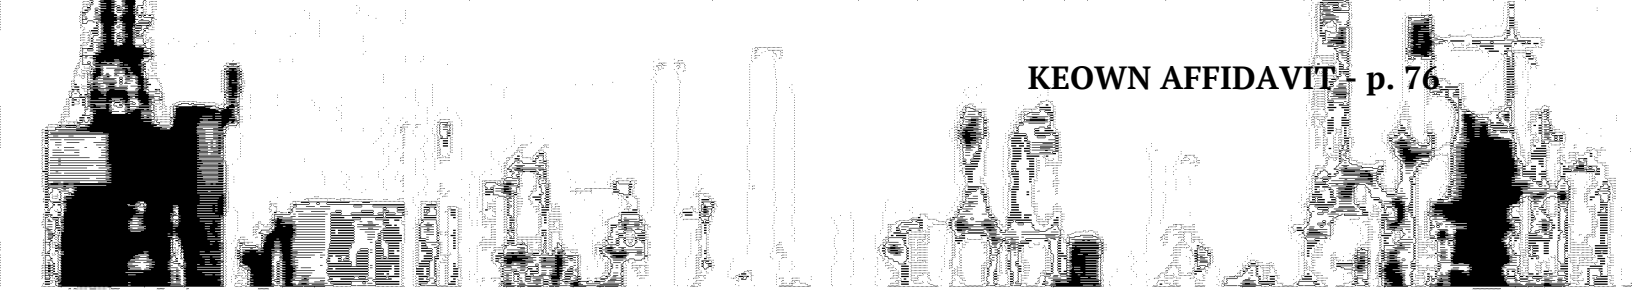
- support the development of a terms of reference for regional plans,
- lead the development of regional plans in conjunction with departments with an interest in land use (regional planning teams) and in consultation with the Regional Advisory Councils,
- communicate with local planning bodies to clarify and interpret regional plans,
- support policy reconciliation,
- provide advice to regional bodies on provincial policy,
- ensure effective management of cross-regional infrastructure and policy matters,
- assist provincial departments, municipalities and other local authorities in reconciling their respective roles to the Land-use Framework,
- provide administrative infrastructure and support to Regional Advisory Councils, and
- ensure application of cumulative effects models.

B. Regional Advisory Councils

The Government of Alberta will create Regional Advisory Councils for each region to provide advice and receive direction from the Cabinet and provide advice to the Land-use Secretariat on the development of the regional plan. Regional Advisory Councils will:

- consist of members representing the range of perspectives and experience in the region and who are able to appreciate the broad interest of the region and its place in the province. Members will be appointed by the provincial government and will include provincial and municipal government interests, industry, nongovernment groups, aboriginal community representatives, and other relevant planning bodies (e.g., Watershed Planning and Advisory Councils) within the region;
- have a mandate to advise on the development of regional plans;
- provide advice on addressing trade-off decisions regarding land uses and on setting thresholds to address cumulative effects; and
- advise and participate in public and stakeholder consultation for the planning process.

The Government of Alberta will ensure that the Land-use Secretariat and regional planning processes are sustained through appropriate resourcing.



Cumulative Effects Management

The Government of Alberta will use cumulative effects management at a regional level.

Cumulative effects denotes the combined impact of past, present and reasonably foreseeable human activities on a region's environmental objectives. The environmental objectives are established based on our understanding of environmental risks and socio-economic values. Once the objectives are set, cumulative effects systems manage those environmental outcomes.

A final caveat is in order. Cumulative effects management is an emerging practice, an art not a science. Accordingly, it should be used pragmatically not dogmatically.

Cumulative effects management recognizes that our watersheds, airsheds and landscapes have a finite carrying capacity. Our future well-being will depend on how well we manage our activities so that they do not exceed the carrying capacity of our environment.

Alberta's current regulatory system is based on a project-by-project approval and mitigation of the adverse effects of each project. Until now, the approach has been to control the impact of each project. While this may be acceptable for low levels of development, it does not adequately address the cumulative effects of all activities under the current pace of development.

Cumulative effects cannot be managed as an "add-on" to existing management approaches; nor is it about shutting down development. It is about anticipating future pressures and establishing limits; not limits on new economic development, but limits on the effects of this development on the air, land, water and biodiversity of the affected region. Within these limits, industry would be encouraged to innovate in order to maximize economic opportunity.

The Government of Alberta will develop a process to identify appropriate thresholds, measurable management objectives, indicators and targets for the environment (air, land, water and biodiversity), at the regional levels and, where appropriate, at local levels. Land-use planning and decision-making will be based on balancing these environmental factors with economic and social considerations.

Conservation and Stewardship

Photo Credit: Fisheries and Oceans
Jeremy Stewart
Bull Trout

Clean water and air, healthy habitat and riparian areas, abundant wild species and fisheries are all "public goods" that Albertans enjoy and value. The costs of supplying these goods on private lands are left largely on the shoulders—and pocketbooks—of ranchers and farmers. Most land-use decisions are economic decisions, and the old saying, "if it doesn't pay, it doesn't stay," explains why much habitat and wetlands have disappeared in recent decades and why there has been an increase in the fragmentation and conversion of agricultural lands to other uses. Public lands are managed for a variety of uses and are also important in providing public goods. If Albertans value these landscapes on private and public lands and the benefits they provide to all of us, we have to find new ways to share the costs of conserving them.

Stewardship is a shared responsibility. While Alberta landowners have a strong tradition of stewardship, current efforts need to keep pace with Alberta's rapid growth. Although land users and landowners have a primary role in land stewardship and conservation, the Government of Alberta has a responsibility to partner with Albertans, industry, and other levels of government to facilitate new stewardship opportunities and strategies to protect and enhance the environment.

There are a variety of economic and noneconomic tools and approaches used throughout the world. There has been a shift away from traditional regulatory mechanisms to market-based instruments. Both approaches will be used in Alberta to encourage stewardship.

Market-based instruments include:

- environmental fees, charges and taxes (green tax reform);
- specialty markets;
- deposit-refund systems;
- tradable permits;
- incentives for environmental actions (provider gets);
- liability (polluter pays); and
- information disclosure on environmental performance.

The Government of Alberta will develop a strategy for conservation and stewardship on public and private lands. This strategy will:

- identify and develop a toolkit of new best practices, market-based approaches and incentives to provide ecological goods and services;
- develop education and awareness programs;
- develop action plans for the conservation and sustainable use of Alberta's biodiversity that can be used to support and inform development of regional plans; and
- pursue innovative ways to raise both public and private funds to support conservation and stewardship initiatives.

The Government of Alberta will work with the Institute of Agriculture, Forestry and the Environment, and other provincial applied research institutes to advance this strategy.

A. Private land stewardship

The Government of Alberta will support and encourage stewardship of private lands in Alberta through the development of applicable incentives and market-based instruments. The government will also consider new funding opportunities at the municipal level for stewardship and conservation initiatives on private lands. These could include:

Transfer of development credits
This is a tool that can be applied to private lands to direct development away from specific landscapes. This approach has been used in some places to allow development but also to allow for the conservation of open spaces and agricultural land. Transfer of development credits allows the owners of both developed and undeveloped land to share equitably in the financial benefits of the developed lands.

Land trusts and conservation easements
A land trust is a non-profit, charitable organization that has as one of its core activities the acquisition of land or interests in land (i.e., conservation easements) for the purpose of conservation. Whether protecting riparian areas, wetlands, or critical habitats for native species, land trusts work with private landowners to conserve public goods (e.g., sensitive habitats, open spaces in settled areas). The Government of Alberta will examine steps to ensure that Eco-Gift tax credits are more widely utilized. The Government will consider alternatives including making the provincial portion of the Tax Credit refundable or extending the carry-forward period. Alberta will also encourage the Government of Canada to consider similar reforms to the Federal portion of the Tax Credit.

Other tools for maintaining ecological goods and services
Economic and social benefits are derived from the natural processes of a healthy environment and biodiversity. These are a benefit to all of society and essential to sustaining a healthy and prosperous way of life. They include groundwater recharge, flood and erosion control, wildlife habitat, productive soils, carbon sequestration and abundant clean air and water. Market-based incentives and tools can provide a way for private landowners to receive some monetary compensation for the ecological goods and services their lands provide.

B. Public land stewardship

The Government of Alberta will continue to manage public lands for a variety of purposes and values. An important aspect of this is to conserve sensitive lands and natural resources (e.g., sensitive habitats, watersheds, historical resources, heritage rangelands). The management of these lands will be supported by a regulatory framework. To further encourage the stewardship of these lands, the Government of Alberta will evaluate market-based incentives that are applicable in Alberta. These could include:

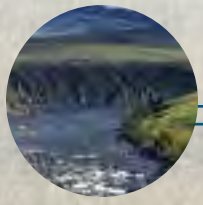
Tradable Disturbance Rights (TDRs)
TDRs is an instrument for cumulative effects management on public land. Its purpose is to minimize the overall disturbance footprint on the land, permitting the trading of "land disturbance" in a co-ordinated market. For example, a company that has been assigned a permit for development and does not use all the space can sell the unused space to someone else who needs more land. Both parties to the trade are encouraged to minimize their overall footprint.

C. Stewardship often transcends boundaries

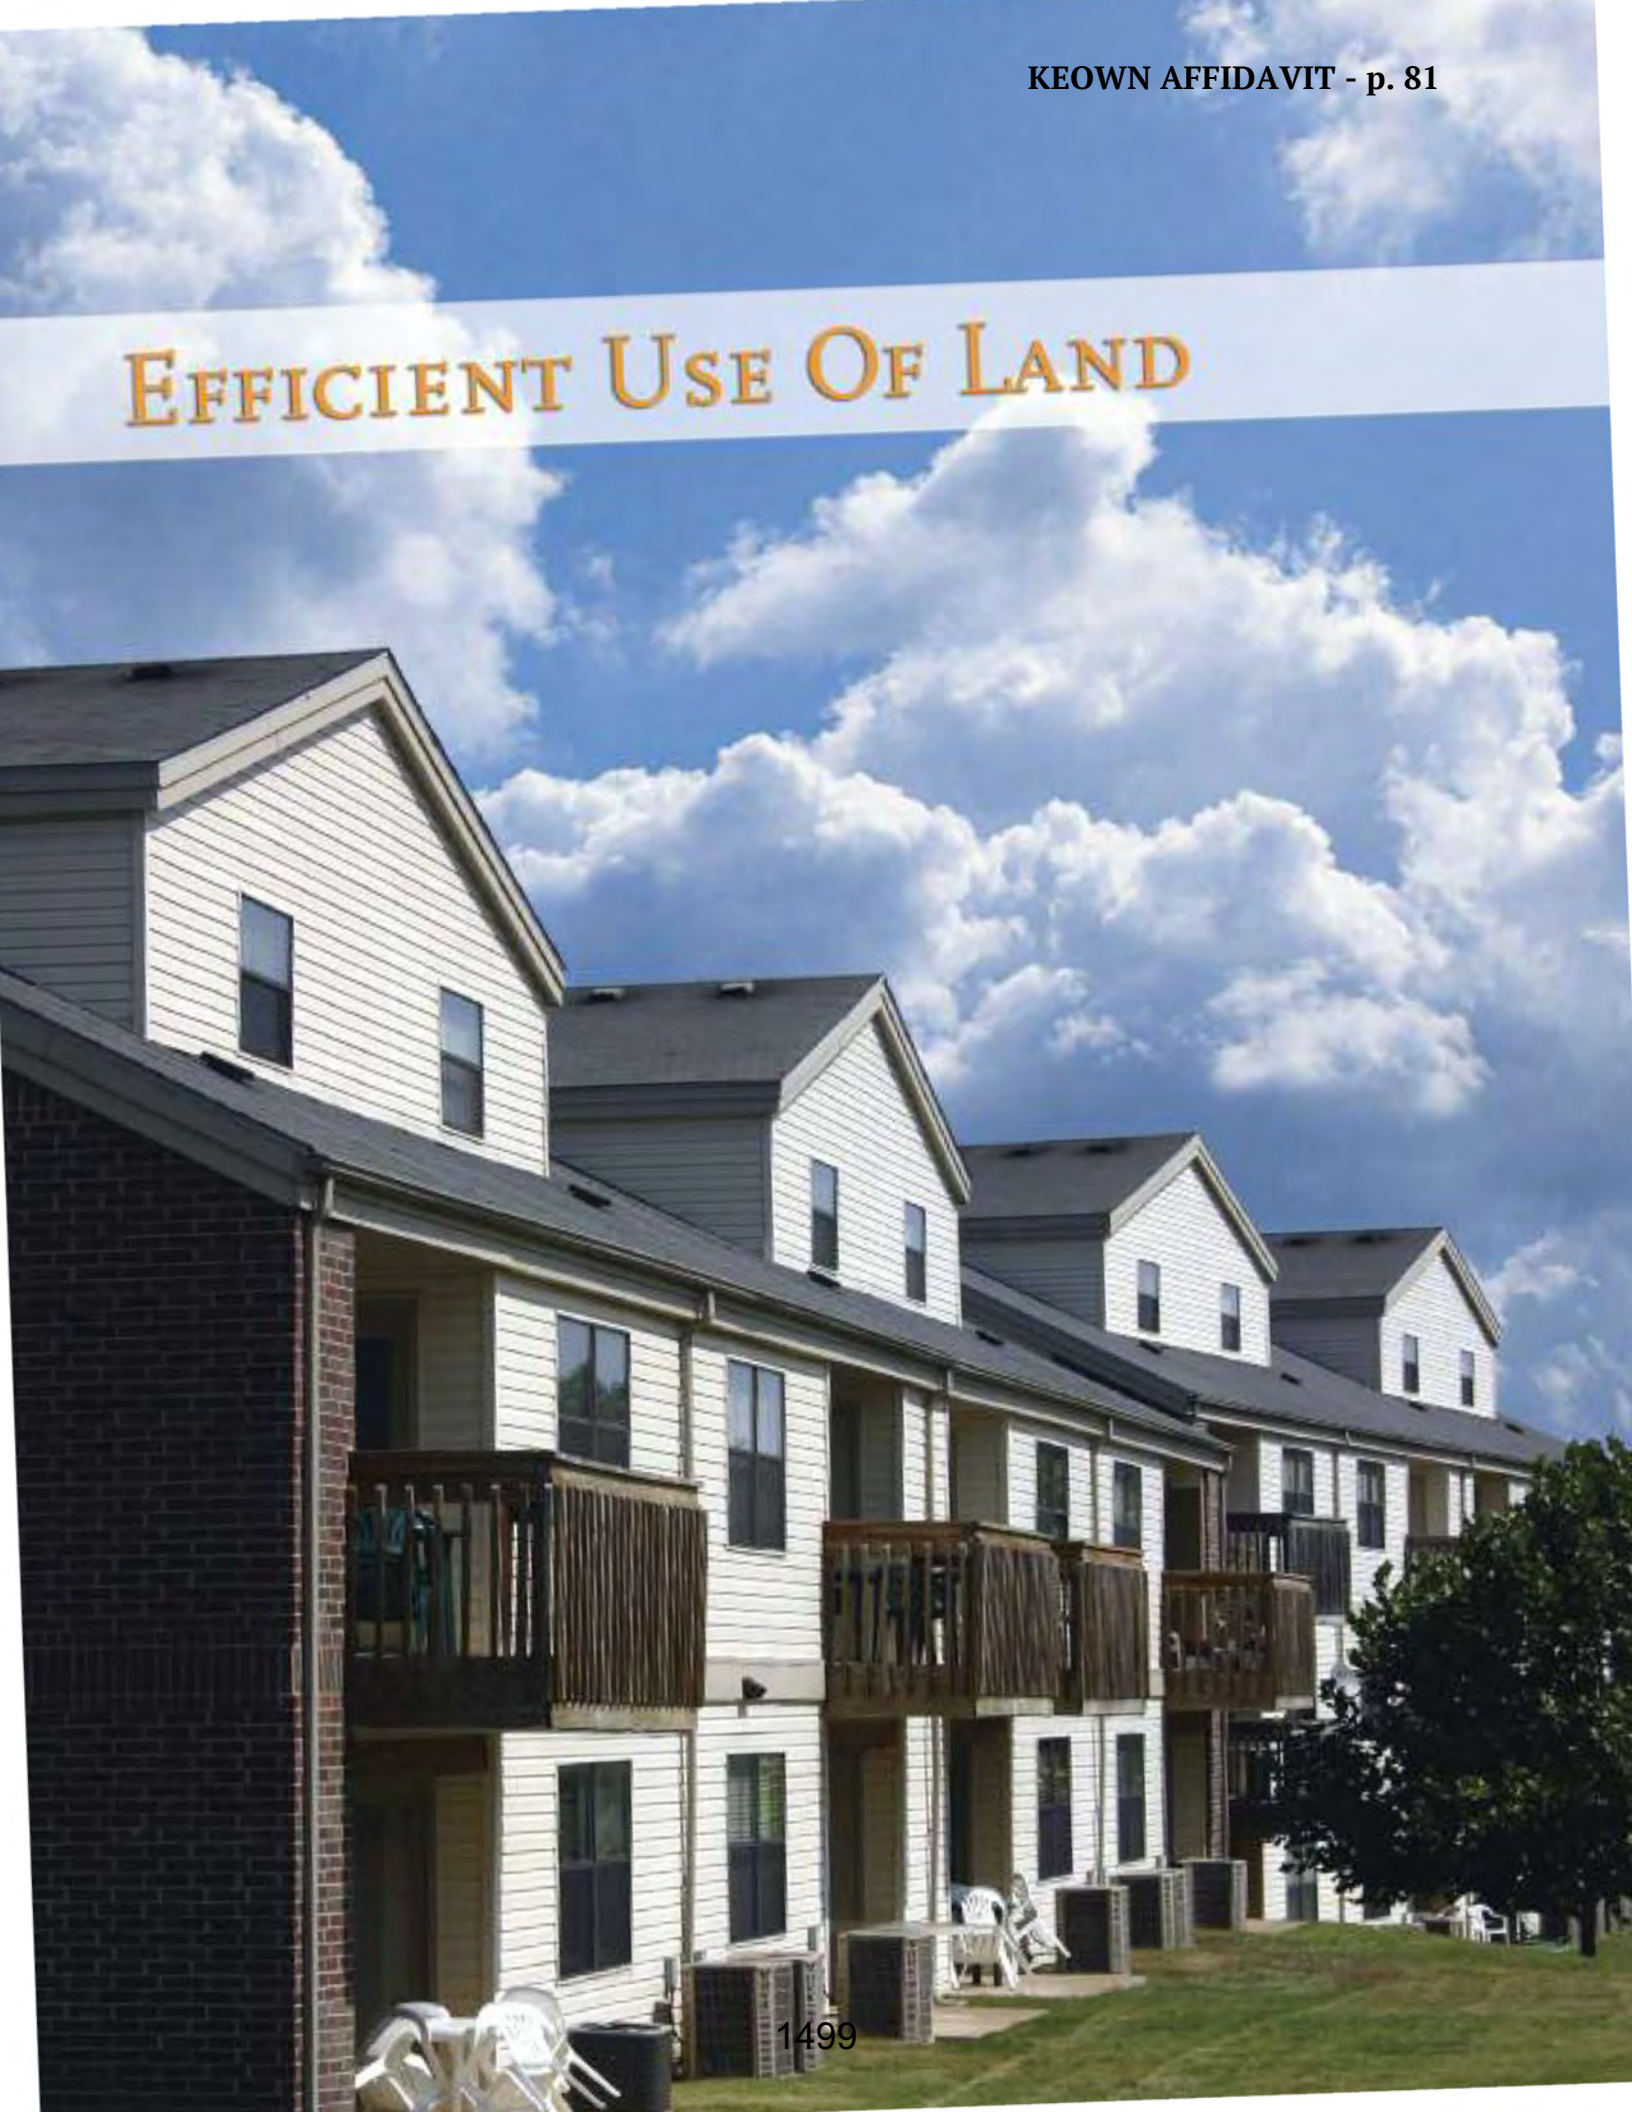
The following incentives will be further evaluated to identify their potential to be applied on both public and private lands:

Land conservation offsets
Land conservation offsets are compensatory actions that address biodiversity or natural value loss arising from development on both public and private lands. Compensation mechanisms include restitution for any damage to the environment through replacement, restoration, or compensation for impacted landscapes.

Lease-swapping and dealing with existing tenure rights in ecologically sensitive areas
Where high conservation values occur on public and private lands, new incentives could be developed to encourage the expeditious removal of industrial activities or hydrocarbon resources from legislated protected areas or lands with high conservation value.



Efficient Use Of Land



Land is a limited, non-renewable resource and so should not be wasted. Land-use decisions should strive to reduce the human footprint on Alberta's landscape. When it comes to land use, other things being equal, less is more — more choices for future generations. This principle should guide all areas of land-use decision-making; urban and rural residential development, transportation and utility corridors, new areas zoned for industrial development, and agriculture.

Examples of land-use decisions that promote efficient use of land.

- Minimize the amount of land that is taken from undeveloped or extensive use and placed in permanent use for residential, commercial, industrial, transportation, utility corridors or intensive recreational purposes.
- Use "green" technology in new development projects that will reduce the impact on natural systems.
- Encourage higher density where redevelopment opportunities occur.
- Support development where infrastructure capacity—water, sewer, road and other infrastructure—already exists.
- Planning land uses to reduce the frequency and length of travel for business and pleasure by promoting mixed-use development—industrial, commercial and residential.

Land-use efficiency should be commensurate with the level of activity in the region. On public lands where there are multiple users on the same landscape (e.g., forestry and oil and gas), integrated land management should be used to reduce the development footprint. In more densely settled metropolitan areas, the efficiency principle may require more complex strategies such as inter-municipal development plans or sub-regional plans such as the Capital Region Board and the Calgary Regional Partnership.

Monitoring, Evaluation And Reporting

Near Hinton, Alberta

Accurate, timely and accessible information is essential to good land-use planning and decision-making. There are many provincial government ministries, other levels of government, industries, groups and individuals that know a lot about the land—including farmers and ranchers, academics, researchers, and First Nations and Métis communities. Establishing stronger connections between these groups will help improve our understanding of how activities affect the land and develop new approaches to land use.

Currently, there is a general lack of accessible, integrated information. Greater collaboration and information sharing is needed between governments, industry and non-government organizations. A sound monitoring, evaluation and reporting system is also needed.

Successful land-use planning must respond to changing circumstances and risks—economic, environmental and social. The Land-use Framework will be based on a system for continuous improvement. Plans and actions may be adjusted and incorporate new technology or new information.

A. Information management

To ensure planners, decision-makers and Albertans have timely access to relevant information, the Government of Alberta will create an improved Integrated Information Management System that monitors the state of the land and the status of land use in the province. This will be done by:

- building on existing information sharing initiatives to ensure timely and practical access to information;
- reviewing and improving protocols for information sharing, taking into consideration proprietary and sensitive information; and
- incorporating scientific and traditional ecological knowledge to inform land and natural resource planning and decision-making.

B. Monitoring and evaluation system

A system of monitoring, evaluation and reporting is required to determine if our land-use policies are achieving desired outcomes. Monitoring programs need to use standardized data collection and analysis processes and standardized metrics so that the same information can be applied and shared across regions. A provincial monitoring and reporting system will be developed to ensure relevant timely and accessible information and ensure consistency across regional plans. This system will be guided by the following principles:

- comprehensive—monitor economic, environmental and social outcomes (cumulative effects),
- practical—results from monitoring must support decision-making,
- understandable—by government and the public;
- forward looking—reports on outcomes that are relevant now and in the future, and
- adaptive—framework can adapt to new knowledge and issues.

Initiatives such as the Alberta Biodiversity Monitoring Program that is being implemented through the Alberta Biodiversity Monitoring Institute is an example of a key program that will support the monitoring and evaluation of the Land-use Framework. This program is a joint undertaking of government, industry and non-government interests for the purpose of developing and implementing a credible, arms-length biodiversity monitoring and reporting system for the province. The Government of Alberta will need to provide sustained funding for the ongoing development and implementation of monitoring, evaluation and reporting programs.

C. Knowledge

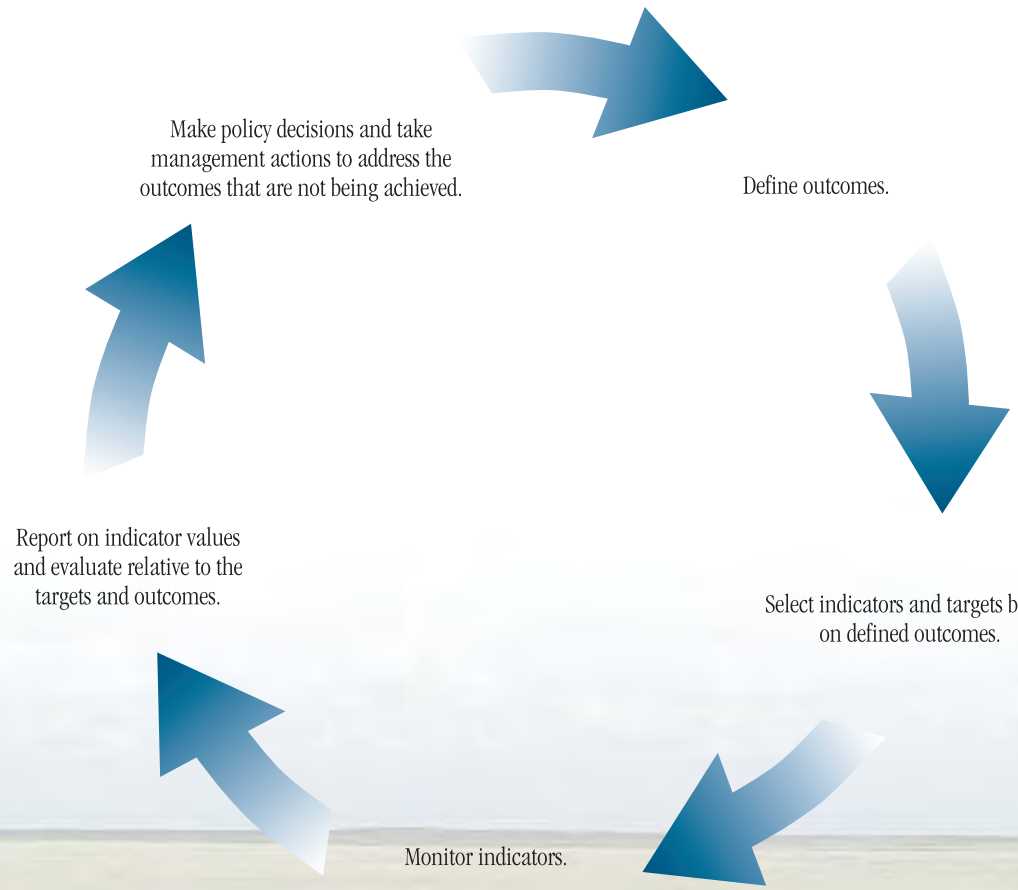
The Land-use Framework will foster the creation and sharing of knowledge for the continuous improvement of land management decisions and practices.

The Government of Alberta will facilitate the establishment of a network connecting researchers, practitioners, institutions and programs to address strategic needs and priorities for the Land-use Framework. This will include:

- establishing a virtual centre of excellence or other appropriate mechanism to provide a focal point for land-use knowledge and information,
- identifying research needs (e.g., economic, environmental, and social),
- improving technology and knowledge transfer,
- improving capacity for practitioners to use technology and be aware of best management practices, experience and knowledge,
- developing tools for continuous improvement (e.g., scenario models and other simulators for decision support, etc.), and
- exploring opportunities for using traditional knowledge along with scientific data.

D. Continuous improvement

Successful land-use planning must respond to changing circumstances. The Land-use Framework will be based on a system for continuous improvement. Plans and actions may be adjusted and incorporate new technology or new information. If there are unintended negative consequences, Cabinet may correct or repeal provincial policy as needed. The diagram below shows the components of the systems approach to monitor and improve land-use decision-making.



Aboriginal Peoples

The aboriginal peoples of Alberta have an historic connection to Alberta's land and environment. Alberta recognizes that those First Nations and Métis communities that hold constitutionally protected rights are uniquely positioned to inform land-use planning.

The Government of Alberta has the constitutional mandate to manage lands in the province for the benefit of all Albertans. However, the Government of Alberta will continue to meet Alberta's legal duty to consult aboriginal communities whose constitutionally protected rights under section 35 of the *Constitution Act, 1982 (Canada)* are potentially adversely impacted by development.

To support meaningful consultation in the province, Cabinet approved *The Government of Alberta's First Nations Consultation Policy on Land Management and Resource Development* in 2005. This policy is a key step towards engaging First Nations in land management decision-making. Ongoing review and monitoring of the policy with the intent of changing and improving it will ensure that it meets the needs of Albertans, First Nations and industry. To address specific implementation challenges, Alberta has created a "trilateral process" involving senior representatives from industry, First Nations and government.

Efforts to build First Nations capacity have been underway for several years and include programs such as the Traditional Use Studies Program and the First Nations Consultation Capacity Investment Program, which are administered by the Ministry of Aboriginal Relations. By investing in the gathering and maintenance of information on First Nations land uses, Alberta has also helped prepare First Nations for increased dialogue in regional planning.

Aboriginal peoples will be encouraged to participate in the development of the seven regional land-use plans.

Priority Actions For The Land-use Framework

West Bragg Creek area, Alberta
Rick Blackwood

The Land-use Framework constitutes a significant change in how land-use decisions are made in Alberta. Implementing the recommended institutional changes and developing individual plans for the seven new land-use regions will take time. This is normal and acceptable for policy change of this magnitude.

A. Immediate priorities

The Land-use Framework will be implemented in stages over the next four years. The first priorities are:

- the introduction and enactment of legislation required to support the implementation of the Land-use Framework. This legislation will be introduced in the Spring 2009 Session of the Legislature;
- the development of metropolitan plans for the Capital and Calgary regions. Both of these are scheduled to be completed in 2009; and
- the regional plans for the Lower Athabasca and South Saskatchewan regions. These are both scheduled to be completed in 2010.

While the specifics are different in each case, the scope and pace of development in these areas warrants their priority. Getting things right now will contribute to the future well-being of Albertans. Other regional plans will be completed by 2012.

1. Legislation to support the Land-use Framework

The Land-use Framework will create a new regional planning structure and affect many laws and policies that guide decisions by provincial ministries, municipalities and land users. Legislation to clarify roles, responsibilities and processes and give authority to plans and policies that emerge under the framework is needed. Developing that legislation and amending existing laws is a priority for the Government of Alberta.

The scope of the legislation will include;

- establishing the Land-use Secretariat and Regional Advisory Councils and defining their mandates,
- outlining the purpose, process and content for regional plans,
- defining the approach to cumulative effects management for the purpose of regional planning,
- supporting the use of conservation and stewardship tools, and
- defining the authority of regional plans, once approved.

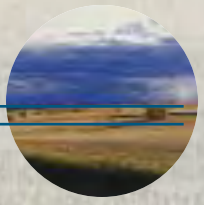
A significant number of consequential amendments to other legislation (*Municipal Government Act, Public Lands Act, Forests Act*, etc.) will also be required.

2. Metropolitan plans for the Capital and Calgary regions

While the Land-use Framework establishes regions to conduct its provincial interest planning on a broad landscape basis, the Government of Alberta recognizes that the Calgary and Edmonton metropolitan areas face intense growth pressures. Capital infrastructure requirements, information sharing, and collaboration require a more detailed planning approach.

These plans are already under development through ongoing planning initiatives of the Capital Region Board for the Edmonton Capital region and the Calgary Regional Partnership for the Calgary Region. Each metropolitan plan should consider and address:

- a vision of the region's pattern of development in the short-medium- and long-term;
- a transportation and utility plan that identifies the infrastructure and services that are of regional benefit and protect transportation and utility corridors from encroachment and development;
- a long-range regional perspective on the plans developed for key infrastructure, such as water and sewer systems, roads, and transit;
- complementary policies between municipalities to eliminate conflicts before they occur, and manage them where they already exist;



- support for higher-density infill development across the region which preserves the natural environment, conserves agricultural land and makes more efficient use of existing infrastructure; and
- future growth areas and areas where growth would be limited. An environmentally and fiscally sound infrastructure plan should be developed to support the type and scale of future development before that development occurs.

The framework supports the development of the Capital Region Plan that has been slated for completion by March 2009. In addition, the Land-use Framework supports the completion of the metropolitan planning initiative being undertaken by the Calgary Regional Partnership.

Given the urgency, it is recognized that metropolitan plans will be completed before regional plans are in place. Once completed, the regional plans will provide guidance to future updates of the metropolitan plans.

3. South Saskatchewan Regional Plan

Southern Alberta has the largest population but the least water. Most of Alberta's roads and rail lines within the province are concentrated in southern Alberta. The region grows much of Alberta's wheat, barley and canola, and contains the majority of feedlots.

The region also contains Alberta's largest city and over one-half of Alberta's total population. This region includes the most intensively developed and productive irrigation network in Canada and much of Alberta's native prairie landscape. Once known as the Palliser triangle, much of this region is semi-arid and water use is a critical issue.

All of southern Alberta depends on the ecological integrity of the Eastern Slopes for its water supply. But much of the Eastern Slopes are zoned for multiple-use. It is not uncommon to find oil and gas operations, grazing leaseholders, and forestry operations all active on the same lands. Often these are the same lands on which southern Albertans depend for their recreation. There is friction between different recreational groups when they all compete for the same area. Relations sometimes become more strained when one or more of the commercial users are also active on the same land. If done in careless or negligent ways, all of these uses have the potential for negative consequences on watersheds, fisheries, habitat and wildlife.

The breathtaking beauty of the landscapes for which southern Alberta is famous—especially along Highway 22, the "Cowboy Trail"—is also at risk from new oil and gas development, new power lines and pipelines, the demand for more acreages and country residential housing, and the fragmentation of traditional ranch and farm properties.

Historically, watershed and recreation were deemed the priority uses of the Eastern Slopes. These priorities should be confirmed, and sooner rather than later. A new land-use plan for southern Alberta will not mean an end to new oil, gas, timber or country residential development. It will mean paying closer attention to where they are done and how they are done.

4. Lower Athabasca Regional Plan

Northeastern Alberta has been the epicentre for economic growth in Alberta and Canada through the development of the oil sands. With over $100 billion in planned oil sands investment in the region, the environment and communities are under immense pressure from a variety of stakeholders, often with competing interests.

In addition to the unique challenges that oil sands development brings, the majority of the land is public owned. The region contains both urban and rural areas, many of which are remote and cannot be accessed by road on a year-round basis. These factors will require a unique cumulative effects management approach that focuses on responsible development and balances environmental, social and economic issues.

The Lower Athabasca Regional Plan will identify and set resource and environmental management outcomes for air, land, water and biodiversity, and guide future resource decisions while considering social and economic impacts. The plan will be guided by *Responsible Actions: A Plan for Alberta's Oil Sands*, which is based on extensive public input through the Radke Report: Investing in *Our Future: Responding to Rapid Growth In Oil Sands Development, the Multi-stakeholder Committee Report* and the *Aboriginal Consultation Final Report*. The plan will also link to other provincial strategies including the *Provincial Energy Strategy, Water for Life*, the *Biodiversity Strategy*, the *Climate Change Strategy*, and the *20-Year Strategic Capital Plan*.

B. Addressing provincial policy gaps and areas of provincial interest

There are a number of specific areas of provincial interest where clear provincial policy does not exist. The Government of Alberta is committed to addressing the following provincial policy gaps and areas of provincial interest.

Managing subsurface and surface activities within our province

Conflicts between subsurface and surface activities are increasing as activities intensify on the land. The policies that address surface and subsurface values are not well integrated. The Government of Alberta will complete the Upstream Oil and Gas Policy Integration Initiative and review the current process for identifying major surface concerns prior to public offering of Crown mineral rights.

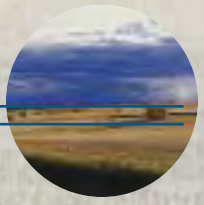
Reducing the fragmentation and conversion of agricultural land is an integral component of a successful Land-use Framework. Agriculture is a key contributor to the Alberta economy. Reducing the fragmentation and conversion of agricultural land to other uses is a key consideration, as is the proliferation of other land uses impacting agricultural land. The Government of Alberta may develop more effective mechanisms and approaches, such as market-based incentives, transfer of development credits, agricultural and conservation easements, and smart growth planning tools designed to reduce the fragmentation and conversion of agricultural land to other uses.

Developing a transportation and utility corridors strategy

While corridors can affect the land and other land uses, they also create an opportunity for consolidating a number of critical land-use functions within a pre-defined area, thereby reducing land fragmentation and environmental impact.

This is a priority for the following reasons:

- the cost of establishing a corridor in the future will be higher (i.e., land purchase and easements);



- the options for corridor alignment and siting will decrease with time as land is converted to or consumed by other long-term land uses. Corridor alignment would be one of the factors considered in the development of regional plans;
- there is an immediate need to address corridor needs in the Edmonton-Calgary corridor through a provincial corridor strategy, long-term environmental benefits will be delivered and land fragmentation issues with landowners will be minimized. Land-use efficiencies will also be obtained by consolidating transportation and utilities into provincial corridors; and
- the province has just released a 20-Year Strategic Capital Plan that identifies Alberta's immediate-, medium- and longer-term infrastructure needs, including several major transportation projects across the province. The plan identifies many new highways, as well as expansions and upgrades to existing highways, including ring roads around Calgary and Edmonton.

Managing recreational use of public lands.
The Government of Alberta is committed to working with members of the recreational communities and other key stakeholders to develop a comprehensive strategy to better manage growing recreational pressures and activities in Alberta. The strategy will:

- enable a variety of recreational opportunities,
- reduce impacts to public lands and natural resources,
- reduce conflicts and increase co-operation between land users, and
- improve public safety.

The Government of Alberta will continue to work with the Alberta Recreation Corridors Coordinating Committee to develop criteria, standards, policies and guidelines for establishing an Alberta Recreation Corridor Designation Program. After completion of the recreational strategy for public lands, the government will develop a broader strategy for the province that will include associated private land.

Conserving and protecting the diversity of Alberta's ecological regions
The Government of Alberta will address the gaps associated with conserving and protecting the diversity of Alberta's land base *(Natural Regions and Subregions of Alberta Report)*, accommodate population growth and improve quality of life opportunities through development of a plan for provincial parks.

Managing flood risk to protect human life, manage natural resources, and limit disaster damage faced by communities. The Government of Alberta will develop policy to minimize exposure of developments and settlements to flood risk.

Timeframe For Implementing The Land-use Framework

Paradise Falls, Alberta

The Land-use Framework constitutes a significant change in how land-use decisions are made in Alberta. Implementing the recommended institutional changes and developing individual plans for the seven new regions will take time. A timeframe for the implementation of the Land-use Framework is provided in the table below.

The Government of Alberta will:	By 2010	By 2012
Land-use regions and plans		
Establishing regional planning		
• Develop regional plans for the seven regions of Alberta.	✔	✔
• Review and update existing provincial appeal processes for land-use decisions, where required.	✔	
Land-use governance structure		
Land-use Secretariat		
• Establish a provincial Land-use Secretariat to support the Cabinet.	✔	
Regional Advisory Councils		
• Create a Regional Advisory Council for each region to provide advice on the development of regional plans.	✔	✔
Cumulative effects management		
• Use cumulative effects management as a key component of the Land-use Framework.	✔	✔
Conservation and stewardship		
• Develop a strategy for conservation and stewardship on public and private lands.	✔	

	By 2010	By 2012
Monitoring, evaluation and reporting		
Information management		
• Create an improved Integrated Information Management System that monitors the state of the land and the status of land use in the province.		✔
Monitoring and evaluation system		
• Build a provincial monitoring and reporting system to ensure accurate, timely and accessible information is available to support land-use planning and decision-making.		✔
• Provide sustained funding for the ongoing development and implementation of the biodiversity monitoring program.	✔	✔
Knowledge		
• Support the establishment of a network connecting researchers, practitioners, institutions and programs to address strategic needs and priorities for the Land-use Framework.		✔
Aboriginal peoples		
• Encourage aboriginal peoples to participate in the development of land-use plans.	✔	✔
• Continue to work with First Nations to better understand and consider their traditional land uses.	✔	✔
Priority actions for the Land-use Framework		
Immediate priorities		
Legislation to support the Land-use Framework	✔	
Metropolitan plans for the Calgary and Calgary regions		
• Support the development and implementation of the Capital region metropolitan plan.	✔	
• Support the completion of the metropolitan planning initiative for the Calgary metropolitan region.	✔	
South Saskatchewan regional plan		
• Undertake and lead the development of a regional plan for southern Alberta.	✔	

	By 2010	By 2012
Lower Athabasca regional plan		
• Undertake and lead the development of a regional plan for northeastern Alberta.	✔	
Addressing provincial policy gaps and areas of provincial interest		
Managing subsurface and surface activities within our province		
• Complete the Upstream Oil and Gas Policy Integration Initiative and review the current process for identifying major surface concerns prior to public offering of Crown mineral rights.	✔	✔
Reducing the fragmentation and conversion of agricultural land		
• Evaluate more effective mechanisms and approaches to reduce the fragmentation and conversion of agricultural land to other uses.	✔	✔
Transportation and utility corridors		
• Create a transportation and utility corridor strategy for the province.	✔	
Recreational use of public lands		
• Develop a strategy to manage recreational use of public lands.	✔	
• Develop a province wide strategy to manage recreational use that will include associated private lands.		✔
Conserving and protecting the diversity of Alberta's land base		
• Address the gaps associated with conserving and protecting the diversity of Alberta's land base.	✔	✔
• Develop a plan for provincial parks.	✔	
Managing flood risk		
• Develop policy to minimize exposure of developments and settlements to flood risk.	✔	

Glossary

Aboriginal peoples of Alberta
Includes the First Nations and Métis people of Alberta.*

Archaeological sites
Places where objects or landscape features may be found that show evidence of manufacture, alteration or use by humans, the patterning of which is valuable for the information that it may give on historic human activities.

Biodiversity
The assortment of life on earth—the variety of genetic material in all living things, the variety of species on earth and the different kinds of living communities and the environments in which they occur.

Carrying capacity
The ability of a watershed, airshed and/or landscape to sustain activities and development before it shows unacceptable signs of stress or degradation.

Conservation
The responsible preservation, management and care of our land and of our natural and cultural resources.

Crown land
Crown land includes all provincial and federal government lands. Provincial parks (administered under the *Provincial Parks Act*) and public land (administered under the *Public Lands Act* and the *Mines and Minerals Act*) are examples of provincial Crown land. The Integrated Land Management Program applies to provincial Crown land; however, where existing legislation (e.g., *Municipal Government Act, Parks Act, Special Areas Act*, and *Public Highway Development Act*) dictates specific management intent, modified approaches to integrated land management will result.

Cumulative effects
The combined effects of past, present and reasonably foreseeable land-use activities, over time, on the environment.

Ecological goods and services
Economic and social benefits resulting from the natural processes of a healthy environment and biodiversity. These are available to all of society and are essential to sustaining a healthy and prosperous way of life. They include groundwater recharge, flood and erosion control, wildlife habitat, productive soils, carbon dioxide sequestration and abundant clean air and water.

Ecosystems
The interaction between organisms, including humans and their environment. Ecosystem health/integrity refers to the adequate structure and functioning of an ecosystem, as described by scientific information and societal priorities.

Economic
Relating to the wealth of a community or nation.

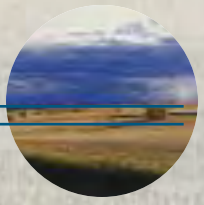
Environment
The components of the earth—including air, land, water, all layers of the atmosphere, all organic and inorganic matter and living organisms, and all of their interacting natural systems.

Forest Management Agreement
A large, area-based agreement between the Province of Alberta and a company. It gives a company the right to establish, grow, harvest and remove timber from a particular area of land.

Historical resources
Any works of nature or of humans that are primarily of value for their palaeontological, archaeological, prehistoric, historic, cultural, natural, scientific or aesthetic interest.

Industrial development
In the context of land use, this term means natural resource development activities like exploration, harvesting and extraction of natural resources. It can also mean, in a municipal planning/zoning context, the use, infrastructure and activities associated with production (e.g., manufacturing, fabricating, warehousing, processing, refining or assembly).

* for the purpose of this document



Land
The entire complex of surface attributes including air, water, and the solid portions of the earth.

Land-use
All uses of land, such as crops, forestry, conservation, recreation, tourism, oil and gas, mining, utility corridors, transportation, cities and towns, industrial development, etc.

Market-based instruments
Market–based instruments provide financial incentives and disincentives to guide behaviour towards conservation and stewardship and mitigate undesirable activities in an effort to lessen adverse effect on the environment. Market forces play a key role, facilitated through regulation, in creating a price mechanism to motivate behaviour.

Municipalities
Cities, towns, villages, summer villages, municipal districts and specialized municipalities.

Natural region
A way of describing broad ecological variations in the landscape. Natural regions reflect differences in climate, geology, landforms, hydrology, vegetation, soils and wildlife. There are six natural regions in Alberta.

Natural resources
Resources that occur in nature, including non-renewable resources, such as timber, fish, wildlife, soil, water, oil sands, coal and minerals.

Non-renewable resources
Natural resources that are in fixed supply, such as coal, oil and minerals.

Palaeontological deposits
Rocks or soils containing evidence of extinct multi-cellular organisms.

Private lands
Land privately owned by individuals, groups, companies or organizations that make decisions about how it is used or managed within existing legislation.

Public lands
Land owned by the provincial government, which makes decisions about how it is used and managed, including for agriculture, forestry, resource development, habitat conservation and protection of watersheds and biodiversity.

Region
A geographical area or district having definable boundaries or characteristics. Regions can be based on natural regions, watersheds or administrative boundaries.

Renewable resources
Natural resources that are naturally replenished, such as fish, wildlife, water and trees.

Rural
Areas where there is a lower concentration of people and buildings than in urban areas. Rural areas typically include farms and resource extraction activity as well as low-density residential communities (i.e., parcels of an acre or more).

Social
Relating to society or its organization, including living in organized communities and related factors such as culture, health and well-being and safety.

Stewardship
An ethic whereby citizens, industry, communities and governments work together to responsibly care for and manage Alberta's natural resources and environment.

Subsurface
Subsurface is used to describe the resources (e.g., oil and gas, coal, metallic and industrial minerals such as limestone) identified under the *Mines and Minerals Act*. It also refers to the titles, rights and activities to access those resources below the ground. Subsurface resources do not include sand and gravel as these are considered surface materials.

Surface
Resources, activities and development that occur on the land e.g., sand, gravel, topsoil, roads and buildings. In land ownership, surface title includes the land and the space above and any sand, gravel, peat, clay or other substance that can be excavated through surface activities. Land titles usually carry a mineral reservation, which excludes subsurface resources; mineral titles for these resources are usually granted separately.

Sustainable development
Development that meets the needs of the present without compromising the ability of future generations to meet their needs.

Sustainability
Relates to understanding the interconnections and continuity of economic, environmental and social aspects of human society and the non-human environment.

Systems approach
An approach to integration that recognizes the interdependence and interaction of parts of a system. It views systems in a holistic manner.

Transportation corridor
A major highway and/or railway, including the associated land required for the right-of-way and buffer.

Urban
Areas where there is a concentration of people and buildings, such as cities or towns and including unincorporated communities such as hamlets.

Utility corridor
A linear strip of land that is used for pipelines (for oil, gas, water, etc.), electrical transmission lines and/or telecommunications (fibre optic) cables, including the associated land required for the right-of-way and buffer. In some places utility corridors are combined with transportation corridors.

Watershed
The area of land bounded by topographic features that drains water to a larger body of water such as a river, wetland or lake. Watersheds can range in size from a few hectares to thousands of square kilometres.

Understanding Land Use in Alberta

Alberta

April 30, 2007

Albertans have a special relationship with the land. Our prairies and parklands, our forests and foothills, our majestic Rockies — each shapes how we live and work on a daily basis. Our land is big, beautiful and bountiful, and we are grateful for the opportunities it has given us.

Over the last 10 years, we have enjoyed unprecedented prosperity. But with this prosperity have come new challenges and new responsibilities. Now is the time to ensure that this land — and all the activities it sustains — is managed responsibly so that our children and grandchildren can enjoy the same quality of life that we have.

Today's hyper-growth in population and economic activities is putting unprecedented pressure on Alberta's landscapes. There are competing demands for oil, gas, forestry, agriculture, industrial development, housing, recreation and conservation — often on the same lands.

While our land management processes and systems have worked in the past, we now face new challenges. In the past 25 years, our population has grown to 3.4 million from 2.3 million — an increase of nearly 50 per cent. If this rate of growth continues, we could see upwards of 5 million people living here 25 years from now. Every region of Alberta is being affected by this growth. These new realities call for new approaches to managing land, resources and our natural environment.

To manage these growth pressures, Premier Stelmach has identified the development of a Land-use Framework as one of his new government's priorities — and has made this my top responsibility as the new Minister of Sustainable Resource Development. The Land-use Framework will put a process in place for balancing the competing economic, social and environmental aspirations of Albertans.

The development of the Land-use Framework is a cross-ministry initiative. My team at Sustainable Resource Development is working closely with other departments — Energy; Environment; Municipal Affairs and Housing; Agriculture and Food; International, Intergovernmental and Aboriginal Relations; and Tourism, Parks, Recreation and Culture — to develop a provincewide land-use framework that reflects Albertans' vision for land use.

We will be consulting Albertans through a variety of ways, and I encourage each of you to become involved in the development of the Land-use Framework. This is your province, and this process will shape how Alberta grows over the next 100 years. So please take a little time to make your voice heard.

Learn more about the issues through this publication and have your say by responding to the questionnaire in the Land-use Framework Workbook. You can also provide feedback by completing the questionnaire online at www.landuse.gov.ab.ca.

Alberta's land is not only our future, but it is also the future of our children. They are counting on us to choose wisely.

Sincerely,

[Original signed by:]

Honourable Ted Morton
Minister of Sustainable Resource Development

The Land-use Framework Consultation Process to Date

Spring 2006. In the initial phase, an Ideas Group of prominent and knowledgeable Albertans was asked to identify the key elements needed for the development of a comprehensive Land-use Framework that accounts for the interests of all Albertans.

August-October 2006. Building on advice from the Ideas Group, stakeholder focus groups were held at a number of locations across the province involving individuals from a variety of land related sectors and organizations — oil and gas, mining, forestry, agriculture, transportation, recreation users, conservation and environmental groups, Aboriginal, municipal representatives and academics. Participants were asked to identify both the key issues that should be addressed by a land-use framework and the principles it should reflect. Some topics that were discussed included:

- agricultural land preservation,
- land-use decision making at the municipal level,
- growth pressures and the need for growth management strategies at all levels,
- land-use conflicts and competing land interests,
- integrated regional land use planning,
- pressures on municipal resources,
- comprehensive integrated resource management planning,
- cumulative effects management,
- long-term planning for transportation and utilities, and
- integration of land, air and water management.

December 2006. A Cross Sector Forum was held in Red Deer, and attendees included many who had taken part in the earlier sessions. Participants were asked to confirm key outcomes, issues and challenges, to identify possible actions and solutions, and to outline the key elements required in a framework.

Each phase of the Land-use Framework consultation process builds on what was learned from the earlier phases.

Reports from all of these sessions are posted under Reports on the website at www.landuse.gov.ab.ca

Learning More About Land Use, Its Management and Challenges

This booklet is intended to help Albertans understand the ways in which the land is used, the land-use issues, and the choices required to best manage and sustain land for Alberta's future.

The first section provides a broad overview of Alberta's land, its uses, management and challenges.

The second section provides more information about the many ways in which Alberta's lands are used and the contributions the land makes to our well-being. It includes information about agriculture, forestry, energy, tourism and recreation, settlements, First Nations, Métis Settlements, climate change, watersheds, biological diversity, fish and wildlife, and parks and protected areas.

The companion piece to this booklet is the *Land-use Framework Workbook*. The workbook questionnaire gives you the opportunity to provide your input on land-use issues.

Alberta's Land: An Introduction

The Bounty of Our Land

As Albertans, we have a special relationship with the land. We take pride in our province's landscapes and in the opportunities the land gives us. Alberta's land provides the places where we live, work and play — from cities to rural areas, oil fields to agricultural lands, and the prairies to the boreal forest. It also provides the clean air, water and fertile soil that we depend on for our day-to-day lives.

The land and the choices we make about its use touch each and every Albertan in one way or another. The places where we live, work and visit are all affected — communities, recreational lands, industrial areas, farms, First Nations lands, Métis Settlements, archaeological resources, protected areas and tourist destinations.

Growing Pressures

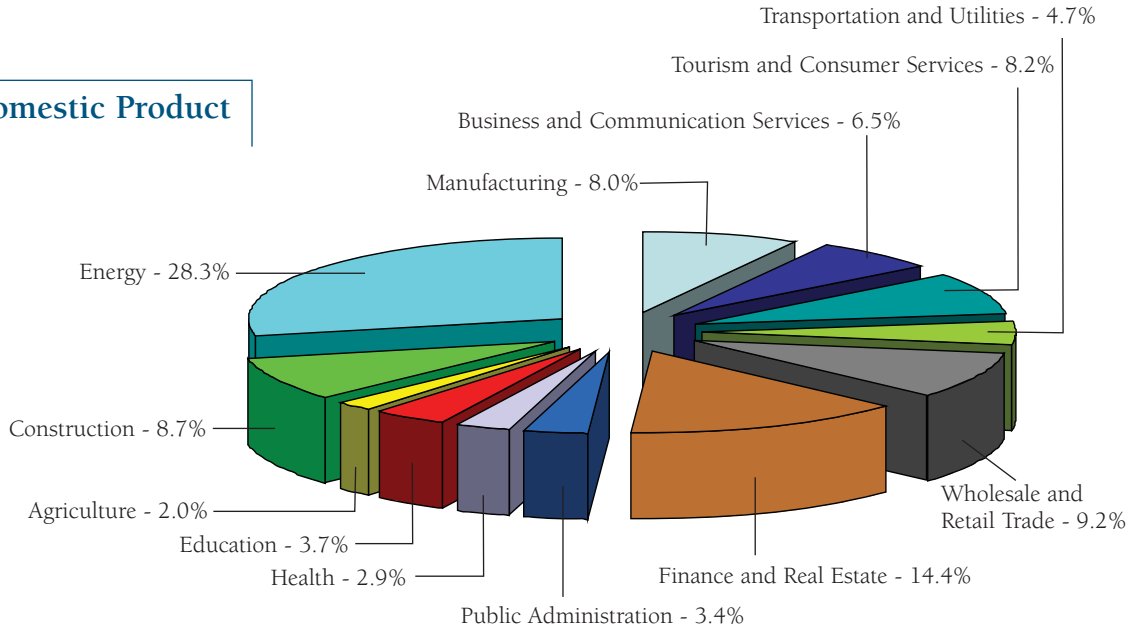
For nine of the last ten years, Alberta's population has grown faster than that of any other province. Over the same period, our economy has grown at an average rate of 4.3 per cent a year — the fastest growth rate in Canada. It is estimated that by 2010 an additional quarter million people will live in Alberta — most of them in urban areas. Our economic growth is expected to remain strong in the foreseeable future.

Alberta's abundance of natural resources contributes to our quickly growing economy. People come to Alberta for employment and business opportunities. While this is good news for our economy, there are consequences for Alberta's land. Cities and towns are expanding onto neighbouring areas. Land that was once used only for farming or ranching is being used for acreages and other urban developments. Resource companies, the agricultural industry and tourism developers often want to use the same land. This demand also creates pressures on Alberta's sensitive areas and natural habitats.

Increasingly, Alberta's landscape is a busy place. With oil and gas, forestry, mining, tourism, agricultural activities and many rapidly growing communities, the impact on public and private land is increasing. There are competing demands for land in many areas of the province — and these will intensify as Alberta's economy and population continue to grow.

Figure 1

Alberta's Gross Domestic Product by Industry 2005



Land-use Challenges

With all the demands on Alberta's land, we have reached a critical point.

Growth, Mounting Land-use Pressures and Cumulative Effects

Growth places demands on the landscape. As people move into the province, more land is needed for housing, transportation, utilities, community services and recreation. And as the global market for energy expands, there is increased need for access to energy resources and further exploration.

Growth usually enlarges the "human footprint" on the land. Over time, the impacts of additional land uses begin to accumulate — these are known as cumulative effects. But growth is inevitable. Our challenge is how to manage the effects that growth has on the landscape.

QUICK FACTS

- In the past 25 years, our population has grown to 3.4 million from 2.3 million — an increase of nearly 50%. If this rate of growth continues, we could see upwards of 5 million people living here 25 years from now.
- In 2005, Alberta's gross domestic product was over $218 billion in current dollars — an increase of about 15 per cent from 2004.

What are cumulative effects?

They are the changes to the environment caused by an activity in combination with other past, present, and reasonably foreseeable human activities. For instance, these might include all the effects on wildlife habitat from a range of land uses.

Competing Demands for Land

Often land is used for more than one purpose at the same time. This can result in competing interests, and a decision must be made as to which use has precedence. For instance, is it agriculture, housing, protection of habitat, natural resource development, or a combination of these? As there are more uses on a piece of land, the buffers between different types of land use diminish and conflicts increase.

Making decisions about land use involves careful consideration of the competing demands for the land. What is most important to protect? What are the consequences of the various uses? How do we balance our economic, social and environmental goals?

Ensuring Sustainability

We all want to ensure the benefits we realize from Alberta's lands continue — not just for our lifetime, but also for future generations. Sustainability involves protecting the natural environment and ensuring our economic and social well-being. To sustain our quality of life, decisions need to consider what is good for the environment, the economy and society.

Integrated Land-use Policies

As growth continues and demands for land increase, it becomes more and more important to integrate direction for land use. Alberta needs integrated land-use policies to help clarify priorities, assist with decisions, minimize conflicts and ultimately help ensure sustainability.

Looking Ahead

How do we anticipate and prepare for a future with six or eight million people? We need to consider where people would live, work and play. We need land for agriculture and forestry, yet we must balance that need with land required for energy and industrial developments, transportation and utilities, tourism and recreation, natural areas and habitat for a rich diversity of wildlife.

To ensure our children and grandchildren benefit from the land as we do today, we must manage the land and activities associated with it in a responsible manner. To this end, the Government of Alberta is developing a Land-use Framework. It will provide a vision for land use in Alberta and the overall direction needed to manage growth and activities on Alberta's landscape.

QUICK FACTS

What is industrial development?

In a public land-use context, it means natural resource development activities like exploration, harvesting and extraction of natural resources.

Alberta's Landscapes and Land Uses

Landscapes

Alberta includes an area of just over 164 million acres (660,000 square kilometres) — more than 97 per cent is land and the rest is water. As Albertans, we are fortunate to have a great variety of landscapes. We are the only jurisdiction in North America where the grassland, boreal forest and mountain regions converge.

Across the province there are six natural regions — each reflects differences in factors like climate, landforms and vegetation. These different factors generally influence the land-use activities and management practices that can occur in an area. For instance, the prairies and parkland support farming and ranching while the foothills and boreal forest are rich in forests. All six natural regions support and sustain a diversity of life and a wealth of ecological values including fish and wildlife.

In addition to the marketable goods and services provided by these natural regions, the landscapes provide clean air and water, productive soils, habitat, and flood and erosion control. They are also a source of inspiration and connection to the natural environment. Many of the social and economic benefits we enjoy as Albertans come from the use, development and protection of the natural resources in these regions.

QUICK FACTS

Acres and Hectares

An acre is 4,046 square metres. A hectare is 10,000 square metres or 2.47 acres. There are 100 hectares in a square kilometre. One hectare is about two football fields, side by side.

Figure 2

Alberta's Natural Regions

Natural regions are a way of describing broad ecological variations in the landscape. They reflect differences in climate, geology, landforms, hydrology, vegetation, soils and wildlife. There are six natural regions in Alberta:

Boreal Forest – This is Alberta's largest natural region, covering just over half the province with deciduous, mixedwood and coniferous forests interspersed with wetlands. Forestry, oil and gas, recreation and grazing are the primary land uses.

Canadian Shield – Many small lakes, sparsely vegetated granite bedrock and glacial deposits characterize this natural region. This area is less than 2 per cent of the province and land uses are limited to mineral extraction and recreation.

Parkland – This region includes patches of aspen and willow shrublands mixed with native grasslands. Much of this region has been cultivated. It is also the most densely populated natural region in Alberta and supports agriculture, settlement, oil and gas and recreation.

Grassland – Level to rolling land with native prairies, grassy foothills and cultivated croplands on vast plains are typical in this region. Agriculture (irrigation-based and grazing), oil and gas and recreation are the key land uses.

Foothills – The terrain varies from gently undulating to rolling hills and plateaus — deciduous trees grow in the lower elevations while coniferous forests are found at higher locations. The main land uses are recreation, forestry, oil and gas and grazing.

Rocky Mountain – Foothills, mountains and deep glacial valleys characterize this region — it includes the treeless alpine areas through to the forested valley bottoms. This region supports recreation and tourism, oil and gas, forestry and grazing.

Land Ownership and Use

Who Owns the Land in Alberta?

- **Private** – Just under 30 per cent of land in Alberta is privately owned by individuals, groups, companies or organizations. Private land provides habitat for wildlife, supports biological diversity and is used for farming, ranching, housing and industrial development.
- **Provincial** – More than 60 per cent of land is owned by the provincial government. This is called public land and it accommodates many uses including timber harvesting, livestock grazing, recreation, and the development and transportation of oil, gas, electricity and other natural resources. As well, public land plays a critical role in habitat conservation and the protection of watersheds and biological diversity.
- **Federal** – The federal government owns about 10 per cent of land in the province — most of it is national parks, Indian Reserves or military reserves. Alberta's Land-use Framework does not address federal land.

How Is Alberta's Land Used?

Almost a third of Alberta's land is used for agriculture and close to another third is used for forest management areas. Alberta's land is also used and valued for other purposes, such as energy and mineral development, tourism and recreation, rural development, transportation and utilities, wildlife habitat and biological diversity. That is one of the challenges — there are many demands for use of the same land. Some uses are compatible and can occur together while others are incompatible. This is one of the issues that will be raised throughout this booklet.

Land Administration

Both the nature of the landscape and its ownership affect how land is used and managed. For instance, grasslands are suitable for grazing and growing crops and over the years, these lands have been privately purchased for agricultural land. Most of the forested areas in the boreal forest are owned by the province, which provides rights for timber harvesting in these areas to forestry companies. The spectacular scenery of the Rocky Mountains, the world-famous badlands and beautiful northern lakes prompted creation of government-owned parks and protected areas — also popular places for tourism and recreation.

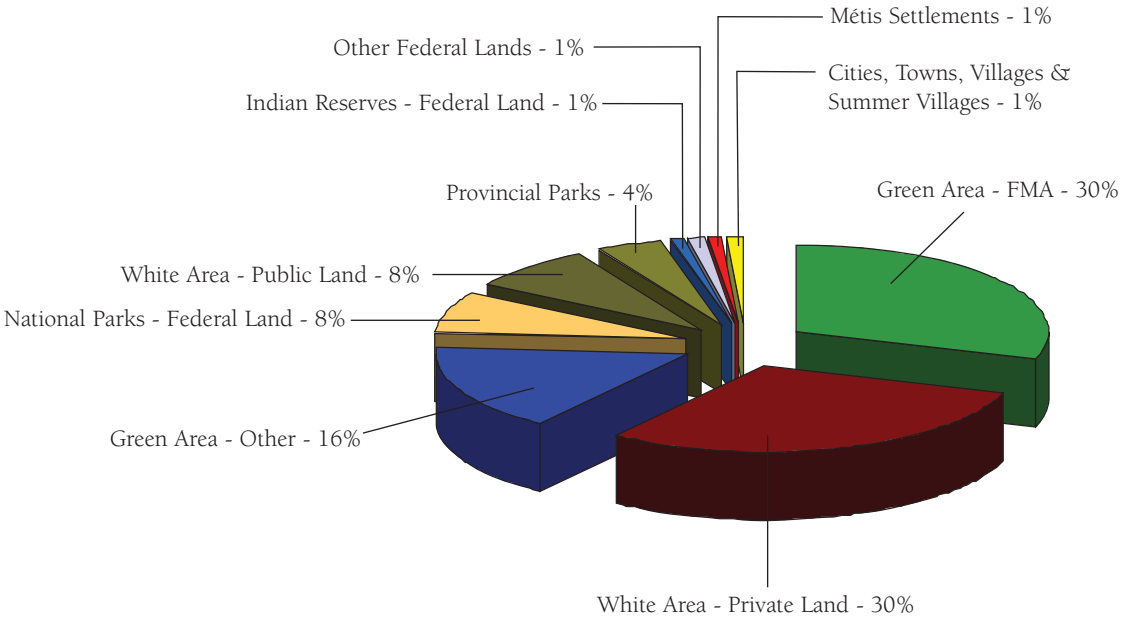
The White and Green Areas

Alberta has two major land designations — the White Area and the Green Area. These two areas were created in 1948 to guide development of the province and to deal, in part, with the failure of homesteads on lands unsuitable for agriculture. The White Area was set aside as land primarily suited for agriculture and settlement. The Green Area included forested land for forest management planning and protection of important watershed areas.

Today, Alberta's White Area and Green Area reflect differences in the landscape, land use and ownership. As well, there are differences in the way land in the two areas is planned and managed.

Figure 3

Land Use in Alberta (Per Cent of Total)



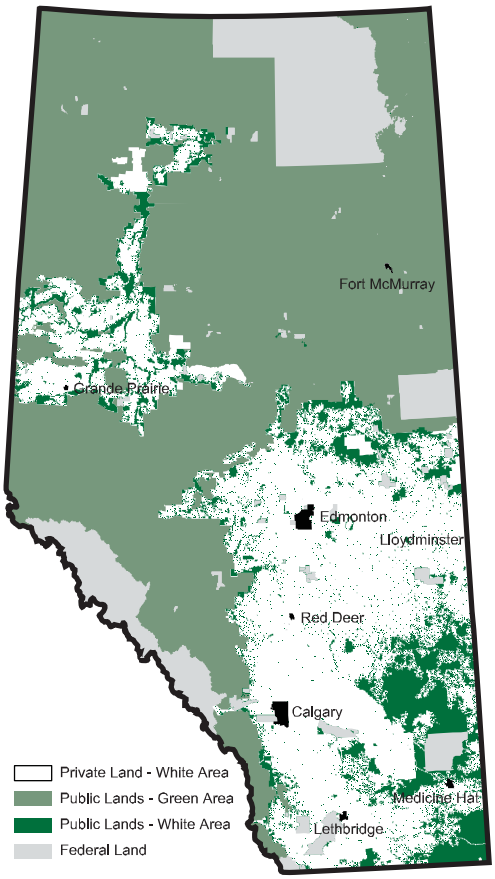


Figure 4

Green and White Areas Including Private and Public Lands

Table 1

Green and White Areas of Alberta

White Area	Green Area
• **Settled** lands	• **Forested** lands
• Covers about **39 per cent of Alberta**	• Covers about **61 per cent of Alberta**
• Three-quarters **privately owned** – by more than 1.7 million individual title holders	• Nearly all **publicly owned**
• Primarily in the **populated central, southern and Peace River areas**	• Primarily in **northern Alberta**, some in the **mountains and foothills**
• Main land uses – **settlements, agriculture, oil and gas development, tourism and recreation, conservation of natural spaces and fish and wildlife habitat**	• Main land uses – **timber production, oil and gas development, tourism and recreation, conservation of natural spaces, watershed protection and fish and wildlife habitat**
• Authority to set regulations and make decisions is primarily with **municipal governments on private land and with the provincial government on public land**	• Authority to set regulations and make decisions is primarily with the **provincial government**

Although there are differences in the primary land uses in the Green and White Areas, both areas support some of the same uses — recreation, natural resource development, conservation of soil and water, and protection of watersheds and habitat.

Making Decisions About Alberta's Land

Who Is Responsible for Land Decisions?

Generally, the provincial government regulates the planning and management of publicly owned lands, most of which are in the Green Area. The municipal governments regulate the planning and development of privately owned lands, most of which are in the White Area. About 10 million acres of public land in the White Area are managed by the provincial government in partnership with disposition holders, primarily grazing lessees.

The provincial government has some provincewide regulatory responsibilities. These include air and water quality as well as historical and natural resources such as fish and wildlife, minerals, oil and gas, timber, water, archaeological sites, palaeontological sites and traditional cultural sites.

QUICK FACTS

What are municipalities?

1. *Urban municipalities* – cities, towns, villages, summer villages
2. *Rural municipalities* – counties and municipal districts (which often contain hamlets within their boundaries)
3. *Specialized municipalities* – may include both urban and rural communities such as the Regional Municipality of Wood Buffalo (including Ft. McMurray) or Strathcona County (including Sherwood Park)

Because of the variety of land uses in Alberta, land holders, municipalities, provincial government departments and agencies, as well as a range of organizations, stakeholders and publics are involved in land-use decisions.

How Are Land Decisions Made?

One way to understand how land-use decisions are made is to consider the differences between publicly and privately owned lands.

Decisions About Private Lands

The province has given municipalities the authority for land-use planning on private land. Municipalities include cities, towns, villages, summer villages, municipal districts or specialized municipalities. Below are some of the authorities (policies and agencies) related to municipal decisions about private land use:

- The ***Municipal Government Act*** – This provides direction about the rights, responsibilities and powers of municipalities including their role in land-use planning. The *Provincial Land Use Policies*, developed according to this legislation, provide broad direction to guide municipalities in their decisions.
- **Municipal Planning** – Municipal plans and bylaws direct development and use of the land and help enhance the quality of life in the municipalities. While these plans and bylaws conform to the broad requirements of the *Municipal Government Act*, the province does not review or approve individual municipal plans and bylaws — this is the role of locally elected councils.
- **Development Permits and Planning Decisions** – Across Alberta, municipalities issue more than 50,000 development permits and planning decisions each year. In doing so, they must consider the social, economic and environmental impacts of these decisions.
- **Other Agencies** – The Alberta Energy and Utilities Board and the Natural Resources Conservation Board issue provincial approvals for activities such as oil and gas wells or pipelines and confined feeding operations. Municipal decisions must reflect approvals made by these provincial agencies.

Private Land Issues

- Through the *Municipal Government Act*, Planning and Subdivision regulations and the *Provincial Land Use Policies*, the government provides broad direction to municipalities — but it does not review or approve individual municipal plans or planning decisions. Some people believe the provincial government should be involved in assuring or monitoring compliance with these policies. Others have concerns with an increased provincial government role in the planning responsibilities currently delegated to municipalities.
- Local planning issues often involve many interests and a high degree of citizen involvement. While municipalities try to respond to issues raised by local citizens, they cannot respond to matters outside their Council's jurisdiction even when these involve land uses located within their boundary.

QUICK FACTS

The *Provincial Land Use Policies* deal with provincial and inter-municipal planning and cooperation, and specific aspects of planning. These include land-use patterns, the natural environment, resource conservation (agriculture, non-renewable resources, water resources, historical resources), transportation and residential development.

Decisions About Public Lands

The provincial government makes decisions about public lands, most of which are in the Green Area although about 10 million acres are in the White Area. When planning public land use, the provincial government follows these approaches:

- **Integrated Resource Management Philosophy** This philosophy recognizes that the use of any resource inevitably affects other resources and that we must consider those resources together when we make decisions. It also requires that we manage resources to realize both present and future benefits and that our management practices reflect a commitment to provide the same range of opportunities to future generations that we enjoy today. Integrated land management ensures that environmental, social and economic issues are considered and helps integrate industry, government and public uses of Alberta's land and resources. Cooperation and communication with stakeholder groups, local municipalities and the public are key components.
- **Integrated Resource Plans and Regional Strategies** These strategies and plans provide direction for land use in a specific area or region. They include an assessment of resource values and identify policies for long-term management and uses that address stakeholder and community needs. It is important to coordinate the direction in an integrated resource plan with that in municipal plans for the area. Some examples of strategies are the Northern East Slopes Strategy, the Eastern Slopes Policy and the Regional Sustainable Development Strategy for the Athabasca Oil Sands.
- **Dispositions** – These include land-use contracts such as agreements, easements, leases, letters of authority, licences, permits or quotas. Dispositions are a way that the government gives individuals, companies or organizations rights to use public land for a specific purpose — such as grazing, farm development, timber harvesting, surface access for oil and gas, commercial use or recreation. Applications for public land dispositions are referred to provincial government resource managers and municipalities who review and identify any concerns related to their mandate. Following this, the provincial government makes a decision based on the concerns raised.

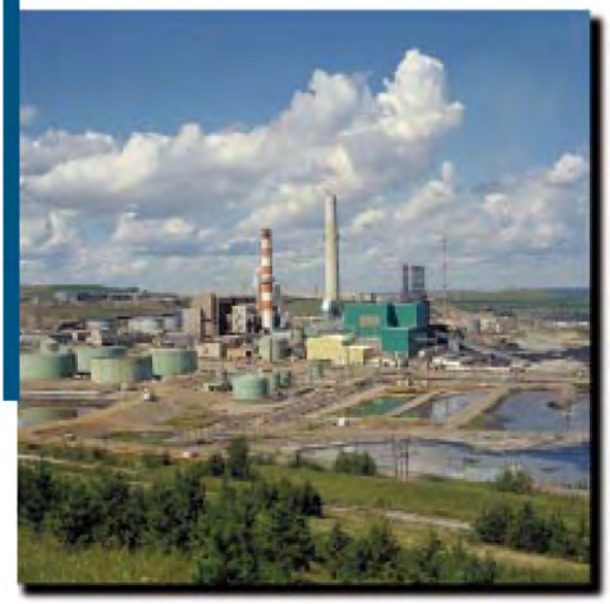
Public Land Issues

- Stakeholders have different, often conflicting expectations about how the various uses of public lands should be integrated. Resource management approval processes need to be better integrated to address natural resource developments, fish and wildlife habitat, watershed impacts and other factors.
- The growth in natural resource development has opened up new access to previously undeveloped public lands and increased access to existing areas.
- Increased and continued use of public lands is resulting in fragmentation and loss of habitat — this affects wildlife, natural vegetation and biodiversity.
- Population growth in centres next to public land in the Green Area (e.g., Fort McMurray, Canmore) has created a demand for more land to be made available for settlement and a corresponding need for recreational or commercial opportunities. Expanding

communities in the Green Area are spreading into places where timber production and oil and gas developments have been the primary land uses.

Issues Common to Private and Public Land

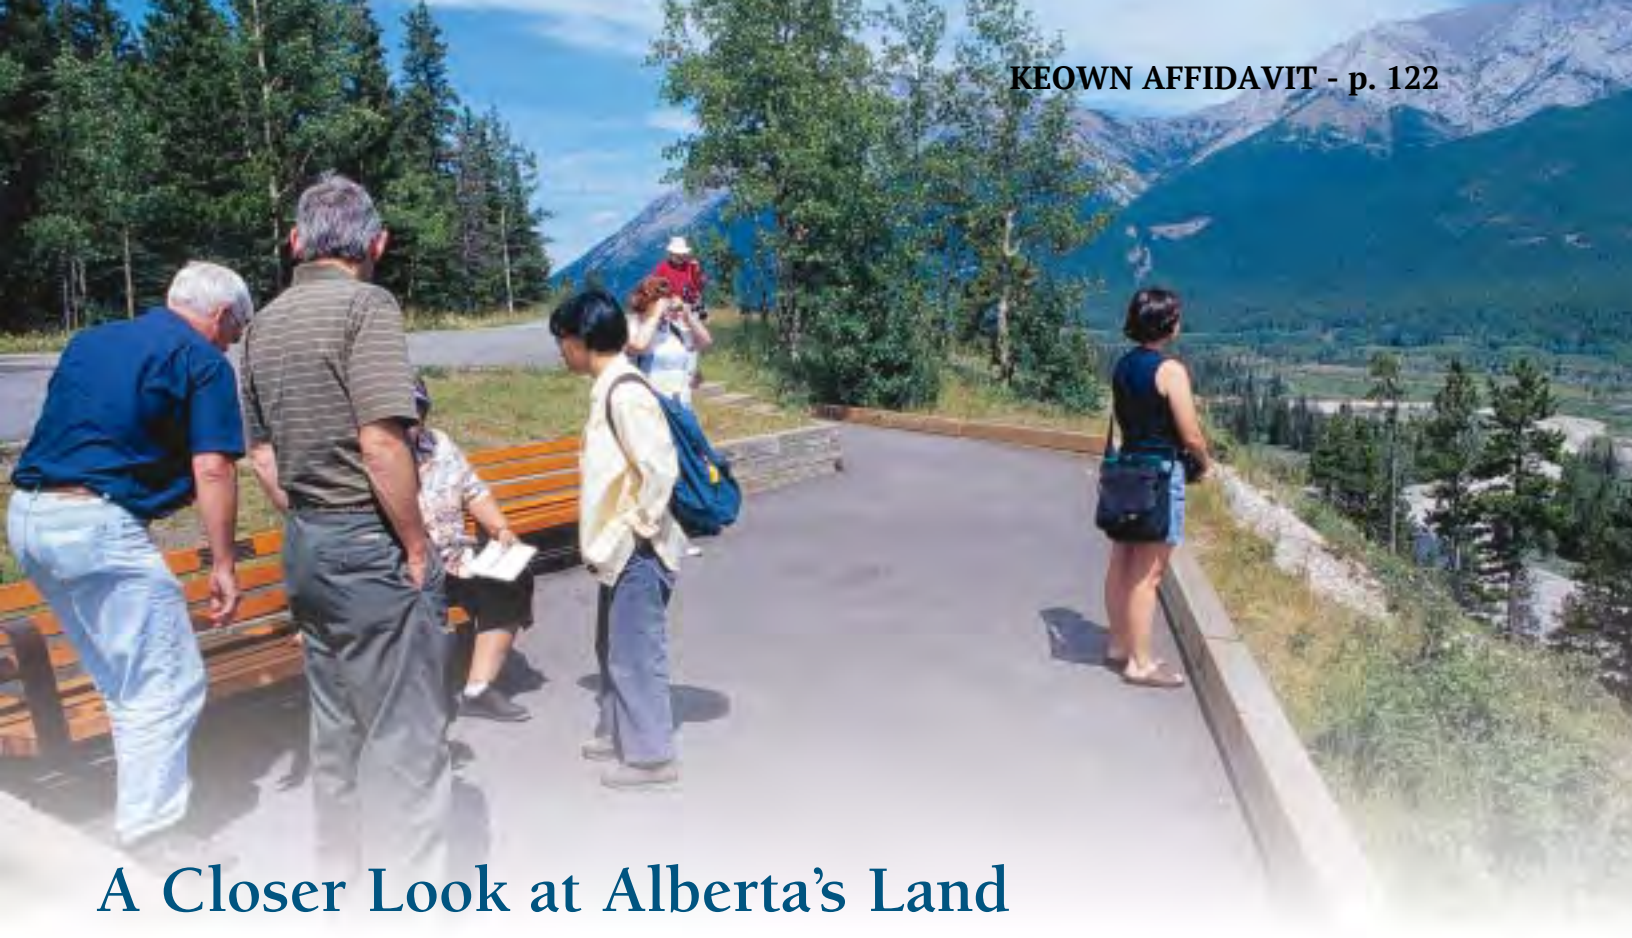
- Given the province's economic and population growth, it is becoming more and more challenging to manage the increasing pressures and conflicts among land uses in various parts of the province, as well as the cumulative effects from activities on the land.



Others Involved with Land-use Decisions

Although municipalities and the provincial government play a significant role in land-use decisions, many others are also involved. We all make decisions that affect the land. As individuals, we make decisions about the land we own or reside on, use for recreation, farming or other means of making a living. As members of organizations, we make choices about land related to the needs of our recreational clubs or land conservation groups.

Companies make decisions about ways to access the land or use the natural resources and also through their corporate environmental practices and policies. As well, when we become involved in land-use planning discussions or advocate changes in land-use policies or practices, we are shaping land-use decisions.



A Closer Look at Alberta's Land

Alberta's land is a mosaic of uses. The next section of this booklet provides more specific information about the many ways Alberta's lands are used and the contributions the land makes to our well-being. This booklet focuses on 11 key areas:

- Agriculture
- Forests
- Energy and Minerals
- Settlement
- First Nations
- Métis Settlements
- Tourism and Recreation
- Historical Resources, Parks and Protected Areas
- Watersheds
- Biodiversity, Ecological Goods and Services, and Fish and Wildlife
- Climate Change

For each area there is information about the current situation, important trends and the key land-use challenges. By reading about each area, we begin to see the "big picture" and understand some of the trade-offs that need to be considered.

Agriculture

Looking Back

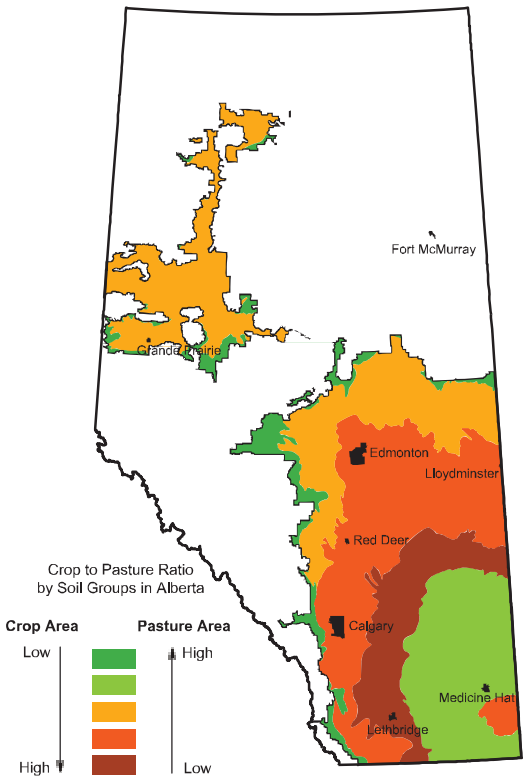
- Alberta's first record of cultivation dates back to 1779, when a fur trader named Peter Pond grew vegetables in a garden at his isolated post near Lake Athabasca. Early agricultural activities were limited to growing vegetables and wheat around forts and missions.
- The influx of settlers nearly 100 years later, after the Canadian Pacific Railway reached Alberta, started an agricultural land-use pattern that exists today. As settlers arrived, they chose lands that were easiest to cultivate and the most productive.

What We Know

- About 52 million acres of Alberta's land is used for agriculture, mostly in the White Area. This land is used for crop and livestock production (primary production), as well as for value-added products such as meat products, cereals, beverages, sugar, hides, pet foods and nutraceuticals. The vast majority of agriculture occurs on private land but about 15 per cent of livestock grazing occurs on public land.
- Alberta is the largest cattle-producing province in Canada.
- In 2006, agriculture and food industries employed 79,300 people. The industry generated $7.8 billion in farm gate revenue for producers while the food and beverage manufacturing sector contributed $9.6 billion to Alberta's economy.
- Over one million acres in Alberta are irrigated — about 65 per cent of the total irrigated area in Canada. Irrigation contributes to over 19 per cent of agriculture's gross primary production in Alberta.
- The *Provincial Land Use Policies*, adopted in 1996 pursuant to the *Municipal Government Act*, includes policies intended to help maintain and diversify Alberta's agricultural industry. The policies encourage municipalities to identify land where agriculture should be a primary use, limit fragmentation and premature conversion to other uses, direct development to areas where it will not constrain agricultural activities, and minimize conflict between intensive agricultural operations and other land uses.
- In 2002, the *Municipal Government Act* was amended to require that municipalities address the protection of agricultural operations in their municipal development plans and land-use bylaws. While this supports farmers in continuing their normal farming practices, municipalities are not required to protect or preserve agricultural land. If a landowner wishes to sell his or her land for non-farm purposes or wishes to change the use of his or her land, a municipality may

Figure 5

Profile of Agriculture in the White Area



decide that the land can be used for purposes other than agriculture. Factors that may influence this decision-making process include the desire of the municipality to diversify the municipal tax base or settlement development pressures.

- Rangelands and other agricultural lands are home to many species of wildlife and contribute to Alberta's biodiversity.

Trends

- Farm incomes have dropped as a result of increased expenses (e.g., fuel and fertilizer), unexpected events (e.g., the BSE crisis) and years of drought.
- Consolidation of agricultural operations has resulted in fewer but larger farms. As farms become larger, it becomes more cost effective to bring more farmland into production.
- Bio-diesel processors will consider using canola as a renewable energy source. Their interest could contribute to increased market opportunities for oilseed processors, which might increase the demand for land to grow canola.
- Alberta's farmers are aging — the current average age is about 48 years. Many farmers may want to retire in the next decade or two. If family members do not want to take over the farming operations, there is an increased likelihood that land close to major urban centres will be sold to developers.

Challenges

- Rural and urban growth has resulted in the loss or *conversion* of some of the province's most productive farm and ranch lands. *Fragmentation* of the land base — dividing land into smaller parcels — is also a significant problem. This is most notable in the vicinity of the Edmonton-Calgary and Canmore corridors, Lethbridge and Grande Prairie areas.

Conversion of Agricultural Land

- Alberta has monitored the conversion of agricultural land to other uses since 1976. Agricultural land that has been converted to other uses has usually been the most productive land in the province, while the land converted to agriculture has generally been less productive — more suited to forage and pastures.

- In some areas of the province, the market value of land for settlement development may exceed the value of land for agriculture. As a result, it is difficult to slow down or prevent conversion of agricultural land to other uses since sometimes conversion can make better economic sense than continuing to use the land for agriculture. And once land is converted to other uses, it may not be available for agricultural production or the remaining parcels of land may be too fragmented for intensive agricultural operations.
- Some landowners have expressed concern that restricting the sale of agricultural land for other purposes in high market value areas could limit their opportunities to sell their land for high market value to offset business losses, support retirement or leave the agricultural industry.

- When a municipality approves a landowner's request to use land for non-agricultural purposes, the impacts of the land conversion are considered from a municipal perspective. Cumulative effects of land conversion — across a region, landscape or watershed — may not be assessed.
- Although the *Provincial Land Use Policies* encourage municipalities to limit fragmentation or retain agricultural land, there is no mechanism for tracking conversion or preventing municipalities from rezoning the land to allow other land uses.

Fragmentation of Agricultural Land

- New subdivisions, urban and rural growth, transportation routes or energy and utility corridors can fragment land and result in pieces that are too small or unsuitable for some agricultural uses. This limits the kinds of agricultural uses and can reduce a producer's ability to farm. For instance, neighbour concerns or bylaws may restrict dust, light and noise but this may also limit farming operations to certain times of the day or week, posing problems for weather-dependent activities like seeding, spraying and harvesting. Small parcels of land also mean that confined feeding operations must expand to areas where there is enough land to accommodate buffers between their operations and other land uses.

Forests

Looking Back

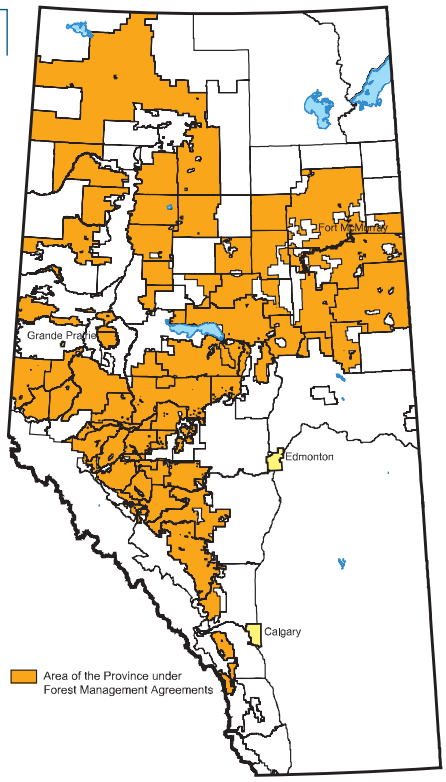
- In the early days of Alberta's settlement, forests were seen as covering up valuable farmland and needing to be cleared to make way for the railroads. Later, forests were valued as a source of timber and for their role in providing clean air and water.
- In 1930, Alberta took ownership of its forests and other natural resources from the federal government. In 1953, Alberta's first Forest Management Agreement was signed with North Western Pulp and Power in Hinton and the timber quota system was authorized in 1966.
- During the 1980s, new manufacturing facilities were developed throughout Alberta. This was the result of a government focus on industrial diversification and the discovery of a new use for Alberta's deciduous trees (oriented strand board).

What We Know

- Over half of Alberta's land base is forested — about 80 million acres (38 million hectares).
- In 2006, Alberta's forests contributed over $11 billion in revenues and supported more than 47,000 jobs. The forest industry is the third largest in the province, next to energy and agriculture.
- Forests are home to many species of wildlife and provide a range of tourism and recreational opportunities. They produce oxygen, control stream temperatures and preserve soil by preventing erosion.
- Most of Alberta's forested lands are publicly owned and in the Green Area. Only about 4 per cent of the total forested land in Alberta is privately owned.
- The right to harvest forests is managed through Forest Management Agreements (FMAs), quotas and permits.

Figure 6

Forest Management Agreement Map



QUICK FACTS

A Forest Management Agreement (FMA) is a large, area-based agreement between the province and a company. It gives a company the right to establish, grow, harvest and remove timber from a particular area of land. An FMA is granted for 20 years, with options for renewal. The FMA holder is responsible for forest management plan development, reforestation, and maintenance of a manufacturing facility.

A quota gives a company the right to harvest a per cent of the annual allowable cut of a particular forest management unit (Coniferous Timber Quota) or a set volume of timber (Deciduous Timber Allocation). This is a 20-year renewable agreement where the quota holder is usually responsible for reforestation and participates in the development of the management plan.

A permit is a short-term timber agreement used to satisfy local demand for timber (e.g., Christmas trees, firewood). It usually is for one year but can be longer.

- In the Green Area, the use of forests is guided by approved forest management plans, prepared either by the government or a company that holds an FMA. The use of forests on public lands in the White Area is guided by local integrated resource plans. There are few harvesting restrictions on privately owned lands.

Trends

- The forest industry is looking for new places to harvest timber. Purchasing privately owned woodlots or Crown land in the White Area, purchasing wood directly from landowners and leasing privately owned land are options.
- Competition for land that could be used for forestry is expected to increase. The bio-energy sector is interested in using White Area timber fibre for the production of heat and electricity while the agricultural industry views woodlots as potential cropland.
- Public pressure for sound forestry practices has increased and in response the forest industry has developed more environmentally friendly practices. Increasingly, companies are becoming certified and can advertise that their products come from sustainably managed forests.

Challenges

- Only a very small amount of Alberta's timber remains uncommitted through an FMA, quota or permit.
- The forested landscape is used by industries other than forestry. Coordination of various industry activities, including forestry, is important to protect the forests and ensure their sustainability. Working together helps reduce road clearings, wood wastage and the industrial footprint.
- Mountain pine beetle infestations kill trees and reduce the annual allowable timber cut. Although harvesting timber killed by the beetles can provide short-term economic gain, it may result in a long-term reduction

in the volume of forest that is harvestable. As well, additional roads may be necessary to harvest mountain pine beetle-susceptible stands or salvage trees that are already infected.

- In the White Area, timber sustainability is impacted by the lack of forested areas and the few private landowners committed to sustainable woodlot management through a woodlot stewardship plan. As well, most of the forested areas are small and separated by large tracts of private land.
- The agricultural industry is looking for expansion opportunities in forested areas. These include land in the Green Area — especially near settlements on the fringe of the Green and White Areas and privately owned land leased by timber companies.

Energy and Minerals

Looking Back

- Over 560 million years ago, carbohydrates and other organic materials produced by plants settled on the ground and in stream, lake and sea beds. As they became more deeply buried, they were transformed by heat and pressure into solid, liquid or gaseous hydrocarbons — fossil fuels.
- In 1788, Alexander Mackenzie wrote about bituminous seeps among Alberta's Athabasca tar sands, into which a six-metre pole could be inserted "without the least resistance." About 100 years later drilling began at the Athabasca oil sands — crews struck a reservoir of natural gas that blew wild for 21 years.
- After drilling 133 dry holes across western Canada, Imperial Oil struck oil at Leduc, Alberta in 1947, transforming Alberta into an oil-rich province.

What We Know

- In 2006, energy resources accounted for almost 70 per cent of the value of the province's total exports and more than one-quarter of its gross domestic product. Energy revenues from non-renewable resources made up about one-third of the total revenue collected by the province in 2005-06.
- Alberta's energy sector is the principal driver of the province's economy and a substantial contributor to the economy of the entire country. Nearly one in every six workers in Alberta is employed directly or indirectly by the energy sector.

QUICK FACTS

The Alberta government owns almost 81 per cent of the oil, natural gas and other mineral resources in the province. The remaining mineral rights are held by the federal government or are privately owned. Mineral title holders have a legal right to access their minerals.

- Alberta has a wealth of mineral, oil and gas resources: (Note: data current as of March 2007)
  - An estimated 1.6 billion barrels of established conventional oil reserves are remaining in the province.
  - Alberta's oil sands reserve is considered one of the largest in the world and brings Alberta's total oil reserves to the second-highest level in the world. To date, about 2 per cent of the initial established oil sands resource has been produced.
  - At the end of 2005, Alberta's remaining natural gas reserves totalled 41 trillion cubic feet.
  - The amount of natural gas in Alberta's coals (coal-bed methane) is estimated to be as much as 500 trillion cubic feet. It is not known how much of this gas may be economical to produce.
  - Canada is ranked tenth in the world for total proven coal reserves — Alberta has 70 per cent of Canada's total reserves. Eleven major coal mines operate in Alberta.
  - The vast majority of new wind generation in Alberta has been installed since 2000. Southwest Alberta near the Crowsnest Pass is a key area and there is also potential for wind energy in the Cypress Hills. As well, interest in on-farm bio-energy is growing.
  - There has been no significant investment in new electricity transmission over the last 20 years. With a growing economy, there is now an urgent need for transmission construction in all quadrants of Alberta. This may result in the need for increased land use through the widening of existing corridors and the construction of new ones.
  - World energy markets are strong and there is a growing demand for energy.
- The United States has been a main market for Alberta's energy products and will continue to be a major market. The worldwide demand for energy is now increasing as economies around the world continue to grow, with Asia becoming an important driver of global economic growth. Alberta's stable political and economic environment offers an attractive investment climate for the energy industry.

Figure 7

Areas of Potential Energy Growth

Challenges

- As energy development expands and intensifies, there are more concerns about land-use challenges and conflicts, the footprint of land that is being used for exploration, drilling and development, and potential impacts on other subsurface resources such as groundwater.

Access

- Many land-use challenges relate to access. Access to resources involves surface and subsurface rights while access itself relates to the physical and economic considerations and constraints involved with getting on to land for resource exploration and development.

Issues include:

- In some areas, residential expansion of cities, towns or acreage subdivisions is occurring on the land above existing oil and gas fields, coal and gravel deposits, or other subsurface resources. In other places, previously undetected oil and gas fields are being identified beneath existing urban and residential sites or new energy projects are being developed within expected growth areas. Accessing these resources increases the potential for conflict between industry, landowners and the public.
- Landowners, other sectors, and the public expect to be increasingly involved in resource access decisions.

Figure 8

Generalized Areas of Mineral Potential

- Access constraints, such as uncertainty or lack of timely access, may make energy industry investment and development less attractive. The potential for significant future natural resource development in the province makes resolution of access issues even more important.
- Access to land will be an important factor in further expansion of the electricity transmission and generation infrastructure needed to sustain the province's economic growth.

Planning and Approvals

- Various agencies, boards and departments are involved with energy resource approvals on private land, although their role may not always be clear to the public and other stakeholders.
- Licenses, permits and authorizations from the Alberta Energy and Utilities Board take priority over the direction in municipal plans and bylaws. This priority exists because of the recognition that:
  - Oil and gas development is important for the province and should not be subject to local bylaws that might vary from place to place.
  - Unlike other development, oil and gas resources occur where they occur and developments to extract the resource cannot be easily moved based on changes in local planning bylaws or goals.
- Resource development companies plan and seek approvals from the Alberta Energy and Utilities Board for extraction of energy resources such as oil and gas. Given that energy development is exempt from the *Municipal Government Act*, it is challenging to develop plans and planning processes that integrate municipal and energy development on the same landscape.

More Information

Alberta Energy: www.energy.gov.ab.ca

Settlement

Looking Back

- Records of First Nations living on land that is now in Alberta date back thousands of years.
- The earliest non-Aboriginals in Alberta were fur traders and explorers like Anthony Henday, Peter Fidler and David Thompson. Later, missionaries arrived in Alberta, followed by the early North West Mounted Police, which later became the RCMP.
- A few urban settlements were established around fur trading posts (like Fort Edmonton) or North West Mounted Police posts (like Fort McLeod). However, most of Alberta's towns and villages were established around railway stations in the late 1800s and early 1900s. During this time, the Canadian government was actively working with the railway companies to encourage the settlement of western Canada.
- Today, human settlements in Alberta include cities, towns, villages, summer villages and rural municipalities. They meet the social, recreational, commerce, and often the educational and health needs of Alberta's growing population.

What We Know

- Alberta has 356 municipalities, of which 278 are urban (cities, towns, villages and summer villages), 4 are specialized municipalities and 74 are rural municipalities including municipal districts.

QUICK FACTS

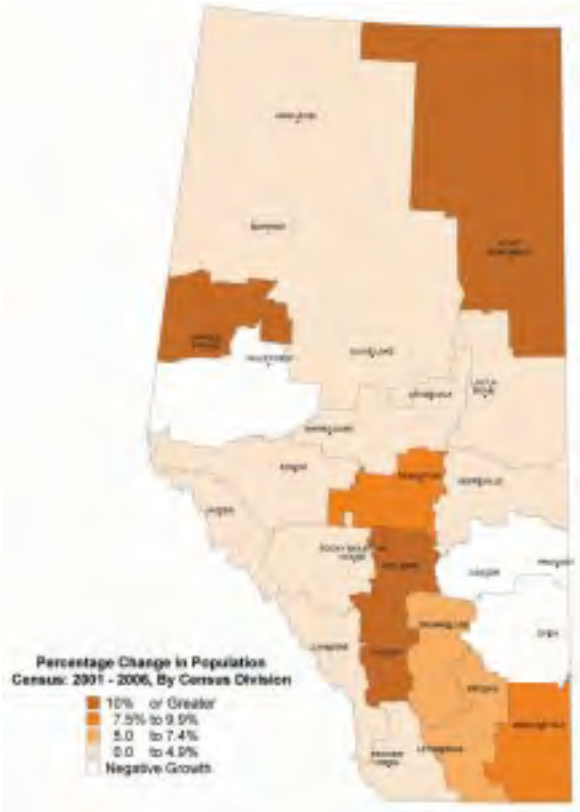
What is industrial development?

In the municipal planning/zoning context, industrial development means the infrastructure and activities associated with production e.g., manufacturing, fabricating, warehousing, processing, refining or assembly.

- In addition to municipalities, there are several other settlements including 3 Special Areas, 7 Improvement Districts, 8 Métis Settlements and 133 Indian Reserves. Of the total land in an urban municipality, typically two-thirds is used for residential, institutional or parks — industrial and commercial development, and land for future development account for the remainder.
- Municipalities are governed according to the *Municipal Government Act*.
- Over 80 per cent of Alberta's population lives in urban areas.
- Over the past five years, communities that are close to major urban areas or along growth corridors have increased in both population and area.

Figure 9

Percentage Change in Population



- Growth has pushed a number of municipalities such as the Regional Municipality of Wood Buffalo (which includes the community of Fort McMurray) beyond their planned development capacity and has strained human, financial and land resources.
- Because of population growth, housing starts increased in many communities between 2000 and 2004. Calgary and greater Edmonton had the highest number of units built between these years, consuming an estimated 11,800 acres of land in four years.
- Not all settlements are growing — some in the eastern parts of the province are declining.

Trends

- Over the next 20 to 25 years, substantial growth is forecast for the province's major urban centres and surrounding regions.
- Much new settlement growth is occurring within suburban neighbourhoods at increasing distances from the urban core. As well, development in suburban neighbourhoods continues to require extensive amounts of land.
- In most communities, residential lot sizes have decreased over the last decades and development is more compact, reflecting increasing land and servicing costs. Compared with one or two decades ago, there has been a substantial increase in the construction of multiple family types of housing (such as townhouses or condominium apartments) being constructed.
- In northeast Alberta, settlement and infrastructure needs have increased, primarily because of resource development.
- Communities are planning for longer horizons, sometimes for 100 years, and there is an increasing emphasis on planning for communities that are sustainable from an economic, social and environmental context.

Challenges

- Human settlement patterns not only influence land use and development but are also affected by these patterns. With high growth rates and strong projections for housing and development within Alberta's municipalities, it is critical that human settlement needs are considered in all land-use decisions.
- Residential, industrial and commercial development in rural areas is increasing the demand for land and services in rural municipalities and is changing the landscape.
- Traffic has increased as a result of business travel, tourism and commuters — particularly between Calgary and Edmonton and around major towns or cities close to the Highway 2 and 63 corridors. This has strained road capacity and resulted in more exhaust and particulate matter in the air.
- Water availability is a mounting concern, particularly in regions and areas that are growing.
- Strong population projections coupled with economic pressures for development will increase the land needed to meet settlement demands. Several major annexations are currently under consideration and will affect Calgary, the Municipal District of Rocky View, the City and County of Grande Prairie, the City and County of Red Deer and others.
- Recreational communities are growing, particularly in summer villages and areas close to the mountains. Balancing demands for growth with protection of the natural environment will become more challenging.
- Some citizens are concerned that municipalities are not giving proper consideration to environmental, social or community impacts of planning decisions.
- Some urban and rural communities compete with each other to attract new residents and business investment. As a result there may be inefficient land use and more widely spread development patterns (i.e. sprawl).

Alberta Municipal Affairs and Housing:
www.municipalaffairs.gov.ab.ca

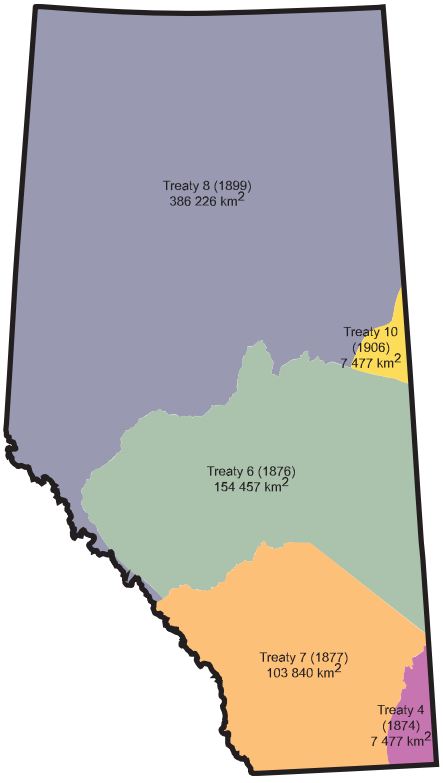
First Nations

Looking Back

- First Nations have lived on the land that is now in Alberta for thousands of years. Archaeological records dating back more than 10,550 years ago indicate camps on the shores of the Vermilion Lakes near Banff.
- Anthony Henday, the first European fur trader to reach Alberta, recorded meeting First Nations in 1754.
- Treaty 6 (1876), Treaty 7 (1877) and Treaty 8 (1899) were created, and cover most of what is now Alberta.

Figure 10

Treaty 6, 7 and 8 in Alberta



What We Know

- There are 47 First Nations in Alberta with a total population of 98,000. About two-thirds live on reserves, one-third live off reserves and a small number live on Crown land.
- Over the past decade, the growth of Alberta's First Nations population has increased consistently by 2.5 per cent to 3 per cent each year.
- Indian reserves in Alberta were set aside in accordance with the provisions of Treaty 6, Treaty 7 and Treaty 8. Reserves in Alberta cover about 1.6 million acres and range in size from a few acres to over 350,000 acres.
- All validated treaty land entitlement claims in Alberta are either settled or under negotiation.
- First Nations share a desire to identify, protect and preserve historical, spiritual and cultural sites on Crown land. Traditional-use studies identify these sites to help avoid infringement on First Nations rights as well as to reduce conflicts between government, industry and First Nations.
- Recent Supreme Court decisions indicate that consultation must occur when land management and resource development decisions may adversely impact First Nations' rights and traditional uses on Crown lands.
- Cabinet approved the Government of Alberta's First Nations Consultation Policy on Land Management and Resource Development in 2005 and the corresponding consultation guidelines were released in the fall of 2006. The guidelines provide direction on how consultation for land management and resource development should occur in relation to activities such as exploration, resource extraction, and management of forests, fish and wildlife.
- Although some First Nations have signed a resolution concerning the consultation guidelines, the Alberta government is proceeding with implementation and continuous monitoring of these. This includes dialogue with First Nations and industry, accepting ongoing feedback and adjusting the guidelines as necessary.
- First Nations want to contribute to the growth of Alberta's economy. Through the First Nations Economic Partnerships Initiative, First Nations are developing partnerships with industry and strengthening the First Nations private sector.

Challenges

- Alberta has a responsibility to consult with First Nations where legislation, regulations or other actions infringe on treaty rights. The province wants to have a practical consultation process that avoids or minimizes impacts on First Nations' rights and traditional uses, and also creates greater certainty for industry.
- The cultural and environmental cumulative effects of land use — including concerns about access management and habitat considerations — require more consideration. Project-specific consultation often does not consider the broader impact of continued long-term development.
- Some sites of utmost importance to First Nations, such as gravesites, or areas of spiritual or ritual significance, are on private lands. Protecting these sites from development while allowing access for First Nations communities, is a priority for some First Nations. In some cases, the *Historical Resources Act* has been used to protect and manage sites of critical importance.

Métis Settlements

Looking Back

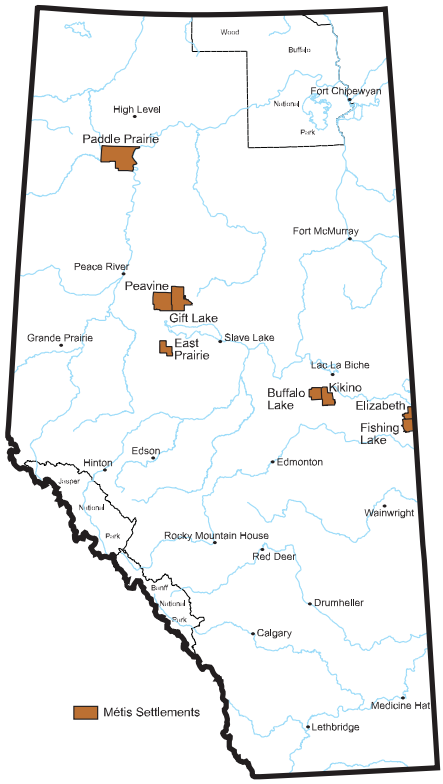
- Many of the first Métis communities grew up near fur trading posts but other communities developed as a distinct Métis culture emerged.
- In 1938, following the Ewing Commission of 1934, the Province of Alberta established Métis land bases in Alberta.

What We Know

- Alberta is the only province in Canada that has a recognized Métis land base. There are eight Métis Settlements in Alberta, all located north of Edmonton around the Lac La Biche-Bonnyville area and Lesser Slave Lake. The Métis Settlements cover approximately 1.3 million acres (528,000 hectares) of land and include Buffalo Lake, East Prairie, Elizabeth, Fishing Lake, Gift Lake, Kikino, Paddle Prairie and Peavine. About 6,950 Métis reside in the Settlements.
- In 1990, by Letters Patent, the Crown granted the Métis Settlements General Council ownership in fee simple of the lands within the eight Metis Settlements.
- There is a co-management agreement between Alberta and the Métis Settlements. This agreement provides for the co-management of exploration and development of subsurface minerals under Settlement lands.

Figure 11

Métis Settlements in Alberta



Tourism/Recreation

Looking Back

- In the fall of 1883, three Canadian Pacific Railway construction workers stumbled across a cave containing hot springs on the eastern slopes of Alberta's Rocky Mountains. That discovery resulted in the creation of Canada's first national park — Banff National Park — and the start of Alberta's tourism and recreation industry.

Current Situation

- Alberta's growing tourism industry generates almost $5 billion in annual revenues and about $2.3 billion in total taxation revenues, of which $635 million is credited to the provincial government. The industry provides over 103,000 person-years of employment in Alberta.
- This is in addition to the many health and social benefits associated with tourism and recreation. Non-monetary benefits — physical fitness, personal achievement, cultural exploration and a connection with the environment — contribute to the quality of life for Albertans and others who visit the province.
- While many people think of tourists as being visitors from distant lands, anyone travelling for non-work purposes is considered a tourist. Approximately two-thirds of provincial tourism revenues arise from residents of Alberta, British Columbia and Saskatchewan travelling throughout this province. Our other important markets include the rest of Canada, the United States, the United Kingdom, Germany and Japan.
- Half the tourism expenditures in Alberta occur in areas other than Edmonton and Calgary. Alberta's rural landscapes and natural environments also offer major tourist attractions.
- Alberta's rural landscapes provide a range of opportunities including agro-tourism, bed and breakfasts, campgrounds and heritage sites.
- Alberta's public lands provide the setting for a variety of pursuits and attractions ranging from less intensive backcountry camping, hunting, fishing and trail riding to more intensive land use through lodges, campgrounds and golf courses.

- Maintaining the esthetic quality of the natural environment and sustaining access to nature and the outdoors is becoming increasingly important for attracting visitors and Albertans.

Trends

- Significant growth is occurring in all forms of tourism and recreation — Aboriginal experiences, rural tourism, ag-tourism, recreational trail use, nature, culture and heritage tourism, hunting and fishing, urban tourism and sports tourism. The Alberta government and stakeholders are committed to continued expansion of tourism and recreation.
- The public's demand for a wide range of recreational opportunities continues to be on the rise.
- Interest in eco-tourism, nature-based and heritage tourism is rising.

- More and more individuals who live in the communities along the Calgary-Edmonton corridor want to use public land for recreation, particularly along the Eastern Rocky Mountain slopes. There are also increasing demands for recreation pursuits in more northern wilderness areas.

Challenges

- Many communities regard tourism as a way to diversify their economies. However, there are other interests competing for the same land base. For example, forestry, grazing, energy and mineral development interests often seek or need access to the same land base.
- Much of Alberta's landscape is already committed to use, including agriculture, residential, industrial and forestry. As a result, it is increasingly difficult to accommodate demands for tourism development and recreation use.
- Albertans' desires to pursue recreation activities are on the rise. It is challenging to adequately address the impacts of demands for greater access to private and public lands. This includes both increasing public safety concerns and cumulative effects on the land and on resources.
- The recreation community operates primarily with volunteers and lacks a common voice. This impacts its capacity to participate in planning and policy initiatives.
- Local municipalities, hospitals and emergency personnel resources are being challenged to respond to emergencies and manage hazards (e.g., fire) related to some recreational activities. This is a particular concern for activities that are becoming more "extreme," and for those located in more remote areas.
- Tourism and recreation activities are sustainable if managed appropriately. However, without appropriate management tools they have the potential to negatively impact other activities and the landscape.
- Increasing pressure for recreation access to public and private lands is producing more frequent conflict between recreation users themselves as well with private landholders and public land disposition holders.
- The anticipated long-term growth in tourism and recreation demand combined with the dramatic increase of Alberta's population stimulates the need for new products and destinations. Without new or enhanced destinations, Alberta has a limited ability to compete in the regional, national and global marketplace.

Historical Resources, Parks and Protected Areas

Looking Back

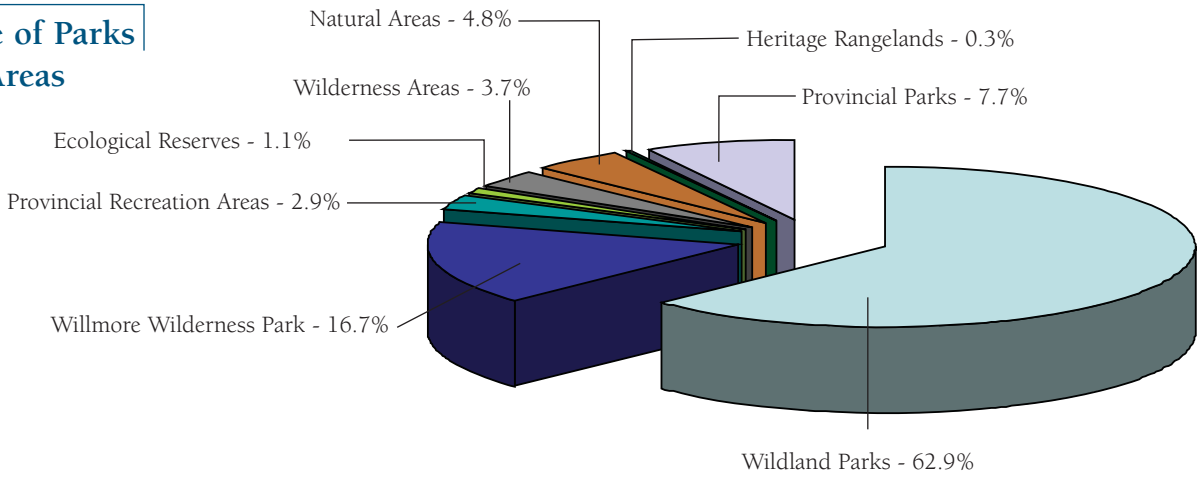
- The establishment of Aspen Beach Provincial Park in 1932 signalled the official beginning of Alberta's provincial park system. Early parks were small recreation sites that provided Albertans with scenic spots to swim and picnic.
- In 1964, Alberta's provincial parks network was expanded to include wilderness areas and natural areas. In 1980, the legislation was amended to allow establishment of ecological reserves.

What We Know

- Alberta's parks and protected areas network includes a spectrum of sites — from developed recreation areas to pristine wilderness. The network consists of more than 520 areas and protects almost seven million acres — just over 4 per cent of Alberta's land base. An additional 8 per cent of Alberta's land base is federal land protected as national parks.
- Parks and protected areas showcase each of Alberta's six natural regions, preserve our natural heritage and biodiversity, and protect habitats and watersheds. As well, they contribute to the province's environmental quality and provide many recreational opportunities.
- The full environmental diversity of the province's six natural regions is not yet represented in the parks and protected areas network. Some significant gaps exist, particularly in the Parkland, Foothills and Grassland Natural Regions.
- The province identifies, evaluates and protects Alberta's historical resources and operates 18 provincial historic sites, museums and interpretive centres. The enjoyment and protection of historical resources contributes to Alberta's identity and provides a sense of place.
- Protection of historical places allows Aboriginal people to practice their traditional cultural ways, which is central to their cultural identity.
- When a new park or protected area is established, the province honours existing commitments for resource development. However, new subsurface mineral rights that are sold after a park or protected area is established, must be developed from lands outside a park or protected area.
- Forest management in parks and protected areas includes pest management and FireSmart programs to reduce wildfire risk for adjacent communities.
- Alberta has identified Environmentally Significant Areas — landscapes with special biological diversity or other natural features. Inventories of these areas provide valuable information for the management of both private and public lands. Some, but not all, of these Environmentally Significant Areas are located within parks and protected areas.

Figure 12

Total Land Base of Parks and Protected Areas



Alberta's historical resources include archaeological sites, palaeontological deposits and historical buildings, and any other works of humans or nature that are of interest for Alberta's posterity. There are just over 33,000 archaeological sites recorded, with more than 30,000 known palaeontological sites estimated. These sites are protected by the *Historical Resources Act*. Historical structures are usually protected by a combination of legal designations and incentives.

Trends

- There is significant and growing public and media interest in archaeology and palaeontology, including preservation of these resources.
- As more baby boomers enter retirement, the demand for heritage tourism will increase, such as exploring historic resources and sites.

- First Nations are becoming more and more interested in the condition and preservation of sacred sites, as well as the location and nature of non-sacred archaeological sites. Consultation with these groups regarding their heritage will increase.
- There will continue to be public pressure to complete the parks and protected areas network as well as public concern about management and protection of individual parks and protected areas. At the same time, population growth will place more recreational pressure on these areas and more intensive use of lands surrounding them.

Challenges

- Parks and protected areas play a significant role in watershed management, particularly in headwater areas. However, many of Alberta's different wetland features are either not included in the existing parks and protected areas network or the current boundaries are insufficient to either properly represent or protect key wetland features.
- Private land could help protect and represent the province's natural diversity. However, the existing management tools for private conservation do not include resource protection comparable to that provided in a provincial protected area. Voluntary initiatives such as conservation easements cannot control subsurface activities that could result in surface disturbances.
- Most individual parks and protected areas are not large enough to ensure long-term preservation of biodiversity and therefore may be at risk of becoming ecological islands.
- Currently, when decisions are made about lands surrounding parks and protected areas, the impact on these areas is not considered. For instance, neighbouring parks and protected areas are not included in forest management planning.
- Existing incompatible activities in designated protected areas make it challenging to ensure these areas will continue to be representative of the lands and features they were set aside to preserve.
- In some provincial parks and protected areas, invasive alien plant species affect the integrity of the ecosystems and how well the area represents the province's natural diversity.
- It is a challenge to properly protect historical resources where they are affected by adjacent land-use activities. For example, noise levels or fumes in the vicinity of a sacred archaeological site such as a medicine wheel can affect its spiritual values.
- Some people are concerned that measures to help conserve historical resources prevent developers from accessing natural resources.

Watershed

What is a Watershed?

- A watershed, or basin, is the area of land that catches precipitation and drains it to a water body such as a marsh, lake, stream or river. Watersheds can range in size from a few hectares to thousands of square kilometres.
- Watershed management considers the whole landscape in a watershed — land, water, plants, animals and people — and how all these components interact to affect the watershed.

What We Know

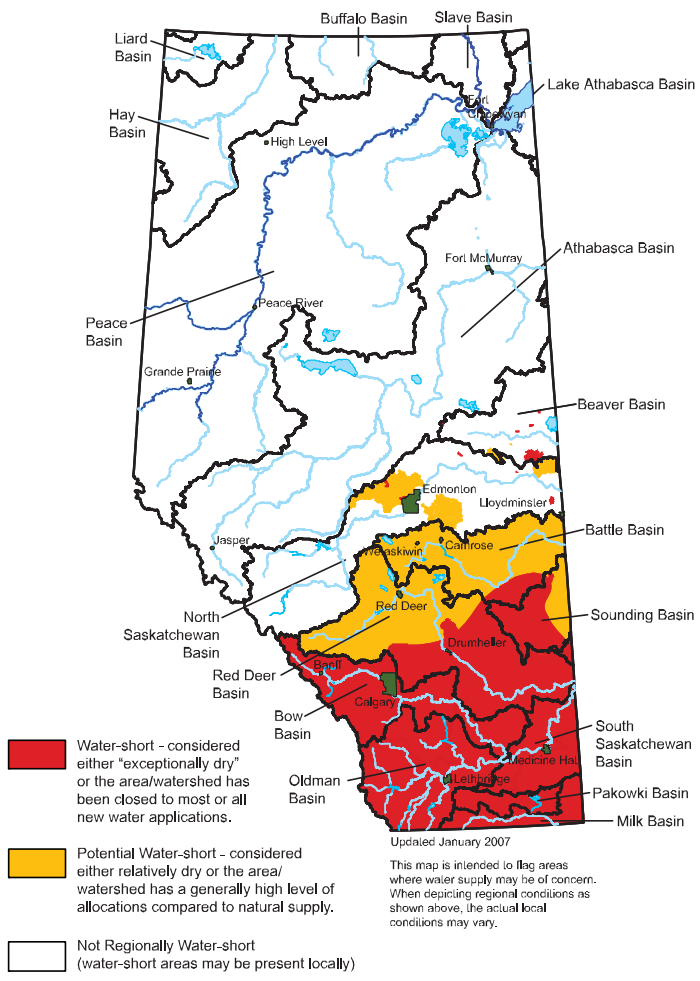
- Alberta has seven major watersheds — Milk River, South Saskatchewan, North Saskatchewan, Beaver River, Athabasca River, Peace/Slave River and Hay River.
- Healthy, functioning watersheds can provide clean and abundant water resources to agricultural, municipal, industrial and recreational users, help maintain healthy crops and crop yields, support wildlife habitat, and regulate natural processes such as soil erosion and sedimentation. Healthy watersheds contribute to the overall health of the environment.
- Water for Life is the Alberta government's strategy for addressing water quality and water quantity issues and the need for sustainability of water resources.
- Watershed Planning and Advisory Councils — multi-stakeholder groups that include governments as partners — provide leadership for watershed management planning and reporting on the state of the basin.
- The watershed planning process identifies issues, gathers information, evaluates management options and makes recommendations to provincial and local government decision makers, as well as to industry and communities.

Challenges

- Alberta is facing significant pressures on its water resources. Population growth, drought, agriculture and industrial development all put stress on the water supply and water systems.
- Watershed management is closely linked to land use. Activities on the land, such as agricultural, industrial or recreational activities, can directly affect water quality and quantity. Specific issues include:
  - Protecting riparian habitat (areas next to flowing or still waters) for biodiversity and addressing the pressures on this habitat from agricultural activities and reduced stream flows.

Figure 13

Water-Short Areas in Alberta



- Dealing with pressures on aquatic ecosystem health from the effects of various land uses.
- Addressing the effects of land uses that occur upstream, particularly source waters for municipalities.
- Managing water demand, especially in water-short areas.

- Better communication and coordination among the various planning and approval processes is needed. Watershed management and land-use planning are not undertaken at the same time in an area.

Alberta's Water Strategy: www.waterforlife.gov.ab.ca

QUICK FACTS

Water as an Ecological Good

An example from the City of New York shows the value of water as an ecological good. Increasing demands on the water supply and risks to it from pollution and human developments in the watershed led to the creation of a major plan for the continuing supply of potable water. The city determined that spending $300 million on land acquisition for conservation and protection of the watershed would save the two to eight billion dollars that would have been required for mechanical water filtration and treatment.

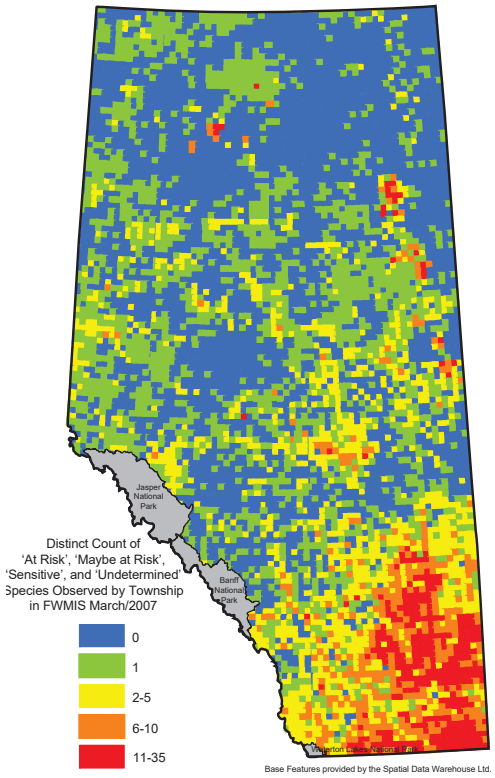
Biodiversity, Ecological Goods and Services, Fish and Wildlife

What Is Biodiversity?

Biodiversity refers to the assortment of life on earth. It is the variety of all animals, plants and microorganisms interacting in all types of environments found on the planet. Biodiversity includes the variety of genetic material in all living things, the variety of species on earth and the different kinds of living communities and the environments in which they occur.

Figure 14

Species at Risk in Alberta



What Are Ecological Goods and Services?

Ecological goods and services are the economic and social benefits resulting from the natural processes of a healthy environment and biodiversity. They are available to all of society and essential to sustaining a healthy and prosperous way of life. Ecological goods and services include groundwater recharge, flood and erosion control, wildlife habitat, productive soils, carbon sequestration, and abundant clean air and water. Unlike resource commodities, the marketplace usually does not place a value on ecological goods and services.

What We Know

- Alberta has a wealth of biological diversity on both public and private land — more than 80,000 wild species living in six natural regions. The majority of these species are small and seldom seen — like the 35,000 species of insects. Of the species Albertans are most familiar with, there are 93 species of mammals, 10 amphibians, 411 birds, 8 reptiles and 63 fish.
- Both public and private lands play critical roles in habitat conservation and the protection of biological diversity.
- Alberta has many types of aquatic habitats: small streams in the mountains and foothills; large rivers extending through the prairie, parkland and boreal regions; alpine lakes, prairie potholes and reservoirs, and large lakes of the northern boreal forest. These aquatic ecosystems contain fish populations made up of 65 species, of which 51 are native, 4 have been introduced intentionally by government agencies, and 10 have been introduced illegally or accidentally. Compared to most other provinces, and elsewhere in North America, Alberta has a relatively sparse fish fauna.
- Although it is hard to determine the full value of ecological goods and services, there is information about the economic benefits for nature-related activities. When this was last studied in 1996, Albertans spent $1.2 billion on nature-related activities —$171.6 million on wildlife viewing, $147.8 million on fishing, $71 million on hunting and most of the remainder on transportation, food and accommodation related to these activities. Nature-related activities supported 23,600 jobs and provided local and provincial governments in Alberta with $369 million in tax revenue.

- Biodiversity, environmental goods and services, and fish and wildlife have other non-monetary values:
  - Healthy fish and aquatic life are key indicators of the fresh, pure water that is needed by all life.
  - Healthy waterfowl populations are indicators of viable water sources including wetlands that supply and filter much of this water.
  - Biodiversity supports recreation and tourism and provides us with a source of beauty and inspiration.
- Biodiversity is an indicator of the status or health of landscapes or watersheds — changes in biodiversity may indicate cumulative effects of land uses and activities.
- Five species of vertebrates and one plant are known to no longer live in Alberta, but we know very little about the loss of most plant species or invertebrates. The Grassland Natural Region of southeast Alberta,

which has been largely altered by human settlement and agricultural development, is considered an area of concern for species at risk — most of the species considered legally endangered or threatened in the province occur in this region.

Challenges

- Human activity and many of the land uses considered valuable to Albertans — settlement, building roads, industrial development, agriculture, recreation and forestry — can affect natural processes of a healthy environment. As well, an increased human footprint on the land can threaten biodiversity through loss, degradation and fragmentation of habitat.
- Land reclamation is not keeping pace with the rate at which industrial land is being retired.
- Increased water demand for domestic, industrial and agricultural uses threaten aquatic ecosystems.
- Wild species and biodiversity respond to human activities and habitat alteration in different ways — populations of specialized, less adaptable species may decline and be displaced by less specialized, more adaptable species.
- The introduction of non-native exotic species has displaced some native species and may significantly disrupt local ecosystems.
- There is a lack of mechanisms to support conservation of ecologically important areas, outside the formal legalized parks and protected areas network.
- We take our clean air, clean water and nature for granted. We all enjoy these public goods and expect them to be sustained. And that poses a challenge — how to reward landowners for practicing sound land stewardship so that in the future we can continue to rely on clear air and water.
- As a society we are challenged to find ways to encourage landowners who provide ecological goods and services that benefit all of us. New ways of looking at the economics of stewardship are emerging, such as tax incentives and direct payments.
- Alteration of riparian areas (those bordering flowing or standing water) and fragmentation of watercourse and fish habitat are particular concerns:
  - Riparian areas are more biologically productive and support a greater variety of species than adjacent uplands. About 80 per cent of Alberta's wildlife use these areas for all or part of their life cycle. Cottage development, recreational use and agriculture have affected lakeshores, stream banks and riparian vegetation.
  - There are approximately 225,000 culvert crossings in the province, many of which have resulted in fragmentation of stream and river habitats and created barriers to fish migration and movement of other aquatic species. As roads continue to be built, the number of culvert crossings will increase.

More Information

A series of fact sheets on biodiversity is available from Alberta Sustainable Resource Development: www.srd.alberta.ca/fishwildlife/biodiversity.aspx

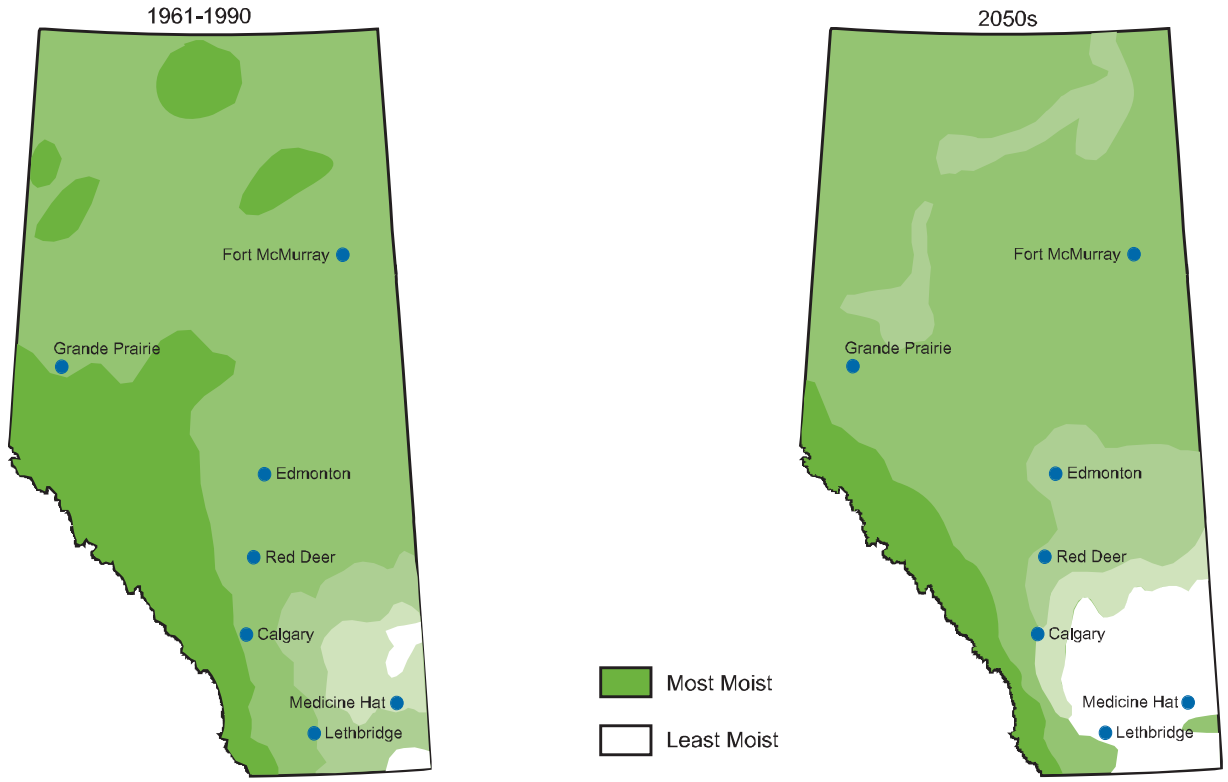
Climate Change

What is Climate Change?

- Weather is what we see on a day-to-day basis. Climate is average weather over at least 30 years. So, for example, if the amount of snow we get over 30 years is lower than the amount we had in the previous 30 years, that shows a change in our climate. If we see more serious weather events — like storms and hurricanes and unusual temperatures — not just one year but over a long period time, that could reflect a change in the climate. Year-over-year changes are just normal variations in weather — the kind we have all seen over many years.

Figure 15

Annual Moisture Index



- Our climate is warming and it is doing so at a faster rate than at any other time in our recorded history. There is considerable evidence that humans have contributed to this warming. Greenhouse gases, which trap heat in the atmosphere, include carbon dioxide, methane and nitrous oxide. Trapped heat causes global temperatures to rise — this is called "the greenhouse effect."
- According to the United Nations Framework Convention on Climate Change, the average temperature of the earth's surface has risen by 0.74 degrees Celsius since the late 1800s. By the year 2100, depending on the scenario, the possible range of increases are another 1.1 to 6.4 degrees Celsius. Even if the minimum predicted increase takes place, it will be larger than any century-long trend in the last 10,000 years.

What We Know

- Future climate models for Alberta have been developed using Global Climate Models downscaled to Alberta. These models include a median scenario that shows a temperature increase of about three degrees Celsius by the 2050s. Under this scenario, the climate now observed in southern Alberta would occur more northerly, and the climate now seen in lower elevations in the mountains and foothills would occur at higher elevations.
- The models also indicate that while annual precipitation may increase, moisture levels across the province, as shown in the maps in Figure 15, could decrease due to higher evaporation rates brought on by increasing temperatures. This could have large impacts on the availability of surface and groundwater which in turn would affect existing ecosystems and land uses as well as future development.

- Climate change may have a significant impact on the types of vegetation in both native ecosystems and managed land areas in Alberta.
- In particular, the agriculture and forestry industries could be impacted. For example, areas now considered dependable agricultural lands may be less so in 10 to 15 years. As well, approaches to respond to climate change such as water storage structures, increased irrigation and alternative cropping and livestock management will alter the landscape for farming.
- There may be a higher risk of wildfire, insects and disease — over time this could alter the pattern and distribution of forests in Alberta. Changes in available moisture in the forested area could lead to changes in forest composition and structure as well as shifts in vegetation patterns.
- Biodiversity conservation — species distribution and the survival of species in their native ranges — may be altered.
- Water supplies will likely be affected, particularly in the southern portions of the province. Declining stream flows, melting glaciers, changes in precipitation and longer drought periods may limit the potential for land development.
- Climate changes that have the potential to affect land use or water availability need to be considered as risks when planning future land use. Since we cannot really predict future climate, we need to use scenarios and assess the risks associated with these as part of policy decision making.

Challenges

- Since climate change issues emerged in the late 1980s and early 1990s, the Alberta government and partners in industry, academic institutions, municipalities and environmental organizations have been actively involved in the search for effective solutions.
- The Alberta Climate Change Action Plan (*Albertans & Climate Change – Taking Action*) identifies initiatives to reduce and manage greenhouse gases as well as adapt to a changing future climate. This plan focuses on improving energy efficiency, enhancing use of technology, seeking out new environmentally friendly energy sources and better managing our emissions today and in the future.
- In particular, two initiatives in the Taking Action plan will have an impact on land use in Alberta:
  - *Climate Change Adaptation* focuses on identifying and managing risks associated with a changing climate. Even with actions to control greenhouse gases, it is anticipated that climate warming will influence water availability, vegetation patterns and the sustainability of some land uses. A changing climate will affect the land and its use and we will need to adapt to the changes.
  - *Enhancing Biological Sinks* deals with promoting environmentally sustainable agriculture and forestry practices in order to reduce greenhouse gas concentrations and maintain or enhance ecosystem health and integrity.
- In 2002, Alberta established a target to reduce emissions intensity by 50 per cent below 1990 levels by 2020.
- An interim target of achieving a 30 per cent reduction in emissions intensity by 2010 was also set. As a result, by 2004 Alberta's emissions intensity decreased by 16 per cent from 1990 levels, but total emissions have increased by 40 per cent. This means that while Alberta's economy is growing, steps have been taken to reduce the growth in emissions.

Alberta's Land: Our Future

We have seen how the land supports us. It provides places for us to live and enjoy as well as ways to make a living. We enjoy the benefits of our province's healthy economic growth and we want to ensure that our way of life is sustainable. But there are many challenges facing Alberta's land.

How do we anticipate and prepare for a future with six or eight million people? How do we maintain land for agriculture and forestry, yet balance that with land for energy and industrial developments, transportation and utilities, tourism and recreation? What is most important to protect? How do we balance our goals for the economy, the environment and our way of life?

Each of us has a role in determining the future of Alberta's land. As Albertans, we need to talk about what is most important to us — and how that affects our land. What do you value most?

And each of us is also faced with a challenge — to manage our activities so that the land and the land uses we rely on can be sustained. Our actions will help ensure that the land continues to sustain us, our way of life, and all other forms of life.

The Government of Alberta wants Albertans to have the information they need to make decisions about the land. If you would like more information, please see the Land-use Framework website at **www.landuse.gov.ab.ca**.

Glossary

Archaeological Sites

Places where objects or landscape features may be found that show evidence of manufacture, alteration or use by humans, the patterning of which is of value for the information that it may give on historic human activities.

Biodiversity

The assortment of life on earth — the variety of genetic material in all living things, the variety of species on earth, and the different kinds of living communities and the environments in which they occur.

Conventional Oil

Hydrocarbons which occur in a liquid state and are found in underground rock reservoirs. Conventional oil can be extracted through drilling and is refined for use as energy or industrial materials.

Forest Fibre

All standing, fallen or harvested trees and woody shrubs used in the production of primary and secondary wood products.

Disposition

A way the government gives individuals, companies or organizations rights to use public land for a specific purpose such as grazing, farm development, timber harvesting, surface access for oil and gas, commercial use or recreation.

Ecological Goods and Services

Economic and social benefits resulting from the natural processes of a healthy environment and biodiversity. These are available to all of society and essential to sustaining a healthy and prosperous way of life. They include groundwater recharge, flood and erosion control, wildlife habitat, productive soils, carbon sequestration, and abundant clean air and water.

Forest Management Agreement (FMA)

A large, area-based agreement between the Province of Alberta and a company.

Headwater

The source for a stream, located in the upper tributaries of a drainage basin.

Historical Resources

Any works of nature or of humans that are primarily of value for their palaeontological, archaeological, prehistoric, historic, cultural, natural, scientific or esthetic interest

Industrial Development

When referring to land use, this term means natural resource development activities like exploration, harvesting and extraction of natural resources. But it can also mean, in a municipal planning/zoning context, the use, infrastructure and activities associated with production; e.g., manufacturing, fabricating, warehousing, processing, refining or assembly.

Municipal Districts

A form of government in rural areas of the province, also sometimes referred to as a county. Land in these areas includes working landscapes such as resource-based areas or farmlands as well as unincorporated communities such as hamlets and rural residential subdivisions.

Natural Gas

Hydrocarbons that occur in a gaseous state at original conditions. Methane, ethane and propane are the most common types. Nitrogen, carbon dioxide or hydrogen sulphide are also examples of natural gas. Natural gas can be extracted through drilling and is processed for use as energy.

Natural Region

A way of describing broad ecological variations in the landscape. Natural regions reflect differences in climate, geology, landforms, hydrology, vegetation, soils and wildlife. There are the six natural regions in Alberta.

Oil Sands

Oil sands are deposits of naturally occurring hydrocarbons that are very viscous and are known as bitumen. Bitumen is found predominantly in sandstone but in Alberta may also be found in carbonate rocks. Bitumen may be recovered by open cast mining techniques (digging) or by unconventional techniques such as injecting steam into the earth to bring the hydrocarbons to the surface. Bitumen is refined for use as energy.

Oriented Strand Board (OSB) and Waferboard

Panel products made of aspen or poplar strands or wafers bonded together under heat and pressure using a waterproof phenolic resin adhesive or equivalent waterproof binder.

Palaeontological Deposits

Rocks or soils containing evidence of extinct multi-cellular organisms.

Riparian

The lands adjacent to streams, river, lakes and wetlands, where the vegetation and soils are strongly influenced by the presence of water.

Rural Municipalities

Areas where there is a lower concentration of people and buildings than in urban municipalities, such as municipal districts. The designation “rural” should not be interpreted to include farm or resource-based areas only — some rural areas contain substantial country residential populations.

Specialized Municipalities

Unique municipal structures that can be formed without resorting to special Acts of the Legislature. Often, specialized municipalities allow urban and rural communities to coexist in a single municipal government.

Subsurface

Subsurface is used to describe the resources (e.g., oil and gas, coal, metallic and industrial minerals such as limestone) identified under the *Mines and Minerals Act* which are located underground. It also refers to the titles, rights and activities to access those resources below ground. Subsurface resources do not include sand and gravel — as these are considered surface materials.

Surface

Resources, activities, and development that occur on the land, e.g., sand, gravel, topsoil, roads, and buildings. This term can also be associated with land titles, e.g., the title to individual properties is for the ownership of the land surface (not the resources underneath the land unless expressly noted as including such).

Urban Municipalities

Areas where there is a concentration of people and buildings, such as cities or towns.

Watershed

A watershed is the area of land that catches precipitation and drains into a larger body of water such as a marsh, stream, river or lake. Watersheds can range in size from a few hectares to thousands of square kilometres.

Woodlot

Tracts of land of any size and shape that contain areas of trees either naturally occurring or planted.

LAND-USE FRAMEWORK

Alberta Government

Complaint of Non-compliance with a Regional Plan

Alberta Land Stewardship Act

Land Use Secretariat
9th floor, Centre West Building
10035 - 108 Street
Edmonton, AB T5J 3E1
TEL: 780- 644-7972 or Toll Free Rite Line at: 310-0000
FAX: 780- 644-1034
EMAIL: LUF@gov.ab.ca

Date Stamp - *(Land Use Secretariat office use only)*
Tracking Number *(Land Use Secretariat office use only)*

Prior to completing the form below, you are strongly encouraged to review the Frequently Asked Questions for Submitting a Complaint of Non-compliance with a Regional Plan document as well as section 62 of the Alberta Land Stewardship Act (ALSA); both are available on the Alberta Land-use website: www.landuse.alberta.ca.

Instructions

- Complete one form for each request for complaint being filed
- Please print clearly
- Legal representation is not required; however if representation has been retained, indicate this in Part 3 of the form
- Submit completed form with the original signature, and any supplemental information by personal service, registered mail, courier, fax or email to:

Land Use Secretariat
9th floor, Centre West Building
10035-108 street
Edmonton, AB T5J 3E1

Fax: 780-644-1034

Email: LUF@gov.ab.ca

PART 1: DETAILS OF COMPLAINT

A) Name of Regional Plan: South Saskatchewan Regional Plan (SSRP)

Specific provision(s) of the regional plan: Implementation Plan - Page 61. Please see attached supplement.

B) Legal land description (township, range, meridian) that is the subject of the complaint, if applicable:

N/A

C) The name(s) of the government agency, organization or person that your complaint is about:

Alberta Energy and Alberta Energy Regulator (AER)

D) Summarize what your complaint is about. Clearly identify the specific provision(s) (section) of the Regional Plan that you believe is not being complied with and explain the nature of the non-compliance.

Please see the summary on page 1 of the attached supplement.

E) Have you contacted any of the persons or authorities named in part C above regarding this complaint?

☑ **No**

☐ **Yes - List the dates, names, phone numbers, addresses (if possible) and the outcome of the interaction:**

F) List any steps you have taken to try to resolve the matter and the relevant dates, file or reference numbers:

Please see discussion in attached supplement regarding the judicial review application filed by other persons. We are not a party to that proceeding at this time, but we are planning to seek leave to intervene in the near future.

G) *Section 62(2)(b) of ALSA requires the Stewardship Commissioner to be satisfied that the matter complained of is not the subject or part of the subject of an application, process, decision or appeal governed by an enactment or regulatory instrument, or that there is not an adequate remedy under the law or existing administrative practices, and no other person should investigate the complaint.*
Did you file an appeal or apply for a review?

☑ **No**

☐ **Yes - Name of the government, agency or organization:**

What was the result of the appeal or review? Please see attached supplement.

☐ **A copy of the results of the review or appeal will be submitted with the form**

H) Describe the result or outcome you seek:

Please see attached supplement.

PART 2: APPLICANT INFORMATION

You are submitting the complaint as an: ☐ **Individual** ☑ **Corporation**

First Name: Neil **Last Name:** Keown

Company Name: Alberta Backcountry Hunters and Anglers

Professional Title: Chair

Email Address: alberta@backcountryhunters.org **Fax #:**

By providing an e-mail address, you agree to receive communications from the Land Use Secretariat by email.

Daytime Telephone #: 403-980-1191 **Alternate Telephone #:**

Mailing Address:

Apt/Suite/Unit#	Street Address	City/Town
	P.O. Box 10294	Airdrie

Province	Country (if not Canada)	Postal Code
Alberta		T4A 0H6

Signature: Neil Keown Digitally signed by Neil Keown Date: 2020.10.23 10:00:45 -06'00' **Date:** 23-10-2020

You must notify the Land Use Secretariat of any change of address or telephone number in writing.

Information on this form is collected under the authority of section 33(c) of the *Freedom of information and Protection of Privacy Act*, RSA 2000 c-F25, for the purpose of investigating complaints of non-compliance with a regional plan.

PART 3: REPRESENTATIVE INFORMATION (IF APPLICABLE)

I hereby authorize the named company and/or individual(s) to represent me:

First Name: Michael **Last Name:** Wenig

Company Name: Big Spruce Law

Professional Title : Lawyer

Email Address: mike@bigsprucelaw.ca **Fax #:** 403-398-4260

By providing an e-mail address, you agree to receive communications from the Land Use Secretariat by email.

Daytime Telephone #: 403-879-1006 **Alternate Telephone #:** 403-826-4442

Mailing Address: 6 (Apt/Suite/Unit#) Varbay Place NW (Street Address) Calgary (City/Town)

Alberta (Province) (Country (if not Canada)) T3A 0C8 (Postal Code)

PART 4: CONSENT

I, Neil Keown *(name)* consent to the information in this complaint form, including my personal information being disclosed to:

(a) the subject of this complaint so that he/she may respond; and

(b) other relevant persons, authorities, departments, agencies, boards or commissions who may have information relevant to this complaint

In accordance with section 40(1) of the *Freedom of Information and Protection of Privacy Act*.

Signature: Neil Keown Digitally signed by Neil Keown Date: 2020.10.23 10:01:06 -06'00' **Date:** 23-10-2020

If you are representing the complainant and are NOT a solicitor, please confirm that you have written authorization to act on behalf of the applicant. Confirm this by checking the box below.

☐ I certify that I have written authorization from the complainant to act as a representative with respect to this application on his or her behalf and I understand that I may be asked to produce this authorization at any time.

BACKCOUNTRY HUNTERS & ANGLERS ALBERTA

SUPPLEMENT TO COMPLAINT OF NON-COMPLIANCE WITH THE SOUTH SASKATCHEWAN REGIONAL PLAN

This is a supplement to the accompanying Form LUS – 05—Complaint of Non-compliance with a Regional Plan.

This complaint is submitted by the Alberta chapter of Backcountry Hunters and Anglers ("Alberta BHA"). Our chapter is a non-profit organization registered under the *Alberta Societies Act* (# 5020824412). We have roughly 820 dues paying members who generally use Alberta's public lands for outdoor recreation and to supply food for themselves and their families. Alberta BHA's purposes include working to protect Alberta's wildlands and waters to preserve Alberta's heritage of non-motorized hunting and fishing.

Summary

Our complaint relates to the rescission of A Coal Development Policy for Alberta (1976).[1] That rescission is contained in Alberta Energy Information Letter (IL) 2020-23 (copy attached), which was issued on May 15, 2020 and "authorized" by Energy Assistant Deputy Minister Martin Chamberlain, Q.C.

IL 2020-23 states that the 1976 Coal Policy "has been rescinded effective June 1, 2020" and that, with the rescission, "all restrictions on issuing coal leases within the former coal categories 2 and 3 have been removed." The IL does continue to restrict coal leasing, exploration and development within public lands formerly designated as coal category 1.

The "coal categories" referenced in IL 2020-23 were established in part 3.13 of the 1976 Coal Policy. That part classified Alberta lands with coal deposits into four categories and set varying restrictions on coal exploration and development in each of those categories. In Category 1 lands, the policy prohibited all coal "exploration or

[1] Online: https://open.alberta.ca/dataset/cc40f8f5-a3f7-42ce-ad53-7521ef360b99.

commercial development". For Category 2 lands, the policy allowed "limited exploration" under "strict controls," but stated that "commercial development by surface mining will not normally be considered at the present time." (By contrast, the policy permitted underground and in-situ coal operations "where the surface effects … are deemed to be environmentally acceptable.")

The South Saskatchewan Regional Plan (SSRP) and several sub-regional plans adopt those Coal Policy zoning categories by reference. In addition, the SSRP commits the government to review those categories through an *integrated* process that includes a review of sub-regional plans and that follows public consultation.

By contrast, the Coal Policy rescission was done on its own and without any public consultation.

If, due to the rescission, the Coal Policy's zoning categories are no longer in effect for purposes of the SSRP (and sub-regional plans), then the rescission is a violation of the SSRP's continuing reliance on the Coal Policy and the SSRP's commitment to an integrated review of that Policy.

However, we submit that the SSRP should be read as essentially keeping the Coal Policy's zoning categories in effect for purposes of the SSRP and sub-regional plans, even if the Coal Policy has been lawfully rescinded for general purposes. If this interpretation is correct, the Alberta Energy Regulator (AER) may be in non-compliance with the SSRP because the AER appears to be issuing permits for coal exploration on Category 2 lands within the South Saskatchewan region, without considering whether those permits meet the application restrictions in the Coal Policy.

Our conclusions are explained in more detail below.

The Coal Policy's link to the SSRP and Sub-regional Plans

Page 61 of the SSRP refers to several resource management tools, including sub-regional integrated resource plans (IRPs). The SSRP then states that these IRPs:

> will remain in effect until they have been reviewed for their relevance and incorporated as appropriate under the implementation strategies of this regional plan or future subregional or issue-specific plans within the region. This will include direction for key industrial sectors such as coal,

> oil and gas, industrial minerals and aggregates. As part of reviewing and incorporating the Integrated Resource Plans, the government will integrate a review of the coal categories, established by the 1976 A Coal Development Policy for Alberta to confirm whether these land classifications specific to coal exploration and development should remain in place or be adjusted. The review of the coal categories will only be for the South Saskatchewan planning region. The intent is for the SSRP and implementation strategies of the regional plan or future associated subregional or issue-specific plans within the region to supersede the coal categories for the purposes of land use decisions about where coal exploration and development can and cannot occur in the planning region.

The SSRP's reference to an "integrate[d …] review" of the Coal Policy's zoning categories with the sub-regional plans implies a process that includes full public consultation. This participation principle is reflected on page 62 of the SSRP, which states that an "integrated approach means there will be sharing of information and knowledge; coordination of assessments, analysis and planning approaches; coordination of engagement with other governments, industry, stakeholders and the public" (emphasis added).[2] This participation principle is also rooted in the government's 2008 Land-use Framework,[3] which provided key policy direction for the development of ALSA, and in section 5 of ALSA itself.

The 2018 Livingstone-Porcupine Hills Land Footprint Management Plan (LFMP) echoes the "integrated review" review process set out in the SSRP. Part 3.3 of the LFMP, titled "Detailed GoA Business Process and Implementation Mechanisms," includes a table listing several planning objectives, and strategies/actions, performance metrics, agency responsibilities, and timelines for each objective. One of these objectives is that

[2] See also *ibid.* (noting that the Alberta government "will provide leadership in the development of subregional and issue-specific planning. There will be coordinated involvement of other governments, aboriginal peoples, stakeholders, partners and the public.").

[3] See Land-use Framework, pp. 7 (noting that the Framework's implementation will "entail ongoing public discussion"), 15 (Vision statement noting that land management is a "shared responsibility that involves all Albertans"), 16 ("Guiding Principle" of "[c]ollaborati[on] and transparen[cy]"—that is, "Albertans, landowners, land users and governments will work together"), and 17 (noting that the Framework's adoption "does not mean that consultation and dialogue will end. Both will be necessary to implement new laws and policies").

"[r]elevant provisions in Sub-regional Integrated Resource Plans are effectively rescinded (see Appendix B)". One of the strategies or actions for achieving this objective states that, as part of "reviewing and incorporating the Integrated Resource Plans, the Government of Alberta will integrate a review of the coal categories for the South Saskatchewan Region (SSRP p. 61)." The plan adds that "[n]ew direction, consistent with footprint planning outcomes, will supersede the coal categories and may extend to all large-scale industrial surface disturbances, including coal." The plan stresses that this "new direction"

> should be consistent with an integrated approach. It will specify where surface exploration and development can and cannot occur based on the best and most recent biodiversity sensitivity data[.]

This sub-regional plan goes on to explain that the integrated review will be based on a "strategy," developed by the Alberta Energy Regulator and Alberta Environment and Parks, for "updating" the Coal Policy and IRPs, with respect to coal mining.[4]

Appendix B of the footprint management plan explains that the 1987 Livingstone-Porcupine Hills IPR "[c]urrently … sets the land use direction" for that sub-region, and that this IRP "will remain in effect" pending the integrated review.[5]

That IRP also references the Coal Policy. At page 26, the IRP states that "[a]ll proposals for coal exploration and development must be processed in accordance with A Coal Development Policy for Alberta, 1976." Similarly, the Ghost River IRP states (at p. 19) that "[a]ll proposals for coal exploration and development will be processed in accordance with" the 1976 Coal Policy."

In short, the above quotes from the SSRP and LFMP make it clear that the provincial government committed to review the Coal Policy's zoning categories through an "integrate[d]" process including review of the sub-regional and issue-specific plans within the South Saskatchewan region. Following that review, those SSRP-based plans will "supersede" the Coal Policy's zoning categories. The logical implication of this statement is that the SSRP intended the Coal Policy's zoning categories to remain in

[4] LFMP, p. 23.

[5] LFMP, p. 43.

effect, for the South Saskatchewan region, until that "integrated review" has been completed and the sub-regional and issue-specific plans have been amended.

The two IRPs provide express confirmation of this implied intent, by stating that coal mining proposals "must" or "will" be processed under the Coal Policy.

Page 61 of the SSRP is binding policy

Page 61 of the SSRP is part of that plan's Implementation Plan which is a statement of "policy". As such, it is "not intended to have binding legal effect."[6] As with any government policy, agencies have discretion to depart from the Implementation Plan's provisions, when considering whether to grant approvals for specific developments. This case-by-case discretion is consistent with the "fettering discretion" doctrine in administrative law.[7]

By contrast, *generic* changes to the Implementation Plan, like the Energy ADM's rescission, should be viewed as *amendments* to the SSRP. Under sections 4, 5 and 13 of the *Alberta Land Stewardship Act* (ALSA), only the provincial cabinet can amend a regional plan and, before cabinet does so, the Stewardship Minister must: provide "appropriate consultation" on the proposed amendment; present a post-consultation report to the Executive Council; and, lay the proposed amendment before the Legislature. To our knowledge, none of these three events has occurred.

Non-compliance with the SSRP

If the Coal Policy is no longer in effect in the South Saskatchewan region, the rescission of that policy was not in compliance with the SSRP (and its sub-regional plans) because the rescission essentially nullified

[6] SSRP, pp. 8 and 42.

[7] See, e.g. *Delta Air Lines Inc. v. Lukacs*, 2018 SCC 2, ¶ 18.

- Those plans' continuing reliance on the Coal Policy's zoning categories, and
- The SSRP's commitment to an *integrated* review of those zoning categories and sub-regional and issue-specific plans.[8]

While raising this non-compliance, we disagree with the underlying premise that the Coal Policy is no longer in effect. As explained above, the SSRP and accompanying sub-regional plans, collectively, essentially adopt the Coal Policy's zoning categories by reference. The Energy ADM has no authority to amend the SSRP, so the ADM cannot modify those Coal Policy references in the SSRP (and sub-regional plans).

The effect of the SSRP's reference to the Coal Policy is analogous to a permit that includes a condition requiring the permittee to comply with a specific version of an industry-established code of practice. The industry association likely has general authority to change or rescind its practice code, but any such change or rescission has no effect on the permit. The permittee remains obligated to comply with the practice code unless and until the permit itself is amended or cancelled.

If the Coal Policy zoning categories are still in effect in the South Saskatchewan region, permitting agencies are obliged to continue to apply those zoning categories (subject to the fettering discretion doctrine noted above).[9] However, it appears that the Alberta Energy Regulator (AER) is not following this approach. The AER's August 2020 Coal Development Manual 020 refers to Alberta Energy's rescission of the Coal Policy, without suggesting that the Policy's zoning categories are still in effect for the South Saskatchewan Region.[10] Recent AER decisions allowing coal exploration in that region also make no reference to the Coal Policy's zoning categories.[11]

---

[8] Viewed in another sense, this nullification is essentially a de facto *amendment* of the SSRP, and sub-regional plan provisions quoted above. This amendment is a violation of sections 4, 5 and 13 of the *Alberta Land Stewardship Act* (ALSA).

[9] See ALSA s. 15(1) and (2) and SSRP, pp. 5 and 8.

[10] AER, *Manual 020 – Coal Development*, p. 12, online: https://static.aer.ca/prd/documents/manuals/Manual020.pdf.

[11] See AER Notices of Decision for: *Cabin Ridge Project Ltd.*, CEP 200001 (Sept. 25, 2020), and *Elan Coal Ltd.*, CEP 200002 (Sept. 10, 2020).

Requested outcomes

For the reasons given above, Alberta BHA requests that the Land-use Secretariat declare that, under the SSRP, the Coal Policy's zoning categories remain in effect in the South Saskatchewan region.

If the Secretariat agrees with that request, Alberta BHA requests that the Secretariat investigate whether the AER is in non-compliance with the SSRP, by issuing coal exploration permits on Category 2 lands without considering the applicable restrictions in the Coal Policy—namely, that exploration should be allowed only on a "limited basis" and under "strict controls," and exploration should be disallowed in "local areas of high environmental sensitivity."

Alberta BHA requests an alternative outcome if the Secretariat concludes that, due to the Coal Policy rescission, the Coal Policy's zoning categories are no longer in effect in the South Saskatchewan region. In this circumstance, Alberta BHA requests that the Secretariat declare that the rescission itself is in non-compliance with the SSRP, because the rescission nullifies the SSRP's cross-reference to the Coal Policy (and to the IRPs which in turn reference the Coal Policy), including the SSRP's commitment to review the Coal Policy through an *integrated* process that includes public consultation.

Blades v. Alberta (QB)

Under section 62(2)(b) of ALSA, the secretariat may investigate a complaint if the stewardship commissioner is satisfied that the subject of the complaint "is not the subject or part of the subject of an application, process, decision or appeal governed by an enactment or regulatory instrument, or that there is not an adequate remedy under the law or existing administrative practices…."

For purposes of this ALSA section, we advise that the Coal Policy rescission is the subject of a judicial review application filed recently in the Alberta Court of Queen's Bench.[12] We are currently not a party to this proceeding, but we are planning to seek leave to intervene.

[12] *E. Macleay Blades, Rocking P Ranch Ltd., John Smith, and Plateau Cattle Co. Ltd. v. Her Majesty the Queen in Right of Alberta and the Minister of Energy for the Province of Alberta*, Civil. No. 2001-08938 (Q.B.).

In our view, this judicial proceeding does not preclude an investigation under ALSA, for two reasons.

First, the central issues raised by the judicial review application overlap with, but are not the same as, those raised in this complaint. The judicial review application claims that the Coal Policy rescission effectively amended the SSRP and thereby violated the amendment requirements in ALSA. The application also raises a common law procedural fairness claim. By contrast, the focus of this complaint is on a violation of the SSRP.

Second, the judicial review application is not "governed by an enactment or regulatory instrument," for purposes of ALSA s. 62(2)(b). That provision appears to refer to other legislated appeal-type proceedings, rather than to the courts' general jurisdiction to review government decisions.

INFORMATION LETTER 2020-23

Subject: Rescission of *A Coal Development Policy for Alberta* and new leasing rules for Crown coal leases

A Coal Development Policy for Alberta, more commonly known as the 1976 Coal Policy (Coal Policy), has been rescinded effective June 1, 2020.

The only mechanism left in effect from the Coal Policy before rescission was the land use classification system comprising four coal categories. Other mechanisms, such as provisions pertaining to royalties, labor requirements, environmental protection, and Crown equity participation, were superseded or not enforced.

The coal categories are no longer required for Alberta to effectively manage Crown coal leases, or the location of exploration and development activities, because of decades of improved policy, planning, and regulatory processes.

Those interested in acquiring Crown coal leases and pursuing exploration and development opportunities will now face the same restrictions as other industrial users. These restrictions include but are not limited to: the South Saskatchewan Regional Plan, including the subregional Livingstone-Porcupine Hills Land Footprint Management Plan; the Integrated Resource Plan zoning that remains in effect throughout much of Alberta's Eastern Slopes; and regulatory instruments (e.g., reservations and notations) applied under the *Public Lands Act*. Regulatory approval requirements to conduct coal exploration and development activities remain in effect.

Coal leases

With the rescission of the Coal Policy, all restrictions on issuing coal leases within the former coal categories 2 and 3 have been removed. Alberta will continue to restrict coal leasing, exploration and development within public lands formerly designated as coal category 1. This prohibition on coal activities is being continued to maintain watershed, biodiversity, recreation and tourism values along the Eastern Slopes of Alberta's Rocky Mountains.

Alberta Energy will be offering the right of first refusal to the holders of active coal lease applications. While Alberta Energy works through the coal lease applications, no new coal lease applications will be accepted for a 120-day period beginning May 15, 2020. Coal Information Bulletin 2020-02 provides details on this process.

BACKCOUNTRY HUNTERS & ANGLERS ALBERTA

BY EMAIL November 12, 2020

Laurie Pushor, Chief Executive Officer
Boal Talabi, Vice President, Regulatory Applications
Alberta Energy Regulator
Admin. Assistants' email: Sue.Donnelly@aer.ca; Amanda.Doherty@aer.ca

Dear Messrs. Pushor and Talabi:

Re: Request for clarification of continuing "restriction" in Information Letter 2020-23

This is a request for clarification of a statement, made in the Alberta Energy Information Letter 2020-23, which rescinded Alberta Energy's *Coal Development Policy for Alberta* (1976).

Information Letter 2020-23 was authorized by an Assistant Deputy Minister for Alberta Energy. However, because the Alberta Energy Regulator (AER) is responsible for issuing various types of authorizations for coal mining, your interpretation of this Information Letter is important.

The relevant statement in the Information Letter is that "Alberta will continue to restrict coal leasing, exploration and development within public lands formerly designated as coal category 1."

Our understanding of the word "restrict" in this statement is that it was intended to mean "prohibit," for purposes of coal leasing, exploration, and development, on former Category 1 lands.

This understanding is supported by the Information Letter's next sentence, which states that "[t]his *prohibition* on coal activities is being continued to maintain watershed, biodiversity, recreation and tourism values along the Eastern Slopes of Alberta's Rocky Mountains." (Emphasis added.)

Information Letter 2020-43 confirms our understanding, with respect to coal *leasing*, by stating that "[c]oal rights in areas formerly classified as coal category one will remain

unavailable for lease." We presume this refers to leasing of Crown coal rights under Part 2 of the *Mines and Minerals Act*.

However, we request confirmation that AER views Information Letter 2020-23 as also intending to *prohibit* the issuance of the following types of authorizations for coal mining activities on former Category 1 lands:

- Permits, under section 10 of the *Coal Conservation Act*, for coal exploration and development
- Licences, under section 11 of the CCA, for coal mining operations
- Approvals, licences and permits for coal exploration activities, under Part 8 of the MMA
- Dispositions for coal mining exploration and development under the *Public Lands Act*
- Approvals for coal mining exploration under the *Environmental Protection and Enhancement Act*
- Approvals and licences for coal mining activities under the *Water Act*

Alberta Energy's September 14, 2020 Information Bulletin 2020-03 states that a "protective notation" has been applied to all former Category 1 lands. If possible, please provide a copy of that protective notation.

If you have questions regarding this letter, please contact Michael Wenig, who is our legal counsel on this matter. Mr. Wenig's contact info is: 403-879-1006; mike@bigsprucelaw.ca

Thank you for your assistance.

By email only.

Dear Mr. Keown,

Thank you for your letter on behalf of the Alberta Chapter, Backcountry Hunters and Anglers.

Coal leasing is within the Government of Alberta's jurisdiction through Alberta Energy. As indicated in your letter, *Information Letter 2020-23* was issued through Alberta Energy. Therefore, we recommend you seek clarification from Alberta Energy regarding your concerns.

The Alberta Energy Regulator's (AER) process as it relates to coal exploration, development, abandonment, and reclamation has not changed as a result of the Government of Alberta's rescission of the *Coal Policy*. All applications for coal development projects continue to be considered through our existing process under applicable provincial legislation. This legislation includes the *Public Lands Act*, *Environmental Protection and Enhancement Act*, *Water Act*, *Coal Conservation Act and Regulation*, part 8 of the *Mines and Minerals Act,* and the *Responsible Energy Development Act.*

Applicants are required to obtain a coal lease, which ensures they hold the rights to the resource and that the proposed activity is safe, environmentally responsible, and meets all requirements. This review process is based on each project's merits, including its economic, social, and environmental impacts.

To encourage public participation in the application process, the AER posts public notices of applications on aer.ca. Anyone who believes they may be directly and adversely affected by an application can file a statement of concern (SOC). We review and consider all SOCs when making decisions on applications.

GHOST RIVER

SUB-REGIONAL

INTEGRATED RESOURCE PLAN

Approved by the Economic Planning
Committee of Cabinet on June 7, 1988

1988
Edmonton

PREFACE

This planning document was prepared by government agencies and public consultants in recognition of the need for improved management of Alberta's lands and resources. It applies only to public lands within the Ghost River Planning Area, not to private or federal lands.

The plan presents the Government of Alberta's resource management policy for public lands and resources within the area. It is intended to be a guide for resource managers, industry and the public with responsibility or interests in the area, rather than a regulatory mechanism. Resource potentials and opportunities for development are identified with a view to assisting in the economic progress of Alberta. The plan is sufficiently flexible so that all future proposals for land use and development may be considered. No legitimate proposals will be categorically rejected. Energy resource decisions are subject to the application of legal and approved regulatory processes under the jurisdiction of the Minister of Energy. This plan may influence regulatory decisions, but will not result in the categorical approval or rejection of energy proposals. The provincial government is committed to serving Albertans; should a proposal not be in keeping with the provisions of the plan, staff will work with the proponent to explore alternative means for accommodating the proposal in a more appropriate location, either in this planning area or on other public lands. The rejection of any proposal will be done only in writing by the minister or his designate.

A detailed outline for implementation will be provided for this sub-regional plan in order to identify the necessary implementation actions and roles. This implementation outline will also provide for the continuing review of the plan so that it may accommodate changing needs and situations. Wherever possible, the private sector will be provided the opportunity to be actively involved in the operational delivery of the plan.

Implementation is subject to the normal budgetary approval process. In establishing overall priorities, opportunities in other planning areas and areas currently outside the planning process will be considered.

While the plan identifies resource potentials and opportunities, the realization of these may require the dedication of major amounts of public funds. The plan will be used on the understanding that any actions required for implementation will only be undertaken as budgetary approvals are given in the normal way. The private sector will be given the first opportunity to provide any development required.

This plan has no legal status and is subject to revisions or review at the discretion of the Minister of Forestry, Lands and Wildlife.

TABLE OF CONTENTS

ILLUSTRATIONS

Figures

Tables

1. INTRODUCTION

1.1 The Planning Area

The Ghost River Planning Area (Figure 1) is located 50 km northwest of Calgary. The area encompasses approximately 2900 km^2 (1120 sq. mi.) and includes most of the Ghost River drainage basin and Burnt Timber and Fallentimber creeks, which are part of the Red Deer River drainage basin.

The boundaries of the planning area are as follows:

NORTH - northern divide of the Burnt Timber/Fallentimber Watershed Basin, and the boundary between Townships 30 and 31, Range 5 (W5M).

SOUTH - Bow Corridor and the northern boundary of the Forest Reserve south of the Stoney Indian Reserve.

EAST - boundary between Ranges 4 and 5, W5M, north of the Stoney Indian Reserve and the I.D. 8 boundary south of the Stoney Indian Reserve.

WEST - Banff National Park.

The planning area contains the settlements of Benchlands, Big Prairie, Waiparous Creek and Water Valley.

The eastern and southeastern portions of the area are used mainly for ranching. Grazing and timber production occur on much of the public land. The entire planning area is also used extensively for a variety of outdoor recreation activities, mainly by people from Cochrane and Calgary. Stoney Indian Reserves 142, 143 and 144 are located along the southern boundary of the Ghost River Planning Area and reserve 142 B is located entirely within the southeastern portion of the area.

Access to the planning area is provided by Highway 1, Highway 1A, Secondary Road 940 (Forestry Trunk Road) and other secondary roads.

1.2 Policy and Planning Context

A Policy for Resource Management of the Eastern Slopes Revised 1984 (Alberta 1984) states that integrated resource planning, conducted under a comprehensive interagency approach, is the key to effective management of Alberta's resources in the Eastern Slopes. The policy also explains that integrated resource plans implement its regional land use zoning priorities and guidelines. The Eastern Slopes Policy articulates further that integrated resource plans will allocate land uses for specific portions of a planning area, and identifies the need for possible changes in policy zone boundaries.

Integrated resource plans have been completed or are under preparation for selected areas of the Eastern Slopes Policy region. In March 1978, the Alberta Energy and Natural Resources/Recreation and Parks Interdepartmental Assistant Deputy Ministers Committee identified the Ghost River area (Figure 1) as a priority for the development of an integrated resource plan. The Ghost River Sub-Regional Integrated Resource Plan will serve to effectively mitigate conflicts between resource use objectives by determining resource priorities and allocating land uses for specific portions of the Ghost River Planning Area.

The Ghost River planning team consists of representatives from the Alberta Forest Service, Public Lands and Fish and Wildlife divisions of the Department of Forestry, Lands and Wildlife, and the Mineral Resources Division of the Department of Energy.

Consultative team members were identified and given the opportunity to present agency concerns and opinions at key stages of the planning process. They include agencies within the Alberta government, federal government and local authorities:

- Alberta government: Alberta Environment, Alberta Recreation and Parks, Alberta Transportation and Utilities, Alberta Culture and Multiculturalism, Alberta Tourism and Alberta Agriculture;

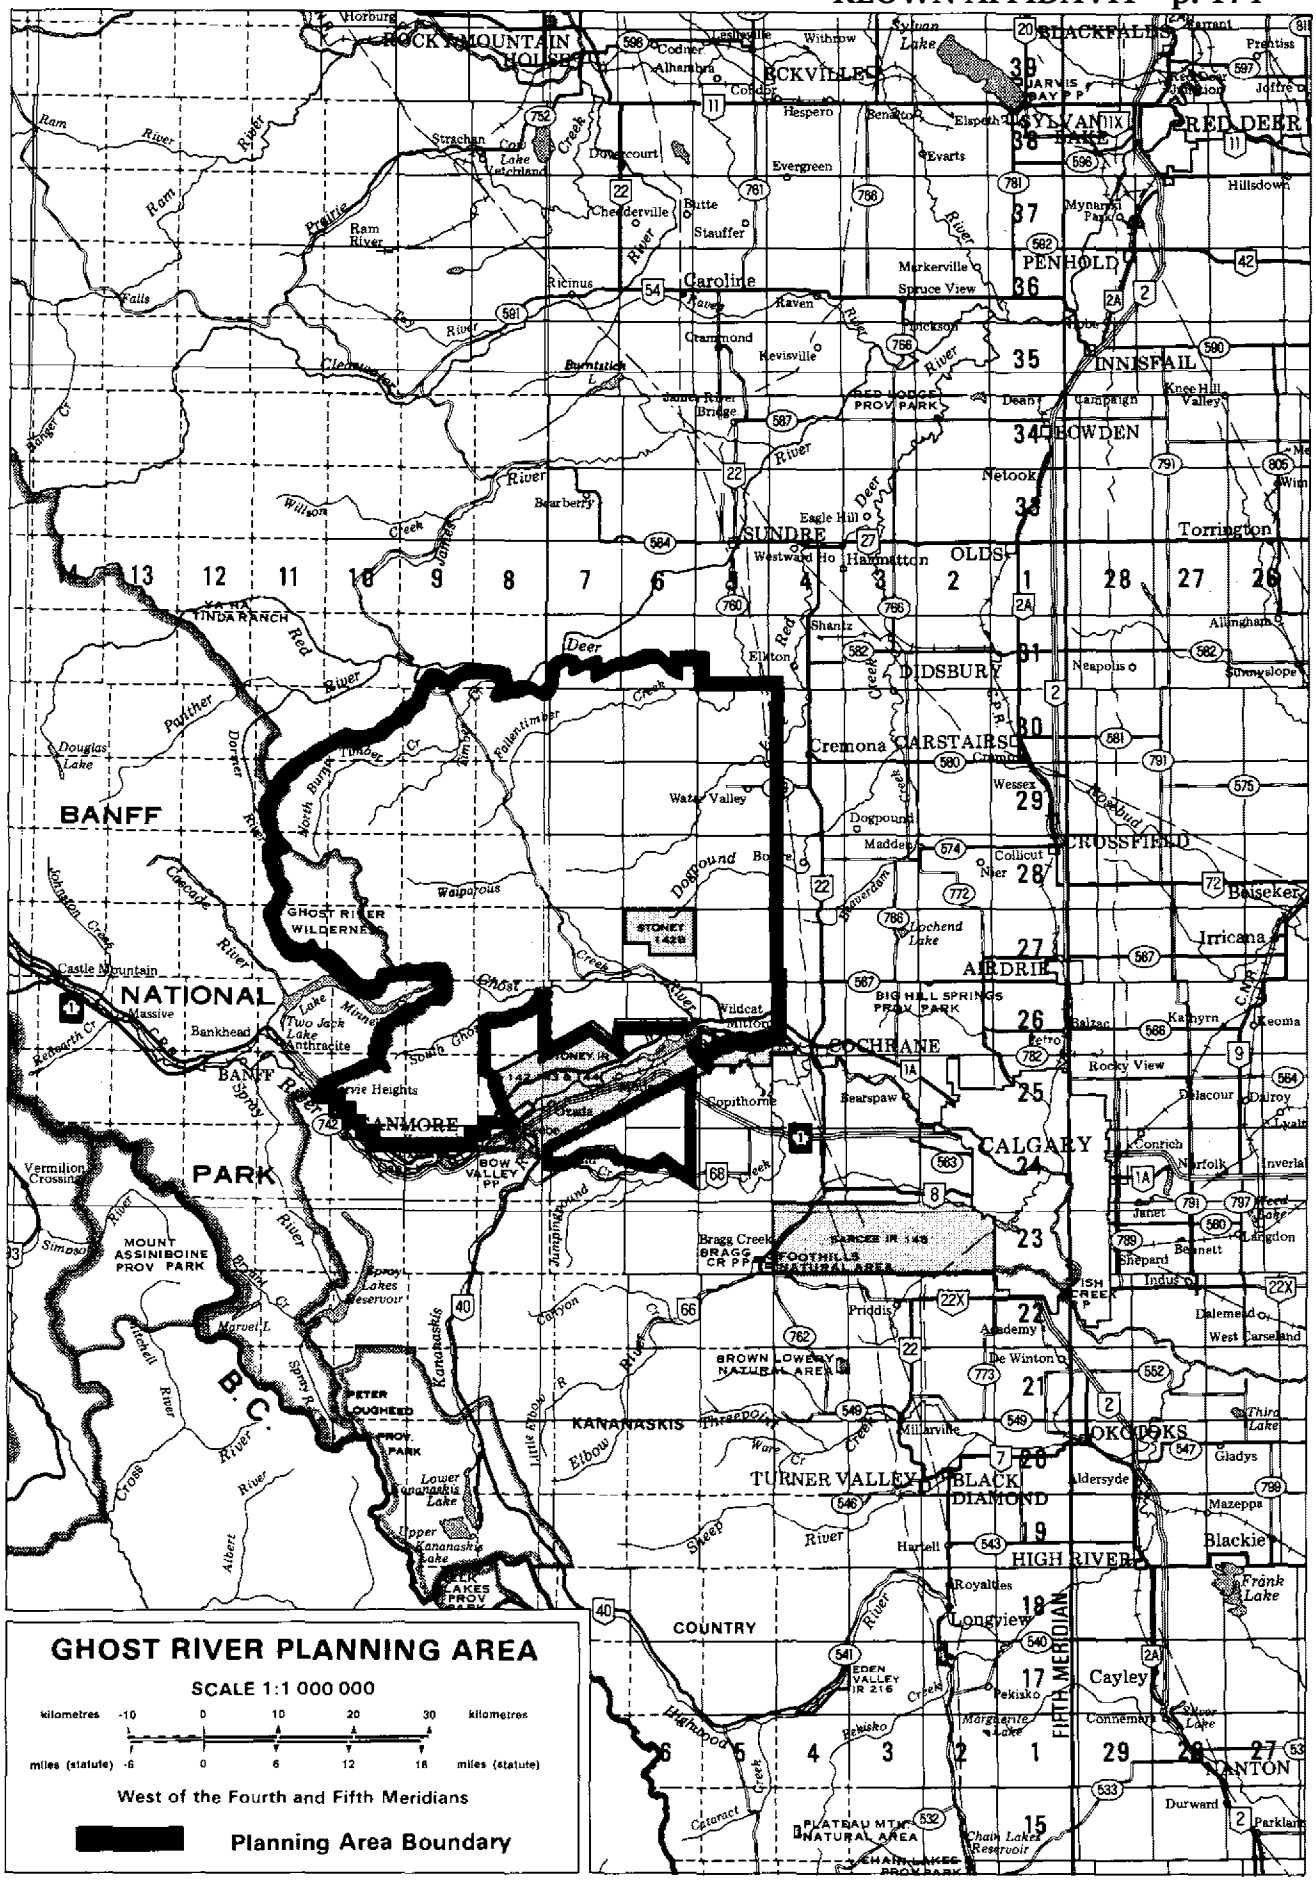

Fig. 1 **REGIONAL LOCATION**

- federal government: Canadian Parks Service; and

- local authorities and MLAs: MLA Banff/Cochrane, MLA Olds/Didsbury, M.D. 8, I.D. 8, M.D. 44, County 17, Red Deer Regional Planning Commission and Calgary Regional Planning Commission.

Throughout development of the plan, public interest groups and associations, industries and individuals have been invited to participate in the planning process. Participation involved submitting letters, briefs and information, reviewing plan documents and attending public meetings.

The final plan will apply only to land and resources vested in the Crown, in both the Green and White Areas. Patent land and private development on public land within the boundaries of the Calgary and Red Deer Regional Planning Commissions remain under the planning control of local municipalities and the planning commissions. In connection with these lands, the integrated resource plan reflects the philosophies of land management of the local authorities. The Alberta government will continue to make every effort to strengthen the existing co-ordination and co-operation with local planning authorities.

A Policy for Resource Management of the Eastern Slopes Revised 1984 (Alberta 1984) provides guidelines and objectives for integrated resource management and planning for the entire Eastern Slopes region including the Ghost River Planning Area. The Eastern Slopes Policy relies on regional land use zoning to designate large areas of land for varying degrees of protection, resource management and development. Table 1 lists the general intent for each of the following eight land use zones:

1) Prime Protection;

2) Critical Wildlife;

3) Special Use;

4) General Recreation;

5) Multiple Use;

6) Agriculture;

7) Industrial; and

8) Facility.

The overriding principle for all the zones is to protect the valuable water resources of the Eastern Slopes and to provide for public land and resource utilization in a manner consistent with principles of conservation and environmental protection. The zoning does not apply to privately owned lands in the planning area. Table 2 defines a range of compatible activities to enact the intent of the eight land use zones. The compatible activities table and regional zoning provide interim direction until sub-regional integrated resource plans are completed.

The Ghost River Sub-Regional Integrated Resource Plan supersedes the zoning configuration in the Eastern Slopes Policy. As a result, the zones have been refined and the regional zoning found in the Eastern Slopes Policy no longer applies in the planning area. Figure 2 shows the revised zoning. It also shows Resource Management Areas (RMAs) which are geographic units that have common resource management intents.

For a discussion of legislation and other associated direction directly related to this plan, refer to APPENDIX A (p. 70).

Table 1

INTENTS OF THE EASTERN SLOPES POLICY ZONES

#	ZONE	INTENT OF THE ZONE
1	Prime Protection	To preserve environmentally sensitive terrain and valuable ecological and aesthetic resources.
2	Critical Wildlife	To protect ranges or terrestrial and aquatic habitat that are crucial to the maintenance of specific fish and wildlife populations.
3	Special Use	To recognize historical resources, lands set aside for scientific research and any lands which are required to meet unique management requirements or legislative status, which can not be accommodated within any of the other zones.
4	General Recreation	To retain a variety of natural environments within which a wide range of outdoor recreational opportunities may be provided.
5	Multiple Use	To provide for the management and development of the full range of available resources, while meeting the objectives for watershed management and environmental protection in the long term.
6*	Agriculture	To recognize those lands within the Eastern Slopes which are presently utilized or are considered suitable for cultivation and/or improved grazing.
7	Industrial	To recognize existing or approved industrial operations such as coal mines, gas processing plants, cement plants and large forest product mills.
8*	Facility	To recognize existing or potential settlement and commercial development areas.

* Not applied in the Ghost River Sub-Regional Integrated Resource Plan.

TABLE 2. COMPATIBLE ACTIVITIES BY LAND USE ZONE

ZONE / ACTIVITY	1 PRIME PROTECTION	2 CRITICAL WILDLIFE	3 SPECIAL USE	4 GENERAL RECREATION	5 MULTIPLE USE	6 AGRICULTURE	7 INDUSTRIAL	8 FACILITY
Non-motorized recreation								
Fishing								
Hunting								
Scientific study								
Trapping								
Trails, non-motorized

Intensive recreation								
Off-highway vehicle activity								
Logging								
Domestic grazing								
Petroleum and natural gas exploration & development								
Coal exploration								
Coal development								
Mineral exploration & development								
Serviced camping								
Commercial development								
Industrial development								
Residential subdivisions								
Cultivation								

Compatible Use — Uses that are considered to be compatible with the intent of a land use zone under normal guidelines and land use regulations.

Permitted Use — Uses that may be compatible with the intent of a land use zone under certain circumstances and under special conditions and controls where necessary.

Not Permitted Use — Uses that are not compatible with the intent or capabilities of a land use zone.

These activities are only representative of the range of activities that occur in the Eastern Slopes. For these and any other activities, the possibility of whether they should or should not take place in a particular area must always be measured against the fundamental management intentions for that zone. Since economic opportunities are not all known in advance, site-specific developments may be considered in any zone.

2. BROAD RESOURCE MANAGEMENT OBJECTIVES AND GUIDELINES

This chapter consists of a statement of intent for resource management within the planning area plus a set of broad resource objectives and guidelines that apply to the entire planning area. A resource summary is also provided for each sector.

The primary intent for resource management within the Ghost River Planning Area is as follows:

> To allow for the development and use of the full range of available resources while minimizing adverse environmental impacts on watershed and renewable resources.

The Ghost River plan was developed within the scope of the broad resource objectives identified at the plan policy stage of the planning process by participating agencies. These broad objectives provide future standards which participating agencies will strive to attain. They reflect government priorities for the Ghost River sub-region within the context of the Eastern Slopes region, and are expressed as they relate to a particular resource. Following the broad objectives for each resource are the common resource management guidelines.

2.1 Watershed

The Ghost River Planning Area includes a portion of the headwaters of the Bow and Red Deer rivers that eventually flow into the South Saskatchewan River. The water supplied by the Bow and Red Deer rivers is used downstream for irrigation, hydro-electric generation, and industrial and municipal purposes in south and south-central Alberta. The major drainages in the planning area include Fallentimber and Burnt Timber creeks and the Little Red Deer River of the Red Deer River drainage basin, and Waiparous Creek and the Ghost and Bow rivers of the Bow River drainage basin. These drainages are locally important for their fisheries, wildlife and recreation values.

The lower elevations (900 to 1200 m or 3000 to 3900 ft. asl) of the eastern portion of the planning area are mainly composed of Aspen Parkland with mixed lodgepole/aspen forests in northern areas. Intermediate elevations are dominated by the Montane Ecoregion to the south and the Subalpine Ecoregion through the remainder of the area. Lodgepole pine, Douglas fir and grasslands dominate the Montane Ecoregion. Engelmann spruce occurs at the higher elevations of the mountains in the western portion of the planning area dominated by Subalpine forests, and the Alpine Ecoregion occurs above tree line (approximately 2100 m or 7000 ft. asl). The Alpine Ecoregion is mainly composed of rock, alpine meadows, sedges, shrubs and herbs.

The topography of the planning area is mountainous to the west, giving way to foothills east of the McConnell Thrust Fault and changing to gently rolling topography in the eastern portions. The majority of the surficial deposits in the planning area consist of glacial deposits with areas in the northwest unglaciated. Terrain sensitivity varies throughout the planning area. Stream channels are well armoured with rock material in the western portions of the planning area. Also in these portions, soils are less developed and slopes are steeper with the result that disturbances become more difficult to reclaim. Although soils are more developed in the east, disturbance can cause erosion on some slopes. Precipitation throughout the planning area is high, generally increasing in the west at higher elevations. Fifty to 60 per cent of the annual precipitation occurs as snow. In addition, streamflow peaks in spring as the result of snowmelt.

Current uses of public land in the planning area do not seriously affect water quality or quantity in the Bow or Red Deer drainage systems. However, local impacts (e.g., industrial, agricultural and recreational) have influenced and continue to influence stream conditions in the planning area.

Objectives

1. To maintain an optimum water yield of streams in the planning area to satisfy both increasing downstream and on-site demands.

2. To prevent vegetation changes that could cause extreme fluctuations in streamflow,

resulting in erosion of channel materials, high sediment loads, property damage or water supply problems.

3. To maintain, and where possible improve, the water quality of streams and lakes.

4. To prevent or minimize soil erosion associated with land use activities.

5. To proceed with proposed reclamation projects on vacant public land where unacceptable environmental conditions exist.

6. To ensure that reclamation guidelines and standards are adhered to on surface and subsurface dispositions and on land disturbances from natural and man-made causes.

Guidelines

1. Alberta Environment and the Alberta Forest Service will monitor water yield and quality in the planning area to ensure the maintenance of a high-quality water resource.

2. The Ghost River Planning Area will be included in a watershed management plan prepared for the Bow/Crow Forest by the Alberta Forest Service.

3. Land or resource uses that may alter water quality, quantity and flow regime of surface water and groundwater should be brought to the attention of Alberta Forestry, Lands and Wildlife, and Alberta Environment so that adverse impacts on the water resource can be assessed and co-operatively minimized as required.

4. Fluctuations in water yield and streamflow will be minimized by adhering to operating ground rules for timber harvesting and existing forest protection policies.

5. The frequency of stream crossings will be minimized to lessen point sources of sedimentation.

6. Soil erosion associated with land use activities will be addressed through ground rules established for individual developments and the internal referral systems of the provincial government.

7. Reclamation projects will be initiated and completed based on provincial reclamation policies, approval of an access management plan and availability of funds where the responsibility rests with the provincial government.

8. Reclamation of land use disturbances will proceed progressively to reduce erosion and sedimentation. Reclamation will be included as a condition of surface disposition approvals and completed according to provincial standards.

2.2 Wildlife

The planning area has the capability to support a wide variety of wildlife species including a number of big game species, upland game bird species and furbearers generally sought for consumptive use. The capability of the area to support big game species depends greatly on the availability of certain factors, such as protective cover near available food sources. Mule deer are currently the most extensively distributed big game species in the area. Significant numbers of moose, bighorn sheep and grizzly bear also inhabit the area. Moose use shrublands located on the floodplains of major creeks and bighorn sheep populations are present in the mountainous areas. The capability of the area to support grizzly bear populations depends on the availability of undisturbed feeding areas and territories. Other big game species present include elk, white-tailed deer, black bear, cougar, wolf and mountain goat.

The area has the capability to support productive populations of furbearing animals such as red squirrel, marten, lynx, coyote and beaver. The areas which have the best capabilities for many of these species change with forest succession and the availability of prey and riparian habitat.

The area also has the capability to support upland bird species such as ruffed grouse and spruce grouse. The areas which have the best capabilities for supporting these species change with forest succession and are largely dependent on forest management.

Present use of these wildlife species is both non-consumptive (e.g., viewing) and consumptive

the range resources. Range management plans are subject to watershed and wildlife assessments.

3. Range improvement programs will be considered to maintain long-term forage productivity. All improvements will preserve the intent of the zone in which they are conducted.

4. A detailed assessment of range improvement requirements will be undertaken to determine the degree of range improvement on allotments, permits and leases required to achieve range management objectives. Range improvements will be accomplished considering wildlife habitat enhancement as a complementary benefit.

5. Range improvements will generally be conducted on suitable areas of brush or aspen vegetation with minimal disturbance to coniferous growing stock. Improvement efforts will be concentrated on areas where vegetation succession has reduced grazing capacities. Treatments may include mechanical removal of vegetation species and the use of prescribed burns for range management purposes.

6. Opportunities for stocking increases based on sound range management practices will be considered on an operational basis during the development of range management plans.

2.9 Minerals

The most important mineral resource of the planning area is natural gas found in 11 gas fields located along the foothills and Front Ranges of the Rocky Mountains. The 1985 total production of natural gas was 1.25 billion m^3, while gas reserves were about 29 billion m^3. This is just over one-and-one half per cent of Alberta's production and reserves of natural gas. There is no production of petroleum here although the Lochend oil field now extends into the area and has potential for discovery of oil.

Coal-bearing strata of the Upper Cretaceous Edmonton Formation occur in the planning area and there is potential for coal resource development. Limited coal exploration has resulted in the identification of two small deposits at Silver Creek and Grand Valley. Several very small mines operated in the first part of this century at these two locations. There is coal potential in a large part of the area.

The area has substantial volumes of limestone and sandstone. At present there is one quarry mining Rundle stone in the Harvie Heights area and one quarry mining sandstone in the Yamnuska area. There are several limestone quarries on the periphery of the planning area, in the Bow Corridor.

Objectives

1. To encourage industry to define the extent of, develop or produce minerals where reserves have been proven or where productive formations exist.

2. To encourage the exploration for mineral resources in previously unexplored areas and formations.

Guidelines

1. All proposals for coal exploration and development will be processed in accordance with A Coal Development Policy for Alberta (1976). Mining and siting of processing facilities will be considered on a site-specific basis in response to Preliminary Disclosures.

2. Renewable resource values are high in Critical Wildlife and General Recreation Zones, and any mineral exploration or development must mitigate any potential resource conflicts.

3. Mineral activity will be governed by Eastern Slopes zoning through normal referral processes.

4. In most cases, mineral activity will be allowed in Zone 2 if the following criteria are met:

   - avoidance, if possible, of key habitat areas by the project;

- where avoidance is not possible, development should be designed to minimize disturbance of wildlife habitat and provide mitigative measures to maintain habitat capability throughout the project; and

- reclamation plans should have wildlife habitat as a high priority and retain the pre-disturbance wildlife capability of the project area whenever possible.

2.10 Historical Resources

The Ghost River area has not been subjected to intensive investigation of its prehistoric past, but over 100 archaeological sites have been identified. It is likely that the area was used for at least the last 12 000 years, but its use was likely less intensive than in surrounding areas associated with major watercourses. The most intensive use would have been along the Ghost, Dogpound, Waiparous and Fallentimber drainage systems.

Sites representing the material remains of hunters who frequented the region in the past 12 000 years have been identified in, or adjacent to, the planning area. The area is considered to have a high potential for the discovery of additional sites particularly along terraces above streams and rivers, along lakeshores or the margins of wetlands, and in areas where bedrock or cobbles of material suitable for the manufacture of stone tools have been exposed.

The Ghost River area first became readily accessible in the 1880s with completion of the railway to Cochrane. This opened markets for ranchers who had moved into the area in the 1870s. Logging was one of the first commercial activities, occurring along the Burnt Timber, Fallentimber, Ghost and Waiparous basins. Access to the area was mainly by foot or horseback until 1953, when the Forestry Trunk Road was completed and oil and gas exploration intensified through the 1950s, 1960s and 1970s. The waters of the North Ghost River were diverted into Lake Minnewanka in 1942.

The area is within the disturbed belts comprising the Rocky Mountain Front Ranges. The foothills belt (Little Red Deer River and Water Valley RMAs) is underlain by Upper Cretaceous clastic units. Formations include the Blackstone, Cardium, and Wapiabi formations of the Alberta Group and Brazeau Formation. The fossils present in these units include such organisms as foraminifera, pelecypods, gastropods, cephalopods and rare fish bones. Dinosaur bones have been recovered from equivalent units in the Nordegg area of Alberta. At the present time most of this foothills region is covered by thick conifer forests. The outcrops of bedrock, usually occurring along streams, are areas of maximum impact. At times construction of roads in the area has exposed these units and they have provided some fossil material. In the subsurface there should be units of the Blairmore Group (Lower Cretaceous), Kootenay Formation (Upper Jurassic - Lower Cretaceous) and Fernie Formation (Jurassic). These units are exposed both north and south of the Ghost River area and may be close to the surface within the area. All three units are fossiliferous in other areas of the foothills belt, and the Kootenay has been extensively mined for fossils in the Bow River Valley.

Once within the Rocky Mountain Front Ranges (Ghost Wilderness, Upper Ghost, Fallentimber and Waiparous RMAs), the sequence of units changes drastically. The sequence is entirely Palaeozoic with units of Cambrian, Devonian and Carboniferous ages mapped in the area. Invertebrate fossils are common in a large number of the formations and there are probably a number of undescribed potential palaeontological sites in the region. The Cambrian units include the Eldon, Pika and Arctomys formations, and the Lynx Group. Trilobites and brachiopods have been recovered from these units in the vicinity.

The Devonian units include Yahatinda (oldest plants in western Canada and fish bones), Cairn, Southesk, Alexo and Palliser formations.

These contain corals, stromatoporids, brachiopods, crinoids, bryozoa, etc. The Carboniferous units encountered include the Exshaw and Banff formations and Rundle Group which have cephalopods, brachiopods, corals, crinoids, bryozoa, pelecypods and gastropods. Thus, all these units are to some extent fossiliferous. The Front Ranges have excellent exposures not only along streams but

also along the exposed eastern faces of the mountains.

Objective

1. To protect historical resources (historic, prehistoric and palaeontological) from potential or actual impact related to future resource development and to manage these resources for future generations.

Guidelines

1. Resource uses in the planning area involving land surface disturbance may require Historical Resources Impact Assessments before development, as outlined under Section 33(2) of the Historical Resources Act.

2. The Archaeological Survey of Alberta, Resource Management Section, will participate in the land use referral process to review proposed development projects within those areas considered to have high historical resource potential.

2.11 Ecological Resources

Ecological resources are unique or representative features or systems that have been identified in the planning area. One Wilderness Area, two Natural Areas and one significant ecological area are located in the planning area. The Ghost River Wilderness Area is located in the headwaters of the Ghost River. Ole Buck Mountain Natural Area (Section 5, pt. Section 7-25-6 W5) is located in the Westover Lake area south of Indian Reserves 142, 143 and 144, and Wildcat Island Natural Area (SW 15-26-3 W5, the island only) is located in the Bow River near Beaupre Creek. One ecologically significant area is located near Winchell Lake south of Water Valley (Winchell Creek, NW 2-29-5 W5).

Objectives

1. To preserve selected unique or representative ecosystems or features.

2. To provide for the recreational, scientific and educational uses of ecological resources.

Guidelines

1. Existing land use reservations will be maintained to protect ecologically significant areas until further protection, such as natural area or ecological reserve designations, is approved and established.

2. For any areas approved as Ecological Reserves or Natural Areas, a management plan will be prepared with interdepartmental and public participation. The plan will outline purpose, boundaries and permitted uses in keeping with guidelines in the Ghost River Sub-Regional Integrated Resource Plan.

APPENDIX A

LEGISLATION AND ASSOCIATED DIRECTION

Numerous government directives must be considered while developing an integrated resource plan. The most significant directions to the Ghost River plan are discussed below.

A.1 A Policy for Resource Management of the Eastern Slopes Revised 1984

A Policy for Resource Management of the Eastern Slopes Revised 1984 (often cited as The Eastern Slope Policy) provides guidelines and objectives for integrated resource management and planning for the entire Eastern Slopes region including the Ghost River Planning Area. The Eastern Slopes Policy relies on regional land use zoning to designate large areas of land for varying degrees of protection, resource management and development. Table 1 lists the general intent for each of the following eight land use zones: 1) Prime Protection; 2) Critical Wildlife; 3) Special Use; 4) General Recreation; 5) Multiple Use; 6) Agriculture; 7) Industrial; and 8) Facility. The overriding principle for all the zones under A Policy for Resource Management of the Eastern Slopes Revised 1984 is to protect the valuable water resources of the Eastern Slopes and provide for public land and resource use in a manner consistent with the principles of conservation and environmental protection. The zoning does not apply to privately owned lands in the planning area. Table 2 defines a range of compatible activities to enact the intent of the eight land use zones. The compatible activities matrix and regional zoning found in the Eastern Slopes Policy provide interim direction until sub-regional integrated resource plans are completed.

The Ghost River Sub-Regional Integrated Resource Plan supersedes the zoning configuration set down in the Eastern Slopes Policy. As a result, the zones have been refined and the regional zoning found in the Eastern Slopes Policy no longer apply in the planning area. Figure 2 shows the revised zoning.

A.2 A Coal Development Policy for Alberta

A Coal Development Policy for Alberta, released in 1976, guides the exploration and development of coal resources throughout the province. Under the Coal Policy, exploration and development of coal deposits are permitted only under strict control to ensure environmental protection and satisfactory reclamation of any disturbed land. It classifies the province into four categories of suitability for different levels of exploration and development. The western portion of the planning area is Category 1 where no exploration or development is permitted. The north-central area is Category 2, where "limited exploration is desirable and may be permitted under strict control". Commercial development by surface mining "will not normally be considered at the present time" because "the preferred land or resource use remains to be determined". The eastern portion of the planning area is mostly Category 4 where "exploration may be permitted under strict control" and where commercial development "may be considered subject to proper assurances respecting protection of the environment and reclamation of disturbed land".

A.3 Fish and Wildlife Policy for Alberta

The Fish and Wildlife Policy for Alberta was approved by Cabinet and released in October 1982. This policy provides general direction regarding outdoor recreation, wildlife resources, fisheries resources and regulatory aspects of fish and wildlife use. The Fish and Wildlife Policy calls for preparation of comprehensive 10-year fish and wildlife resource plans. Meeting the objectives stated in this plan will achieve a portion of the overall fish and wildlife projected demand targets identified in the Status of the Fish and Wildlife Resource in Alberta (1984).

APPENDIX B

GLOSSARY

Access Management Plan	A plan to manage recreational off-highway vehicle access in the entire planning area outside of the Ghost River Wilderness Area will be co-ordinated by the Bow Crow Forest, Alberta Forest Service, with participation from concerned government agencies, local authorities and the public. The plan will consist of a network of selected routes and trails suitable for recreational off-highway vehicle use. The access management plan will maintain a range of recreational OHV trails and address such items as types of vehicles, seasonal use of routes and trails, and limits to motorized recreational access in the area.
Animal Unit Month (AUM)	Measure of forage or feed required to maintain one (AUM) animal unit (a mature cow of 455 kg [1000 lbs]/ or equivalent) for 30 days (Resource Conservation Glossary, Soil Conservation Society of America, 1976).
Annual Allowable Cut (AAC)	Total volume of timber that may be harvested yearly under sustained yield management.
Auto Touring Route	Existing roads in the planning area which are either major travel corridors or travel through cultural or aesthetic features of sufficient significance to warrant greater visitor awareness, education and enjoyment. The development of suitable visitor information (e.g., interpretive brochures, road signage) and non-serviced road facilities such as pull-off areas and viewpoints are appropriate on these roadways.
Archaeological Resource	"...a work of man that (i) is primarily of value for its prehistoric, historic, cultural or scientific significance, and (ii) is or was buried or partially buried in land in Alberta or submerged beneath the surface of any watercourse or permanent body of water in Alberta". (Historic Resources Act, Revised Statute of Alberta [henceforth abbreviated RSA] 1978, H-8).
Commercial Development	All activities and infrastructure associated with the development of facilities for the use of the general public, including fixed-roof recreation accommodation, such as hunting, fishing, skiing and backcountry lodges; hotels, motels, apartments, townhouses and cottages; and commercial recreational activities involving facilities such as ski hills and golf courses, whether owned and/or operated by the private or public sector.
Commercial Timber Permit	Authorization for the permittee to harvest timber and which identifies lands on which timber may be harvested, the period of time within which the timber may be harvested, the actual timber to be harvested and the terms and conditions on which the permit is issued (Forest Act, RSA 1980, c. F-16).
Consumptive Use	Those uses of resources that reduce the supply such as hunting, logging and mining (Wildland Planning Glossary, USDA Forest Service).

	Conversely, non-consumptive use does not reduce the supply (e.g., wildlife viewing.)
Country Vacation Farm or Vacation Ranch	A working farm or ranch which provides overnight accommodation for a minimum of four guests and offers organized participation in, and/or observation of, actual farm/ranch activities as part of the vacation experience.
Crown Land	Land titled to her Majesty the Queen in the right of the Province of Alberta.
Domestic Grazing	All activities associated with the production and use of forage for domestic livestock.
Extirpated Species	Wildlife species no longer found in their historical ranges but are not extinct.
Eastern Slopes Zones	The Eastern Slopes Policy document, first issued in 1977, identified three policy areas and eight corresponding regional land use zones: **A. Protection** - 1) Prime Protection, 2) Critical Wildlife and 3) Special Use; **B. Resource Management** - 4) General Recreation, 5) Multiple Use and 6) Agriculture; **C. Development** - 7) Industrial and 8) Facility. The primary objectives of regional zoning are: a) to provide resource management intents for broad units of land; b) to recognize opportunities and allocate resources at a broader regional scale; c) to provide background and direction for more detailed integrated resource planning; and d) as a consequence of the latter, to resolve land use conflicts (A Policy for Resource Management of the Eastern Slopes Revised 1984, Alberta 1984).
Fixed Roof Accommodation	Permanent accommodation other than campgrounds (e.g., hotels, motels, backcountry lodges or rental cabins).
Flow Regime	Distribution of streamflow over time (usually one year).
Forest Land Base	Land considered to be capable of contributing to the social and economic welfare of the province if it is predominantly maintained under forest management. Includes provisions for production of wood and wood products on a sustained yield basis, wildlife, grazing, recreation, and protection and production of water supplies.
Forest Management Unit (FMU)	An area of forest land designated by the minister for the purposes of administration (Forest Act, RSA 1980, c. F-16). The annual allowable cut of timber is determined with respect to forest management unit boundaries.
Forest Reserve	Approximately two-thirds of the Ghost River Planning Area is within the Rocky Mountain Forest Reserve. It includes lands in the Province of Alberta set aside by the Forest Reserves Act (1964) primarily to maintain good watershed conditions and obtain high water yields. This is done through the management of vegetative cover as an insurance against soil erosion and to minimize the danger of flash floods. Other

benefits of the forest reserve are timber production, grazing, recreational use and use of fish and wildlife (Alberta's Forests, Alberta 1971).

Grazing Allotment

Synonymous with range allotment. A rangeland area based on natural or watershed boundaries designated for use by a prescribed number of cattle, managed by permittee(s) and directed by a range management plan prepared by the Alberta Forest Service (Range Management Section, Forest Land Use Branch).

Grazing Lease

Crown grazing-land disposition issued on an area of land which is suitable for supporting livestock. Leases are legislated under the Public Lands Act (RSA 1980, P-30) and are issued for public lands in the Green Area and White Area, outside the Rocky Mountain Forest Reserve, usually for a term of five or 10 years. The lease allows the lessee exclusive use of the land for grazing (Range Management Section, Forest Land Use Branch, Alberta Forest Service).

Grazing Permit

Official written permission to graze a specific number, kind and class of livestock for a specific period on a defined range allotment (Wildland Planning Glossary, USDA, Forest Service, 1976).

Green Area:
Permits are issued on an annual basis by the forest superintendent for the Green Area, pending the preference quota for each permittee and the available animal unit months (AUM) in each allotment. Grazing permits are legislated pursuant to the Forest Reserves Act (RSA 1980, F-15) (Range Management Section, Forest Land Use Branch, Alberta Forest Service).

White Area:
Grazing permits are issued on an annual basis, frequently on lands under reservation for another purpose or on lands for which it is not considered in the public interest to grant long-term dispositions. Grazing permits are legislated through Alberta Regulation 64/70 found under the Public Lands Act (RSA 1980, P-30).

Green Area

The Green Area, established in 1948 by Alberta Order-in-Council 213/48, consists of the non-settled forest lands and covers 53 per cent of the total area of the Province of Alberta. Public lands in the Green Area are managed primarily for forest production, watershed protection, fish and wildlife management, recreation and other multiple uses. Permanent settlement, except on legally subdivided lands, as well as agricultural uses other than grazing, have been excluded (Alberta Public Lands, Alberta, 1981a).

Historical Resource

Any work of nature or of man that is primarily of value for its palaeontological, archaeological, prehistoric, historic, cultural, natural, scientific or aesthetic interest (Historical Resource Act, RSA 1979, H-8).

Historical Resource Impact Assessment

Projects normally conducted when development programs are anticipated to cause ground surface disturbance within the Province of Alberta. The purposes of such projects are to locate all historical resource sites to be affected by the development, evaluate the worth

	of such sites relative to Alberta historical resources as a whole, determine the nature of the impact of the development on individual sites and propose conservation procedures for those sites to be affected by the development. (Archaeological Survey of Alberta).
Historic Site	"...any site which includes or is comprised of an historical resource of an immovable nature or which cannot be disassociated from its context without destroying some or all of its value as an historical resource and includes a prehistoric, historic or natural site or structure." (Historic Resources Act, RSA 1979, H-8).
Integrated Resource Management (IRM)	Co-ordinated, interagency approach to comprehensive planning and shared decision-making in the overall management of diverse natural resources and their use. A basic principle of IRM is consultation before action; concerned agencies consult and discuss implications of possible courses of action so mutually acceptable solutions can be determined. Integrated resource management is a comprehensive, co-ordinated approach to planning and administering Alberta's resources as efficiently as possible, with the goal of producing the greatest benefits for present and future Albertans (Resource Planning Branch; Alberta Forestry, Lands and Wildlife).
Miscellaneous Timber Unit Area	Land set aside within a forest management unit to provide timber for local use. The area represents a portion of the annual allowable cut for the total forest management unit. Timber is allocated for local use through Local Timber or Commercial Timber permits.
Multiple Use	The use of land for more than one purpose (e.g., watershed management, timber production, domestic livestock grazing, wildlife production and recreational and industrial uses). A combination of uses may not necessarily yield the highest economic return or the greatest unit output considering the optimal use of available resources (adapted from Resource Conservation Glossary, 3rd Edition. Soil Conservation Society of America, 1976).
Off-Highway Vehicle	Motorized vehicle used for cross-country travel on land, water or snow, including four-wheel-drive vehicles, motorcycles, track vehicles and snow vehicles, but not motorboats (Off-Highway Vehicle Act, RSA 1980, c. 0-4). In the context of this plan, off-highway vehicles do not include helicopters.
Operational Plans	Provincial government resource management agencies prepare long- and short-range plans for the management of resources under their jurisdiction. These specific resource management plans generally deal exclusively with the resource(s) for which a management responsibility has been delegated. Wildlife management plans, timber management plans, range management plans and recreational management plans are examples.
Palaeontological Resource	"...a work of nature consisting of or containing evidence of extinct multicellular beings and includes those works or classes of works of nature designated by the regulations as palaeontological resources." (Historic Resources Act, RSA 1979, H-8).

Point Source Of Sedimentation	Term used to denote where sedimentation occurs as a result of land use which is in direct contact with the stream (e.g., road crossings). Conversely, a non-point source of sedimentation is used to denote sedimentation arising from a land use within the watershed but not adjacent to the stream (e.g., timber harvest cutblocks may change the quantity and timing of run-off which may lead to higher flows and erosion of stream banks downstream).
Preliminary Disclosure	Means by which both the private and public sectors may make major development proposals, on a confidential basis, to government. Through preliminary review, the government may indicate whether it has objections "in principle" to a proposal's form, timing, location or any other essential feature. No objection in principle of a major development proposal (resulting from preliminary disclosure) constitutes approval for the filing of necessary applications and documents as required under controlling legislation (A Policy for Resource Management of the Eastern Slopes Revised 1984 [Alberta, 1984]).
Primary Range	An area which animals prefer to use and over which they will graze when management is limited (Wildland Planning Glossary, USDA, Forest Service). The primary range will be overused before the secondary range is used when animals are allowed to shift for themselves (A Glossary of Terms Used in Range Management, Society for Range Management, 1974).
Productive Geological Structure	Types of geological situations which contain economically viable amounts of naturally occurring minerals such as petroleum and natural gas (e.g., traps), coal (e.g., seam formations) and metals (e.g., igneous intrusives).
Program	Plan of procedure; a schedule or system under which action may be taken toward a desired goal.
Project	Specific plan or design intended to meet desired program goals. A work item definable in terms of plans and specifications.
Public Land	Land which is under the administration of the Minister of Forestry, Lands and Wildlife. Title to the beds and shores of all rivers, streams, water- courses, lakes and other bodies of water is declared to be vested in the Crown in right of Alberta and under the administration of the Minister of Forestry, Lands and Wildlife (Public Lands Act, RSA 1980, P-30) unless the title specifies otherwise.
Rangeland	Land on which the (climax or natural potential) plant community is dominated by grasses, grass-like plants, forbs or shrubs suitable for grazing or browsing and present in sufficient quantity to justify grazing or browsing use. Land on which the native vegetation (climax or natural potential) is predominantly grasses, grass-like plants, forbs or shrubs suitable for grazing or browsing use. This includes lands revegetated naturally or artificially to provide a forage cover that is managed like native vegetation. Rangelands include natural grasslands, savannahs, shrublands, most deserts, tundra, alpine, communities, coastal marshes

	and wet meadows (A Glossary of Terms Used in Range Management, Society for Range Management, 1974).
Recreation	Extensive Recreation: The recreational use of trails, natural lakes, rivers, streams and generally undeveloped or minimally developed areas. The term includes such activities as off-highway vehicle use, random camping, hiking, backpacking, hunting, fishing, snowmobiling, horseback riding and cross-country skiing. Intensive Recreation: High-density recreational use such as developed staging areas and camp and picnic grounds, and other sites or areas requiring continuous recreational management and services to maintain recreational opportunities.
Referral Systems	The Alberta government has established formal mechanisms for the internal review of land-use applications originating from within itself and the private sector. Government management agencies concerned or affected by the provisions of an application participate in its review. Each management agency subsequent to the review files its recommendation for the approval or rejection of the application. These positions are co-ordinated by a lead agency (i.e., "one window" approach) which, in turn, provides the proponent with a comprehensive decision.
Regional Resource Management Committee (RRMC)	A group of regional directors representing each of the involved divisions of Alberta Forestry, Lands and Wildlife and other agency representatives on an occasional and "as needed" basis. The RRMC reviews planning documents and has the primary responsibility for the implementation stage of the planning process.
Reserve Block	Area of timber exempted from harvest. The coniferous reserve block is usually harvested after the initial cut area has been reforested with coniferous regeneration to a height of 1.8 m (6 ft.) to 2.4 m (8 ft.). It is expected that coniferous regeneration will reach a height of 2.0 m (7 ft.) within 20 years.
Residential Subdivisions	All activities and infrastructure associated with permanent housing subdivisions for residents.
Resource	Any part of the natural environment which society perceives as having value.
Resource Integration Committee (RIC)	An approvals body responsible for supervising and monitoring the integrated resource planning program.
Resource Management Area	A geographical unit which has a common resource management intent (e.g., wildlife habitat protection, multiple use, extensive and intensive recreation).
Resource Management Guidelines	Measures which prescribe or define: a) conditions, requirements or standards which may be imposed upon those activities which have a direct or indirect effect on resources or resource uses; b) information collection activities and responsibilities;

c) decision-making activities and responsibilities; and
d) procedures for making decisions about activities.

Resource Management Implication	A statement in an integrated resource plan that attempts to outline: a) benefits to accrue to the public as a result of the policy decisions made through the plan's resource management objectives, guidelines and zoning; b) resource management costs incurred (generally in qualitative terms) to implement the proposed resource management actions; and c) potential trade-offs between mutually exclusive resource uses.
Resource Management Objective	A frame of reference that provides a degree of measure in reaching designated goals. Specifically, resource management objectives: a) document desired conditions that spell out ends rather than means; b) are cast as infinitives rather than in the imperative mood or future tense; c) are presented in a general to specific fashion which demonstrates continuity in detail; and d) are quantifiable and can be achieved with existing technology or knowledge.
Restricted	Any activity which will not be permitted until stricter than normal conditions are defined through an integrated decision-making process such as integrated resource planning and referrals.
Route	Usually a mapped but unsigned primitive travel way for motorized or non-motorized use which has a low standard of maintenance. Summer routes may not have an evident tread.
Salvage Cutting	A cutting to remove dead, downed and injured trees before the timber becomes unmerchantable.
Sanitation Cutting	A cutting made to remove dead, diseased, infested, damaged or susceptible trees to reduce or prevent the spread of insects or pathogens.
Secondary Range	An area which is unused or lightly used by livestock under minimal management and will ordinarily not be fully used until the primary range has been overused (Wildland Planning Glossary, USDA, Forest Service, 1976).
Staging Area	A site developed to provide access to trails.
Step-Out Well	A proposed well that, in the judgment of the Mineral Resources Division, Alberta Department of Energy (based on geophysical, geological or engineering technical data), has a reasonable chance of penetrating the same hydrocarbon-bearing structure discovered by a well drilled prior to July 1977 (Mineral Resources Division, Alberta Energy).
Surface Disturbance	Because historical resources generally exist on the surface or are shallowly buried in the upper components of the soil horizon, surface disturbance can include any mechanical activity that affects the distribution of near-surface or buried sediments. In the case of open prairie, even extensive vehicular activity over the surface is considered

	disturbance. In the case of forested conditions, any activity that displaces soil horizons immediately below forest litter or deeper is considered surface disturbance. In the case of a significant known historical resource containing stratified or layered occupations, compaction of sediments as a result of heavy vehicular activity is considered disturbance (Archaeological Survey of Alberta).
Sustained Yield	The yield that a forest can produce continuously at a given intensity of management without impairment of the productivity of the land. Sustained yield timber management therefore implies continuous production of timber so planned that at the earliest practical time there is a balance between timber growth and cutting (Wildland Planning Glossary, USDA, Forest Service, 1976).
Timber Quota	Coniferous Timber Quota: A percentage of the volume of the annual allowable cut, as it relates to coniferous timber, that a quota holder may harvest. Deciduous Timber Quota: The volume or area of deciduous timber that a quota holder may harvest. (Forests Act, RSA 1980, c. F-16).
Trail	A signed, mapped travel way for motorized or non-motorized use that has an evident tread (in summer) and is developed and maintained to a prescribed standard.
Tourism	The action and activities of people taking trips to places outside their home communities for any purpose except daily commuting to and from work.
Tourism Attractions	A physical feature of interest or significance which can either be natural or man-made. There may or may not be facilities constructed in conjunction with it to increase the enjoyment of visitors. The attraction can be of international, national, provincial, regional or local significance, depending upon the degree of market appeal.
Tourism Facility	A man-made development whose purpose is to offer or enhance a particular service or recreational activity to the tourist.
Water Quality	Quantity of solid and dissolving material carried out by a stream (Resource Conservation Glossary, Soil Conservation Society of America, 1976).
White Area	The White Area is the region of the province settled initially and includes nearly 40 per cent of the total area of Alberta. Available public lands in this region, suitable for settlement and agriculture and not required for conservation, watershed, forestry, recreational uses or wildlife habitat, for example, may be applied for pursuant to the Public Lands Act (RSA 1980, P-30).
Wildland Recreation	In relative terms, extensive recreation occurring on lands that are on the less used and less altered side of a continuum from totally developed to completely untouched lands. The term is not exact in that the land may be under a low level of management for several land uses and is therefore not truly wild.

Wildlife Depredation	Use of lands and/or land products by wildlife for their survival which is determined by human land occupants to be in direct competition with a proposed or existing use. Examples include wildlife use of agricultural crops, hay stacks and domestic livestock ranges.
Wildlife Management Unit	An area of Alberta designated in the Wildlife Act (RSA, 1980) for the purpose of administration.

Subject: Complaint re non-compliance with the South Sask. Regional Plan

From: Kelly Ness <Kelly.Ness@gov.ab.ca> **On Behalf Of** LUF
Sent: Tuesday, December 22, 2020 3:44 PM
To: LUF <LUF@gov.ab.ca>; Michael Wenig <mike@bigsprucelaw.ca>
Cc: Alberta Chapter <alberta@backcountryhunters.org>
Subject: RE: Complaint re non-compliance with the South Sask. Regional Plan

Good afternoon,

We have reviewed the complaint, and have found that the matter complained of is the subject or is part of the subject of several applications for judicial review currently before the Alberta Court of Queen's Bench challenging Alberta Energy's decision to rescind the 1976 Coal Policy. You indicated in your complaint your intention to intervene in one of those judicial review applications. Therefore, under section 62(2)(b) of the *Alberta Land Stewardship Act,* the Secretariat will not investigate the complaint at this time.

Sincerely,

Land Use Secretariat

Subject: RE: Complaint re non-compliance with the South Sask. Regional Plan

Hi Mike,
Please accept our apology for the delay responding to your submission. This email is to serve as confirmation that the Land Use Secretariat has received the e-mail copy of your complaint of non-compliance with a regional plan including the completed form and supporting materials.

Your complaint is currently under review. The Secretariat will response to you as soon as possible.

Sincerely,

Land Use Secretariat

CAUTION: This email has been sent from an external source. Treat hyperlinks and attachments in this email with care.

Dear Sir/Madam –

I just left a phone message with your office asking about the status of the complaint we submitted in October, per the email below. We haven't received any response to our complaint, so we'd appreciate an update.

Thanks very much.

Yours truly,

Mike Wenig

Subject: Complaint re non-compliance with the South Sask. Regional Plan

Dear Sir/Madam –

Attached is a complaint from the Alberta chapter of the Backcountry Hunters and Anglers. The complaint is submitted under section 62 of the Alberta Land Stewardship Act.

The complaint consists of the signed complaint form and the accompanying supplement. (Because of the form's special formatting, I was unable to combine the two pdf files into a single file.)

Please confirm receipt of this email.

Yours truly,

Mike Wenig

TAB 79

Court of Queen's Bench of Alberta

Citation: Keller v. Municipal District of Bighorn No. 8, 2010 ABQB 362

2010 ABQB 362 (CanLII)

Date: 20100527
Docket: 0701 09911
Registry: Calgary

Between:

Rod Keller

Applicant

- and -

Municipal District of Bighorn No. 8 and Wild Buffalo Ranching Ltd.

Respondents

Reasons for Judgment
of the
Honourable Madam Justice Sandra L. Hunt McDonald

---

[1] This is an application for Judicial Review of three bylaws, enacted by the Respondent Municipal District of Bighorn ("the Municipality") in June and August 2007. The combined effect of the bylaws would permit the Respondent Wild Buffalo Ranching Ltd. ("Wild Buffalo") to transfer "density credits" from one parcel of land owned by Wild Buffalo to another. An arrangement by which subdivision rights, or density, may be transferred from one parcel of land to another is often referred to as a "transfer of subdivision density" or a "transfer of development credits" scheme ("TDC scheme"). The TDC scheme implemented by the Municipality would permit Wild Buffalo to proceed with a proposed residential development called Carraig Ridge. The site proposed for Carraig Ridge is directly adjacent to lands owned and maintained as a nature preserve by the Applicant, Rod Keller.

Background

[2] In 1989, Mr. Keller purchased a 406-acre parcel of ranch land in the Bow River Corridor, 20 kilometres west of Cochrane, Alberta ("the Keller lands"). He built a house on the property and has resided there ever since. In 2006, Wild Buffalo purchased an adjacent 662-acre parcel of land ("the Carraig Ridge lands"). Wild Buffalo and/or its principal, Mr. Ian McGregor, also owns land north of the Carraig Ridge and Keller lands ("the Jamison Road lands").

[3] The Keller, Carraig Ridge and Jamison Road lands are located in an area designated a "Small Holdings Area" within the Municipal District of Bighorn No. 8. Under the Municipal Development Plan ("MDP") as it existed prior to June 2007, these lands could each be subdivided into 40-acre lots with one residence per lot. Wild Buffalo's plan for the Carraig Ridge lands was to build a residential development consisting of 45 homes, but under the MDP subdivision would be limited to 16 lots.

[4] In February 2007, Wild Buffalo applied to the Municipality for the enactment of three bylaws. Bylaw 06/07 would amend the MDP as follows:

1. To Section 3.3 Municipal Goals, the following new goal is added:

   3.3.1 xv) To provide opportunities to apply innovative land use planning and environmental conservation concepts that improve municipal efficiencies and reduce rural sprawl.

2. To Section 15.6, Small Holdings, add Policies 15.6.14 through 15.6.18 as follows:

   15.6.14 Notwithstanding the subdivision limitations established elsewhere in section 15.6, landowners wishing to redistrict (rezone) and subdivide land in the Small Holdings Policy area may undertake a "Transfer of Subdivision Density (TSD)" program as an optional planning technique to concentrate subdivision into a smaller human footprint and to reduce the amount of land that would otherwise be fragmented within the Small Holdings area.

   15.6.15 The TSD option allows gathering and transferring of subdivision density potential (as identified in policy 15.6.3) from one or more Sending Parcels within the Small Holdings area and concentrating it into one or more Receiving Parcels, also located in the Small Holdings area.

   15.6.16 In order to prevent future subdivisions of a Sending Parcel after the transfer of its subdivision density to a Receiving Parcel, a conservation easement must be registered on the title of the Sending Parcel at the time

2010 ABQB 362 (CanLII)

> of subdivision approval. The Sending Parcels may only send the number of lots that are allowed under policy 15.6.3.
> 15.6.17 Landowners choosing to undertake the TSD option shall be required to prepare an Area Structure Plan and shall apply the Transfer of Subdivision Density (TSD) District of the Land Use Bylaw to the land that is the Receiving Parcel.
>
> 15.6.18 Similarly, a Conservation Easement (CE) District shall be applied through the Land Use Bylaw to those Sending Parcel lands that are subject to a Conservation Easement in accordance with policy 15.6.16.

Bylaw 07/07 would provide for the approval of the Area Structure Plan prepared by Wild Buffalo ("the Carraig Ridge ASP"). Bylaw 08-Z/07 would amend the Land Use Bylaw ("LUB") by adding several definitions:

> "Transfer of Subdivision Density (TSD)" means a land use policy that reduces or eliminates subdivision potential in one or more parcels while increasing, by the same number, subdivision potential in one or more other parcels. The technique gathers a base development density assigned to all parcels in an area and divides the land into Sending Parcels and Receiving Parcels as defined elsewhere in this section.
>
> "Sending Parcels" means land that is restricted from future subdivision and/or development as part of a comprehensive Transfer of Subdivision Density program. Sending Parcels require the registration of a Conservation Easement on the certificate of title to ensure the terms of development restrictions remain in effect in perpetuity.
>
> "Receiving Parcels" means land that is granted the benefit of more subdivision and/or development than the base density allows as the result of a comprehensive Transfer of Subdivision Density program implemented in accordance with Municipal Development Plan policy.

Bylaw 08-Z/07 would also add the new districts of "Transfer of Subdivision Density District (TSD) and Conservation Easement District (CE) to the LUB, and rezone the subject lands from Agriculture Conservation District to Transfer of Subdivision Density District.

[5] Collectively, these bylaws would permit Wild Buffalo to transfer subdivision rights from the Jamison Road lands to the Carraig Ridge lands. In exchange, the registration of a conservation easement against the Jamison Road lands would restrict Wild Buffalo's right to subdivide there. Ultimately, Wild Buffalo would be able to apply to subdivide the Carraig Ridge lands into a total of 45 lots.

2010 ABQB 362 (CanLII)

[6] First reading was given to the three bylaws on February 13, 2007. Section 692 of the *Municipal Government Act*, R.S.A. 2000, c.M-26 ("MGA") provides:

> 692 (1) Before giving second reading to
> (a) a proposed bylaw to adopt an intermunicipal development plan,
> (b) a proposed bylaw to adopt a municipal development plan,
> (c) a proposed bylaw to adopt an area structure plan,
> (d) proposed bylaw to adopt an area redevelopment plan,
> (e) a proposed land use bylaw, or
> (f) a proposed bylaw amending a statutory plan or land use bylaw referred to in clauses (a) to (e),a council must hold a public hearing with respect to the proposed bylaw in accordance with section 230 after giving notice of it in accordance with section 606.
>
> (2) Despite subsection (1), if a proposed development relates to more than one proposed bylaw referred to in subsection (1), the council may hold a single public hearing.

[7] In accordance with s.692 of the MGA, a public hearing for each of the Bylaws was held on April 19, 2007. The minutes of the April 19 2007 public hearing indicate that after a presentation by Wild Buffalo, a number of parties spoke and submitted materials in favour and opposed to the bylaws. Mr. Keller attended the April 19 2007 meeting, spoke in opposition to the bylaws and submitted an 89-page report.

[8] On June 12 2007, the Municipality passed second and third reading for Bylaw 06/07. After second reading was passed, but before third reading, the Municipality passed a motion:

> Moved by Councillor Dunki that Council direct staff to undertake a public consultation process regarding the transfer of subdivision density policy, with the intention of seeking improvements to the policy as set out in the draft Bylaw 06/07 by determining such things as the values that the community wants to protect and their ranking relative to one another.

[9] After the June 12 2007 Council meeting, Councillor Maria Dunki circulated a letter to her constituents. Entitled "June Bighorn Update", the letter referred to the Carraig Ridge proposal and indicated:

> To facilitate the Land Use Bylaw changes (or "rules" document) Council also asked Administration to set up a community consultation process "with the intention of... determining such things as the land values that the community

2010 ABQB 362 (CanLII)

> wants to protect and their ranking relative to one another." No date has been set, but I will give you lots of notice. Most area residents will recall a similar process a few years ago that was well received. Council recognizes the importance of the opportunity to discuss, share, learn together and thus provide Council with direction. The Public Hearing process is mandated by the Municipal Government Act but is only one way of finding out the public view. Consultation is the other way and Council recognizes this.

[10] No additional public consultation took place between June 12 and August 14, 2007, when second and third reading was given to Bylaw 07/07 and Bylaw 08-Z/07. However, the Municipality held community workshops the following year, on May 29 and June 19, 2008, to discuss the transfer of subdivision density policy with landowners. Though Mr. Keller attended both of these workshops, the Bylaws he seeks to challenge had already been passed. He filed the Originating Notice challenging the three bylaws on October 3, 2007.

Issues

[11] The issues are as follows:

1. Does s.537 of the *Municipal Government Act* apply to the challenge to Bylaw 06/07?

2. What is the appropriate standard of review?

3. Should the Bylaws be declared invalid on the basis that:
   (a) The bylaws are ultra vires the Municipality; or
   (b) The bylaws are void for uncertainty; or
   (c) The bylaws were conditional upon a public consultation process which did not occur;

4. Should Bylaws 08-Z/07 and 07/07 be declared invalid on the basis that:
   (a) Mr. Keller was not given prior notice of the Municipality's consideration of the Bylaws on August 14, 2007;
   (b) The bylaws that were passed was materially different from the bylaw presented for the public hearing in April, 2007.

5. Should Bylaw 07/07 be declared invalid on the basis that:
   (a) The Area Structure Plan fails to comply with Bylaw 08-Z/07 and sections 9.1.11, 3.3.1(XV), 15.6.14, 15.6.15, and 15.6.16 of the amended Municipal Development Plan.

6. The Effect of the Alberta Land Stewardship Act

2010 ABQB 362 (CanLII)

[12] The Municipality points out that while Mr. Keller has raised the issue of the *vires* of Bylaw 07/07 in argument, he did not do so in the Amended Originating Notice. In argument, counsel for Mr. Keller submitted that his contention in this regard is that Bylaw 07/07 is part of "scheme that is *ultra vires*", insofar that if either Bylaw 06/07 or Bylaw 08-Z/07 are struck down, Bylaw 07/07 would lack a legislative foundation. In my view, notwithstanding the failure to include reference to the *vires* of Bylaw 07/07 in the Amended Originating Notice, it is appropriate to consider the issue in this context.

Analysis

1. Section 537 of the Municipal Government Act

[13] Sections 536 to 538 of the MGA provide:

> 536 (1) A person may apply by originating notice to the Court of Queen's Bench for
>
> (a) a declaration that a bylaw or resolution is invalid, or
>
> (b) an order requiring a council to amend or repeal a bylaw as a result of a vote by the electors on the amendment or repeal.
>
> (2) A judge may require an applicant to provide security for costs in an amount and manner established by the judge.
>
> 537 A person who wishes to have a bylaw or resolution declared invalid on the basis that
>
> (a) the proceedings prior to the passing of the bylaw or resolution, or
>
> (b) the manner of passing the bylaw or resolution
>
> does not comply with this or any other enactment must make an application within 60 days after the bylaw or resolution is passed.
>
> 538 Despite section 537, a person may apply at any time
>
> (a) for a declaration that a bylaw is invalid if
>
> (I) the bylaw is required to be put to a vote of electors and the vote has not been conducted or if the bylaw was not given the required approval in such a vote,

2010 ABQB 362 (CanLII)

(ii) the bylaw is required to be advertised and it was not advertised, or

(iii) a public hearing is required to be held in respect of the bylaw and the public hearing was not held,

2010 ABQB 362 (CanLII)

[14] I agree that s.537 would limit the Applicant's ability to argue that Bylaw 06/07 was conditional upon further consultation. At the hearing of this matter, the Applicant limited the argument in this regard to Bylaws 07/07 and 08-Z/07. I disagree with Wild Buffalo that, because the Applicant has referred to ss. 536 to 538 in his Originating Notice of Motion, s.537 bars his application in respect of Bylaw 06/07 in its entirety. I agree with the Applicant that a bylaw enacted without jurisdiction is a nullity and therefore subject to challenge notwithstanding the passage of the 60-day limit in s.537. Moreover, to the extent that the Applicant has raised the issues set out in s.538, it is proper to consider them.

2. Standard of Review

[15] The standard of review with respect to a Municipal Council's jurisdiction to make bylaws is correctness: *United Taxi Drivers' Fellowship of Southern Alberta v. Calgary (City)*, [2004] 1 S.C.R. 485. The Applicant also challenges the process followed by the Municipality in passing the bylaws, in particular with respect to statutory notice requirements, and I am satisfied that it is appropriate to determine whether the Municipality correctly complied with its statutory obligations in this regard.

[16] In his supplementary materials, the Applicant has also challenged the reasonableness of the Municipality's decisions, assuming that they are found to have been *intra vires*. Interestingly, the Applicant contends that the appropriate standard of review in this regard is patent unreasonableness, while the Municipality argues that the proper standard for assessing an *intra vires* decision of a Municipal Council is "reasonableness, with a high degree of deference being afforded to the Council's decision."

[17] All parties are aware of the decision of the Supreme Court of Canada in *Dunsmuir v. New Brunswick*, [2008] 1 S.C.R. 190, wherein the Court collapsed the previous categories of patent unreasonableness and reasonableness into one category, thereafter to be known as reasonableness. In the wake of *Dunsmuir*, it is unusual for a party seeking judicial review to argue or concede that the appropriate standard of review for an *intra vires* decision is patent unreasonableness, but understandable confusion arises as a result of s.539 of the *Municipal Government Act*, which provides:

539 No bylaw or resolution may be challenged on the ground that it is unreasonable.

[18] Prior to *Dunsmuir*, s.539 was interpreted to mean that the appropriate standard of review for *intra vires* municipal actions should be patent unreasonableness: *Nanaimo (City) v. Rascal Trucking Ltd.*, [2000] 1 S.C.R. 342 at para.38._With the patent unreasonableness standard effectively collapsed into the reasonableness standard, the question raised by s.539 is whether it operates to preclude judicial review of *intra vires* bylaws or resolutions altogether, or merely evidences an intention on the part of the Legislature to provide significant but not complete privative protection, thereby weighing in favour of a high degree of deference within the reasonableness standard.

[19] Since the Municipality has argued for the latter interpretation and the Applicant has argued for a patent unreasonableness standard, and because of my determination with respect to the reasonableness of the bylaws implementing the TSD scheme, it is not necessary to resolve the question of whether s.539 would operate to bar judicial review of an *intra vires* bylaw altogether. I agree with the Municipality's assertion, however, that the first step in the standard of review analysis mandated by *Dunsmuir* is to determine whether the degree of deference is well settled by the case law, and that the case law strongly suggests that a high degree of deference is appropriate. This was made clear by the Supreme Court of Canada in *Nanaimo*, at para.35:__

> ...Municipal Councilors are elected by the constituents they represent and as such are more conversant with the exigencies of their community than are the courts. The fact that municipal councils are elected representatives of their community, and accountable to their constituents, is relevant in scrutinizing intra vires decisions. The reality that municipalities often balance complex and divergent interests in arriving at decisions in the public interest is of similar importance. In short, these considerations warrant that the intra vires decisions of municipalities should be reviewed upon a deferential standard.

See also *Montreal (Ville) v. 2952-1366 Quebec Inc*. [2005] 3 S.C.R. 141, at para.47; *St. Paul (County) No. 19 v. Belland*, 2006 ABCA 55, [2005] A.J. No. 152, at paras. 13-16.

3. Are the Bylaws Ultra Vires and/or Unreasonable?

[20] Part 17 of the MGA sets out the authority of a municipality for planning and development. Section 617 of the MGA provides:

> 617 The purpose of this Part and the regulations and bylaws under this Part is to provide means whereby plans and related matters may be prepared and adopted
>
> (a) to achieve the orderly, economical and beneficial development, use of land and patterns of human settlement, and

2010 ABQB 362 (CanLII)

(b) to maintain and improve the quality of the physical environment within which patterns of human settlement are situated in Alberta, without infringing on the rights of individuals for any public interest except to the extent that is necessary for the overall greater public interest.

[21] Section 632 of the MGA sets out the list of items which must, and which may, be addressed in a Municipal Development Plan:

632 (1) A council of a municipality with a population of 3500 or more must by bylaw adopt a municipal development plan.

(2) A council of a municipality with a population of less than 3500 may adopt a municipal development plan.

(3) A municipal development plan

(a) must address

(I) the future land use within the municipality,

(ii) the manner of and the proposals for future development in the municipality,

(iii) the co-ordination of land use, future growth patterns and other infrastructure with adjacent municipalities if there is no intermunicipal development plan with respect to those matters in those municipalities,

(iv) the provision of the required transportation systems either generally or specifically within the municipality and in relation to adjacent municipalities, and

(v) the provision of municipal services and facilities either generally or specifically,

(b) may address

(I) proposals for the financing and programming of municipal infrastructure,

(ii) the co-ordination of municipal programs relating to the physical, social and economic development of the municipality,

(iii) environmental matters within the municipality,

(iv) the financial resources of the municipality,

(v) the economic development of the municipality, and

(vi) any other matter relating to the physical, social or economic development of the municipality,

(c) may contain statements regarding the municipality's development constraints, including the results of any development studies and impact analysis, and goals,

2010 ABQB 362 (CanLII)

objectives, targets, planning policies and corporate strategies,

(d) must contain policies compatible with the subdivision and development regulations to provide guidance on the type and location of land uses adjacent to sour gas facilities,

(e) must contain policies respecting the provision of municipal, school or municipal and school reserves, including but not limited to the need for, amount of and allocation of those reserves and the identification of school requirements in consultation with affected school authorities, and

(f) must contain policies respecting the protection of agricultural operations.

2010 ABQB 362 (CanLII)

[22] Section 639 of the MGA provides that every municipality must pass a land use bylaw. Section 640(1) sets out a list of items that must, and may, be considered in an LUB:

640 (1) A land use bylaw may prohibit or regulate and control the use and development of land and buildings in a municipality.

(2) A land use bylaw

(a) must divide the municipality into districts of the number and area the council considers appropriate,

(b) must, unless the district is designated as a direct control district pursuant to Section 641, prescribe with respect to each district,

(I) the one or more uses of land or buildings that are permitted in the district, with or without conditions, or

(ii) the one or more uses of land or buildings that may be permitted in the district at the discretion of the development authority, with or without conditions,

or both;

(e) must establish the number of dwelling units permitted on a parcel of land.

(4) Without restricting the generality of subsection (1), a land use bylaw may provide for one or more of the following matters, either generally or with respect to any district or part of a district established pursuant to subsection (2)(a):

> (o) the density of population in any district or part of it;...

[23] Section 633(2) of the MGA sets out the list of items that a municipality must and may address in an Area Structure Plan:

> 633 (2) An area structure plan
>
> (a) must describe
>
> (ii) the land uses proposed for the area, either generally or with respect to specific parts of the area,
> (iii) the density of population proposed for the area either generally or with respect to specific parts of the area,
>
> and
>
> (b) may contain any other matters the council considers necessary.

[24] The Applicant submits that a transfer of development rights is not included in s.632, s.640 and s.633(2) and therefore an amendment to an existing MDP, LUB and/or ASP to allow for a transfer of subdivision density is *ultra vires*. In the alternative, the Applicant submits that, if the Municipality has jurisdiction to implement a transfer of subdivision density scheme, it does not have the power under any of these provisions to "randomly and arbitrarily" transfer subdivision rights and may only do so for conservation purposes.

[25] The parties are agreed that the law mandates a broad and purposive approach to the interpretation of municipal authority under the MGA: *United Taxi Drivers' Fellowship of Southern Alberta v. Calgary*, [2004] 1 S.C.R. 485; *Keyland Development Corporation v. Cochrane (Town of)*, [2007] A.J. No. 275 (Q.B.). Both the Respondent Municipality and the Applicant have directed me to an article in the Journal of Environmental Law and Practice: Kwasniak, Arlene: *The Potential for Municipal Transfer of Development Credit Programs in Canada*, (2004) 15 J.E.L.P. No.2, at pps. 47-70, wherein Professor Kwasniak notes, at p.60, that, because of this broad and purposive approach, municipalities likely have implied authority to develop systems for the transfer of density. Professor Kwasniak relied in this regard upon the decision of the Alberta Court of Appeal in *698114 Alberta Ltd. v. Banff (Town of)*, [2000] A.J. No. 992 (C.A.). In that case, the Court considered a bylaw that allocated commercial development rights according to a lottery scheme and expressly approved the Chambers Judge's conclusion that, while the lottery scheme was not expressly authorized by the MGA, "the broad powers of regulation and control" therein provided the municipality with the authority to implement the lottery system.

[26] Under s.632(a)(ii), an MDP must address the manner of future development within the municipality. Under s.632(b)(iii) and s.632(3)(b)(vi), it may address environmental matters and

2010 ABQB 362 (CanLII)

the physical, social and economic development of the municipality. Though the legislation does not refer specifically to a TDC scheme, in my view such a scheme clearly falls within the broad powers of regulation and control provided to the municipality under these sections of the MGA. Similarly, s.640(4)(o) very clearly provides authority to the municipality to provide for density in its LUB, and s.633(2)(a) requires a municipality to address issues of land use and population density in any ASP. The Applicant may disagree with how the Municipality has chosen to exercise its powers in this regard, but the legislation clearly extends to the Municipality the authority necessary to amend its MDP and LUB and to approve an ASP that includes the components necessary for the transfer of subdivision density from one part of the municipality to another.

[27] The Applicant's argument in the alternative is that, if the Municipality has the authority to implement a TDC scheme, it must do so only for conservation purposes. He has directed me to a number of articles and materials from the United States, where such schemes are apparently common, in support of the proposition that a TDC scheme is a tool to achieve conservation only. (See: Pruetz, Erica: *Transfer of Development Rights Turns 40*: American Planning Association and Planning & Environmental Law, 2007; *Fact Sheet: Transfer of Development Rights*, American Farmland Trust, 2001.) He also points out that Professor Kwasniak writes, at p.49-50:

> In rural settings the objectives of TDC programs typically are to preserve landscape features such as agriculture, open space, wildlife habitat, or important ecological features as well as to prevent fragmentation... a TDC program meets these objectives by shifting permissible densities from areas where development is less desirable to areas where it is more desirable.

[28] Aside from these indicators of how such schemes are typically implemented in the United States, the Applicant has cited no authority for the proposition that the broad powers conferred upon a municipality under s.632 and s..640 of the MGA to address development and population density should *prima facie* be limited to a conservation purpose. A TDC scheme implemented by a municipality in the Province of Alberta does not depend for its validity upon the rationale for such schemes in other jurisdictions; it is sufficient if the scheme falls within the jurisdiction of the municipality under the MGA.

[29] Moreover, "conservation purposes" may be very much in the eye of the beholder. Obviously, in Mr. Keller's view, it is more important to limit development at the Carraig Ridge site than to limit development on the Jamison Road lands. In preventing any further subdivision on the Jamison Road lands, however, it appears that the Municipality may achieving at least two of the objectives described by Professor Kwasniak: the prevention of fragmentation and the preservation of agriculture on the Jamison Road lands. This may advance a conservation objective, though not the conservation objective that Mr. Keller would like. In essence, Mr. Keller would prefer to see the Carraig Ridge site remain low density at the potential expense of further subdivision on the Jamison Road lands. The municipality has evidenced a preference to increase the density at Carraig Ridge in favour of preserving the Jamison Road lands. The

2010 ABQB 362 (CanLII)

question of which lands are better preserved is not a jurisdictional one, it is instead a question that goes directly to the reasonableness of the Municipality's decision.

[30] The reasonableness standard is described in *Dunsmuir*, at para.47:

> Reasonableness is a deferential standard animated by the principle that underlies the development of the two previous standards of reasonableness: certain questions that come before administrative tribunals do not lent themselves to one specific, particular result. Instead, they may give rise to a number of possible, reasonable conclusions. Tribunals have a margin of appreciation within the range of acceptable and rational solutions. A court conducting a review for reasonableness inquires into the qualities that make a decision reasonable, referring both to the process of articulating the reasons and to outcomes. In judicial review, reasonableness is concerned mostly with the existence of justification, transparency and intelligibility within the decision-making process. But it is also concerned with whether the decision falls within a range of possible, acceptable outcomes which are defensible in respect of the facts and law.

[31] The Applicant contends that the decision to implement the TDC scheme was unreasonable because no conservation group supported it, because the scheme failed to include the process by which sending and receiving lands would be assessed, and because it is "patently unreasonable to use a conservation tool for an anti-conservation purpose." In my view, there are any number of reasons why a municipality might consider a TDC scheme beyond conservation purposes, so long as the scheme fits municipal objectives and falls within the municipality's jurisdiction. Moreover, as noted above, the municipality has not implemented this particular TDC scheme wholly without regard to conservation. The scheme would significantly and perhaps permanently limit further development on the Jamison Road lands. Those lands are presently used for agricultural purposes and, on the Applicant's own submissions, the preservation of agricultural lands has been recognized as a valid objective for TDC schemes.

[32] Nor am I satisfied that the decision made by the Municipality is unreasonable because, as the Applicant submits, it is missing the essential component of how to identify and assess the lands to be preserved and the capacity of the receiving parcel. As the Municipality points out, under the TDC scheme, the receiving lands must be suitable for the proposed density in order to be approved for subdivision, regardless of the TDC policy, and the criteria for suitability (which are set out in further detail below) are clearly established. Similarly, the lands to be preserved must meet the criteria established for a conservation easement, which are again discussed below but are clearly set out in legislation.

4. Are the Bylaws Void for Uncertainty?

[33] The Applicant contends that Bylaw 06/07 is void for uncertainty because it fails to identify and rank the criteria used to assess what land is to be preserved and what land is to receive the transfer of subdivision density.

2010 ABQB 362 (CanLII)

[34] Uncertainty, in the context of a municipal bylaw, was addressed by Beetz J. in *Montreal (City) v. Arcade Amusements Inc*., [1985] 1 S.C.R. 368, at para.87:

> Each case is practically unique, and the Courts have to determine each time whether the true meaning of the by-law in question can be understood by the persons to whom it applies.

[35] Difficulty in interpretation is not should not be confused with uncertainty to point of invalidity: *Montreal Amusements*, at para.83; *698114 Alberta Ltd.*, 2000 ABCA 237, [2000] A.J. No. 992, at para.30. In *698114 Alberta Ltd*. the Alberta Court of Appeal upheld an amendment to the Land Use Bylaw even where that amendment imposed a lottery scheme whereby a landowner could not predict when a proposed commercial development that was permitted could proceed. The Court of Appeal agreed with the Chambers Judge's conclusion that, "while the outcome of the random draw was uncertain, the machinery governing the lottery is understandable by those who are affected by it."

[36] Bylaw 06/07 establishes the goal of promoting innovative land use planning and environmental conservation and proposes the TDC scheme as one means to do so. It requires the registration of a conservation easement upon the sending parcel. The conservation easement cannot be registered unless it meets the requirements of s.22 of the *Environmental Protection and Enhancement Act*, R.S.A. 2000, c.E-12, which means that protection of the sending parcel must meet the objectives of protecting, conserving or enhancing the environment or providing for, *inter alia*, recreational use or open space use in a manner that is consistent with the protection, conservation and enhancement of the environment. The Municipality further points out that the application of the TDC policy does not alleviate its statutory obligation under s.654 of the MGA to only approve a subdivision application where the proposed land is suitable for the intended purpose of the subdivision. At the time the application for subdivision is put to the Municipality for approval, the Municipality must consider, *inter alia*, the topography, soil characteristics, potential for flooding, subsidence or erosion, accessibility, availability of water supply and sewage disposal, and the use of land in the vicinity of the subject land. Consequently, I am satisfied that the bylaws are sufficiently certain to be understood by those who would be affected by them.

5. Were the Bylaws Conditional Upon Further Public Consultation?

[37] The Applicant's claim that Bylaw 06/07 was conditional upon further public consultation was filed more than 60 days after Bylaw 06/07 was passed by Municipal Council and is out of time pursuant to s.537 of the MGA. The Applicant's challenge to Bylaws 08-Z/07 and 07/07 was brought within the period set out in s.537 and may be considered on the merits.

[38] The statutory requirement for a public hearing is set out at s.692, and a public hearing to consider all three bylaws took place on April 19, 2007. The Applicant was present and made fulsome submissions. The Applicant points out that no environmental groups supported the three

2010 ABQB 362 (CanLII)

bylaws at the public hearing, and a number of residents in the vicinity of the Carraig Ridge lands attended and stated their objections. Some neighbours opposed the development proposal that would be facilitated by the bylaws, while others supported it.

[39] The Applicant contends that the Municipality committed itself to further public consultation on June 12, 2007 when, in between second and third reading of Bylaw 06/07, Municipal Council passed the motion directing its staff to undertake a public consultation process "with the intention of seeking improvements to the policy as set out in draft Bylaw 06/07 by determining such things as the values that the community wants to protect and their ranking relative to one another." Municipal Council immediately thereafter proceeded to third reading and passage of Bylaw 06/07.

[40] In my view, the motion passed on June 12, 2007 did not commit the Municipality to a course of public consultation upon which further passage of Bylaws 06/07, 08-Z/07 and 07/07 was conditional. While the Municipality was committed to implementing a process by which the policy might be improved, there is nothing in the language of the motion to suggest that passage of the Bylaws would be conditional upon such a process, or that further public consultation would necessarily result in a change to the Bylaws.

6. Are Bylaws 08-Z/07 and 07/07 invalid on the basis that the Applicant was not given prior notice of the Municipality's consideration of the Bylaws on August 14, 2007?

[41] Section 692 requires a Municipality to hold a public hearing in accordance with s.230 of the MGA, after giving notice of it in accordance with s.606, prior to second reading. The Applicant has not challenged the sufficiency of the April, 2007 hearing, at which all three proposed bylaws were considered. There is no further statutory obligation imposed upon the Municipality to give further notice that it intends to consider and give third reading to a bylaw. The Municipality correctly complied with its statutory obligations.

7. Are Bylaws 08-Z/07 and 07/07 invalid on the basis that they are materially different from the bylaws presented for the public hearing?

[42] The Applicant has challenged both bylaws on this basis, but in argument referred only to Bylaw 08-Z/07. The Applicant contends that the bylaw is invalid because as ultimately passed, it allows for freehold titles as well as bareland condominiums.

[43] I agree with the Municipality that the addition of freehold titles does not constitute a material change to the bylaw, because it does not, in any way, impact the use of the Carraig Ridge lands. I further agree with the Municipality that s.230(5)(b) of the MGA permits the municipality to make any amendment to a bylaw or resolution it considers necessary to pass it, after second reading, without further advertisement or hearing.

2010 ABQB 362 (CanLII)

8. ASP Compliance with sections 9.1.11, 3.3.1(XV), 15.6.14, 15.6.15, and 15.6.16 of the MDP., and Bylaw 08-Z/07.

[44] The relevant portions of s3.3.1 and s.9.1.11 of the MDP provide:

> 3.3.1 The Mission Statement indicates, in a broad sense, the direction in which the residents of the MD of Bighorn want to see the municipality develop, and towards which Council will strive. The following goals are adopted in order to elaborate upon the Mission Statement and to clarify the MD of Bighorn's intentions:
>
> (xv) to provide opportunities to apply innovative land use planning and environmental conservation concepts that improve municipal efficiencies and reduce rural sprawl.
>
> 9.1.11 In some instances, before subdivision or development of land is allowed, the MD of Bighorn may require that the proponent of the subdivision or development prepare an Area Structure Plan (ASP), at the expense of the proponent. The ASP will normally include the following:
>
> Generally required for large parcels of land on which little or no development has taken place, this plan will provide direction for the MD of Bighorn to guide how subdivision and development of these lands might occur.
>
> I) site suitability;
> v) impact on adjacent uses;
> vi) location of utilities.

[45] As the Municipality points out, the language of s.9.1.11 of the MDP is discretionary. There is no mandatory requirement that a developer provide an ASP, nor any mandatory components for an ASP set out in the MDP. I further agree with the Municipality that site suitability, impact on adjacent uses and location of utilities are all expressly addressed in the ASP in any event. Moreover, in my view the TDC scheme implemented by the Municipality by way of the three bylaws is "innovative land use planning" per s.3.3.1, and though it has regard to "environmental conservation concepts" that the Applicant does not share (ie. the preservation of the Jamison Road lands), it falls squarely within that section of the MDP.

[46] With respect to Bylaw 08-Z/07 and sections 15.6.14 and 15.6.15, the Applicant argues that the ASP fails to comply because it would increase fragmentation and fails to properly identify sending and receiving parcels.

[47] With respect to s.15.6.14, the Applicant's contention notwithstanding, the ASP does not increase fragmentation in the Small Holdings Area on the whole; it concentrates fragmentation into a relatively small area at Carraig Ridge and reduces the fragmentation that might otherwise

2010 ABQB 362 (CanLII)

occur on the Jamison Road lands. Though the Applicant argues that s.15.6.15 requires the developer to specifically identify the sending parcels, there is no such requirement in the language of s.15.6.15 itself. Instead, it is necessary only that the sending and receiving parcels both be located in the Small Holdings Area. The Applicant further argues that the ASP does not comply with s.15.6.16, but that section mandates the filing of a conservation easement at the time of subdivision approval. Until that time, I do not see how the ASP can be said to violate s.15.6.16.

2010 ABQB 362 (CanLII)

9. The Effect of the Alberta Land Stewardship Act

[48] On June 4, 2009, the Legislature enacted *the Alberta Land Stewardship Act*, S.A. 2009, c.A-26.8 ("ALSA"). ALSA, which was proclaimed in force on October 1, 2009, establishes a legal framework for increased Provincial oversight of land use planning and development. It provides for the development, by the Province of regional plans, described at s.13 as "expressions of the public policy of the Government" and binding upon municipalities, that would address planning and development in seven planning regions within the Province. Sections 48 to 50 of ALSA provide for a Transfer of Development Credits scheme. Section 48 provides:

> 48 (1) A TDC scheme may be established only in accordance with this Division.
>
> (2) A TDC scheme may be established by
>
> (a) a regional plan,
> (b) a local authority if the scheme is first approved by the Lieutenant Governor in Council, or
> (c) 2 or more local authorities in accordance with an agreement or arrangement among them, with or without other persons, if the agreement or arrangement is first approved by the Lieutenant Governor in Council.

[49] Section 49 sets out a list of components which every TDC scheme must include. A TDC scheme must designate an area of land as a conservation area, for environmental, scenic, aesthetic, agricultural or historic purposes and it must designate an area of land as a development area, and any terms and conditions of that designation. The Lieutenant Governor in Council is given broad regulatory power over TDC schemes under s.50.

[50] The Applicant contends that Bylaws 06/07, 08-Z/07 and 07/07 are of no effect because the TSD scheme they implement has not been approved by the Lieutenant Governor in Council. Section 13 of ALSA provides:

> 13 If there is an inconsistency between a Bylaw and this or another enactment, the Bylaw is of no effect to the extent of the inconsistency.

[51] It is important to consider s.13 in the context of a number of other provisions in ALSA. Section 18 provides:

> 18 (1) The stewardship commissioner may apply to the Court of Queen's Bench for an order under this section if, in the opinion of the stewardship commissioner, non-compliance with this Act, a regulation under this Act or a regional plan cannot be remedied or rectified under another enactment.
>
> (2) On application by the stewardship commissioner, if the Court is satisfied that this Act, a regulation under this Act or a regional plan has not been or is not being complied with, the Court may make an order to remedy or rectify the non-compliance.
>
> (3) The Court may make any interim or final order it thinks fit, including, without limitation, any or all of the following orders:
>
> (a) to stop something being done, to require something to be done or to change the way in which something is being done;
>
> (b) to manage the conduct of a person who is non-compliant;
>
> (c) declaring that any regulatory instrument of a local government body does or does not comply with a regional plan and, if necessary, ordering compliance;
>
> (d) to take any action or measure necessary to remedy or rectify non-compliance with a regional plan and, if necessary, an order to prevent a reoccurrence of the contravention;
>
> (e) to amend or repeal a regulatory instrument of a local government body that does not comply with a regional plan.

[52] I agree with the Municipality that, by excluding references to individuals or persons other than the Stewardship Commissioner, the Legislature intended to exclude anyone other than the Stewardship Commissioner from bringing an application for judicial review on the basis of non-compliance with ALSA. This interpretation is consistent with s.15(3) of the Act, which expressly limits the ability to bring any action concerning compliance with a Provincial Regional Plan to the Stewardship Commissioner, and s. 62 of the Act, which provides the mechanism by which individuals may make a written complaint to the Stewardship Commissioner. In short, ALSA taken as a whole implements a scheme whereby the Province assumes a greater role in local planning and the power to determine whether there has been compliance with the Act and with Provincial dictates as expressed in regional plans. Individual recourse is limited to the complaint provision at s.62.

2010 ABQB 362 (CanLII)

[53] This is sufficient reason to conclude that ALSA has no impact upon the disposition of this matter. However, the parties have also addressed the issues of retroactivity and vested rights, and in my view it is appropriate to address these issues briefly.

(a) Retroactive Effect

[54] Section 5 of the *Interpretation Act*, R.S.A. 2000, c.I-8 provides:

> 5(1) An enactment has effect immediately at the beginning of the day on which it comes into force.

[55] In *Sullivan and Driedger on the Construction of Statutes*, 4th.ed., at p.546, the presumption with regard to the retroactive application of statutes is described as follows:

> It is presumed that the legislature does not intend new legislation to be given a retroactive application - that is, to be applied so as to change the past legal effect of a past situation.
>
> This presumption is strong. Normally it can be rebutted only if the statute or regulation in question contains language clearly indicating that it, or some part of it, is meant to apply retroactively.

[56] ALSA was not in effect at the time the Bylaws were passed by the Municipality. Absent express language to the effect that the Legislature intended the provisions of ALSA to apply to a TDC scheme implemented prior to the ALSA coming into force, the presumption that ALSA does not operate so as to retroactively invalidate an existing TDC scheme applies.

(b) The Impact of ALSA Upon the Existing TDC Scheme

[57] The Municipality contends that the use of the term “may” in s.48(2) of ALSA suggests that the list of ways to establish TDC schemes is not exhaustive. Because “may’ is to be interpreted as “permissive and empowering” while “must” is to be interpreted as “imperative”, per s.28 of the *Interpretation Act*, the Municipality suggests that it is reasonable to interpret the “may” as referencing any TDC schemes established prior to ALSA.

[58] I am not convinced that this is the proper interpretation of s.48(2). That section provides that a local authority may implement a TDC scheme if the scheme is first approved by the Lieutenant Governor in Council. It is not imperative insofar as municipalities are not compelled to implement TDC schemes, but it is clear from the language of s.48(2) that a municipality may implement a TDC scheme *only if* it has the approval of the Lieutenant Governor in Council. To put the matter another way, had the Legislature included express language to the effect that ALSA would retroactively impact an existing TDC scheme, it is clear to me that s.48 would apply and the Municipality’s TDC scheme would be rendered invalid. It is because the Legislature did not do so that it does not.

2010 ABQB 362 (CanLII)

(c) Vested Rights

[59] Mr. MacGregor provided an affidavit setting out Wild Buffalo's expenses in respect of the Carraig Ridge development. The affidavit indicates that land purchase expenses exceeded $11 million. An accounting printout provided at the cross examination on this affidavit indicates that development costs are in the range of $2.6 million. The Applicant has taken issue with a number of the expenses, but for the purposes of this decision it is necessary to find only that, at a minimum, costs associated with the development of the Carraig Ridge lands, after the passage of the bylaws, exceeds $1 million.

[60] Wild Buffalo argues that it has acquired vested rights as a result of the passage of the bylaws. It is important to distinguish this issue from the question of the retroactivity of ALSA. In *Dikranian v. Quebec (Attorney General)*, [2005] 3 S.C.R. 530, Bastarache J. pointed out, at para.30, that "In general it will be purely prospective statutes that will threaten the future exercise of rights that were vested before their commencement."

[61] The issue, therefore, is not whether the s.13 of ALSA would adversely affect Wild Buffalo's rights by retroactively invalidating the bylaws in question, but whether the provisions of ALSA would negatively affect Wild Buffalo's right to pursue subdivision on the Carraig Ridge lands going forward. In my view, in the absence of a regional plan purporting to limit the right to subdivide, there is no provision in ALSA that would have this effect. There is, in short, nothing in ALSA that purports to limit Wild Buffalo's right to apply for subdivision under the existing TDC scheme. Consequently, it is not necessary to determine whether the rights acquired by Wild Buffalo are vested because they are not effected by ALSA in any event.

Conclusion

[62] Bylaws 06/07, 07/07 and 08-Z/07 were intra vires, reasonable, and passed after the Municipality followed the proper procedures and are therefore valid. The *Alberta Land Stewardship Act* does not retroactively invalidate these bylaws, and in any event, only the Stewardship Commissioner, and not the Applicant, may challenge the bylaws on the basis of inconsistency with that Act. The application to declare the bylaws invalid is dismissed.

[63] If the parties are unable to agree in respect of costs, they may bring the issue before me within 60 days of this Judgment.

Heard March 9th, 10th and 12th, 2010.
Dated at the City of Calgary, Alberta this 27th day of May, 2010.

Concurring in the Result

Appeal from the Judgment by
The Honourable Madam Justice D.L. Shelley
Dated the 10th day of August, 2017
Filed the 19th day of September, 2017
(2017 ABQB 491, Docket: 1114 00276)

2019 ABCA 49 (CanLII)

> adjudicate it on its merits. On a summary judgment motion, a judge has the duty to take "a hard look" at the merits of a claim: ***Knee v Knee***, 2018 MBCA 20 at para. 33.

As the Court noted in ***Hryniak v Mauldin*** at paras. 27-8, a fair and just summary dismissal procedure is " … illusory unless it is also accessible - proportionate, timely and affordable", and that summary procedures are "no less legitimate" than trials.

[45] While the law does not have to be beyond doubt before summary judgment can be granted, there are occasions when the law is so unsettled or complex that it is not possible to apply the law to the facts without the benefit of a full trial record: e.g. ***Tottrup v Clearwater*** at para. 11; ***Cardinal v Alberta Motor Association Insurance Co***., 2018 ABCA 69 at para. 10, 66 Alta LR (6th) 15; ***Condominium Corp. No. 0321365 v Cuthbert***, 2016 ABCA 46 at para. 29, 33 Alta LR (6th) 209, 612 AR 284; ***Axcess Mortgage Fund Ltd. v 1177620 Alberta Ltd.***, 2018 ABQB 626 at para. 49. Where the case presents complex factual issues, such as those based on highly technical scientific and medical evidence, summary disposition will often be inappropriate. There are other occasions where there will be a genuine issue requiring a trial.

[46] Procedural and substantive fairness must always be a part of the summary disposition process. Considerations of fairness need not be a threshold requirement, nor should they only arise at the conclusion of the application. The chambers judge is entitled to take into consideration the fairness of the process, and its ability to achieve a just result, at all stages. Thus considerations of fairness will always be in the background, including during the fact-finding process, in determining whether the moving party has proven its case on a balance of probabilities, in deciding if there is a genuine issue requiring a trial, and in deciding if, considered overall, summary disposition is a "suitable means to achieve a just result". The ultimate determination of whether summary disposition is appropriate is up to the chambers judge: ***Hryniak v Mauldin*** at para. 83. As stated in ***Hryniak v Mauldin*** at para. 50 and ***Nelson v Grande Prairie (City)***, 2018 ABQB 537 at para. 47, 75 Alta LR (6th) 36, whether a summary disposition will be fair and just will often come down to whether the chambers judge has a sufficient measure of confidence in the factual record before the court. In practical terms, that level of confidence will not often be reached in close cases.

V. Summary of the Application of the Principles

[47] The proper approach to summary dispositions, based on the ***Hryniak v Mauldin*** test, should follow the core principles relating to summary dispositions, the standard of proof, the record, and fairness. The test must be predictable, consistent, and fair to both parties. The procedure and the outcome must be just, appropriate, and reasonable. The key considerations are:

2019 ABCA 49 (CanLII)

a) Having regard to the state of the record and the issues, is it possible to fairly resolve the dispute on a summary basis, or do uncertainties in the facts, the record or the law reveal a genuine issue requiring a trial?

b) Has the moving party met the burden on it to show that there is either "no merit" or "no defence" and that there is no genuine issue requiring a trial? At a threshold level the facts of the case must be proven on a balance of probabilities or the application will fail, but mere establishment of the facts to that standard is not a proxy for summary adjudication.

c) If the moving party has met its burden, the resisting party must put its best foot forward and demonstrate from the record that there is a genuine issue requiring a trial. This can occur by challenging the moving party's case, by identifying a positive defence, by showing that a fair and just summary disposition is not realistic, or by otherwise demonstrating that there is a genuine issue requiring a trial. If there is a genuine issue requiring a trial, summary disposition is not available.

d) In any event, the presiding judge must be left with sufficient confidence in the state of the record such that he or she is prepared to exercise the judicial discretion to summarily resolve the dispute.

To repeat, the analysis does not have to proceed sequentially, or in any particular order. The presiding judge may determine, during any stage of the analysis, that summary adjudication is inappropriate or potentially unfair because the record is unsuitable, the issues are not amenable to summary disposition, a summary disposition may not lead to a "just result", or there is a genuine issue requiring a trial.

[48] There is no policy reason to cling to the old, strict rules for summary judgment. This can only serve to undermine the shift in culture called for by ***Hryniak v Mauldin***. Summary judgment should be used when it is the proportionate, more expeditious and less expensive procedure. It frequently will be. Its usefulness should not be undermined by attaching conclusory and exaggerated criteria like "obvious" or "high likelihood" to it.

[49] In closing, it is helpful to note that the judge who dismisses an application for summary adjudication may still be in a position to advance the litigation. The judge may be able to isolate and identify issues that can be tried separately under R. 7.1. The summary judgment materials may form a suitable platform for a summary trial, as happened in ***Vallard Construction Ltd. v Bird Construction***, 2015 ABQB 141, 41 CLR (4th) 51. While serial applications for summary judgment are not to be encouraged, a second application for summary judgment may be appropriate later in the proceedings when the record is clarified and the issues are perhaps narrowed: ***Milne v Barnes***, 2013 ABCA 379 at para. 6, 561 AR 256.

Memorandum of Judgment of the Honourable Madam Justice Picard and the Honourable Mr. Justice Costigan

Dissenting Memorandum of Judgment of the Honourable Mr. Justice Wakeling

Appeal from the Order by
The Honourable Madam Justice D. Pentelechuk
Dated the 9th day of April, 2015
Filed on the 15th day of May, 2015

(2015 ABQB 230, Docket: 1403 12178)

2015 ABCA 368 (CanLII)

[6] In *Mitten*, this Court confirmed that a party who has a statutory right to appeal a decision dismissing a complaint has standing to seek judicial review if the appeal process is conducted in a fundamentally unfair manner. Mr. Warman's argument is not that, by virtue of exercising his statutory right of appeal, he has standing to question any downstream procedure as stated by Wakeling J.A. at paras 4 and 35. Rather, he argues that he has standing to seek judicial review of the fairness of the specific procedure which effectively reversed the results of his previous statutorily mandated appeal without his participation. While the modern test for summary judgment is to determine, based on the record, if a disposition that is fair and just to both parties can be made without the need for a trial, the intent is not to summarily prevent novel arguments on unsettled law from going forward: *Windsor v Canadian Pacific Railway Ltd*., 2014 ABCA 108 at para 13, 572 AR 317; *Hyrniak v Mauldin*, 2014 SCC 7 at paras 4-5, [2014] 1 SCR 87; *Tottrup v Clearwater (Municipal District No. 99)*, 2006 ABCA 380 at para 11, 401 AR 88. Mr. Warman's argument, although novel, is not foreclosed by any previous decision of this Court nor by the *Act* and is not devoid of merit. Counsel were unable to cite any authority on point and we were unable to find one. Therefore, Mr. Warman's application should not be summarily dismissed.

[7] Mr. Attaran's position rests on somewhat different footing. He did not have to exercise a statutory right of appeal because his complaint was not dismissed at an earlier stage. Nonetheless, his position is linked, to a certain degree, to that of Mr. Warman because the Law Society elected to consider the complaints in tandem, given their similarities, and both were dismissed by the Conduct Committee at the same hearing. In our view, Mr. Attaran's application should not be summarily dismissed either.

[8] The application of the law to the unique facts of this appeal is unsettled: *Tottrup* at para 11. The positions of both parties have sufficient merit to resist summary dismissal. The parties advance several issues, which are intertwined. In the circumstances, it is not appropriate to consider whether some issues have more merit than others. The application for judicial review in its entirety should proceed to a full hearing.

[9] The appeal is dismissed.

Reasons for Judgment
of the
Honourable Madam Justice C.S. Phillips

Appeal of Master Farrington's Decision
Filed on the 28th day of February, 2017
Dated the 27th day of February, 2017

(iv) To trigger protection from liability under section 6(2) of Schedule 19 to the *HPA*, is the only condition precedent that a generic drug or brand name equivalent be "given" to a patient? If the Appellants' argument on this is accepted, does it mean that if, for example, a pharmacist who dispenses with the wrong directions or disregards a disclosed patient's allergies with respect to a non-medicinal ingredient found in a certain generic drug substituted for another generic drug, without qualification, is afforded the protection of section 6(2) such that no action may be commenced by a plaintiff against that pharmacist?

(v) Or is it that everything else being equal, and after exercising due diligence, a pharmacist who dispenses a generic drug in substitution for a brand name drug or another generic drug, is then and only then afforded the protection from liability found in section 6(2)? and

(vi) Does it mean that the risk of liability is greater to a pharmacist when dispensing exactly what is prescribed, than when a pharmacist dispenses a drug equivalent (i.e. a generic drug) and who falls within the protection from liability under section 6(2)?

[38] In the result, I conclude that the legal and factual issues are so intertwined that they cannot be fairly decided on a summary record. To use the words of the majority of the Court in ***Warman v Law Society of Alberta***, 2015 ABCA 368 paragraph 1. "It is appropriate and important that the legal issues raised be dealt with by a court that has the benefit of a complete record."

[39] Furthermore, as noted above, much of this calls for a statutory interpretation. As a judge sitting on an appeal from a Master, I decline to resolve the dispute regarding the interpretation and meaning of section 6, and in particular section 6(2) of Schedule 19 of the *HPA* as it relates to the facts of this case. In my opinion, the law is very much unclear on this and any determination by me would require this Court to make new law. I am not prepared to do so based on the summary record before me.

[40] Although, it is not necessary for a determination of this Appeal, I should add that in my opinion the Master's interpretation of sections 6(1) and 6(2) of Schedule 19 of the *HPA* appear to be unpersuasive. I do not believe it necessary for section 6(1) to be met in order to trigger section 6(2). In my view, they operate independently. However, I will not further comment because I leave it to the trial judge to decide this issue with the benefit of a full record.

Conclusion

[41] Accordingly, the appeal is dismissed.

[42] Since I have dismissed this Appeal and therefore upheld the Master's decision to dismiss the Appellants' summary dismissal applications, albeit for somewhat different reasons than that of the Master's, I see no need to deal with the issue of whether the corporate Appellant Mountview is statutorily protected by section 6(2) of Schedule 19 of the *HPA* on the facts of this case. I leave that to the trial judge to decide.

[43] The parties may contact my assistant to arrange a time mutually convenient to all to speak to the matter of costs, if necessary.

Memorandum of Judgment of the Honourable Mr. Justice Thomas W. Wakeling and the Honourable Mr. Justice Kevin Feehan

Dissenting Memorandum of Judgment of the Honourable Mr. Justice Brian O'Ferrall

Appeal from the Order by
The Honourable Mr. Justice D.K. Miller
Dated the 7th day of December, 2018
Filed the 30th day of September, 2019
(Docket: 1508 00014)

satisfied that they are fairly heard and accept the outcome as the product of a rational process. The fact that they are willing to return to the private forum is the best proof that they are satisfied with the protocol.

[183] But some disputes are of such a nature that the parties must be allowed to access every procedural stage that the civil process offers and make unlimited use of it to ensure that justice is done. Disputes on complex material facts and those in which one or both of the parties do not abide by the rules or court orders[256] are two obvious examples of this type of dispute.

[184] The crucial questions are these.

[185] What are the stages of the civil process that a dispute must pass through to be fairly and accurately assessed?

[186] Who is entitled to make that decision? The litigators or the courts?

[187] And when should that decision be made?

[188] Historically, litigants made most of the important litigation decisions and determined individually the stages of the civil process that a litigant would utilize and when.[257]

[189] That is not the case anymore.

[190] Our *Alberta Rules of Court*[258] now assign the courts a major role in determining the pace of litigation and the stages of the litigation process that a party may access.[259]

---

arbitration may be very similar to that applicable to proceedings in the larger and more complex cases that come before the court, with full oral hearings, strict adherence to the rules of evidence, pleadings, extensive disclosure of documents, and factual and expert witnesses. At the other extreme, it may be agreed that the tribunal should decide the dispute on the basis of a limited range of documents, with no hearings, pleadings or submissions (oral or written). Between these extremes procedures may be modified or mixed as desired").

[256] E.g., *Dreco Energy Services Ltd. v. Wenzel*, 2006 ABQB 356, ¶ 41; 399 A.R. 166, 177 ("I conclude ... that the destruction of these computer files was intentional and deliberate. The Defendants gave undertakings to provide computer records. There was a Court Order ... that required these records be produced by May 12, 2004. The records were not produced. Instead, they were destroyed when, after February 27, 2004 the assets of KW Downhole Tools Inc. were sold to Wenzel Downhole Tools Ltd. ... . I find that the purpose for their destruction was to destroy evidence which would have been relevant and admissible in these proceedings").

[257] *Ursa Ventures Ltd. v. City of Edmonton*, 2016 ABCA 135, ¶ 91; 91 C.P.C. 7th 73, 111 per Wakeling, J.A. ("Common law civil procedure is based on the adversarial system that places some limits on the role of the judiciary and values party autonomy. Under traditional common law regimes, the parties make many important litigation decisions").

[258] Alta. Reg. 124/2010.

Between:

Alberta's Free Roaming Horses Society and John Ticknor

Applicants

- and -

Her Majesty the Queen in Right of Alberta

Respondent

Decision
of the
Honourable Mr. Justice B.A. Millar

Introduction

[1] Alberta has legislation governing wild horses through the *Stray Animals Act* and the *Horse Capture Regulation*. Together these pieces of legislation allow for the capture of wild horses either to protect or conserve lands, or for public safety, or the horses' safety. Under the legislation, the Minister can designate that portions of public lands are available for licensees to capture wild horses, and then confine, transport or dispose of the horses.

[2] The Applicants in this case are Alberta's Free Roaming Horses Society and John Ticknor. The Society aims to preserve and protect Alberta's wild horses and to promote their ethical treatment. They allege that wild horse capture has been going on for years without the government properly coming to an opinion that the removals are necessary before making land designations and issuing licenses. They seek a declaration that the government must make the

requisite opinion before authorizing the removal of the horses. They also seek a declaration that the current public land designation is void as are any extant and active licenses that were issued pursuant to it (the "Application"). Finally, the Applicants seek an order of mandamus requiring the government to prepare the opinion in writing and make it publicly available before designating any lands.

[3] The Respondent, the Province of Alberta, takes the position that the public land designations and associated licenses have all been issued under proper authority. The Province also argues that the Application is limitation barred as the designations in question were made over 12 years ago. Further, the Province argues that the Applicants should not be granted standing to bring the Application. Based on these grounds, the Province asks that the Application be summarily dismissed. Additionally, the Province brought a cross-application to strike the Application in its entirety (the "Cross-Application") on similar grounds. The Application and Cross-Application were heard at the same time.

2019 ABQB 714 (CanLII)

Background

[4] The legislation at issue is s 9 of the *Stray Animals Act,* RSA 2000 c S-20, which allows the Minister to designate public land for which a licence may be issued to capture, confine, transport or dispose of horses. The Minister can designate the land if, in the Minister's opinion, the designation is needed to protect, maintain or conserve the land, wildlife habitat, or for the safety of the public or the horses. Once the land is designated, the Minister can issue licenses to license holders to confine, transport or dispose of the horses:

> 9(1) The Minister responsible for the administration of the Public Lands Act may designate public land for which a licence under this section may be issued if, in the opinion of the Minister, it is necessary to protect, maintain or conserve the range, forage, soil, reforestation, wildlife habitat or other resource or for the safety of the public or of horses or as provided for in the regulations.
>
> (2) The Minister responsible for the administration of the Public Lands Act may, in accordance with the regulations, issue licences that authorize the licence holder to capture horses on public land designated under subsection (1) and to confine, transport and dispose of those horses.

[5] The Record of Proceedings shows that the Minister has made designations of public land pursuant to the *Act* three times: August 24, 1994, January 29, 1996, and October 13, 2005, with each designation replacing its predecessor. Therefore, the only designation being challenged in this case is the October 2005 designation.

[6] The Record of Proceedings contains a Ministerial Order with an Appendix for each of these dates. The orders recite that a land designation is being made, then the accompanying appendix contains multiple pages with legal descriptions of the land affected. The orders are simple and do not contain any commentary on the need for the designation, for example the 2005 Order states the following:

> I, David C. Coutts, Minister responsible for the administration of the *Public Lands Act*, pursuant to section 9.1 of the *Stray Animals Act*, hereby designate the public land described in the Appendix to this order as public land for which a licence under section 9.1 of the *Stray Animals Act* may be issued.

> Ministerial Order 06/96 is hereby revoked and replaced by this Ministerial Order.
>
> DATED at the City of Edmonton, in the Province of Alberta, this 13 day of October, 2005.

[7] The Record of Proceedings from the government contained only the Orders and accompanying appendices from 1994, 1996, and 2005 when it was originally filed.

[8] The Applicants filed an affidavit sworn by Mr. Ticknor that provides more background and context to the legislation and how it has been implemented (the "Affidavit"). He provides excerpts from Hansard regarding the amendment of the *Stray Animals Act* to provide protection for wild horses back in 1993. He also details the various requests he made (through counsel) to the Province relating to land designations. Mr. Ticknor was aware of a Memorandum of Understanding between the Province and the Wild Horses of Alberta Society (WHOAS), which permits the society to capture horses for an adoption program and contraception program. Mr. Ticknor wanted to track down the Minister's "opinion" which supported the land designations and the Memorandum of Understanding. He made requests to a number of different government departments, but none of them were able to provide him with the information in the form he sought.

[9] In addition, the Affidavit includes correspondence with Alberta Environment and Parks. That department confirmed some of the details regarding the horse capture program, including that licenses had issued in the past for horse capture on a seasonal basis (November to March), but that the last license program ended in spring 2015. Outside of that, licences had been issued from time to time to organizations such as WHOAS for capture on the designated lands. Finally, since there had been no capture season for a number of years, there was no extant "opinion".

[10] I note that the Province has challenged the admission of Mr. Ticknor's Affidavit, or at least the permitted uses of it in this proceeding, which will be dealt with later in this decision. The Province however is not disputing the history in the Affidavit relating to licences.

[11] The Applicants filed their Application on August 31, 2018, seeking the aforementioned declarations and mandamus remedy due to the absence of a Minister's opinion to support any land designations or licenses.

[12] The Province filed its own application to strike or for summary dismissal on February 4, 2019, arguing the allegations were out of time and made for an improper purpose. The applications were ordered to be heard concurrently, with a date set for March 26, 2019.

[13] Shortly before the hearing, the Province amended their Record of Proceedings and provided government documents relating to the expansion of the horse capture area in 2005. More detail will be provided later, but the documents include a Briefing Note and Memorandum to the Minister regarding the rationale for the expansion, and a draft Minister's Order. These documents did not change the Applicant's position that there is still no written opinion from the Minister and the applications proceeded on March 26, 2019.

Issues

1. Do the Applicants have standing to bring this Application?
2. Should this Court permit the Applicants to rely on the Ticknor Affidavit when reviewing the Minister's decisions?

2019 ABQB 714 (CanLII)

3. Is declaratory relief available in these circumstances or is the Application filed outside of the time limit for applications for judicial review?
4. Did the Minister satisfy the requirement in section 9 of the *Act* to form an opinion before proceeding with designating public lands and issuing licenses?

Decision

Standing

[14] A preliminary issue on this Application is whether the Applicant society and Mr. Ticknor, who is a director of that society, should be granted standing to bring this judicial review. The test for public interest standing requires a court to weigh the following three factors:

a. Is there a serious justiciable issue?
b. Does the party bringing the action have a real stake or genuine interest in the outcome?
c. Is the proposed action a reasonable and effective means to bring the case to court?

> ***Downtown Eastside Sex Workers United Against Violence Society v Canada (Attorney General),*** 2012 SCC 45, at para 2, citing *Canadian Council of Churches v R*, [1992] 1 SCR 236.

[15] I note that the Province admitted the Ticknor Affidavit was admissible for the purpose of arguing standing.

[16] The Province argues that there is no justiciable issue here because the Applicants have a collateral purpose for bringing this Application. It argues that the Applicants' true purpose in seeking the Minister's opinion is to determine if it was done on a satisfactory basis and compel the Province to seek the input of the Applicants before making land designations. It argues that this application is a preliminary step in the Applicants' end-game.

[17] The Province further argues that the Applicants have no real stake in the outcome as the only party affected by a decision that the land designations were invalid would be licence holders. Finally, the Province argues that this Application was brought for the collateral purpose of compelling the Minister to publicize its opinion or consult with the Applicants before taking any steps under the *Act*. This would also be an abuse of process as there is nothing in the legislation requiring consultation or publication of the Minister's opinion.

[18] The Applicants disagree, noting that they have a genuine interest in the welfare and protection of Alberta's wild horses given their mandate. They submit that someone must act on behalf of the horses, as "no animal ... can start an action on its own": ***Reece v Edmonton (City)***, 2011 ABCA 238, at para 179, citing Fraser CJ, in dissent. They argued that the question of the Minister's jurisdiction is a matter between the government and the public and that limits on governmental authority are serious.

[19] I have decided to grant the Applicants standing to bring their application. There was no challenge of Applicants' genuine interest for Alberta's wild horses. Mr. Ticknor's Affidavit shows the multiple efforts made by he and the society to determine whether the Minister issued an opinion in support of the section 9 land designations. Further, there nor does there appear to be another way for this matter to come before the court, considering that the party with the most

2019 ABQB 714 (CanLII)

at stake in this case are the horses themselves. There do not appear to be any current license holders, so that is not of concern either.

[20] I also agree with the Applicants that determining whether the government has complied with the law and is acting with authority is a serious justiciable issue: ***Reece***, at paras 173-174 (Fraser CJ in dissent).

[21] Although there was some difficulty in determining what the Applicants sought from this Application, there was no support in the evidence for the Province's position of a collateral or improper motive here such that it would be an abuse of process. The Applicants withdrew their original position that the Province should consult or seek input from groups such as the society before making a designation. The Province chose not to cross-examine Mr. Ticknor on his affidavit, and so questioning his and the society's motives is purely speculative.

2019 ABQB 714 (CanLII)

The Ticknor Affidavit

[22] The Province argues that the evidence in the Ticknor Affidavit should not be admissible for the purpose of considering the Minister's decision to grant the land designations. It submits that the general rule is that only evidence before the decision-maker is admissible, which is generally the Record of Proceedings, citing rule 3.22 of the *Rules of Court*:

> Evidence on judicial review
>
> 3.22 When making a decision about an originating application for judicial review, the Court may consider the following evidence only:
>
> (a) the certified copy of the record of proceedings of the person or body that is the subject of the application, if any;
>
> (b) if questioning was permitted under rule 3.21, a transcript of that questioning;
>
> (c) anything permitted by any other rule or by an enactment;
>
> (d) any other evidence permitted by the Court.

[23] The Province explained the rationale behind the restricted approach is that a court's role is to review the decision below. It does not consider the matter anew. The court must determine if the decision is reasonable based on the information that was before the decision maker, not on further evidence that is presented on judicial review: ***Alberta Liquor and Gaming Commission***, 2006 ABQB 904, at paras 38-43.

[24] The Province accepts that there are limited exceptions to the general rule, such as when evidence is needed to show bias or to show a breach of natural justice, but asserts that those circumstances do not exist here. It submits that the questions here, which relate to exceeding jurisdiction and whether relevant considerations were taken into account, should only be answered through reference to the documents contained in the Record of Proceedings. Information in the Ticknor Affidavit is submitted to be "padding the record with irrelevant information."

[25] Although the Province is correct that affidavit evidence is usually not admissible on a judicial review, I find that the Applicants submissions on why I should use my discretion under

rule 3.22 (d) to be persuasive. This is not a typical judicial review case where the Record of Proceedings shows the materials submitted and considered by a tribunal, along with their reasons for decision. The question here is whether the Minister properly exercised his jurisdiction in making the land designation. The Record of Proceedings contains only the decision (the Order) and the briefing note and memorandum. No actual reasons from the Minister exist. This is similar to one of the exceptions mentioned in ***Alberta Liquor and Gaming***, namely where the decision maker makes no record of, or an inadequate record of, its proceedings.

[26] Without the Ticknor Affidavit, the background and context necessary to understand the Application would be absent. It would also be challenging to understand the effect of a declaration without the material explaining the licensing system in place. The material in the Ticknor Affidavit assists the court and is not akin to admitting new evidence on the merits of the decision. Therefore, for the purpose of providing context to the Application, the Ticknor Affidavit is admissible on this judicial review.

2019 ABQB 714 (CanLII)

Can the Applicants Pursue Judicial Review?

[27] The parties disagree over whether judicial review is the appropriate proceeding and if so whether the Application was filed out of time. Although there was some confusion about what the Applicants' sought prior to the hearing, it became clear that they seek the "opinion" that supports the land designation, which they say is missing. They also seek a declaration that the Minister is obligated to prepare a written opinion before making a land designation. They do not challenge the Minister's discretion to designate public land, or the 2005 Order itself, or which lands should be designated. Nor do they challenge any licences that have been or may be issued.

[28] Further, the Applicants say that if they are correct that the Minister acted without jurisdiction as there is no opinion, the public land designation and any existing licenses are nullities and void *ab initio*, and the Applicants seek declarations to that effect. They also seek an order of mandamus that the opinion be made publicly available, such as being posted on a website, for public transparency and accountability.

[29] The Province argues that what the Applicants are seeking falls under rule 3.15 of the *Rules of Court*, as they seek a remedy to set aside a decision or act of the Minister, being the land designation, which is subject to a six-month limitation period in 3.15(2):

> 3.15(1) An originating application must be filed in the form of an originating application for judicial review if the originating applicant seeks from the Court any one or more of the following remedies against a person or body whose decision, act or omission is subject to judicial review:
>
> (a) an order in the nature of mandamus, prohibition, certiorari, quo warranto or habeas corpus;
>
> (b) a declaration or injunction.
>
> (2) Subject to rule 3.16, an originating application for judicial review to set aside a decision or act of a person or body must be filed and served within 6 months after the date of the decision or act, and rule 13.5 does not apply to this time period.

[30] Rule 13.5 gives the court the power to enlarge or abridge time under the Rules, but as is stated in rule 3.15 (2), the six-month limitation period for judicial review is exempted from being changed.

[31] As this Application was filed in 2018, it was filed almost 13 years after the 2005 land designation, thus the Province argues it was out of time and must be dismissed or struck.

[32] The Applicants respond that what they seek is a declaration in relation to an omission by the Minister, the lack of the opinion, and that omissions are specifically excluded from the time limit under rule 3.15(2). They argue the time limit applies only to decisions or acts of a person or body, not to omissions.

[33] Further, even if they were challenging an act or decision by the Minister, the Applicants argue that the declaration would result in the designation being found a nullity, which is different from setting aside a decision or act.

[34] The Applicants submit that if the Province's argument is accepted, it would mean that the Minister could avoid complying with the requirement of an opinion under s 9(1) unless that omission was caught within six months. If more than six months had passed the lack of compliance could never be challenged.

[35] In support of their respective positions, the parties relied on and distinguished two main cases, with the Province relying on *Athabasca* and the Applicants relying on *Mammoet*, two decisions that both went to the Alberta Court of Appeal.

[36] ***Athabasca Chipewyan First Nation v Alberta (Minister of Energy)***, 2009 ABQB 576, aff'd 2011 ABCA 29, leave to appeal to SCC refused [2011] SCCA No 128, concerned a First Nations group who sought declarations that certain oil sands leases granted by the Minister of Energy on their reserve lands were defective due to a failure to consult. They argued the Minister was under a continuing duty to consult and sought declarations that the leases should be quashed, or alternatively suspended or stayed. The Minister alleged that that the First Nation was out of time because their claim was filed past the six-month time limit for judicial review and asked for summary judgment. The leases were granted between November of 2006 and March of 2007, and the claim was filed on December 10, 2008. The First Nation responded that the six-month limitation period does not apply to declaratory relief.

[37] The Court discussed the limitation period applicable to judicial review applications and noted the *Rules* specifically prevent courts from enlarging or abridging the time limit, noting that fact "is a clear signal that the six-month time period is intended to be fixed and cannot be extended", at para 18, citing *Urban Development Institute v Rocky View (Municipal District No 44)*, 2002 ABQB 651. It also explained the important policy reasons behind limitation periods, which are to bring finality and certainty to events, which is especially important in administrative decisions where rights and responsibilities are affected by the decisions, at para 19:

> There are good policy reasons behind the adoption of limitation periods. They are necessary to bring finality and certainty to events because without them, the conduct of affairs of state and business would be chaotic: Babiuk v. Calgary (City) (1992), 133 A.R. 21 (Q.B.) ("Babiuk"), at para. 25. This rationale was articulated further by Veit J. in Johannesson v. Alberta (Workers' Compensation Appeals Commission) (1995), 175 A.R. 34 (Q.B.) at para. 34:

2019 ABQB 714 (CanLII)

> The Rules establish a 6 month limit within which a motion for judicial review must be brought. This limitation reflects a policy decision to the effect that, ordinarily, when a properly constituted tribunal makes a decision, that decision is binding; any challenge to that decision must be made promptly because the rights and responsibilities of many persons may be affected by the decision. All of those people who are directly and indirectly affected by such a decision cannot be left in limbo indefinitely. There must be closure, finality, so that every one can move on. It is therefore important to move to set aside or challenge a decision within 6 months of the day when the decision is issued.

[38] The Court also noted that in some situations where a party seeks a declaration the six-month time limit does not apply, such as a declaration that a municipal bylaw is invalid due to lack of jurisdiction. However, where the effect of the declaration is to set aside an administrative decision, the time limit does apply.

[39] In order to determine what is being sought when declarative relief is claimed, the court must look to the remedy being requested. If the effect of the judicial review remedy is to quash a delegate's decision, the time limit applies, ***Athabasca*** at para 21. The same is true of a declaration seeking to challenge the validity of a decision, at para 23. The Court summarized the law on this point succinctly as follows, at para 24:

> Based on the law expressed above, one must look to the nature and substance of the relief requested, and not merely to whether the relief is framed in the form of a declaration, in order to determine whether the application for judicial review is subject to the six-month limitation set out in Rule 753.11 [now rule 3.15].

[40] Applying the law to the declarations sought for the leases at issue, the Court determined that all of the declarations sought were tied to specific administrative decisions made by the Minister through the granting of the leases. The declarations did not allege invalidity of a bylaw or regulation due to a lack of jurisdiction, nor was the validity of the legislation or regulatory regime being challenged. The relief sought, that the Minister was under a duty to consult, was not merely advisory because the effect of such a declaration would be to challenge the validity of the leases. Similarly, the requests to stay or suspend the leases were tied to the administrative decisions to grant the leases and were time-barred, at paras 37-39.

[41] The Alberta Court of Appeal affirmed the findings outlined above: 2011 ABCA 29.

[42] The Province argues that ***Athabasca*** is directly on point as the Applicants, despite asking for declarations, in effect seek to set aside decisions that were made by the Minister pursuant to the *Stray Animals Act*.

[43] ***Mammoet 13220-33 Street NE Ltd v Edmonton City***, 2013 ABQB 663, was an example of a case where the time limit did not apply. The applicant was a developer who obtained a development permit in 2006, and purchased land in 2007, but only found out about significant levies for roads that were being put on the property in 2012. The levies were placed pursuant to a 2006 bylaw. The developer believed the bylaw allowing the levies was invalid because it failed to conform to its governing regulation. It challenged the bylaw through judicial review, seeking a declaration of invalidity. The municipality of Edmonton argued that because the bylaw was

2019 ABQB 714 (CanLII)

passed in 2006, the six-month time limit applied and the levies under the bylaw could no longer be challenged.

[44] The Court reviewed the regulation at issue. It agreed with the developer that the bylaw appeared to be invalid on its face because it did not incorporate certain requirements for municipalities that were set out in the regulation, such as a term relating to the city negotiating levies with affected parties.

[45] Edmonton did not argue about the validity of the bylaw but focussed its argument on the time limit applying to the bylaw challenge. It relied on a case from the Alberta Court of Appeal which it argued stood for the proposition that challenges to municipal bylaws are subject to the six-month limitation period for judicial review. Much of the Court's time in the case was spent attempting to understand and potentially distinguish that case from another Court of Appeal case that came to the opposite finding.

[46] Ultimately, the Court sided with the authority from the *United Taxi* case, which held that the limitation period does not apply in cases where a bylaw is being challenged as void based on a lack of jurisdiction to enact it.

[47] The Applicants rely on the following passage from ***Mammoet*** to support their position that if a decision is challenged as void for not meeting statutory pre-conditions, the limitation period does not apply, at para 48:

> And both United Taxi and Wiswell do appear to stand squarely for the proposition that a challenge to an arguably invalid bylaw will not fail owing to an expired limitation period. The latter court adopted the comment by Rogers in The Law of Canadian Municipal Corporations, vol. 2, at p. 893:
>
> > ... A voidable by-law is one that is defective for non-observance or want of compliance with a statutory formality or an irregularity in the proceedings relation to its passing and is therefore liable to be quashed whereas a void by-law is one that is beyond the competence to enact either because of complete lack of power to legislate upon the subject matter or because of a non-compliance with a prerequisite to its passing.

[48] The Court of Appeal affirmed the decision and confirmed that the time limit does not apply when a statutory pre-condition for a bylaw has not been met: 2014 ABCA 229, at para 29:

> ... the respondents are arguing that the Bylaw does not meet certain statutory pre-conditions which would render it void. It follows that the respondents can make this argument without concern for the limitation period found in Rule 3.15(2), although any issue of delay may go to the exercise of discretion in the grant of a remedy.

[49] The Applicants argue that as the statutory pre-condition of the Minister's "opinion" was not met, the land designation is void.

[50] Having considered the two cases and their application, I agree with the Province that the limitation period applies in this case. The Applicants have attempted to frame their case as one seeking a declaration that an opinion is a statutory prerequisite to a land designation, however, they do not actually challenge the validity of the legislation.

2019 ABQB 714 (CanLII)

[51] The facts in this case are akin to ***Athabasca***, where the applicant sought to have the leases quashed, and is not akin to ***Mammoet*** where the applicant sought to have legislation declared invalid. The Applicants admittedly are not attempting to have the *Act*, or even a section of the *Act,* declared invalid.

[52] As this is not a case where legislation such as a bylaw is being challenged, the Applicants' reliance on that line of cases is misplaced. Municipal bylaws are not administrative decisions, ***Mammoet*** at para 89. In the decision of ***Urban Development Institute v Rocky View (Municipal District No 44)***, 2002 ABQB 651, which is cited both by the trial judge and appellate court in ***Mammoet***, as well as in ***Athabasca***, the Court makes it clear that challenges to legislation are treated differently than challenges to administrative decisions. Challenges to legislation are not caught by the limitation period, at paras 15-16:

> ...I have found that the Bylaw before the Court here is a form of subordinate legislation that must be interpreted by the Court. It is not a decision of a tribunal to be set aside.
>
> Finally, this matter seems to have been conclusively resolved by the Alberta Court of Appeal in the recent United Taxi Drivers Fellowship of Southern Alberta decision, supra. In finding that Rule 753.11(1) did not apply to a request for a declaration that a Calgary city bylaw was invalid, the Court stated at paragraph 162:
>
> > No relief is sought to set aside "a decision or act". What is sought is a declaration of invalidity of parts of a bylaw due to lack of jurisdiction. In such cases, [the time limit set out in] R.753.11(2) does not affect the ability of a court to decide the municipality lacked the jurisdiction under its constituent legislation.

[53] Again, here the Applicants do not challenge the legislation, only the "decision or act" taken by the Minister under the legislation. It is agreed by all parties that the Minister may designate land pursuant to s. 9 of the *Act*.

[54] Ultimately, the Applicants are asking this Court to quash the land use designations that the Minister made pursuant to s 9 of the *Act,* along with any related licenses. The true nature of their request is not simply a declaration, but the added consequence of setting aside the Minister's decision and any licenses which have issued past or present.

[55] The Applicants seek the following declarations:

a) The Minister has not come to any opinion as required under section 9 of the *Stray Animals Act*; and/or
b) The Minister has not designated public land for which licenses may be issued;
c) Any extant designation of public land made ostensibly pursuant to section 9 of the *Stray Animals Act* is void *ab initio* and of no force and effect;
d) Any extant and active licenses issued ostensibly pursuant to section 9 of the *Stray Animals Act* and its *Horse Capture Regulation* are void ab initio and of no force and effect; and
e) The Minister and any delegates have no jurisdiction to designate public land or issue licences pursuant to section 9 of the *Stray Animals Act* and its *Horse*

2019 ABQB 714 (CanLII)

> *Capture Regulation*, until the Minister has satisfied the necessary pre-condition under section 9(1) of the *Stray Animals Act*.

[56] The relief requested is determinative, not the framing of the question: ***Athabasca***.

[57] I find that the Applicants are challenging an administrative decision by the Minister well outside of the limitation period in rule 3.15 and dismiss their application on this basis. Consistent with this finding, the Province's application for summary judgment is granted.

2019 ABQB 714 (CanLII)

What is required of the Minister under s 9(1) of the Act?

[58] Although the previous section disposes of this matter, I note that I was not convinced by the Applicants that a written "memorialized" opinion was required by the Minister in this case. There is no requirement in the legislation for the two-step process advocated for by the Applicants, whereby the Minister would first demonstrate in writing that he or she had come to an opinion that a land designation was necessary, then secondly create a land designation such as those we see in the Record of Proceedings. Nor did the Applicants' case law support such a position, it only demonstrated that there are occasions where Ministers in unrelated cases had issued letters containing their opinions. However, requirements for a valid "opinion" were not at issue in those cases.

[59] Based on my finding that a written opinion from the Minister is not required, I would have declined the Applicants' request that the Minister's opinion be made public.

[60] Finally, regarding the opinion itself, I do agree with the Applicants that the Minister must personally come to the required opinion and that this task may not be delegated, absent legislation permitting such delegation: ***Edgar v Canada (Attorney General),*** 46 OR (3d) 294 (Ont. C.A.), at para 43. However, when one looks at the Memorandum from the Deputy Minister to the Minister in October 2005, it provides the information that the Minister would have needed to form such an opinion. The Memorandum explains in a letter the need for the expansion of the land designation in 2005 to the Minister. It also attaches a Briefing Note prepared on the topic for the Minister's Department. The Memorandum reads in part "[t]he designated horse capture area is being expanded to allow horses to be captured where herds are increasing and are known to cause safety problems along roads and highways outside the existing designated area. Expansion of the designated area will provide the mechanism to enable licensed, humane horse capture in these areas to improve safety along the roads and highways..." Accompanying the Memorandum was a Ministerial Order for the Minister to sign.

[61] Considering that the Minister was provided with this information and signed the Ministerial Order designating the lands, I find an inference can be made that the Minister agreed with the research done by his department in support of the land designation. The fact that the Minister did not research the topic on his own does not mean he could not form an opinion based on appropriate information being provided. I agree with the Province that in this circumstance the Minister is owed deference and that his decision falls within a range of possible, acceptable outcomes based on the information before him: ***Kolody v Alberta (Environment and Sustainable Resource Development)***, 2016 ABQB 360. I therefore would not have disturbed the land designation.

Conclusion

[62] The Province's application for summary judgment is granted.

[63] Costs may be spoken to within 30 days.

Heard on the 26th day of March, 2019.
Dated at the City of Calgary, Alberta this 13th day of September, 2019.

Applicants / Defendants

Memorandum of Decision
of the
Honourable Mr. Justice J.W. Hopkins

I. Introduction

[1] On April 17, 2018, Scott Manson [Mr. Manson], acting for himself and also as the self-appointed representative for the Estate of Melba Manson (Mr. Manson's mother) [the Estate],

filed a Statement of Claim that named as Defendants Obsidian Energy Ltd. [Obsidian], a petroleum resource company, Her Majesty the Queen in Right of Alberta [Alberta], and an Ontario lawyer, Todd J. Burke [Mr. Burke]. Obsidian is the successor of the other petroleum resource corporations identified in the action's style of cause.

[2] The allegations in the Statement of Claim against Obsidian are not readily summarized, nor are their details particularly relevant to this decision. In brief, Mr. Manson alleges that Obsidian and its precursors illegally obtained petroleum from land where Mr. Manson and the Estate had a property interest. The Plaintiffs allege they were denied large payments that they were due, and on that basis sue Obsidian for $15 million, "... that may be doubled or trebled at law."

[3] The complaints against Alberta relate to prior litigation. These claims are best illustrated by quoting the relevant passages from the Statement of Claim:

> ... This Statement of claim further alleges that at all mineral times, Her Majesty the Queen in right of Alberta knew or ought to have known through various legal notices sent by the Plaintiffs not only to be the Provincial Government of Alberta but also the former Premier and Minister of Justice that in fact the Government of Alberta was knowingly allowing the rules of Court to not only be violated and trashed by certain judges but in addition some case decisions were so flawed under law that it clearly violated the Honorable wisdom and intention of the Alberta legislature and senate who are ultimately responsible for the rules of Court of queen's Bench to be specifically adhered to under law and followed precisely by the court and the appointed judges.
>
> ... The Provincial Government of Alberta has known or ought to have known that it has additionally damaged the Plaintiffs by permitting rogue judges to trash the Alberta Rules of Court and not adhere under law to the intentions of the Alberta Legislature and Alberta Senate who are ultimately responsible for the conduct and liability of the damages done against the collective Plaintiff's and the Provincial Government of Alberta is enriched every month by a royalty off this producing mineral title.
>
> [Sic]

[4] On this basis Mr. Manson and the Estate seek $5 million in damages, again "... that may be doubled or trebled at law."

[5] The allegations against Mr. Burke are found in one of the headings of relief:

> This Statement of Claim further alleges damages against Todd J. Burke (#33586B) in the amount of $1,500,00.00 (one million five hundred thousand dollars) which include elder abuse where Mr. Burke physically approached the Plaintiffs in court by extending his arm and waiving it in Melba Manson's face who is 87 years of age while uttering financial threats on behalf of his clients, Canetic, Penn West and the Alberta government, collusion and conflict of interest. [Sic]

[6] The Defendants deny liability. Each applied to have the claims against themselves struck out. In addition, Obsidian asked the Court to impose prospective court access restrictions against the Plaintiffs by what is sometimes called a "vexatious litigant order".

2020 ABQB 370 (CanLII)

[7] The Defendants appeared before Bast J on January 25, 2019. Mr. Manson did not appear. Justice Bast ordered the striking out and court access restriction applications to be heard in a special chambers hearing set for June 6, 2019.

II. The June 6, 2019 Hearing

[8] The Defendants appeared before me on June 6, 2019. Mr. Manson was not present. The Court adjourned for 30 minutes in case Mr. Manson was in some way delayed. He never arrived. I then concluded Mr. Manson was properly served notice of the Defendants' applications.

A. Submissions

[9] The Defendants each prepared a written brief, but also made oral submissions.

1. Alberta

[10] Alberta took the position that the claims against it were hopeless on three separate bases. Those allegations should be struck out per *Rule* 3.68(2)(b) of the *Alberta Rules of Court*, Alta Reg 124/2010, since the Plaintiffs' claims against Alberta:

1. fail to recognize the constitutional separation between government and the Court, the principle of judicial independence, and that complaints against federally appointed judges are properly adjudicated before the Canadian Judicial Council;
2. in relation to alleged misapplication of the *Rules of Court,* are not particularized; and
3. are statute barred by the *Limitations Act*, RSA 2000, c L-12.

2. Mr. Burke

[11] Mr. Burke argued that the Statement of Claim provided no reasonable basis for the Plaintiffs to sue Mr. Burke. During a *Rule* 3.68 analysis the facts pled are presumed to be true, however all that the Plaintiffs had claimed was that Mr. Burke was an Ontario lawyer, and the bald allegations of "elder abuse". The latter purportedly involved arm waving, unspecified "financial threats", and bald allegations of collusion and conflict of interest. These claims are not an adequate basis for a lawsuit, let alone the claimed $1.5 million in damages.

[12] Counsel for Mr. Burke also argued that the fact the substantive allegations against Mr. Burke were in the prayer for relief is also fatal, since information in that part of a statement of claim are not facts alleged.

[13] Mr. Burke concluded that when evaluated in the context of the ***Hryniak v Mauldin***, 2014 SCC 7, [2014] 1 SCR 87 civil litigation "culture shift", the appropriate steps are to strike Mr. Burke from the Statement of Claim, and award costs against the Plaintiffs on a full indemnity or elevated basis.

3. Obsidian

[14] Obsidian argued both that the Statement of Claim should be struck out pursuant to *Rule* 3.68, and also that Mr. Manson and the Estate should be subject to court access restrictions. The factual basis for both remedies in certain senses overlaps, since the same factors favour both remedies.

2020 ABQB 370 (CanLII)

[15] Obsidian submitted that a critical factor to understand the present action is that the current Statement of Claim has a series of historical antecedents. Obsidian and its precursors had indeed leased property owned by Mr. Manson and his mother, but that relationship ended in 2014. Obsidian and its precursors made payments to Mr. Manson and his mother while that lease was underway.

[16] In 2007-2008 Obsidian became a third-party to a dispute over ownership of the mineral rights in question. While that dispute was underway, Obsidian, per a court order (***Penn West Petroleum Ltd v Manson*** (13 May 2008), Calgary 0801 04488 (Alta QB)), paid royalties into Court. The Mansons launched an appeal of that decision, which was struck as non-compliant with the *Rules* (***Penn West Petroleum Ltd v Manson*** (2 November 2010), Calgary 0801 04488 (Alta QB)).

[17] Despite this, Mr. Manson and his mother alleged that Obsidian had no lease, was misappropriating funds, and "... this action is very underhanded and extremely unprofessional and unethical". The Court ordered that distribution of royalty funds continue while the Mansons continued these complaints.

[18] In 2014, Mr. Manson and his mother renewed their litigation challenges to the 2008 Order, alleging that Obsidian had engaged in fraud, that counsel for Obsidian had lied to the court to further that fraud, and that $18 million should be paid into Court on that basis. Rawlins J dismissed the application as a duplicate proceeding and therefore futile (***Penn West Petroleum Ltd v Manson*** (10 September 2015), Calgary 0801 04488 (Alta QB)). Justice Rawlins also imposed court access restrictions on Mr. Manson and his mother:

1. Mr. Manson and his mother must obtain leave of the Court of Queen's Bench of Alberta prior to bringing proceedings against Obsidian's precursor Penn West Petroleum Ltd, and

2. Mr. Manson and his mother may only make applications or seek leave after they paid $5,000.00 in costs to Obsidian's precursor Penn West Petroleum Ltd.

[19] Obsidian indicates that costs award has not been paid.

[20] The Mansons then filed an appeal. Instead of naming Obsidian, the appeal identifies Obsidian's lawyer as the Respondent: ***Manson v Sharpe*** (23 November 2015), Calgary 1501 0276AC (Alta CA). The Mansons claimed Justice Rawlins was biased, and "clearly displayed favouritism" for Obsidian and its lawyer. The appeal was subsequently struck as abandoned: ***Manson v Sharpe*** (24 March 2016), Calgary 1501 0276AC (Alta CA).

[21] Obsidian explains that in addition to this unsuccessful Alberta litigation, on September 12, 2012, the Mansons initiated a lawsuit in Ontario, which Obsidian indicates made essentially the same complaints as the then still ongoing Alberta litigation. That lawsuit sought $15 million from Obsidian, alleging illegal conduct, trespassing, slander, and fraud, all part of "... an illegal sleazy, defence strategy to continue stealing and defrauding the Manson plaintiffs of their oil and gas assets": ***Manson v Canetic Resources Ltd*** (12 September 2012), 12-55468 (Ont SCJ).

[22] Alberta was added as a Defendant to that lawsuit, with allegations that largely parallel those made in the present Statement of Claim. The Mansons sought $5 million in damages from Alberta.

2020 ABQB 370 (CanLII)

[23] An Endorsement issued by Justice Smith set deadlines to bring the matter forward, and also imposed a communications restriction that prohibited Mr. Manson from communicating with the former counsel for Obsidian in light of Mr. Manson "... leaving abusive and lengthy verbal messages": ***Manson v Canetic Resources Ltd***, 2013 ONSC 5533. Mr. Manson disobeyed that prohibition, was found in contempt of court, and fined: ***Manson v Canetic Resources Ltd***, 2013 ONSC 7613. The Ontario action was ultimately dismissed because the Ontario Court had no jurisdiction over the matter: ***Manson v Canetic Resources Ltd***, 2014 ONSC 261. Substantial indemnity costs were subsequently awarded: ***Manson v Canetic Resources Ltd***, 2014 ONSC 532; ***Manson v Canetic Resources Ltd***, 2014 ONSC 1480.

[24] Obsidian argues that it and its precursors should also be struck from this lawsuit. The current action is an abuse of process, barred by the *Limitations Act*, and simply false.

[25] Obsidian notes that in relation to court access restrictions, this Court may proceed to take steps to manage abusive litigation under both the *Judicature Act*, RSA 2000, c J-2, ss 23-23.1 and via its inherent jurisdiction. The Court evaluates gatekeeping steps on a prospective basis, by assessing what kinds of future litigation misconduct are plausible. The Court may examine a wide range of potentially relevant information for "indicia" of abusive conduct.

[26] Obsidian argues Mr. Manson and the Estate are now engaged in abusive litigation. The current action is a collateral attack on the 2008 Order and its appeals. The same was true for the Ontario litigation.

[27] The amounts claimed are excessive and without any basis in law.

[28] The Mansons have not paid the costs awarded against them in 2015.

[29] The Mansons' litigation is expanding. The Ontario litigation added Alberta as a Defendant. Now Obsidian's lawyer is being sued, as well.

[30] Obsidian reviewed how the communications received from Mr. Manson are highly relevant to understand his motivation to conduct abusive litigation. He threatens to commence criminal proceedings and additional lawsuits. Mr. Manson uses inappropriate, abusive, and derogatory language.

[31] Obsidian asks the Court to impose broad court access restrictions in all Alberta Courts, and asks for a provision that the Plaintiffs be required to retain counsel and pay all outstanding cost awards prior to being required to seek leave to initiate or continue litigation. Obsidian seeks full indemnity costs for this action and its applications.

B. The June 6, 2019 *Rule* 3.68 Oral Decision

[32] After the Applicants' oral submissions on June 6, 2019, I gave an oral decision in which I concluded that the Applicants' *Rule* 3.68 applications should be granted. As a result, the Statement of Claim was entirely struck out. I reserved on the question of whether the Plaintiffs should be subject to indefinite court access restrictions. These are my reasons for striking the Statement of Claim.

[33] At the oral hearing I reserved on the question of whether the Plaintiffs should be subject to indefinite court access restrictions. I did impose interim court access restrictions on the Plaintiffs, as reviewed in ***Unrau v National Dental Examining Board***, 2019 ABQB 283 at paras 551-553 (***Unrau #2***).

2020 ABQB 370 (CanLII)

[34] While my decision was on reserve, the Alberta Court of Appeal released its decision in ***Jonsson v Lymer***, 2020 ABCA 167 (***Lymer***). In ***Lymer*** the Court of Appeal held that the primary jurisdiction for awarding court access orders, or vexatious litigant orders, is under the *Judicature Act*. Further, applications for these types of orders must be brought on notice to the Attorney General.

[35] Given these developments, I invite further submissions from the parties, specifically addressing the relevant sections of the *Judicature Act*, on whether the Plaintiffs should be subject to indefinite court access restrictions. The Court will also provide this decision to the Attorney General, to afford the required notice.

2020 ABQB 370 (CanLII)

III. The Statement of Claim is a Futile and Abusive Proceeding

[36] A pleading may be struck out in whole or in part per *Rule* 3.68(1)(a) if:

1. the court has no jurisdiction (*Rule* 3.68(2)(a));
2. the pleading discloses no reasonable claim or defence (*Rule* 3.68(2)(b));
3. the pleading is "frivolous, irrelevant or improper" or "an abuse of process" (*Rules* 3.68(2)(c-d)); or
4. an irregularity is "so prejudicial to the claim that it is sufficient to defeat the claim" (*Rule* 3.68(2)(e)).

[37] In relation to the application of *Rule* 3.68, I generally accept the arguments of the Applicants. I also accept Obsidian's review and summary of the history of the dispute between the Mansons and Obsidian and its precursors.

[38] The Mansons' Statement of Claim should be struck out on multiple bases.

[39] In relation to Alberta, the Statement of Claim is factually hopeless and provides no reasonable claim. As Alberta indicates, the complaint that Alberta has failed to adequately control the conduct of judges is contrary to the constitutional division of authority. Second, the current action's Statement of Claim essentially duplicates the allegations and claims advanced against Alberta in the Mansons' Ontario litigation. The Statement of Claim is therefore a collateral attack, which is prohibited (***British Columbia (Workers' Compensation Board) v Figliola***, 2011 SCC 52 at para 28, [2011] 3 SCR 422), and should be terminated, immediately (***Alberta v Pocklington Foods Inc***, 1995 ABCA 111 at para 14, 123 DLR (4th) 141).

[40] Furthermore, I conclude that the allegations against Alberta are not adequately pled, and are therefore an abuse of the Court's processes:

> Inadequate pleadings are an indicium of abusive litigation. This Court has adopted the reasoning in [***kisikawpimootewin v Canada***, 2004 FC 1426, 134 ACWS (3d) 396], at paras 8-9, that litigation is an abuse of court processes when a "... defendant cannot know how to answer, and a court will be unable to regulate the proceedings ...", "bare assertions and bald statements" leave the defendant "... both embarrassed and unable to defend itself ...", and the court is unable to identify the intended argument and/or specific material facts. As Gill J observed in ***Arabi v Alberta***, 2014 ABQB 295 at paras 85-86, 589 AR 249, there is no need

> for a court or responding litigant to answer claims that are "gibberish", which "simply make no sense", or which are "illogical, impenetrable claims".
>
> (***Unrau #2***, at para 629).

[41] I will not, however, strike out the Statement of Claim on the basis it was filed outside the relevant limitations period. The allegations against Alberta are simply too vague to evaluate that question, and therefore this is an instance where Alberta simply cannot establish on a balance of probabilities that the Mansons' action is out of time, except perhaps with evidence, but that is prohibited per *Rule* 3.68(3). In any case, that vagueness is, in itself, a reason to terminate the lawsuit in relation to this particular Defendant. How can a defendant be expected to answer allegations that do not provide the defendant a way to test if the claim is barred by legislation and out of time?

[42] The allegations in relation to Mr. Burke fail for similar reasons. I accept the argument that the facts alleged simply are not a possible basis for a $1.5 million claim. Second, the allegations against Mr. Burke are ill-defined and little more than bald allegations, thus offending the principle in ***kisikawpimootewin v Canada***. Mr. Burke and this Court cannot make a meaningful response on the basis of these allegations.

[43] I however reject the argument of counsel for Mr. Burke that the fact that the substance of the allegations against Mr. Burke were in a prayer for relief is a fatal defect, per *Rule* 3.68(2)(e). At the time the Statement of Claim was filed, Mr. Manson was an unrepresented person, and therefore the rules of procedure and evidence do not apply to him in the same manner as represented litigants: ***Pintea v Johns***, 2017 SCC 23, [2017] 1 SCR 470; *Statement of Principles on Self-represented Litigants and Accused Persons (2006)*. In particular, Principle B(2) of the latter document instructs that:

> Self-represented persons should not be denied relief on the basis of a minor or easily rectified deficiency in their case.

[44] This is an instance where the Statement of Claim could readily be amended, without surprise to Mr. Burke, and relocate the allegations against him to the body of the Statement of Claim. That would not make those allegations any more valid - they still would fail due to providing inadequate particulars - but I conclude this formal irregularity is not a kind that would be fatal to the allegations against Mr. Burke in the post-***Pintea v Johns*** era.

[45] Finally, I conclude the allegations which involve Obsidian are both hopeless and an abuse of process. To the degree that any specific allegation may be dissected from the Statement of Claim, I conclude that the allegations are a collateral attack on:

1. both the original 2008 Alberta Court of Queen's Bench Order and its subsequent appeal,
2. the 2015 decision of Justice Rawlins, and
3. the Ontario litigation.

[46] The Mansons are effectively attempting to re-litigate the same complaints, in multiple forums, and via duplicative lawsuits.

[47] I therefore conclude the Statement of Claim is a futile, and abusive proceeding, and should be struck out, entirely.

2020 ABQB 370 (CanLII)

IV. Court Access Restrictions

[48] With respect to Obsidian's application to have Mr. Manson and the Estate made subject to court access restrictions by what is sometimes called a "vexatious litigant order", pursuant to the recent ***Lymer*** decision, I invite further submissions from all parties on the issue of court access restrictions for Mr. Manson. Any further submissions must be received by the Court by July 15, 2020.

[49] The Court will also provide a copy of this decision to the Attorney General, in compliance with the notice requirement in ***Lymer***.

V. Costs

[50] While the Defendants had made submissions on costs at the June 6, 2019 hearing, the Defendants and I then further discussed how to address costs. The Defendants agreed that written submissions would be submitted on this issue.

[51] In accordance with the Defendants' subsequent written submissions, costs were awarded in my Order dated December 3, 2019 as follows:

a. $10,000 lump sum to Obsidian
b. $5,500 lump sum to Her Majesty the Queen in right of Alberta
c. $6,000 lump sum to Todd J. Burke.

VI. Conclusion

[52] The Statement of Claim is struck out entirely as a hopeless and abusive proceeding.

Heard on the 6th day of June, 2019.
Dated at the City of Red Deer, Alberta this 18th day of June 2020.

Memorandum of Judgment

The Court:

[1] The appellant appeals from orders which struck his application for judicial review and parts of his statement of claim alleging defamation: 2012 ABQB 732, 554 AR 55. He says the chambers judge erred in concluding the court has no jurisdiction to consider either proceeding.

BACKGROUND

[2] The appellant was employed by the respondent Telus Corporation (Telus) under a collective agreement between Telus and the respondent Telecommunications Workers Union (the Union). He was injured in an automobile accident. Various attempts were made by Telus to accommodate his injuries. The appellant received some counseling from Shepell FGI (FGI), which was hired by Telus to provide counseling to Telus employees. It was alleged that, during a conversation with a FGI counselor, the appellant made an unspecified threat towards Telus personnel or property.

[3] Gary Trolley, a FGI employee, told the respondent Martin Armour, a Telus labour relations consultant, about the threat. Armour communicated the threat to other Telus employees, including the respondent Ros Maddren, an occupational health advisor, and the respondent Eric Stenberg, a corporate security investigator. Stenberg conducted an investigation to determine whether the appellant posed a safety risk in the workplace. It was decided that the appellant should undergo a psychiatric assessment.

[4] Armour advised John Carpenter, a Union executive, about the threat and the assessment. Maddren sent a letter to the appellant's physician, with whom she had previous contact, advising of the threat and the assessment. The appellant did not attend the assessment. A second assessment was arranged and the appellant was advised that his employment would be terminated if he did not indicate his willingness to attend the assessment. The appellant refused to attend the second assessment and his employment was terminated.

[5] The Union filed an accommodation grievance and a termination grievance on the appellant's behalf. Both sides were represented by counsel before the arbitrator. It was agreed between counsel that they would proceed with the termination grievance first. The arbitration lasted several days. Documents the appellant provided to the Union's counsel were not introduced into evidence. The arbitrator heard evidence concerning the involvement of Armour, Stenberg and Maddren (the Telus employees) in the matter. After the arbitration concluded, but before the arbitrator rendered his decision, the appellant filed a statement of claim alleging defamation against the Telus employees, Trolley and FGI.

[6] The arbitrator dismissed the termination grievance and retained jurisdiction over the accommodation grievance without deciding it. He held that Telus had reasonable and probable grounds to require the appellant to attend a psychiatric assessment. He concluded that Telus was

2014 ABCA 73 (CanLII)

obliged by law and common sense to deal with what appeared to be credible information that there was a potential threat to the workplace and that Telus' reaction was measured and appropriate. The Union decided not to apply for judicial review of the arbitrator's decision after receiving two legal opinions that there was no basis for judicial review.

[7] The appellant filed a complaint with the Canada Industrial Relations Board (CIRB) alleging the Union breached its duty of fair representation under section 37 of the *Canada Labour Code,* RSC 1985, c L-2. He claimed the Union had acted in an arbitrary, discriminatory and bad faith manner in failing to properly represent him at the arbitration hearing, refusing to seek judicial review of the arbitrator's decision and failing to pursue the accommodation grievance. The CIRB dismissed the complaint. It declined to second guess the various tactical decisions the Union's counsel made during the arbitration; conduct a detailed analysis of how the Union's counsel handled the grievances; or evaluate the competence of the Union's counsel. It concluded that the Union was not simply going through the motions; the Union made a reasoned decision not to seek judicial review; and, once the termination grievance was dismissed, there was no labour relations purpose in pursuing the accommodation grievance. The appellant applied for reconsideration of the CIRB's decision. His application was dismissed.

[8] The appellant also filed complaints with the Office of the Privacy Commissioner of Canada (OPC) regarding the communications FGI and Telus employees had about the threat. The OPC concluded that the FGI and Telus employees acted appropriately and dismissed the complaints. Applications by the appellant for judicial review of the OPC's decisions were dismissed by the Federal Court.

[9] The appellant filed complaints with the Canadian Human Rights Commission (CHRC) as well. He alleged discrimination and retaliation by Telus. The CHRC refused to deal with the complaints because the arbitrator had considered and addressed the substance of all the appellant's allegations. The appellant filed an application for judicial review of the CHRC's decision. After missing a procedural deadline, he applied for an extension of time. The Federal Court dismissed his application for an extension of time on the basis that his judicial review application was doomed to fail. The appellant's judicial review application was dismissed accordingly.

[10] The appellant filed an application for judicial review of the arbitrator's decision. Telus applied to strike the judicial review application on the basis that the appellant has no standing to seek judicial review of an arbitrator's decision. The Telus employees applied to strike the appellant's statement of claim against them on the basis that the dispute is within the sole jurisdiction of the arbitrator under the terms of the collective agreement between Telus and the Union.

[11] A Master held that, as an employee, the appellant would only have standing to seek judicial review of the arbitrator's decision if there was an applicable exception to the principle that, once an employee is represented by an association in collective bargaining, he loses his right of self-representation. In concluding there was no applicable exception, the Master said

2014 ABCA 73 (CanLII)

there was no evidence of inadequate or unfair representation by the Union. Thus, the appellant's judicial review application was struck for lack of standing. As to the statement of claim, the Master was satisfied that the Telus employees' alleged defamatory comments concerned the appellant's character and capacity as an employee and were made by people whose job required them to communicate workplace problems. He struck the statement of claim against Stenberg and Armour because their alleged defamatory comments were made to people who would be expected to be informed of workplace problems and were, therefore, work related and within the exclusive jurisdiction of the arbitrator. Part of the statement of claim against Maddren was struck on the same basis. However, the Master concluded there was a triable issue as to whether the appellant's physician was a person to whom information about the threat should have been conveyed. Thus, he declined to strike the other part of the statement of claim against Maddren.

[12] The appellant appealed the Master's decision and adduced fresh evidence. Maddren cross appealed. The chambers judge concluded the Master properly struck the appellant's judicial review application, albeit for different reasons. He concluded the appellant could not seek standing to pursue judicial review of the arbitrator's decision by alleging a reasonable apprehension of unfair or inadequate representation by the Union. Applying *Gendron v Supply & Services Union of the Public Service Alliance of Canada, Local 50057*, [1990] 1 SCR 1298 [*Gendron*], the chambers judge concluded that, where the *Canada Labour Code* applies, the CIRB has exclusive jurisdiction to hear claims of inadequate representation. He found that the appellant had sought and been denied a finding of inadequate representation by the CIRB. He concluded the appellant could not ask the court to make a new finding on essentially the same issue.

[13] On Maddren's cross appeal, the chambers judge noted that, under section 57 of the *Canada Labour Code*, arbitration is the exclusive forum for matters arising under a collective agreement. Applying *Weber v Ontario Hydro*, [1995] 2 SCR 929 [*Weber*], the chambers judge analyzed whether the dispute arose out of the collective agreement between Telus and the Union by considering the dispute and the ambit of the collective agreement. He noted the evidence showed that one of Maddren's responsibilities included helping Telus employees seek medical treatment where it appeared that a health issue was impacting their ability to perform their job; she had a history of communicating with the appellant's physician in the course of her work responsibilities; and the appellant had consented to those communications. He also noted Maddren's evidence was that she was acting in the course of employment when she sent the impugned letter to the appellant's physician and she sent the letter as part of Telus' response to the alleged threat. He found the dispute over the letter arose within the ambit of the collective agreement and Telus' response to a potential safety threat. He concluded that whether the communication amounted to defamation was a matter for the arbitrator to determine. Therefore, contrary to what the Master found, the court did not have jurisdiction. The remainder of the appellant's statement of claim against Maddren was dismissed accordingly.

[14] Finally, on the appellant's appeal from the striking of his statement of claim against Stenberg and Armour, the chambers judge held the Master was correct to conclude that the

2014 ABCA 73 (CanLII)

alleged defamatory comments were within the exclusive jurisdiction of the arbitrator. He said that, like Maddren, Stenberg and Armour were acting to ensure the safety of other Telus employees.

2014 ABCA 73 (CanLII)

GROUNDS OF APPEAL

[15] On his appeal from the striking of his judicial review application, the appellant argues the chambers judge erred in concluding the CIRB has exclusive jurisdiction to adjudicate allegations of inadequate representation. In the alternative, he argues the CIRB did not exercise its jurisdiction because it failed to conduct a detailed analysis of how the Union's counsel handled the grievances or evaluate the competence of the Union's counsel. Therefore, the court has jurisdiction to consider whether the Union's representation was deficient or gave rise to a reasonable apprehension of inadequate representation.

[16] On his appeal from the striking of his statement of claim against the Telus employees, the appellant says the chambers judge applied the wrong test for an application to strike. He asserts that, when an application to strike is based on a lack of jurisdiction, the allegations in the statement of claim are presumed to be true and the statement of claim should not be struck if it raises a serious issue of fact or law. The appellant concedes that the comments the Telus employees made to other Telus employees in the course of investigating the alleged threat were within the ambit of the collective agreement between Telus and the Union and are outside the court's jurisdiction. However, he asserts that the comments the Telus employees made to individuals outside of Telus (Trolley, Carpenter and the appellant's physician) were motivated by a desire to terminate his employment and were not in Telus' best interests. Therefore, those comments were outside the ambit of the collective agreement and the court retains jurisdiction over them.

STANDARDS OF REVIEW

[17] Absent an error of law, a decision to strike pleadings is reviewed on a reasonableness standard since it requires an exercise of the chambers judge's discretion. Extricable questions of law are reviewable on the correctness standard: *Eastaugh v Halat*, 2009 ABCA 122, 448 AR 377 at para 14.

ANALYSIS

The Judicial Review Application

[18] The appellant was employed under a collective agreement between Telus and the Union. The collective agreement was subject to the provisions of the *Canada Labour Code*. The arbitration was conducted pursuant to the provisions of the collective agreement and the *Code*. At common law, an employee has no standing to seek judicial review of an arbitrator's decision unless he can establish a recognized exception, such as a reasonable apprehension of unfair or inadequate representation by his union.

2014 ABCA 73 (CanLII)

[19] Section 37 of the *Canada Labour Code* prohibits a union from acting in a manner that is arbitrary, discriminatory or in bad faith in representing an employee. Where, as here, the *Code* applies, the common law duty of fair representation is ousted and the CIRB has exclusive jurisdiction to adjudicate allegations of unfair or inadequate representation. An action in the courts for a breach of the duty of fair representation is not permitted; the courts have no jurisdiction over such allegations: *Gendron* at 1318-19, 1321 and 1326-27; *Koenig v Marsh*, 2005 ABCA 118, 363 AR 269 at paras 8-9 and 14. Therefore, the chambers judge did not err in concluding that the CIRB has exclusive jurisdiction to consider the appellant's allegations of inadequate representation.

[20] The appellant argues the court has jurisdiction over his inadequate representation allegations because the CIRB declined to conduct a detailed analysis of how the Union's counsel handled the grievances or evaluate the competence of the Union's counsel. This is an argument about the adequacy or correctness of the CIRB's adjudication of the appellant's complaint. It cannot displace the exclusive jurisdiction of the CIRB or vest jurisdiction in the court. The appellant's application for reconsideration of the CIRB decision was dismissed. An application for judicial review of the arbitrator's decision is not an available avenue for reviewing a decision the CIRB rendered in the exercise of its exclusive jurisdiction. Therefore, the chambers judge did not err in relying on the exclusive jurisdiction of the CIRB to conclude that the appellant could not seek standing to apply for judicial review of the arbitrator's decision by alleging a reasonable apprehension of unfair or inadequate representation by the Union. Accordingly, he was correct to strike the appellant's judicial review application.

The Statement of Claim

[21] The appellant says the chambers judge applied the wrong test for striking a statement of claim pursuant to Rule 3.68 of the *Alberta Rules of Court*, Alta Reg 124/2010. The appellant relies on law that applies when it is alleged that a pleading discloses no reasonable claim (or cause of action): Rule 3.68(2)(b). When an application to strike is made on that basis, no evidence can be submitted on the application and the court must assume that every fact pleaded is true: Rule 3.68(3). The Telus employees' application to strike the appellant's statement of claim against them was not made on the basis that the pleading discloses no reasonable claim. It was made on the basis that the court has no jurisdiction because the dispute is within the sole jurisdiction of the arbitrator under the terms of the collective agreement between Telus and the Union: Rule 3.68(2)(a). Evidence can be admitted on such an application and the court will not assume that every fact pleaded is true. The statement of claim should only be struck if it is plain and obvious that the court has no jurisdiction. This can only be determined by evidence of all the surrounding facts: *Young Estate v TransAlta Utilities Corp*, 1997 ABCA 349, 209 AR 89 at paras 17-18. The appellant says the chambers judge erred by determining the key issue. Where the record is sufficiently clear to fairly decide an issue, there is no need to defer the issue to trial: *Reece v Edmonton (City)*, 2011 ABCA 238, 513 AR 199 at para 14. The chambers judge did not apply the wrong test.

[22] Section 57 of the *Canada Labour Code* requires every collective agreement to contain a provision for final settlement by arbitration of all differences between the parties to or employees bound by the collective agreement, concerning its interpretation, application, administration or alleged contravention. This provision gives rise to an exclusive jurisdiction model under which disputes arising from a collective agreement must proceed to arbitration even if the facts could give rise to a tort action. The core issue is whether the dispute arises out of the collective agreement. The issue is resolved by considering the essential character of the dispute and the ambit of the collective agreement: *Weber* at paras 50-52.

[23] The appellant concedes that the comments the Telus employees made to other Telus employees in the course of investigating the alleged threat were within the ambit of the collective agreement and are outside the jurisdiction of the court. However, he says the comments the Telus employees made to non-Telus employees were outside the ambit of the collective agreement because they were motivated by a desire to terminate his employment and were not in Telus' best interests. He argues the comments have a separate tortious character that removes them from the exclusive jurisdiction of the arbitrator and places them within the jurisdiction of the court.

[24] The essential character of the dispute is determined on the basis of the facts surrounding the dispute, not on the basis of the legal issues which may be framed. What must be determined is whether the essential character of the dispute concerns a matter that is covered by the collective agreement: *Regina Police Assn Inc v Regina (City) Board of Police Commissioners*, 2000 SCC 14, [2000] 1 SCR 360 at para 25 [*Regina Police*]. While aspects of the alleged conduct may arguably extend beyond the ambit of the collective agreement, this does not alter the essential character of the dispute: *Weber* at para 73. Indeed, matters arising from the collective agreement may occur off the workplace: *Weber* at para 52.

[25] The essential character of this dispute concerns the appropriateness of the actions taken and comments made by the Telus employees in the course of their employment, including comments made to other Telus employees and to Trolley, Carpenter and the appellant's physician, while investigating and responding to an alleged threat to workplace safety from an employee under the collective agreement.

[26] The collective agreement must be examined to determine whether it contemplates this factual situation. If the essential character of the dispute arises either expressly or inferentially from the interpretation, application, administration or violation of the collective agreement, the dispute is within the sole jurisdiction of the arbitrator: *Regina Police* at para 25.

[27] The collective agreement between Telus and the Union provides the terms and conditions of the appellant's employment. It is subject to the provisions of the *Canada Labour Code*, such as section 124 which requires every employer to ensure that the health and safety at work of every employee is protected. The collective agreement governs disciplinary action, dismissal, transfers, change of assignments and health and safety. It governs working conditions and prohibits discrimination. It contemplates that actions will be taken and comments will be made by Telus employees in order to investigate and respond to an allegation of a threat to workplace

2014 ABCA 73 (CanLII)

safety made by another employee under the collective agreement. It implicitly contemplates that the investigation and response will involve contact with Union representatives and persons not employed by Telus who may have relevant information. Therefore, it is clear that the dispute in its essential character arises from the interpretation, application, administration or violation of the collective agreement. This is so even if some aspects of the alleged conduct arguably extend beyond the ambit of the collective agreement and even if some of the matters occurred off the workplace.

[28] Indeed, evidence was led at the arbitration of the impugned actions taken and comments made by the Telus employees. The appropriateness of those actions and comments was at the heart of the issues before the arbitrator. The arbitrator ruled that Telus' reaction to the situation was measured and appropriate. He found that Telus was obliged by law and common sense to deal with what appeared to be credible information that there was a potential threat to the workplace. The chambers judge did not err in concluding that the alleged defamatory comments of the Telus employees were within the exclusive jurisdiction of the arbitrator.

[29] Although courts of inherent jurisdiction have the power to grant remedies not available to an arbitrator, in this case the arbitrator could have fashioned a remedy had he been persuaded that any of the impugned actions or comments were inappropriate. Therefore, there is no deprivation of remedy in this case: *Weber* at para 57.

[30] Accordingly, the chambers judge was correct to strike the appellant's statement of claim against the Telus employees.

RESULT

[31] The appeals are dismissed.

Memorandum of Judgment

Application to Dismiss for Want of Jurisdiction

III. Why the Judge Has No Standing to Appeal the Decision

[18] The courts have historically recognized that limitations on who can sue about an issue are required: ***Canada (Attorney General) v Downtown Eastside Sex Workers United Against Violence Society***, 2012 SCC 45 at para 22, [2012] 2 SCR 524 [***Downtown Eastside***]. Legal standing is the vehicle courts have used to determine who is entitled to bring a case for a decision: ***Downtown Eastside***, *supra* at para 1. This includes who can appeal a decision. Generally speaking, legal standing is grounded on either (a) a personal basis where one's legal rights have been or are likely to be affected; or (b) on a public interest basis where the person claiming standing can be seen as a genuine representative of a larger class of individuals intent on bringing matters of public interest and importance before the courts: ***Downtown Eastside***, *supra* at para 22. The Judge does not satisfy the test for either.

2016 ABCA 396 (CanLII)

A. The Judge Does Not Satisfy the Test for Private Interest Standing

[19] There are several compelling reasons why the Judge does not satisfy the test for private interest standing.

1. Proceedings Are Criminal in Nature and Have No Personal Implications for the Judge

[20] We begin with this. While counsel for the Judge attempted to characterize these proceedings as "civil", they are not. It is indisputable that they have arisen in the course of criminal proceedings. The Judge was asked to issue a production order under s 487.014 of the *Code*. He declined to do so. The Queen's Bench quashed his order and directed him to issue the production order.

[21] It is important not to conflate the distinct civil and criminal jurisdictions given the caution expressed in ***Kourtessis v MNR***, [1993] 2 SCR 53 [***Kourtessis***] at 80 against courts manufacturing a right of appeal in the criminal law by invoking civil law notions. To do so risks creating an "unpredictable mish-mash" of civil and criminal proceedings. This ought not to be permitted.

[22] The Judge here was proceeding only under Part XV of the *Code*. He had no other jurisdiction to exercise, nor was any given to him by any other source. He was not a trial judge. He and his Court do not have inherent jurisdiction as does a superior court judge under s 96 of the *Constitution Act, 1867*. Provincial Court judges execute purely statutory functions under the criminal law, such as the conduct of preliminary inquiries. Where the Provincial Court judge transcends the jurisdictional boundaries of such a function, the decision is subject to review by *certiorari* for lack of jurisdiction. But in such event, the application of *certiorari* and *mandamus* is still criminal, not civil, law.

[23] The critical point is this. The Decision that the Judge purports to appeal relates entirely to a criminal matter. It has no implications for the Judge in any personal capacity. A judge, imbued with the power to preside in court, makes decisions as a member of the judiciary, acting in an

institutional role rather than a personal one. Indeed, that is the basis on which the Judge has argued his standing to appeal the Decision.

2. The Code Does not Authorize the Judge's Putative Appeal

[24] As a matter of criminal law, the Judge has no right to appeal the Decision under the relevant *Code* provisions. Read correctly, the provisions of the *Code* could not be clearer on this point.

[25] Appellate courts are statutory bodies: ***R v Mian***, 2014 SCC 54 at para 50, [2014] 2 SCR 689. Thus, their jurisdiction and powers must be grounded in statute: ***R v Bichsel***, 2013 BCCA 164 at para 9, 336 BCAC 104. This means there is no right of appeal unless provided for by statute: ***R v Litchfield*** (1995), 174 AR 171 (CA) at para 3. Since criminal appeals are part of the law of criminal procedure, both rights of appeal and rights to seek leave to appeal in criminal law fall within Parliament's jurisdiction under s 91(27) of the *Constitution Act, 1867*. Parliament has defined and delimited these largely, although not exclusively, in the *Code.* Accordingly, this Court is not empowered to invent either a route of criminal appeal or a form of criminal law remedy that Parliament has not provided for in the *Code* or elsewhere in statute: see, for example, ***Dagenais v Canadian Broadcasting Corp.***, [1994] 3 SCR 835 [***Dagenais***]; ***Kourtessis***; ***R v Meltzer***, [1989] 1 SCR 1764. See also ***R v Ciancio***, 2006 BCCA 311, 232 BCAC 1 and ***Angel Acres Recreation & Festival Property Ltd v British Columbia***, 2006 BCCA 285, 227 BCAC 302.

[26] With respect to indictable offences (and there is no dispute that this would apply here), appeals can only be taken as authorized under s 674 of the *Code* and, to the limited extent identified, s 784 of the *Code*. Section 674 of the *Code* provides as follows:

> 674 No proceedings other than those authorized by this Part and Part XXVI shall be taken by way of appeal in proceedings in respect of indictable offences. [underline added]

[27] In turn, under Part XXVI (Extraordinary Remedies), ss 784(1) and s 784(2) of the *Code* provide as follows:

> 784 (1) An appeal lies to the court of appeal from a decision granting or refusing the relief sought in proceedings by way of *mandamus*, *certiorari* or *prohibition*.
>
> (2) Except as provided in this section, Part XXI applies, with such modifications as the circumstances require, to appeals under this section. [underline added]

[28] What flows from the inter-relationship between these sections and Parts XXI and XXVI is the following. In accordance with s 784(2), the terms of Part XXI apply to Part XXVI to the extent necessary. In turn, under Part XXI, criminal appeals are limited to authorized parties only. The

2016 ABCA 396 (CanLII)

limited statutory rights of appeal defined by Parliament under Part XXI cannot be broadened in favour of the Judge's position merely because the case involves a Crown motion for *certiorari* and *mandamus* taken against his ruling. Sections 674 and 784 are by Parliament's direction to be read together. Thus, the only parties authorized to appeal a prerogative writ under s 784(1) are those who could launch an appeal under Part XXI. As to who is "authorized" to appeal under Part XXI, the parties with a right of appeal or a right to seek leave to appeal are the Attorney General and a "person" who is convicted, found not criminally responsible, subject to certain types of orders, or sentenced. Nowhere is a criminal court judge identified as *a party* capable of launching an appeal in his or her own personal capacity within the meaning of either s 674 or s 784 of the *Code*.

[29] Admittedly, the *Code* confers rights of appeal on third parties under some sections in Part XXI, such as those dealing with forfeiture of crime-related property. But third parties in this category have a right to appeal because that right has been expressly granted to them, no doubt because they have an identifiable interest of a real nature. However, nothing in these provisions supports the Judge's claimed right to appeal the Decision. In addition, there may be instances in which individuals other than those who are parties to the criminal proceedings may be given standing. For example, in ***Dagenais***, the media was given standing to seek *certiorari* as against a criminal court publication ban order. Plainly in ***Dagenais***, the media was actually affected in a *Charter* cognizable capacity. However, no such impact on the Judge is recognizable here.

[30] It is this simple. Judges are not parties authorized to appeal in either Part XXI or Part XXVI of the *Code*. It therefore follows that the Judge has no statutory right of appeal and no right to seek leave to appeal; both are barred. By itself, that defeats the putative appeal.

3. The Criminal Rules Do Not Authorize or Justify the Judge's Putative Appeal

[31] Counsel for the Judge asserted that the Judge nevertheless has a personal stake in the Decision sufficient to qualify for private interest standing because of Rule 835. This *Criminal Rule* provides for automatic civil immunity for a Provincial Court judge who is made subject to a *mandamus* order. Counsel for the Judge suggested that because *certiorari* is not mentioned, this therefore implies that the Judge may be personally liable civilly in the *certiorari* application if his original order is overturned. According to the Judge's counsel, this thereby gives the Judge a personal stake in the proceedings and hence private interest standing.

[32] This is a red herring for two reasons. First, s 9.51 of the *Provincial Court Act*, RSA 2000 c P-31 is a complete answer to a concern about claimed personal liability in these circumstances. It expressly provides in subsection (1) that:

> No action may be brought against a judge for any act done or omitted to be done in the execution of the judge's duty or for any act done in a matter in which the judge has exceeded the judge's jurisdiction unless it is proved that the judge acted maliciously and without reasonable and probable cause.

2016 ABCA 396 (CanLII)

The notion that the Judge might face civil proceedings here is fanciful.

[33] Second, in any event, in accordance with the constitutional principle of judicial independence, judges are immune from suit and prosecution: see ***Slansky v Canada (Attorney General)***, 2013 FCA 199 at paras 134-137, 364 DLR (4th) 112. This ensures that judges are free to make decisions independently and impartially. As the Federal Court of Appeal noted at para 135, quoting Lord Denning in ***Sirros v Moore*** (1974), [1975] QB 118 (Eng CA) at 136:

> Each [judge] should be protected from liability to damages when he is acting judicially. Each should be able to do his work in complete independence and free from fear. He should not have to turn the pages of his books with trembling fingers, asking himself: "If I do this, shall I be liable in damages?"

[34] There is nothing in the *Criminal Rules* that justifies granting the Judge private interest standing to pursue the putative appeal.

4. The Common Law Does Not Support the Judge's Putative Appeal

[35] The Judge's counsel also contended that, at common law, a tribunal subject to *certiorari* had a right to be made a party and was therefore entitled to be a full party in the *certiorari* proceedings. This argument too is without merit.

[36] It rests on the claim that "... neither Parliament nor any judicial authority has taken away the unfettered common-law right of a justice or magistrate to have standing in criminal judicial review proceedings": Memorandum of Argument of the Respondent at para 16, relying on ***R v Batchelor***, [1978] 2 SCR 988 [***Batchelor***] at 1006-1007 and ***Brewer v Fraser Milner Casgrain LLP,*** 2008 ABCA 160 at para 16, 432 AR 188, leave to appeal to SCC refused, 32695 (30 October 2008) [***Brewer***].

[37] But ***Batchelor*** does not support the Judge's position. To the contrary. It contradicts it. ***Batchelor*** did not confirm the existence at common law of an "unfettered right" on the part of a judge to "standing" in *certiorari* proceedings. Moreover, ***Batchelor*** explained why, in Canada, the writ of *certiorari* had been abolished long ago and replaced instead by the simplified procedure of a notice of motion. This simplified process reduced the already limited role of the judge subject to *certiorari* proceedings.

[38] In reviewing the historical record, Laskin J noted that, at one time, it had been necessary to apply to a superior court for a writ of *certiorari*. If issued, the inferior court would then be directed to return the record of the challenged proceedings to the superior court. After the record was returned, the superior court would issue an order (sometimes called a rule *nisi*) requiring the judge of the inferior court to show cause why the application to quash should not succeed. Thereafter, a hearing on the merits would finally follow to determine whether the rule *nisi* would be discharged or made absolute in favour of the applicant. But this unnecessarily complicated procedure was

2016 ABCA 396 (CanLII)

changed in Canada more than a hundred years ago. There is no longer any need for an order or rule *nisi*: see ***Batchelor***, *supra* at 1007, citing Tremeear, *Criminal Code* (6th ed. 1964) at 1286-1289. Instead, a notice of motion for *an order in the nature of certiorari* will do: see Rule 826 of the *Criminal Rules*.

2016 ABCA 396 (CanLII)

[39] In Alberta, that change dates back to at least 1914. The *Consolidated Rules of the Supreme Court of Alberta* (Calgary: Burroughs, 1914) of that year provided in Rule 1 of "Crown Practice" that in all cases where it is desired to move to quash "...the proceeding shall be by notice of motion in the first instance instead of by *certiorari* or by rule or by order *nisi*". This Rule, which effectively abolished the *writ* of *certiorari* without affecting the substantive remedy of *certiorari*, was validly made under the rule-making authority conferred on superior courts and appellate courts by s 576 [now s 482] of the *Code*: see ***R v Titchmarsh*** (1914), [1915] 22 DLR 272 (Ont SC(AD)).

[40] In the result, since then, when a notice of motion seeks an order in the nature of *certiorari* to quash a decision of a judge of the Provincial Court, notice is provided to the Provincial Court purely for the purposes of obtaining the "record" of the proceedings below: see ***Brewer***, *supra* at paras 23-26, which confirms that, in the context of tribunals, they are not parties in the traditional sense. The same holds true for judges in the criminal context.

[41] Moreover, whatever the scope under the common law for a judge of an inferior court to "defend" against the *certiorari* application, we are unaware of any persuasive authority showing that it extended to judges *appealing* the superior court's decision (as the Judge has purported to do here). In any event, the need for *tribunals* to participate in *certiorari* proceedings in 19th century England because of concerns about personal liability has not traveled to Alberta, given the constitutional principle of judicial independence embodied in the preamble to the *Constitution Act, 1867*. As noted, a judge is immune from liability.

[42] Therefore, even if there were some argument buried deep in the common law that might have leant any support to the Judge's argument at one time, there remains no vestige of it today given the provisions in the *Code* and in Rule 833, which is effectively legislation under s 63 of the *Judicature Act*, RSA 2000, c J-2. More important, whatever the common law might once have been, the *Code* now governs. The common law of criminal procedure must yield to the *Code* to the extent there is a conflict. That is in the nature of the *Code* and Parliament's sovereignty over the criminal law under s 91(27) of the *Constitution Act, 1867*. On the key point in dispute here, the *Code* could not be more explicit. The Judge has no private interest standing to appeal the Decision.

5. Administrative Law Does Not Support the Judge's Putative Appeal

[43] Nor does administrative law provide any supplementary jurisdiction to expand the administration of criminal justice in the manner the Judge suggests. The concerns militating against importing civil law notions into the administration of criminal justice apply equally to administrative law notions. There is no benefit in creating an uncertain hodgepodge of criminal and administrative law proceedings.

[44] Admittedly, the administrative law has come some distance in recognizing that tribunals might be allowed to participate in judicial review proceedings launched by affected parties: see ***Ontario (Energy Board) v Ontario Power Generation Inc.***, 2015 SCC 44 at paras 41-62, [2015] 2 SCR 147 [***Ontario Energy***]. However, whatever latitude may now be given to tribunals to make submissions on judicial review, they have no application whatever to the Judge. Why? The Provincial Court is not an administrative tribunal; it is a court of record: see *The Provincial Court Act*, s 2(3); see also s 10(b)(i) of the *Administrative Procedures and Jurisdiction Act*, RSA 2000, c A-3.

[45] Nor does the mere fact that a judge is named as a respondent on a motion for *certiorari* mean assigning party status to the judge. As noted, this is done purely for the purposes of obtaining the "record" of the proceedings below, a qualification that applies with even more force where it is a court that is subject to the prerogative writs.

[46] Further, none of the policy considerations involved in allowing a *tribunal* to make submissions on judicial review launched by a "party" support a direct appeal by the Judge here. These considerations were summarized in ***Pruden v Metis Settlements Appeal Tribunal***, 2014 ABCA 288 at paras 22-26, 580 AR 306, leave to appeal to the SCC refused, 36158 (9 April 2015) [***Pruden***]; see also ***Ontario Energy***, *supra*. They include making sure there is a full *lis* and that the reviewing court is properly informed about jurisdiction. But while the judicial review court *may* allow the tribunal to speak to the public policy concerns underlying the exercise of its jurisdiction, even then, the judicial review court may regulate such participation. In this regard, rarely are tribunals allowed to speak to the merits of the case.

[47] In any event, none of the rationales for the judicial review court allowing participation by a tribunal in administrative law proceedings have any application to the Judge's appeal. The Decision is a matter of criminal law, purely adjudicative in nature concerning as it does the statutory investigative powers of state agents. It is not imbued with polycentric policy considerations as in administrative law.

[48] In addition, if the Decision is later challenged by either a target of such an order or the institution subject to the order, both would be able to raise, whether under the *Charter* or otherwise, a question as to the *effect* of the order on *them*. In particular, the target of the investigation, if charged criminally, may be able to contend there has been a *Charter* breach which gives rise to a need to provide a just and appropriate remedy.

[49] Administrative law principles do not support this putative appeal.

B. The Judge Does Not Satisfy the Test for Public Interest Standing

[50] The Judge has failed to establish any basis for granting him public interest standing to pursue the putative appeal.

The Minister of Finance of Canada, the Minister of National Health and Welfare of Canada and the Attorney General of Canada, appellants; v. Robert James Finlay, respondent.

ON APPEAL FROM THE FEDERAL COURT OF APPEAL

Case Summary

Actions — Standing — Non-constitutional challenge by private individual to the statutory authority for federal public expenditure — Person in need within the meaning of the Canada Assistance Plan seeking a declaration that cost-sharing payments by Canada to Manitoba pursuant to the Plan are illegal and an injunction to stop the payments because of provincial non-compliance with the conditions and undertakings imposed by the Plan — Plaintiff claiming to be prejudiced by the provincial non-compliance — Whether plaintiff has standing to seek the declaratory and injunctive relief — Whether statement of claim discloses reasonable cause of action.

The respondent alleges that he is a resident of Manitoba and a person in need within the meaning of the Canada Assistance Plan ("the Plan") whose sole support is the social allowance he receives under the Manitoba Social Allowances Act; that for a period of forty-six months an amount was deducted from his monthly social allowance in payment of a debt owing by him to the Crown for overpayment of allowance; and that prior to receiving social allowance he received municipal assistance, which by The Municipal Act of Manitoba is made a debt owing by the respondent to the municipality. The respondent contends that the continued payments by Canada to Manitoba of contributions under the Plan are illegal, as being contrary to the statutory authority conferred by s. 7(1) of the Plan, because they contribute to the cost of a provincial system of assistance to persons in need which is in breach, in several respects, of the conditions and undertakings [page608] to which such payments are made subject by s. 7(1). He contends that s. 20(3) of The Social Allowances Act, which authorizes the deduction from a social allowance payment of an amount to repay an overpayment of allowance, is contrary to the provincial undertaking to provide assistance to any person in need in an amount or manner that takes into account his basic requirements because such deduction has the effect of reducing the amount of a social allowance payment below the cost of basic requirements; that s. 444 of The Municipal Act, which makes the cost of any municipal assistance to a person in need a debt owing to the municipality, is in breach of the provincial undertaking to provide assistance to a person in need; and that the authority conferred on municipalities by s. 11(5)(b) of The Social Allowances Act to fix the amount of assistance required to meet the cost of basic

requirements is contrary to the indication in the Plan that such authority shall be exercised by the provincial authority designated in the agreement made pursuant to the Plan.

The respondent sues for a declaration that the federal cost-sharing payments are illegal and an injunction to stop them as long as the provincial system of assistance to persons in need fails to comply with the conditions and undertakings imposed by the Plan. On a motion to strike by the appellants under Federal Court Rule 419(1) the respondent's statement of claim was struck out in the Trial Division of the Federal Court on the grounds that the respondent lacked the requisite standing to bring his action and the statement of claim did not disclose a reasonable cause of action. A majority of the Federal Court of Appeal allowed an appeal from this order and restored the respondent's statement of claim. The appellants appeal from that judgment, and the issues in the appeal are whether the respondent should be recognized as having standing to bring his action, and if he has the requisite standing, whether the statement of claim discloses a reasonable cause of action.

Held: The appeal should be dismissed.

The respondent does not have a sufficiently direct, personal interest in the legality of the federal cost-sharing payments, as distinct from provincial compliance with the conditions and undertakings imposed by the Plan, to bring him within the general requirement for standing to sue, without the consent of the Attorney General, for a declaration or an injunction to challenge an exercise of statutory authority. He should, however, be recognized, as a matter of judicial discretion, as having public interest standing to bring his action. The approach to public interest standing reflected in the judgments of this Court in Thorson, McNeil and [page609] Borowski, in which there was a challenge to the constitutionality or operative effect of legislation, should be extended to a non-constitutional challenge by an action for a declaration to the statutory authority for public expenditure or other administrative action. The respondent meets the criteria laid down for the discretionary recognition of public interest standing in Thorson, McNeil and Borowski. His action raises justiciable issues. The issues are serious ones, and the respondent has a genuine interest in them. If the respondent were denied standing there would be no other way in which the issues could be brought before a court. The respondent should be recognized as having standing to sue for the injunctive, as well as the declaratory, relief prayed for in his statement of claim. The alternative contention that the statement of claim does not disclose a reasonable cause of action should be rejected. It is not plain and obvious that the respondent cannot succeed with his contentions.

The judgment of the Court was delivered by

LE DAIN J.

1 This appeal raises the question whether a private individual has standing to sue for a declaration that certain payments out of the Consolidated Revenue Fund of Canada are illegal on the ground that they are not made in accordance with the applicable statutory authority. More specifically, the question is whether a recipient of provincial assistance to persons in need, who claims to be prejudiced by certain provisions of the provincial legislation respecting such assistance, should be recognized as having standing to seek a declaration that payments by the federal government to the provincial government of contributions to the cost of such assistance, pursuant to the Canada Assistance Plan, R.S.C. 1970, c. C-1 (hereinafter referred to as "the Plan"), are illegal, as being contrary to the authority conferred by the Plan, because the provincial legislative provisions complained of do not comply with the conditions and undertakings to

which the federal cost-sharing payments are made subject by the Plan. There is also the issue, raised alternatively, whether, if [page611] there is the requisite standing to sue, the statement of claim discloses a reasonable cause of action.

2 The appeal is by leave of this Court from the judgment of the Federal Court of Appeal (Thurlow C. J. and Lalande D.J.; Heald J. dissenting), on April 25, 1983, *[1984] 1 F.C. 516*, allowing an appeal from the order on November 17, 1982 of Nitikman D.J. in the Trial Division, who, on a motion to strike under Federal Court Rule 419 (1), struck out the respondent's statement of claim on the grounds that the respondent lacked standing and the statement of claim did not disclose a reasonable cause of action.

I

3 The respondent's statement of claim contains the following allegations of fact. The respondent is a resident of Manitoba who by reason of illness and disability is unable to provide adequately for himself and is therefore a person in need within the meaning of the Plan. His sole source of support is the social allowance he receives under The Social Allowances Act, R.S.M. 1970, c. S160, of Manitoba. For a period of forty-six months an amount equal to 5 per cent of the respondent's social allowance was deducted from his monthly allowance in payment of a debt owing by him to the Crown for overpayment of allowance. Prior to receiving social allowance the respondent received municipal assistance, which, by s. 444 of The Municipal Act, S.M. 1970, c. 100, of Manitoba, is made a debt owing by the respondent to the municipality.

4 The respondent contends that the continued payments by Canada to Manitoba of contributions under the Plan are illegal, as being contrary to the statutory authority conferred by s. 7(1) of the Plan, because they contribute to the cost of a provincial system of assistance to persons in need which is in breach, in several respects, of the conditions and undertakings to which such payments are made subject by s. 7 (1). Section 7 (1) reads as follows:

[page612]

> 7. (1) Contributions or advances on account thereof shall be paid, upon the certificate of the Minister, out of the Consolidated Revenue Fund at such times and in such manner as may be prescribed, but all such payments are subject to the conditions specified in this Part and in the regulations and to the observance of the agreements and undertakings contained in an agreement.

5 The respondent contends that s. 20(3) of The Social Allowances Act, which authorizes the deduction from a social allowance payment of an amount to repay an overpayment of allowance, is contrary to the provincial undertaking to provide assistance to any person in need in an amount or manner that takes into account his basic requirements because such deduction has the effect of reducing the amount of a social allowance payment below the cost of basic requirements. The provincial undertaking is required as a condition of contributions under the Plan by s. 6 (2)(a) thereof and is contained in clause 2 of the agreement of March 20, 1967 (hereinafter referred to as "the Agreement") entered into by the Government of Canada and the Government of Manitoba pursuant to s. 4 of the Plan.

6 The respondent further contends that s. 444 of The Municipal Act, which makes the cost of any municipal assistance to a person in need a debt owing to the municipality, is in breach of the provincial

of the proceedings at which the issue of standing is best considered had earlier been the subject of comment by this Court in McNeil, supra, where, the question of standing to bring an action for a declaration of legislative invalidity having been raised and determined in the courts below as a preliminary matter, Laskin C.J. said at p. 267: "In granting leave, this Court indicated that where, as here, there is an arguable case for according standing, it is preferable to have all the issues in the case, whether going to procedural regularity or propriety or to the merits, decided at the same time. A thoroughgoing examination of the challenged statute could have a bearing in clarifying any disputed question on standing." A similar view was expressed by the House of Lords in Inland Revenue Commissioners v. National Federation of Self-Employed and Small Businesses Ltd., [1982] A.C. 617. There the question arose in the context of an application for judicial review under R.S.C. Ord. 53, r. 3 (5), which required that an applicant have "a sufficient interest in the matter to which the application relates." The members of the House of Lords were of the view that it was necessary to consider the merits of the application in order to determine the matter to which the application related. This question was also considered by the High Court of Australia in Australian Conservation Foundation Inc. v. Commonwealth of Australia (1980), 28 A.L.R. 257, where the opinion was expressed that it is a matter of judicial discretion, having regard to the particular circumstances of a case, whether to determine the question of standing with final effect as a preliminary matter or to reserve it for consideration on the merits. The Court held that for reasons of cost and convenience the judge had properly exercised that discretion in dealing with the question of standing as a preliminary matter and striking out the statement of claim. Assuming that the question whether an issue of standing to sue [page617] may be properly determined as a preliminary matter in a particular case is one which a court should consider, whether or not it has been raised by the parties, I agree with the view expressed in the Australian Conservation Foundation case. It depends on the nature of the issues raised and whether the court has sufficient material before it, in the way of allegations of fact, considerations of law, and argument, for a proper understanding at a preliminary stage of the nature of the interest asserted. In my opinion the present case is one in which the question of standing can be properly determined on a motion to strike. The nature of the respondent's interest in the substantive issues raised by his action is sufficiently clearly established by the allegations and contentions in the statement of claim and the statutory and contractual provisions relied on without the need of evidence or full argument on the merits.

III

17 I turn to the question whether the respondent has a sufficient personal interest in the legality of the federal cost-sharing payments to bring him within the general requirement for standing to challenge an exercise of statutory authority by an action for a declaration or an injunction. The nature of the interest required by a private individual for standing to sue for declaratory or injunctive relief where, as in the present case, a question of public right or interest is raised, has been defined with reference to the role of the Attorney General as the guardian of public rights. Only the Attorney General has traditionally been regarded as having standing to assert a purely public right or interest by the institution of proceedings for declaratory or injunctive relief of his [page618] own motion or on the relation of another person. His exercise of discretion as to whether or not to give his consent to relator proceedings is not reviewable by the courts. See London County Council v. Attorney-General, [1902] A.C. 165, and Gouriet v. Union of Post Office Workers, [1978] A.C. 435. In such a case a private individual may not sue for declaratory or injunctive relief without the consent of the Attorney General unless he can show what amounts to a sufficient private or personal interest in the subject matter of the proceedings. It is in this sense that I have referred to the discretionary control of the Attorney General over public interest standing. Thorson,

McNeil and Borowski represent a departure from or exception to that general rule, but before considering their application in the present case it is necessary to consider whether the respondent has a sufficient interest in the legality of the federal cost-sharing payments to bring him within the general rule.

18 The general rule was laid down in cases involving the private action for public nuisance but it has been applied in a variety of public law contexts where an issue of public right or interest has been raised. The statement of the rule that has been most often cited is that of Buckley J. in Boyce v. Paddington Borough Council, [1903] 1 Ch. 109, in which the issue was whether the plaintiff, a private individual, could bring an action, without the consent of the Attorney General, for an injunction to restrain a public authority from erecting an obstruction in an open space that interfered with the access of light to the windows of the plaintiff's property. The case involved the public right to the open space and the private right to access of light to private property. It was held that the plaintiff could sue without joining the Attorney General because, although the right to the open space was a public right, the plaintiff sought to restrain an interference with his private right to access of light to his property, and he also suffered special damage peculiar to himself from the interference with the public right. Buckley J. stated the rule as follows at p. 114:

[page619]

> A plaintiff can sue without joining the Attorney-General in two cases: first, where the interference with the public right is such that some private right of his is at the same time interfered with (e.g., where an obstruction is so placed in a highway that the owner of the premises abutting upon the highway is specially affected by reason that the obstruction interferes with his private right to access from end to his premises to and from the highway); and, secondly, where no private right is interfered with, but the plaintiff, in respect of his public right, suffers special damage peculiar to himself from the interference with the public right.

19 That statement has been treated as an authoritative expression of the rule and applied on several occasions to actions for a declaration as well as actions for an injunction, most notably by the House of Lords in London Passenger Transport Board v. Moscrop, [1942] A.C. 332, and Gouriet, supra. Examples of its application in Canada to cases involving issues of statutory authority are the judgments of the Ontario Court of Appeal in Cowan v. Canadian Broadcasting Corp., *[1986] 2 O.R. 309*, and Rosenberg v. Grand River Conservation Authority *(1976), 69 D.L.R. (3d) 384*. While the authority of the rule is well established the precise nature of the two exceptions stated by Buckley J. -- interference with a private right and special damage peculiar to oneself -- has been the subject of a variety of commentary and expression. The "private right" referred to by Buckley J. has been said to be "a right the invasion of which gives rise to an actionable wrong within the categories of private law, for example, a breach of contract or trust or the commission of a tort": S.M. Thio, Locus Standi and Judicial Review (1971), p. 161. It has also been observed that the exception for private rights applies not only to common law rights but to a right created by statute for the benefit of a plaintiff: I. Zamir, The Declaratory Judgment (1962), p. 269. The nature of the interest reflected by the words "special damage peculiar to himself" in the second exception in Boyce has been variously characterized in the cases. For a convenient reference to the conflicting meanings given to these words in the private action for public nuisance see T.A. Cromwell, Locus Standi: A Commentary on the Law of Standing in Canada (1986), pp. 24-27. In Smith v. Attorney General of Ontario, *[1924] S.C.R. 331*, [page620] which was considered by this Court in Thorson, Duff J. referred to the general rule as follows at p. 337: "An individual, for example, has no status to maintain an action

restraining a wrongful violation of a public right unless he is exceptionally prejudiced by the wrongful act." In Cowan, supra, in which the standing requirement laid down in Boyce was applied by the Ontario Court of Appeal to an action for declaratory and injunctive relief alleging that the Canadian Broadcasting Corporation had exceeded its statutory authority by operating a French language broadcasting station, Schroeder J.A. said at p. 311:

> A plaintiff, in attempting to restrain, control or confine within proper limits, the act of a public or quasi-public body which affects the public generally, is an outsider unless he has sustained special damage or can show that he has some "special interest, private interest, or sufficient interest". These are terms which are found in the law of nuisance but they have been introduced into cases which also involve an alleged lack of authority. Therefore, in an action where it is alleged that a public or quasi-public body has exceeded or abused its authority in such a manner as to affect the public, whether a nuisance be involved or not, the right of the individual to bring the action will accrue as it accrues in cases of nuisance on proof that he is more particularly affected than other people.

In Australian Conservation Foundation, supra, in which the High Court of Australia applied the rule in Boyce to deny public interest standing to challenge the validity of administrative procedures respecting a requirement for an environmental impact statement, Gibbs J., at p. 268, made the following observations concerning the meaning to be given to the words "special damage peculiar to himself" in Boyce:

> Although the general rule is clear, the formulation of the exceptions to it which Buckley J. made in Boyce v Paddington Borough Council is not altogether satisfactory. Indeed the words which he used are apt to be misleading. His reference to "special damage" cannot be limited to actual pecuniary loss, and the words "peculiar to himself" do not mean that the plaintiff, and no one else, must have suffered damage. However, the expression [page621] "special damage peculiar to himself", in my opinion should be regarded as equivalent in meaning to "have a special interest in the subject matter of the action".

In Borowski, supra, Laskin C.J., dissenting, referred to the general rule as follows at p. 578: "Unless the legislation itself provides for a challenge to its meaning or application or validity by any citizen or taxpayer, the prevailing policy is that a challenger must show some special interest in the operation of the legislation beyond the general interest that is common to all members of the relevant society."

20 The precise nature of the respondent's interest in the legality of the federal cost-sharing payments is not easy to characterize in terms of the general rule. The respondent sues as a person in need within the meaning of the Plan who claims to have been prejudiced by the alleged provincial non-compliance with the conditions and undertakings to which the federal cost-sharing payments are made subject by the Plan. He alleges the prejudice caused by the deduction from his monthly social allowance payment of an amount to repay an overpayment of allowance, which he contends was caused by administrative error. Counsel for the appellants conceded that the deduction reduced the amount of the respondent's monthly social allowance payment below that required to meet the cost of basic requirements or necessities. The respondent alleges the further prejudice arising from the fact that he remains indebted for the municipal assistance which he received prior to qualifying for social allowance. Although the Plan was enacted for the benefit of persons in need it does not confer any rights on such persons; their entitlement to assistance arises under the provincial legislation. Nor can the federal cost-sharing payments be said to affect such

entitlement directly. The respondent contends, however, that the continued payment of the federal contributions, despite the alleged provincial non-compliance with the conditions [page622] and undertakings imposed by the Plan, is in effect a cause of such non-compliance and the resulting prejudice to the respondent. He argues that it is the federal failure to insist on provincial compliance with the conditions and undertakings imposed by the Plan that permits or encourages such continued non-compliance by the province. What the respondent seeks by a declaration that the federal payments are illegal and an injunction to stop them is to compel the province to comply with the conditions and undertakings imposed by the Plan.

21 Counsel for the appellants contended that there was an insufficient "nexus" between the alleged provincial non-compliance with the conditions and undertakings imposed by the Plan and the alleged illegality of the federal payments to satisfy the general requirement for standing to bring an action for a declaration. The term "nexus" was apparently borrowed from American cases on standing to which we were referred in the course of argument. As formulated in Flast v. Cohen, 392 U.S. 83 (1968), a case of taxpayer's standing to challenge the constitutionality of federal public expenditure, the nexus requirement has a two-fold aspect of a special nature based on particular features of the American Constitution. The term "nexus" is used in a more general sense in other cases, such as Linda R.S. v. Richard D., 410 U.S. 614 (1973), to refer to the causative relationship that must exist between the injury or prejudice complained of and the action attacked. The action attacked must have been a cause of the injury or prejudice complained of, and the plaintiff must have a personal stake in the outcome of the litigation -- that is, stand to benefit in his personal interests from the relief sought. It is in this general sense that I understood counsel for the appellants to use the word "nexus". The American requirement of "nexus" or "directness", as it is sometimes referred to (cf. Joint Anti-Fascist Refugee Committee v. McGrath, 341 U.S. 123 (1951), per Frankfurter J. at pp. 152-53), stems from the special constitutional requirement of case or controversy for federal jurisdiction under Article III of the Constitution, and for this reason the American cases on standing must be treated with some caution. I am of the opinion, however, that a similar requirement of directness or causal relationship between the alleged prejudice or grievance and the challenged action is implicit in the notions of interference with private right and special damage. I note that Thio, op. cit., pp. 5-6, refers to [page623] the general requirement for standing in administrative law as being that of a "direct, personal interest". In Australian Conservation Foundation, supra, Gibbs J., referring to the general rule, stated the requirement of a personal stake in the outcome of the litigation as follows at p. 270:

> A person is not interested within the meaning of the rule, unless he is likely to gain some advantage, other than the satisfaction of righting a wrong, upholding a principle or winning a contest, if his action succeeds or to suffer some disadvantage, other than a sense of grievance or a debt for costs, if his action fails.

22 There is no doubt that the respondent has a direct, personal interest in the alleged provincial non-compliance with the conditions and undertakings imposed by the Plan. A declaration that the federal cost-sharing payments are illegal would necessarily involve a finding that the province had failed to comply with the conditions and undertakings imposed by the Plan, but this would not affect the validity of the provincial legislative provisions about which complaint is made. Cf. Re Lofstrom and Murphy *(1971), 22 D.L.R. (3d) 120* (Sask. C.A.) See also LeBlanc v. City of Transcona, *[1974] S.C.R. 1261*, per Spence J. at p. 1268. It cannot be asserted for a certainty that the province would feel compelled by such a finding to change the offending legislative provisions. The effect on provincial action of a declaration that the

federal payments are illegal and even an injunction to stop them is also necessarily a matter of speculation. For a somewhat analogous relationship between the prejudice suffered and the action attacked that was held to be too speculative for standing see Simon v. Eastern Kentucky Welfare Rights Organization, 426 U.S. 26 (1976). Although I have experienced some difficulty on this question, I am on balance of the view that the relationship between the prejudice allegedly caused to the respondent by the provincial non-compliance with the conditions and undertakings imposed by the Plan and the alleged illegality of the federal payments [page624] is too indirect, remote or speculative to be a sufficient causative relationship for standing under the general rule. The respondent must therefore in my opinion rely for standing on what is essentially a public interest in the legality of the federal cost-sharing payments, albeit that of a particular class of the public defined by the Plan as persons in need. It is accordingly necessary to consider whether the respondent should be recognized as having standing, as a matter of judicial discretion, by application of the principle or approach reflected in the decisions of this Court in Thorson, McNeil and Borowski.

IV

23 Opinion has differed as to the scope and implications of what was held by this Court in Thorson, McNeil and Borowski. The two questions that are particularly relevant to the issue of standing in this appeal may be summarized as follows: (a) Does the approach to public interest standing in those cases apply to a non-constitutional challenge to the statutory authority for administrative action; and (b) As a result of what was said in those cases about MacIlreith v. Hart *(1908), 39 S.C.R. 657*, in which this Court affirmed the standing of a municipal ratepayer to challenge the legality of municipal expenditure, does the principle of that case apply by analogy to a challenge to the legality of federal public expenditure?

24 In the Federal Court of Appeal, Thurlow C.J. appears to have relied particularly on MacIlreith v. Hart and generally on the approach reflected in Thorson, McNeil and Borowski for his conclusion that the respondent should be recognized as having standing, as a matter of judicial discretion. In one passage of his reasons, which I quote below, there is possibly a suggestion that he may have considered the respondent to have a sufficient personal interest in the legality of the federal payments for standing, but I read his reasons as a whole as basing standing in this case on what is essentially a public interest. In his analysis of the issue of reasonable cause of action, which he undertook [page625] first and which perhaps unavoidably overlapped with his discussion of standing, he referred to the present case as one falling directly within the class of MacIlreith v. Hart. He was referring there to the distinction noted by Laskin C.J. in his dissenting judgment in Borowski, which I also quote below, between an issue of the legality of federal or provincial public expenditure arising incidentally to an issue of the constitutionality of legislation and such an issue arising "per se". After saying at p. 525 that MacIlreith v. Hart varied from the present case "only in that it is a federal expenditure which is alleged to be illegal and in that the appellant does not assert standing as a taxpayer", Thurlow C.J. made the following statements at p. 526, which although made with reference to the issue of reasonable cause of action, suggest, I think, the nature of the interest which he considered sufficient for standing in this case: "Once it is accepted for the purposes of this appeal that the allegations of the statement of claim are true, and it is not inconceivable that they may be true, one may at once wonder how the citizenry can put a stop to such illegal action otherwise than by the declaration of a court of competent jurisdiction"; and "What is at stake is the right of the citizens of Canada to have the Consolidated Revenue Fund of Canada applied in accordance with the law." Referring explicitly to the issue of standing in the light of the judgments of this Court in Thorson, McNeil and Borowski, Thurlow C.J. expressed his conclusion in the following passages of his reasons for judgment at

TAB 89

Alberta Land Stewardship Amendment Act, 2011, SA 2011, c 9

ALBERTA LAND STEWARDSHIP AMENDMENT ACT, 2011

Chapter 9

(Assented to May 13, 2011)

HER MAJESTY, by and with the advice and consent of the Legislative Assembly of Alberta, enacts as follows:

Amends SA 2009 cA-26.8

…

5 Section 5 is repealed and the following is substituted:

Consultation required

5 Before a regional plan is made or amended, the Stewardship Minister must

(a) ensure that appropriate public consultation with respect to the proposed regional plan or amendment has been carried out, and present a report of the findings of such consultation to the Executive Council, and

(b) lay before the Legislative Assembly the proposed regional plan or amendment.

10 Section 13 is amended by adding the following after subsection (2):

(2.1) Notwithstanding subsection (2), a regional plan may provide rules of application and interpretation, including specifying which parts of the regional plan are enforceable as law and which parts of the regional plan are statements of public policy or a direction of the Government that is not intended to have binding legal effect.

TAB 90

Alberta Land Stewardship Act, SA 2009, c A-26.8

ALBERTA LAND STEWARDSHIP ACT

Chapter A-26.8

HER MAJESTY, by and with the advice and consent of the Legislative Assembly of Alberta, enacts as follows:

Purposes of Act

1 The purposes of this Act are

(a) to provide a means by which the Government can give direction and provide leadership in identifying the objectives of the Province of Alberta, including economic, environmental and social objectives;

(b) to provide a means to plan for the future, recognizing the need to manage activity to meet the reasonably foreseeable needs of current and future generations of Albertans, including aboriginal peoples;

(c) to create legislation and policy that enable sustainable development by taking account of and responding to the cumulative effect of human endeavour and other events.

Part 1
Regional Plans

Division 1
Making, Amending and Reviewing Regional Plans

How regional plans are made and amended

4(1) The Lieutenant Governor in Council may make or amend regional plans for planning regions.

(2) The Lieutenant Governor in Council may make regulations

(a) classifying amendments to regional plans;

(b) prescribing the process, procedure or criteria, if any, for all or any class of amendments to regional plans;

(c) respecting the notice or consultation, or both, required for amendments to regional plans or for a class of amendment;

(d) respecting the conditions or criteria to be met in applying for an amendment to a regional plan, who may apply for an amendment to a regional plan and to whom the application must be made, and the procedure for verifying that any conditions or criteria have been met;

(e) respecting the role and function of the secretariat, government departments and other persons in reviewing, preparing or developing amendments to regional plans for consideration by the Lieutenant Governor in Council;

(f) appointing or designating a person or entity to perform any function with respect to a proposed amendment to a regional plan and, if required, appointing a person as a commissioner under the *Public Inquiries Act* for the purposes described in the regulation.

(3) A regulation under subsection (2) may be made with respect to all or one or more regional plans.

(4) If a regulation is made under subsection (2) about how a regional plan is to be amended, an amendment to the regional plan may be made by the Lieutenant Governor in Council only in accordance with the regulation.

Lieutenant Governor in Council not constrained

5(1) A regional plan may be made or amended whether or not

(a) a regional advisory council has been appointed for a planning region to which a regional plan or an amendment to a regional plan applies;

(b) a regional advisory council or other person has provided advice about a proposed regional plan or an amendment to a regional plan and irrespective of the advice given and irrespective of whether or not the advice was considered or followed;

(c) the secretariat has provided advice with respect to a regional plan or an amendment to a regional plan and irrespective of the advice given and irrespective of whether or not the advice was considered or followed.

(2) The Lieutenant Governor in Council may repeal a regional plan.

Part 2
Nature and Effect of Regional Plans and Compliance Declarations

Division 1
Nature and Effect of Regional Plans

Legal nature of regional plans

13(1) A regional plan is an expression of the public policy of the Government and therefore the Lieutenant Governor in Council has exclusive and final jurisdiction over its contents.

(2) Regional plans are legislative instruments and, for the purposes of any other enactment, are considered to be regulations.

(3) The meaning of a regional plan is to be ascertained from its text, in light of the objectives of the regional plan, and in the context in which the provision to be interpreted or applied appears.

(4) A regional plan and every amendment to a regional plan must

(a) be published in Part I of The Alberta Gazette, and

(b) be made publicly available by the secretariat in accordance with section 59(c).

(5) A regional plan and every amendment to a regional plan comes into effect when it is published in Part I of The Alberta Gazette or on any later date specified in the regional plan or amendment.
